h. Except as otherwise provided herein, this Subscription Agreement shall be binding upon, and inure to the benefit of the parties hereto and their heirs, executors, administrators, successors, legal representatives, and permitted assigns, and the agreements, representations, warranties, covenants and acknowledgments contained herein shall be deemed to be made by, and be binding upon, such heirs, executors, administrators, successors, legal representatives and permitted assigns.

i. If any provision of this Subscription Agreement shall be adjudicated by a court of competent jurisdiction to be invalid, illegal or unenforceable, the validity, legality or enforceability of the remaining provisions of this Subscription Agreement shall not in any way be affected or impaired thereby and shall continue in full force and effect.

j. This Subscription Agreement may be executed in one or more counterparts (including by facsimile or electronic mail or in .pdf) and by different parties in separate counterparts, with the same effect as if all parties hereto had signed the same document. All counterparts so executed and delivered shall be construed together and shall constitute one and the same agreement.

k. The parties hereto acknowledge and agree that irreparable damage would occur in the event that any of the provisions of this Subscription Agreement were not performed in accordance with their specific terms or were otherwise breached. It is accordingly agreed that the parties shall be entitled to an injunction or injunctions to prevent breaches of this Subscription Agreement, without posting a bond or undertaking and without proof of damages, to enforce specifically the terms and provisions of this Subscription Agreement, this being in addition to any other remedy to which such party is entitled at law, in equity, in contract, in tort or otherwise.

l. If any change in the number, type or classes of authorized shares of SOAC (including the Shares), other than as contemplated by the Transaction Agreement or any agreement contemplated by the Transaction Agreement, shall occur between the date hereof and immediately prior to the Closing by reason of reclassification, recapitalization, stock split (including reverse stock split) or combination, exchange or readjustment of shares, or any stock dividend, the number of Shares issued to the Investor shall be appropriately adjusted to reflect such change.

m. This Subscription Agreement shall be governed by and construed in accordance with the laws of the State of New York (regardless of the laws that might otherwise govern under applicable principles of conflicts of laws thereof) as to all matters (including any action, suit, litigation, arbitration, mediation, claim, charge, complaint, inquiry, proceeding, hearing, audit, investigation or reviews by or before any governmental entity related hereto), including matters of validity, construction, effect, performance and remedies.

n. Each party hereto, and any person asserting rights as a third party beneficiary may do so only if he, she or it, irrevocably agrees that any action, suit or proceeding between or among the parties hereto, whether arising in contract, tort or otherwise, arising in connection with any disagreement, dispute, controversy or claim arising out of or relating to this Subscription Agreement or any related document or any of the transactions contemplated hereby or thereby ("Legal Dispute") shall be brought only to the exclusive jurisdiction of the courts of the State of New York or the federal courts located in the State of New York, and each party hereto hereby consents to the jurisdiction of such courts (and of the appropriate appellate courts therefrom) in any such suit, action or proceeding and irrevocably waives, to the fullest extent permitted by law, any objection that it, he or she may now or hereafter have to the laying of the venue of any such suit, action or proceeding in any such court or that any such suit, action or proceeding that

is brought in any such court has been brought in an inconvenient forum. During the period a Legal Dispute that is filed in accordance with this [Section 11.n](#) is pending before a court, all actions, suits or proceedings with respect to such Legal Dispute or any other Legal Dispute, including any counterclaim, cross-claim or interpleader, shall be subject to the exclusive jurisdiction of such court. Each party hereto and any person asserting rights as a third party beneficiary may do so only if he, she or it hereby waives, and shall not assert as a defense in any Legal Dispute, that (a) such party is not personally subject to the jurisdiction of the above named courts for any reason, (b) such action, suit or proceeding may not be brought or is not maintainable in such court, (c) such party's property is exempt or immune from execution, (d) such action, suit or proceeding is brought in an inconvenient forum, or (e) the venue of such action, suit or proceeding is improper. A final judgment in any action, suit or proceeding described in this [Section 11.n](#) following the expiration of any period permitted for appeal and subject to any stay during appeal shall be conclusive and may be enforced in other jurisdictions by suit on the judgment or in any other manner provided by applicable laws. EACH OF THE PARTIES HERETO AND ANY PERSON ASSERTING RIGHTS AS A THIRD PARTY BENEFICIARY MAY DO SO ONLY IF HE, SHE OR IT IRREVOCABLY AND UNCONDITIONALLY WAIVES ANY RIGHT TO TRIAL BY JURY ON ANY CLAIMS OR COUNTERCLAIMS ASSERTED IN ANY LEGAL DISPUTE RELATING TO THIS SUBSCRIPTION AGREEMENT OR THE TRANSACTIONS CONTEMPLATED HEREBY AND FOR ANY COUNTERCLAIM RELATING THERETO. IF THE SUBJECT MATTER OF ANY SUCH LEGAL DISPUTE IS ONE IN WHICH THE WAIVER OF JURY TRIAL IS PROHIBITED, NO PARTY HERETO NOR ANY PERSON ASSERTING RIGHTS AS A THIRD PARTY BENEFICIARY SHALL ASSERT IN SUCH LEGAL DISPUTE A NONCOMPULSORY COUNTERCLAIM ARISING OUT OF OR RELATING TO THIS SUBSCRIPTION AGREEMENT OR THE TRANSACTIONS CONTEMPLATED HEREBY. FURTHERMORE, NO PARTY HERETO NOR ANY PERSON ASSERTING RIGHTS AS A THIRD PARTY BENEFICIARY SHALL SEEK TO CONSOLIDATE ANY SUCH LEGAL DISPUTE WITH A SEPARATE ACTION OR OTHER LEGAL PROCEEDING IN WHICH A JURY TRIAL CANNOT BE WAIVED.

o. Any notice or communication required or permitted hereunder to be given to the Investor shall be in writing and either delivered personally, emailed or sent by overnight mail via a reputable overnight carrier, or sent by certified or registered mail, postage prepaid, to such address(es) or email address(es) set forth on the signature page hereto, and shall be deemed to be given and received (i) when so delivered personally, (ii) when sent, with no mail undeliverable or other rejection notice, if sent by email, or (iii) three (3) business days after the date of mailing to the address below or to such other address or addresses as the Investor may hereafter designate by notice to SOAC.

12. Non-Reliance and Exculpation. The Investor acknowledges that it, he or she is not relying upon, and has not relied upon, any statement, representation or warranty made by any person, firm or corporation, other than the statements, representations and warranties of SOAC expressly contained in [Section 6](#) of this Subscription Agreement, in making its, his or her investment or decision to invest in SOAC. The Investor acknowledges and agrees that none of (i) any other investor pursuant to this Subscription Agreement or any other subscription agreement related to the private placement of the Shares (including the investor's respective affiliates or any control persons, officers, directors, employees, partners, agents or representatives of any of the foregoing) or (ii) any other party to the Transaction Agreement or any Non-Party Affiliate (other than SOAC with respect to the previous sentence), shall have any liability to the Investor, or to any other investor, pursuant to, arising out of or relating to this Subscription Agreement or any other subscription agreement related to the private placement of the Shares, the negotiation hereof or thereof or its subject matter, or the transactions contemplated hereby or thereby, including, without limitation, with respect to any action heretofore or hereafter taken or omitted to be taken by any of them in connection with the purchase of the Shares or with respect to any claim (whether in tort, contract or otherwise) for breach of this Subscription Agreement or in respect of any written or oral representations made or alleged to be made in connection herewith, as expressly provided herein, or for any actual or alleged inaccuracies, misstatements or omissions with respect to any information or materials of any kind furnished by SOAC, the Company or any Non-Party Affiliate concerning SOAC, the Company, any of their controlled affiliates, this Subscription Agreement or the transactions contemplated hereby. For purposes of this Subscription Agreement, "Non-Party Affiliates" means each former, current or future officer, director, employee, partner, member, manager, direct or indirect equityholder or affiliate of SOAC, the Company or any of SOAC's or the Company's controlled affiliates or any family member of the foregoing.

[Table of Contents](#)

13. Disclosure. SOAC shall, by 9:00 a.m., New York City time, on the first (1st) business day immediately following the date of this Subscription Agreement, issue one or more press releases or file with the SEC a Current Report on Form 8-K (collectively, the “Disclosure Document”) disclosing all material terms of the transactions contemplated hereby and by the Other Subscription Agreements, the Transaction and any other material, nonpublic information that SOAC has provided to the Investor at any time prior to the filing of the Disclosure Document. Upon the issuance of the Disclosure Document, to the actual knowledge of SOAC, the Investor shall not be in possession of any material, non-public information received from SOAC or any of its officers, directors, or employees or agents, and the Investor shall no longer be subject to any confidentiality or similar obligations under any current agreement, whether written or oral, with SOAC or any of its affiliates, relating to the transactions contemplated by this Subscription Agreement. Notwithstanding anything in this Subscription Agreement to the contrary, SOAC shall not publicly disclose the name of the Investor or any of its, his or her affiliates or advisers, or include the name of the Investor or any of its, his or her affiliates or advisers in any press release or in any filing with the SEC or any regulatory agency or trading market, without the prior written consent of the Investor, except (i) as required by the federal securities law or pursuant to other routine proceedings of regulatory authorities, (ii) to the extent such disclosure is required by law, at the request of the staff of the SEC or regulatory agency or under the regulations of any national securities exchange on which SOAC’s securities are listed for trading or (iii) to the extent such announcements or other communications contain only information previously disclosed in a public statement, press release or other communication previously approved in accordance with this Section 13.

**SCHEDULE A**

**ELIGIBILITY REPRESENTATIONS OF THE INVESTOR**

**A. QUALIFIED INSTITUTIONAL BUYER STATUS**

(Please check the applicable subparagraphs):

We are a “qualified institutional buyer” (as defined in Rule 144A under the Securities Act (a “QIB”).

**B. ACCREDITED INVESTOR STATUS**

(Please check the applicable subparagraphs):

We are an “accredited investor” (within the meaning of Rule 501(a) under the Securities Act or an entity in which all of the equity holders are accredited investors within the meaning of Rule 501(a) under the Securities Act), and have marked the appropriate box in the following paragraph indicating the provision under which we qualify as an “accredited investor.”

Rule 501(a), in relevant part, states that an “accredited investor” shall mean any person who comes within any of the below listed categories, or who the issuer reasonably believes comes within any of the below listed categories, at the time of the sale of the securities to that person. The Investor has indicated, by marking the appropriate box below, the provision(s) below which apply to the Investor and under which the Investor accordingly qualifies as an “accredited investor.”

FOR INDIVIDUALS:

(a) A natural person with individual net worth (or joint net worth<sup>1</sup> with spouse<sup>2</sup>) in excess of \$1,000,000. For purposes of this item, “net worth” means the excess of total assets at fair market value, including cash, stock, securities, personal property and real estate (other than your primary residence), over total liabilities (other than a mortgage or other debt secured by your primary residence). In the event that the amount of any mortgage or other indebtedness secured by your primary residence exceeds the fair market value of the residence, that excess liability should also be deducted from your net worth. Any mortgage or indebtedness secured by your primary residence incurred within 60 days before the time of the sale of the securities offered hereunder, other than as a result of the acquisition of the primary residence, shall also be deducted from your net worth.

(b) A natural person with individual income (without including any income of the Investor’s spouse) in excess of \$200,000, or joint income with spouse of \$300,000, in each of the two most recent years and who reasonably expects to reach the same income level in the current year.

(c) A natural person who currently holds in good standing:

<sup>1</sup> Assets need not be purchased or held jointly to be included in the calculation of “joint net worth with such person’s spouse,” which includes the aggregate net worth of the Investor and the Investor’s spouse.

<sup>2</sup> For purposes hereof, “spouse” refers to the Investor’s spouse or “spousal equivalent,” *i.e.*, a cohabitant occupying a relationship generally equivalent to that of a spouse.

a General Securities Representative license (Series 7), Private Securities Offerings Representative license (Series 82) or Investment Adviser Representative license (Series 65); or

the following other professional certification(s), designation(s) or credential(s) from an accredited educational institution that the U.S. Securities and Exchange Commission has designated by order as qualifying natural persons as accredited investors:

\_\_\_\_\_.

[Table of Contents](#)

- £ (d) A natural person “family client” of a “family office” (each such term as defined in Rule 202(a)(11)(G)-1 under the U.S. Investment Advisers Act of 1940, as amended, and the rules and regulations promulgated thereunder), where: (A) the family office has total assets under management in excess of \$5,000,000; (B) the family office is not formed for the specific purpose of acquiring limited liability company interests of the Company; and (C) the natural person family client’s purchase of the limited liability company interests offered is directed by the family office, which has such knowledge and experience in financial and business matters that the family office is capable of evaluating the merits and risks of an investment in such limited liability company interests.

FOR INDIVIDUALS AND ENTITIES:

- £ (e) A director, executive officer (as defined in Regulation D under the Securities Act), or manager of (or a manager of a manager of) the issuer of the shares being offered or sold.

FOR ENTITIES:

- £ (f) A bank as defined in Section 3(a)(2) of the Securities Act or any savings and loan association or other institution as defined in Section 3(a)(5)(A) of the Securities Act, whether acting in its individual or fiduciary capacity.
- £ (g) An investment adviser either (A) registered pursuant to Section 203 of the U.S. Investment Advisers Act of 1940, as amended, and the rules and regulations promulgated thereunder (the “Investment Advisers Act”) or pursuant to the laws of any U.S. state or (B) relying on an exemption from registration under either Section 203(l) or (m) of the Investment Advisers Act.
- £ (h) An insurance company as defined in Section 2(a)(13) of the Securities Act.
- £ (i) A broker-dealer registered pursuant to Section 15 of the Exchange Act.
- £ (j) An investment company registered under the Investment Company Act of 1940, as amended (the “Investment Company Act”).
- £ (k) A business development company as defined in Section 2(a)(48) of the Investment Company Act.
- £ (l) A small business investment company licensed by the U.S. Small Business Administration under Section 301(c) or (d) of the Small Business Investment Act of 1958.
- £ (m) A Rural Business Investment Company as defined in Section 384A of the Consolidated Farm and Rural Development Act, as amended.
- £ (n) A private business development company as defined in Section 202(a)(22) of the Advisers Act.
- £ (o) One of the following entities which was not formed for the specific purpose of acquiring the shares being offered or sold and which has total assets in excess of \$5,000,000: (i) a corporation, limited liability company or partnership, (ii) an organization described in Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (the “Code”), or (iii) a Massachusetts or similar business trust.
- £ (p) A trust with total assets in excess of \$5,000,000 not formed for the specific purpose of acquiring the shares being offered or sold, whose purchase is directed by a sophisticated person with such knowledge and experience in financial and business matters as described in Rule 506(b)(2)(ii) of Regulation D under the Securities Act as to be capable of evaluating the merits and risks of an investment in the shares being offered or sold.
- £ (q) A “family office,” as defined in Rule 202(a)(11)(G)-1 under the Investment Advisers Act, with total assets under management in excess of \$5,000,000, not formed for the specific purpose of

acquiring limited liability company interests of the Company, whose purchase of the limited liability company interests offered is directed by a person with such knowledge and experience in financial and business matters as to be capable of evaluating the merits and risks of the prospective investment, or any “family client” (as defined in Rule 202(a)(11)(G)-1) thereof, the investments of which are directed by the family office.

- £ (r) An employee benefit plan within the meaning of Section 3(3) of the United States Employee Retirement Income Security Act of 1974, as amended ("ERISA"), if the decision to invest in the shares being offered or sold is made by a plan fiduciary, as defined in Section 3(21) of ERISA, which is either a bank, savings and loan association, insurance company, or registered investment adviser, or if the employee benefit plan has total assets in excess of \$5,000,000 or, if a self-directed plan, with investment decisions made solely by persons that are accredited investors.
  
- £ (s) A plan established and maintained by a state, its political subdivisions, or any agency or instrumentality of a state or its political subdivisions, for the benefit of its employees, if the plan has total assets in excess of \$5,000,000.
  
- £ (t) An entity in which all of the equity owners are accredited investors as determined under any of the paragraphs (a) through (s) above; provided that the Investor makes the additional representations, warranties and covenants listed in footnote 3<sup>3</sup>; (Please note that this response is not applicable for irrevocable trusts).
  
- £ (u) An entity not otherwise described in items (f) through (t) above, not formed for the specific purpose of acquiring limited liability company interests of the Company, owning Investments in excess of \$5,000,000.

***This page should be completed by the Investor  
and constitutes a part of the Subscription Agreement.***

<sup>3</sup> If the Investor is an accredited investor for the reason described in this clause (t), the Investor hereby represents, warrants and covenants with respect to each stockholder, partner, member or other beneficial owner of the Investor (each, a "Beneficial Owner") that: (i) the Investor is sufficiently familiar with each such Beneficial Owner's regulatory status and/or asset ownership to make representations on each such Beneficial Owner's behalf; (ii) each such Beneficial Owner qualifies as an "accredited investor" under one or more of the provisions of this Schedule A; (iii) the Company may rely on the Investor's representations on behalf of each such Beneficial Owner hereunder to the same extent as if each such Beneficial Owner had completed this Schedule A; and (iv) the Investor shall permit no direct or indirect transfer of beneficial interests in the Investor that at any time would result in any of the representations contained in clauses (i) through (iii) ceasing to be true.

**SCHEDULE B**

**ELIGIBILITY REPRESENTATIONS OF CANADIAN INVESTOR  
ACCREDITED INVESTOR CERTIFICATE**

*This Schedule must be completed by the Investor and forms a part of the Subscription Agreement to which it is attached. All defined terms not specifically defined in this Certificate of Accredited Investor are defined in Canadian Securities Laws.*

**(Check one or more, as applicable):**

- (a) (i) except in Ontario, a Canadian financial institution, or a Schedule III bank; or (ii) in Ontario, a financial institution described in paragraph 73.1(1) of the *Securities Act* (Ontario) (as detailed below),
- (b) the Business Development Bank of Canada incorporated under the *Business Development Bank of Canada Act* (Canada),
- (c) a subsidiary of any person or company referred to in paragraphs (a) or (b), if the person or company owns all of the voting securities of the subsidiary, except the voting securities required by law to be owned by directors of that subsidiary,
- (d) a person registered under the securities legislation of a province or territory of Canada as an adviser or dealer, and in Ontario except as otherwise prescribed by applicable regulations,
- (e) an individual registered under the securities legislation of a province or territory of Canada as a representative of a person referred to in paragraph (d),
- (e.1) an individual formerly registered under the securities legislation of a province or territory of Canada, other than an individual formerly registered solely as a representative of a limited market dealer under one or both of the *Securities Act* (Ontario) or the *Securities Act* (Newfoundland and Labrador),
- (f) the Government of Canada or the government of a province or territory of Canada, or any crown corporation, agency or wholly owned entity of the Government of Canada or the government of a province or territory of Canada,
- (g) a municipality, public board or commission in Canada and a metropolitan community, school board, the Comité de gestion de la taxe scolaire de l'île de Montréal or an intermunicipal management board in Québec,
- (h) any national, federal, state, provincial, territorial or municipal government of or in any foreign jurisdiction, or any agency of that government,
- (i) a pension fund that is regulated by either the Office of the Superintendent of Financial Institutions (Canada) or a pension commission or similar regulatory authority of a province or territory of Canada,
- (j) *[Intentionally deleted.]*
- (j.1) an individual who beneficially owns financial assets having an aggregate realizable value that, before taxes but net of any related liabilities, exceeds CAD\$5,000,000,
- (k) *[Intentionally deleted.]*
- (l) *[Intentionally deleted.]*

- (m) a person, other than an individual or investment fund, that has net assets of at least CAD\$5,000,000, as shown on its most recently prepared financial statements, and that was not formed for the sole purpose of making a representation to this effect in order to qualify as an accredited investor, (*Note: your “net income” before taxes is found on your personal income tax return.*)
  
- (n) an investment fund that distributes or has distributed its securities only to
  - (i) a person that is or was an accredited investor at the time of the distribution,

(ii) a person that acquires or acquired securities in the circumstances referred to in Sections 2.10 [Minimum amount investment] or 2.19 [Additional investment in investment funds] of NI 45-106 or equivalent exemptions under applicable securities legislation as specified in Section 8.2 of NI 45-106, or

(iii) a person described in paragraph (i) or (ii) that acquires or acquired securities under Section 2.18 [Investment fund reinvestment] of NI 45-106,

- (o) an investment fund that distributes or has distributed securities under a prospectus in a province of Canada for which the regulator or, in Quebec, the securities regulatory authority, has issued a receipt,
- (p) a trust company or trust corporation registered or authorized to carry on business under the *Trust and Loan Companies Act* (Canada) or under comparable legislation in a province or territory of Canada or a foreign jurisdiction, acting on behalf of a fully managed account managed by the trust company or trust corporation, as the case may be,
- (q) a person acting on behalf of a fully managed account managed by that person, if that person is registered or authorized to carry on business as an adviser or the equivalent under the securities legislation of a province or territory of Canada or a foreign jurisdiction,
- (r) a registered charity under the *Income Tax Act* (Canada) that, in regard to the trade, has obtained advice from an eligibility adviser or an adviser registered under the securities legislation of the province or territory of the registered charity to give advice on the securities being traded,
- (s) an entity organized in a foreign jurisdiction that is analogous to any of the entities referred to in paragraphs (a) to (d) or paragraph (i) in form and function,
- (t) a person in respect of which all of the owners of interests, direct, indirect or beneficial, except the voting securities required by law to be owned by directors, are persons that are accredited investors. ***If you checked (t), please indicate the name and category of accredited investor (by reference to the applicable letter in this Appendix "A") of each of:***

SCHEDULE C

ELIGIBILITY REPRESENTATIONS OF CANADIAN INVESTOR  
PERMITTED CLIENT CERTIFICATE

*This Schedule must be completed by the Investor and forms a part of the Subscription Agreement to which it is attached. All defined terms not specifically defined in this Certificate of Permitted Client are defined in Canadian Securities Law.*

(Check one or more, as applicable):

- £ (a) a Canadian financial institution or a Schedule III bank;
- £ (b) the Business Development Bank of Canada incorporated under the *Business Development Bank of Canada Act* (Canada);
- £ (c) a subsidiary of any person or company referred to in paragraph (a) or (b), if the person or company owns all of the voting securities of the subsidiary, except the voting securities required by law to be owned by directors of the subsidiary;
- £ (d) a person or company registered under the securities legislation of a jurisdiction of Canada as an adviser, investment dealer, mutual fund dealer or exempt market dealer;
- £ (e) a pension fund that is regulated by either the federal Office of the Superintendent of Financial Institutions or a pension commission or similar regulatory authority of a jurisdiction of Canada or a wholly-owned subsidiary of such a pension fund;
- £ (f) an entity organized in a foreign jurisdiction that is analogous to any of the entities referred to in paragraphs (a) to (e);
- £ (g) the Government of Canada or a jurisdiction of Canada, or any Crown corporation, agency or wholly-owned entity of the Government of Canada or a jurisdiction of Canada;
- £ (h) any national, federal, state, provincial, territorial or municipal government of or in any foreign jurisdiction, or any agency of that government;
- £ (i) a municipality, public board or commission in Canada and a metropolitan community, school board, the *Comité de gestion de la taxe scolaire de l'île de Montréal* or an intermunicipal management board in Québec;
- £ (j) a trust company or trust corporation registered or authorized to carry on business under the *Trust and Loan Companies Act* (Canada) or under comparable legislation in a jurisdiction of Canada or a foreign jurisdiction, acting on behalf of a managed account managed by the trust company or trust corporation, as the case may be;
- £ (k) a person or company acting on behalf of a managed account managed by the person or company, if the person or company is registered or authorized to carry on business as an adviser or the equivalent under the securities legislation of a jurisdiction of Canada or a foreign jurisdiction;
- £ (l) an investment fund if one or both of the following apply:
  - (i) the fund is managed by a person or company registered as an investment fund manager under the securities legislation of a jurisdiction of Canada;
  - (ii) the fund is advised by a person or company authorized to act as an adviser under the securities legislation of a jurisdiction of Canada;

- £ (m) in respect of a dealer, a registered charity under the *Income Tax Act* (Canada) that obtains advice on the securities to be traded from an eligibility adviser, as defined in section 1.1 of National Instrument 45-106 *Prospectus and Registration Exemptions*, or an adviser registered under the securities legislation of the jurisdiction of the registered charity;

[Table of Contents](#)

- £ (n) in respect of an adviser, a registered charity under the *Income Tax Act* (Canada) that is advised by an eligibility adviser, as defined in section 1.1 of National Instrument 45-106 *Prospectus and Registration Exemptions*, or an adviser registered under the securities legislation of the jurisdiction of the registered charity;
  
- £ (o) an individual who beneficially owns financial assets, as defined in section 1.1 of National Instrument 45-106 *Prospectus and Registration Exemptions*, having an aggregate realizable value that, before taxes but net of any related liabilities, exceeds C\$5 million;
  
- £ (p) a person or company that is entirely owned by an individual or individuals referred to in paragraph (o), who holds the beneficial ownership interest in the person or company directly or through a trust, the trustee of which is a trust company or trust corporation registered or authorized to carry on business under the *Trust and Loan Companies Act* (Canada) or under comparable legislation in a jurisdiction of Canada or a foreign jurisdiction;
  
- £ (q) a person or company, other than an individual or an investment fund, that has net assets of at least C\$25 million as shown on its most recently prepared financial statements;
  
- £ (r) a person or company that distributes securities of its own issue in Canada only to persons or companies referred to in paragraphs (a) to (q) above.

**TRANSACTION SUPPORT AGREEMENT**

**THIS AGREEMENT** is made as of [•], 2021

**BETWEEN:**

The person executing this Agreement as “Shareholder” on the signature page hereof (the “**Shareholder**”);

- and -

Sustainable Opportunities Acquisition Corp., a Cayman Islands exempted company (“**SOAC**”).

**RECITALS:**

**WHEREAS**, on the date hereof, SOAC, 1291924 B.C. Unlimited Liability Company (“**NewCo Sub**”), DeepGreen Metals Inc. (the “**Company**”), entered into a business combination agreement (the “**Business Combination Agreement**”), a copy of which has been provided to the Shareholder, pursuant to which, among other things, (i) SOAC will acquire all of the issued and outstanding Company Shares (as defined herein) from the shareholders of the Company (the “**Company Shareholders**”) in exchange for SOAC Common Shares and Company Earnout Shares by means of a statutory plan of arrangement (the “**Arrangement**”) under Part 9, Division 5 of the *Business Corporations Act* (British Columbia), (ii) the Company will become a wholly-owned Subsidiary of SOAC, and (iii) the Company and NewCo Sub will amalgamate to continue as one company, the whole upon and subject to the terms and conditions set forth in the Business Combination Agreement and the Arrangement;

**WHEREAS**, the Shareholder is the holder of record and beneficial owner of the common shares in the capital of the Company (the “**Company Common Shares**”) and/or the Class B preferred shares in the capital of the Company (the “**Company Preferred Shares**”) and/or the options to purchase Company Common Shares (the “**Company Options**”) and/or the warrant exercisable to purchase Company Common Shares (the “**Company Warrant**”) on the Shareholder’s signature page hereto, which will be subject to the Arrangement in accordance with the Business Combination Agreement;

**WHEREAS**, concurrently with the execution of this Agreement and the Business Combination Agreement, (i) Company Shareholders representing at least 66<sup>2/3</sup>% of the issued Company Shares, and (ii) Company Shareholders and holders of Company Options and Company Warrant representing at least 66<sup>2/3</sup>% of the Company Common Shares, Company Options and Company Warrant, taken together, have executed and delivered an agreement substantially in the same form and on the same terms as this Agreement;

**WHEREAS**, the Shareholder acknowledges that SOAC would not enter into the Business Combination Agreement and the Arrangement but for the execution and delivery of this Agreement by the Shareholder;

**WHEREAS**, the Company Board has unanimously (a) determined that the transactions contemplated by the Business Combination Agreement and the Ancillary Documents are in the best interests of the Company and fair to the Company Shareholders, (b) approved the Business Combination Agreement, the Ancillary Documents to which the Company is or will be a party and the transactions contemplated hereby and thereby and (c) recommended, among other things, that the Company Shareholders vote in favor of the Arrangement; and

**WHEREAS**, this Agreement sets out the terms and conditions of the agreement of the Shareholder to abide by the covenants in respect of the Company Securities (as defined herein) and the other restrictions and covenants set forth herein.

**NOW THEREFORE**, in consideration of the premises and the covenants and agreements herein contained, the Parties agree as follows:

## **ARTICLE 1 INTERPRETATION**

### **1.1 Definitions**

Capitalized terms used, and not otherwise defined, herein have the meanings ascribed to them in the Business Combination Agreement. In this Agreement:

“**Agreement**” means this transaction support agreement;

“**Arrangement**” has the meaning set forth in the recitals of this Agreement;

“**Business Combination Agreement**” has the meaning set forth in the recitals of this Agreement;

“**Company**” has the meaning set forth in the recitals of this Agreement;

“**Company Common Shares**” has the meaning set forth in the recitals of this Agreement;

“**Company Options**” has the meaning set forth in the recitals of this Agreement;

“**Company Preferred Shares**” has the meaning set forth in the recitals of this Agreement;

“**Company Securities**” means the Company Shares, the Company Options and the Company Warrant;

“**Company Shares**” means the Company Common Shares and the Company Preferred Shares listed on the Shareholder’s signature page hereto and any Company Common Shares or Company Preferred Shares acquired beneficially or of record by the Shareholder subsequent to the date hereof, and includes all securities which may be converted into, exchanged for or otherwise changed into, including, for the avoidance of doubt, any Company Common Shares issuable upon the exercise of Company Options or the conversion of Company Preferred Shares or other securities;

“**Company Warrant**” has the meaning set forth in the recitals of this Agreement;

“**NewCo Sub**” has the meaning set forth in the recitals of this Agreement;

“**Parties**” means the Shareholder and SOAC, collectively, and “**Party**” means any one of them, as the context requires;

“**Permitted Transferee**” has the meaning set forth in section 4.1(a)(iii) of this Agreement;

“**Shareholder**” has the meaning set forth in the introductory paragraph to this Agreement;

“**SOAC**” has the meaning set forth in the introductory paragraph to this Agreement; and

“**Transfer**” has the meaning set forth in section 4.1(a)(iii) of this Agreement.

### **1.2 Incorporation of Schedule**

The Shareholder’s signature page to this Agreement forms an integral part of this Agreement for all purposes of it.

**ARTICLE 2**  
**REPRESENTATIONS AND WARRANTIES**

**2.1 Representations and Company Warranties of the Shareholder**

The Shareholder represents and warrants to and in favour of SOAC as follows and acknowledges that SOAC is relying upon such representations and warranties in entering into this Agreement and the Business Combination Agreement:

- (a) The Shareholder, if not an individual, is a corporation, limited liability company or other applicable business entity duly organized, incorporated or formed, as applicable, validly existing and in good standing (or the equivalent thereof, if applicable, in each case, with respect to the jurisdictions that recognize the concept of good standing or any equivalent thereof) under the Laws of its jurisdiction of formation or organization (as applicable). The Shareholder, if an individual, has the legal capacity to enter into and perform his or her obligations under this Agreement.
- (b) The Shareholder, if not an individual, has the requisite corporate power and authority to execute and deliver this Agreement, to perform its obligations hereunder and to consummate the transactions contemplated by this Agreement. This Agreement has been duly authorized by all necessary corporate action on the part of the Shareholder. This Agreement has been duly and validly executed and delivered by the Shareholder and constitutes a legal, valid and binding agreement of the Shareholder (assuming that this Agreement has been duly authorized, executed and delivered by SOAC) enforceable against the Shareholder in accordance with its terms (subject to applicable bankruptcy, insolvency, reorganization, moratorium or other Laws affecting generally the enforcement of creditors' rights and subject to general principles of equity).
- (c) The Shareholder is the sole holder of, record and beneficial owner of, or exercises control or direction over, and at the Effective Time and at all times between the date hereof and the Effective Time, the Shareholder will be the sole holder of, record and beneficial owner of, or exercise control or direction over, all the Company Securities set forth on the Shareholder's signature page hereto, with good title thereto, free and clear of all Liens (other than transfer restrictions under this Agreement, the Governing Documents of the Shareholder and applicable Securities Laws). Other than the Company Securities set forth on the Shareholder's signature page hereto, the Shareholder does not own, beneficially or of record, and is not a party to or bound by any agreement or option, or right or privilege (whether by law, pre-emptive or contractual) capable of becoming an agreement or option, for the purchase or acquisition by the Shareholder of, any additional securities, or any securities convertible or exchangeable into any additional securities, of the Company, except as may be required under the Governing Documents of the Shareholder.
- (d) Except as contemplated by the Business Combination Agreement or the Governing Documents of the Shareholder, no Person has any contractual right or privilege for the purchase or acquisition from the Shareholder of any of the Company Securities or for the right to vote any of the Company Securities.
- (e) There are no legal proceedings in progress or pending before any Governmental Entity or, to the knowledge of the Shareholder, threatened against the Shareholder that would adversely affect in any manner the ability of the Shareholder to enter into this Agreement and to perform its obligations hereunder in any material respect.
- (f) No consent, approval, order or authorization of, or designation, declaration or filing with, any Person is required on the part of the Shareholder with respect to the execution, delivery or performance of its obligations under this Agreement by the Shareholder, the performance by the Shareholder of its obligations under this Agreement and the completion of the transactions contemplated by this Agreement, other than those which are contemplated by the Business Combination Agreement, except for any consents, approvals, authorizations, designations, declarations, waivers or filings, the absence of which would not adversely affect the ability of the Shareholder to perform, or otherwise comply with, any of its covenants, agreements or obligations hereunder in any material respect, or which have already been obtained in advance of the Shareholder's entry into this Agreement.

- (g) None of the execution or delivery by the Shareholder of this Agreement, the performance by the Shareholder of its obligations hereunder or the consummation of the transactions contemplated hereby or pursuant to the Business Combination Agreement will, directly or indirectly (with or without due notice or lapse of time or both), (i) result in a violation or breach of any provision of the Governing Documents of the Shareholder, (ii) result in a violation or breach of, or constitute a default or give rise to any right of termination, Consent, cancellation, amendment, modification, suspension, revocation or acceleration under, any of the terms, conditions or provisions of any Contract to which the Shareholder is a party, (iii) violate, or constitute a breach under, any Order or applicable Law to which the Shareholder or any of its properties or assets are subject or bound or (iv) result in the creation of any Lien upon the Company Securities of the Shareholder, except, in the case of any of clauses (ii) through (iv) above, as would not adversely affect the ability of the Shareholder to perform, or otherwise comply with, any of its covenants, agreements or obligations hereunder in any material respect.

## **2.2 Representations and Company Warranties of SOAC**

SOAC represents and warrants to and in favour of the Shareholder as follows and acknowledges that the Shareholder is relying upon such representations and warranties in entering into this Agreement:

- (a) SOAC is an exempted company, corporation, limited liability company or other applicable business entity duly organized, incorporated or formed, as applicable, validly existing and in good standing (or the equivalent thereof, if applicable, in each case, with respect to the jurisdictions that recognize the concept of good standing or any equivalent thereof) under the Laws of its jurisdiction of organization, incorporation or formation (as applicable).
- (b) SOAC has the requisite exempted company, corporate, limited liability company or other similar power and authority to execute and deliver each of this Agreement and the Business Combination Agreement, to perform its obligations hereunder and thereunder, and to consummate the transactions contemplated hereby and thereby. Each of this Agreement and the Business Combination Agreement has been duly authorized by all necessary exempted company, corporate, limited liability company or other similar action on the part of SOAC. Each of this Agreement and the Business Combination Agreement has been duly and validly executed and delivered by SOAC and constitutes a legal, valid and binding agreement of SOAC (assuming that this Agreement or the Business Combination Agreement, as applicable, has been duly authorized, executed and delivered by the other Persons party thereto), enforceable against SOAC in accordance with its terms (subject to applicable bankruptcy, insolvency, reorganization, moratorium or other Laws affecting generally the enforcement of creditors' rights and subject to general principles of equity).
- (c) None of the execution and delivery by SOAC of this Agreement or the Business Combination Agreement, the performance of SOAC of its obligations hereunder and thereunder, or the consummation by SOAC of the transactions contemplated hereby and thereby will, directly or indirectly (with or without due notice or lapse of time or both), (i) result in a violation or breach of any provision of the Governing Documents of SOAC, (ii) result in a violation or breach of, or constitute a default or give rise to any right of termination, Consent, cancellation, amendment, modification, suspension, revocation or acceleration under, any of the terms, conditions or provisions of any Contract to which SOAC is a party, (iii) violate, or constitute a breach under, any Order or applicable Law to which SOAC or any of its properties or assets are subject or bound or (iv) result in the creation of any Lien upon any of the assets or properties (other than any Permitted Liens) of SOAC, except in the case of any of clauses (ii) through (iv) above, as would not have a SOAC Material Adverse Effect.

## **ARTICLE 3 SHAREHOLDER ACKNOWLEDGMENT AND CONSENT**

### **3.1 Acknowledgment and Consent of the Shareholder**

Until the termination of this Agreement in accordance with its terms, the Shareholder:

- (a) irrevocably and unconditionally consents to and approves the entering into and execution by the Company of the Business Combination Agreement and all Ancillary Documents to which the Company is or will be a party and the consummation of the Arrangement and the transactions contemplated by the Business Combination Agreement; and

(b) irrevocably and unconditionally consents to the details of this Agreement being set out in the Company Information Circular to be prepared in connection with the Company Shareholders Meeting and for the form of this Agreement to be filed with the SEC and any other Governmental Entity, in connection with the Transactions.

## **ARTICLE 4 COVENANTS**

### **4.1 Covenants of the Shareholder**

- (a) The Shareholder hereby irrevocably and unconditionally covenants, undertakes and agrees, from time to time, until the earlier of (i) the Effective Time, and (ii) the termination of this Agreement in accordance with [Section 5.1](#) hereof:
- (i) to cause to be counted as present for purposes of establishing quorum all the Company Securities, at any meeting of any of the securityholders of the Company at which the Shareholder is entitled to vote, including the Company Shareholders Meeting, or at any adjournment thereof or in any other circumstances upon which a vote, consent or other approval with respect to the Transactions contemplated by the Business Combination Agreement (including, for greater certainty, any Alternative Transaction) is sought, or in any action by written consent of the securityholders of the Company, and to vote or cause to be voted (in person, by proxy, by action by written consent, as applicable, or as otherwise may be required under the articles of the Company) all the Company Securities, in favour of the approval, consent, ratification and adoption of the Company Arrangement Resolution and the Transactions contemplated by the Business Combination Agreement (including any Alternative Transaction). For greater certainty, in the event of any proposed Alternative Transaction, any reference in this Agreement to the Arrangement, the Business Combination Agreement or the Arrangement Resolution shall refer to the Alternative Transaction, all related documentation in order to complete the Alternative Transaction or any resolution in respect thereto. To the extent applicable, all terms, covenants, representations and warranties of this Agreement shall be and shall be deemed to have been made in the context of such Alternative Transaction.
  - (ii) to cause to be counted as present for purposes of establishing quorum all the Company Securities, at any meeting of any of the securityholders of the Company at which the Shareholder is entitled to vote, or at any adjournment thereof or in any other circumstances upon which a vote, consent or other approval, with respect to matters contemplated by [clause \(A\)](#) or [clause \(B\)](#) of this [Section 4.1\(a\)\(ii\)](#), is sought, or in any action by written consent of the securityholders of the Company, and to vote or cause to be voted (in person, by proxy or by action by written consent, as applicable, or as otherwise may be required under the articles of the Company) all the Company Securities, in opposition to: (A) any Company Acquisition Proposal; and (B) any other matter, action or proposal which would reasonably be expected to result in a breach of any representation, warranty, covenant or other obligation of the Company under the Business Combination Agreement if such breach requires securityholder approval and is communicated as being such a breach in a notice in writing delivered by SOAC to the Shareholder; provided that, in the case of either [clause \(A\)](#) or [clause \(B\)](#) of this [Section 4.1\(a\)\(ii\)](#), the Business Combination Agreement shall not have been amended or modified without the Shareholder's written consent to decrease, or change the form of, the consideration payable to Company Shareholders or holders of Company Options or Company Warrant;
  - (iii) except pursuant to the Plan of Arrangement or as otherwise expressly contemplated by the Business Combination Agreement or with the prior written consent of SOAC (such consent to be given or withheld in its sole discretion), not to (A) Transfer any Company Securities, or any right or interest therein, (B) enter into (1) any option, warrant, purchase right, or other Contract that could (either alone or in connection with one or more events, developments or events (including the satisfaction or waiver of any conditions precedent)) require such Shareholder to Transfer any Company Securities, or any right or interest therein, or (2) any voting trust, proxy or other Contract with respect to the voting or Transfer of any Company Securities, or any right or interest therein, in a manner inconsistent with the covenants and obligations of this Agreement, or (C) enter

into any Contract to take, or cause to be taken, any of the actions set forth in [clauses \(A\)](#) or [\(B\)](#); provided, however, that the foregoing shall not apply to any Transfer (1) to any Affiliate of such Shareholder; (2) in the case of an individual, by gift to a member of one of the individual's immediate family, to a trust, the beneficiary of which is a member of the individual's immediate family or an Affiliate of such individual; (3) in the case of an individual, by virtue of laws of descent and distribution upon death of the individual; (4) in the case of an individual, pursuant to a qualified domestic relations order; or (5) by virtue of the Shareholder's organizational documents upon liquidation or dissolution of the Shareholder (any transferee of the type set forth in clauses (1) through (5) a "**Permitted Transferee**"); provided, that the transferring Shareholder shall, and shall cause any Permitted Transferee, to enter into a written agreement in form and substance reasonably satisfactory to SOAC, agreeing to be bound by this Agreement (which will include, for the avoidance of doubt, all of the covenants, agreements and obligations of the transferring Shareholder hereunder and the making of all applicable representations and warranties of the transferring Shareholder set forth in [Article 2](#) with respect to such transferee and his, her or its Company Securities, or any right or interest therein, received upon such Transfer, as applicable) prior and as a condition to the occurrence of such Transfer. For purposes of this Agreement, "**Transfer**" means any, direct or indirect, sale, transfer, assignment, pledge, mortgage, exchange, hypothecation, grant of a security interest or encumbrance in or disposition of an interest (whether with or without consideration, whether voluntarily or involuntarily or by operation of law or otherwise).

- (iv) not to exercise any dissent rights in respect of any transaction contemplated by the Business Combination Agreement, including any Alternative Transaction;
  - (v) to execute and deliver all related documentation and take such other actions in support of the Arrangement and the transactions contemplated by the Business Combination Agreement as shall reasonably be requested by the Company or SOAC to consummate the Transactions, including any Alternative Transaction;
  - (vi) the Shareholder hereby revokes any and all previous proxies granted or voting instruction forms or other voting documents delivered that conflict, or are inconsistent, with the matters set forth in this Agreement;
  - (vii) not take any other action of any kind, directly or indirectly, which would make any representation or warranty of the Shareholder set forth in this Agreement untrue or incorrect in any material respect or might reasonably be regarded, individually or in the aggregate, as likely to reduce the success of, or delay or interfere with, the completion of the Transactions contemplated by the Business Combination Agreement, including any Alternative Transaction;
  - (viii) the Shareholder shall be bound by and subject to **Sections 5.3(a) (Confidentiality and Access to Information)**, **5.4(a) (Public Announcements)** and **5.6(a) (Exclusive Dealing)** of the Business Combination Agreement to the same extent that **Sections 5.3(a) (Confidentiality and Access to Information)**, **5.4(a) (Public Announcements)** and **5.6(a) (Exclusive Dealing)** of the Business Combination Agreement apply to the Company, *mutatis mutandis*, as if the Shareholder is directly party thereto; provided that, notwithstanding anything in this Agreement to the contrary, any breach by the Company of its obligations under the Business Combination Agreement shall not be considered a breach of this [Section 4.1\(a\)\(viii\)](#); and
  - (ix) the Shareholder hereby grants an irrevocable power of attorney and hereby irrevocably constitutes and appoints SOAC, or any individual designated by SOAC, as attorney in fact (which appointment is coupled with an interest), with full power of substitution in favour of SOAC, to take all such actions and execute and deliver such documents, instruments or agreements as are necessary to give effect to the covenants set forth in this [Article 4](#).
- (b) If the Shareholder acquires or is issued any additional Company Securities following the date hereof, the Shareholder acknowledges that such additional Company Securities shall be deemed to be Company Securities for the purposes of this Agreement.

**ARTICLE 5  
GENERAL**

**5.1 Termination**

This Agreement shall automatically terminate, without any notice or other action on the part of any Party, upon the earliest to occur of the following:

- (a) the Effective Time;
- (b) the date upon which the Parties agree in writing to terminate this Agreement;
- (c) the date of earlier termination of the Business Combination Agreement in accordance with its terms, except if such termination is made in connection with an Alternative Transaction; and
- (d) the amendment or modification of the Business Combination Agreement without the Shareholder's written consent to decrease, or change the form of, the consideration payable to Company Shareholders or holders of Company Options.

**5.2 Fiduciary Duties**

Notwithstanding anything in this Agreement to the contrary, (a) the Shareholder makes no agreement or understanding herein in any capacity other than in the Shareholder's capacity as a record holder and/or beneficial owner of the Company Securities and not in such Shareholder's capacity as a director, officer or employee of the Company and (b) nothing herein will be construed to limit or affect any action or inaction by the Shareholder or any representative of the Shareholder serving as a member of any Group Company Board or as an officer, employee or fiduciary of any Group Company, in each case, acting in such person's capacity as a director, officer, employee or fiduciary of such Group Company.

**5.3 Effect of Termination**

If this Agreement is terminated pursuant to [Section 5.1](#), this Agreement shall become void and of no force and effect and no Party will have any liability or further obligation to the other Party hereunder. Notwithstanding the foregoing or anything to the contrary in this Agreement, (i) the termination of this Agreement pursuant to [Section 5.1\(c\)](#) shall not affect any Liability on the part of any Party for a Willful Breach of any covenant or agreement set forth in this Agreement prior to such termination or Fraud, (ii) [Section 4.1\(a\)\(viii\)](#) (solely to the extent that it relates to [Section 5.3\(a\) \(Confidentiality and Access to Information\)](#) of the Business Combination Agreement) and this [Article 5](#) (to the extent related to any of the provisions that survive the termination of this Agreement and excluding [Section 5.10](#) (solely to the extent that it relates to [Section 9.1 \(Non Survival\)](#) of the Business Combination Agreement)) shall survive the termination of this Agreement and (iii) [Section 4.1\(a\)\(viii\)](#) (solely to the extent that it relates to [Section 5.4\(a\) \(Public Announcements\)](#) of the Business Combination Agreement) and [Section 5.10](#) (solely to the extent that it relates to [Section 9.1 \(Non Survival\)](#) of the Business Combination Agreement) shall each survive the termination of this Agreement pursuant to [Section 5.1\(a\)](#). For purposes of this [Section 8](#), (x) "**Willful Breach**" means a material breach of this Agreement by a Party that is a consequence of an act undertaken or a failure to act by the breaching Party with the knowledge that the taking of such act or such failure to act would, or would reasonably be expected to, constitute or result in a breach of this Agreement and (y) "**Fraud**" means an act or omission by a Party, and requires: (a) a false or incorrect representation or warranty expressly set forth in this Agreement, (b) with actual knowledge (as opposed to constructive, imputed or implied knowledge) by the Party making such representation or warranty that such representation or warranty expressly set forth in this Agreement is false or incorrect, (c) an intention to deceive another Party, to induce him, her or it to enter into this Agreement, (d) another Party, in justifiable or reasonable reliance upon such false or incorrect representation or warranty expressly set forth in this Agreement, causing such Party to enter into this Agreement, and (e) another Party to suffer damage by reason of such reliance. For the avoidance of doubt, "Fraud" does not include any claim for equitable fraud, promissory fraud, unfair dealings fraud or any torts (including a claim for fraud or alleged fraud) based on negligence or recklessness.

#### **5.4 Notices**

All notices, requests, claims, demands and other communications hereunder shall be in writing and shall be given (and shall be deemed to have been duly given) by delivery in person, by e-mail (having obtained electronic delivery confirmation thereof), or by registered or certified mail (postage prepaid, return receipt requested) (upon receipt thereof) to the other Parties as follows:

- (a) if to SOAC:

c/o Sustainable Opportunities Acquisition Corp.  
1601 Bryan Street, Suite 4141, Dallas, TX 75201

Attention: Scott Leonard; Gina Stryker  
Email: scott.leonard@soa-corp.com; gina.stryker@soa-corp.com

with a copy (which shall not constitute notice) to:

Kirkland & Ellis LLP  
609 Main Street  
Houston, Texas 77002

Attention: Douglas E. Bacon, P.C.; Ryan Brissette  
Email: doug.bacon@kirkland.com; ryan.brissette@kirkland.com

with a copy (which shall not constitute notice) to:

Stikeman Elliott LLP  
1155 René-Lévesque Blvd. West 41st Floor  
Montréal, Quebec H3B 3V2

Attention: Warren Katz  
Email: wkatz@stikeman.com

- (b) if to the Shareholder, at the address set forth on the Shareholder's signature page hereto.

or to such other address as the Party to whom notice is given may have previously furnished to the others in writing in the manner set forth above. Any demand, notice or other communication given by personal delivery will be conclusively deemed to have been given on the day of actual delivery thereof and, if given by electronic communication, on the day of transmittal thereof if given during the normal business hours of the recipient and on the Business Day during which such normal business hours next occur if not given during such hours on any day.

#### **5.5 Benefit of Agreement**

This Agreement shall be for the sole benefit of the Parties and their respective successors and permitted assigns and is not intended, nor shall be construed, to give any Person, other than the Parties and their respective successors and assigns, any legal or equitable right, benefit or remedy of any nature whatsoever by reason of this Agreement. Nothing in this Agreement, expressed or implied, is intended to or shall constitute the Parties, partners or participants in a joint venture.

#### **5.6 Non-Recourse**

Except for claims pursuant to the Business Combination Agreement or any other Ancillary Document by any party(ies) thereto against any other party(ies) thereto on the terms and subject to the conditions therein, each Party agrees that (a) this Agreement may only be enforced against, and any action for breach of this Agreement may only be made against, the Parties, and no claims of any nature whatsoever (whether in tort, contract or otherwise) arising under or relating to this Agreement, the negotiation hereof or its subject matter, or the transactions contemplated hereby shall be asserted against any Company Non-Party Affiliate or any SOAC Non-Party Affiliate (other than the Shareholders named as parties hereto), and (b) no Company Non-Party Affiliate or SOAC Non-Party Affiliate (other than the Shareholders named as parties hereto), shall have any Liability arising out of or relating to this Agreement, the negotiation hereof or its subject matter, or the transactions contemplated hereby, including with

[Table of Contents](#)

respect to any claim (whether in tort, contract or otherwise) for breach of this Agreement or in respect of any written or oral representations made or alleged to be made in connection herewith, or for any actual or alleged inaccuracies, misstatements or omissions with respect to any information or materials of any kind furnished in connection with this Agreement, the negotiation hereof or the transactions contemplated hereby.

**5.7 Time**

Time is of the essence of this Agreement. The mere lapse of time in the performance of the terms of this Agreement by any Party will have the effect of putting such Party in default.

**5.8 Further Assurances**

Subject to the provisions of this Agreement, the Parties will, from time to time, do all acts and things and execute and deliver all such further documents and instruments, as the other Parties may, reasonably require to effectively carry out or better evidence or perfect the full intent and meaning of this Agreement.

**5.9 Governing Law**

This Agreement shall be governed by, construed and enforced in accordance with, the laws of the Province of British Columbia and the federal laws of Canada applicable therein.

**5.10 Incorporation by Reference**

*Sections 9.1 (Non-Survival), 9.2 (Entire Agreement; Assignment), 9.3 (Amendment), 9.7 (Constructions; Interpretation), 9.10 (Severability), 9.11 (Counterparts; Electronic Signatures), Section 9.14 (Extension; Waiver), 9.15 (Waiver of Jury Trial), 9.16 (Submission to Jurisdiction) and 9.17 (Remedies) of the Business Combination Agreement are incorporated herein and shall apply to this Agreement mutatis mutandis.*

## SPONSOR LETTER AGREEMENT

This SPONSOR LETTER AGREEMENT (this “**Agreement**”), dated as of March 4, 2021, is made by and among Sustainable Opportunities Holdings LLC, a Delaware limited liability company (the “**Sponsor**”), all other holders of SOAC Class B Shares, as set forth on Schedule I hereto (the “**Other Class B Holders**”, and together with the Sponsor, collectively, the “**Shareholders**”), Sustainable Opportunities Acquisition Corp., a Cayman Islands exempted company (“**SOAC**”), and DeepGreen Metals Inc., a corporation existing under the laws of British Columbia, Canada (the “**Company**”). The Sponsor, the Other Class B Holders, SOAC and the Company shall be referred to herein from time to time collectively as the “**Parties**”. Capitalized terms used but not otherwise defined herein shall have the meanings ascribed to such terms in the Business Combination Agreement (as defined below).

WHEREAS, SOAC, the Company and certain other Persons party thereto entered into that certain Business Combination Agreement, dated as of the date hereof (as it may be amended, restated or otherwise modified from time to time in accordance with its terms, the “**Business Combination Agreement**”); and

WHEREAS, the Business Combination Agreement contemplates that the Parties will enter into this Agreement concurrently with the entry into the Business Combination Agreement by the parties thereto, pursuant to which, among other things, (a) the Shareholders agree that they will vote in favor of approval of the Business Combination Agreement and the transactions contemplated thereby (including the SOAC Continuance and the Transactions), (b) each Shareholder agrees, subject to and conditioned upon the Closing and effective as of immediately prior to the Effective Time, to waive any adjustment to the conversion ratio set forth in the Governing Documents of SOAC, including under Article 17 of the Amended and Restated Articles of Association of SOAC, or any other anti-dilution or similar protection with respect to all of the SOAC Class B Shares owned by him, her or it (whether in connection with the transactions contemplated by the Business Combination Agreement, the PIPE Subscription Agreements, or otherwise) and (c) the Sponsor agrees, subject to and conditioned upon the Closing and effective as of immediately following the SOAC Continuance, to exchange 741,000 SOAC Common Shares held by the Sponsor for Vesting Sponsor Shares (as defined herein) and the Sponsor Earnout Shares, in each case, on the terms and subject to the conditions of this Agreement and the exchange agreement in the form attached hereto as Exhibit A (the “**Exchange Agreement**”).

NOW, THEREFORE, in consideration of the premises and the mutual promises contained herein and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties, each intending to be legally bound, hereby agree as follows:

1. **Agreement to Vote.** Each Shareholder (on behalf of himself, herself and itself and not the other Shareholders) hereby irrevocably agrees, at any meeting of the shareholders of SOAC duly called and convened in accordance with the Governing Documents of SOAC, whether or not adjourned and however called, including at the SOAC Shareholders Meeting or otherwise, and in any action by written consent of the shareholders of SOAC, (i) to vote, or cause to be voted, or execute and return, or cause to be executed and returned, an action by written consent with respect to, as applicable, all of such Shareholder’s SOAC Shares held of record or beneficially by such Shareholder as of the date of this Agreement, or to which such Shareholder acquires record or beneficial ownership after the date hereof and prior to the Closing (collectively, the “**Subject SOAC Equity Securities**”) in favor of each of the Transaction Proposals, in each case, to the extent Subject SOAC Equity Securities are entitled to vote thereon or consent thereto, (ii) when such meeting is held, appear at such meeting or otherwise cause the Subject SOAC Equity Securities to be counted as present thereat for the purpose of establishing a quorum, and (iii) to vote, or cause to be voted against, against or withhold written consent, or cause written consent to be withheld, with respect to, as applicable, (A) any SOAC Acquisition Proposal or (B) any other matter, action or proposal that would reasonably be expected to result in (x) a breach of any of the SOAC Parties’ covenants, agreements or obligations under the Business Combination Agreement or (y) any of the conditions to the Closing set forth in Sections 6.1, 6.2 or 6.3 of the Business Combination Agreement not being satisfied.

2. **Waiver of Anti-dilution Protection.** Each Shareholder hereby (a) waives, subject to and conditioned upon the Closing and effective as of immediately prior to the Effective Time (for himself, herself or itself and for his, her or its, successors, heirs and assigns), and (b) agrees not to assert or perfect, any rights to adjustment or other anti-dilution protections with respect to the rate that the SOAC Class B Shares held by him, her or it convert into

SOAC Class A Shares, including those set out in Article 17 of the Amended and Restated Articles of Association of SOAC, whether in connection with the transactions contemplated by the Business Combination Agreement, the PIPE Subscription Agreements or otherwise. SOAC hereby acknowledges and agrees to such waiver.

3. Transfer of Shares. Except as expressly contemplated by the Business Combination Agreement or with the prior written consent of the Company (such consent to be given or withheld in its sole discretion), from and after the date hereof, each Shareholder hereby agrees that he, she or it shall not (i) Transfer any of his, her or its Subject SOAC Equity Securities or any right, title or interest therein, (ii) enter into (A) any option, warrant, purchase right, or other Contract that could (either alone or in connection with one or more events, developments or events (including the satisfaction or waiver of any conditions precedent)) require such Shareholder to Transfer his, her or its Subject SOAC Equity Securities, or any right, title or interest therein or (B) any voting trust, proxy or other Contract with respect to the voting or Transfer of the Subject SOAC Equity Securities, or any right, title or interest therein, in a manner inconsistent with the covenants and obligations of this Agreement, or (iii) enter into any Contract to take, or cause to be taken, any of the actions set forth in clauses (i) or (ii); provided, however, that the foregoing shall not apply to any Transfer (1) to SOAC's officers or directors, any members or partners of the Sponsor, any affiliates of the Sponsor, or any employees of such affiliate; (2) in the case of an individual, by gift to a member of one of the individual's immediate family, to a trust, the beneficiary of which is a member of the individual's immediate family or an Affiliate of such individual; (3) in the case of an individual, by virtue of laws of descent and distribution upon death of the individual; (4) in the case of an individual, pursuant to a qualified domestic relations order; or (5) by virtue of the Sponsor's organizational documents upon liquidation or dissolution of the Sponsor (any transferee of the type set forth in clauses (1) through (5) a "**Permitted Transferee**"); provided, that the transferring Shareholder shall, and shall cause any Permitted Transferee, to enter into a written agreement in form and substance reasonably satisfactory to the Company, agreeing to be bound by this Agreement (which will include, for the avoidance of doubt, all of the covenants, agreements and obligations of the transferring Shareholder hereunder and the making of all applicable representations and warranties of the transferring Shareholder set forth in this Agreement with respect to such transferee and his, her or its Subject SOAC Equity Securities, or any right, title or interest therein received upon such Transfer, as applicable) prior and as a condition to the occurrence of such Transfer. For purposes of this Agreement, "**Transfer**" means any, direct or indirect, sale, transfer, assignment, pledge, mortgage, exchange, hypothecation, grant of a security interest or encumbrance in or disposition of an interest (whether with or without consideration, whether voluntarily or involuntarily or by operation of law or otherwise).

4. Vesting Sponsor Shares and Sponsor Earnout Shares.

a. The Sponsor and SOAC agree that, subject to and conditioned upon the Closing, immediately following the SOAC Continuance and immediately prior to the Effective Time, the Sponsor and SOAC shall enter into the Exchange Agreement pursuant to which 741,000 of the SOAC Common Shares (which, for the avoidance of doubt, shall consist of the SOAC Class B Shares prior to the SOAC Continuance) beneficially owned by the Sponsor shall be exchanged for 741,000 Class J Special Shares in the capital of SOAC (the "**Class J Conversion**"), convertible into SOAC Common Shares and redeemable in accordance with their terms (the "**Vesting Sponsor Shares**") and the Sponsor Earnout Shares. For the avoidance of doubt, any SOAC Common Shares beneficially owned by any Person other than the Sponsor, including the Other B Shareholders, and any SOAC Common Shares beneficially owned by the Sponsor, other than the 741,000 SOAC Common Shares described in the foregoing sentence, shall not be exchanged pursuant to this Section 4.a.

b. The Sponsor hereby acknowledges and agrees that, pursuant to the terms of the Business Combination Agreement, the SOAC Articles will, following the occurrence of the SOAC Continuance, provide, with respect to the Vesting Sponsor Shares, that if, (i) on any twenty (20) Trading Days within any thirty (30) Trading Day period the closing price of the SOAC Common Shares is greater than or equal to \$12.00 or (ii) there occurs any transaction resulting in a Change of Control with a valuation of the SOAC Common Shares that is greater than or equal to \$12.00 per SOAC Common Share, then all of the Vesting Sponsor Shares shall automatically be converted into SOAC Common Shares (the "**Automatic Conversion**"). If there occurs any transaction resulting in a Change of Control and the applicable valuation of the SOAC Common Shares is less than \$12.00 per SOAC Common Share, then each outstanding Vesting Sponsor Share shall be redeemable by the Company, without any action or consent on the part of the Sponsor as set forth in the SOAC Articles.

c. SOAC shall take such actions as are reasonably requested by the Sponsor to evidence the issuances to or ownership by the Sponsor of SOAC Common Shares pursuant to this [Section 4](#), including through the provision of an updated securities registry showing such issuances (as certified by an officer of SOAC responsible for maintaining such registry or the applicable registrar or transfer agent of SOAC).

d. In the event SOAC effects a subdivision or consolidation of the outstanding SOAC Common Shares into a greater or lesser number of SOAC Common Shares, then (i) the Vesting Sponsor Shares shall be subdivided or consolidated in the same manner and (ii) the dollar values set forth in [Section 4.b](#) above shall be appropriately amended to provide to the Sponsor the same economic effect as contemplated by this Agreement prior to such event.

e. So long as the Vesting Sponsor Shares are outstanding, SOAC shall take all reasonable efforts for SOAC to remain listed as a public company on, and for the SOAC Common Shares (including, for the avoidance of doubt, the SOAC Common Shares issuable upon conversion of the Vesting Sponsor Shares in accordance with this [Section 4](#) to be tradeable over, the NYSE; provided, however, the foregoing shall not limit SOAC from consummating a Change of Control or entering into a Contract that contemplates a Change of Control. Subject to the terms hereof, upon the consummation of any Change of Control, other than as set forth in [Section 4.b](#) above, SOAC shall have no further obligations pursuant to this [Section 4.e](#).

f. The Sponsor intends to make a protective election under Section 83(b) of the Code with respect to the receipt of the Vesting Sponsor Shares.

g. As a condition to the issuance of any Sponsor Earnout Shares or Vesting Sponsor Shares to a Shareholder, such Shareholder shall enter into an agreement with SOAC to provide, in respect of its ownership of such Sponsor Earnout Shares or Vesting Sponsor Shares, the same covenants, agreements and acknowledgements as will be contained in the Letter of Transmittal and provided by holders of other classes of Special Shares of SOAC to be issued at the Effective Time pursuant to the Transactions.

#### 5. [Other Agreements](#).

a. Each Shareholder hereby agrees that he, she or it shall (i) be bound by and subject to Sections 5.3(a) (Confidentiality and Access to Information) and 5.4(a) (Public Announcements) of the Business Combination Agreement to the same extent as such provisions apply to the parties to the Business Combination Agreement, as if such Shareholder is directly a party thereto, and (ii) not, directly or indirectly, take any action that SOAC is prohibited from taking pursuant to Section 5.6(a) (Exclusive Dealing) of the Business Combination Agreement.

b. Each Shareholder acknowledges and agrees that the Company is entering into the Business Combination Agreement in reliance upon each Shareholder entering into this Agreement and agreeing to be bound by, and perform, or otherwise comply with, as applicable, the agreements, covenants and obligations contained in this Agreement and but for each such Shareholder entering into this Agreement and agreeing to be bound by, and perform, or otherwise comply with, as applicable, the agreements, covenants and obligations contained in this Agreement, the Company would not have entered into or agreed to consummate the transactions contemplated by the Business Combination Agreement or the Ancillary Documents.

c. Each Shareholder hereby agrees that it shall not exercise or submit a request to exercise the SOAC Shareholder Redemption with respect to any SOAC Shares held by him, her or it.

d. Each Shareholder hereby agrees that it shall, at or prior to the Closing, deliver, or caused to be delivered, to the Company the Registration Rights Agreement duly executed by the Shareholder or, if applicable, an authorized officer of the Shareholder, dated as of the Closing Date.

6. [Termination of Lock-up Period](#). Each of the Shareholders hereby agrees that subject to, and conditioned upon the occurrence and effective as of, the Closing, Section 5 of those certain Letter Agreements, dated May 8, 2020 (the "[Insider Letter Agreements](#)"), by and between SOAC and each of the Shareholders and certain other parties thereto, shall be amended and restated in its entirety as follows:

"5. [Reserved](#)."

The amendment and restatement of the Insider Letter Agreements set forth in this [Section 6](#) shall be void and of no force and effect if the Business Combination Agreement is terminated in accordance with its terms.

7. **Tax Treatment.** The parties to this Agreement intend that, for U.S. federal and all applicable state and local income tax purposes, (1) each of the Class J Conversion and Automatic Conversion qualify as a “reorganization” within the meaning of Section 368(a)(1)(E) of the Code and (2) this Agreement be, and hereby adopt this Agreement as, a “plan of reorganization” within the meaning of Section 368 of the Code. The parties to this Agreement shall not take any position inconsistent with the intent set forth in this [Section 7](#) except to the extent otherwise required by a “determination” as defined in Section 1313 of the Code. References in this [Section 7](#) to the Code shall include references to any similar or analogous provisions of state or local Law.

8. **Termination.** This Agreement shall automatically terminate, without any notice or other action by any Party, and be void *ab initio* upon the earlier of (a) the Effective Time and (b) the termination of the Business Combination Agreement in accordance with its terms (except if such termination is made concurrently with the entering into of a definitive agreement in connection with an Alternative Transaction). Upon termination of this Agreement as provided in the immediately preceding sentence, none of the Parties shall have any further obligations or Liabilities under, or with respect to, this Agreement. Notwithstanding the foregoing or anything to the contrary in this Agreement, (i) the termination of this Agreement pursuant to [Section 8\(b\)](#) shall not affect any Liability on the part of any Party for a Willful Breach of any covenant or agreement set forth in this Agreement prior to such termination or Fraud, (ii) [Section 5.a\(i\)](#) (solely to the extent that it relates to Section 5.4(a) (Public Announcements) of the Business Combination Agreement), this [Section 8](#) through [Section 13](#) and [Section 14](#) (to the extent related to any of the provisions that survive the termination of this Agreement) shall survive the termination of this Agreement pursuant to [Section 8\(a\)](#), and (iii) [Section 5.a\(i\)](#) (solely to the extent that it relates to Section 5.3(a) (Confidentiality and Access to Information) of the Business Combination Agreement), this [Section 8](#) through [Section 10](#), [Section 12](#), [Section 13](#) and [Section 14](#) (to the extent related to any of the provisions that survive the termination of this Agreement and excluding Sections 9.1 (Non-Survival) of the Business Combination Agreement) shall survive the termination of this Agreement pursuant to [Section 8\(b\)](#). For purposes of this [Section 8](#), (x) “**Willful Breach**” means a material breach of this Agreement by a Party that is a consequence of an act undertaken or a failure to act by the breaching Party with the knowledge that the taking of such act or such failure to act would, or would reasonably be expected to, constitute or result in a breach of this Agreement and (y) “**Fraud**” means an act or omission by a Party, and requires: (a) a false or incorrect representation or warranty expressly set forth in this Agreement, (b) with actual knowledge (as opposed to constructive, imputed or implied knowledge) by the Party making such representation or warranty that such representation or warranty expressly set forth in this Agreement is false or incorrect, (c) an intention to deceive another Party, to induce him, her or it to enter into this Agreement, (d) another Party, in justifiable or reasonable reliance upon such false or incorrect representation or warranty expressly set forth in this Agreement, causing such Party to enter into this Agreement, and (e) another Party to suffer damage by reason of such reliance. For the avoidance of doubt, “Fraud” does not include any claim for equitable fraud, promissory fraud, unfair dealings fraud or any torts (including a claim for fraud or alleged fraud) based on negligence or recklessness.

9. **No Recourse.** Except for claims pursuant to the Business Combination Agreement or any other Ancillary Document by any party(ies) thereto against any other party(ies) thereto on the terms and subject to the conditions therein, each Party agrees that (a) this Agreement may only be enforced against, and any action for breach of this Agreement may only be made against, the Parties, and no claims of any nature whatsoever (whether in tort, contract or otherwise) arising under or relating to this Agreement, the negotiation hereof or its subject matter, or the transactions contemplated hereby shall be asserted against any Company Non-Party Affiliate or any SOAC Non-Party Affiliate (other than the Shareholders named as parties hereto), and (b) no Company Non-Party Affiliate or SOAC Non-Party Affiliate (other than the Shareholders named as parties hereto), shall have any Liability arising out of or relating to this Agreement, the negotiation hereof or its subject matter, or the transactions contemplated hereby, including with respect to any claim (whether in tort, contract or otherwise) for breach of this Agreement or in respect of any written or oral representations made or alleged to be made in connection herewith, or for any actual or alleged inaccuracies, misstatements or omissions with respect to any information or materials of any kind furnished in connection with this Agreement, the negotiation hereof or the transactions contemplated hereby. Notwithstanding anything to the contrary in this Agreement, (i) in no event shall any Shareholder have any obligations or Liabilities related to or arising out of the covenants, agreements, obligations, representations or warranties of any other Shareholder under this Agreement (including related to or arising out of the breach of any such covenant, agreement, obligation, representation or warranty by any other Shareholder), (ii) in no event shall SOAC have any obligations or Liabilities related to or arising out of the covenants, agreements, obligations, representations or warranties of any Shareholder under this Agreement (including related to or arising out of any breach of any such covenant, agreement, obligation, representation or warranty by any such Shareholder).

10. Fiduciary Duties. Notwithstanding anything in this Agreement to the contrary, (a) each Shareholder makes no agreement or understanding herein in any capacity other than in such Shareholder's capacity as a record holder and/or beneficial owner of the Subject SOAC Equity Securities, and not, in the case of each Other Class B Shareholder in such Other Class B Shareholder's capacity as a director, officer or employee of any SOAC Party, and (b) nothing herein will be construed to limit or affect any action or inaction by each Other Class B Shareholder or any representative of the Sponsor serving as a member of the board of directors (or other similar governing body) of any SOAC Party or as an officer, employee or fiduciary of any SOAC Party, in each case, acting in such person's capacity as a director, officer, employee or fiduciary of such SOAC Party.

11. Expenses. In the event, the sum of (a) the SOAC Expenses, *plus* (b) the SOAC Liabilities exceeds \$50 million at the Closing, not including any amounts set forth on Schedule II hereto, the Sponsor shall pay, or cause to be paid, to SOAC at the Closing out of immediately available funds to a bank account designated by the SOAC such excess amount (which, for the avoidance of doubt, shall not include any amounts set forth on Schedule II hereto) in United States Dollars.

12. No Third Party Beneficiaries. This Agreement shall be for the sole benefit of the Parties and their respective successors and permitted assigns and is not intended, nor shall be construed, to give any Person, other than the Parties and their respective successors and assigns, any legal or equitable right, benefit or remedy of any nature whatsoever by reason this Agreement. Nothing in this Agreement, expressed or implied, is intended to or shall constitute the Parties, partners or participants in a joint venture.

13. Notices. All notices, requests, claims, demands and other communications hereunder shall be in writing and shall be given (and shall be deemed to have been duly given) by delivery in person, by e-mail (having obtained electronic delivery confirmation thereof (i.e., an electronic record of the sender that the email was sent to the intended recipient thereof without an "error" or similar message that such email was not received by such intended recipient)), or by registered or certified mail (postage prepaid, return receipt requested) (upon receipt thereof) to the other Parties as follows:

**AMENDED AND RESTATED REGISTRATION RIGHTS AGREEMENT**

THIS AMENDED AND RESTATED REGISTRATION RIGHTS AGREEMENT (this “**Agreement**”), dated as of [•], 2021, is made and entered into by and among [•] (f/k/a Sustainable Opportunities Acquisition Corp.), a company existing under the laws of British Columbia, Canada (the “**Company**”), Sustainable Opportunities Holdings LLC, a Delaware limited liability company (the “**Sponsor**”), the undersigned parties listed under Sponsor Group Holders on the signature page(s) hereto (each such party, a “**Sponsor Group Holder**” and, collectively, the “**Sponsor Group Holders**”), and the undersigned parties listed under DeepGreen Holders on the signature page(s) hereto (each such party, a “**DeepGreen Holder**” and, collectively, the “**DeepGreen Holders**”). The Sponsor Group Holders, the DeepGreen Holders and any person or entity who hereafter becomes a party to this Agreement pursuant to Section 5.2 of this Agreement, are each referred to herein as a “**Holder**” and collectively as the “**Holdings**.”

**RECITALS**

**WHEREAS**, the Company has entered into that certain Business Combination Agreement (the “**Business Combination Agreement**”), dated as of March 4, 2021, by and among the Company, 1291924 B.C. Unlimited Liability Company, an unlimited liability company existing under the laws of British Columbia, Canada, and DeepGreen Metals Inc., a company existing under the laws of British Columbia, Canada;

**WHEREAS**, pursuant to the transactions contemplated by the Business Combination Agreement, the DeepGreen Holders received (i) common shares (“**Common Shares**”) of the Company (the “**DeepGreen Shares**”), and (ii) the DeepGreen Earnout Securities (as defined below) upon the closing of such transactions (the “**Closing**”);

**WHEREAS**, the Existing Parties (as defined below) collectively hold an aggregate of 6,759,000 Common Shares (the “**Founder Shares**”), which Common Shares were automatically converted from 6,759,000 Company’s Class B ordinary shares, par value \$0.0001 per share, held by the Existing Parties prior to the Closing;

**WHEREAS**, pursuant to the transactions contemplated by the Business Combination Agreement and subject to the terms and conditions set forth therein, the Sponsor received the Sponsor Earnout Securities (as defined below) at the Closing;

**WHEREAS**, the Company and the Sponsor are party to that certain Private Placement Warrants Purchase Agreement, dated May 5, 2020, pursuant to which the Sponsor purchased 9,500,000 warrants (the “**Private Placement Warrants**”) in private placement transactions occurring simultaneously with the closing of the Company’s initial public offering, and the Sponsor or an affiliate of the Sponsor or any of the Company’s officers or directors may, but are not obligated to, loan the Company funds for certain purposes, of which up to \$1,500,000 of such loans may be convertible into an additional 1,500,000 Private Placement Warrants (the “**Working Capital Warrants**”);

**WHEREAS**, the Company has entered into separate Subscription Agreements (the “**Subscription Agreements**”) with the subscribers identified therein (the “**PIPE Investors**”), pursuant to which (i) the PIPE Investors purchased an aggregate of 33,000,000 Common Shares (the “**PIPE Shares**”) in a private placement transaction that closed substantially concurrently with and immediately prior to the Closing, and (ii) the PIPE Investors were granted certain registration rights with respect to the PIPE Shares;

**WHEREAS**, on March 4, 2021, the Company issued to Allseas Group S.A. a warrant to purchase up to 10,000,000 shares of Common Stock, subject to certain vesting and other conditions described therein (the “**Allseas Warrant**”);

**WHEREAS**, the Company, the Sponsor and certain of the Sponsor Group Holders (the Sponsor and such Sponsor Group Holders being collectively referred to herein as the “**Existing Parties**”) are party to that certain Registration and Shareholder Rights Agreement dated May 8, 2020 (the “**Existing Registration Rights Agreement**”), pursuant to which, among other matters, such Existing Parties were granted certain registration rights with respect to the Company securities then held by the Existing Parties;

**WHEREAS**, pursuant to Section 6.8 of the Existing Registration Rights Agreement, the provisions, covenants and conditions set forth therein may be waived, amended or modified upon the written consent of the Company and the Existing Parties holding a majority-in-interest of the “Registrable Securities” (as such term was defined in the Existing Registration Rights Agreement) at the time in question; and

**WHEREAS**, the Company and all of the Existing Parties desire to amend and restate the Existing Registration Rights Agreement in order to provide the Sponsor Group Holders and the DeepGreen Holders certain registration rights, as set forth in this Agreement.

**NOW, THEREFORE**, in consideration of the representations, covenants and agreements contained herein, and certain other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties hereto, intending to be legally bound, hereby agree as follows:

## **ARTICLE I**

### **DEFINITIONS**

1.1 **Definitions.** The terms defined in this **Article I** shall, for all purposes of this Agreement, have the respective meanings set forth below:

“**Adverse Disclosure**” shall mean any public disclosure of material non-public information, which disclosure, in the good faith judgment of the principal executive officer or principal financial officer of the Company, after consultation with counsel to the Company, (i) would be required to be made in any Registration Statement or Prospectus in order for the applicable Registration Statement or Prospectus not to contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements contained therein (in the case of any Prospectus and any preliminary Prospectus, in the light of the circumstances under which they were made) not misleading, (ii) would not be required to be made at such time if the Registration Statement were not being filed, and (iii) the Company has a bona fide business purpose for not making such information public.

“**Agreement**” shall have the meaning given in the Preamble.

“**Allseas Warrant**” shall have the meaning given in the Recitals hereto.

“**Board**” shall mean the Board of Directors of the Company.

“**Business Combination Agreement**” shall have the meaning given in the Recitals hereto.

“**Commission**” shall mean the U.S. Securities and Exchange Commission.

“**Common Shares**” shall have the meaning given in the Recitals hereto.

“**Company**” shall have the meaning given in the Preamble.

“**Company Shelf Takedown Notice**” shall have the meaning given in **subsection 2.1.3.**

“**DeepGreen Earnout Securities**” means (i) 5,000,000 Class A Special Shares, (ii) 10,000,000 Class B Special Shares, (iii) 10,000,000 Class C Special Shares, (iv) 20,000,000 Class D Special Shares, (v) 20,000,000 Class E Special Shares, (vi) 20,000,000 Class F Special Shares, (vii) 25,000,000 Class G Special Shares, and (viii) 25,000,000 Class H Special Shares, in each case, in the capital of the Company.

“**DeepGreen Earnout Shares**” means the Common Shares underlying the DeepGreen Earnout Securities.

“**DeepGreen Holders**” shall have the meaning given in the Preamble.

“**DeepGreen Lock-up Periods**” shall have the meaning given in **subsection 3.7.**

“**DeepGreen Management Lock-up Period**” shall mean, with respect to the DeepGreen Shares listed on *Schedule A* hereto,<sup>1</sup> the period ending on the earlier of (A) 540 days after the Closing and (B) the date on which (x) the Common Shares has traded at a price that is greater than or equal to \$12.00 per share (as adjusted for stock splits, stock dividends, reorganizations, recapitalizations and the like) during any 20 trading days within any 30 consecutive trading day period after the Closing or (y) the Company completes a liquidation, merger, stock exchange, reorganization or other similar transaction that results in all of the Company’s public stockholders having the right to exchange their shares of Common Shares for cash, securities or other property.

“**DeepGreen Shares**” shall have the meaning given in the Recitals hereto.

“**DeepGreen Shares Lock-up Period**” shall mean, with respect to the DeepGreen Shares listed on *Schedule B* hereto<sup>2</sup>, the period ending on the earlier of (A) 180 days after the Closing and (B) the date on which (x) the Common Shares has traded at a price that is greater than or equal to \$12.00 per share (as adjusted for stock splits, stock dividends, reorganizations, recapitalizations and the like) during any 20 trading days within any 30 consecutive trading days after the Closing or (y) the Company completes a liquidation, merger, stock exchange, reorganization or other similar transaction that results in all of the Company’s public stockholders having the right to exchange their Common Shares for cash, securities or other property.

“**Demand Registration**” shall have the meaning given in [subsection 2.2.1](#).

“**Demanding Holders**” shall have the meaning given in [subsection 2.2.1](#).

“**Effectiveness Deadline**” shall have the meaning given in [subsection 2.1.1](#).

“**Exchange Act**” shall mean the Securities Exchange Act of 1934, as it may be amended from time to time.

“**Existing Parties**” shall have the meaning given in the Recitals hereto.

“**Existing Registration Rights Agreement**” shall have the meaning given in the Recitals hereto.

“**Form S-1**” shall have the meaning given in [subsection 2.1.1](#).

“**Form S-3**” shall have the meaning given in [subsection 2.1.2](#).

“**Founder Lock-up Periods**” shall have the meaning given in [subsection 3.7](#).

“**Founder Shares**” shall have the meaning given in the Recitals hereto.

“**Founder Shares Six-Month Lock-up Period**” shall mean, with respect to the securities listed on *Schedule C* hereto<sup>3</sup>, the period ending on the earlier of (A) 180 days after the Closing and (B) the date on which (x) the Common Shares has traded at a price that is greater than or equal to \$12.00 per share (as adjusted for stock splits, stock dividends, reorganizations, recapitalizations and the like) during any 20 trading days within any 30 consecutive trading days after the Closing, or (y) the Company completes a liquidation, merger, stock exchange, reorganization or other similar transaction that results in all of the Company’s public stockholders having the right to exchange their Common Shares for cash, securities or other property.

“**Founder Shares Twelve-Month Lock-up Period**” shall mean, with respect to the securities listed on *Schedule D* hereto<sup>4</sup>, the period ending on the earlier of (A) 360 days after the Closing and (B) the date on which (x) the Common Shares has traded at a price that is greater than or equal to \$12.00 per share

---

1 Note: Schedule A shall include an aggregate of 10% of the DeepGreen Shares held by certain members of DeepGreen management.

2 Note: Schedule B shall include Deep Green Shares (other than the DeepGreen Management Shares) held by DeepGreen Holders holding in excess of one percent (1%) of the total number of shares of DeepGreen issued and outstanding immediately prior to the Closing.

3 Note: Schedule C shall include securities equal to 50% of all shares, warrants and underlying shares held by the Sponsor and its affiliates, and directors of SOAC.

4 Note: Schedule D shall include securities equal to 50% of all shares, warrants and underlying shares held by the Sponsor and its affiliates, and directors of SOAC.

(as adjusted for stock splits, stock dividends, reorganizations, recapitalizations and the like) during any 20 trading days within any 30 consecutive trading days commencing at least 150 days after the Closing; provided that all of the DeepGreen Shares have been registered on an effective Registration Statement filed pursuant to subsection 2.1.1, or (y) the completion by the Company of a liquidation, merger, stock exchange, reorganization or other similar transaction that results in all of the Company's public stockholders having the right to exchange their Common Shares for cash, securities or other property.

**"Holders"** shall have the meaning given in the Preamble.

**"Insider Letter"** shall mean that certain letter agreement, dated as of May 8, 2020, by and among the Company and the Sponsor, as in effect immediately prior to the Closing.

**"Maximum Number of Securities"** shall have the meaning given in subsection 2.2.4.

**"Misstatement"** shall mean an untrue statement of a material fact or an omission to state a material fact required to be stated in a Registration Statement or Prospectus or necessary to make the statements in a Registration Statement or Prospectus (in the case of any Prospectus, in the light of the circumstances under which they were made) not misleading.

**"Lock-up Periods"** shall mean the Founder Shares Six-Month Lock-up Period, the Founder Shares Twelve-Month Lock-up Period, the DeepGreen Shares Lock-up Period, and the DeepGreen Management Lock-Up Period.

**"Permitted Transferees"** shall mean a person or entity to whom a Holder of Registrable Securities is or was permitted to transfer such Registrable Securities prior to the expiration of any applicable lock-up period, under the Insider Letter, this Agreement or any other applicable agreement between such Holder and the Company and to any transferee thereafter.

**"Piggyback Registration"** shall have the meaning given in subsection 2.3.1.

**"PIPE Investors"** shall have the meaning given in the Recitals hereto.

**"PIPE Shares"** shall have the meaning given in the Recitals hereto.

**"Private Placement Warrants"** shall have the meaning given in the Recitals hereto.

**"Prospectus"** shall mean the prospectus included in any Registration Statement, as supplemented by any and all prospectus supplements and as amended by any and all post-effective amendments and including all material incorporated by reference in such prospectus.

**"Registrable Security"** shall mean (a) the Founder Shares, (b) the Private Placement Warrants, (c) the DeepGreen Shares, (d) the DeepGreen Earnout Shares, (e) the Sponsor Earnout Shares, (f) the Common Shares issued or issuable upon the exercise of any Private Placement Warrants, (g) the Working Capital Warrants (including any Ordinary Shares issued or issuable upon the conversion of working capital loans), (h) the Common Shares issued or issuable upon the exercise of the Allseas Warrant; (i) any outstanding Common Shares or any other equity security (including the Common Shares issued or issuable upon the exercise or conversion of any other equity security) of the Company held by a Holder as of immediately following the Closing, (j) any Common Shares issued or issuable upon the exercise of any Working Capital Warrants, (k) any Common Shares held by unitholders or members of the board of managers of the Sponsor immediately prior to the Closing, and (l) any other equity security of the Company issued or issuable with respect to any such Common Shares by way of a stock dividend or stock split or in connection with a combination of shares, recapitalization, merger, consolidation or reorganization; provided, however, that, as to any particular Registrable Security, such securities shall cease to be Registrable Securities when: (A) a Registration Statement with respect to the sale of such securities shall have become effective under the Securities Act and such securities shall have been sold, transferred, disposed of or exchanged in accordance with such Registration Statement; (B) such securities shall have been otherwise transferred, new certificates for such securities not bearing a legend restricting further transfer shall have been delivered by the Company and subsequent public distribution of such securities shall not require registration under the Securities Act; (C) such securities shall have ceased to be outstanding; (D) such securities may be sold without volume or

manner of sale restrictions pursuant to Rule 144 promulgated under the Securities Act; or (E) such securities have been sold to, or through, a broker, dealer or underwriter in a public distribution or other public securities transaction.

“**Registration**” shall mean a registration effected by preparing and filing a registration statement or similar document in compliance with the requirements of the Securities Act, and the applicable rules and regulations promulgated thereunder, and such registration statement becoming effective.

“**Registration Expenses**” shall mean the out-of-pocket expenses of a Registration, including, without limitation, the following:

(A) all registration and filing fees (including fees with respect to filings required to be made with the Financial Industry Regulatory Authority, Inc.) and any securities exchange on which the Common Shares is then listed;

(B) fees and expenses of compliance with securities or blue sky laws (including reasonable fees and disbursements of counsel for the Underwriters in connection with blue sky qualifications of Registrable Securities);

(C) printing, messenger, telephone and delivery expenses;

(D) reasonable fees and disbursements of counsel for the Company;

(E) reasonable fees and disbursements of all independent registered public accountants of the Company incurred specifically in connection with such Registration; and

(F) reasonable fees and expenses of one (1) legal counsel selected by the majority-in-interest of the Demanding Holders initiating a Demand Registration to be registered for offer and sale in the applicable Registration.

“**Registration Statement**” shall mean any registration statement that covers the Registrable Securities pursuant to the provisions of this Agreement, including the Prospectus included in such registration statement, amendments (including post-effective amendments) and supplements to such registration statement, and all exhibits to and all material incorporated by reference in such registration statement.

“**Requesting Holder**” shall have the meaning given in [subsection 2.2.1](#).

“**Restricted Securities**” shall have the meaning given in [subsection 3.7](#).

“**Rule 415**” shall have the meaning given in [subsection 2.1.1](#).

“**Securities Act**” shall mean the Securities Act of 1933, as amended from time to time.

“**Shelf Takedown Notice**” shall have the meaning given in [subsection 2.1.3](#).

“**Shelf Underwritten Offering**” shall have the meaning given in [subsection 2.1.3](#).

“**Sponsor**” shall have the meaning given in the Preamble.

“**Sponsor Earnout Securities**” means (i) 500,000 Class I Special Shares and (ii) 741,000 Class J Special Shares, in each case in the capital of the Company.

“**Sponsor Earnout Shares**” means the Common Shares underlying the Sponsor Earnout Securities.

“**Sponsor Group Holders**” shall have the meaning given in the Preamble.

“**Subscription Agreements**” shall have the meaning given in the Recitals hereto.

“**Underwriter**” shall mean a securities dealer who purchases any Registrable Securities as principal in an Underwritten Offering and not as part of such dealer’s market-making activities.

“**Underwritten Registration**” or “**Underwritten Offering**” shall mean a Registration in which securities of the Company are sold to an Underwriter in a firm commitment underwriting for distribution to the public.

“**Working Capital Warrants**” shall have the meaning given in the Recitals hereto.

## ARTICLE II

### REGISTRATIONS

#### 2.1 Initial Registration; Shelf Takedown.

2.1.1 Initial Registration. The Company shall use its commercially reasonable efforts to file a Registration Statement under the Securities Act promptly, but in any event within thirty (30) days following the Closing, to permit the public resale of all the Registrable Securities (including the DeepGreen Earnout Shares and the Sponsor Earnout Shares, whether or not outstanding on the date of such filing) held by the Holders from time to time as permitted by Rule 415 under the Securities Act (or any successor or similar provision adopted by the Commission then in effect) (“**Rule 415**”) on the terms and conditions specified in this subsection 2.1.1 and shall use its commercially reasonable efforts to cause such Registration Statement to be declared effective as soon as practicable after the filing thereof, but in no event later than forty-five (45) days following the filing deadline (the “**Effectiveness Deadline**”); provided, that the Effectiveness Deadline shall be extended to seventy-five (75) days after the filing deadline if the Registration Statement is reviewed by, and receives comments from, the Commission. The Registration Statement filed with the Commission pursuant to this subsection 2.1.1 shall be a registration statement on Form S-1 (a “**Form S-1**”) or such other form of registration statement as is then available to effect a registration for resale of such Registrable Securities, covering such Registrable Securities, and shall contain a Prospectus in such form as to permit any Holder to sell such Registrable Securities pursuant to Rule 415 at any time beginning on the effective date for such Registration Statement. A Registration Statement filed pursuant to this subsection 2.1.1 shall provide for the resale pursuant to any method or combination of methods legally available to, and requested by, the Holders. The Company shall use its commercially reasonable efforts to cause a Registration Statement filed pursuant to this subsection 2.1.1 to remain effective, and to be supplemented and amended to the extent necessary to ensure that such Registration Statement is available or, if not available, that another Registration Statement is available, for the resale of all the Registrable Securities held by the Holders until all such Registrable Securities have ceased to be Registrable Securities. As soon as practicable following the effective date of a Registration Statement filed pursuant to this subsection 2.1.1, but in any event within two (2) business days of such date, the Company shall notify the Holders of the effectiveness of such Registration Statement. When effective, a Registration Statement filed pursuant to this subsection 2.1.1 (including the documents incorporated therein by reference) will comply as to form in all material respects with all applicable requirements of the Securities Act and the Exchange Act and will not contain a Misstatement.

2.1.2 Form S-3. The Company shall use its commercially reasonable efforts to convert the Registration Statement filed pursuant to subsection 2.1.1 to a Form S-3 (“**Form S-3**”) as soon as practicable after the Company is eligible to use Form S-3.

2.1.3 Shelf Takedown. At any time and from time to time following the effectiveness of the shelf registration statement required by subsection 2.1.1 or 2.1.2, any Holder(s) may request to sell all or a portion of their outstanding Registrable Securities in an Underwritten Offering that is registered pursuant to such shelf registration statement (a “**Shelf Underwritten Offering**”) provided that such Holder(s) (a) reasonably expect aggregate gross proceeds in excess of \$40,000,000 from such Shelf Underwritten Offering or (b) reasonably expects to sell all of the Registrable Securities held by such Holder in such Shelf Underwritten Offering but in no event for less than \$10,000,000 in gross proceeds. All requests for a Shelf Underwritten Offering shall be made by giving written notice to the Company (the “**Shelf Takedown Notice**”). Each Shelf Takedown Notice shall specify the approximate number of Registrable Securities proposed to be sold in the Shelf Underwritten Offering and the expected price range (net of underwriting discounts and commissions) of such Shelf Underwritten Offering. Within ten (10) business days after receipt of any Shelf Takedown Notice, the Company shall give written notice of such requested Shelf Underwritten Offering to all other Holders of Registrable Securities (the “**Company Shelf Takedown Notice**”) and, subject to reductions consistent with the pro rata calculations in subsection 2.2.4, shall include in such Shelf Underwritten Offering all outstanding Registrable Securities with respect to which the Company has received written requests

for inclusion therein, within five (5) days after sending the Company Shelf Takedown Notice. The Company shall enter into an underwriting agreement in a form as is customary in Underwritten Offerings of securities by the Company with the managing Underwriter or Underwriters selected by the initiating Holder(s) after consultation with the Company and shall take all such other reasonable actions as are requested by the managing Underwriter or Underwriters in order to expedite or facilitate the disposition of such Registrable Securities. In connection with any Shelf Underwritten Offering contemplated by this [subsection 2.1.3](#), subject to [Section 3.4](#) and [Article IV](#), the underwriting agreement into which each Holder and the Company shall enter shall contain such representations, covenants, indemnities and other rights and obligations of the Company and the selling stockholders as are customary in Underwritten Offerings of securities by the Company.

## 2.2 [Demand Registration](#).

2.2.1 [Request for Registration](#). Subject to the provisions of [subsection 2.2.4](#) hereof and provided that the Company does not have an effective Registration Statement pursuant to [subsection 2.1](#) outstanding covering the Registrable Securities subject to the applicable Demand Registration, the Holders of at least a majority-in-interest of the then outstanding number of Registrable Securities held by the DeepGreen Holders or the Sponsor Group Holders (the “**Demanding Holders**”), in each case, may make a written demand for Registration of all or part of their Registrable Securities, which written demand shall describe the amount and type of securities to be included in such Registration and the intended method(s) of distribution thereof (such written demand a “**Demand Registration**”). The Company shall, within five (5) days of the Company’s receipt of the Demand Registration, notify, in writing, all other Holders of Registrable Securities of such demand, and each Holder of Registrable Securities who thereafter wishes to include all or a portion of such Holder’s Registrable Securities in a Registration pursuant to a Demand Registration (each such Holder that includes all or a portion of such Holder’s Registrable Securities in such Registration, a “**Requesting Holder**”) shall so notify the Company, in writing, within five (5) days after the receipt by the Holder of the notice from the Company. Upon receipt by the Company of any such written notification from a Requesting Holder(s) to the Company, such Requesting Holder(s) shall be entitled to have their Registrable Securities included in a Registration pursuant to a Demand Registration and the Company shall effect, as soon thereafter as practicable, the Registration of all Registrable Securities requested by the Demanding Holders and Requesting Holders pursuant to such Demand Registration, including by filing a Registration Statement relating thereto as soon as practicable, but not more than forty-five (45) days immediately after the Company’s receipt of the Demand Registration. Under no circumstances shall the Company be obligated to effect more than an aggregate of two (2) Registrations pursuant to a Demand Registration initiated by the DeepGreen Holders and two (2) Registrations pursuant to a Demand Registration initiated by the Sponsor Group Holders under this [subsection 2.1.1](#) with respect to any or all Registrable Securities; [provided, however](#), that a Registration pursuant to a Demand Registration shall not be counted for such purposes unless a Registration Statement with respect to such Demand Registration has become effective and all of the Registrable Securities requested by the Requesting Holders and the Demanding Holders to be registered on behalf of the Requesting Holders and the Demanding Holders on such Registration Statement have been sold, in accordance with [Section 3.1](#) of this Agreement; [provided, further](#), that an Underwritten Shelf Takedown shall not count as a Demand Registration.

2.2.2 [Effective Registration](#). Notwithstanding the provisions of [subsection 2.2.1](#) above or any other part of this Agreement, a Registration pursuant to a Demand Registration shall not count as a Registration unless and until (i) the Registration Statement filed with the Commission with respect to a Registration pursuant to a Demand Registration has been declared effective by the Commission and (ii) the Company has complied with all of its material obligations under this Agreement with respect thereto; [provided, further](#), that if, after such Registration Statement has been declared effective, an offering of Registrable Securities in a Registration pursuant to a Demand Registration is subsequently interfered with by any stop order or injunction of the Commission, federal or state court or any other governmental agency, the Registration Statement with respect to such Registration shall be deemed not to have been declared effective, unless and until, (i) such stop order or injunction is removed, rescinded or otherwise terminated, and (ii) a majority-in-interest of the Demanding Holders initiating such Demand Registration thereafter affirmatively elect to continue with such Registration and accordingly notify the Company in writing, but in no event later than five (5) days, of such election; [provided, further](#), that the Company shall not be obligated or required to file another Registration Statement until the Registration Statement that has been previously filed with respect to a Registration pursuant to a Demand Registration becomes effective or is subsequently terminated.

2.2.3 **Underwritten Offering.** Subject to the provisions of [subsection 2.2.4](#) hereof, if a majority-in-interest of the Demanding Holders so advise the Company as part of their Demand Registration that the offering of the Registrable Securities pursuant to such Demand Registration shall be in the form of an Underwritten Offering, then the right of such Demanding Holder or Requesting Holder (if any) to include its Registrable Securities in such Registration shall be conditioned upon such Holder's participation in such Underwritten Offering and the inclusion of such Holder's Registrable Securities in such Underwritten Offering to the extent provided herein. All such Holders proposing to distribute their Registrable Securities through an Underwritten Offering under this [subsection 2.2.3](#) shall enter into an underwriting agreement in customary form with the Underwriter(s) selected for such Underwritten Offering by the majority in interest of the Demanding Holders initiating the Demand Registration, which Underwriter(s) shall be reasonably satisfactory to the Company.

2.2.4 **Reduction of Underwritten Offering.** If the managing Underwriter or Underwriters in an Underwritten Registration pursuant to a Demand Registration, in good faith, advises the Company, the Demanding Holders and the Requesting Holders (if any) in writing that the dollar amount or number of Registrable Securities that the Demanding Holders and the Requesting Holders (if any) desire to sell, taken together with all other Common Shares or other equity securities that the Company desires to sell and the Common Shares, if any, as to which a Registration has been requested pursuant to separate written contractual piggyback registration rights held by any other stockholders who desire to sell, exceeds the maximum dollar amount or maximum number of equity securities that can be sold in the Underwritten Offering without adversely affecting the proposed offering price, the timing, the distribution method, or the probability of success of such offering (such maximum dollar amount or maximum number of such securities, as applicable, the "**Maximum Number of Securities**"), then the Company shall include in such Underwritten Offering, as follows: (i) first, the Registrable Securities of the Demanding Holders (pro rata based on the respective number of Registrable Securities that each Demanding Holder has requested be included in such Underwritten Registration and the aggregate number of Registrable Securities that the Demanding Holders have requested be included in such Underwritten Registration) that can be sold without exceeding the Maximum Number of Securities; (ii) second, the Registrable Securities of the Requesting Holders (pro rata based on the number of Registrable Securities that each Requesting Holder has requested to be included in such Underwritten Registration and the aggregate number of Registrable Securities that the Requesting Holders have requested be included in such Underwritten registration) that can be sold without exceeding the Maximum Number of Securities; (iii) third, to the extent that the Maximum Number of Securities has not been reached under the foregoing clauses (i)-(ii), the Registrable Securities of Holders (pro rata, based on the respective number of Registrable Securities that each Holder has so requested) exercising their rights to register their Registrable Securities pursuant to [subsection 2.3.1](#) hereof, without exceeding the Maximum Number of Securities; and (iv) fourth, to the extent that the Maximum Number of Securities has not been reached under the foregoing clauses (i)-(iii), the Common Shares or other equity securities that the Company desires to sell, which can be sold without exceeding the Maximum Number of Securities; and (v) fifth, to the extent that the Maximum Number of Securities has not been reached under the foregoing clauses (i)-(iv), the Common Shares or other equity securities of other persons or entities that the Company is obligated to register in a Registration pursuant to separate written contractual arrangements with such persons and that can be sold without exceeding the Maximum Number of Securities.

2.2.5 **Demand Registration Withdrawal.** A majority-in-interest of the Demanding Holders initiating a Demand Registration or a majority-in-interest of the Requesting Holders (if any), pursuant to a Registration under [subsection 2.2.1](#) shall have the right to withdraw from a Registration pursuant to such Demand Registration or a Shelf Underwritten Offering pursuant to [subsection 2.1.3](#) for any or no reason whatsoever upon written notification to the Company and the Underwriter or Underwriters (if any) of their intention to withdraw from such Registration at least two (2) business days prior to the effectiveness of the Registration Statement filed with the Commission with respect to the Registration of their Registrable Securities pursuant to such Demand Registration (or in the case of an Underwritten Registration pursuant to [Section 2.1.1](#) or [2.2.4](#) at least five (5) business days prior to the time of pricing of the applicable offering). Notwithstanding anything to the contrary in this Agreement, the Company shall be responsible for the Registration Expenses incurred in connection with a Registration pursuant to a Demand Registration prior to its withdrawal under this [subsection 2.2.5](#).

### 2.3 **Piggyback Registration.**

2.3.1 **Piggyback Rights.** If the Company proposes to file a Registration Statement under the Securities Act with respect to an offering of equity securities, or securities or other obligations exercisable or exchangeable for, or convertible into equity securities, for its own account or for the account of stockholders of the

Company (or by the Company and by the stockholders of the Company including, without limitation, pursuant to [Sections 2.1](#) and [2.2](#) hereof), other than a Registration Statement (i) filed in connection with any employee stock option or other benefit plan, (ii) for a rights offering or an exchange offer or offering of securities solely to the Company's then existing stockholders, (iii) for an offering of debt that is convertible into equity securities of the Company or (iv) for a dividend reinvestment plan, then the Company shall give written notice of such proposed filing to all of the Holders of Registrable Securities as soon as practicable but not less than ten (10) days before the anticipated filing date of such Registration Statement, which notice shall (A) describe the amount and type of securities to be included in such offering, the intended method(s) of distribution, and the name of the proposed managing Underwriter or Underwriters, if any, in such offering, and (B) offer to all of the Holders of Registrable Securities the opportunity to register the sale of such number of Registrable Securities as such Holders may request in writing within five (5) days after receipt of such written notice (such Registration a "**Piggyback Registration**"). The Company shall, in good faith, cause such Registrable Securities to be included in such Piggyback Registration and shall use its commercially reasonable efforts to cause the managing Underwriter or Underwriters of a proposed Underwritten Offering to permit the Registrable Securities requested by the Holders pursuant to this [subsection 2.3.1](#) to be included in a Piggyback Registration on the same terms and conditions as any similar securities of the Company included in such Registration and to permit the sale or other disposition of such Registrable Securities in accordance with the intended method(s) of distribution thereof. All such Holders proposing to distribute their Registrable Securities through an Underwritten Offering under this [subsection 2.3.1](#) shall enter into an underwriting agreement in customary form with the Underwriter(s) selected for such Underwritten Offering by the Company. The Holders agree that, except as required by applicable law, the Holders shall treat as confidential any notice or other communication in connection with any Piggyback Registration and shall not disclose or use the information contained in such notice without the prior written consent of the Company until such time as the information contained therein is or becomes public, other than as a result of disclosure by a Holder of Registrable Shares in breach of the terms of this Agreement.

**2.3.2 Reduction of Piggyback Registration.** If the managing Underwriter or Underwriters in an Underwritten Registration that is to be a Piggyback Registration, in good faith, advises the Company and the Holders of Registrable Securities participating in the Piggyback Registration in writing that the dollar amount or number of the Common Shares that the Company desires to sell, taken together with (i) the Common Shares, if any, as to which Registration has been demanded pursuant to separate written contractual arrangements with persons or entities other than the Holders of Registrable Securities hereunder, (ii) the Registrable Securities as to which registration has been requested pursuant to [Section 2.3](#) hereof, and (iii) the Common Shares, if any, as to which Registration has been requested pursuant to separate written contractual piggyback registration rights of other stockholders of the Company, exceeds the Maximum Number of Securities, then:

If the Registration is undertaken for the Company's account, the Company shall include in any such Registration (A) first, the Common Shares or other equity securities that the Company desires to sell, which can be sold without exceeding the Maximum Number of Securities; (B) second, to the extent that the Maximum Number of Securities has not been reached under the foregoing clause (A), the Registrable Securities of the Holders exercising their rights to register their Registrable Securities pursuant to [subsection 2.3.1](#) hereof, pro rata, based on the respective number of Registrable Securities that each Holder has so requested, which can be sold without exceeding the Maximum Number of Securities; and (C) third, to the extent that the Maximum Number of Securities has not been reached under the foregoing clauses (A) and (B), the Common Shares, if any, as to which Registration has been requested pursuant to written contractual piggyback registration rights of other stockholders of the Company, which can be sold without exceeding the Maximum Number of Securities;

If the Registration is pursuant to a request by persons or entities other than the Holders of Registrable Securities, then the Company shall include in any such Registration (A) first, the Common Shares or other equity securities, if any, of such requesting persons or entities, other than the Holders of Registrable Securities, which can be sold without exceeding the Maximum Number of Securities; (B) second, to the extent that the Maximum Number of Securities has not been reached under the foregoing clause (A), the Registrable Securities of Holders exercising their rights to register their Registrable Securities pursuant to [subsection 2.3.1](#), pro rata, based on the respective number of Registrable Securities that each Holder has requested be included in such Underwritten Registration and the aggregate number of Registrable Securities that the Holders have requested to be included in such Underwritten Registration, which can be sold without exceeding the Maximum Number of Securities; (C) third, to the extent that the Maximum Number of Securities has not been reached under the foregoing clauses (A) and (B), the Common Shares or other equity securities that the Company desires to sell, which can be sold without exceeding

the Maximum Number of Securities; and (D) fourth, to the extent that the Maximum Number of Securities has not been reached under the foregoing clauses (A), (B) and (C), the Common Shares or other equity securities for the account of other persons or entities that the Company is obligated to register pursuant to separate written contractual arrangements with such persons or entities, which can be sold without exceeding the Maximum Number of Securities.

2.3.3 Piggyback Registration Withdrawal. Any Holder of Registrable Securities shall have the right to withdraw from a Piggyback Registration for any or no reason whatsoever upon written notification to the Company and the Underwriter or Underwriters (if any) of his, her or its intention to withdraw from such Piggyback Registration at least two (2) business days prior to the effectiveness of the Registration Statement filed with the Commission with respect to such Piggyback Registration (or in the case of an Underwritten Registration pursuant to Rule 415, at least five (5) business days prior to the time of pricing of the applicable offering). The Company (whether on its own good faith determination or as the result of a request for withdrawal by persons pursuant to separate written contractual obligations) may withdraw a Registration Statement filed with the Commission in connection with a Piggyback Registration at any time prior to the effectiveness of such Registration Statement. Notwithstanding anything to the contrary in this Agreement, the Company shall be responsible for the Registration Expenses incurred in connection with the Piggyback Registration prior to its withdrawal under this subsection 2.3.3.

2.3.4 Unlimited Piggyback Registration Rights. For purposes of clarity, any Registration effected pursuant to Section 2.3 hereof shall not be counted as a Registration pursuant to a Demand Registration effected under Section 2.2 hereof.

2.4 Restrictions on Registration Rights. If (A) during the period starting with the date thirty (30) days prior to the Company's good faith estimate of the date of the filing of, and ending on a date one hundred and twenty (120) days after the effective date of, a Company initiated Registration and provided that the Company has delivered written notice to the Holders prior to receipt of a Demand Registration pursuant to subsection 2.2.1 and it continues to actively employ, in good faith, all reasonable efforts to cause the applicable Registration Statement to become and/or remain effective; (B) the Holders have requested an Underwritten Registration and the Company and the Holders are unable to obtain the commitment of underwriters to firmly underwrite the offer; or (C) in the good faith judgment of the Board such Registration would be seriously detrimental to the Company and the Board concludes as a result that it is essential to defer the filing of such Registration Statement at such time, then in each case the Company shall furnish to such Holders a certificate signed by the Chairman of the Board, the Chief Executive Officer, the President, the Chief Financial Officer or the Secretary of the Company stating that in the good faith judgment of the Board it would be seriously detrimental to the Company for such Registration Statement to be filed in the near future and that it is therefore essential to defer the filing of such Registration Statement. In such event, the Company shall have the right to defer such filing for a period of not more than sixty (60) days; provided, however, that the Company shall not defer its obligation in this manner more than once in any 12-month period.

2.5 Limitation on Subsequent Registration Rights. From and after the date hereof, the Company shall not, without the prior written consent of the Holders of a majority of the outstanding Registrable Securities, enter into any agreement with any current or future holder of any securities of the Company that would allow such current or future holder to require the Company to include securities in any registration statement filed by the Company on a basis other than expressly subordinate to the piggyback rights of the Holders of Registrable Securities hereunder; provided, however, that in no event shall the Company enter into any agreement that would permit another holder of securities of the Company to participate on a pari passu basis (in terms of priority of cut-back based on advice of underwriters) with a Demanding Holder or a Requesting Holder requesting Registration or an underwritten offering pursuant to subsection 2.2.1.

## ARTICLE III

### COMPANY PROCEDURES

3.1 General Procedures. If at any time on or after the Closing, the Company is required to effect the Registration of Registrable Securities, the Company shall use its commercially reasonable efforts to effect such Registration to permit the sale of such Registrable Securities in accordance with the intended plan of distribution thereof, and pursuant thereto the Company shall, as soon as reasonably practicable:

3.1.1 prepare and file with the Commission as soon as practicable a Registration Statement with respect to such Registrable Securities and use its commercially reasonable efforts to cause such Registration Statement to become effective and remain effective until all Registrable Securities covered by such Registration Statement have been sold or otherwise cease to be Registrable Securities;

3.1.2 prepare and file with the Commission such amendments and post-effective amendments to the Registration Statement, and such supplements to the Prospectus, as may be reasonably requested by the Holders with Registrable Securities registered on such Registration Statement or any Underwriter of Registrable Securities or as may be required by the rules, regulations or instructions applicable to the registration form used by the Company or by the Securities Act or rules and regulations thereunder to keep the Registration Statement effective until all Registrable Securities covered by such Registration Statement are sold in accordance with the intended plan of distribution set forth in such Registration Statement or supplement to the Prospectus or otherwise cease to be Registrable Securities;

3.1.3 prior to filing a Registration Statement or Prospectus, or any amendment or supplement thereto (except for supplements containing Exchange Act reports of the Company filed with respect to a Registration Statement or Prospectus for which forward incorporation by reference is unavailable), furnish without charge to the Underwriters, if any, and the Holders of Registrable Securities included in such Registration, and such Holders' legal counsel, copies of such Registration Statement as proposed to be filed, each amendment and supplement to such Registration Statement (in each case including all exhibits thereto and documents incorporated by reference therein), the Prospectus included in such Registration Statement (including each preliminary Prospectus), and such other documents as the Underwriters and the Holders of Registrable Securities included in such Registration or the legal counsel for any such Holders may request in order to facilitate the disposition of the Registrable Securities owned by such Holders;

3.1.4 prior to any public offering of Registrable Securities, use its best efforts to (i) register or qualify the Registrable Securities covered by the Registration Statement under such securities or "blue sky" laws of such jurisdictions in the United States as the Holders of Registrable Securities included in such Registration Statement (in light of their intended plan of distribution) may request and (ii) take such action necessary to cause such Registrable Securities covered by the Registration Statement to be registered with or approved by such other governmental authorities as may be necessary by virtue of the business and operations of the Company and do any and all other acts and things that may be necessary or advisable to enable the Holders of Registrable Securities included in such Registration Statement to consummate the disposition of such Registrable Securities in such jurisdictions; provided, however, that the Company shall not be required to qualify generally to do business in any jurisdiction where it would not otherwise be required to qualify or take any action to which it would be subject to general service of process or taxation in any such jurisdiction where it is not then otherwise so subject;

3.1.5 cause all such Registrable Securities to be listed on each securities exchange or automated quotation system on which similar securities issued by the Company are then listed;

3.1.6 provide a transfer agent or warrant agent, as applicable, and registrar for all such Registrable Securities no later than the effective date of such Registration Statement;

3.1.7 advise each seller of such Registrable Securities, promptly after it shall receive notice or obtain knowledge thereof, of the issuance of any stop order by the Commission suspending the effectiveness of such Registration Statement or the initiation or threatening of any proceeding for such purpose and promptly use its reasonable best efforts to prevent the issuance of any stop order or to obtain its withdrawal if such stop order should be issued;

## [Table of Contents](#)

3.1.8 at least five (5) days prior to the filing of any Registration Statement or Prospectus or any amendment or supplement to such Registration Statement or Prospectus (except for supplements containing Exchange Act reports of the Company filed with respect to a Registration Statement or Prospectus for which forward incorporation by reference is unavailable), furnish a copy thereof to each seller of such Registrable Securities or its counsel;

3.1.9 notify the Holders at any time when a Prospectus relating to such Registration Statement is required to be delivered under the Securities Act, of the happening of any event as a result of which the Prospectus included in such Registration Statement, as then in effect, includes a Misstatement, and then to correct such Misstatement as set forth in [Section 3.5](#) hereof;

3.1.10 permit a representative of the Holders, the Underwriters, if any, and any attorney or accountant retained by such Holders or Underwriter to participate, at each such person's own expense, in the preparation of the Registration Statement, and cause the Company's officers, directors and employees to supply all information reasonably requested by any such representative, Underwriter, attorney or accountant in connection with the Registration; provided, however, that such representative or Underwriter enter into a confidentiality agreement, in form and substance reasonably satisfactory to the Company, prior to the release or disclosure of any such information;

3.1.11 obtain a "comfort" letter from the Company's independent registered public accountants in the event of an Underwritten Registration, in customary form and covering such matters of the type customarily covered by "comfort" letters as the managing Underwriter may reasonably request, and reasonably satisfactory to a majority-in-interest of the participating Holders;

3.1.12 on the date the Registrable Securities are delivered for sale pursuant to such Registration, obtain an opinion, dated such date, of counsel representing the Company for the purposes of such Registration, addressed to the Holders, the placement agent or sales agent, if any, and the Underwriters, if any, covering such legal matters with respect to the Registration in respect of which such opinion is being given as the Holders, placement agent, sales agent, or Underwriter may reasonably request and as are customarily included in such opinions and negative assurance letters, and reasonably satisfactory to a majority-in-interest of the participating Holders;

3.1.13 in the event of any Underwritten Offering, enter into and perform its obligations under an underwriting agreement, in usual and customary form, with the managing Underwriter of such offering;

3.1.14 make available to its security holders, as soon as reasonably practicable, an earnings statement covering the period of at least twelve (12) months beginning with the first day of the Company's first full calendar quarter after the effective date of the Registration Statement which satisfies the provisions of Section 11(a) of the Securities Act and Rule 158 thereunder (or any successor rule promulgated thereafter by the Commission); provided that the Company will be deemed to have satisfied such requirement to the extent such information is filed on EDGAR or any successor system;

3.1.15 in connection with any Shelf Underwritten Offering pursuant to [Section 2.1.3](#) or any Underwritten Offering pursuant to [Section 2.2.3](#), if such Shelf Underwritten Offering or Underwritten Offering involves the sale of Registrable Securities for gross proceeds in excess of \$50,000,000, use its reasonable efforts to make available senior executives of the Company to participate in customary "road show" presentations that may be reasonably requested by the Underwriter in such Shelf Underwritten Offering or Underwritten Offering, as the case may be; and

3.1.16 subject to [Section 3.7](#), in connection with any sale or transfer of Registrable Securities where such Registrable Securities are sold or transferred pursuant to an effective Registration Statement, Rule 144 or any other exemption from the registration requirements of the Securities Act, the Company shall promptly as practicable take any and all action necessary or reasonably requested by the Holder of such Registrable Securities or its transferees in order to permit or facilitate such sale or transfer, including, without limitation, at the sole expense of the Company, by (i) issuing such directions to any transfer agent, registrar or depository, as applicable, as are reasonably necessary to facilitate such sale or transfer, (ii) delivering such opinions to the transfer agent, registrar or depository as are requested by the same, (iii) taking or causing to be taken such other actions as are reasonably necessary (in each case on a timely basis) in order to (a) cause any legend, notation or similar designation restricting transferability of such Registrable Securities to be removed from the certificates or book entries evidencing such

## Table of Contents

Registrable Securities, and (b) rescind any transfer restrictions, and (iv) delivering (or causing to be delivered) to any broker, dealer or underwriter purchasing such Registrable Securities or facilitating such sale or transfer any opinions of counsel to the Company and comfort letters from the independent registered public accountants of the Company, each in customary form and covering such matters of the type customarily covered by such opinions or comfort letters, as the case may be, as reasonably requested by such Holder.

3.1.17 otherwise, in good faith, cooperate reasonably with, and take such customary actions as may reasonably be requested by the Holders, in connection with such Registration.

3.2 Registration Expenses. The Registration Expenses of all Registrations shall be borne by the Company. It is acknowledged by the Holders that the Holders shall bear all incremental selling expenses relating to the sale of Registrable Securities, such as Underwriters' commissions and discounts, brokerage fees, Underwriter marketing costs and, other than as set forth in the definition of "Registration Expenses," all fees and expenses of any legal counsel representing the Holders.

3.3 Holder Information Required for Participation in Registrations. At least ten (10) business days prior to the first anticipated filing date of a Registration Statement, the Company shall use its commercially reasonable efforts to notify each Holder in writing (which may be by email) of the information reasonably necessary about the Holder to include such Holder's Registrable Securities in such Registration Statement. At least three (3) business days prior to the anticipated filing date of any post-effective amendment of a Registration Statement (including pursuant to subsection 2.1.2), the Company shall use its commercially reasonable efforts to notify each Holder of Registrable Securities included in such Registration Statement in writing (which may be by email) of the information reasonably necessary about the Holder to keep such Holder's Registrable Securities in such Registration Statement. Notwithstanding anything else in this Agreement, the Company shall not be obligated to include or keep a Holder's Registrable Securities in a Registration Statement to the extent the Company has not received such information, and received any other reasonably requested agreements or certificates, on or prior to the fifth (5<sup>th</sup>) business day prior to the first anticipated filing date of a Registration Statement or the second (2<sup>nd</sup>) business day prior to the anticipated filing date of any post-effective amendment of a Registration Statement, as applicable.

3.4 Requirements for Participation in Underwritten Offerings. No person may participate in any Underwritten Offering for equity securities of the Company pursuant to a Registration initiated by the Company hereunder unless such person (i) agrees to sell such person's securities on the basis provided in any underwriting arrangements approved by the Company and (ii) completes and executes all customary questionnaires, powers of attorney, indemnities, lock-up agreements, underwriting agreements and other customary documents as may be reasonably required under the terms of such underwriting arrangements.

3.5 Suspension of Sales; Adverse Disclosure. Upon receipt of written notice from the Company that a Registration Statement or Prospectus contains a Misstatement, each of the Holders shall forthwith discontinue disposition of Registrable Securities until such Holder has received copies of a supplemented or amended Prospectus correcting the Misstatement (it being understood that the Company hereby covenants to prepare and file such supplement or amendment as soon as practicable after the time of such notice), or until it is advised in writing by the Company that the use of the Prospectus may be resumed. If the filing, initial effectiveness or continued use of a Registration Statement in respect of any Registration at any time would require the Company to make an Adverse Disclosure or would require the inclusion in such Registration Statement of financial statements that are unavailable to the Company for reasons beyond the Company's control, the Company may, upon giving prompt written notice of such action to the Holders, delay the filing or initial effectiveness of, or suspend use of, such Registration Statement for the shortest period of time, but in no event more than thirty (30) days, determined in good faith by the Company to be necessary for such purpose. In the event the Company exercises its rights under the preceding sentence, the Holders agree to suspend, immediately upon their receipt of the notice referred to above, their use of the Prospectus relating to any Registration in connection with any sale or offer to sell Registrable Securities. The Company shall immediately notify the Holders of the expiration of any period during which it exercised its rights under this Section 3.5.

3.6 Reporting Obligations. As long as any Holder shall own Registrable Securities, the Company, at all times while it shall be a reporting company under the Exchange Act, covenants to file timely (or obtain extensions in respect thereof and file within the applicable grace period) all reports required to be filed by the Company after the date hereof pursuant to Sections 13(a) or 15(d) of the Exchange Act. The Company further covenants that it shall take such further action as any Holder may reasonably request, all to the extent required from time to time to

enable such Holder to sell Common Shares held by such Holder without registration under the Securities Act within the limitation of the exemptions provided by Rule 144 promulgated under the Securities Act (or any successor rule promulgated thereafter by the Commission), including providing any legal opinions, it being acknowledged by the Holders that the securities of the Company will not be eligible for resale pursuant to Rule 144 promulgated under the Securities Act, until, among other requirements, at least one year has elapsed from the time that the Company has filed current Form 10 information with the Commission reflecting its status as an entity that is not a shell company. Upon the request of any Holder, the Company shall deliver to such Holder a written certification of a duly authorized officer as to whether it has complied with such requirements.

3.7 Compliance with Canadian Securities Laws. With a view to making available the benefits of Canadian securities laws that may at any time permit the resale of Registrable Securities without the filing of a Canadian prospectus, at all times after the Company has become a reporting issuer or the equivalent under Canadian securities laws in any province or territory of Canada, the Company agrees to use its commercially reasonable efforts to (a) file with the appropriate Canadian securities authorities in a timely manner all reports and other documents required under Canadian securities laws, and (b) so long as any Holder owns any Registrable Securities, furnish to any Holder forthwith upon request a written statement by the Company stating that the Company is a reporting issuer and is not in default of any requirement under Canadian Securities Laws.

3.8 Lock-up Restrictions.

3.8.1 During the Founder Shares Six-Month Lock-up Period and the Founder Shares Twelve-Month Lock-up Period (collectively, the “**Founder Lock-up Periods**”), none of the Holders owning the securities subject to the Founder Lock-up Periods shall, and during the DeepGreen Management Lock-up Period and the DeepGreen Shares Lock-up Period (collectively, the “**DeepGreen Lock-up Periods**”), none of the Holders owning the securities subject to the DeepGreen Lock-up Periods shall: offer, sell, contract to sell, pledge, grant any option to purchase, make any short sale or otherwise dispose of or distribute any Common Shares that are subject to the applicable Lock-up Period or any securities convertible into, exercisable for, exchangeable for or that represent the right to receive Common Shares that are subject to the applicable Lock-up Period, whether now owned or hereinafter acquired, that is owned directly by such Holder (including securities held as a custodian) or with respect to which such Holder has beneficial ownership within the rules and regulations of the Commission (such securities that are subject to an applicable Lock-up Period, the “**Restricted Securities**”), other than any transfer to an affiliate of a Holder or to a Permitted Transferee, as applicable. The foregoing restriction is expressly agreed to preclude each Holder, as applicable, from engaging in any hedging or other transaction with respect to Restricted Securities which is designed to or which reasonably could be expected to lead to or result in a sale or disposition of the Restricted Securities even if such Restricted Securities would be disposed of by someone other than such Existing Holder. Such prohibited hedging or other transactions include any short sale or any purchase, sale or grant of any right (including any put or call option) with respect to any of the Restricted Securities of the applicable Holder, or with respect to any security that includes, relates to, or derives any significant part of its value from such Restricted Securities.

3.8.2 Each Holder hereby represents and warrants that it now has and, except as contemplated by this subsection 3.7.2 for the duration of the applicable Lock-up Period, will have good, and marketable title to its Restricted Securities, free and clear of all liens, encumbrances, and claims that could impair the ability of such Holder to comply with the foregoing restrictions. Subject to subsection 3.1.16, each Holder agrees and consents to the entry of stop-transfer instructions with the Company’s transfer agent and registrar against the transfer of any Restricted Securities during the applicable lock-up period.

## ARTICLE IV

### **INDEMNIFICATION AND CONTRIBUTION**

#### 4.1 Indemnification.

4.1.1 The Company agrees to indemnify, to the extent permitted by law, each Holder of Registrable Securities, its officers and directors and agents and each person who controls such Holder (within the meaning of the Securities Act) against all losses, claims, damages, liabilities and expenses (including, without limitation, reasonable attorneys' fees) resulting from any untrue or alleged untrue statement of material fact contained in any Registration Statement, Prospectus or preliminary Prospectus or any amendment thereof or supplement thereto or any omission or alleged omission of a material fact required to be stated therein or necessary to make the statements therein not misleading, except insofar as the same are caused by or contained in any information or affidavit so furnished in writing to the Company by such Holder expressly for use therein.

4.1.2 In connection with any Registration Statement in which a Holder of Registrable Securities is participating, such Holder shall furnish to the Company in writing such information and affidavits as the Company reasonably requests for use in connection with any such Registration Statement or Prospectus and, to the extent permitted by law, shall indemnify the Company, its directors and officers and agents and each person who controls the Company (within the meaning of the Securities Act) against all losses, claims, damages, liabilities and expenses (including, without limitation, reasonable attorneys' fees) resulting from any untrue or alleged untrue statement of material fact contained in any Registration Statement, Prospectus or preliminary Prospectus or any amendment thereof or supplement thereto or any omission or alleged omission of a material fact required to be stated therein or necessary to make the statements therein not misleading, but only to the extent that such untrue statement or omission is contained in any information or affidavit so furnished in writing by such Holder expressly for use therein; provided, however, that the obligation to indemnify shall be several, not joint and several, among such Holders of Registrable Securities, and the liability of each such Holder of Registrable Securities shall be in proportion to and limited to the net proceeds received by such Holder from the sale of Registrable Securities pursuant to such Registration Statement. The Holders of Registrable Securities shall indemnify the Underwriters, their officers, directors and each person who controls such Underwriters (within the meaning of the Securities Act) to the same extent as provided in the foregoing with respect to indemnification of the Company.

4.1.3 Any person entitled to indemnification herein shall (i) give prompt written notice to the indemnifying party of any claim with respect to which it seeks indemnification (provided that the failure to give prompt notice shall not impair any person's right to indemnification hereunder to the extent such failure has not materially prejudiced the indemnifying party) and (ii) unless in such indemnified party's reasonable judgment a conflict of interest between such indemnified and indemnifying parties may exist with respect to such claim, permit such indemnifying party to assume the defense of such claim with counsel reasonably satisfactory to the indemnified party. If such defense is assumed, the indemnifying party shall not be subject to any liability for any settlement made by the indemnified party without its consent (but such consent shall not be unreasonably withheld). An indemnifying party who is not entitled to, or elects not to, assume the defense of a claim shall not be obligated to pay the fees and expenses of more than one counsel for all parties indemnified by such indemnifying party with respect to such claim, unless in the reasonable judgment of any indemnified party a conflict of interest may exist between such indemnified party and any other of such indemnified parties with respect to such claim. No indemnifying party shall, without the consent of the indemnified party, consent to the entry of any judgment or enter into any settlement which cannot be settled in all respects by the payment of money (and such money is so paid by the indemnifying party pursuant to the terms of such settlement) or which settlement does not include as an unconditional term thereof the giving by the claimant or plaintiff to such indemnified party of a release from all liability in respect to such claim or litigation.

4.1.4 The indemnification provided for under this Agreement shall remain in full force and effect regardless of any investigation made by or on behalf of the indemnified party or any officer, director or controlling person of such indemnified party and shall survive the transfer of securities. The Company and each Holder of Registrable Securities participating in an offering also agrees to make such provisions as are reasonably requested by any indemnified party for contribution to such party in the event the Company's or such Holder's indemnification is unavailable for any reason.

4.1.5 If the indemnification provided under [Section 4.1](#) hereof from the indemnifying party is unavailable or insufficient to hold harmless an indemnified party in respect of any losses, claims, damages, liabilities and expenses referred to herein, then the indemnifying party, in lieu of indemnifying the indemnified party, shall contribute to the amount paid or payable by the indemnified party as a result of such losses, claims, damages, liabilities and expenses in such proportion as is appropriate to reflect the relative fault of the indemnifying party and the indemnified party, as well as any other relevant equitable considerations. The relative fault of the indemnifying party and indemnified party shall be determined by reference to, among other things, whether any action in question, including any untrue or alleged untrue statement of a material fact or omission or alleged omission to state a material fact, was made by, or relates to information supplied by, such indemnifying party or indemnified party, and the indemnifying party's and indemnified party's relative intent, knowledge, access to information and opportunity to correct or prevent such action and the benefits received by such indemnifying party or indemnified party; provided, however, that the liability of any Holder under this [subsection 4.1.5](#) shall be limited to the amount of the net proceeds received by such Holder in such offering giving rise to such liability. The amount paid or payable by a party as a result of the losses or other liabilities referred to above shall be deemed to include, subject to the limitations set forth in [subsections 4.1.1, 4.1.2 and 4.1.3](#) above, any legal or other fees, charges or expenses reasonably incurred by such party in connection with any investigation or proceeding. The parties hereto agree that it would not be just and equitable if contribution pursuant to this [subsection 4.1.5](#) were determined by pro rata allocation or by any other method of allocation, which does not take account of the equitable considerations referred to in this [subsection 4.1.5](#). No person guilty of fraudulent misrepresentation (within the meaning of Section 11(f) of the Securities Act) shall be entitled to contribution pursuant to this [subsection 4.1.5](#) from any person who was not guilty of such fraudulent misrepresentation.

## ARTICLE V

### MISCELLANEOUS

5.1 Notices. Any notice or communication under this Agreement must be in writing and given by (i) deposit in the United States mail, addressed to the party to be notified, postage prepaid and registered or certified with return receipt requested, (ii) delivery in person or by courier service providing evidence of delivery, or (iii) transmission by hand delivery, electronic mail or facsimile. Each notice or communication that is mailed, delivered, or transmitted in the manner described above shall be deemed sufficiently given, served, sent, and received, in the case of mailed notices, on the third business day following the date on which it is mailed and, in the case of notices delivered by courier service, hand delivery, electronic mail or facsimile, at such time as it is delivered to the addressee (with the delivery receipt or the affidavit of messenger) or at such time as delivery is refused by the addressee upon presentation. Any notice or communication under this Agreement must be addressed to the Company, 1601 Bryan Street, Suite 4141, Dallas, Texas 75201, Attn: Chief Executive Officer, with a copy (which shall not constitute notice) to Michael L. Fantozzi, Esq., Mintz, Levin, Cohn, Ferris, Glovsky and Popeo, P.C., One Financial Center, Boston, MA 02111, and, if to any Holder, at such Holder's address or other contact information as set forth in the Company's books and records. Any party may change its address for notice at any time and from time to time by written notice to the other parties hereto, and such change of address shall become effective thirty (30) days after delivery of such notice as provided in this [Section 5.1](#).

5.2 Assignment; No Third Party Beneficiaries.

5.2.1 This Agreement and the rights, duties and obligations of the Company and the Holders, as the case may be, hereunder may not be assigned or delegated by the Company or the Holders, as the case may be, in whole or in part, except in connection with a transfer of Registrable Securities by such Holder to a Permitted Transferee, but only if such Permitted Transferee agrees to become bound by the terms and restrictions set forth in this Agreement.

5.2.2 Notwithstanding [subsection 5.2.1](#), prior to the expiration of any Lock-up Period applicable to a Holder, if any, no such Holder may assign or delegate such Holder's rights, duties or obligations under this Agreement, in whole or in part, except in connection with a transfer of Registrable Securities by such Holder to a Permitted Transferee, but only if such Permitted Transferee agrees to become bound by the transfer restrictions set forth in this Agreement, including the lock up restrictions applicable to the transferor, or any other applicable agreements between the Company and such Holder.

5.2.3 This Agreement and the provisions hereof shall be binding upon and shall inure to the benefit of each of the parties and its successors and the permitted assigns of the Holders, which shall include Permitted Transferees.

5.2.4 This Agreement shall not confer any rights or benefits on any persons that are not parties hereto, other than as expressly set forth in this Agreement and [Section 5.2](#) hereof.

5.2.5 No assignment by any party hereto of such party's rights, duties and obligations hereunder shall be binding upon or obligate the Company unless and until the Company shall have received (i) written notice of such assignment as provided in [Section 5.1](#) hereof and (ii) the written agreement of the assignee, in a form reasonably satisfactory to the Company, to be bound by the terms and provisions of this Agreement (which may be accomplished by an addendum or certificate of joinder to this Agreement). Any transfer or assignment made other than as provided in this [Section 5.2](#) shall be null and void.

5.3 Severability. This Agreement shall be deemed severable, and the invalidity or unenforceability of any term or provision hereof shall not affect the validity or enforceability of this Agreement or of any other term or provision hereof. Furthermore, in lieu of any such invalid or unenforceable term or provision, the parties hereto intend that there shall be added as a part of this Agreement a provision as similar in terms to such invalid or unenforceable provision as may be possible that is valid and enforceable.

5.4 Counterparts. This Agreement may be executed in multiple counterparts (including facsimile or PDF counterparts), each of which shall be deemed an original, and all of which together shall constitute the same instrument, but only one of which need be produced.

5.5 Governing Law; Venue. NOTWITHSTANDING THE PLACE WHERE THIS AGREEMENT MAY BE EXECUTED BY ANY OF THE PARTIES HERETO, THE PARTIES EXPRESSLY AGREE THAT (I) THIS AGREEMENT SHALL BE GOVERNED BY AND CONSTRUED UNDER THE LAWS OF THE STATE OF NEW YORK, INCLUDING, WITHOUT LIMITATION, SECTIONS 5-1401 AND 5-1402 OF THE NEW YORK GENERAL OBLIGATIONS LAW AND NEW YORK CIVIL PRACTICE LAWS AND RULES 327(B), AS APPLIED TO AGREEMENTS AMONG NEW YORK RESIDENTS ENTERED INTO AND TO BE PERFORMED ENTIRELY WITHIN NEW YORK, WITHOUT REGARD TO THE CONFLICT OF LAW PROVISIONS OF SUCH JURISDICTION, AND (II) THE VENUE FOR ANY ACTION TAKEN WITH RESPECT TO THIS AGREEMENT SHALL BE ANY STATE OR FEDERAL COURT IN NEW YORK COUNTY IN THE STATE OF NEW YORK.

5.6 Entire Agreement. This Agreement (including all agreements entered into pursuant hereto and all certificates and instruments delivered pursuant hereto and thereto) constitute the entire agreement of the parties with respect to the subject matter hereof and supersede all prior and contemporaneous agreements, representations, understandings, negotiations and discussions between the parties, whether oral or written.

5.7 Amendments and Modifications. Upon the written consent of the Company and the Holders of at least a majority-in-interest of the Registrable Securities at the time in question (including the Holders of at least a majority-in-interest of the Founder Shares and the Holders of at least a majority-in-interest of the DeepGreen Shares), compliance with any of the provisions, covenants and conditions set forth in this Agreement may be waived, or any of such provisions, covenants or conditions may be amended or modified; provided, however, that notwithstanding the foregoing, any amendment hereto or waiver hereof that adversely affects any Holder(s), solely in its capacity as a holder of the shares of the Company, in a manner that is materially different from other Holders (in such capacity) shall require the consent of the Holder(s) so affected. No course of dealing between any Holder or the Company and any other party hereto or any failure or delay on the part of a Holder or the Company in exercising any rights or remedies under this Agreement shall operate as a waiver of any rights or remedies of any Holder or the Company. No single or partial exercise of any rights or remedies under this Agreement by a party shall operate as a waiver or preclude the exercise of any other rights or remedies hereunder or thereunder by such party. Any waiver, amendment or modification effected in accordance with this [Section 5.7](#) shall be binding on all parties hereto, regardless of whether any such party has consented thereto.

5.8 Titles and Headings. Titles and headings of sections of this Agreement are for convenience only and shall not affect the construction of any provision of this Agreement.

5.9 Waivers and Extensions. Any party to this Agreement may waive any right, breach or default which such party has the right to waive, provided that such waiver will not be effective against the waiving party unless it is in writing, is signed by such party, and specifically refers to this Agreement. Waivers may be made in advance or after the right waived has arisen or the breach or default waived has occurred. Any waiver may be conditional. No waiver of any breach of any agreement or provision herein contained shall be deemed a waiver of any preceding or succeeding breach thereof nor of any other agreement or provision herein contained. No waiver or extension of time for performance of any obligations or acts shall be deemed a waiver or extension of the time for performance of any other obligations or acts.

5.10 Remedies Cumulative. In the event that the Company fails to observe or perform any covenant or agreement to be observed or performed under this Agreement, the Holders may proceed to protect and enforce its rights by suit in equity or action at law, whether for specific performance of any term contained in this Agreement or for an injunction against the breach of any such term or in aid of the exercise of any power granted in this Agreement or to enforce any other legal or equitable right, or to take any one or more of such actions, without being required to post a bond. None of the rights, powers or remedies conferred under this Agreement shall be mutually exclusive, and each such right, power or remedy shall be cumulative and in addition to any other right, power or remedy, whether conferred by this Agreement or now or hereafter available at law, in equity, by statute or otherwise.

5.11 Other Registration Rights. The Company represents and warrants that no person, other than the Holders with respect to Registrable Securities, or the PIPE Investors pursuant to the terms of the Subscription Agreements with respect to the PIPE Shares, has any right to require the Company to register any securities of the Company for sale or to include such securities of the Company in any Registration filed by the Company for the sale of securities for its own account or for the account of any other person. Further, the Company represents and warrants that this Agreement supersedes any other registration rights agreement or agreement with similar terms and conditions (excluding the Subscription Agreements) and in the event of a conflict between any such agreement or agreements and this Agreement, the terms of this Agreement shall prevail.

5.12 Term. This Agreement shall terminate upon the earlier of (i) the tenth anniversary of the date of this Agreement, (ii) the date as of which no Registrable Securities remain outstanding; or (iii) the date as of which all Holders of Registrable Securities are permitted to sell the Registrable Securities without registration pursuant to Rule 144 promulgated under the Securities Act (but with no volume or manner of sale restrictions or limitations). The provisions of Section 3.6 and Article IV shall survive any termination.

5.13 Existing Registration Rights Agreement Superseded. Pursuant to Section 6.8 of the Existing Registration Rights Agreement, the undersigned parties who are parties to the Existing Registration Rights Agreement hereby terminate the Existing Registration Rights Agreement, with the intent and effect that the Existing Registration Rights Agreement shall hereby be replaced and superseded in its entirety by this Agreement.

AMENDED AND RESTATED  
MEMORANDUM OF ASSOCIATION  
OF

SUSTAINABLE OPPORTUNITIES ACQUISITION CORP.

(ADOPTED BY SPECIAL RESOLUTION DATED 5 MAY 2020 AND EFFECTIVE ON 5 MAY 2020)

- 1 The name of the Company is **Sustainable Opportunities Acquisition Corp.**
- 2 The Registered Office of the Company shall be at the offices of Maples Corporate Services Limited, PO Box 309, Ugland House, Grand Cayman, KY1-1104, Cayman Islands, or at such other place within the Cayman Islands as the Directors may decide.
- 3 The objects for which the Company is established are unrestricted and the Company shall have full power and authority to carry out any object not prohibited by the laws of the Cayman Islands.
- 4 The liability of each Member is limited to the amount unpaid on such Member's shares.
- 5 The share capital of the Company is US\$33,100 divided into 300,000,000 Class A ordinary shares of a par value of US\$0.0001 each, 30,000,000 Class B ordinary shares of a par value of US\$0.0001 each and 1,000,000 preference shares of a par value of US\$0.0001 each.
- 6 The Company has power to register by way of continuation as a body corporate limited by shares under the laws of any jurisdiction outside the Cayman Islands and to be deregistered in the Cayman Islands.
- 7 Capitalised terms that are not defined in this Memorandum of Association bear the respective meanings given to them in the Articles of Association of the Company.

THE COMPANIES LAW (2020 REVISION)  
OF THE CAYMAN ISLANDS  
COMPANY LIMITED BY SHARES  
AMENDED AND RESTATED  
ARTICLES OF ASSOCIATION  
OF  
SUSTAINABLE OPPORTUNITIES ACQUISITION CORP.  
(ADOPTED BY SPECIAL RESOLUTION DATED 5 MAY 2020 AND EFFECTIVE ON 5 MAY 2020)

**1 Interpretation**

1.1 In the Articles Table A in the First Schedule to the Statute does not apply and, unless there is something in the subject or context inconsistent therewith:

- “Affiliate”** in respect of a person, means any other person that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with, such person, and (a) in the case of a natural person, shall include, without limitation, such person’s spouse, parents, children, siblings, mother-in-law and father-in-law and brothers and sisters-in-law, whether by blood, marriage or adoption or anyone residing in such person’s home, a trust for the benefit of any of the foregoing, a company, partnership or any natural person or entity wholly or jointly owned by any of the foregoing and (b) in the case of an entity, shall include a partnership, a corporation or any natural person or entity which directly, or indirectly through one or more intermediaries, controls, is controlled by, or is under common control with, such entity.
- “Applicable Law”** means, with respect to any person, all provisions of laws, statutes, ordinances, rules, regulations, permits, certificates, judgments, decisions, decrees or orders of any governmental authority applicable to such person.
- “Articles”** means these articles of association of the Company.
- “Audit Committee”** means the audit committee of the board of directors of the Company established pursuant to the Articles, or any successor committee.
- “Auditor”** means the person for the time being performing the duties of auditor of the Company (if any).
- “Business Combination”** means a merger, amalgamation, share exchange, asset acquisition, share purchase, reorganisation or similar business combination involving the Company, with one or more businesses or entities (the **“target business”**), which Business Combination: (a) as long as the Company’s securities are listed on the Designated Stock Exchange, must occur with one or more target businesses that together have an aggregate fair market value of at least 80 per cent of the assets held in the Trust Account (excluding the deferred underwriting commissions and taxes payable on the income earned on the Trust Account) at the time of the agreement to enter into such Business Combination; and (b) must not be effectuated solely with another blank cheque company or a similar company with nominal operations.

[Table of Contents](#)

<b>“business day”</b>	means any day other than a Saturday, a Sunday or a legal holiday or a day on which banking institutions or trust companies are authorised or obligated by law to close in New York City.
<b>“Clearing House”</b>	means a clearing house recognised by the laws of the jurisdiction in which the Shares (or depositary receipts therefor) are listed or quoted on a stock exchange or interdealer quotation system in such jurisdiction.
<b>“Class A Share”</b>	means a class A ordinary share of a par value of US\$0.0001 in the share capital of the Company.
<b>“Class B Share”</b>	means a class B ordinary share of a par value of US\$0.0001 in the share capital of the Company.
<b>“Company”</b>	means the above named company.
<b>“Company’s Website”</b>	means the website of the Company and/or its web-address or domain name (if any).
<b>“Compensation Committee”</b>	means the compensation committee of the board of directors of the Company established pursuant to the Articles, or any successor committee.
<b>“Designated Stock Exchange”</b>	means any United States national securities exchange on which the securities of the Company are listed for trading, including the New York Stock Exchange.
<b>“Directors”</b>	means the directors for the time being of the Company.
<b>“Dividend”</b>	means any dividend (whether interim or final) resolved to be paid on Shares pursuant to the Articles.
<b>“Electronic Communication”</b>	means a communication sent by electronic means, including electronic posting to the Company’s Website, transmission to any number, address or internet website (including the website of the Securities and Exchange Commission) or other electronic delivery methods as otherwise decided and approved by the Directors.
<b>“Electronic Record”</b>	has the same meaning as in the Electronic Transactions Law.
<b>“Electronic Transactions Law”</b>	means the Electronic Transactions Law (2003 Revision) of the Cayman Islands.
<b>“Equity-linked Securities”</b>	means any debt or equity securities that are convertible, exercisable or exchangeable for Class A Shares issued in a financing transaction in connection with a Business Combination, including but not limited to a private placement of equity or debt.
<b>“Exchange Act”</b>	means the United States Securities Exchange Act of 1934, as amended, or any similar U.S. federal statute and the rules and regulations of the Securities and Exchange Commission thereunder, all as the same shall be in effect at the time.
<b>“Founders”</b>	means all Members immediately prior to the consummation of the IPO.
<b>“Independent Director”</b>	has the same meaning as in the rules and regulations of the Designated Stock Exchange or in Rule 10A-3 under the Exchange Act, as the case may be.

[Table of Contents](#)

<b>“IPO”</b>	means the Company’s initial public offering of securities.
<b>“Member”</b>	has the same meaning as in the Statute.
<b>“Memorandum”</b>	means the memorandum of association of the Company.
<b>“Nominating and Corporate Governance Committee”</b>	means the nominating and corporate governance committee of the board of directors of the Company established pursuant to the Articles, or any successor committee.
<b>“Officer”</b>	means a person appointed to hold an office in the Company.
<b>“Ordinary Resolution”</b>	means a resolution passed by a simple majority of the Members as, being entitled to do so, vote in person or, where proxies are allowed, by proxy at a general meeting, and includes a unanimous written resolution. In computing the majority when a poll is demanded regard shall be had to the number of votes to which each Member is entitled by the Articles.
<b>“Over-Allotment Option”</b>	means the option of the Underwriters to purchase up to an additional 15 per cent of the units (as described in the Articles) sold in the IPO at a price equal to US\$10 per unit, less underwriting discounts and commissions.
<b>“Preference Share”</b>	means a preference share of a par value of US\$0.0001 in the share capital of the Company.
<b>“Public Share”</b>	means a Class A Share issued as part of the units (as described in the Articles) issued in the IPO.
<b>“Redemption Notice”</b>	means a notice in a form approved by the Company by which a holder of Public Shares is entitled to require the Company to redeem its Public Shares, subject to the condition contained therein.
<b>“Register of Members”</b>	means the register of Members maintained in accordance with the Statute and includes (except where otherwise stated) any branch or duplicate register of Members.
<b>“Registered Office”</b>	means the registered office for the time being of the Company.
<b>“Representative”</b>	means a representative of the Underwriters.
<b>“Seal”</b>	means the common seal of the Company and includes every duplicate seal.
<b>“Securities and Exchange Commission”</b>	means the United States Securities and Exchange commission.
<b>“Share”</b>	means a Class A Share, a Class B Share, or a Preference Share and includes a fraction of a share in the Company.
<b>“Special Resolution”</b>	subject to Article 29.4, has the same meaning as in the Statute, and includes a unanimous written resolution.

<b>“Sponsor”</b>	means Sustainable Opportunities Holdings LLC, a Delaware limited liability company, and its successors or assigns.
<b>“Statute”</b>	means the Companies Law (2020 Revision) of the Cayman Islands.
<b>“Treasury Share”</b>	means a Share held in the name of the Company as a treasury share in accordance with the Statute.
<b>“Trust Account”</b>	means the trust account established by the Company upon the consummation of its IPO and into which a certain amount of the net proceeds of the IPO, together with a certain amount of the proceeds of a private placement of warrants simultaneously with the closing date of the IPO, will be deposited.
<b>“Underwriter”</b>	means an underwriter of the IPO from time to time and any successor underwriter.

1.2 In the Articles:

- (a) words importing the singular number include the plural number and vice versa;
- (b) words importing the masculine gender include the feminine gender;
- (c) words importing persons include corporations as well as any other legal or natural person;
- (d) “written” and “in writing” include all modes of representing or reproducing words in visible form, including in the form of an Electronic Record;
- (e) “shall” shall be construed as imperative and “may” shall be construed as permissive;
- (f) references to provisions of any law or regulation shall be construed as references to those provisions as amended, modified, re-enacted or replaced;
- (g) any phrase introduced by the terms “including”, “include”, “in particular” or any similar expression shall be construed as illustrative and shall not limit the sense of the words preceding those terms;
- (h) the term “and/or” is used herein to mean both “and” as well as “or.” The use of “and/or” in certain contexts in no respects qualifies or modifies the use of the terms “and” or “or” in others. The term “or” shall not be interpreted to be exclusive and the term “and” shall not be interpreted to require the conjunctive (in each case, unless the context otherwise requires);
- (i) headings are inserted for reference only and shall be ignored in construing the Articles;
- (j) any requirements as to delivery under the Articles include delivery in the form of an Electronic Record;
- (k) any requirements as to execution or signature under the Articles including the execution of the Articles themselves can be satisfied in the form of an electronic signature as defined in the Electronic Transactions Law;
- (l) sections 8 and 19(3) of the Electronic Transactions Law shall not apply;

[www.verify.gov.ky](http://www.verify.gov.ky) File#: 358424

Filed: 06-May-2020 10:19 EST  
Auth Code: H54397741721

- (m) the term “clear days” in relation to the period of a notice means that period excluding the day when the notice is received or deemed to be received and the day for which it is given or on which it is to take effect; and
- (n) the term “holder” in relation to a Share means a person whose name is entered in the Register of Members as the holder of such Share.

## **2 Commencement of Business**

- 2.1 The business of the Company may be commenced as soon after incorporation of the Company as the Directors shall see fit.
- 2.2 The Directors may pay, out of the capital or any other monies of the Company, all expenses incurred in or about the formation and establishment of the Company, including the expenses of registration.

## **3 Issue of Shares and other Securities**

- 3.1 Subject to the provisions, if any, in the Memorandum (and to any direction that may be given by the Company in general meeting) and, where applicable, the rules and regulations of the Designated Stock Exchange, the Securities and Exchange Commission and/or any other competent regulatory authority or otherwise under Applicable Law, and without prejudice to any rights attached to any existing Shares, the Directors may allot, issue, grant options over or otherwise dispose of Shares (including fractions of a Share) with or without preferred, deferred or other rights or restrictions, whether in regard to Dividends or other distributions, voting, return of capital or otherwise and to such persons, at such times and on such other terms as they think proper, and may also (subject to the Statute and the Articles) vary such rights save that the Directors shall not allot, issue, grant options over or otherwise dispose of Shares (including fractions of a Share) to the extent that it may affect the ability of the Company to carry out a Class B Share Conversion set out in the Articles.
- 3.2 The Company may issue rights, options, warrants or convertible securities or securities of similar nature conferring the right upon the holders thereof to subscribe for, purchase or receive any class of Shares or other securities in the Company on such terms as the Directors may from time to time determine.
- 3.3 The Company may issue units of securities in the Company, which may be comprised of whole or fractional Shares, rights, options, warrants or convertible securities or securities of similar nature conferring the right upon the holders thereof to subscribe for, purchase or receive any class of Shares or other securities in the Company, upon such terms as the Directors may from time to time determine.
- 3.4 The Company shall not issue Shares to bearer.

## **4 Register of Members**

- 4.1 The Company shall maintain or cause to be maintained the Register of Members in accordance with the Statute.
- 4.2 The Directors may determine that the Company shall maintain one or more branch registers of Members in accordance with the Statute. The Directors may also determine which register of Members shall constitute the principal register and which shall constitute the branch register or registers, and to vary such determination from time to time.

## **5 Closing Register of Members or Fixing Record Date**

- 5.1 For the purpose of determining Members entitled to notice of, or to vote at any meeting of Members or any adjournment thereof, or Members entitled to receive payment of any Dividend or other distribution, or in order to make a determination of Members for any other purpose, the Directors may, after notice has been given by advertisement in an appointed newspaper or any other newspaper or by any other means in accordance with the rules and regulations of the Designated Stock Exchange, the Securities and Exchange Commission and/or any other competent regulatory authority or otherwise under Applicable Law, provide that the Register of Members shall be closed for transfers for a stated period which shall not in any case exceed forty days.
- 5.2 In lieu of, or apart from, closing the Register of Members, the Directors may fix in advance or arrears a date as the record date for any such determination of Members entitled to notice of, or to vote at any meeting of the Members or any adjournment thereof, or for the purpose of determining the Members entitled to receive payment of any Dividend or other distribution, or in order to make a determination of Members for any other purpose.
- 5.3 If the Register of Members is not so closed and no record date is fixed for the determination of Members entitled to notice of, or to vote at, a meeting of Members or Members entitled to receive payment of a Dividend or other distribution, the date on which notice of the meeting is sent or the date on which the resolution of the Directors resolving to pay such Dividend or other distribution is passed, as the case may be, shall be the record date for such determination of Members. When a determination of Members entitled to vote at any meeting of Members has been made as provided in this Article, such determination shall apply to any adjournment thereof.

## **6 Certificates for Shares**

- 6.1 A Member shall only be entitled to a share certificate if the Directors resolve that share certificates shall be issued. Share certificates representing Shares, if any, shall be in such form as the Directors may determine. Share certificates shall be signed by one or more Directors or other person authorised by the Directors. The Directors may authorise certificates to be issued with the authorised signature(s) affixed by mechanical process. All certificates for Shares shall be consecutively numbered or otherwise identified and shall specify the Shares to which they relate. All certificates surrendered to the Company for transfer shall be cancelled and, subject to the Articles, no new certificate shall be issued until the former certificate representing a like number of relevant Shares shall have been surrendered and cancelled.
- 6.2 The Company shall not be bound to issue more than one certificate for Shares held jointly by more than one person and delivery of a certificate to one joint holder shall be a sufficient delivery to all of them.
- 6.3 If a share certificate is defaced, worn out, lost or destroyed, it may be renewed on such terms (if any) as to evidence and indemnity and on the payment of such expenses reasonably incurred by the Company in investigating evidence, as the Directors may prescribe, and (in the case of defacement or wearing out) upon delivery of the old certificate.
- 6.4 Every share certificate sent in accordance with the Articles will be sent at the risk of the Member or other person entitled to the certificate. The Company will not be responsible for any share certificate lost or delayed in the course of delivery.

[www.verify.gov.ky](http://www.verify.gov.ky) File#: 358424

Filed: 06-May-2020 10:19 EST  
Auth Code: H54397741721

6.5 Share certificates shall be issued within the relevant time limit as prescribed by the Statute, if applicable, or as the rules and regulations of the Designated Stock Exchange, the Securities and Exchange Commission and/or any other competent regulatory authority or otherwise under Applicable Law may from time to time determine, whichever is shorter, after the allotment or, except in the case of a Share transfer which the Company is for the time being entitled to refuse to register and does not register, after lodgement of a Share transfer with the Company.

## **7 Transfer of Shares**

7.1 Subject to the terms of the Articles, any Member may transfer all or any of his Shares by an instrument of transfer provided that such transfer complies with the rules and regulations of the Designated Stock Exchange, the Securities and Exchange Commission and/or any other competent regulatory authority or otherwise under Applicable Law. If the Shares in question were issued in conjunction with rights, options or warrants issued pursuant to the Articles on terms that one cannot be transferred without the other, the Directors shall refuse to register the transfer of any such Share without evidence satisfactory to them of the like transfer of such option or warrant.

7.2 The instrument of transfer of any Share shall be in writing in the usual or common form or in a form prescribed by the rules and regulations of the Designated Stock Exchange, the Securities and Exchange Commission and/or any other competent regulatory authority or otherwise under Applicable Law or in any other form approved by the Directors and shall be executed by or on behalf of the transferor (and if the Directors so require, signed by or on behalf of the transferee) and may be under hand or, if the transferor or transferee is a Clearing House or its nominee(s), by hand or by machine imprinted signature or by such other manner of execution as the Directors may approve from time to time. The transferor shall be deemed to remain the holder of a Share until the name of the transferee is entered in the Register of Members.

## **8 Redemption, Repurchase and Surrender of Shares**

8.1 Subject to the provisions of the Statute, and, where applicable, the rules and regulations of the Designated Stock Exchange, the Securities and Exchange Commission and/or any other competent regulatory authority or otherwise under Applicable Law, the Company may issue Shares that are to be redeemed or are liable to be redeemed at the option of the Member or the Company. The redemption of such Shares, except Public Shares, shall be effected in such manner and upon such other terms as the Company may, by Special Resolution, determine before the issue of such Shares. With respect to redeeming or repurchasing the Shares:

- (a) Members who hold Public Shares are entitled to request the redemption of such Shares in the circumstances described in the Business Combination Article hereof;
- (b) Class B Shares held by the Founders shall be surrendered by the Founders for no consideration to the extent that the Over-Allotment Option is not exercised in full so that the Founders will own 20 percent of the Company's issued Shares after the IPO (exclusive of any securities purchased in a private placement simultaneously with the IPO); and
- (c) Public Shares shall be repurchased by way of tender offer in the circumstances set out in the Business Combination Article hereof.

[www.verify.gov.ky](http://www.verify.gov.ky) File#: 358424

Filed: 06-May-2020 10:19 EST  
Auth Code: H54397741721

[Table of Contents](#)

8.2 Subject to the provisions of the Statute, and, where applicable, the rules and regulations of the Designated Stock Exchange, the Securities and Exchange Commission and/or any other competent regulatory authority or otherwise under Applicable Law, the Company may purchase its own Shares (including any redeemable Shares) in such manner and on such other terms as the Directors may agree with the relevant Member. For the avoidance of doubt, redemptions, repurchases and surrenders of Shares in the circumstances described in the Article above shall not require further approval of the Members.

8.3 The Company may make a payment in respect of the redemption or purchase of its own Shares in any manner permitted by the Statute, including out of capital.

8.4 The Directors may accept the surrender for no consideration of any fully paid Share.

**9 Treasury Shares**

9.1 The Directors may, prior to the purchase, redemption or surrender of any Share, determine that such Share shall be held as a Treasury Share.

9.2 The Directors may determine to cancel a Treasury Share or transfer a Treasury Share on such terms as they think proper (including, without limitation, for nil consideration).

**10 Variation of Rights of Shares**

10.1 Subject to Article 3.1, if at any time the share capital of the Company is divided into different classes of Shares, all or any of the rights attached to any class (unless otherwise provided by the terms of issue of the Shares of that class) may, whether or not the Company is being wound up, be varied without the consent of the holders of the issued Shares of that class where such variation is considered by the Directors not to have a material adverse effect upon such rights; otherwise, any such variation shall be made only with the consent in writing of the holders of not less than two thirds of the issued Shares of that class (other than with respect to a waiver of the provisions of the Class B Share Conversion Article hereof, which as stated therein shall only require the consent in writing of the holders of a majority of the issued Shares of that class), or with the approval of a resolution passed by a majority of not less than two thirds of the votes cast at a separate meeting of the holders of the Shares of that class. For the avoidance of doubt, the Directors reserve the right, notwithstanding that any such variation may not have a material adverse effect, to obtain consent from the holders of Shares of the relevant class. To any such meeting all the provisions of the Articles relating to general meetings shall apply *mutatis mutandis*, except that the necessary quorum shall be one person holding or representing by proxy at least one third of the issued Shares of the class and that any holder of Shares of the class present in person or by proxy may demand a poll.

10.2 For the purposes of a separate class meeting, the Directors may treat two or more or all the classes of Shares as forming one class of Shares if the Directors consider that such class of Shares would be affected in the same way by the proposals under consideration, but in any other case shall treat them as separate classes of Shares.

10.3 The rights conferred upon the holders of the Shares of any class issued with preferred or other rights shall not, unless otherwise expressly provided by the terms of issue of the Shares of that class, be deemed to be varied by the creation or issue of further Shares ranking *pari passu* therewith or Shares issued with preferred or other rights.

[www.verify.gov.ky](http://www.verify.gov.ky) File#: 358424

Filed: 06-May-2020 10:19 EST  
Auth Code: 1154397741721

## 11 Commission on Sale of Shares

The Company may, in so far as the Statute permits, pay a commission to any person in consideration of his subscribing or agreeing to subscribe (whether absolutely or conditionally) or procuring or agreeing to procure subscriptions (whether absolutely or conditionally) for any Shares. Such commissions may be satisfied by the payment of cash and/or the issue of fully or partly paid-up Shares. The Company may also on any issue of Shares pay such brokerage as may be lawful.

## 12 Non Recognition of Trusts

The Company shall not be bound by or compelled to recognise in any way (even when notified) any equitable, contingent, future or partial interest in any Share, or (except only as is otherwise provided by the Articles or the Statute) any other rights in respect of any Share other than an absolute right to the entirety thereof in the holder.

## 13 Lien on Shares

- 13.1 The Company shall have a first and paramount lien on all Shares (whether fully paid-up or not) registered in the name of a Member (whether solely or jointly with others) for all debts, liabilities or engagements to or with the Company (whether presently payable or not) by such Member or his estate, either alone or jointly with any other person, whether a Member or not, but the Directors may at any time declare any Share to be wholly or in part exempt from the provisions of this Article. The registration of a transfer of any such Share shall operate as a waiver of the Company's lien thereon. The Company's lien on a Share shall also extend to any amount payable in respect of that Share.
- 13.2 The Company may sell, in such manner as the Directors think fit, any Shares on which the Company has a lien, if a sum in respect of which the lien exists is presently payable, and is not paid within fourteen clear days after notice has been received or deemed to have been received by the holder of the Shares, or to the person entitled to it in consequence of the death or bankruptcy of the holder, demanding payment and stating that if the notice is not complied with the Shares may be sold.
- 13.3 To give effect to any such sale the Directors may authorise any person to execute an instrument of transfer of the Shares sold to, or in accordance with the directions of, the purchaser. The purchaser or his nominee shall be registered as the holder of the Shares comprised in any such transfer, and he shall not be bound to see to the application of the purchase money, nor shall his title to the Shares be affected by any irregularity or invalidity in the sale or the exercise of the Company's power of sale under the Articles.
- 13.4 The net proceeds of such sale after payment of costs, shall be applied in payment of such part of the amount in respect of which the lien exists as is presently payable and any balance shall (subject to a like lien for sums not presently payable as existed upon the Shares before the sale) be paid to the person entitled to the Shares at the date of the sale.

## 14 Call on Shares

- 14.1 Subject to the terms of the allotment and issue of any Shares, the Directors may make calls upon the Members in respect of any monies unpaid on their Shares (whether in respect of par value or premium), and each Member shall (subject to receiving at least fourteen clear days' notice specifying the time or times of payment) pay to the Company at the time or times so specified the amount called on the Shares. A call may be revoked or postponed, in whole or in part, as the Directors may determine. A call may be required to be paid by instalments. A person upon whom a call is made shall remain liable for calls made upon him notwithstanding the subsequent transfer of the Shares in respect of which the call was made.

[Table of Contents](#)

- 14.2 A call shall be deemed to have been made at the time when the resolution of the Directors authorising such call was passed.
- 14.3 The joint holders of a Share shall be jointly and severally liable to pay all calls in respect thereof.
- 14.4 If a call remains unpaid after it has become due and payable, the person from whom it is due shall pay interest on the amount unpaid from the day it became due and payable until it is paid at such rate as the Directors may determine (and in addition all expenses that have been incurred by the Company by reason of such non-payment), but the Directors may waive payment of the interest or expenses wholly or in part.
- 14.5 An amount payable in respect of a Share on issue or allotment or at any fixed date, whether on account of the par value of the Share or premium or otherwise, shall be deemed to be a call and if it is not paid all the provisions of the Articles shall apply as if that amount had become due and payable by virtue of a call.
- 14.6 The Directors may issue Shares with different terms as to the amount and times of payment of calls, or the interest to be paid.
- 14.7 The Directors may, if they think fit, receive an amount from any Member willing to advance all or any part of the monies uncalled and unpaid upon any Shares held by him, and may (until the amount would otherwise become payable) pay interest at such rate as may be agreed upon between the Directors and the Member paying such amount in advance.
- 14.8 No such amount paid in advance of calls shall entitle the Member paying such amount to any portion of a Dividend or other distribution payable in respect of any period prior to the date upon which such amount would, but for such payment, become payable.

**15 Forfeiture of Shares**

- 15.1 If a call or instalment of a call remains unpaid after it has become due and payable the Directors may give to the person from whom it is due not less than fourteen clear days' notice requiring payment of the amount unpaid together with any interest which may have accrued and any expenses incurred by the Company by reason of such non-payment. The notice shall specify where payment is to be made and shall state that if the notice is not complied with the Shares in respect of which the call was made will be liable to be forfeited.
- 15.2 If the notice is not complied with, any Share in respect of which it was given may, before the payment required by the notice has been made, be forfeited by a resolution of the Directors. Such forfeiture shall include all Dividends, other distributions or other monies payable in respect of the forfeited Share and not paid before the forfeiture.
- 15.3 A forfeited Share may be sold, re-allotted or otherwise disposed of on such terms and in such manner as the Directors think fit and at any time before a sale, re-allotment or disposition the forfeiture may be cancelled on such terms as the Directors think fit. Where for the purposes of its disposal a forfeited Share is to be transferred to any person the Directors may authorise some person to execute an instrument of transfer of the Share in favour of that person.
- 15.4 A person any of whose Shares have been forfeited shall cease to be a Member in respect of them and shall surrender to the Company for cancellation the certificate for the Shares forfeited and shall remain liable to pay to the Company all monies which at the date of forfeiture were payable by him to the Company in respect of those Shares together with interest at such rate as the Directors may determine, but his liability shall cease if and when the Company shall have received payment in full of all monies due and payable by him in respect of those Shares.

[www.verify.gov.ky](http://www.verify.gov.ky) File#: 358424

Filed: 06-May-2020 10:19 EST  
Auth Code: H54397741721

- 15.5 A certificate in writing under the hand of one Director or Officer that a Share has been forfeited on a specified date shall be conclusive evidence of the facts stated in it as against all persons claiming to be entitled to the Share. The certificate shall (subject to the execution of an instrument of transfer) constitute a good title to the Share and the person to whom the Share is sold or otherwise disposed of shall not be bound to see to the application of the purchase money, if any, nor shall his title to the Share be affected by any irregularity or invalidity in the proceedings in reference to the forfeiture, sale or disposal of the Share.
- 15.6 The provisions of the Articles as to forfeiture shall apply in the case of non payment of any sum which, by the terms of issue of a Share, becomes payable at a fixed time, whether on account of the par value of the Share or by way of premium as if it had been payable by virtue of a call duly made and notified.

## **16 Transmission of Shares**

- 16.1 If a Member dies, the survivor or survivors (where he was a joint holder), or his legal personal representatives (where he was a sole holder), shall be the only persons recognised by the Company as having any title to his Shares. The estate of a deceased Member is not thereby released from any liability in respect of any Share, for which he was a joint or sole holder.
- 16.2 Any person becoming entitled to a Share in consequence of the death or bankruptcy or liquidation or dissolution of a Member (or in any other way than by transfer) may, upon such evidence being produced as may be required by the Directors, elect, by a notice in writing sent by him to the Company, either to become the holder of such Share or to have some person nominated by him registered as the holder of such Share. If he elects to have another person registered as the holder of such Share he shall sign an instrument of transfer of that Share to that person. The Directors shall, in either case, have the same right to decline or suspend registration as they would have had in the case of a transfer of the Share by the relevant Member before his death or bankruptcy or liquidation or dissolution, as the case may be.
- 16.3 A person becoming entitled to a Share by reason of the death or bankruptcy or liquidation or dissolution of a Member (or in any other case than by transfer) shall be entitled to the same Dividends, other distributions and other advantages to which he would be entitled if he were the holder of such Share. However, he shall not, before becoming a Member in respect of a Share, be entitled in respect of it to exercise any right conferred by membership in relation to general meetings of the Company and the Directors may at any time give notice requiring any such person to elect either to be registered himself or to have some person nominated by him be registered as the holder of the Share (but the Directors shall, in either case, have the same right to decline or suspend registration as they would have had in the case of a transfer of the Share by the relevant Member before his death or bankruptcy or liquidation or dissolution or any other case than by transfer, as the case may be). If the notice is not complied with within ninety days of being received or deemed to be received (as determined pursuant to the Articles), the Directors may thereafter withhold payment of all Dividends, other distributions, bonuses or other monies payable in respect of the Share until the requirements of the notice have been complied with.

## **17 Class B Share Conversion**

- 17.1 The rights attaching to all Shares shall rank *pari passu* in all respects, and the Class A Shares and Class B Shares shall vote together as a single class on all matters (subject to the Variation of Rights of Shares Article and the Appointment and Removal of Directors Article hereof) with the exception that the holder of a Class B Share shall have the Conversion Rights referred to in this Article.

[www.verify.gov.ky](http://www.verify.gov.ky) File#: 358424

Filed: 06-May-2020 10:19 EST  
Auth Code: H54397741721

- 17.2 Class B Shares shall automatically convert into Class A Shares on a one-for-one basis (the “**Initial Conversion Ratio**”): (a) at any time and from time to time at the option of the holder thereof; and (b) automatically on the day of the closing of a Business Combination.
- 17.3 Notwithstanding the Initial Conversion Ratio, in the case that additional Class A Shares or any other Equity-linked Securities, are issued, or deemed issued, by the Company in excess of the amounts offered in the IPO and related to the closing of a Business Combination, all Class B Shares in issue shall automatically convert into Class A Shares at the time of the closing of a Business Combination at an adjusted ratio so that the number of Class A Shares issuable upon conversion of all Class B Shares will equal, in the aggregate, 20 per cent of the sum of all Class A Shares and Class B Shares in issue upon completion of the IPO plus all Class A Shares and Equity-linked Securities issued, or deemed issued, in connection with a Business Combination, excluding any Shares or Equity-linked Securities issued, or to be issued, to any seller in a Business Combination and any private placement warrants issued to the Sponsor or an affiliate of the Sponsor or certain of the Officers and Directors upon conversion of working capital loans.
- 17.4 Notwithstanding anything to the contrary contained herein, the foregoing adjustment to the Initial Conversion Ratio may be waived as to any particular issuance, or deemed issuance, of additional Class A Shares or Equity-linked Securities by the written consent or agreement of holders of a majority of the Class B Shares then in issue consenting or agreeing separately as a separate class in the manner provided in the Variation of Rights of Shares Article hereof.
- 17.5 The foregoing conversion ratio shall also be adjusted to account for any subdivision (by share split, subdivision, exchange, capitalisation, rights issue, reclassification, recapitalisation or otherwise) or combination (by reverse share split, share consolidation, exchange, reclassification, recapitalisation or otherwise) or similar reclassification or recapitalisation of the Class A Shares in issue into a greater or lesser number of shares occurring after the original filing of the Articles without a proportionate and corresponding subdivision, combination or similar reclassification or recapitalisation of the Class B Shares in issue.
- 17.6 Each Class B Share shall convert into its pro rata number of Class A Shares pursuant to this Article. The pro rata share for each holder of Class B Shares will be determined as follows: each Class B Share shall convert into such number of Class A Shares as is equal to the product of 1 multiplied by a fraction, the numerator of which shall be the total number of Class A Shares into which all of the Class B Shares in issue shall be converted pursuant to this Article and the denominator of which shall be the total number of Class B Shares in issue at the time of conversion.
- 17.7 References in this Article to “**converted**”, “**conversion**” or “**exchange**” shall mean the compulsory redemption without notice of Class B Shares of any Member and, on behalf of such Members, automatic application of such redemption proceeds in paying for such new Class A Shares into which the Class B Shares have been converted or exchanged at a price per Class B Share necessary to give effect to a conversion or exchange calculated on the basis that the Class A Shares to be issued as part of the conversion or exchange will be issued at par. The Class A Shares to be issued on an exchange or conversion shall be registered in the name of such Member or in such name as the Member may direct.
- 17.8 Notwithstanding anything to the contrary in this Article, in no event may any Class B Share convert into Class A Shares at a ratio that is less than one-for-one.

## **18 Amendments of Memorandum and Articles of Association and Alteration of Capital**

### **18.1 The Company may by Ordinary Resolution:**

- (a) increase its share capital by such sum as the Ordinary Resolution shall prescribe and with such rights, priorities and privileges annexed thereto, as the Company in general meeting may determine;
- (b) consolidate and divide all or any of its share capital into Shares of larger amount than its existing Shares;
- (c) convert all or any of its paid-up Shares into stock, and reconvert that stock into paid-up Shares of any denomination;
- (d) by subdivision of its existing Shares or any of them divide the whole or any part of its share capital into Shares of smaller amount than is fixed by the Memorandum or into Shares without par value; and
- (e) cancel any Shares that at the date of the passing of the Ordinary Resolution have not been taken or agreed to be taken by any person and diminish the amount of its share capital by the amount of the Shares so cancelled.

18.2 All new Shares created in accordance with the provisions of the preceding Article shall be subject to the same provisions of the Articles with reference to the payment of calls, liens, transfer, transmission, forfeiture and otherwise as the Shares in the original share capital.

18.3 Subject to the provisions of the Statute, the provisions of the Articles as regards the matters to be dealt with by Ordinary Resolution and Article 29.4, the Company may by Special Resolution:

- (a) change its name;
- (b) alter or add to the Articles (subject to Article 29.4);
- (c) alter or add to the Memorandum with respect to any objects, powers or other matters specified therein; and
- (d) reduce its share capital or any capital redemption reserve fund.

## **19 Offices and Places of Business**

Subject to the provisions of the Statute, the Company may by resolution of the Directors change the location of its Registered Office. The Company may, in addition to its Registered Office, maintain such other offices or places of business as the Directors determine.

## **20 General Meetings**

20.1 All general meetings other than annual general meetings shall be called extraordinary general meetings.

20.2 The Company may, but shall not (unless required by the Statute) be obliged to, in each year hold a general meeting as its annual general meeting, and shall specify the meeting as such in the notices calling it. Any annual general meeting shall be held at such time and place as the Directors shall appoint and if no other time and place is prescribed by them, it shall be held at the Registered Office on the second Wednesday in December of each year at ten o'clock in the morning. At these meetings the report of the Directors (if any) shall be presented.

[www.verify.gov.ky](http://www.verify.gov.ky) File#: 358424

Filed: 06-May-2020 10:19 EST  
Auth Code: H54397741721

[Table of Contents](#)

- 20.3 The Directors, the chief executive officer or the chairman of the board of Directors may call general meetings, and, for the avoidance of doubt, Members shall not have the ability to call general meetings.
- 20.4 Members seeking to bring business before the annual general meeting or to nominate candidates for appointment as Directors at the annual general meeting must deliver notice to the principal executive offices of the Company not later than the close of business on the 90th day nor earlier than the close of business on the 120th day prior to the scheduled date of the annual general meeting.

**21 Notice of General Meetings**

- 21.1 At least five clear days' notice shall be given of any general meeting. Every notice shall specify the place, the day and the hour of the meeting and the general nature of the business to be conducted at the general meeting and shall be given in the manner hereinafter mentioned or in such other manner if any as may be prescribed by the Company, provided that a general meeting of the Company shall, whether or not the notice specified in this Article has been given and whether or not the provisions of the Articles regarding general meetings have been complied with, be deemed to have been duly convened if it is so agreed:
- (a) in the case of an annual general meeting, by all of the Members entitled to attend and vote thereat; and
  - (b) in the case of an extraordinary general meeting, by a majority in number of the Members having a right to attend and vote at the meeting, together holding not less than ninety-five per cent in par value of the Shares giving that right.
- 21.2 The accidental omission to give notice of a general meeting to, or the non receipt of notice of a general meeting by, any person entitled to receive such notice shall not invalidate the proceedings of that general meeting.

**22 Proceedings at General Meetings**

- 22.1 No business shall be transacted at any general meeting unless a quorum is present. The holders of a majority of the Shares being individuals present in person or by proxy or if a corporation or other non-natural person by its duly authorised representative or proxy shall be a quorum.
- 22.2 A person may participate at a general meeting by conference telephone or other communications equipment by means of which all the persons participating in the meeting can communicate with each other. Participation by a person in a general meeting in this manner is treated as presence in person at that meeting.
- 22.3 A resolution (including a Special Resolution) in writing (in one or more counterparts) signed by or on behalf of all of the Members for the time being entitled to receive notice of and to attend and vote at general meetings (or, being corporations or other non-natural persons, signed by their duly authorised representatives) shall be as valid and effective as if the resolution had been passed at a general meeting of the Company duly convened and held.
- 22.4 If a quorum is not present within half an hour from the time appointed for the meeting to commence or if during such a meeting a quorum ceases to be present, the meeting, if convened upon a Members' requisition, shall be dissolved and in any other case it shall stand adjourned to the same day in the next week at the same time and/or place or to such other day, time and/or place as the Directors may determine, and if at the adjourned meeting a quorum is not present within half an hour from the time appointed for the meeting to commence, the Members present shall be a quorum.

## Table of Contents

- 22.5 The Directors may, at any time prior to the time appointed for the meeting to commence, appoint any person to act as chairman of a general meeting of the Company or, if the Directors do not make any such appointment, the chairman, if any, of the board of Directors shall preside as chairman at such general meeting. If there is no such chairman, or if he shall not be present within fifteen minutes after the time appointed for the meeting to commence, or is unwilling to act, the Directors present shall elect one of their number to be chairman of the meeting.
- 22.6 If no Director is willing to act as chairman or if no Director is present within fifteen minutes after the time appointed for the meeting to commence, the Members present shall choose one of their number to be chairman of the meeting.
- 22.7 The chairman may, with the consent of a meeting at which a quorum is present (and shall if so directed by the meeting) adjourn the meeting from time to time and from place to place, but no business shall be transacted at any adjourned meeting other than the business left unfinished at the meeting from which the adjournment took place.
- 22.8 When a general meeting is adjourned for thirty days or more, notice of the adjourned meeting shall be given as in the case of an original meeting. Otherwise it shall not be necessary to give any such notice of an adjourned meeting.
- 22.9 If, prior to a Business Combination, a notice is issued in respect of a general meeting and the Directors, in their absolute discretion, consider that it is impractical or undesirable for any reason to hold that general meeting at the place, the day and the hour specified in the notice calling such general meeting, the Directors may postpone the general meeting to another place, day and/or hour provided that notice of the place, the day and the hour of the rearranged general meeting is promptly given to all Members. No business shall be transacted at any postponed meeting other than the business specified in the notice of the original meeting.
- 22.10 When a general meeting is postponed for thirty days or more, notice of the postponed meeting shall be given as in the case of an original meeting. Otherwise it shall not be necessary to give any such notice of a postponed meeting. All proxy forms submitted for the original general meeting shall remain valid for the postponed meeting. The Directors may postpone a general meeting which has already been postponed.
- 22.11 A resolution put to the vote of the meeting shall be decided on a poll.
- 22.12 A poll shall be taken as the chairman directs, and the result of the poll shall be deemed to be the resolution of the general meeting at which the poll was demanded.
- 22.13 A poll demanded on the election of a chairman or on a question of adjournment shall be taken forthwith. A poll demanded on any other question shall be taken at such date, time and place as the chairman of the general meeting directs, and any business other than that upon which a poll has been demanded or is contingent thereon may proceed pending the taking of the poll.
- 22.14 In the case of an equality of votes the chairman shall be entitled to a second or casting vote.

### **23 Votes of Members**

- 23.1 Subject to any rights or restrictions attached to any Shares, including as set out at Article 29.4, every Member present in any such manner shall have one vote for every Share of which he is the holder.

[www.verify.gov.ky](http://www.verify.gov.ky) File#: 358424

Filed: 06-May-2020 10:19 EST  
Auth Code: H54397741721

## Table of Contents

- 23.2 In the case of joint holders the vote of the senior holder who tenders a vote, whether in person or by proxy (or, in the case of a corporation or other non-natural person, by its duly authorised representative or proxy), shall be accepted to the exclusion of the votes of the other joint holders, and seniority shall be determined by the order in which the names of the holders stand in the Register of Members.
- 23.3 A Member of unsound mind, or in respect of whom an order has been made by any court, having jurisdiction in lunacy, may vote by his committee, receiver, curator bonis, or other person on such Member's behalf appointed by that court, and any such committee, receiver, curator bonis or other person may vote by proxy.
- 23.4 No person shall be entitled to vote at any general meeting unless he is registered as a Member on the record date for such meeting nor unless all calls or other monies then payable by him in respect of Shares have been paid.
- 23.5 No objection shall be raised as to the qualification of any voter except at the general meeting or adjourned general meeting at which the vote objected to is given or tendered and every vote not disallowed at the meeting shall be valid. Any objection made in due time in accordance with this Article shall be referred to the chairman whose decision shall be final and conclusive.
- 23.6 Votes may be cast either personally or by proxy (or in the case of a corporation or other non-natural person by its duly authorised representative or proxy). A Member may appoint more than one proxy or the same proxy under one or more instruments to attend and vote at a meeting. Where a Member appoints more than one proxy the instrument of proxy shall specify the number of Shares in respect of which each proxy is entitled to exercise the related votes.
- 23.7 A Member holding more than one Share need not cast the votes in respect of his Shares in the same way on any resolution and therefore may vote a Share or some or all such Shares either for or against a resolution and/or abstain from voting a Share or some or all of the Shares and, subject to the terms of the instrument appointing him, a proxy appointed under one or more instruments may vote a Share or some or all of the Shares in respect of which he is appointed either for or against a resolution and/or abstain from voting a Share or some or all of the Shares in respect of which he is appointed.

## **24 Proxies**

- 24.1 The instrument appointing a proxy shall be in writing and shall be executed under the hand of the appointor or of his attorney duly authorised in writing, or, if the appointor is a corporation or other non natural person, under the hand of its duly authorised representative. A proxy need not be a Member.
- 24.2 The Directors may, in the notice convening any meeting or adjourned meeting, or in an instrument of proxy sent out by the Company, specify the manner by which the instrument appointing a proxy shall be deposited and the place and the time (being not later than the time appointed for the commencement of the meeting or adjourned meeting to which the proxy relates) at which the instrument appointing a proxy shall be deposited. In the absence of any such direction from the Directors in the notice convening any meeting or adjourned meeting or in an instrument of proxy sent out by the Company, the instrument appointing a proxy shall be deposited physically at the Registered Office not less than 48 hours before the time appointed for the meeting or adjourned meeting to commence at which the person named in the instrument proposes to vote.
- 24.3 The chairman may in any event at his discretion declare that an instrument of proxy shall be deemed to have been duly deposited. An instrument of proxy that is not deposited in the manner permitted, or which has not been declared to have been duly deposited by the chairman, shall be invalid.

Filed: 06-May-2020 10:19 EST  
Auth Code: H54397741721

[www.verify.gov.ky](http://www.verify.gov.ky) File#: 358424

[Table of Contents](#)

- 24.4 The instrument appointing a proxy may be in any usual or common form (or such other form as the Directors may approve) and may be expressed to be for a particular meeting or any adjournment thereof or generally until revoked. An instrument appointing a proxy shall be deemed to include the power to demand or join or concur in demanding a poll.
- 24.5 Votes given in accordance with the terms of an instrument of proxy shall be valid notwithstanding the previous death or insanity of the principal or revocation of the proxy or of the authority under which the proxy was executed, or the transfer of the Share in respect of which the proxy is given unless notice in writing of such death, insanity, revocation or transfer was received by the Company at the Registered Office before the commencement of the general meeting, or adjourned meeting at which it is sought to use the proxy.

**25 Corporate Members**

- 25.1 Any corporation or other non-natural person which is a Member may in accordance with its constitutional documents, or in the absence of such provision by resolution of its directors or other governing body, authorise such person as it thinks fit to act as its representative at any meeting of the Company or of any class of Members, and the person so authorised shall be entitled to exercise the same powers on behalf of the corporation which he represents as the corporation could exercise if it were an individual Member.
- 25.2 If a Clearing House (or its nominee(s)), being a corporation, is a Member, it may authorise such persons as it sees fit to act as its representative at any meeting of the Company or at any meeting of any class of Members provided that the authorisation shall specify the number and class of Shares in respect of which each such representative is so authorised. Each person so authorised under the provisions of this Article shall be deemed to have been duly authorised without further evidence of the facts and be entitled to exercise the same rights and powers on behalf of the Clearing House (or its nominee(s)) as if such person was the registered holder of such Shares held by the Clearing House (or its nominee(s)).

**26 Shares that May Not be Voted**

Shares in the Company that are beneficially owned by the Company shall not be voted, directly or indirectly, at any meeting and shall not be counted in determining the total number of outstanding Shares at any given time.

**27 Directors**

- 27.1 There shall be a board of Directors consisting of not less than one person provided however that the Company may by Ordinary Resolution increase or reduce the limits in the number of Directors.

[www.verify.gov.ky](http://www.verify.gov.ky) File#: 358424

Filed: 06-May-2020 10:19 EST  
Auth Code: H54397741721

27.2 The Directors shall be divided into three classes: Class I, Class II and Class III. The number of Directors in each class shall be as nearly equal as possible. Upon the adoption of the Articles, the existing Directors shall by resolution classify themselves as Class I, Class II or Class III Directors. The Class I Directors shall stand elected for a term expiring at the Company's first annual general meeting, the Class II Directors shall stand elected for a term expiring at the Company's second annual general meeting and the Class III Directors shall stand elected for a term expiring at the Company's third annual general meeting. Commencing at the Company's first annual general meeting, and at each annual general meeting thereafter, Directors elected to succeed those Directors whose terms expire shall be elected for a term of office to expire at the third succeeding annual general meeting after their election. Except as the Statute or other Applicable Law may otherwise require, in the interim between annual general meetings or extraordinary general meetings called for the election of Directors and/or the removal of one or more Directors and the filling of any vacancy in that connection, additional Directors and any vacancies in the board of Directors, including unfilled vacancies resulting from the removal of Directors for cause, may be filled by the vote of a majority of the remaining Directors then in office, although less than a quorum (as defined in the Articles), or by the sole remaining Director. All Directors shall hold office until the expiration of their respective terms of office and until their successors shall have been elected and qualified. A Director elected to fill a vacancy resulting from the death, resignation or removal of a Director shall serve for the remainder of the full term of the Director whose death, resignation or removal shall have created such vacancy and until his successor shall have been elected and qualified.

## **28 Powers of Directors**

28.1 Subject to the provisions of the Statute, the Memorandum and the Articles and to any directions given by Special Resolution, the business of the Company shall be managed by the Directors who may exercise all the powers of the Company. No alteration of the Memorandum or Articles and no such direction shall invalidate any prior act of the Directors which would have been valid if that alteration had not been made or that direction had not been given. A duly convened meeting of Directors at which a quorum is present may exercise all powers exercisable by the Directors.

28.2 All cheques, promissory notes, drafts, bills of exchange and other negotiable or transferable instruments and all receipts for monies paid to the Company shall be signed, drawn, accepted, endorsed or otherwise executed as the case may be in such manner as the Directors shall determine by resolution.

28.3 The Directors on behalf of the Company may pay a gratuity or pension or allowance on retirement to any Director who has held any other salaried office or place of profit with the Company or to his widow or dependants and may make contributions to any fund and pay premiums for the purchase or provision of any such gratuity, pension or allowance.

28.4 The Directors may exercise all the powers of the Company to borrow money and to mortgage or charge its undertaking, property and assets (present and future) and uncalled capital or any part thereof and to issue debentures, debenture stock, mortgages, bonds and other such securities whether outright or as security for any debt, liability or obligation of the Company or of any third party.

## **29 Appointment and Removal of Directors**

29.1 Prior to the closing of a Business Combination, the Company may by Ordinary Resolution of the holders of the Class B Shares appoint any person to be a Director or may by Ordinary Resolution of the holders of the Class B Shares remove any Director. For the avoidance of doubt, prior to the closing of a Business Combination, holders of Class A Shares shall have no right to vote on the appointment or removal of any Director.

[www.verify.gov.ky](http://www.verify.gov.ky) File#: 358424

Filed: 06-May-2020 10:19 EST  
Auth Code: H54397741721

[Table of Contents](#)

- 29.2 The Directors may appoint any person to be a Director, either to fill a vacancy or as an additional Director provided that the appointment does not cause the number of Directors to exceed any number fixed by or in accordance with the Articles as the maximum number of Directors.
- 29.3 After the closing of a Business Combination, the Company may by Ordinary Resolution appoint any person to be a Director or may by Ordinary Resolution remove any Director.
- 29.4 Prior to the closing of a Business Combination, Article 29.1 may only be amended by a Special Resolution passed by at least 90 per cent of such Members as, being entitled to do so, vote in person or, where proxies are allowed, by proxy at a general meeting of which notice specifying the intention to propose the resolution as a special resolution has been given, or by way of unanimous written resolution.

**30 Vacation of Office of Director**

The office of a Director shall be vacated if:

- (a) the Director gives notice in writing to the Company that he resigns the office of Director; or
- (b) the Director absents himself (for the avoidance of doubt, without being represented by proxy) from three consecutive meetings of the board of Directors without special leave of absence from the Directors, and the Directors pass a resolution that he has by reason of such absence vacated office; or
- (c) the Director dies, becomes bankrupt or makes any arrangement or composition with his creditors generally; or
- (d) the Director is found to be or becomes of unsound mind; or
- (e) all of the other Directors (being not less than two in number) determine that he should be removed as a Director, either by a resolution passed by all of the other Directors at a meeting of the Directors duly convened and held in accordance with the Articles or by a resolution in writing signed by all of the other Directors.

**31 Proceedings of Directors**

- 31.1 The quorum for the transaction of the business of the Directors may be fixed by the Directors, and unless so fixed shall be two if there are two or more Directors, and shall be one if there is only one Director.
- 31.2 Subject to the provisions of the Articles, the Directors may regulate their proceedings as they think fit. Questions arising at any meeting shall be decided by a majority of votes. In the case of an equality of votes, the chairman shall have a second or casting vote.
- 31.3 A person may participate in a meeting of the Directors or any committee of Directors by conference telephone or other communications equipment by means of which all the persons participating in the meeting can communicate with each other at the same time. Participation by a person in a meeting in this manner is treated as presence in person at that meeting. Unless otherwise determined by the Directors, the meeting shall be deemed to be held at the place where the chairman is located at the start of the meeting.

[www.verify.gov.ky](http://www.verify.gov.ky) File#: 358424

Filed: 06-May-2020 10:19 EST  
Auth Code: H54397741721

- 31.4 A resolution in writing (in one or more counterparts) signed by all the Directors or all the members of a committee of the Directors or, in the case of a resolution in writing relating to the removal of any Director or the vacation of office by any Director, all of the Directors other than the Director who is the subject of such resolution shall be as valid and effectual as if it had been passed at a meeting of the Directors, or committee of Directors as the case may be, duly convened and held.
- 31.5 A Director may, or other Officer on the direction of a Director shall, call a meeting of the Directors by at least two days' notice in writing to every Director which notice shall set forth the general nature of the business to be considered unless notice is waived by all the Directors either at, before or after the meeting is held. To any such notice of a meeting of the Directors all the provisions of the Articles relating to the giving of notices by the Company to the Members shall apply *mutatis mutandis*.
- 31.6 The continuing Directors (or a sole continuing Director, as the case may be) may act notwithstanding any vacancy in their body, but if and so long as their number is reduced below the number fixed by or pursuant to the Articles as the necessary quorum of Directors the continuing Directors or Director may act for the purpose of increasing the number of Directors to be equal to such fixed number, or of summoning a general meeting of the Company, but for no other purpose.
- 31.7 The Directors may elect a chairman of their board and determine the period for which he is to hold office; but if no such chairman is elected, or if at any meeting the chairman is not present within five minutes after the time appointed for the meeting to commence, the Directors present may choose one of their number to be chairman of the meeting.
- 31.8 All acts done by any meeting of the Directors or of a committee of the Directors shall, notwithstanding that it is afterwards discovered that there was some defect in the appointment of any Director, and/or that they or any of them were disqualified, and/or had vacated their office and/or were not entitled to vote, be as valid as if every such person had been duly appointed and/or not disqualified to be a Director and/or had not vacated their office and/or had been entitled to vote, as the case may be.
- 31.9 A Director may be represented at any meetings of the board of Directors by a proxy appointed in writing by him. The proxy shall count towards the quorum and the vote of the proxy shall for all purposes be deemed to be that of the appointing Director.

### **32 Presumption of Assent**

A Director who is present at a meeting of the board of Directors at which action on any Company matter is taken shall be presumed to have assented to the action taken unless his dissent shall be entered in the minutes of the meeting or unless he shall file his written dissent from such action with the person acting as the chairman or secretary of the meeting before the adjournment thereof or shall forward such dissent by registered post to such person immediately after the adjournment of the meeting. Such right to dissent shall not apply to a Director who voted in favour of such action.

### **33 Directors' Interests**

- 33.1 A Director may hold any other office or place of profit under the Company (other than the office of Auditor) in conjunction with his office of Director for such period and on such terms as to remuneration and otherwise as the Directors may determine.
- 33.2 A Director may act by himself or by, through or on behalf of his firm in a professional capacity for the Company and he or his firm shall be entitled to remuneration for professional services as if he were not a Director.

Filed: 06-May-2020 10:19 EST  
Auth Code: H54397741721

[www.verify.gov.ky](http://www.verify.gov.ky) File#: 358424

- 33.3 A Director may be or become a director or other officer of or otherwise interested in any company promoted by the Company or in which the Company may be interested as a shareholder, a contracting party or otherwise, and no such Director shall be accountable to the Company for any remuneration or other benefits received by him as a director or officer of, or from his interest in, such other company.
- 33.4 No person shall be disqualified from the office of Director or prevented by such office from contracting with the Company, either as vendor, purchaser or otherwise, nor shall any such contract or any contract or transaction entered into by or on behalf of the Company in which any Director shall be in any way interested be or be liable to be avoided, nor shall any Director so contracting or being so interested be liable to account to the Company for any profit realised by or arising in connection with any such contract or transaction by reason of such Director holding office or of the fiduciary relationship thereby established. A Director shall be at liberty to vote in respect of any contract or transaction in which he is interested provided that the nature of the interest of any Director in any such contract or transaction shall be disclosed by him at or prior to its consideration and any vote thereon.
- 33.5 A general notice that a Director is a shareholder, director, officer or employee of any specified firm or company and is to be regarded as interested in any transaction with such firm or company shall be sufficient disclosure for the purposes of voting on a resolution in respect of a contract or transaction in which he has an interest, and after such general notice it shall not be necessary to give special notice relating to any particular transaction.

#### **34 Minutes**

The Directors shall cause minutes to be made in books kept for the purpose of recording all appointments of Officers made by the Directors, all proceedings at meetings of the Company or the holders of any class of Shares and of the Directors, and of committees of the Directors, including the names of the Directors present at each meeting.

#### **35 Delegation of Directors' Powers**

- 35.1 The Directors may delegate any of their powers, authorities and discretions, including the power to sub-delegate, to any committee consisting of one or more Directors (including, without limitation, the Audit Committee, the Compensation Committee and the Nominating and Corporate Governance Committee). Any such delegation may be made subject to any conditions the Directors may impose and either collaterally with or to the exclusion of their own powers and any such delegation may be revoked or altered by the Directors. Subject to any such conditions, the proceedings of a committee of Directors shall be governed by the Articles regulating the proceedings of Directors, so far as they are capable of applying.
- 35.2 The Directors may establish any committees, local boards or agencies or appoint any person to be a manager or agent for managing the affairs of the Company and may appoint any person to be a member of such committees, local boards or agencies. Any such appointment may be made subject to any conditions the Directors may impose, and either collaterally with or to the exclusion of their own powers and any such appointment may be revoked or altered by the Directors. Subject to any such conditions, the proceedings of any such committee, local board or agency shall be governed by the Articles regulating the proceedings of Directors, so far as they are capable of applying.

- 35.3 The Directors may adopt formal written charters for committees. Each of these committees shall be empowered to do all things necessary to exercise the rights of such committee set forth in the Articles and shall have such powers as the Directors may delegate pursuant to the Articles and as required by the rules and regulations of the Designated Stock Exchange, the Securities and Exchange Commission and/or any other competent regulatory authority or otherwise under Applicable Law. Each of the Audit Committee, the Compensation Committee and the Nominating and Corporate Governance Committee, if established, shall consist of such number of Directors as the Directors shall from time to time determine (or such minimum number as may be required from time to time by the rules and regulations of the Designated Stock Exchange, the Securities and Exchange Commission and/or any other competent regulatory authority or otherwise under Applicable Law).
- 35.4 The Directors may by power of attorney or otherwise appoint any person to be the agent of the Company on such conditions as the Directors may determine, provided that the delegation is not to the exclusion of their own powers and may be revoked by the Directors at any time.
- 35.5 The Directors may by power of attorney or otherwise appoint any company, firm, person or body of persons, whether nominated directly or indirectly by the Directors, to be the attorney or authorised signatory of the Company for such purpose and with such powers, authorities and discretions (not exceeding those vested in or exercisable by the Directors under the Articles) and for such period and subject to such conditions as they may think fit, and any such powers of attorney or other appointment may contain such provisions for the protection and convenience of persons dealing with any such attorneys or authorised signatories as the Directors may think fit and may also authorise any such attorney or authorised signatory to delegate all or any of the powers, authorities and discretions vested in him.
- 35.6 The Directors may appoint such Officers as they consider necessary on such terms, at such remuneration and to perform such duties, and subject to such provisions as to disqualification and removal as the Directors may think fit. Unless otherwise specified in the terms of his appointment an Officer may be removed by resolution of the Directors or Members. An Officer may vacate his office at any time if he gives notice in writing to the Company that he resigns his office.

### **36 No Minimum Shareholding**

The Company in general meeting may fix a minimum shareholding required to be held by a Director, but unless and until such a shareholding qualification is fixed a Director is not required to hold Shares.

### **37 Remuneration of Directors**

- 37.1 The remuneration to be paid to the Directors, if any, shall be such remuneration as the Directors shall determine, provided that no remuneration shall be paid to any Director by the Company prior to the consummation of a Business Combination. The Directors shall also, whether prior to or after the consummation of a Business Combination, be entitled to be paid all travelling, hotel and other expenses properly incurred by them in connection with their attendance at meetings of Directors or committees of Directors, or general meetings of the Company, or separate meetings of the holders of any class of Shares or debentures of the Company, or otherwise in connection with the business of the Company or the discharge of their duties as a Director, or to receive a fixed allowance in respect thereof as may be determined by the Directors, or a combination partly of one such method and partly the other.
- 37.2 The Directors may by resolution approve additional remuneration to any Director for any services which in the opinion of the Directors go beyond his ordinary routine work as a Director. Any fees paid to a Director who is also counsel, attorney or solicitor to the Company, or otherwise serves it in a professional capacity shall be in addition to his remuneration as a Director.

[www.verify.gov.ky](http://www.verify.gov.ky) File#: 358424

**38 Seal**

- 38.1 The Company may, if the Directors so determine, have a Seal. The Seal shall only be used by the authority of the Directors or of a committee of the Directors authorised by the Directors. Every instrument to which the Seal has been affixed shall be signed by at least one person who shall be either a Director or some Officer or other person appointed by the Directors for the purpose.
- 38.2 The Company may have for use in any place or places outside the Cayman Islands a duplicate Seal or Seals each of which shall be a facsimile of the common Seal of the Company and, if the Directors so determine, with the addition on its face of the name of every place where it is to be used.
- 38.3 A Director or Officer, representative or attorney of the Company may without further authority of the Directors affix the Seal over his signature alone to any document of the Company required to be authenticated by him under seal or to be filed with the Registrar of Companies in the Cayman Islands or elsewhere wheresoever.

**39 Dividends, Distributions and Reserve**

- 39.1 Subject to the Statute and this Article and except as otherwise provided by the rights attached to any Shares, the Directors may resolve to pay Dividends and other distributions on Shares in issue and authorise payment of the Dividends or other distributions out of the funds of the Company lawfully available therefor. A Dividend shall be deemed to be an interim Dividend unless the terms of the resolution pursuant to which the Directors resolve to pay such Dividend specifically state that such Dividend shall be a final Dividend. No Dividend or other distribution shall be paid except out of the realised or unrealised profits of the Company, out of the share premium account or as otherwise permitted by law.
- 39.2 Except as otherwise provided by the rights attached to any Shares, all Dividends and other distributions shall be paid according to the par value of the Shares that a Member holds. If any Share is issued on terms providing that it shall rank for Dividend as from a particular date, that Share shall rank for Dividend accordingly.
- 39.3 The Directors may deduct from any Dividend or other distribution payable to any Member all sums of money (if any) then payable by him to the Company on account of calls or otherwise.
- 39.4 The Directors may resolve that any Dividend or other distribution be paid wholly or partly by the distribution of specific assets and in particular (but without limitation) by the distribution of shares, debentures, or securities of any other company or in any one or more of such ways and where any difficulty arises in regard to such distribution, the Directors may settle the same as they think expedient and in particular may issue fractional Shares and may fix the value for distribution of such specific assets or any part thereof and may determine that cash payments shall be made to any Members upon the basis of the value so fixed in order to adjust the rights of all Members and may vest any such specific assets in trustees in such manner as may seem expedient to the Directors.
- 39.5 Except as otherwise provided by the rights attached to any Shares, Dividends and other distributions may be paid in any currency. The Directors may determine the basis of conversion for any currency conversions that may be required and how any costs involved are to be met.
- 39.6 The Directors may, before resolving to pay any Dividend or other distribution, set aside such sums as they think proper as a reserve or reserves which shall, at the discretion of the Directors, be applicable for any purpose of the Company and pending such application may, at the discretion of the Directors, be employed in the business of the Company.

Auth Code: H54397741721

[www.verify.gov.ky](http://www.verify.gov.ky) File#: 358424

- 39.7 Any Dividend, other distribution, interest or other monies payable in cash in respect of Shares may be paid by wire transfer to the holder or by cheque or warrant sent through the post directed to the registered address of the holder or, in the case of joint holders, to the registered address of the holder who is first named on the Register of Members or to such person and to such address as such holder or joint holders may in writing direct. Every such cheque or warrant shall be made payable to the order of the person to whom it is sent. Any one of two or more joint holders may give effectual receipts for any Dividends, other distributions, bonuses, or other monies payable in respect of the Share held by them as joint holders.
- 39.8 No Dividend or other distribution shall bear interest against the Company.
- 39.9 Any Dividend or other distribution which cannot be paid to a Member and/or which remains unclaimed after six months from the date on which such Dividend or other distribution becomes payable may, in the discretion of the Directors, be paid into a separate account in the Company's name, provided that the Company shall not be constituted as a trustee in respect of that account and the Dividend or other distribution shall remain as a debt due to the Member. Any Dividend or other distribution which remains unclaimed after a period of six years from the date on which such Dividend or other distribution becomes payable shall be forfeited and shall revert to the Company.

#### **40 Capitalisation**

The Directors may at any time capitalise any sum standing to the credit of any of the Company's reserve accounts or funds (including the share premium account and capital redemption reserve fund) or any sum standing to the credit of the profit and loss account or otherwise available for distribution; appropriate such sum to Members in the proportions in which such sum would have been divisible amongst such Members had the same been a distribution of profits by way of Dividend or other distribution; and apply such sum on their behalf in paying up in full unissued Shares for allotment and distribution credited as fully paid-up to and amongst them in the proportion aforesaid. In such event the Directors shall do all acts and things required to give effect to such capitalisation, with full power given to the Directors to make such provisions as they think fit in the case of Shares becoming distributable in fractions (including provisions whereby the benefit of fractional entitlements accrue to the Company rather than to the Members concerned). The Directors may authorise any person to enter on behalf of all of the Members interested into an agreement with the Company providing for such capitalisation and matters incidental or relating thereto and any agreement made under such authority shall be effective and binding on all such Members and the Company.

#### **41 Books of Account**

- 41.1 The Directors shall cause proper books of account (including, where applicable, material underlying documentation including contracts and invoices) to be kept with respect to all sums of money received and expended by the Company and the matters in respect of which the receipt or expenditure takes place, all sales and purchases of goods by the Company and the assets and liabilities of the Company. Such books of account must be retained for a minimum period of five years from the date on which they are prepared. Proper books shall not be deemed to be kept if there are not kept such books of account as are necessary to give a true and fair view of the state of the Company's affairs and to explain its transactions.

Auth Code: H54397741721

[www.verify.gov.ky](http://www.verify.gov.ky) File#: 358424

[Table of Contents](#)

41.2 The Directors shall determine whether and to what extent and at what times and places and under what conditions or regulations the accounts and books of the Company or any of them shall be open to the inspection of Members not being Directors and no Member (not being a Director) shall have any right of inspecting any account or book or document of the Company except as conferred by Statute or authorised by the Directors or by the Company in general meeting.

41.3 The Directors may cause to be prepared and to be laid before the Company in general meeting profit and loss accounts, balance sheets, group accounts (if any) and such other reports and accounts as may be required by law.

**42 Audit**

42.1 The Directors may appoint an Auditor of the Company who shall hold office on such terms as the Directors determine.

42.2 Without prejudice to the freedom of the Directors to establish any other committee, if the Shares (or depositary receipts therefor) are listed or quoted on the Designated Stock Exchange, and if required by the rules and regulations of the Designated Stock Exchange, the Securities and Exchange Commission and/or any other competent regulatory authority or otherwise under Applicable Law, the Directors shall establish and maintain an Audit Committee as a committee of the Directors and shall adopt a formal written Audit Committee charter and review and assess the adequacy of the formal written charter on an annual basis. The composition and responsibilities of the Audit Committee shall comply with the rules and regulations of the Designated Stock Exchange, the Securities and Exchange Commission and/or any other competent regulatory authority or otherwise under Applicable Law.

42.3 If the Shares (or depositary receipts therefor) are listed or quoted on the Designated Stock Exchange, the Company shall conduct an appropriate review of all related party transactions on an ongoing basis and shall utilise the Audit Committee for the review and approval of potential conflicts of interest.

42.4 The remuneration of the Auditor shall be fixed by the Audit Committee (if one exists).

42.5 If the office of Auditor becomes vacant by resignation or death of the Auditor, or by his becoming incapable of acting by reason of illness or other disability at a time when his services are required, the Directors shall fill the vacancy and determine the remuneration of such Auditor.

42.6 Every Auditor of the Company shall have a right of access at all times to the books and accounts and vouchers of the Company and shall be entitled to require from the Directors and Officers such information and explanation as may be necessary for the performance of the duties of the Auditor.

42.7 Auditors shall, if so required by the Directors, make a report on the accounts of the Company during their tenure of office at the next annual general meeting following their appointment in the case of a company which is registered with the Registrar of Companies as an ordinary company, and at the next extraordinary general meeting following their appointment in the case of a company which is registered with the Registrar of Companies as an exempted company, and at any other time during their term of office, upon request of the Directors or any general meeting of the Members.

### 43 Notices

43.1 Notices shall be in writing and may be given by the Company to any Member either personally or by sending it by courier, post, cable, telex, fax or e-mail to him or to his address as shown in the Register of Members (or where the notice is given by e-mail by sending it to the e-mail address provided by such Member). Notice may also be served by Electronic Communication in accordance with the rules and regulations of the Designated Stock Exchange, the Securities and Exchange Commission and/or any other competent regulatory authority or by placing it on the Company's Website.

43.2 Where a notice is sent by:

- (a) courier; service of the notice shall be deemed to be effected by delivery of the notice to a courier company, and shall be deemed to have been received on the third day (not including Saturdays or Sundays or public holidays) following the day on which the notice was delivered to the courier;
- (b) post; service of the notice shall be deemed to be effected by properly addressing, pre paying and posting a letter containing the notice, and shall be deemed to have been received on the fifth day (not including Saturdays or Sundays or public holidays in the Cayman Islands) following the day on which the notice was posted;
- (c) cable, telex or fax; service of the notice shall be deemed to be effected by properly addressing and sending such notice and shall be deemed to have been received on the same day that it was transmitted;
- (d) e-mail or other Electronic Communication; service of the notice shall be deemed to be effected by transmitting the e-mail to the e-mail address provided by the intended recipient and shall be deemed to have been received on the same day that it was sent, and it shall not be necessary for the receipt of the e-mail to be acknowledged by the recipient; and
- (e) placing it on the Company's Website; service of the notice shall be deemed to have been effected one hour after the notice or document was placed on the Company's Website.

43.3 A notice may be given by the Company to the person or persons which the Company has been advised are entitled to a Share or Shares in consequence of the death or bankruptcy of a Member in the same manner as other notices which are required to be given under the Articles and shall be addressed to them by name, or by the title of representatives of the deceased, or trustee of the bankrupt, or by any like description at the address supplied for that purpose by the persons claiming to be so entitled, or at the option of the Company by giving the notice in any manner in which the same might have been given if the death or bankruptcy had not occurred.

43.4 Notice of every general meeting shall be given in any manner authorised by the Articles to every holder of Shares carrying an entitlement to receive such notice on the record date for such meeting except that in the case of joint holders the notice shall be sufficient if given to the joint holder first named in the Register of Members and every person upon whom the ownership of a Share devolves by reason of his being a legal personal representative or a trustee in bankruptcy of a Member where the Member but for his death or bankruptcy would be entitled to receive notice of the meeting, and no other person shall be entitled to receive notices of general meetings.

#### 44 Winding Up

44.1 If the Company shall be wound up, the liquidator shall apply the assets of the Company in satisfaction of creditors' claims in such manner and order as such liquidator thinks fit. Subject to the rights attaching to any Shares, in a winding up:

- (a) if the assets available for distribution amongst the Members shall be insufficient to repay the whole of the Company's issued share capital, such assets shall be distributed so that, as nearly as may be, the losses shall be borne by the Members in proportion to the par value of the Shares held by them; or
- (b) if the assets available for distribution amongst the Members shall be more than sufficient to repay the whole of the Company's issued share capital at the commencement of the winding up, the surplus shall be distributed amongst the Members in proportion to the par value of the Shares held by them at the commencement of the winding up subject to a deduction from those Shares in respect of which there are monies due, of all monies payable to the Company for unpaid calls or otherwise.

44.2 If the Company shall be wound up the liquidator may, subject to the rights attaching to any Shares and with the approval of a Special Resolution of the Company and any other approval required by the Statute, divide amongst the Members in kind the whole or any part of the assets of the Company (whether such assets shall consist of property of the same kind or not) and may for that purpose value any assets and determine how the division shall be carried out as between the Members or different classes of Members. The liquidator may, with the like approval, vest the whole or any part of such assets in trustees upon such trusts for the benefit of the Members as the liquidator, with the like approval, shall think fit, but so that no Member shall be compelled to accept any asset upon which there is a liability.

#### 45 Indemnity and Insurance

45.1 Every Director and Officer (which for the avoidance of doubt, shall not include auditors of the Company), together with every former Director and former Officer (each an "**Indemnified Person**") shall be indemnified out of the assets of the Company against any liability, action, proceeding, claim, demand, costs, damages or expenses, including legal expenses, whatsoever which they or any of them may incur as a result of any act or failure to act in carrying out their functions other than such liability (if any) that they may incur by reason of their own actual fraud, wilful neglect or wilful default. No Indemnified Person shall be liable to the Company for any loss or damage incurred by the Company as a result (whether direct or indirect) of the carrying out of their functions unless that liability arises through the actual fraud, wilful neglect or wilful default of such Indemnified Person. No person shall be found to have committed actual fraud, wilful neglect or wilful default under this Article unless or until a court of competent jurisdiction shall have made a finding to that effect.

45.2 The Company shall advance to each Indemnified Person reasonable attorneys' fees and other costs and expenses incurred in connection with the defence of any action, suit, proceeding or investigation involving such Indemnified Person for which indemnity will or could be sought. In connection with any advance of any expenses hereunder, the Indemnified Person shall execute an undertaking to repay the advanced amount to the Company if it shall be determined by final judgment or other final adjudication that such Indemnified Person was not entitled to indemnification pursuant to this Article. If it shall be determined by a final judgment or other final adjudication that such Indemnified Person was not entitled to indemnification with respect to such judgment, costs or expenses, then such party shall not be indemnified with respect to such judgment, costs or expenses and any advancement shall be returned to the Company (without interest) by the Indemnified Person.

45.3 The Directors, on behalf of the Company, may purchase and maintain insurance for the benefit of any Director or Officer against any liability which, by virtue of any rule of law, would otherwise attach to such person in respect of any negligence, default, breach of duty or breach of trust of which such person may be guilty in relation to the Company.

**46 Financial Year**

Unless the Directors otherwise prescribe, the financial year of the Company shall end on 31st December in each year and, following the year of incorporation, shall begin on 1st January in each year.

**47 Transfer by Way of Continuation**

If the Company is exempted as defined in the Statute, it shall, subject to the provisions of the Statute and with the approval of a Special Resolution, have the power to register by way of continuation as a body corporate under the laws of any jurisdiction outside the Cayman Islands and to be deregistered in the Cayman Islands.

**48 Mergers and Consolidations**

The Company shall have the power to merge or consolidate with one or more other constituent companies (as defined in the Statute) upon such terms as the Directors may determine and (to the extent required by the Statute) with the approval of a Special Resolution.

**49 Business Combination**

49.1 Notwithstanding any other provision of the Articles, this Article shall apply during the period commencing upon the adoption of the Articles and terminating upon the first to occur of the consummation of a Business Combination and the full distribution of the Trust Account pursuant to this Article. In the event of a conflict between this Article and any other Articles, the provisions of this Article shall prevail.

49.2 Prior to the consummation of a Business Combination, the Company shall either:

- (a) submit such Business Combination to its Members for approval; or
- (b) provide Members with the opportunity to have their Shares repurchased by means of a tender offer for a per-Share repurchase price payable in cash, equal to the aggregate amount then on deposit in the Trust Account, calculated as of two business days prior to the consummation of such Business Combination, including interest earned on the Trust Account (which interest shall be net of taxes paid or payable, if any) divided by the number of then issued Public Shares, provided that the Company shall not repurchase Public Shares in an amount that would cause the Company's net tangible assets to be less than US\$5,000,001 following such repurchases. Such obligation to purchase Shares is subject to the completion of the proposed Business Combination to which it relates.

49.3 If the Company initiates any tender offer in accordance with Rule 13e-4 and Regulation 14E of the Exchange Act in connection with a proposed Business Combination, it shall file tender offer documents with the Securities and Exchange Commission prior to completing such Business Combination which contain substantially the same financial and other information about such Business Combination and the redemption rights as is required under Regulation 14A of the Exchange Act. If, alternatively, the Company holds a general meeting to approve a proposed Business Combination, the Company will conduct any redemptions in conjunction with a proxy solicitation pursuant to Regulation 14A of the Exchange Act, and not pursuant to the tender offer rules, and file proxy materials with the Securities and Exchange Commission.

- 49.4 At a general meeting called for the purposes of approving a Business Combination pursuant to this Article, in the event that such Business Combination is approved by Ordinary Resolution, the Company shall be authorised to consummate such Business Combination, provided that the Company shall not consummate such Business Combination unless the Company has net tangible assets of at least US\$5,000,001 immediately prior to, or upon such consummation of, or any greater net tangible asset or cash requirement that may be contained in the agreement relating to, such Business Combination.
- 49.5 Any Member holding Public Shares who is not the Sponsor, a Founder, Officer or Director may, at least two business days' prior to the initially scheduled vote on a Business Combination, elect to have their Public Shares redeemed for cash (the "**IPO Redemption**"), provided that no such Member acting together with any Affiliate of his or any other person with whom he is acting in concert or as a partnership, limited partnership, syndicate, or other group for the purposes of acquiring, holding, or disposing of Shares may exercise this redemption right with respect to more than 15 per cent of the Public Shares in the aggregate without the prior consent of the Company, and provided further that any beneficial owner of Public Shares on whose behalf a redemption right is being exercised must identify itself to the Company in connection with any redemption election in order to validly redeem such Public Shares. If so demanded, the Company shall pay any such redeeming Member, regardless of whether he votes or is voting for or against such proposed Business Combination, a per-Share redemption price payable in cash, equal to the aggregate amount then on deposit in the Trust Account calculated as of two business days prior to the consummation of the Business Combination, including interest earned on the Trust Account and not previously released to the Company to pay its taxes, divided by the number of then issued Public Shares (such redemption price being referred to herein as the "**Redemption Price**"), but only in the event that the applicable proposed Business Combination is approved and consummated. The Company shall not redeem Public Shares that would cause the Company's net tangible assets to be less than US\$5,000,001 following such redemptions (the "**Redemption Limitation**").
- 49.6 A Member may not withdraw a Redemption Notice following the deadline for such Redemption Notice once submitted to the Company unless the Directors determine (in their sole discretion) to permit the withdrawal of such redemption request (which they may do in whole or in part).
- 49.7 In the event that the Company does not consummate a Business Combination within 18 months from the consummation of the IPO, or such later time as the Members may approve in accordance with the Articles, the Company shall:
- (a) cease all operations except for the purpose of winding up;
  - (b) as promptly as reasonably possible but not more than ten business days thereafter, redeem the Public Shares, at a per-Share price, payable in cash, equal to the aggregate amount then on deposit in the Trust Account, including interest earned on the funds held in the Trust Account and not previously released to the Company (less taxes payable and up to US\$100,000 of interest to pay dissolution expenses), divided by the number of then Public Shares in issue, which redemption will completely extinguish public Members' rights as Members (including the right to receive further liquidation distributions, if any); and
  - (c) as promptly as reasonably possible following such redemption, subject to the approval of the Company's remaining Members and the Directors, liquidate and dissolve, subject in the case of (b) and (c) above to its obligations under Cayman Islands law to provide for claims of creditors and in all cases subject to the other requirements of Applicable Law.

[Table of Contents](#)

49.8 In the event that any amendment is made to this Article that would affect the substance or timing of the Company's obligation to:

- (a) provide for the redemption of the Public Shares in connection with a Business Combination; or
- (b) redeem 100 per cent of the Public Shares if the Company has not consummated a Business Combination within 18 months from the consummation of the IPO, or such later time as the Members may approve in accordance with the Articles,

each holder of Public Shares who is not the Sponsor, a Founder, Officer or Director shall be provided with the opportunity to redeem their Public Shares upon the approval or effectiveness of any such amendment at a per-Share price, payable in cash, equal to the aggregate amount then on deposit in the Trust Account, including interest earned on the funds held in the Trust Account and not previously released to the Company to pay its taxes, divided by the number of then outstanding Public Shares. The Company's ability to provide such redemption in this Article is subject to the Redemption Limitation.

49.9 A holder of Public Shares shall be entitled to receive distributions from the Trust Account only in the event of an IPO Redemption, a repurchase of Shares by means of a tender offer pursuant to this Article **Error! Reference source not found.**, or a distribution of the Trust Account pursuant to this Article. In no other circumstance shall a holder of Public Shares have any right or interest of any kind in the Trust Account.

49.10 After the issue of Public Shares, and prior to the consummation of a Business Combination, the Company shall not issue additional Shares or any other securities that would entitle the holders thereof to:

- (a) receive funds from the Trust Account; or
- (b) vote as a class with Public Shares on a Business Combination.

49.11 A Director may vote in respect of a Business Combination in which such Director has a conflict of interest with respect to the evaluation of such Business Combination. Such Director must disclose such interest or conflict to the other Directors.

49.12 As long as the Company's securities are listed on the Designated Stock Exchange, the Company must complete one or more Business Combinations having an aggregate fair market value equal to at least 80 percent of the assets held in the Trust Account (net of amounts previously disbursed to the Company's management for taxes and excluding the amount of deferred underwriting discounts held in the Trust Account) at the time of the Company's signing a definitive agreement in connection with a Business Combination. A Business Combination must not be effectuated with another blank cheque company or a similar company with nominal operations

49.13 The Company may enter into a Business Combination with a target business that is Affiliated with the Sponsor, a Founder, a Director or an Officer. In the event the Company seeks to complete a Business Combination with a target that is Affiliated with the Sponsor, a Founder, a Director or an Officer, the Company, or a committee of Independent Directors, will obtain an opinion from an independent investment banking firm or another valuation or appraisal firm that regularly renders fairness opinions on the type of target business the Company is seeking to acquire that such a Business Combination is fair to the Company from a financial point of view.

**50 Business Opportunities**

- 50.1 To the fullest extent permitted by Applicable Law, no individual serving as a Director or an Officer (“**Management**”) shall have any duty, except and to the extent expressly assumed by contract, to refrain from engaging directly or indirectly in the same or similar business activities or lines of business as the Company. To the fullest extent permitted by Applicable Law, the Company renounces any interest or expectancy of the Company in, or in being offered an opportunity to participate in, any potential transaction or matter which may be a corporate opportunity for Management, on the one hand, and the Company, on the other. Except to the extent expressly assumed by contract, to the fullest extent permitted by Applicable Law, Management shall have no duty to communicate or offer any such corporate opportunity to the Company and shall not be liable to the Company or its Members for breach of any fiduciary duty as a Member, Director and/or Officer solely by reason of the fact that such party pursues or acquires such corporate opportunity for itself, himself or herself, directs such corporate opportunity to another person, or does not communicate information regarding such corporate opportunity to the Company.
- 50.2 Except as provided elsewhere in this Article, the Company hereby renounces any interest or expectancy of the Company in, or in being offered an opportunity to participate in, any potential transaction or matter which may be a corporate opportunity for both the Company and Management, about which a Director and/or Officer who is also a member of Management acquires knowledge.
- 50.3 To the extent a court might hold that the conduct of any activity related to a corporate opportunity that is renounced in this Article to be a breach of duty to the Company or its Members, the Company hereby waives, to the fullest extent permitted by Applicable Law, any and all claims and causes of action that the Company may have for such activities. To the fullest extent permitted by Applicable Law, the provisions of this Article apply equally to activities conducted in the future and that have been conducted in the past.

**PLAN OF ARRANGEMENT  
UNDER SECTION 288 OF THE  
BUSINESS CORPORATIONS ACT (BRITISH COLUMBIA)**

**ARTICLE 1  
INTERPRETATION**

1.1 In this Plan of Arrangement, any capitalized term used herein and not defined in this Section 1.1 will have the meaning ascribed thereto in the Business Combination Agreement. Unless the context otherwise requires, the following words and phrases used in this Plan of Arrangement will have the meanings hereinafter set out:

“**Affected Securities**” means, collectively, the Company Common Shares, the Company Preferred Shares and the Company Options;

“**Affected Securityholders**” means, collectively, the Company Shareholders and the Company Optionholders;

“**Allocation Schedule**” means the allocation schedule to be delivered no later than five (5) Business Days prior to the Effective Date by the Company to SOAC (and to be delivered by SOAC to the Exchange Agent thereafter) in accordance with Section 2.4 of the Business Combination Agreement;

“**Amalco**” has the meaning ascribed thereto in Section 3.1(e) of this Plan of Arrangement;

“**Amalco Shares**” means the common shares in the capital of Amalco;

“**Amalgamation**” has the meaning ascribed thereto in Section 3.1(e) of this Plan of Arrangement;

“**Arrangement**” means the arrangement under Part 9, Division 5 of the BCBCA on the terms and subject to the conditions set out in this Plan of Arrangement, subject to any amendments or variations thereto made in accordance with the terms of the Business Combination Agreement or Article 7 of this Plan of Arrangement or made at the direction of the Court in the Final Order with the prior written consent of SOAC and the Company, such consent not to be unreasonably withheld, conditioned or delayed;

“**Arrangement Dissent Rights**” has the meaning ascribed thereto in Section 4.1 of this Plan of Arrangement;

“**Assumed Plan**” has the meaning ascribed thereto in Section 3.1(c)(i) of this Plan of Arrangement;

“**BCBCA**” means the *Business Corporations Act* (British Columbia) and the regulations made thereunder, as now in effect and as they may be promulgated or amended from time to time;

“**Business Combination Agreement**” means the business combination agreement made as of March 4, 2021 by and among SOAC, NewCo Sub and the Company, including all schedules annexed thereto, as the same may be amended, supplemented or otherwise modified from time to time in accordance with the terms thereof;

“**Business Day**” means a day, other than a Saturday or Sunday, on which commercial banks in New York, New York and Vancouver, British Columbia are open for the general transaction of business;

“**Code**” means the U.S. Internal Revenue Code of 1986, as amended;

“**Company**” means DeepGreen Metals Inc., a company existing under the laws of the Province of British Columbia;

“**Company Arrangement Resolution**” means the special resolution of the Affected Securityholders approving the Plan of Arrangement which is to be considered at the Company Shareholders Meeting, substantially in the form of Exhibit A to the Business Combination Agreement;

“**Company Common Shares**” means the common shares in the capital of the Company (including, for greater certainty, any Company Common Shares issued in connection with the Preferred Share Conversion and the Convertible Debenture Conversion);

“**Company Common Shareholders**” means, at any time, the holders of Company Common Shares issued and outstanding at such time and “**Company Common Shareholder**” means any one of them;

“**Company Equity Plan**” means the Company stock option plan currently in effect (as amended from time to time) and each other plan that provides for the award to any current or former director, manager, officer, employee, individual independent contractor, consultant or other service provider of any Group Company of rights of any kind to receive Equity Securities of any Group Company or benefits measured in whole or in part by reference to Equity Securities of any Group Company;

“**Company Optionholders**” means, at any time, the holders of Company Options outstanding at such time and “**Company Optionholder**” means any one of them;

“**Company Options**” means, as of any determination time, each option to purchase Company Common Shares that is outstanding and unexercised, whether vested or unvested and whether granted under a Company Equity Plan or otherwise;

“**Company Preferred Shareholders**” means, at any time, the holders of Company Preferred Shares issued and outstanding at such time and “**Company Preferred Shareholder**” means any one of them;

“**Company Preferred Shares**” means the Class B Preferred Shares in the capital of the Company;

“**Company Shareholders**” means, at any time, the holders of Company Common Shares, Company Preferred Shares or both, in each case issued and outstanding at such time and “**Company Shareholder**” means any one of them;

“**Company Shareholders Meeting**” means the special meeting of the Affected Securityholders, including any adjournment or postponement thereof in accordance with the terms of the Business Combination Agreement, that is to be convened as provided by the Interim Order to consider, and if deemed advisable, approve, the Company Arrangement Resolution, and for any other purpose as may be set out in the Company Information Circular and agreed to by SOAC;

“**Company Shares**” means, collectively, the Company Common Shares and the Company Preferred Shares;

“**Court**” means the Supreme Court of British Columbia;

“**Dissenting Shareholders**” means a registered Company Shareholder (other than a Supporting Company Shareholder) who exercises Arrangement Dissent Rights in respect of the Company Arrangement Resolution in compliance with the dissent procedures set out in this Plan of Arrangement and the Interim Order or the BCBCA, as applicable, and who has not withdrawn or been deemed to have withdrawn such exercise of Arrangement Dissent Rights;

“**Earnout Shares**” means (i) 5,000,000 Class A Special Shares, (ii) 10,000,000 Class B Special Shares, (iii) 10,000,000 Class C Special Shares, (iv) 20,000,000 Class D Special Shares, (v) 20,000,000 Class E Special Shares, (vi) 20,000,000 Class F Special Shares, (vii) 25,000,000 Class G Special Shares, and (viii) 25,000,000 Class H Special Shares, in each case, in the capital of SOAC following the SOAC Continuance, convertible into SOAC Common Shares and redeemable in accordance with their terms;

“**Effective Date**” means the date upon which the Arrangement becomes effective as provided in this Plan of Arrangement;

“**Effective Time**” means 12:00 p.m. (noon) (Vancouver time) on the Effective Date or such other time as the Company and SOAC may agree upon in writing;

“**Eligible Holder**” means a Company Shareholder that is (a) a resident of Canada for purposes of the Tax Act and not exempt from tax under Part I of the Tax Act, or (b) a partnership, any member of which is a resident of Canada for purposes of the Tax Act and not exempt from tax under Part I of the Tax Act;

“**Exchange Agent**” means such Person appointed by SOAC to act as exchange agent for the Company Shares in accordance with the Business Combination Agreement, reasonably acceptable to the Company, such acceptance not to be unreasonably withheld, conditioned or delayed;

“**Exchange Consideration**” means the number of SOAC Common Shares and Earnout Shares allocated to each Company Common Shareholder pursuant to the Allocation Schedule;

“**holder**”, when used with reference to any securities of the Company, means the holder of such securities shown from time to time in the central securities register maintained by or on behalf of Company in respect of such securities;

“**Interim Order**” means the interim order of the Court contemplated by Section 2.1(a) of the Business Combination Agreement and made pursuant to Section 291 of the BCBCA, in a form acceptable to the Company and SOAC, each acting reasonably, providing for, among other things, the calling and holding of the Company Shareholders Meeting, as the same may be amended by the Court with the consent of the Company and SOAC, such consent not to be unreasonably withheld, conditioned or delayed, provided that any such amendment is reasonable acceptable to each of the Company and SOAC;

“**Letter of Transmittal**” means the letter of transmittal as mutually agreed by each of the Exchange Agent, SOAC and the Company as contemplated in the Business Combination Agreement;

“**NewCo Shares**” means the common shares in the capital of NewCo Sub;

“**NewCo Sub**” means 1291924 B.C. Unlimited Liability Company, an unlimited liability company formed under the laws of the Province of British Columbia;

“**Plan of Arrangement**” means this plan of arrangement and any amendments, supplements, modifications or variations hereto made in accordance with this Plan of Arrangement, the applicable provisions of the Business Combination Agreement, or upon the direction of the Court in the Final Order with the consent of the Company and SOAC, such consent not to be unreasonably withheld, conditioned or delayed;

“**Rollover Option**” has the meaning ascribed thereto in Section 3.1(c)(i) of this Plan of Arrangement;

“**SOAC**” means Sustainable Opportunities Acquisition Corp., a Cayman Islands exempted company, and any successor thereof continued under the BCBCA;

“**Supporting Company Shareholder**” means a Company Shareholder that executed and delivered to SOAC a transaction support agreement, substantially in the form of Exhibit E to the Business Combination Agreement; and

“**Tax Act**” means the *Income Tax Act* (Canada) and the regulations made thereunder, as now in effect and as they may be promulgated or amended from time to time.

1.2 In this Plan of Arrangement, unless otherwise expressly stated or the context otherwise requires:

- (a) all references to Articles and Sections are to Articles and Sections of this Plan of Arrangement;
- (b) time periods within or following which any payment is to be made or act is to be done will be calculated by excluding the day on which the period commences and including the day on which the period ends. If any action under this Plan of Arrangement is required to be done or taken on a day that is not a Business Day, then such action shall be required to be done or taken not on such day but on the first succeeding Business Day thereafter;
- (c) the words, “herein,” “hereto,” “hereof” and words of similar import refer to this Plan of Arrangement as a whole, and not to any particular section, subsection, paragraph, subparagraph or clause set forth in this Plan of Arrangement;

- (d) masculine gender shall also include the feminine and neutral genders, and vice versa;
- (e) words importing the singular shall also include the plural, and vice versa;
- (f) the word “or” is disjunctive but not necessarily exclusive;
- (g) the words “include,” “includes” or “including” shall be deemed to be followed by the words “without limitation”;
- (h) the word “extent” in the phrase “to the extent” means the degree of which a subject or other thing extends, and such phrase shall mean simply “if”;
- (i) all references to any Law will be to such Law as amended, supplemented or otherwise modified or re-enacted from time to time; and
- (j) all references to cash or currency in this Plan of Arrangement are to United States dollars unless otherwise indicated.

**ARTICLE 2  
BUSINESS COMBINATION AGREEMENT**

- 2.1 This Plan of Arrangement is made pursuant to and subject to the provisions of the Business Combination Agreement and constitutes an arrangement as referred to in Part 9, Division 5 of the BCBCA. If there is any inconsistency or conflict between the provisions of this Plan of Arrangement and the provisions of the Business Combination Agreement, the provisions of this Plan of Arrangement will govern.
- 2.2 This Plan of Arrangement and the Arrangement will become effective as at the Effective Time and will be binding without any further authorization, act or formality on the part of the Court or any Person, on the Affected Securityholders, SOAC, Newco Sub, the Company, Amalco and the Exchange Agent from and after the Effective Time.

**ARTICLE 3  
ARRANGEMENT**

- 3.1 Commencing at the Effective Time, the following transactions will occur and will be deemed to occur at the times and in the order set out below without any further authorization, act or formality required on the part of any Person, except as otherwise expressly provided herein:
  - (a) At the Effective Time:
    - (i) each Company Common Share (including, for greater certainty, any Company Common Shares issued in connection with the Preferred Share Conversion and the Convertible Debenture Conversion), held by a Company Common Shareholder (other than a Dissenting Shareholder) immediately prior to the Effective Time will be transferred and assigned to SOAC free and clear of all Liens in consideration for the Exchange Consideration (provided that it shall be a condition to a Company Common Shareholder’s entitlement to receive the Exchange Consideration that such Company Common Shareholder shall have executed and delivered the Letter of Transmittal);
    - (ii) each Company Common Shareholder will cease to have any rights as a registered holder of Company Common Shares other than the right to receive (A) the consideration contemplated by Section 3.1(a)(i), and (B) any dividends and other distributions payable in respect of the Company Common Shares as of the Effective Time, to the extent applicable, in each case less any amounts required to be withheld in accordance with Section 6.2, as applicable;
    - (iii) the name of each Company Common Shareholder will be removed as the registered holder of Company Common Shares from the applicable central securities register of the Company maintained by or on behalf of the Company and added as a registered holder of SOAC Common Shares and Earnout Shares, as applicable, on the applicable central securities registers of SOAC maintained by or on behalf of SOAC; and

- (iv) SOAC will be recorded as the registered holder of the Company Common Shares so transferred and acquired in accordance with this Section 3.1(a) and will be deemed to be the legal and beneficial owner thereof free and clear of all Liens;
- (b) one minute after the steps in Section 3.1(a):
  - (i) each Company Common Share held by a Dissenting Shareholder will be deemed to be transferred and assigned by such Dissenting Shareholder to the Company free and clear of all Liens, in accordance with, and for the consideration contemplated in, Article 4;
  - (ii) each Dissenting Shareholder will cease to have any rights as a registered holder of Company Common Shares other than the right to receive (A) the consideration contemplated by Article 4, and (B) any dividends and other distributions payable in respect of the Company Common Shares held by such Dissenting Shareholder as of the Effective Time, to the extent applicable, in each case less any amounts required to be withheld in accordance with Section 6.2, as applicable;
  - (iii) each Dissenting Shareholder shall be deemed to have executed and delivered all consents, releases, assignments and waivers, statutory or otherwise, required to transfer and assign each Company Common Shares held by such Dissenting Shareholder; and
  - (iv) the name of each Dissenting Shareholder will be removed as the registered holder of Company Common Shares from the applicable central securities register of the Company maintained by or on behalf of the Company, and at such time, such Dissenting Shareholder will have the rights set out in Section 4.1;
- (c) one minute after the steps in Section 3.1(b):
  - (i) the Company Equity Plan will be assumed by SOAC and become a stock option plan of SOAC (the “**Assumed Plan**”) and will continue in full force and effect without any amendments thereof (including with respect to vesting, expiration and forfeiture provisions), except such amendments required to take into account the Arrangement and securities laws and regulations applicable to SOAC;
  - (ii) each Company Option outstanding immediately prior to the Effective Time (whether vested or unvested) (each a “**Rollover Option**”), will be exchanged for options to purchase the number of SOAC Common Shares and Earnout Shares allocated to such Rollover Option pursuant to the Allocation Schedule and having the exercise price set forth therein, in each case in accordance with the Assumed Plan, and in a manner intended to comply with the requirements of Section 409A of the Code and subsection 7(1.4) of the Tax Act (provided that the exercise of the Rollover Options shall be conditional upon the holder of the Rollover Option executing an instrument providing the same covenants, agreements and undertakings in respect of the securities issuable on the exercise of the Rollover Options as those contained in the Letter of Transmittal in respect of the issuance of the Earnout Shares, which instrument shall be in a form reasonably acceptable to SOAC);
  - (iii) each Company Optionholder will cease to have any rights as a holder of Company Options other than the right to receive the consideration contemplated by Section 3.1(c)(ii);
  - (iv) the name of each Company Optionholder will be removed as the registered holder of Company Options from the applicable central securities register of the Company maintained by or on behalf of the Company and added as a registered holder of options under the Assumed Plan on the applicable central securities register of SOAC maintained by or on behalf of SOAC (subject to the condition set out in Section 3.1(c)(ii)); and
  - (v) any document previously evidencing Company Options will thereafter evidence and be deemed to evidence the Rollover Options exchanged therefor and no certificates evidencing the Rollover Options shall be required to be issued and the Rollover Options shall be governed by and be subject to such previously issued documents, other than as amended hereby; and

- (d) one minute after the step in Section 3.1(c), the Company and NewCo Sub will amalgamate to continue as one corporate entity as an unlimited liability company (as so amalgamated, “**Amalco**”), with the same effect as if they were amalgamated under section 276 of the BCBCA (the “**Amalgamation**”). For greater certainty, the Parties intend that the Amalgamation qualify as (i) an “amalgamation” for purposes of subsection 87(1) of the Tax Act, and (ii) a “reorganization” within the meaning of Section 368(a) of the Code. On and after the Amalgamation:
- (i) each Company Common Share outstanding immediately after the steps in Sections 3.1(a) and 3.1(b) will be exchanged for one Amalco Share, the holder of the Company Common Shares so exchanged will be added to the register of holders of Amalco Shares and the Company Common Shares so exchanged will be cancelled without any repayment of capital;
  - (ii) each NewCo Share outstanding immediately prior to the Effective Time will be exchanged for one Amalco Share, the holder of the NewCo Shares so exchanged will be added to the register of holders of Amalco Shares and the NewCo Shares so exchanged will be cancelled without any repayment of capital;
  - (iii) the name of Amalco will be DeepGreen Metals ULC;
  - (iv) the registered office of Amalco will be the same registered office as the Company;
  - (v) the notice of articles and the articles of Amalco will be in the form of the notice of articles and the articles of NewCo Sub, as amended;
  - (vi) the first directors of Amalco will be the directors of the Company;
  - (vii) the stated capital of Amalco will be the sum of the stated capital of the Company and NewCo Sub;
  - (viii) Amalco will own and hold all property of the Company and NewCo Sub, and, without limiting the provisions hereof, all rights of creditors or others will be unimpaired by such Amalgamation, and all obligations of the Company and NewCo Sub, whether arising by contract or otherwise, may be enforced against Amalco to the same extent as if such obligations had been incurred or contracted by it;
  - (ix) Amalco will continue to be liable for the obligations of the Company and NewCo Sub;
  - (x) all rights, contracts, permits and interests of the Company and NewCo Sub will continue as rights, contracts, permits and interests of Amalco and, for greater certainty, the Amalgamation will not constitute a transfer or assignment of the rights or obligations of the Company and NewCo Sub under any such rights, contracts, permits and interests;
  - (xi) any existing cause of action, claim or liability to prosecution will be unaffected;
  - (xii) a civil, criminal or administrative action or proceeding pending by or against the Company or NewCo Sub may be continued by or against Amalco; and
  - (xiii) a conviction against, or ruling, order or judgment in favour of or against, the Company or NewCo Sub may be enforced by or against Amalco.

The transactions provided for in this Section 3.1 will be deemed to occur on the Effective Date notwithstanding that certain of the procedures related hereto are not completed until after the Effective Date (and provided that none of the foregoing will occur or will be deemed to occur unless all of the foregoing occur and, if they occur, all of the foregoing will be deemed to occur without further act or formality).

- 3.2 Each Company Shareholder who is an Eligible Holder shall be entitled to make an income tax election pursuant to subsection 85(1) of the Tax Act, or subsection 85(2) of the Tax Act if such Company Shareholder is a partnership (and in each case, where applicable, the analogous provisions of provincial income tax law), with respect to the transfer of its Company Common Shares to SOAC and the receipt of the Exchange Consideration in respect thereof by: (A) notifying SOAC and the Exchange Agent of

its intention to make such an income tax election by completing the Letter of Transmittal accordingly; and (B) providing two signed copies of the necessary prescribed election form(s) (or equivalent information through an alternative document or platform, at SOAC's discretion) to the Exchange Agent within 90 days following the Agreement Effective Date, duly completed with the details of the number of Company Common Shares transferred and the applicable agreed amounts for the purposes of such elections. Thereafter, subject to the election forms being correct and complete and complying with the provisions of the Tax Act (and applicable provincial income tax law), the forms will be signed by SOAC and returned to such former Company Shareholder within 90 days after the receipt thereof by the Exchange Agent for filing with the Canada Revenue Agency (or the applicable provincial taxing authority) by such former Company Shareholder. SOAC will not be responsible for the proper completion of any election form and, except for SOAC's obligation to return (within 90 days after the receipt thereof by the Exchange Agent) duly completed election forms which are received by the Exchange Agent within 90 days of the Arrangement Effective Date, SOAC will not be responsible for any taxes, interest or penalties resulting from the failure by a former Company Shareholder to properly complete or file the election forms in the form and manner and within the time prescribed by the Tax Act (or any applicable provincial legislation).

#### **ARTICLE 4 RIGHTS OF DISSENT**

- 4.1 In connection with the Arrangement, each registered Company Shareholder (other than a Supporting Company Shareholder) may exercise rights of dissent (the "**Arrangement Dissent Rights**") with respect to the Company Shares held by such Company Shareholder pursuant to Section 237 to 247 of the BCBCA, as modified by the Interim Order and this Section 4.1; provided that, notwithstanding Section 242(1)(a) of the BCBCA, the written objection to the Company Arrangement Resolution referred to in such section of the BCBCA must be received by the Company not later than 4:00 p.m. (Vancouver time) on the day that is two Business Days preceding the Company Shareholders Meeting.
- 4.2 Dissenting Shareholders who duly exercise their Arrangement Dissent Rights and are ultimately entitled to be paid by the Company the fair value for their Company Common Shares (1) shall be deemed to not to have participated in the transactions in Article 3 (other than Section 3.1(b)); (2) shall be deemed to have transferred and assigned such Company Common Shares held by them in respect of which Arrangement Dissent Rights have been validly exercised to the Company, free and clear of all Liens, in accordance with Section 3.1(b); (3) will be entitled to be paid the fair value of such Company Common Shares by the Company, which fair value, notwithstanding anything to the contrary contained in the BCBCA, shall be determined as of the close of business on the day before the Company Arrangement Resolution was adopted at the Company Shareholders Meeting; and (4) will not be entitled to any other payment or consideration, including any payment that would be payable under the Arrangement had such Dissenting Shareholders not exercised their Arrangement Dissent Rights in respect of such Company Common Shares.
- 4.3 Dissenting Shareholders who are ultimately not entitled, for any reason, to be paid by the Company the fair value for their Company Common Shares, shall be deemed to have participated in the Arrangement in respect of those Company Common Shares on the same basis as a non-Dissenting Shareholder, and shall be entitled to receive their portion of the Exchange Consideration from SOAC in the same manner as such a non-Dissenting Shareholder, provided such Dissenting Shareholders comply with Article 5 of this Plan of Arrangement.
- 4.4 In no case shall SOAC, the Company, the Exchange Agent or any other Person be required to recognize a Dissenting Shareholder as a holder of Company Common Shares or any interest therein (other than the rights set out in this Article 4) at or after the Effective Time and the name of each such Dissenting Shareholder shall be removed as the registered holder of such Company Common Shares from the applicable securities register of the Company maintained by or on behalf of the Company as at the Effective Time, as provided in Section 3.1(b)(iv).

- 4.5 For greater certainty, in addition to any other restrictions in the Interim Order, no Person shall be entitled to exercise Arrangement Dissent Rights with respect to Company Common Shares in respect of which a Person has voted in person or has instructed a proxyholder to vote in favour of the Company Arrangement Resolution at the Company Shareholders Meeting.
- 4.6 No Arrangement Dissent Rights shall be available to Company Optionholders in connection with the Arrangement.

**ARTICLE 5  
CERTIFICATES AND PAYMENTS**

- 5.1 As soon as practicable following the SOAC Continuance and prior to the Effective Time, SOAC will deposit or cause to be deposited with the Exchange Agent, for the benefit of and to be held on behalf of the Company Shareholders entitled to receive the Exchange Consideration in accordance with Section 3.1(a)(i), evidence of the Exchange Consideration in the book-entry form. All SOAC Common Shares and Earnout Shares issued as part of the Exchange Consideration issued pursuant hereto shall be deemed to be validly issued and outstanding as fully paid and non-assessable shares for the purposes of the BCBCA.
- 5.2 Following the deposit with the Exchange Agent of the Exchange Consideration in accordance with Section 5.1, SOAC will be fully and completely discharged from its obligation to pay the Exchange Consideration to the Company Shareholders pursuant to Section 3.1(a), and the rights of such holders will be limited to receiving, from the Exchange Agent, the SOAC Common Shares and the Earnout Shares to which they are entitled in accordance with this Plan of Arrangement. After the Effective Time and until surrendered for cancellation as contemplated by this Article 5, each certificate that immediately prior to the Effective Time represented one or more Company Shares shall be deemed at all times to represent only the right to receive in exchange therefor the Exchange Consideration in book-entry form, that the holder of such certificate is entitled to receive in accordance with Section 3.1(a)(i).
- 5.3 Until such time as a Company Shareholder deposits with the Exchange Agent a duly completed Letter of Transmittal, and such documents, certificates and instruments contemplated by the Letter of Transmittal, and such other documents and instruments as the Exchange Agent or SOAC reasonably require, the payment or delivery to which such Company Shareholder is entitled will, in each case, be delivered or paid to the Exchange Agent to be held as agent on behalf of and for the benefit of such Company Shareholder for delivery to such Company Shareholder, without interest and net of all applicable withholdings and other taxes, if any, upon delivery of the Letter of Transmittal, and such documents, certificates and instruments contemplated by the Letter of Transmittal, and such other documents, certificates and instruments as the Exchange Agent or SOAC reasonably require.
- 5.4 Upon surrender to the Exchange Agent for cancellation of a certificate (or affidavit of loss in lieu thereof in the form required by SOAC and the Exchange Agent) that immediately prior to the Effective Time represented one or more Company Common Shares, or in the case of Company Common Shares held in the book-entry form, a properly completed and duly executed Letter of Transmittal, and such additional documents, certificates and instruments as the SOAC, the Company and the Exchange Agent may reasonably require, the holder of such surrendered certificate (or affidavit of loss in lieu thereof), or the deliverer of such Letter of Transmittal, as applicable, will be entitled to receive, and the Exchange Agent will, as promptly as practicable after the Effective Time, deliver to such holder, evidence of the Exchange Consideration, in book entry form, to which such holder is entitled under the Arrangement, and any certificate so surrendered will forthwith be cancelled.
- 5.5 If any portion of the Exchange Consideration is to be issued to a Person other than the Company Shareholder in whose name the surrendered Certificate or the transferred Company Share in book-entry form is registered, it shall be a condition to the issuance of the applicable portion of the Exchange Consideration that (i) either such Certificate shall be properly endorsed or shall otherwise be in proper form for transfer or such Company Share in book-entry form shall be properly transferred and (ii) the Person requesting such consideration pay to the Exchange Agent any transfer Taxes required as a result

of such consideration being issued to a Person other than the registered holder of such Certificate or Company Share in book-entry form or establish to the satisfaction of the Exchange Agent that such transfer Taxes have been paid or are not payable

- 5.6 No interest will be paid or accrued on the Exchange Consideration (or any portion thereof). From and after the Effective Time, until surrendered or transferred, as applicable, in accordance with this Article 5, each Company Share shall solely represent the right to receive a portion of the Exchange Consideration to which such Company Share is entitled to receive in accordance with the Allocation Schedule.
- 5.7 Any portion of the aggregate Exchange Consideration that remains unclaimed by the Company Shareholders six (6) years following the Effective Time shall be delivered to SOAC or as otherwise instructed by SOAC, and any right or claim to payment under the Plan of Arrangement that remains outstanding six (6) years following the Arrangement Effective Date shall cease to represent a right or claim of any kind or nature and the right of the Company Shareholders to receive the applicable portion of the aggregate Exchange Consideration in accordance with the Plan of Arrangement shall terminate and be deemed to be surrendered and forfeited to SOAC, for no consideration.
- 5.8 In no event will any Person be entitled to a fractional SOAC Common Share. Where the aggregate number of SOAC Common Shares to be issued to a Person pursuant to the Plan of Arrangement would result in a fraction of a SOAC Common Share being issuable, the number of SOAC Common Shares to be received by such Person will be rounded up to the nearest whole SOAC Common Share.
- 5.9 No dividend or other distribution declared or made after the Effective Time with respect to the Exchange Consideration with a record date after the Effective Time shall be delivered to the holder of any unsurrendered certificate that, immediately prior to the Effective Time, represented outstanding Company Shares unless and until the holder of such certificate shall have complied with the provisions of Article 5. Subject to applicable law and to Section 6.1, at the time of such compliance, there shall, in addition to the delivery of evidence of the portion of the Exchange Consideration to which such holder is entitled under the Arrangement, be delivered to such holder, without interest, the amount of the dividend or other distribution with a record date after the Effective Time theretofore paid with respect to such Exchange Consideration.

## **ARTICLE 6**

### **EFFECT OF THE ARRANGEMENT; WITHHOLDINGS**

- 6.1 From and after the Effective Time: (a) this Plan of Arrangement will take precedence and priority over any and all Affected Securities issued prior to the Effective Time, (b) the rights and obligations of the Affected Securityholders, the Company, SOAC, NewCo Sub, Amalco, the Exchange Agent and any transfer agent or other exchange agent therefor in relation thereto, will be solely as provided for in this Plan of Arrangement, and (c) all actions, causes of action, claims or proceedings (actual or contingent and whether or not previously asserted) based on or in any way relating to any Affected Securities will be deemed to have been settled, compromised, released and determined without liability except as set forth in this Plan of Arrangement.
- 6.2 SOAC, the Company and the Exchange Agent shall be entitled to deduct and withhold (or cause to be deducted and withheld) with respect to any consideration payable pursuant to this Plan of Arrangement such amounts as are required to be deducted and withheld under applicable Tax Law. Any amounts so withheld shall be timely remitted to the applicable Governmental Entity, and shall be treated for all purposes of this Plan of Arrangement as having been paid to the Person in respect of which such deduction and withholding was made. Each of SOAC and the Exchange Agent, as applicable, is hereby authorized to sell or otherwise dispose of, on behalf of such Person, such portion of the Exchange Consideration as is necessary to provide sufficient funds to SOAC or the Exchange Agent, as the case may be, to enable it to comply with such deduction and withholding requirement and SOAC or the Exchange Agent shall use commercially reasonable efforts to notify such Person thereof and remit the applicable portion of the net proceeds of such sale to the appropriate Governmental Entity and, if applicable, any portion of such net proceeds that is not required to be so remitted shall be paid to

such Person. The Parties shall cooperate in good faith to eliminate or reduce any such deduction or withholding (including through the request and provision of any statements, forms or other documents to reduce or eliminate any such deduction or withholding).

**ARTICLE 7  
AMENDMENTS**

- 7.1 The Company and SOAC may amend, modify and/or supplement this Plan of Arrangement at any time and from time to time prior to the Effective Time, provided that each such amendment, modification and/or supplement must (i) be set out in writing, (ii) be approved by the Company and SOAC, each acting reasonably, (iii) be filed with the Court and, if made following the Company Shareholders Meeting, approved by the Court, and (iv) be communicated to the Affected Securityholders if and as required by the Court.
- 7.2 Any amendment, modification or supplement to this Plan of Arrangement may be proposed by the Company or SOAC at any time prior to the Company Shareholders Meeting (provided that the Company or SOAC will have consented thereto) with or without any other prior notice or communication, and if so proposed and accepted by the Persons voting at the Company Shareholders Meeting (other than as may be required under the Interim Order), will become part of this Plan of Arrangement for all purposes.
- 7.3 Any amendment, modification or supplement to this Plan of Arrangement that is approved or directed by the Court following the Company Shareholders Meeting will be effective only if (i) it is consented to in writing by each of the Company and SOAC (in each case, acting reasonably) and (ii) if required by the Court, it is consented to by some or all of the Company Shareholders voting in the manner directed by the Court.
- 7.4 Any amendment, modification or supplement to this Plan of Arrangement may be made following the Effective Date by SOAC, provided that it concerns a matter which, in the reasonable opinion of SOAC, is of an administrative nature required to better give effect to the implementation of this Plan of Arrangement.

**ARTICLE 8  
FURTHER ASSURANCES**

- 8.1 Notwithstanding that the transactions and events set out herein will occur and be deemed to occur in the order set out in this Plan of Arrangement without any further act or formality, each of the parties to the Business Combination Agreement will make, do and execute, or cause to be made, done and executed, all such further acts, deeds, agreements, transfers, assurances, instruments or documents as may reasonably be required by any of them in order further to document or evidence any of the transactions or events set out therein.

**ARTICLE 9  
U.S. SECURITIES LAW MATTERS**

- 9.1 Notwithstanding any provision herein to the contrary, this Plan of Arrangement will be carried out with the intention that (i) all Exchange Consideration to be issued to Affected Securityholders in exchange for their Affected Securities pursuant to this Plan of Arrangement, as applicable, will be issued and exchanged in reliance on the exemption from the registration requirements of the U.S. Securities Act as provided by section 3(a)(10) thereof and applicable state securities laws, and pursuant to the terms, conditions and procedures set forth in the Business Combination Agreement; and (ii) all Rollover Options to be issued to Company Optionholders in exchange for their Company Options pursuant to this Plan of Arrangement will be issued and exchanged in reliance upon the exemption from the registration requirements of the U.S. Securities Act as provided by section 3(a)(10) thereof.

**PART II****INFORMATION NOT REQUIRED IN PROSPECTUS****Item 20. Indemnification of directors and officers**

Cayman Islands law does not limit the extent to which a company's memorandum and articles of association may provide for indemnification of officers and directors, except to the extent any such provision may be held by the Cayman Islands courts to be contrary to public policy, such as to provide indemnification against willful default, willful neglect, civil fraud or the consequences of committing a crime. The Existing Governing Documents provided for indemnification of our officers and directors to the maximum extent permitted by law, including for any liability incurred in their capacities as such, except through their own actual fraud, willful default or willful neglect.

We have entered into agreements with our officers and directors to provide contractual indemnification in addition to the indemnification provided for in the Existing Governing Documents. We have purchased a policy of directors' and officers' liability insurance that insures our officers and directors against the cost of defense, settlement or payment of a judgment in some circumstances and insures us against our obligations to indemnify our officers and directors.

Insofar as indemnification for liabilities arising under the Securities Act may be permitted to directors, officers or persons controlling us pursuant to the foregoing provisions, we have been informed that in the opinion of the SEC such indemnification is against public policy as expressed in the Securities Act and is therefore unenforceable.

\* To be filed by amendment.

† Certain confidential portions (indicated by brackets and asterisks) have been omitted from this exhibit.

†† Schedules and exhibits to this Exhibit omitted pursuant to Regulation S-K Item 601(b)(2). The Registrant agrees to furnish supplementally a copy of any omitted schedule or exhibit to the SEC upon request.

**Item 22. Undertakings**

- (a) The undersigned registrant hereby undertakes:
- (1) To file, during any period in which offers or sales are being made, a post-effective amendment to this registration statement:
    - (i) To include any prospectus required by Section 10(a)(3) of the Securities Act;
    - (ii) To reflect in the prospectus any facts or events arising after the effective date of the registration statement (or the most recent post-effective amendment thereof), which, individually or in the aggregate, represent a fundamental change in the information set forth in the registration statement. Notwithstanding the foregoing, any increase or decrease in volume of securities offered (if the total dollar value of securities offered would not exceed that which was registered) and any deviation from the low or high end of the estimated maximum offering range may be reflected in the form of prospectus filed with the SEC pursuant to Rule 424(b) if, in the aggregate, the changes in volume and price represent no more than a 20 percent change in the maximum aggregate offering price set forth in the “*Calculation of Registration Fee*” table in the effective registration statement; and
    - (iii) To include any material information with respect to the plan of distribution not previously disclosed in the registration statement or any material change to such information in the registration statement.
  - (2) That, for the purpose of determining any liability under the Securities Act, each such post-effective amendment shall be deemed to be a new registration statement relating to the securities offered therein, and the offering of such securities at that time shall be deemed to be the initial *bona fide* offering thereof.
  - (3) To remove from registration by means of a post-effective amendment any of the securities being registered which remain unsold at the termination of the offering.
  - (4) That, for the purpose of determining liability under the Securities Act to any purchasers:
    - (i) Each prospectus filed pursuant to Rule 424(b) as part of a registration statement relating to an offering other than registration statements relying on Rule 430B or other than prospectuses filed in reliance on Rule 430A, shall be deemed to be part of and included in the registration statement as of the date it is first used after effectiveness. *Provided, however,* that no statement made in a registration statement or prospectus that is part of the registration statement or made in a document incorporated or deemed incorporated by reference into the registration statement or prospectus that is part of the registration statement will, as to a purchaser with a time of contract of sale prior to such first use, supersede or modify any statement that was made in the registration statement or prospectus that was part of the registration statement or made in any such document immediately prior to such date of first use.
  - (5) That, for the purpose of determining liability of the registrant under the Securities Act to any purchaser in the initial distribution of the securities, the undersigned registrant undertakes that in a primary offering of securities of the undersigned registrant pursuant to this registration statement, regardless of the underwriting method used to sell the securities to the purchaser, if the securities are offered or sold to such purchaser by means of any of the following communications, the undersigned registrant will be a seller to the purchaser and will be considered to offer or sell such securities to such purchaser:
    - (i) any preliminary prospectus or prospectus of the undersigned registrant relating to the offering required to be filed pursuant to Rule 424;
    - (ii) any free writing prospectus relating to the offering prepared by or on behalf of the undersigned registrant or used or referred to by the undersigned registrant;

- (iii) the portion of any other free writing prospectus relating to the offering containing material information about the undersigned registrant or its securities provided by or on behalf of the undersigned registrant; and
  - (iv) any other communication that is an offer in the offering made by the undersigned registrant to the purchaser.
- (b) The undersigned registrant hereby undertakes that, for purposes of determining any liability under the Securities Act, each filing of the registrant's annual report pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934 (and, where applicable, each filing of an employee benefit plan's annual report pursuant to Section 15(d) of the Securities Exchange Act of 1934) that is incorporated by reference in the registration statement shall be deemed to be a new registration statement relating to the securities offered therein, and the offering of such securities at that time shall be deemed to be the initial *bona fide* offering thereof.
- (c) The undersigned registrant hereby undertakes as follows:
  - (1) That prior to any public reoffering of the securities registered hereunder through use of a prospectus which is a part of this registration statement, by any person or party who is deemed to be an underwriter within the meaning of Rule 145(c), the issuer undertakes that such reoffering prospectus will contain the information called for by the applicable registration form with respect to reofferings by persons who may be deemed underwriters, in addition to the information called for by the other items of this form.
  - (2) That every prospectus (i) that is filed pursuant to paragraph (1) immediately preceding or (ii) that purports to meet the requirements of Section 10(a)(3) of the Securities Act and is used in connection with an offering of securities subject to Rule 415, will be filed as a part of an amendment to the registration statement and will not be used until such amendment is effective, and that, for purposes of determining any liability under the Securities Act, each such post-effective amendment shall be deemed to be a new registration statement relating to the securities offered therein, and the offering of such securities at that time shall be deemed to be the initial *bona fide* offering thereof.
- (d) Insofar as indemnification for liabilities arising under the Securities Act may be permitted to directors, officers and controlling persons of the registrant pursuant to the foregoing provisions, or otherwise, the registrant has been advised that in the opinion of the SEC such indemnification is against public policy as expressed in the Act and is, therefore, unenforceable. In the event that a claim for indemnification against such liabilities (other than the payment by the registrant of expenses incurred or paid by a director, officer or controlling person of the registrant in the successful defense of any action, suit or proceeding) is asserted by such director, officer or controlling person in connection with the securities being registered, the registrant will, unless in the opinion of its counsel the matter has been settled by controlling precedent, submit to a court of appropriate jurisdiction the question whether such indemnification by it is against public policy as expressed in the Act and will be governed by the final adjudication of such issue.
- (e) The undersigned registrant hereby undertakes to respond to requests for information that is incorporated by reference into the prospectus pursuant to Items 4, 10(b), 11, or 13 of Form S-4, within one business day of receipt of such request, and to send the incorporated documents by first class mail or other equally prompt means. This includes information contained in documents filed subsequent to the effective date of the registration statement through the date of responding to the request.
- (f) The undersigned registrant hereby undertakes to supply by means of a post-effective amendment all information concerning a transaction, and the company being acquired involved therein, that was not the subject of and included in the registration statement when it became effective.

## SIGNATURES

Pursuant to the requirements of the Securities Act, the registrant has duly caused this registration statement to be signed on its behalf by the undersigned, thereunto duly authorized, in the City of New York, State of New York on the 8<sup>th</sup> of April, 2021.

## DEEPGREEN METALS INC.

## WARRANT TO PURCHASE COMMON SHARES

For value received, DeepGreen Metals Inc., a privately held, company existing under the laws of British Columbia (the “**Company**”), hereby certifies that Allseas Group S.A. (“**Holder**”), is the registered holder of warrants (the “**Warrants**”) to subscribe for and purchase a number of fully paid common shares (“**Common Shares**”) of the Company equal to (x) 10,000,000 times (y) the Adjustment Factor, as calculated below (as such number of shares, but not the Adjustment Factor, may be adjusted pursuant to Section 3 hereof, the “**Warrant Shares**”), at a purchase price of \$0.01 per share (as adjusted pursuant to Section 3 hereof, the “**Purchase Price**”), at any time after the occurrence of the Vesting Event after the completion of the Business Combination (as such terms are defined below) and before 5:00 p.m., Eastern Time, on September 30, 2026 (the “**Expiration Date**”), subject to the provisions and upon the terms and conditions hereinafter set forth. As used in this Warrant, the term “**Business Day**” means any day other than a Saturday, Sunday or a day on which commercial banks located in New York, New York are not open for the general transaction of business. If the Vesting Event shall occur on or prior to September 30, 2023, then the Adjustment Factor shall be 1.00. If the Vesting Event shall occur after September 30, 2023, and before September 30, 2025, then the Adjustment Factor shall be calculated as follows:

$$[1 - [ 0.5 \times [\text{the number of days between the Vesting Event and September 30, 2023}] / 730 ] ]$$

If the Vesting Even occurs between September 30, 2025 and the Expiration Date, the Adjustment Factor shall be 0.5.

Section 1. Exercise.(a) Method of Exercise; Payment; Issuance of New Warrant.

(i) Subject to the provisions hereof, the Holder may exercise this Warrant, in whole or in part and from time to time after the occurrence of the Vesting Event, by the surrender of this Warrant (with the Notice of Exercise attached hereto as **Appendix A** duly executed) at the principal office of the Company, or such other office or agency of the Company as it may reasonably designate by written notice to the Holder, during normal business hours on any Business Day, and the payment by the Holder by cash, certified check payable to the Company or wire transfer of immediately available funds to an account designated to the exercising Holder by the Company of an amount equal to the then applicable Purchase Price multiplied by the number of Warrant Shares then being purchased. On the date on which the Holder shall have satisfied in full the Holder’s obligations set forth herein regarding an exercise of this Warrant (provided that such date is on or prior to the Expiration Date), the Holder shall be treated for all purposes as the holder of record of such Warrant Shares as of the close of business on such date.

(ii) In the event of any exercise of the rights represented by this Warrant, unless this Warrant has been fully exercised, a new Warrant representing the whole number of Warrant Shares, if any, with respect to which this Warrant shall not then have been exercised shall be issued to the Holder as soon as reasonably practicable thereafter after such exercise.

Section 2. Stock Fully Paid. All Warrant Shares issued upon exercise of this Warrant shall be, at the time of delivery of the certificates for such Warrant Shares upon payment in full of the Purchase Price therefor in accordance with the terms of this Warrant, duly authorized, validly issued and fully paid Common Shares of the Company as adjusted pursuant to Section 3 hereof.

Section 3. Certain Adjustments and Distributions. The number and kind of securities purchasable upon the exercise of this Warrant shall be subject to adjustment from time to time upon the occurrence of certain events, as follows:

(a) Subdivision, Consolidation, Reclassification or Change in Warrant Shares. In the event of any consolidation, reclassification or change of the Warrant Shares into a lesser number of the same or different class or classes of stock, the number of Warrant Shares deliverable upon exercise of this Warrant shall be proportionally decreased, the class or classes of such Warrant Shares shall be appropriately adjusted and the Purchase Price for such Warrant Shares shall be proportionately increased. In the event of any subdivision, reclassification or change of the Warrant Shares into a greater number of the same or different class or classes of stock, the number of Warrant Shares deliverable upon exercise of this Warrant shall be proportionally increased, the class or classes of such Warrant Shares shall be appropriately adjusted and the Purchase Price for such Warrant Shares shall be proportionately reduced.

(b) Reorganizations. If there shall occur any capital reorganization of the Common Shares (excluding mergers and consolidations covered under Section 3(c), excluding the Business Combination and any transaction related thereto and excluding a subdivision, combination or reclassification), then, as part of any such reorganization, lawful provision shall be made so that the Holder shall have the right thereafter to receive upon the exercise of this Warrant the kind and amount of shares of stock or other securities or property which such Holder would have been entitled to receive if, immediately prior to any such reorganization, such Holder had held the number of Common Shares which were then purchasable upon the exercise of this Warrant. In any such case, appropriate adjustment (as reasonably determined by the Board of Directors of the Company) shall be made in the application of the provisions set forth herein with respect to the rights and interests thereafter of the Holder such that the provisions set forth in this Section 3 (including provisions with respect to adjustment of the Purchase Price) shall thereafter be applicable, as nearly as is reasonably practicable, in relation to any shares of stock or other securities or property thereafter deliverable upon the exercise of this Warrant.

(c) Amalgamation, Consolidation or Sale of Assets; Business Combination. If there shall be an amalgamation, merger, arrangement or reorganization of the Company with or into another corporation (other than an amalgamation, merger, arrangement or reorganization involving only a change in the jurisdiction of incorporation of the Company), or the sale of all or substantially all of the Company's capital stock or assets to any other person, then as a part of such transaction, provision shall be made so that the Holder shall thereafter be entitled to receive upon exercise of this Warrant (in lieu of Common Shares of the Company) the number of shares of stock or other securities or property of the Company, or of the successor corporation resulting from the amalgamation, merger, reorganization or sale, to which the Holder would have been entitled if the Holder had exercised its rights pursuant to this Warrant immediately prior thereto. In any such case, appropriate adjustment shall be made in the application of the provisions of this Section 3 to the end that the provisions of this Section 3 shall be applicable after that event in as nearly equivalent a manner as may be practicable. For the avoidance of doubt, and notwithstanding anything to the contrary in this Warrant or otherwise, this Section 3(c) shall not apply to the Business Combination (as defined below) or any transaction in connection therewith. Upon the closing of the transactions contemplated by that certain Business Combination Agreement (the "BCA") entered into by and among the Company, Sustainable Opportunities Acquisition Corp., a Cayman Islands exempted company, as may be renamed at the closing of the transactions pursuant to the BCA ("SOAC"), 1291924 B.C. Unlimited Liability Company, a company existing under the laws of British Columbia, Canada (such transactions, the "Business Combination"), this Warrant shall be assumed by SOAC in all respects, and thereafter any reference to the "Company" herein shall be deemed a reference to SOAC and any reference to "Common Shares" herein shall be deemed a reference to the common shares of SOAC. Upon completion of the Business Combination, the number of common shares of SOAC into which this Warrant may be exercised shall be calculated by multiplying (i) the maximum number of Warrant Shares into which this Warrant is then exercisable pursuant to the terms hereof by (ii) the Per Share Consideration (as defined in the BCA), rounded down to the nearest whole share.

(d) Certificate of Adjustment. When any adjustment is required to be made in the Purchase Price (other than the adjustment arising from the completion of the Business Combination and assumption of this Warrant by SOAC), other than the adjustment arising from the completion of the Business Combination and assumption of this Warrant by SOAC, the Company shall promptly mail to the Holder a certificate setting forth the Purchase Price after such adjustment and setting forth a brief statement of the facts requiring such adjustment. Such certificate shall also set forth the kind and amount of stock or other securities or property into which this Warrant shall be exercisable following the occurrence of any of the events specified in this Section 3.

Section 4. Notices. Unless otherwise specifically provided herein, all communications under this Warrant shall be in writing and shall be deemed to have been duly given (a) on the date personally delivered to the party to whom notice is to be given, (b) on the day of transmission if sent by facsimile or email with confirmation of receipt, (c) on the Business Day after delivery to Federal Express or similar overnight courier which utilizes a written form of receipt, or (d) on the fifth day after mailing, if mailed to the party to whom notice is to be given, by first class mail, registered or certified, postage prepaid, and properly addressed, return receipt requested, to each such Holder at its address as shown on the books of the Company or to the Company at the address indicated therefor on the signature page of this Warrant. Any party hereto may change its address for purposes of this Section 4 by giving the other party written notice of the new address in the manner set forth herein.

Section 5. Mutilated or Missing Warrants. In case this Warrant shall be mutilated, lost, stolen, or destroyed, the Company shall issue in exchange and substitution of and upon cancellation of the mutilated Warrant, or in lieu of and substitution for the Warrant lost, stolen or destroyed, a new Warrant of like tenor and for the purchase of a like number of Warrant Shares, but only upon receipt of evidence reasonably satisfactory to the Company of such loss, theft or destruction of the Warrant, and with respect to a lost, stolen or destroyed Warrant, reasonable indemnity or bond with respect thereto, if requested by the Company.

Section 6. Rights as Shareholder; Information. Except as expressly provided in this Warrant, the Holder, in its capacity as a holder of this Warrant, shall not be entitled to vote or receive dividends or be deemed the holder of Common Shares or any other securities of the Company which may at any time be issuable on the exercise hereof for any purpose, nor shall anything contained herein be construed to confer upon the Holder, in its capacity as a holder of this Warrant, any of the rights of a shareholder of the Company or any right to vote for the election of the directors or upon any matter submitted to shareholders at any meeting thereof, or to receive dividends or subscription rights or otherwise, until this Warrant shall have been exercised and the Warrant Shares purchasable upon the exercise hereof shall have become deliverable, as provided herein.

Section 7. Vesting; Termination. This Warrant (and the right to purchase securities upon exercise hereof) shall vest and be exercisable **only** upon (and not at any time before) the occurrence of Successful Completion, as defined in that certain Pilot Mining Test Agreement dated July 8, 2019 (as amended by Change Order Number 1, and amended again by Amendment Number 2 dated February 20, 2020 and again by Amendment Number 3 dated as of March 4, 2021, and as otherwise amended) (the "**Vesting Event**"). This Warrant and all rights hereunder shall automatically terminate upon the Expiration Date. For the avoidance of doubt, prior to the occurrence of a Successful Completion, the Holder shall have no rights of any kind to require or demand the right to exercise this Warrant in any way or any part and no Warrant Shares shall be issued, notwithstanding any event or circumstance.

Section 8. Modification and Waiver. This Warrant and any provision hereof may be amended, changed, waived, discharged or terminated only by an instrument in writing signed by the Company and the then Holder.

Section 9. Descriptive Headings. The descriptive headings contained in this Warrant are inserted for convenience only and do not constitute a part of this Warrant.

Section 10. Governing Law. The validity, interpretation and performance of this Warrant shall be governed by, and construed in accordance with, the laws of British Columbia (without giving effect to its principles of conflict of laws), and the parties hereby irrevocably attorn to the exclusive jurisdiction of the Courts of the Province of British Columbia in the City of Vancouver which shall have exclusive jurisdiction in case of any conflict or dispute arising under this Warrant.

Section 11. Severability. If any provision of this Warrant is held to be unenforceable under applicable law, then (i) such provision shall be excluded from this Warrant, (ii) the balance of this Warrant shall be interpreted as if such provision were so excluded and (iii) the balance of this Warrant shall be enforceable in accordance with its terms.

Section 12. Acceptance. Receipt of this Warrant by the Holder hereof shall constitute acceptance of and agreement to the foregoing terms and conditions.

Section 13. Assignment. Without the prior written consent of the Company, the Warrant shall not be assigned, pledged, or hypothecated by the Holder, and shall not be subject to execution, attachment or similar process. Any attempted transfer, assignment, pledge, hypothecation or other disposition of the Warrant or of any rights granted hereunder contrary to the provisions of this Section 13, or the levy of any attachment or similar process upon the Warrant or such rights, shall be null and void. The terms and conditions of this Warrant shall inure to the benefit of and be binding upon the respective successors and assigns of the parties.

Section 14. Time. Only for the purposes of Section 1(a) of this Warrant and all matters relating to the Expiration Date, time is of the essence hereof.

*[Remainder of Page Intentionally Left Blank]*

IN WITNESS WHEREOF, the Company has caused this Warrant to be executed on its behalf by one of its officers thereunto duly authorized.

## STRATEGIC ALLIANCE AGREEMENT

This Strategic Alliance Agreement is entered on the 29<sup>th</sup> of March 2019 by and between:

**DeepGreen Metals Inc**, a British Columbia company having its registered office at 10th Floor, 595 Howe Street, Vancouver, British Columbia V6C 2T5, (DeepGreen) and

**Allseas Group S.A.**, a Swiss company having its registered office at 18 Route de Pra de Plan, Case Postale, 411 1618 Chatel-Saint-Denis, Switzerland (Allseas).

## Introduction

This Strategic Alliance Agreement is entered into between DeepGreen and Allseas, each referred to as the “**Party**”, in relation to the arrangements set forth herein.

## 1. Principles

1.1 The Parties agree that this Strategic Alliance Agreement constitutes a legally binding obligation upon each of the Parties in respect of the matters covered herein.

1.2 The following overarching principles will apply to this Strategic Alliance Agreement:

(a) Allseas agrees to subscribe for 6,666,667 shares in DeepGreen for a purchase price of US\$20,000,000 in cash (the **Subscription**), and a further 10,000,000 shares paid in lieu of services to the value of \$30,000,000 (**Pilot Mining Test Project or PMTP**), to be executed in three tranches:

(1) US\$[\*\*\*] for [\*\*\*] shares (**First Tranche**) within [\*\*\*] days of signature of this Agreement, but not later than [\*\*\*];

(2) US\$[\*\*\*] for [\*\*\*] shares (**Second Tranche**) upon [\*\*\*]

(in each case such Subscription shall be effected through the execution of a standard form DeepGreen Subscription Agreement); and

(3) Upon delivery of the PMTP, with an overall estimated cost of \$[\*\*\*], then DeepGreen will issue 10MM new shares to Allseas agreed to equal in value to \$30,000,000 which shall represent [\*\*\*]% of Allseas’s cost of the project (**Third Tranche**)

(b) following completion of the First Tranche of the Subscription, Allseas shall be entitled to nominate a Board Director to DeepGreen, who, for the avoidance of doubt, shall serve as a Board Observer until the company holds an Annual General Meeting of the Shareholders to expand the number of directors to accommodate the new Allseas appointee (**Board Appointment**);

(c) DeepGreen shall hire Allseas exclusively, to conduct a pilot mining test in one of its exclusive Exploration Contract Areas (subject to ISA regulatory requirements) and Allseas shall develop the technology, intellectual property, equipment and operational know-how for such a pilot mining test (the **Pilot Mining Test Project**) to conduct pilot trial mining, as further set forth in Annex 1 hereto (the **Pilot Mining Test Project Agreement**). The results of the Pilot Mining Project will inform the Environmental Impact Study (EIS), a critical component of DeepGreen’s application for the Exploitation Contract;

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

(d) subject to successful completion of the Pilot Mining Test Project, the Parties shall enter into a nodule collection and shipping agreement where DeepGreen (or a related party) shall finance the development of the first production system from Allseas, for the exploitation of the first [\*\*\*] of polymetallic nodules, as further set forth in Annex 2 hereto (the **Nodule Collection and Shipping Agreement**);

(e) DeepGreen shall be responsible for securing the processing of nodules collected and transported using the Allseas nodule collection and shipping system (**Processing Obligation**);

(f) the Parties acknowledge that the belief underpinning their Strategic Alliance is that, together, they will be able to develop and scale the production of base metal products from the deep-sea nodule resource faster and more successfully. The following principles will be applied to expanding production beyond the first Nodule Collection and Shipping Agreement:

(1) if after at least [\*\*\*] months of successful operation of the first Allseas' nodule collection and shipping system at full scale (harvester, riser, production vessel and trans-shipping solution), Allseas wants to build a new system, DeepGreen will be offered the opportunity to finance the system and contract Allseas for a new area. If DeepGreen refuses Allseas will be free to offer it to another license holder (or deploy it on Allseas' own contract area) (**DeepGreen's Right of Refusal to Follow-on Nodule Collection and Shipping Systems**), and

(2) if DeepGreen needs a new nodule collection and shipping system and can finance it, Allseas will be offered a new Nodule Collection and Shipping Agreement. If Allseas refuses, DeepGreen will be free to offer it to another offshore service provider (**Allseas' Right of Refusal to Follow-on Nodule Collection and Shipping Systems**);

(g) the Parties acknowledge that DeepGreen has been in discussions with [\*\*\*], another potential strategic offshore partner, and by mutual agreement the Parties have agreed to terminate those discussions provided that the Parties enter into this Strategic Alliance Agreement;

(h) the Parties acknowledge that in connection with this Strategic Alliance Agreement, Allseas has agreed to step away from a potential transaction with [\*\*\*], a company that has an exclusive right to apply for an Exploration Contract for [\*\*\*]. The Parties also acknowledge that prior to engaging with Allseas, DeepGreen was already involved in [\*\*\*] tender process to obtain an Exploration Contract in [\*\*\*]. The Parties agree that DeepGreen shall conduct due diligence on [\*\*\*] and in the event the parties agree that a transaction is warranted [\*\*\*], the Parties will proceed as follows:

(1) Allseas will execute the transaction and grant an option over [\*\*\*] of the shares in [\*\*\*] to DeepGreen in consideration for [\*\*\*] of the transaction price, thereby leaving the option for DeepGreen to participate in [\*\*\*] tender process and apply for an additional Exploration Contract;

(2) DeepGreen will be responsible for executing the work necessary to acquire the Exploration Contract and convert it into an Exploitation Contract using Allseas nodule collection and shipping system; and

(3) DeepGreen and Allseas will equally share the costs associated with developing the [\*\*\*] project;

(i) In case Allseas and DeepGreen do not proceed with the [\*\*\*] transaction and DeepGreen successfully acquires rights to an Exploitation Contract in [\*\*\*] (**DeepGreen's [\*\*\*] Area**), DeepGreen will grant Allseas a first right of refusal on the [\*\*\*] nodule collection and shipping agreement in recognition of Allseas' acceptance to step away from their pursuit of the [\*\*\*] transaction. If Allseas accepts the offer to collect and ship nodules in DeepGreen's [\*\*\*] Area, the terms for that agreement will be the same as the Nodule Collection and Shipping Agreement set forth in Appendix 2;

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

(j) the Parties agree that they shall use their best efforts to further the collaboration and cooperation contemplated by the terms set forth herein, however in the event that either party decides to exit this strategic alliance for any reason, they shall unwind and terminate the relationship as follows (**Termination**):

(1) DeepGreen will have a call option to buy Allseas' shares in DeepGreen (or to find a new buyer) at the price Allseas paid for such shares and Allseas will have a call option to buy DeepGreen shares in OML (or to find a new buyer) at the price DeepGreen paid for such shares;

(2) the Allseas-nominated Director will resign from the DeepGreen Board;

(3) Allseas will have the right to collect [\*\*\*] resources held by DeepGreen pursuant to its contractual rights with the International Seabed Authority; provided that Allseas will pay DeepGreen an *ad valorem* royalty on nodules collected in the DeepGreen area. The amount of the royalty will be set at [\*\*\*]. DeepGreen shall also have a right of first refusal to acquire and process the nodules collected by Allseas in such event; and

(4) in consideration for financing and informing the initial development of the Alleas' pilot mining system, DeepGreen will have a right of first refusal to acquire and process all nodules collected using Allseas' nodule collection and shipping systems (**DeepGreen's Right of Refusal to Nodules**); and

(k) following execution of this agreement the Parties agree to form a Steering Committee to finalize the drafting of the long-form Pilot Mining Test Project Agreement and the Nodule Collection and Shipping Agreement, with an expectation that such agreements shall be completed within 2 months from the date hereof.

## 2. Representations and Warranties

2.1 Each Party represents, warrants and covenants to the other that as of the date of this agreement, it is (a) a corporation duly formed and validly existing under the laws of its incorporation, (b) it has the requisite power and authority to enter into this agreement, and (c) this Agreement has been duly authorized, executed and delivered and constitutes a legal, valid and binding obligation of such Party in accordance with its terms.

## 3. Duration and Termination

3.1 This Strategic Alliance Agreement shall come into effect on the date hereof and shall remain in full force and effect unless renewed or replaced by mutual agreement. It is the intent of the Parties that this Strategic Alliance Agreement will remain the overarching context and framework for the Parties' relationship once the Pilot Mining Test Project Agreement, Nodule Collection and Shipping Contract and any related agreements come into effect.

3.2 In the event Parties cannot come to agreement on the viability of the projects contemplated herein, either Party shall have the right to provide notice of termination that shall come into effect within 30 days.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

#### **4. Costs**

4.1 Each Party shall be responsible for its own costs in relation to this Strategic Alliance Agreement and the transactions contemplated herein unless otherwise agreed.

#### **5. Governing Law**

5.1 This Strategic Alliance Agreement will be governed by the laws of the Province of British Columbia and the federal laws of Canada applicable therein. The invalidity or unenforceability of any provision of the Agreement will not affect the validity or enforceability of any other provision. The Parties submit to the non-exclusive jurisdiction of the courts of the British Columbia in connection with any dispute arising hereunder.

#### **6. Successors and Assigns**

6.1 This Strategic Alliance Agreement and the Parties' obligations hereunder shall be binding on the representatives, assigns and successors of such party and shall inure to the benefit of the assigns and successors of such party; provided, however, that the rights and obligations of the Parties hereunder are not assignable.

#### **7. Occupational Health and Safety**

7.1 The Parties will each carry out its obligations contemplated hereunder from its own location and as such will have control over its work health and safety issues, and it is the responsibility of such Party to comply with all work health and safety legislative requirements.

#### **8. Counterparts**

8.1 This Agreement may be executed in counterparts, each of which will constitute an original and all of which taken together will constitute one and the same instrument, and delivery of the counterparts may be effected by electronic means. The reproduction of signatures by electronic means will be treated as binding as if originals.

#### **9. Headings**

9.1 Headings used in this Strategic Alliance Agreement are provided for convenience only and shall not be used to construe meaning or intent.

#### **10. Confidentiality**

10.1 The Parties shall maintain the confidentiality of the information belonging to or relating to other each other's finances, business affairs and which are not in the public domain and which:

10.1.1 the Parties have marked as confidential; or

10.1.2 the Parties have advised each other of its confidential nature, in writing or orally; or

10.1.3 due to its character or nature a reasonable person would treat it as confidential.

(Hereafter referred to as "confidential information.")

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

10.2 The Parties shall not, without each other's prior written consent, use, disclose, copy or modify the other party's confidential information (or permit others to do so) other than is necessary for that part to fulfill the activities specified in this Strategic Alliance Agreement.

10.3 The Parties shall not make any use of, or otherwise process, the Confidential Information received other than for the strict purpose or purposes which have been expressly agreed.

10.4 The Parties shall restrict access to the Confidential Information received solely to their responsible staff members and/or to the responsible staff members of any authorized third-party organization(s) who need to have such access for the strict purpose or purposes which have been expressly agreed.

10.5 The Parties shall give each other immediate notice of any unauthorized misuse, disclosure, theft or loss of the other party's Confidential Information.

10.6 The Parties may request from each other the return of their Confidential Information at any time and upon reasonable notice.

## **11. Publicity**

11.1 The Parties agree that neither shall make any statement or issue any publicity in connection with this Strategic Alliance Agreement without the prior written consent of the other Party, provided however that the Parties agree DeepGreen may make reference to this agreement to bona fide third party potential investors in DeepGreen who have signed confidentiality terms similar to those set forth herein.

## **12. No Agency**

12.1 For the avoidance of doubt, unless otherwise agreed to by the Parties pursuant to the eventual binding agreements between them, nothing herein shall be intended to constitute a fiduciary relationship, employment, agency or a trust, and shall not give authority to bind the other party.

## **13. Notices**

13.1 All notices, requests, demands and other communications shall be in writing to the email addresses below and shall be deemed to have been given and received on the day sent by email, if sent prior to 4:30 p.m. (local time in place of receipt) on a business day, and otherwise on the next business day following the day it is sent by email.

#### **14. Further Assurances**

14.1 Each of the Parties hereto will execute and deliver all such further documents and instruments and do all acts and things as any party may reasonably require in order to carry out the full intent and meaning of this Agreement.

#### **14. Assignment**

14.1 A party must not assign or transfer the whole or any part of its interest or rights and obligations under this Strategic Alliance Agreement unless to a related body corporate without first obtaining the prior written consent of the other party, which consent must not be unreasonably withheld or delayed.

#### **15. Amendment**

15.1 This Strategic Alliance Agreement may be amended only by an instrument in writing signed by the parties.

## Appendix 1: Pilot Mining Test Project Agreement

*Below are the key terms that have been agreed between the parties and will need to be detailed in a long-form agreement:*

- **Pilot mining test & system requirements:** Allseas and DeepGreen shall review the ISA requirements for what constitutes a “pilot mining test” for the purposes of applying for the ISA Exploitation Contract and agree on the functional, environmental, operational and timeline requirements for a pilot mining system.
- **Pilot mining test plan of work:** Allseas and DeepGreen recognize that the ISA views tests of collecting systems as an opportunity to examine the environmental implications of mining. DeepGreen will be required to submit to the Authority a plan of such testing [\*\*\*] in advance. Preliminary descriptions of [\*\*\*] should be submitted to the Authority with the application for approval of a plan of work for exploration; the details for monitoring the environment during the test mining shall be submitted at least [\*\*\*] before testing begins. A plan for testing of the Allseas’ pilot mining system shall include provision for monitoring of those areas impacted by the pilot mining test activities which have the potential to cause serious environmental harm, even if such areas fall outside the proposed test site. The programme will include, to the maximum extent practicable, specification of those activities or events that could cause suspension or modification of the tests owing to serious environmental harm if the specified activities or events cannot be adequately mitigated.
- **Development costs:** [\*\*\*]
- **DeepGreen’s onsite presence & Steering Committee:** DeepGreen owner’s team will ensure that the Allseas pilot mining system meets the ISA environmental and other requirements through onsite presence (1-2 engineers seconded to Allseas) and a joint development Steering Committee.
- **Conduct pilot mining test:** Once Allseas’s pilot mining system is ready, Allseas will perform a pilot mining test on DeepGreen’s Area NORI D.
- **Payment for successful pilot mining test:** The Parties agree that the total development cost of the pilot test mining system is approximately US\$[\*\*\*]. In consideration for a successful pilot mining test that meets the design specifications agreed to among the Parties, DeepGreen will pay Allseas \$30M in cash and, in addition, issue 10 million DeepGreen shares. Allseas will assume the responsibility for any development cost overruns.
- **IP ownership:** Allseas will own and retain all background and foreground IP used and generated in the development of the Allseas pilot mining system.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

## Appendix 2: Nodule Collection and Shipping Agreement

*Below are the key terms that have been agreed between the parties and will need to be detailed in a long-form agreement:*

- **Exploitation Contract:** DeepGreen will use its best efforts to secure an Exploitation Contract from the ISA using Allseas nodule collection system on one of its Areas.
- **Allseas' system production volume:** Both parties recognize that in order to secure optimal project economics, Allseas' offshore production system output needs to be matched to DeepGreen's processing plant input. It is currently expected that DeepGreen will be able to start a processing plant line with an input requirement of [\*\*\*] wet tonnes of nodules and scale it up in increments of [\*\*\*] tonnes. It is also currently expected that Allseas' offshore production system could be started up at [\*\*\*] wet tonnes and scaled up to at least [\*\*\*] or [\*\*\*] wet tonnes. Recognizing that there will be significant feasibility development work undertaken by Allseas on the offshore system and by DeepGreen on the onshore plant to get to the Investment Decision, both parties undertake to carry on the joint development Steering Committee beyond the initial engagement on pilot mining system to ensure alignment and output-input coordination across the value chain.
- **[\*\*\*] wet tonnes contract:** DeepGreen will grant Allseas a contract to collect [\*\*\*] wet tonnes of nodules (seabed-to-port). Allseas will build, own and operate the production system on the contract area that contains [\*\*\*] wet tonnes of nodules.
- **Financing of Allseas' first nodule collection production system:** DeepGreen will either finance or, together with its processing partners, guarantee nodule offtake to enable the financing of the Allseas offshore production system.
- **At-cost + profit-share:** DeepGreen will pay Allseas [\*\*\*] (provided however that the Parties agree to a detailed cost structure of such operations). In addition, Allseas and DeepGreen will share profit on the nodule collection contract [\*\*\*]. As a principle, the relevant profit pool will be determined by taking the market value of the nodules at port and subtracting all costs incurred by both parties to deliver nodules to port. The technical definition of the relevant profit pool will be further negotiated and agreed in good faith. In a situation where the market for nodules does not exist (e.g., all nodule players are integrated collection-and-processing businesses), the market value of nodules will be determined based on the methodology developed by MIT ("MIT model for profit-based schemes") and commissioned by the ISA. If the parties fail to reach a shared understanding, an independent third party (e.g., MIT) will be hired by the parties to implement the agreed methodology and determine the implicit market value of nodules at port.

## FORM OF AGREEMENT

### Parties

**DeepGreen Engineering Pte Ltd (DeepGreen);**

and

**Allseas Group S.A. (Allseas),**

each referred to as a Party or collectively as the Parties.

### RECITALS

- A. DeepGreen is an international deepsea resource exploration and development company with polymetallic manganese nodule exploration rights granted by the International Seabed Authority (**ISA**).
- B. DeepGreen and Allseas entered into a Strategic Alliance Agreement, dated 29 March 2019, which governs the relationship between the Parties including this Agreement.
- C. Allseas is a global leader in offshore pipelay installation, heavy lift and subsea construction and has the skills, personnel and equipment necessary to develop a Pilot Mining Test System (**PMTS**) according to the provisions set forth herein.
- D. DeepGreen wishes to progress the development of one or more of its exploration licenses into an Exploitation Contract with the ISA, and requires the successful trial and testing of a PMTS in accordance with ISA regulations, and DeepGreen has decided to prove the economic and technical viability and environmental impact of a proposed nodule collection and shipping system (**Production System**) that will meet the environmental and operational requirements of the ISA.
- E. DeepGreen has conducted preliminary economic modelling for a Production System that can deliver up to [\*\*\*] (wet) of nodules with an expected offshore CAPEX of \$[\*\*\*] and OPEX of \$[\*\*\*/dry tonne of dry nodules delivered to shore.
- F. DeepGreen contemplates a scalable Production System that may commence as a minimum viable operating system producing [\*\*\*] of nodules (wet) and could then be scaled up in [\*\*\*] increments to produce [\*\*\*], [\*\*\*] and [\*\*\*], provided however that the Parties expect to complete detailed studies, design and engineering to determine the optimal throughput.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- G. The Parties agree to collaborate throughout the development of the appropriate design and performance characteristics necessary to meet the ISA regulatory requirements and to optimize economic and technical performance and to appropriately manage project risk.
- H. Allseas has agreed to develop a PMTS and conduct all appropriate testing and monitoring required by the ISA and DeepGreen in order to achieve an Exploitation Contract, and DeepGreen shall pay Allseas a Success Fee upon Successful Commissioning, provided however that Allseas shall keep ownership of the PMTS and its related Intellectual Property.
- I. DeepGreen and Allseas wish to enter into this Agreement for the design, engineering, testing and commissioning of the PMTS according to the provisions set forth herein.
- J. The Parties have agreed to enter into a **Nodule Collection and Shipping Contract** effective upon the Successful Completion of the PMTS.
- K. The Parties intend to cooperate with respect to the PMTS following Successful Completion, including, without limitation, to permit the design modification and deployment of the PMTS for test work in other exploration sites controlled by DeepGreen.
- L. The Parties acknowledge that this Agreement is essential to (i) demonstrate the economic viability of a Production System and (ii) meet all the regulatory requirements established by the ISA in order to apply for an Exploitation Contract.

**THE PARTIES AGREE AS FOLLOWS.**

**1 AGREEMENT**

---

**1.1 Documents comprising this Agreement.** This Agreement is constituted by the following sections:

Form of Agreement

Annex 1: Design Specifications for PMTS

Annex 2: Success Fee

Annex 3: Programme

Annex 4: Specifications and Drawings

Annex 5: Procedures

**1.2 Order of precedence.**

1.2.1 The documents comprising this Agreement will be read as one document.

1.2.2 If there is any ambiguity, inconsistency or conflict between the provisions of any of the documents comprising this Agreement then the documents take precedence in the order set out above in clause 1.1.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- 1.3 **Commissioning of PMTS and Payment.** In consideration for Allseas commissioning the PMTS in accordance with the Design Specifications set forth in Annex 1, DeepGreen agrees to pay Allseas in accordance with the terms of this Agreement.
- 1.4 **Effective Date.** This Agreement comes into effect on the date when the last Party to sign has executed this Agreement (**Effective Date**).
- 1.5 **Parties' Representatives for this Agreement.** The Parties' respective representatives for the purposes of this Agreement are set out in Annex 5: Procedures.
- 1.6 **Notice particulars.** The addresses for the service of notices are as follows:

## 1 DEFINITIONS AND INTEPRETATION

---

1.1 In this Agreement the initialized terms have the following meaning.

**Affiliate** means any entity Controlling, Controlled by, or under common Control with DeepGreen or Allseas respectively, including (i) any person under common Control with a Party or under common Control with a person under the direct or indirect Control of the Party; or (ii) any person under the direct or indirect Control of a person that has the direct or indirect Control of the Party.

**Agreement** means this agreement (including all of the annexures).

**Allseas** means the entity designated as such in the Form of Agreement.

**Allseas Group** means Allseas, its contractors of any tier, its and their Affiliates, its and their respective directors, officers, employees, invitees and agents but does not include any member of DeepGreen Group.

**Background Intellectual Property** means any Intellectual Property that is owned by or licensed to either Party independently of this Agreement and includes Intellectual Property that may be used by Allseas in the development and delivery of the PMTS or which is incorporated into the PMTS or otherwise made available by DeepGreen in connection with this Agreement.

**Claim** means any cost, demand, legal proceedings, claims, actions, fines, penalties, obligations or liabilities of any nature, including legal costs on a full indemnity basis, arising under any statute or in equity or under a contract or at common law or otherwise at law of whatsoever nature.

**Competent Authority** shall mean (i) any person having legal, executive and/or regulatory authority and/or enforcement powers (including any public body or authority responsible for the investigation and/or prosecution of criminal offences) over either or both of the parties or any member of their respective Groups in connection with this Contract; and/or (ii) any court of law or tribunal with jurisdiction over either or both of the parties or any member of their respective Groups in connection with the Contract.

**Completion Certificate** means the certificate issued pursuant to clause 15 in respect of the whole or relevant part of the PMTS.

**Completion Date** means the date shown on the Completion Certificate on which the whole or the relevant part of the PMTS were completed.

**Consequential Loss** means:

- (a) any indirect or consequential loss whatsoever; and
- (b) any loss of profits or anticipated profits, loss of use (including, without limitation, loss of use or the cost of use of property, equipment, materials and services); loss of product; loss of business; business interruption; loss, restriction or forfeiture of licences, concession or field interest; loss of revenue, shut in, loss of production, deferral of production; cost of insurance; or any other similar losses whether direct or indirect,

arising out of or in connection with the performance or non-performance of this Agreement, even if such loss is caused wholly or partially by the act, neglect, breach of duty (whether statutory or otherwise) or default of a Party, and even if such loss is caused wholly or partially by the unseaworthiness of any vessel.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

**Control** means control which a person has over an Affiliate and any of the following: (i) direct or indirect ownership of 50% (fifty per cent) or more of the share capital or other ownership interest in any other entity; or (ii) the right to exercise 50% (fifty per cent) or more of the votes in any other entity; or (iii) the contractual right to designate more than half of the members of such entity's board of directors or similar executive body; or by virtue of any power conferred by the law, constitutional documents, agreements or arrangements regulating or relating to such undertaking.

**DeepGreen** means the entity designated as such in the Form of Agreement.

**DeepGreen Group** means DeepGreen, its and their respective Affiliates, their contractors of any tier, and their respective directors, officers, employees, invitees and agents but does not include any member of Allseas Group.

**Defect** means in relation to the PMTS any omission, failure, fault, error, defect, unacceptable performance or results, or otherwise any defect arising as a result of a breach of this Agreement.

**Effective Date** has the meaning given to it in the Form of Agreement.

**Force Majeure** has the meaning given to that term in clause 33.2.

**Good Industry Practices** means the practices that would be adopted by, and the exercise of that degree of care, skill, diligence, prudence and foresight that reasonably would be expected from a competent party in the international maritime and offshore oil and gas industry experienced in performing work similar in nature, size, scope and complexity to the development of the PMTS, where Allseas is seeking to comply with, the standards specified in this Agreement or such national or international standards as are most applicable and the applicable law.

**Government** means any national or local government, including any department, agency or other instrumentality thereof, and any government owned or controlled enterprise.

**Group** shall mean either DeepGreen Group or Allseas Group as the context requires.

**Insolvency Event** means the relevant person becoming bankrupt or making a composition or arrangement with its creditors or an order for the winding up of such person being made or (except for the purposes of amalgamation or solvent reconstruction) a resolution for its voluntary winding-up being passed or a provisional liquidator, receiver, examiner, administrator or manager of its business or undertaking being appointed or presenting a petition or having a petition presented, applying for an administration order to be made, or possession being taken by or on behalf of the holders of any debenture secured by a floating charge or any property comprised in or subject to the floating charge, or any equivalent act or thing being done or suffered under any applicable law.

**Intellectual Property** means any invention, patent or application for a patent, design (registered or unregistered), trademark (registered or unregistered), name, copyright (including future copyright), circuit layout, trade secret, know-how, proprietary information or other right in respect of any data, information, process, work, material or method.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

**PMTS** means the Pilot Mining Test System as further described in Annex 1: Design Specifications, including the provision of all materials and equipment, and such other services contemplated by this Agreement, or as may be requested by DeepGreen.

**Pollution** means any liquid or non-liquid pollutant, contaminant or waste substance or contamination of whatsoever nature, including waste, fuel, lubricants and grease.

**Public Official** means any (a) officer or other person employed in any capacity (i) at any level of Government, (ii) any official or employee of a labor union controlled by any Government or political party, or (iii) in any public international organization, such as the United Nations, the European Union, or International Seabed Authority, including any department, agency or other instrumentality thereof; (b) any candidate or officer or other person employed by a political party; or (c) any person acting in any official capacity for or on behalf of any person or organization listed in (a) or (b).

**Subcontract** means the agreement, contract, purchase order or other arrangement under which a Subcontractor is appointed by Allseas for a part of the PMTS.

**Subcontractor** means any person appointed as a subcontractor for a part of the PMTS, whether directly by Allseas or at a lower tier, and such person's successors in title.

**Successful Completion** shall have the meaning set forth in clause 15.2.

**Success Fee** shall mean the amounts payable according to Annex 2.

**VAT** means any Value Added Tax or similar tax required by an applicable jurisdiction pursuant to the activities contemplated under this Agreement.

**Worksite** means the area or areas to be agreed by the Parties as the testing area for the PMTS

**Willful Misconduct** means an intentional disregard of good and prudent standards of performance or of any of the terms of this Agreement and to the adverse consequences of such act or omission.

1.2 **Interpretation.** In this Agreement, unless the context otherwise requires:

- 1.2.1 headings or subheadings are for convenience only and do not govern the meaning or construction of any provision of this Agreement;
- 1.2.2 a reference to any agreement or document is to that agreement or document as amended, novated, supplemented or preplaced from time to time;
- 1.2.3 words expressed in singular include the plural and vice versa;
- 1.2.4 a 'person' includes a company, partnership, firm, joint venture, association, authority, corporation or other body corporate;
- 1.2.5 references to annexures and clauses, are references to annexures and clauses to this Agreement;

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- 1.2.6 a reference to a Party to this Agreement includes that Party's successors and permitted assigns;
- 1.2.7 no rule of construction will apply to the disadvantage of a party because that party was responsible for drafting this Agreement or any of the provisions of this Agreement;
- 1.2.8 a reference to any law contained in this Agreement is deemed to include any amendment, re-enactment or consolidation of that law; and
- 1.2.9 if anything is required to be done under this Agreement within a certain number of days and the last day of the specified period falls on a non-working day in the location where the relevant act or thing must be done, then the last day of the relevant period is deemed to be on the first following working day.

## **2 COMMUNICATIONS AND REPRESENTATIVES**

---

- 2.1 **Communications.** All instructions, notices, authorizations, approvals and acknowledgements and other communications between the Parties must be in writing. All such communications, together with all correspondence and other documents must be in the English language. If it is necessary for DeepGreen to give any instructions to Allseas orally in the first instance, Allseas will comply with such instruction. Any such oral instruction will be confirmed in writing as soon as possible thereafter.
- 2.2 **Representatives.**
  - 2.2.1 The Parties appoint representative(s) as set out in Annex 5: Procedures to exercise or perform the Party's rights or obligations under this Agreement. A Party's representative may nominate a delegate to exercise any of his or her powers, duties, discretions or authority.
  - 2.2.2 A Party may at any time by notice in writing to the other Party remove the existing representative and appoint a new representative.
  - 2.2.3 The representatives do not have powers or authority to amend this Agreement or to relieve the other Party from any of its obligations under this Agreement.

## **3 ALLSEAS'S OBLIGATIONS**

---

- 3.1 Allseas must perform and carry out all its obligations under this Agreement and must deliver the PMTS with all due care and diligence and with the skill to be expected of a reputable contractor experienced in the types of work to be carried out under this Agreement.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- 3.2 The PMTS must be, and Allseas represents that the PMTS will be:
- (a) free of Defects;
  - (b) meet in all material respects the specifications provided in Annex 1;
  - (c) compliant with all applicable requirements and law including any regulations established by the ISA as communicated by DeepGreen;
  - (d) carried out in accordance with the dates and milestones set out in this Agreement, including in Annex 3: Programme;
  - (e) performed in a safe manner and in accordance with Good Industry Practices; and
  - (f) performed in a manner to ensure lawful environmental impact.
- 3.3 Allseas must provide all materials and equipment, vessels, consumables, facilities and all other things whether of a temporary or permanent nature, as is necessary to deliver the PMTS. All Allseas materials, equipment and facilities used in connection with delivering the PMTS must be in good working order and suitable for the use. Allseas must provide all management, supervision and personnel necessary for delivering and commissioning the PMTS.
- 3.4 The design, execution and the Successful Completion of the PMTS shall comply with all applicable technical standards, building, construction and environmental laws applicable to the PMTS.
- 3.5 Allseas may, at any time, submit to DeepGreen a proposal which will, if adopted, (1) accelerate Successful Completion, (ii) reduce the cost to DeepGreen of maintaining or operating the Production System, (iii) improve the efficiency or value to DeepGreen of the PMTS or the Production System, or (iv) otherwise be of benefit to DeepGreen and/or Allseas.

#### **4 ALLSEAS TO INFORM ITSELF**

---

- 4.1 Allseas is deemed to have satisfied itself, before entering into this Agreement, as to the extent and nature of the PMTS including but not limited to the work, personnel, materials, consumables and facilities required for the PMTS, general and local conditions, and all other matters which may affect progress or performance of the PMTS. Any failure by Allseas to take into account any matters which affect the PMTS will not relieve Allseas from its obligations under this Agreement.
- 4.2 If Allseas makes use of any information provided by DeepGreen, it is deemed to have satisfied itself as to the accuracy and completeness of the information and to have accepted full responsibility for such use including any conclusions drawn by it from such information. DeepGreen will have no liability to Allseas, nor will Allseas be entitled to any remuneration or time as a result of additional costs or delays incurred in using such information.
- 4.3 Allseas shall be deemed to have scrutinised, prior to commencement of its design works, design criteria and calculations, provided in Annex 1: Design Specifications. Allseas shall be responsible for the design of the PMTS and for the accuracy of such design criteria and calculations.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

## **5 REQUIREMENT TO GIVE NOTICE**

---

- 5.1 Allseas must notify DeepGreen without delay of all things which in the opinion of Allseas appear to be deficiencies, omissions, contradictions or ambiguities in this Agreement or any possible conflicts with the applicable law. On receipt of such notice DeepGreen will issue instructions before Allseas may proceed with any part of the PMTS affected.
- 5.2 Allseas must notify DeepGreen without delay of any accidents or environmental incidents which occur in connection with the carrying out of the PMTS. Allseas must notify DeepGreen immediately of any proposed or actual stoppages of work, industrial disputes or other matters affecting or likely to affect the carrying out of the PMTS or this Agreement.

## **6 ALLSEAS PERSONNEL**

---

- 6.1 Allseas undertakes to provide sufficient personnel at all times to ensure the performance and Successful Completion of the PMTS in accordance with the provisions of this Agreement. All persons employed on the PMTS must be competent, properly qualified, skilled and experienced in accordance with Good Industry Practice. Allseas must verify all relevant qualifications of such personnel.
- 6.2 DeepGreen may instruct Allseas to remove any person engaged in any part of the PMTS who in the reasonable opinion of DeepGreen is:
- (a) incompetent or negligent in the performance of the duties;
  - (b) engaged in activities which are contrary or detrimental to the interests of DeepGreen; or
  - (c) not complying with any health, safety and environment processes set out in this Agreement or persist in any conduct likely to be prejudicial to safety, health or the environment.

Any such person must be removed without delay and must not be engaged again in the PMTS or on any other work for DeepGreen without the prior approval of DeepGreen.

## **7 PERMITS, LICENCES AND COMPLIANCE WITH LAW**

---

- 7.1 Allseas must comply, and must ensure that all Subcontractors comply, with all applicable laws (national or international), including all rules and regulations of any government authority or regulatory body (including the ISA) having jurisdiction over the PMTS, sites where the PMTS is being designed and developed, or any goods or materials (to the extent relevant) that will be delivered or provided under this Agreement in connection with the PMTS.
- 7.2 Without prejudice to clause 7.1, Allseas must carry out its obligations under this Agreement so as not to cause or contribute to any breach by DeepGreen of any law or any obligation to the ISA that has been communicated to Allseas.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- 7.3 Allseas must, at its own cost, obtain all licenses, permits, consents and authorizations that are required by the applicable laws, rules and regulations governing the construction and operation of the PMTS other than as provided in this clause 7.3. Allseas must ensure that all such licenses, permits, consents and authorizations remain in full force and effect for the duration of the performance of the PMTS. DeepGreen shall be responsible for all governmental and ISA permits, consents or authorization required in connection with operating the PMTS in the Worksite, removal of polymetallic manganese nodules from the Worksite, transport and importation of nodules to any onshore processing facility. DeepGreen shall also be responsible for submission of any required applications to the ISA, one year in advance of the proposed testing schedule.
- 7.4 If there are other licenses, permits, consents and authorizations that can only be legally obtained by DeepGreen (other than ISA authorizations), Allseas must give notice of this to DeepGreen in good time so as to ensure that such are able to be obtained well in advance of the time they are needed in order not to delay the performance of any part of the PMTS or the Project. Allseas must provide such reasonable assistance as may be requested by DeepGreen.
- 7.5 Allseas will save, indemnify and hold harmless DeepGreen Group from and against any Claims by reason of a failure of Allseas or its Subcontractors to comply fully with its obligations under this clause 7. DeepGreen will save, indemnify and hold harmless Allseas Group from and against any Claims by reason of negligence, willful misconduct or breach of law.

## **8 FUTURE USE OF [\*\*\*]**

---

- 8.1 Allseas acknowledges and accepts that DeepGreen is developing additional mineral exploration areas and may wish to use [\*\*\*] in respect of applications for future Exploitation Contracts or mining licenses within such areas.
- 8.2 If applicable, the Parties agree to use all reasonable endeavours to reach an agreement which shall permit DeepGreen to order the modification and deployment of [\*\*\*] for any such future site as and when requested by DeepGreen, provided that the Parties shall also then agree on how [\*\*\*], provided in no event shall DeepGreen be liable for any costs in excess of Allseas direct costs and expenses.

## **9 INSPECTION AND TESTING**

---

- 9.1 To confirm that the requirements of this Agreement are met, DeepGreen shall have the right, but not the obligation, at all reasonable times to examine and inspect the PMTS and all documentation relating thereto. Allseas will render such reasonable assistance (including access to DeepGreen to any premises at which the PMTS is being designed and developed, maintained, tested or stored) as may be required to facilitate such inspection. Allseas must without delay and at its own cost and expense take whatever remedial action DeepGreen deems necessary to remedy any Defect identified as a result of such inspection and ensure compliance.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

9.2 Any inspection or examination (or failure to do so) carried out under this clause 9 does not relieve Allseas of any of its obligations under this Agreement.

## **10 WARRANTY**

---

10.1 Allseas warrants and guarantees that it will design, develop, engineer and commission the PMTS in accordance with the provisions of this Agreement.

## **11 CHANGES**

---

11.1 DeepGreen has the right to issue instructions to Allseas at any time to make any changes to the PMTS (including any additions or reductions to Annex 1: Design Specifications for PMTS or changes to Annex 3: Programme) which are within the capability and resources of Allseas. The right to instruct changes includes any changes that DeepGreen deems necessary in commissioning and operating the PMTS. Any change in applicable laws or regulations, or requirements of the ISA which are announced after the Effective Date and require additional time or resources shall entitle Allseas to request a Change Order.

11.2 Prior to issuing a change to the PMTS, DeepGreen may require Allseas to provide promptly and at the latest within five (5) days of receipt of DeepGreen's request the information regarding the effects of the change on the PMTS, including on Annex 3: Programme.

11.3 Allseas must not proceed with any change unless such change has been authorized in writing by DeepGreen through a Change Order. Allseas must comply with the Change Order without delay.

11.4 Any adjustment to the Success Fee resulting from any change will be made by mutual agreement between the Parties.

11.5 Allseas is not entitled to any additional payment if DeepGreen requests Allseas to perform remedial work due to any Defect or if the relevant change is due to a default on the part of Allseas. Changes caused by circumstances for which Allseas is responsible will not entitle Allseas to any changes to this Agreement.

## **12 INVOICING AND PAYMENT**

---

12.1 In consideration of the complete and successful delivery of the PMTS by Allseas under this Agreement, DeepGreen agrees to pay Allseas the Success Fee.

12.2 Allseas must submit its invoice no later than thirty (30) days following Successful Completion, and DeepGreen shall make the payments in accordance with Annex 2 within 30 days thereafter.

12.3 All payments contemplated under this Agreement are inclusive of VAT and all other local taxes, duties and charges, which shall be charged by and accounted to the relevant tax authority by Allseas as required under prevailing legislation.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- 12.4 DeepGreen may deduct from any payment becoming due to Allseas:
- (a) all costs, charges, damages, expenses and other moneys which are payable by or to be reimbursed by Allseas to DeepGreen under the provisions of this Agreement; and
  - (b) any other amount which DeepGreen is entitled to deduct or withhold under this Agreement.
- 12.5 If DeepGreen at any time incurs costs which it is entitled to recover from Allseas, DeepGreen may invoice Allseas for such costs, provided always that DeepGreen may deduct the amount of such costs from any amount due hereunder. Allseas must pay DeepGreen within thirty (30) days of receipt of invoice any sums outstanding.
- 12.6 Notwithstanding anything to the contrary in this Agreement, wherever a Party is entitled to recover from another Party any costs incurred, then the amount of such costs shall not include an element of profit.

### **13 PAYMENT OF SUBCONTRACTORS**

---

- 13.1 Allseas must pay, in a timely manner, all Subcontractors engaged in respect of the PMTS.
- 13.2 Allseas saves, indemnifies, defends and holds DeepGreen harmless from and against any Claims which arise in connection with any failure by Allseas to pay to any of its Subcontractors any amount due to such Subcontractors.
- 13.3 If Allseas fails to pay any amounts properly owing to a Subcontractor as and when they fall due, then DeepGreen may upon 30 days notice to Allseas withhold from any payment otherwise due to Allseas any amount which DeepGreen reasonably believes to be owing but unpaid to such Subcontractor and pay the amount withheld to such Subcontractor.
- 13.4 DeepGreen must pay, in a timely manner, all of its subcontractors engaged in interfacing with the PMTS.
- 13.5 DeepGreen saves, indemnifies, defends and holds Allseas harmless from and against any Claims which arise in connection with any failure by DeepGreen to pay to any of its subcontractors any amount due to such Subcontractors.

### **14 NO AGENCY, PARTNERSHIP OR JOINT VENTURE**

---

- 14.1 For the avoidance of doubt, and regardless of any other arrangements between the Parties, this Agreement shall not constitute a partnership, agency arrangement or joint venture with respect to the development, use or deployment of the PMTS or any other matter contemplated hereunder.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

## 15 SUCCESSFUL COMPLETION

---

15.1 Allseas shall deliver the PMTS in accordance with the dates and milestones set out in this Agreement, including as may be specified in Annex 3: Programme.

Successful Completion shall require the completion of the following activities:

(a) pre-commissioning tests, which shall include the appropriate inspections and (“dry” or “cold”) functional tests to demonstrate that each item of PMTS can safely under-take the next stage,

(b) commissioning tests, which shall include the specified operational tests to demonstrate that the PMTS can be operated safely and as specified, under all available operating conditions; and

(c) trial operation, which shall demonstrate that the PMTS can perform reliably and in accordance with this agreement.

During trial operation, when the PMTS is operating under stable conditions, Allseas shall give notice to DeepGreen that the PMTS is ready for any other tests, including performance tests to demonstrate whether the PMTS conforms with criteria specified in Annex 1: Design Specifications.

15.2 Where Allseas considers that the PMTS has been completed in accordance with Annex 1: Design Specifications for PMTS and has satisfactorily passed any final test that may be prescribed in this Agreement, Allseas must notify DeepGreen and request the issue of a Completion Certificate.

15.3 DeepGreen must independently evaluate such results to ensure that Successful Completion has occurred, and upon such verification as soon as reasonably practicable and in any event within [\*\*\*] either.

(a) issue to Allseas a Completion Certificate in respect of the whole or the relevant part of the PMTS; or

(b) notify Allseas of any Defects in all or any relevant part of the PMTS.

15.4 Any notice issued under clause 15.4(b) will include details of the specific nature of each Defect and will specify the part or parts of this Agreement containing the obligations which Allseas has failed to meet. Allseas must on receipt of any such notice promptly correct all Defects. When it has completed such correction, it must notify DeepGreen in accordance with clause 15.1.

## 16 DATA AND INFORMATION

---

16.1 Allseas must provide to DeepGreen all relevant data and information with respect to the design, construction, performance and likely environmental impacts of the PMTS, including environmental data, performance results, and any other information required by the ISA and reasonably requested by DeepGreen to understand the performance parameters of the PMTS. Allseas shall provide reasonable assurances with respect to the accuracy, sufficiency and completeness of such data provided.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

16.2 DeepGreen shall be entitled to review documents, reports, data, or other information generated in connection with the development, testing and operation of the PMTS as required to verify the performance of the PMTS.

## **17 TERMINATION AND DEFAULT**

---

17.1 Both Parties have the right, by written notice to the other Party to terminate all or any part of this Agreement as considered necessary for any or all of the following reasons:

- (a) subject to clause 17.2 in the event of a material default by either Party;
- (b) in the event of the other Party suffering an Insolvency Event.

17.2 In the event of material default on the part of either Party, and before the issue of a notice of termination of this Agreement, the non-defaulting Party will give notice of default giving details of such default. The defaulting Party must as soon as possible remedy such default at its own cost. If the defaulting Party upon receipt of such notice does not commence and thereafter continuously proceed with satisfactory action to remedy such default (or where the default is not capable of being remedied) then the non-defaulting Party may:

- (a) issue a notice of termination in accordance with the provisions of clause 17.1; or
- (b) specifically in the event of material default by Allseas perform or cause to be performed by a third party Allseas's obligation in default and all costs will be recoverable from Allseas from any sums of money due or that may become due to Allseas under this Agreement. With the exception of (i) indemnity obligations under this Agreement, and (ii) the recovery from Allseas of any sums paid under this Agreement, DeepGreen shall not otherwise be entitled to recover any other costs or damages from Allseas in respect of termination of this Agreement whether under contract, tort or otherwise at law.

17.3 In the event of termination of this Agreement in accordance with clause 17.1 as a result of default by Allseas, the following conditions apply:

- (a) Allseas ceases to be entitled to receive any monies on account of this Agreement; except as set out in Annex 2: Success Fee for that part of the PMTS completed in accordance with this Agreement up to the date of termination; and
- (b) any additional costs reasonably incurred by DeepGreen as a direct result of Allseas's default or other events giving rise to termination are recoverable from Allseas but always limited to deductions from the Success Fee (both shares and cash components) due in accordance with this Agreement. In the event of any dispute on valuation of the DeepGreen shares, the Parties will arrange an independent valuation.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- 17.4 Termination of this Agreement (whether under this clause 17 or any other provision of this Agreement) will be without prejudice to any rights or remedies that may have accrued to either Party prior to such termination.
- 17.5 The Parties acknowledge that in the Strategic Alliance Agreement a mutual agreement was reached providing that DeepGreen shall source an initial Pilot Mining Test System from Allseas. In the event of termination pursuant to this clause 17, DeepGreen shall no longer have any obligation to source a PMTS from Allseas and shall be free to negotiate with third party providers for such a system.
- 17.6 Notwithstanding any other provision of this agreement, in the event of a termination by DeepGreen as a result of a material default by Allseas , or if Allseas terminates this agreement before Successful Completion for any reason other than a material default by DeepGreen, or either of DeepGreen or DeepGreen Metals suffering an Insolvency Event, Allseas shall, at its sole election:
- (a) acquire an additional [\*\*\*] shares in DeepGreen for a consideration of US\$[\*\*\*]; or
  - (b) sell no less than [\*\*\*] shares in DeepGreen to DeepGreen for US\$[\*\*\*] in total consideration.

## **18 ENVIRONMENT, HEALTH AND SAFETY**

---

- 18.1 Allseas must deliver the PMTS in a manner that gives priority to safety in order to protect life, health, property and environment. Allseas is at all times responsible for the management and control of health, safety, security and environmental issues related to the delivery, commissioning, testing and operation of the PMTS and must protect the environment, health and safety of the personnel and the property of Allseas, of its Subcontractors, and DeepGreen Group.
- 18.2 Allseas acknowledges and accepts that the ISA, and DeepGreen and Allseas health, safety, environment and quality policies and requirements and local applicable law may apply to the development and performance of the PMTS; Allseas agrees to strictly observe the applicable standards and to ensure that its personnel are trained to the applicable set of standards.
- 18.3 Allseas shall take all reasonable steps to protect the environment (both on and off its work site and the test site) and to limit damage and nuisance to people and property resulting from pollution, noise and other results of its operations to a level as low as reasonably practical. Allseas shall ensure that it prevents unacceptable emissions, discharges and effluent from its activities.
- 18.4 Allseas shall provide monthly environmental, health and safety information associated with the performance of the PMTS.
- 18.4 Allseas shall notify DeepGreen immediately of any unplanned incident arising from Allseas's or its Subcontractor's activities which has caused, had the potential to cause, or could in the future cause:
- (i) any PMTS related injury or illness to a DeepGreen, Allseas or Subcontractor employee or third party; or

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- (ii) any damage to, or loss of DeepGreen, Allseas, Subcontractor or third party assets; or
- (iii) harm to the environment.

Allseas shall confirm the notification of such incidents to DeepGreen Representative or to the nominated deputy as the case may be, within twenty four (24) hours of the incident.

- 18.5 DeepGreen shall have access at all reasonable times to the facilities, equipment, material, personnel and records of Allseas and its Subcontractors to audit any or all of its and their business management systems as appropriate to review compliance with this Agreement. Reasonable recommendations arising from such audits shall be implemented by Allseas within a timescale agreed between DeepGreen and Allseas. Allseas shall similarly enforce any recommendations made by DeepGreen in respect of any Subcontractor.

## **19 TRANSPORT OF GOODS AND EQUIPMENT**

---

- 19.1 Allseas shall be responsible for packing, loading, transporting, receiving, unloading, storing and protecting the PMTS and other things required for the testing, commission, and storing the PMTS; and Allseas shall indemnify and hold DeepGreen harmless against and from all damages, losses and expenses (including legal fees and expenses) resulting from the transport of the PMTS, and shall negotiate and pay all claims arising from such transport.
- 19.2 Allseas shall be responsible for collecting and managing any materials generated by the PMTS and transporting such materials to a location requested by DeepGreen. For the avoidance of doubt such materials shall be the exclusive property of DeepGreen. Allseas shall comply with any sample or material handling procedures instructed by DeepGreen from time to time.

## **20 OWNERSHIP, LIENS**

---

- 21 Title to any deliverables or outputs in or arising from the performance or utilization of the PMTS (including any data, drawings, reports and technical documents) will vest in and be held by Allseas, provided however that DeepGreen personnel shall be entitled to witness, and examine all aspects of the development of the PMTS. The risk of loss or damage to the PMTS remains with Allseas and Allseas remains responsible for the PMTS in accordance with the terms of this Agreement.

For the avoidance of doubt, DeepGreen shall be entitled to submit all data, drawings, reports and other technical documents to the ISA without restriction and under any terms as may be required by the ISA to meet applicable regulatory requirements concerning the pilot mining test project.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

## **21 INTELLECTUAL PROPERTY**

---

- 21.1 Nothing in this Agreement affects a Party's title to its Background Intellectual Property.
- 21.2 Allseas shall be entitled to exclusive ownership of any new intellectual property developed in connection with the design, engineering and development of the PMTS.
- 21.3 In the event that Allseas commercializes a future PMTS or related system based upon the Background Intellectual Property provided by DeepGreen, it shall negotiate in good faith a fair and reasonable royalty right to DeepGreen for the use of such Background Intellectual Property.

## **22 TAXATION**

---

- 22.1 Allseas is responsible for:
- (a) the payment of all taxes, duties, levies, charges and contributions (and any related interest or penalties) for which Allseas is liable as imposed by any appropriate governmental authority, whether or not they are calculated by reference to the wages, salaries, benefits or expenses and other remuneration paid directly or indirectly to persons engaged or employed by Allseas;
  - (b) the payment of all taxes, duties, levies, charges and contributions (and any related interest or penalties) including but not limited to income, profits, corporation taxes and taxes on capital gains, turnover and added value taxes for which Allseas is liable, now or hereafter levied or imposed by any appropriate governmental authority arising from this Agreement; and
  - (c) compliance with all statutory obligations to make deductions on account of tax and remit the required amounts to any appropriate governmental authority including, but not limited to income tax, PAYE, national insurance, employee taxes, charges, social security costs, levies and contributions whether or not they are measured by the wages, salaries or other remuneration or benefits paid to persons employed by Allseas, or persons providing services in connection with this Agreement to Allseas, and the imposition of a similar obligation upon all Subcontractors or any other persons employed by them or providing services to them in connection with this Agreement; and
  - (d) ensuring that any Subcontractor or any other person employed or providing services on or in connection with this Agreement shall comply with this clause.
- 22.2 Allseas must supply to DeepGreen all such information, in connection with activities under this Agreement, as is necessary to enable DeepGreen to comply with the lawful demands for such information by the ISA or any appropriate governmental authority.
- 22.3 Allseas saves, indemnifies, defends and holds harmless DeepGreen against all levies, charges, contributions and taxes of the type referred to in this clause and any interest or penalty thereon which may be assessed, by any appropriate governmental authority, on Allseas Group in connection with this Agreement and from all costs reasonably incurred in connection with it.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- 22.4 If DeepGreen receives a notice requiring it to pay any levies, charges, contributions or taxes of the types referred to in this clause and/or any interest or penalty thereon whether with respect to Allseas, any Subcontractor, their respective Affiliates or any other person employed by Allseas or any Subcontractor or providing any services to Allseas or any Subcontractor in connection with this Agreement, DeepGreen shall forthwith notify Allseas who must work with DeepGreen to make all reasonable endeavours to make any valid appeal against such payment. If DeepGreen is ultimately required to make such payment, DeepGreen may recover from Allseas any such sums and all costs reasonably incurred in connection therewith and Allseas shall within fourteen (14) days of receiving written notice from DeepGreen pay to DeepGreen any such sum or DeepGreen will be entitled to deduct such sums from any monies due, or which may become due, to Allseas.
- 22.5 DeepGreen shall be responsible for any taxes, levies, duties, royalties, or any other payments due to any appropriate governmental or International authority, in respect of any nodules or other material mined or removed from the seabed pursuant to this Agreement. The provisions of 22.3 and 22.4 shall apply mutatis mutandum.
- 22.6 Notwithstanding any other provisions of this Agreement, the liabilities and obligations incumbent upon DeepGreen and Allseas under this Clause 22 shall survive in full force and effect notwithstanding termination of this Agreement or Successful Completion.

### **23 AUDIT AND STORAGE OF DOCUMENTS**

---

- 23.1 During the course of the contract and for a period ending six (6) years thereafter, DeepGreen or its duly authorized representative (including a well-reputed third party auditor appointed by DeepGreen at its own cost) has the right to audit at all reasonable times and, upon request, take copies of all of Allseas's records (including data stored on computers) books, personnel records, accounts, correspondence, memoranda, receipts, vouchers and other papers of every kind relating to any provision of this Agreement under which Allseas has obligations the performance of which is capable of being verified by audit.
- 23.2 Allseas must co-operate fully with DeepGreen and/or its representatives in the carrying out of any audit required by DeepGreen and must provide all necessary assistance (including making Allseas's personnel and facilities available on request) to the auditors. DeepGreen will conduct any audit in a manner which will keep to a reasonable minimum any inconvenience to Allseas.
- 23.3 Allseas must obtain equivalent rights of audit to those set out above in this clause from all Subcontractors and will cause such rights to extend to DeepGreen.
- 23.4 Allseas must keep and maintain books, records, personnel, accounts, correspondence, vouchers, receipts, dockets and other documents of every kind (including those which are stored on computers) relating to this Agreement for a period of six (6) years after the date of Successful Completion.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

## 24 ASSIGNMENT AND SUBCONTRACTING

---

- 24.1 No work, including any design, construction, engineering, monitoring, testing or commissioning of the PMTS may be subcontracted or assigned in whole or in part without DeepGreen's prior written approval which shall not be unreasonably withheld.
- 24.2 Notwithstanding the terms of any Subcontract, Allseas shall remain liable to DeepGreen for the full performance of all of Allseas's obligations under this Agreement and shall be accountable for the acts and omissions or default of all of its Subcontractors.
- 24.3 DeepGreen may with the prior consent of Allseas, which shall not be unreasonably withheld, assign or novate to any other party the whole or any part of this Agreement.

## 25 CONFIDENTIALITY

---

- 25.1 Allseas must at no time without the prior agreement of DeepGreen except as may be necessary to enable Allseas to perform its obligations under this Agreement, use, reproduce, copy, disclose to, place at the disposal of or use on behalf of any third party or enable any third party to use, peruse or copy any information including but not limited to drawings, data, and computer software which is provided to Allseas by or on behalf of DeepGreen Group in relation to this Agreement.
- 25.2 The provisions of clause 25.1 do not apply to information which:
- (a) is part of the public domain;
  - (b) was in the possession of Allseas prior to award of this Agreement and which was not subject to any obligation of confidentiality owed to DeepGreen;
  - (c) was received from a third party whose possession is lawful and who is under no obligation not to disclose;
  - (d) is required to be disclosed in order to comply with the requirements of any law, rule or regulation or any governmental or regulatory body having jurisdiction over the PMTS or Allseas, or any relevant stock exchange; or
  - (e) is used or disclosed by Allseas five (5) years or more after Successful Completion.
- 25.3 Allseas must ensure that the provisions of this clause 25 are incorporated in any Subcontract and that the officers, employees and agents of Allseas and its Subcontractors comply with it.
- 25.4 Allseas indemnifies, defends, and holds harmless DeepGreen Group for any breach of these confidentiality provisions contained in this clause 25.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- 25.5 In respect of Allseas's confidential information, being any information including but not limited to drawings, data, and computer software which is provided to DeepGreen by or on behalf of Allseas Group in relation to this Agreement, DeepGreen is entitled to:
- (a) disclose to and authorize use by DeepGreen Group;
  - (b) disclose pursuant to any statutory or other legal requirements (such as by the ISA); and
  - (c) subject to Allseas's prior consent, which must not be unreasonably withheld or delayed, disclose to and authorize use by third parties to the extent necessary for Successful Completion or otherwise contemplated hereunder.

Notwithstanding the above, DeepGreen must, and must ensure that its officers, employees and agents take all reasonable measures to protect confidential information of Allseas concerning or arising from this Agreement for a period of five (5) years from the Effective Date and the provisions of 25.1 to 25.4 shall apply mutatis mutandum to Allseas confidential Information. For clarity, the provisions of this clause 25.5 do not apply to information which vests in DeepGreen in accordance with this Agreement.

DeepGreen shall have the right to disclose publicly any information relevant with respect to the PMTS and the activities contemplated herein. Allseas recognizes that such disclosures may make reference to the PMTS as a "DeepGreen- Allseas Pilot Test Mining" project. The Parties may discuss the disclosure of such information to the market.

## 26 INDEMNITIES

---

- 26.1 **Indemnities provided by Allseas.** Allseas releases and will save, indemnify, defend and hold DeepGreen Group harmless from and against any and all Claims arising in relation to this Agreement by reason of:

- (a) injury to, sickness of or death of any member of Allseas Group or its Subcontractors;
- (b) damage to, loss of or destruction of any property owned or hired by, leased or contracted to, Allseas Group or its Subcontractors; and
- (c) Pollution which originates from the vessels or equipment or the premises owned or leased or otherwise controlled by Allseas Group or its Subcontractors

arising from, relating to or in connection with the performance or non-performance of this Agreement, to the fullest extent permitted by law.

- 26.2 **Indemnities provided by DeepGreen.** DeepGreen releases and will save, indemnify, defend and hold Allseas Group harmless from and against any and all Claims arising in relation to this Agreement by reason of:

- (a) injury to, sickness of or death of any member of DeepGreen Group or any personnel of any subcontractor of DeepGreen Group or any person working under a contract with the DeepGreen Group; and

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- (b) damage to, loss of or destruction of any property owned or hired by, leased or contracted to DeepGreen Group or any of its subcontractors (with the exclusion of any Allseas property referenced in 26.1 (b)),
- (c) Pollution which originates from the vessels or equipment, or the premises owned or leased or contracted by or otherwise controlled by DeepGreen Group (with the exclusion of any Allseas property referenced in 26.1(b)),

arising from, relating to or in connection with the performance or non-performance of this Agreement, to the fullest extent permitted by law.

- 26.3 Subject to clause 26.6, all exclusions and indemnities given under this clause 26 apply irrespective of cause and notwithstanding the negligence or breach of duty (whether statutory or otherwise) of the indemnified Party or any other entity or party and shall apply irrespective of any claim in tort, under contract or otherwise at law.
- 26.4 If either Party becomes aware of any incident likely to give rise to a claim under the above indemnities, it shall notify the other and both Parties shall co-operate fully in investigating the incident.
- 26.5 The indemnities given by the Parties under this Agreement are full and primary, and shall apply irrespective of whether the indemnified Party has, or has not, insurance in place relating to any claims, losses, damages, costs, expenses and liabilities in respect of the subject matter of any indemnity given under this Agreement.
- 26.6 Each Party expressly agrees that the indemnities set out in this clause 26 do not extend to criminal prosecution, Willful Misconduct, fine or penalty arising from, relating to or in connection with the performance or non-performance of this Agreement.

## **27 EXCLUSION OF CONSEQUENTIAL LOSS**

---

- 27.1 Subject to clause 27.2 and any liquidated damages, neither Party is liable to the other for, and each Party waives and releases the other from any Claim for Consequential Loss arising from, relating to or in connection with this Agreement, (including any Consequential Loss that may be suffered by the Parties' respective Groups).
- 27.2 Nothing in clause 27 relieves a Party from:
  - (a) indemnities given under clause 26;
  - (b) any liability under clauses 13.2, 22, 25 and 32;
  - (c) where relevant, any liability for any predetermined termination fees or delay, performance or liquidated damages provided for in this Agreement or general damages in the event that for any reason such liquidated damages are not enforceable;
  - (d) any liability in relation to any Claim of a third party under any applicable law;
  - (e) any liability arising from fraud, fraudulent misrepresentation or Willful Misconduct.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

## 28 LIMITATION OF LIABILITY

---

- 28.1 Except for indemnity obligations and the provisions of clause 17.6, Allseas' obligations and liabilities under this Agreement or arising out of or related to the performance of the Agreement, whether in contract, tort or otherwise at law, shall always be limited to forfeiture of the amounts to be paid by DeepGreen under Annex 2 below.
- 28.2 Except for indemnity obligations, DeepGreen's obligations and liabilities under this Agreement or arising out of or related to the performance of the Agreement, whether in contract, tort or otherwise at law, shall always be limited to forfeiture of the amounts to be paid by DeepGreen under Annex 2 below.

## 29 INSURANCES

---

- 29.1 Allseas must, as a minimum, take out and maintain all insurances as set out in this clause 29. All such insurances shall be placed with reputable and substantial insurers, satisfactory to DeepGreen, and shall for all insurances (including insurances provided by Subcontractors), other than employers' liability insurance/workmen's compensation, to the extent of the liabilities assumed by Allseas under this Agreement, include DeepGreen Group as additional insured. All insurances required under this clause 29 shall be endorsed to provide that underwriters waive any rights of recourse, including in particular subrogation rights against DeepGreen Group to the extent of the liabilities assumed by Allseas under this Agreement. Such insurances must also, where possible, provide that DeepGreen shall be given not less than thirty (30) days' notice of cancellation of or material change to the cover. The provisions of this clause 29 shall in no way limit the liability of Allseas under this Agreement.
- 29.2 The insurances required to be effected under clause 29.1 are as follows (to the extent that they are relevant to the PMTS):
- (a) Employers' Liability and/ or (where the jurisdiction of where the PMTS is to be performed or under which the personnel employed requires this) Workmen's Compensation insurance covering personal injury to or death of the personnel of Allseas engaged in the performance of the PMTS to the minimum value required by any applicable legislation including extended cover (where required) for working offshore or such greater sum of US\$[\*\*\*] per claim;
  - (b) general third party liability insurance for any incident or series of incidents covering the operations of Allseas in the performance of this Agreement, with a limit not less than US\$[\*\*\*] per claim;
  - (c) third party and passenger liability insurance and other motor insurance as required by applicable law but with a limit not less than US\$[\*\*\*] per claim;
  - (d) insurance covering Allseas's own property, equipment, materials owned, hired, leased or used by Allseas for the purpose of this Agreement, with a limit not less than US\$[\*\*\*] per claim;

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- (e) insurance covering the PMTS and related systems necessary to support the PMTS (such as supply and services vessels) up to a value of US\$60,000,000, and
  - (f) any additional insurance required by any applicable law or reasonably necessary to comply with the obligations set forth herein.
- 29.3 In addition to the insurances to be obtained by Allseas pursuant to this clause 29 Allseas may obtain such additional insurances at its own cost as it deems necessary to cover the liabilities it has assumed under this Agreement.
- 29.4 Allseas acknowledges and agrees that the insurances maintained under this Agreement are primary to the indemnities contained in this Agreement. DeepGreen will not be required to enforce the indemnities in this Agreement as a pre-condition to claiming the same loss under the insurances.
- 29.5 Allseas will, at the request of DeepGreen, provide for inspection copies of certificates of currency in respect of the insurances required to be taken out by Allseas.
- 29.6 DeepGreen must, as a minimum, take out or ensure its subcontractors or any personnel under contract directly or indirectly to the DeepGreen Group, or any other member of the DeepGreen Group maintain insurances as set out in this clause 29.6. All such insurances shall be placed with reputable and substantial insurers, satisfactory to Allseas, and shall for all insurances (including insurances provided by subcontractors), other than employers' liability insurance/workmen's compensation, to the extent of the liabilities assumed by DeepGreen under this Agreement, include Allseas Group as additional insured. All insurances required under this clause 29.6 shall be endorsed to provide that underwriters waive any rights of recourse, including in particular subrogation rights against Allseas Group to the extent of the liabilities assumed by DeepGreen under this Agreement. Such insurances must also, where possible, provide that DeepGreen shall be given not less than thirty (30) days' notice of cancellation of or material change to the cover. The provisions of this clause 29 shall in no way limit the liability of DeepGreen under this Agreement.
- (a) Employers' Liability and/ or (where the jurisdiction of where the PMTS is to be performed or under which the personnel employed requires this) Workmen's Compensation insurance covering personal injury to or death of the personnel of DeepGreen Group or its subcontractors of any tier, engaged in the performance of the PMTS to the minimum value required by any applicable legislation including extended cover (where required) for working offshore or such greater sum of US\$5,000,000 per claim;
  - (b) general third party liability insurance for any incident or series of incidents covering the operations of DeepGreen Group or its subcontractors of any tier, in the performance of this Agreement, with a limit not less than US\$5,000,000 per claim;
  - (c) P&I insurance in respect of any vessel chartered by DeepGreen Group or by any of its subcontractors of any tier, in connection with the Agreement, and any additional insurance required by any applicable law or reasonably necessary to comply with the obligations set forth herein.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

## **30 HAZARDOUS SUBSTANCES**

---

- 30.1 Allseas must ensure that all materials, including any hazardous, toxic or corrosive substances provided in connection with the PMTS comply with all ISA guidelines and regulations as provided by DeepGreen, and all applicable laws.
- 30.2 Allseas undertakes not to utilize hazardous ingredients if they can be substituted by a substance which is not hazardous, less hazardous or less noxious than the one being used.

## **31 COMPLIANCE WITH INSTRUCTIONS FROM DEEPGREEN AND THE ISA**

---

- 31.1 Allseas acknowledges that testing the PMTS shall occur in international waters governed by the ISA. The ISA has exclusive regulatory authority concerning the form and conduct of any pilot test mining activities and Allseas agrees to work with DeepGreen and comply with any instructions received from DeepGreen (or from the ISA) in connection with its activities in the testing and commissioning the PMTS.

## **32 BUSINESS ETHICS**

---

- 32.1 Each party undertakes and warrants to the other that neither it nor any member of its Group, nor any agent, consultant or other intermediary acting on behalf of its Group, will directly or indirectly, in relation to this Agreement, give, promise or attempt to give, or approve or authorize the giving of, anything of value to:
- (a) any employee, officer or director of or any person representing the party;
  - (b) any other person, including any Public Official;
  - (c) a charitable or other organization, or an officer, director or employee thereof, or any person acting directly or indirectly on behalf of the same,
- for the purpose of (i) securing any improper advantage for Allseas or DeepGreen Group; (ii) inducing or influencing that Public Official improperly to take any action or refrain from taking any action in order for either Party's Group to obtain or retain business, or to secure the direction of business to either Group, or (iii) inducing or influencing that Public Official to use his/her influence with any Government or public international organization, or any or any department, agency or other instrumentality thereof, for any such purpose.
- 32.2 Each party further warrants and undertakes to the other that:
- (a) to the best of its knowledge, neither it nor any of its Affiliates, officers, directors, shareholders, employees, or agents or other intermediaries, or any other person acting directly or indirectly on its behalf, has carried out any of the actions described in clause 32.1, above; and,

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

(b) the persons described in paragraph (a) above, will comply with the provisions of this clause 32.

- 32.3 Each party warrants and undertakes to the other that it shall maintain adequate records in order to be able to verify its compliance with the provisions of this clause 32.
- 32.4 Each party saves, indemnifies, defends and holds harmless the other from all fines, penalties, Claims and all associated expenses arising out of or resulting from the violation by such party of any of its obligations in this clause 32.
- 32.5 Before the award of any Subcontract, Allseas must procure a warranty in the same terms as set out in clause 32.2 from such Subcontractor in favour of DeepGreen.

### **33 FORCE MAJEURE**

---

- 33.1 Except as provided in clause 33.2 and 33.3 below, Allseas shall be deemed to have obtained all necessary information as to risks, contingencies and other circumstances which may influence or affect the PMTS; and by signing this agreement, Allseas accepts responsibility for having foreseen all difficulties and costs of successfully completing the PMTS; and the Success Fee shall not be adjusted to take account of any unforeseen difficulties or costs.
- 33.2 Neither Party will be liable to the other Party for any failure to fulfil any term or condition of this Agreement if and to the extent that such fulfilment has been delayed or temporarily prevented by occurrence of a Force Majeure event which is beyond the control and without the fault or negligence of the Party affected and which, by the exercise of reasonable diligence, the affected Party is unable to protect against.
- 33.3 For the purposes of this Agreement only the following occurrences are deemed force majeure (**Force Majeure**):
- (a) war, civil war, acts of terrorism or armed conflict;
  - (b) nuclear, chemical or biological contamination;
  - (c) national strikes or lock outs or other national industrial disputes but excluding any industrial disputes or strikes involving only the workforce of the affected Party or any of its subcontractors;
  - (d) earthquake, flood, fire, explosion and/or other natural physical disaster, but excluding weather conditions as such, regardless of severity;
  - (e) changes to applicable legislation preventing development and delivery of the PMTS in entirety.
- 33.4 Where an event of Force Majeure occurs, the affected Party must notify the other Party without delay and give full particulars of the event. Save as expressly provided in this Agreement, no payments of whatever nature will be payable in respect of a Force Majeure occurrence and each Party will bear its own costs arising from this event.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

33.5 The Party claiming to be prevented or delayed in the performance of any of its obligations under this Agreement by reason of Force Majeure will use all reasonable endeavors to bring the Force Majeure event to a close or to find a solution in the event of continuance of the Force Majeure event.

#### **34 GOVERNING LAW AND LANGUAGE**

---

34.1 This Agreement and all questions arising in connection with it are governed by and will be construed in accordance with the laws in force in England and Wales.

34.2 A dispute, difference or claim whatsoever arising in connection with this Agreement which cannot be resolved amicably by the Parties may be referred by either Party to arbitration in accordance with the Rules of Arbitration of the International Chamber of Commerce then in force. The arbitration will be conducted on the following basis:

- (a) the venue of arbitration must be London;
- (b) the arbitration will be conducted in the English language; and
- (c) unless the remainder of this paragraph (c) applies, three arbitrators will be appointed by agreement between the Parties. The Party wishing to refer a dispute to arbitration must appoint its arbitrator and send notice of such appointment in writing to the other Party requiring the other Party to appoint its own arbitrator within 14 calendar days of that notice and stating that it will appoint its arbitrator as sole arbitrator unless the other Party appoints its own arbitrator and gives notice that it has done so within the 14 days so specified. If the other Party does not appoint its own arbitrator and does not give notice that it has done so within the 14 days, the Party referring the dispute to arbitration may, without the requirement of any further prior notice to the other Party appoint its arbitrator as the sole arbitrator and will advise the other Party accordingly. The award of a sole arbitrator will be binding on both Parties as if the arbitrator had been appointed by agreement.

Nothing in this clause 34 prevents a party from obtaining injunctive, declaratory or other interlocutory relief from a court which may be urgently required.

#### **35 GENERAL**

---

35.1 **Acts and omissions of Allseas Group.** Allseas is responsible under this Agreement for all acts and omissions of Allseas Group as if they were the acts and omissions of Allseas. DeepGreen is responsible under this Agreement for all acts and omissions of DeepGreen Group as if they were the acts and omissions of DeepGreen.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- 35.2 **Notices.** Except as otherwise stated in this Agreement, any notice in respect of this Agreement must be in the English language, given in writing and delivered by hand, or sent by email or by post to the relevant address specified in the Form of Agreement and copied to such other office or offices of the Parties as are from time to time nominated by them in writing to the other. Any such notice will be effective:
- (a) if delivered by hand, at the time of delivery;
  - (b) if sent by email, at the time of transmission unless received after the close of the recipient's normal business hours or on a non-working day, in which case it is effective on the next business day following the date of sending; and
  - (c) if sent by post, fifth working day after the date of posting.
- 35.3 **Entire Agreement.** To the extent permitted by law, in relation to its subject matter, this Agreement embodies the entire understanding of the Parties concerning the PMTS and constitutes the entire terms and conditions agreed by the Parties; and supersedes any prior written or other agreement of the Parties.
- 35.4 **Amendments.** Unless otherwise provided in this Agreement no amendment or addition to this Agreement shall be binding on the Parties unless in writing and signed on behalf of each Party.
- 35.5 **Nature of relationship between the Parties.**
- 35.5.1 Except as expressly stated otherwise in this Agreement, the obligations and liabilities of the Parties pursuant to this Agreement are severable and neither joint nor joint and severable and each Party is responsible only for its individual obligations hereunder.
  - 35.5.2 Allseas is an independent contractor and neither it nor any of its personnel or Allseas will be, or be deemed to be: (i) in partnership or in a joint venture relationship with DeepGreen; or (ii) an employee, servant or agent of DeepGreen.
- 35.6 **Counterparts.** This Agreement may be executed in any number of counterparts each of which when executed and delivered will be an original and all the counterparts together will constitute one and the same instrument.
- 35.7 **Illegality.** Any provision in this Agreement which is illegal, void or unenforceable will be ineffective to the extent only of such illegality, voidness or unenforceability and such illegality, voidness or unenforceability will not invalidate any other provision of this Agreement. If the removal of a clause or part of a clause under this clause materially alters the commercial allocation of benefit and risk (or management of risk) under this Agreement, the Parties agree to negotiate in good faith to amend or modify the terms of this Agreement as may be necessary or desirable having regard to the original terms of the bargain and the prevailing circumstances.
- 35.8 **Survival.** Provisions in this Agreement which for any reason require action or forbearance after termination, including but not limited to provisions of liabilities, indemnities, warranties and confidentiality, shall remain in full force and effect regardless of termination.
- 35.9 **Expenses.** Each Party must pay its own costs and expenses in connection with the negotiation, preparation, execution and performance of this Agreement.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

Pilot Mining Test Agreement  
Design Requirements

**(1) Operating Environment & Pilot Test Mining Site**

- (a) The PMTS and the commercial production system will need to operate in the NORI Area environment with the following salient characteristics:
- a. Depth – between [\*\*\*] and [\*\*\*] water depth
  - b. Slope – up to [\*\*\*] seabed slope
- (b) DeepGreen has allocated a [\*\*\*] representative test site within its NORI Area D. All survey data gathered on the test site by DeepGreen to date, and in future during the term of this Agreement, shall be provided to Allseas. For the avoidance of doubt, the test site may change depending on technical and operational considerations, provided however that the fundamental characteristics of the test site shall not be materially different from the NORI Area D.

**(2) Mandatory production economics & system scaling**

- (a) The PMTS needs to provide the data to validate the economic viability of Allseas' first scalable production system to collect, lift and transport nodules to DeepGreen's onshore processing facility. DeepGreen expects a scalable solution that will provide integrated production units at [\*\*\*] Mt/annum of dry nodules, provided however that DeepGreen is open to discussion with Allseas to meet alternative production unit sizing depending on improved economic outcomes across the full DeepGreen operating system including onshore processing.
- (b) The preliminary economic assessment (PEA) for the first production system compiled for DeepGreen by an independent third party, AMC, in April 2019 is based on the production of [\*\*\*]/annum of wet nodules and estimated an offshore capital cost of \$US[\*\*\*] and an operational cost of \$US[\*\*\*] of dry nodules (\$US[\*\*\*] wet), assuming a nodule abundance of 1[\*\*\*], when delivered to a port in Mexico corresponding to \$US [\*\*\*] of dry nodules for collection, lifting and transshipment and \$US[\*\*\*] of dry nodules for shipping. Allseas to make reasonable efforts to meet or outperform the target values as defined in the preliminary economic assessment.
- (c) Onshore processing of nodules is a much higher CAPEX (\$US[\*\*\*]) than offshore collection and relies on standard size conventional equipment. The sizing of DeepGreen's onshore processing and refining plant drives the sizing of the offshore collection and shipping system. Specifically, DeepGreen's preliminary plant design relies on [\*\*\*] furnace that processes [\*\*\*]/annum of dry nodules. As a result, DeepGreen expects the offshore system to scale in increments of [\*\*\*]/annum of dry nodules and reaching the target production rate of [\*\*\*]/annum of dry nodules – subject to the completion of future studies, design and engineering to validate the optimized production throughput.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- (d) Allseas shall demonstrate that the PMTS serves as the prototype for a bridge into a first production system, where the first production system shall target to deliver equivalent or superior economic performance to that stated within the DeepGreen PEA. Such demonstration shall take the form of designs, calculations, drawings, economic data models, all delivered to recognised international standards that may be, after mutual agreement, audited, checked and verified by one or more independent experts.

**(3) Mandatory environmental impact requirements**

- (a) An important part of DeepGreen's mission is to aggressively reduce environmental impacts of its operations over the project lifecycle from nodule collection on seabed floor to onshore processing and delivering product to customer door. DeepGreen has commissioned an independent consultant to conduct a preliminary life cycle analysis based on the PEA and is developing a preliminary assessment of expected impacts across key metrics: CO<sub>2</sub> emissions, cumulative energy consumption, biodiversity impacts.
- (b) As a prototype of the first commercial offshore production system, the PMTS will need to have a life cycle analysis and special attention given to the following drivers of environmental impacts:
- a. PMTS fuel consumption – The PEA assumes [\*\*\*] tonnes of fuel used per collected tonne of wet nodules. The PMTS would need to confirm that this assumption for the nodule collection system is correct and can be used for the life cycle analysis of the full scale system. Reasonable efforts to be made by Allseas to develop power efficient techniques and reduce the fuel consumption per collected tonne of nodules.
  - b. PMTS plume generation and management – All reasonable means should be employed to minimise sediment plume generation and to ensure any plume generated settles rapidly to the sea-floor.
  - c. Design should minimise release of oils and lubricants to the water and all subsea oils and lubricants to be biodegradable.

**(4) Mandatory product requirements**

- (a) Minimum quantity of nodules: The PMTS shall consist of a system that can collect and lift [\*\*\*] and store minimum quantity of [\*\*\*] of nodules (wet) on a surface vessel and transport these nodules to the port of San Diego, California, USA, where they shall be off-loaded.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- (b) Collected Nodule Dilution. The collected nodule grades are adversely affected by the presence of seabed mud and other soil particles. Reasonable endeavours shall be made to minimise the dilution of nodule particles by mud and other soil particles during the collection process.
- (c) Collected Particle Size Distribution. The particle size distribution of the collected nodules during the Pilot Test Mining project is an important measurement for the design of the onshore processing facilities and shall be carefully recorded. Reasonable endeavours shall be made to minimise the attrition of nodule particles during the collection process. Target attrition rate is <[\*\*\*] (particle size distribution received topside > [\*\*\*] of the measured seafloor particle distribution) and the rejection threshold allow for collection of nodules within the defined test area for the nodule collector. The nodule collection method shall aim not to show significant deviation in pick up efficiency based on nodule size that could result in deviating particle size distribution.

**(5) Mandatory ISA Regulatory Requirements**

- (a) The Pilot Mining Test shall meet the specific recommendations of the International Seabed Authority, as elaborated in ISBA/19/LTC/8, “Recommendations for the guidance of contractors for the assessment of the possible environmental impacts arising from exploration for marine minerals in the Area” dated 1 March 2013 and available at [https://ran-s3.s3.amazonaws.com/isa.org.jm/s3fs-public/files/documents/isba-19ltc-8\\_0.pdf](https://ran-s3.s3.amazonaws.com/isa.org.jm/s3fs-public/files/documents/isba-19ltc-8_0.pdf) (the “ISA Recommendations”). Appendix A provides a breakdown and scope demarcation between Allseas and DeepGreen to implement the specific recommendations of the ISA for exploration activities.
- (b) The Pilot Mining test shall include “Testing of all Components”. As per paragraph 23 of the ISA Recommendations that requires that “all components of the mining system will be assembled and the entire process of test mining, lifting minerals to the ocean surface and discharge of tailings will be executed. This test phase shall be monitored intensively”
- (c) During the conduct of the Pilot Mining test Allseas shall ensure all required data will be collected related to 1) the system performance and 2) monitoring of the “near field” environmental impact. Monitoring will be limited to sensors, instrumentation and sampling techniques that can be performed and operated from either the mining system, the ROV or the supporting surface vessel being either Lorelay or Fortitude, this scope excludes the use of AUVs.
- (d) During the conduct of the Pilot Mining test DeepGreen will monitor the environmental impact of the “far field” and all other monitoring requirements not covered under c). For this purpose a survey vessel outfitted with AUV capabilities is foreseen to be present in the field during operations.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- (e) Allseas to provide the facilities for ISA observers and scientists to witness the pilot mining test and perform sampling and recording.
- (f) DeepGreen to contract the required scientists, marine biologists and research institutes and equipment to perform the required sampling and recording during the test and processing of the data upon completion of the test.
- (g) DeepGreen will undertake required environmental baseline data studies and pre and post Pilot Mining Test surveys and data collection.
- (h) DeepGreen will perform and submit the environmental impact assessments (EIA) to the ISA as part of the environmental management plan
- (i) Specific clarification on sub scopes are further defined in the demarcation table of Appendix A;
  - (i) **Required Activity Information - Paragraph 27** Requires a list of information that must be provided to the Secretarial General in connection with a mining test pilot. Allseas will be required to provide the information necessary under Paragraph 27, and specified in the demarcation table, to DeepGreen to provide to the ISA on a timely basis. Such information includes, for the avoidance of doubt, methods of mining, processing and transporting, including duration of test, and test plans.
  - (ii) **Specifying Events that could cause Suspension or Modification - Paragraph 28** Requires the identification of any events that could cause suspension owing to serious environmental harm if the events can not be mitigated. Allseas will perform an assessment of such events such that mitigation plans can be designed or suspension plans triggered.
  - (iii) **Mitigation – Sea Bed Activities. In ISBA/19/LTC/8 Annex I Explanatory Commentary, Paragraph 4.** Allseas shall develop methods that minimize impacts in space and time from direct disturbance of the sea floor and from material carried in, and deposited from, the operational plume.
  - (iv) **Mitigation – Surface Processing Activities. In Annex I, Paragraph 5.** Allseas shall mitigate any adverse impacts from storing and managing nodules at the surface so as not to alter sea surface ecosystems, allow the degassing of climate-active gases and the release of harmful metals and compounds from the mining process. Any chemicals added to separate the mineral phases from the waste material and water need to be assessed for potential harmful effects.
  - (v) **Mitigation – Discharge. In Annex I, Paragraph 5.** The discharge plume needs to be controlled to limit harmful environmental effects. Discharge at the sea surface may introduce particle-laden water to oligotrophic particle-sparse waters, limiting light penetration, changing sea temperature and introducing high levels of nutrients to nutrient-poor regions with significant impacts on the species composition of primary producers and the pelagic ecosystem. Discharge within the deeper waters of the oxygen-minimum zone or zones may trigger the release of harmful bioactive metals, while discharge at even greater depths may introduce particle-rich water to sparse, but generally diverse, pelagic communities. Discharge at the seabed would add to the operational plume with warmer water and finer particles. Base case for discharge will be mid column, which is considered acceptable to avoid the issues with surface and near sea-bed discharge. Level to be defined

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- (vi) **Cooperation on Submission of Mining Test Plan to the ISA.** Annex 1, paragraph 52 requires a submission for the plan of testing. Allseas shall cooperate with DeepGreen in all respects to comply with this requirement, including the details for monitoring the environment. The plan is to be submitted at least one year before testing begins and at least three months in advance of the annual session of the Authority.

## **(6) MANDATORY PROCESS REQUIREMENTS**

---

- (a) **Review.** Design documentation will be submitted for review to demonstrate that the pilot mining system adheres to the requirements of DeepGreen and ISA. Where milestones are agreed under the project programme, gate reviews will be performed.
- (b) **Access to pilot site.** DeepGreen and NORI shall have access to the pilot test at all stages of the test.
- (c) **Training requirements.** Allseas to provide training opportunities for DeepGreen, and ISA selected trainees as required under NORI's Exploration Contract conditions. The numbers, locations, logistics, and re-imburement of costs to be further discussed between the Parties.
- (d) **Safety.** Pilot test to be completed safely and with the minimum practical environmental impact.
- (e) **Pilot Test Mining Plan.** Prior to operations, and in accordance with the permitting process and notices required for the Pilot Test Mining project, Allseas shall submit a Pilot Test Mining Plan document for review and approval by DeepGreen.
- (f) **PMTS project data.** Allseas agrees to transfer and convey to DeepGreen sufficient project data at the PMTS systems level, and in more detail at the PMTS sub-system level if required, to demonstrate that the PMTS complies with DeepGreen's production requirements and the ISA requirements.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

## (7) Functional performance

The pilot mining test shall meet the following function performance requirements:

- a. **Traverse Speed.** A traversing speed [\*\*\*] at a constant steady state shall be achievable and details of the route to be followed by the PMTS across the mining site during all collecting operations shall be identified in the agreed Pilot Test Mining project Plan.
- b. **Stability and Manoeuvrability.** No significant sinkage of equipment at any time into the seabed of greater than [\*\*\*] displacement shall be acceptable, based on soil shear strength of [\*\*\*], and justification for achieving this shall be provided. Manoeuvrability over terrain of slope up to [\*\*\*] degrees to horizontal with capability of traversing small seabed obstructions and step features of up to [\*\*\*] size shall be achievable. It shall at all times be possible to safely and smoothly control the trajectory of the PMTS in real-time. It shall be able to stop all progress of the PMTS at any time with a shut-down to safe condition within reasonable duration.
- c. **Collection efficiency.** Collection efficiency is defined as the ratio of nodules recovered to deck compared to the nodules covered by PMTS equipment at seabed. Allseas shall make reasonable endeavours to ensure that the collection efficiency is as high as possible, indicated to be a minimum at [\*\*\*] or greater.
- d. **Reliability.** Allseas shall ensure that equipment reliability is demonstrably such that pilot mining operations can continue as long as reasonably possible between break-downs. Measures of reliability such as Mean Time Between Failure (MTBF) shall be computed and demonstrated to be as high as reasonably possible such that they shall be consistent with the design, build and operations of an economically optimal first production system and should use reasonable efforts to show that the full scale mining system would meet the productivity estimates outlined in the PEA.
- e. **Collected Entrained Water Content.** The entrained water content of the collected nodules during the Pilot Test Mining project is an important measurement for the design of the shipping and onshore processing facilities and shall be carefully recorded. Reasonable endeavours shall be made to minimise the water entrained during the collection process. It is expected to drain the water content by gravity in the vessel nodule holds to 20% prior to offloading. No active systems are required to drain the entrained water from the nodules during the PMTS.
- f. **Emergency disconnect.** To safely manage the risks of system failures and extreme weather conditions during PMTS operations, the design requirements for controlled disconnection and safe cessation of operations shall be defined based on HAZID and system design FMECA.
- g. **No debris.** No PMTS equipment, sub-components thereof or general debris shall be left at site following completion of the Pilot Test Mining project, unless specific permission is obtained from DeepGreen.
- h. **Design aesthetics.** The PMTP shall be visually attractive, clean and pleasing to the eye as consistent with DeepGreen's corporate branding.
- i. **Final Report.** A comprehensive final report shall be issued by Allseas to DeepGreen within 90 days of the completion of the fieldwork portion of the Pilot Test Mining project.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

## ANNEX 2 – SUCCESS FEE

### 1 FULLY INCLUSIVE RATES, SUMS AND PERCENTAGES

- 1.1 Success Fee. DeepGreen shall pay US\$60,000,000.00 upon Successful Completion and commissioning of the PMTS. Such payment shall be in two tranches of equal value comprising (1) 10,000,000 shares in DeepGreen Metals which shall be deemed to be worth US\$30,000,000 (upon execution by Allseas of DeepGreen's standard Subscription Agreement to acquire such shares), and (2) cash in the total amount of US\$30,000,000, in each case inclusive of VAT and any other applicable taxes, fees and/or charges, to be paid within 30 days of receipt of Allseas invoice.
- 1.2 In constructing the Success Fee specified in this Annex 2, Allseas confirms that this is fixed and firm for the period of this Agreement, and provision has been made and is fully inclusive of all Allseas's costs and charges including but not limited to:
- i) Personnel, labour, management, administration and crew changing
  - ii) Products and raw materials
  - iii) Permits, licenses and authorisations required for the work and PMTS rendered
  - iv) Direct wages, salaries, bonuses, benefits, premiums, overtime allowance, paid holiday, redundancy, pensions, nightshift premium and sick pay
  - v) Employers' Liability Insurance
  - vi) National insurance and PAYE deductions
  - vii) Travel time and expenses, accommodation, offices, facilities, and communication
  - viii) Plant, tools, hand tools, equipment, materials, consumables, fuel and lubricants
  - ix) Obtaining and training of personnel
  - x) Offshore survival and training

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- xi) Medical examinations, to include medical as may be required
- xii) Maintenance and replacement of protective clothing and other personal safety equipment
- xiii) Onshore travel and accommodation;
- xiv) Mobilisation and demobilisation of personnel, equipment and materials for onshore preparation work and work performed on DeepGreen nominated vessels offshore or in quay area
- xv) Fabrication, installation, procedure preparation, engineering, documentation inclusive of as-built submissions, design and procurement
- xvi) Data processing and printing / photocopying services
- xvii) Quality assurance, safety requirements, reporting, survey, inspection and testing;
- xviii) Insurance requirements and coverage;
- xix) Taxes and contributions imposed by law, trade union contracts or regulations with respect to or measured by Allseas's payroll in accordance with the terms and conditions of this Agreement
- xx) Corporate support, overheads, financing costs and profits
- xxi) Transportation costs up to the place of delivery
- xxii) Any and all other costs not recoverable by Allseas elsewhere
- xxiii) Any other costs reasonably related to the performance of Allseas's obligations hereunder unless specifically allocated to DeepGreen

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

**ANNEX 3 – PROGRAMME**

1 Allseas shall commence the work upon Agreement award and shall carry out the PMTS in a continuous and expeditious manner to meet the key dates herein

1.1 **Schedule of Key Dates**

[\*\*\*]

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

## ANNEX 4 – SPECIFICATIONS

The PMTS shall be certified in accordance with Lloyds Register CLAME for the lifting appliances and DNV Rules for Classification – Underwater technology, for the mining system. Modification to either Lorelay or Fortitude will be in accordance with the vessel's classification under Lloyds register rules for ships and Valetta flag-state requirements. Legislation of applicable laws and conventions as listed in table 1 for Deep Sea Mining operations and vessel operations shall be adhered to.

With design codes for explorations and exploitation for deep-sea mining operations currently under development. The design of the PMTS will adhere to industry standards design codes applied in the oil & gas industry as listed in table 2, complemented with the recommendations as listed in table 3.

Table 1 Rules and Regulations

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

## ANNEX 5 – PROCEDURES

### 1.0 HEALTH, SAFETY AND ENVIRONMENT PROCEDURES

**1.1 Compliance.** Allseas shall comply with all applicable Health Safety and Environment legislation and codes of practice and applicable regulations (including any applicable code or regulation provided by the ISA), when operating in the ISA Area. Allseas shall follow its own Health Safety and Environment policy and Health Safety and Environment management system in relation to the development of the PMTS.

### 2.0 STEERING COMMITTEE

**2.1 Representatives.** Each Party may nominate one or more representative to a steering committee which shall meet in person on a monthly basis to ensure proper communication, cooperation and reporting between the Parties.

**2.2 Meetings:** Monthly meetings to be held as required by DeepGreen, time to be confirmed, via conference call or at Allseas's / DeepGreen's premises as required. Meeting agenda will be proposed by the project manager and approved by the Steering Committee Chairman who will be appointed by DeepGreen and circulated a week ahead of each monthly. Meetings will be minuted with minutes distributed to DeepGreen and Allseas management.

**2.3 Monthly Report:** Allseas shall prepare and deliver a monthly report to DeepGreen to provide a formal assessment on progress and major achievements for the reporting period. It should include key exceptions, expectations and solutions where appropriate. It shall also detail all project highlights which are forecast during the next reporting period. In addition the report shall include safety incidents & environmental report & statistics for the period in form normally required for statutory reporting. The form of monthly reporting will be agreed between Allseas and DeepGreen Steering Committee representatives and will be delivered one week before scheduled Steering Committee Meetings.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

**2.4 STEERING COMMITTEE PURPOSE:** The purpose of the Steering Committee is provide a forum for effective communication between Allseas and DeepGreen an to provide guidance to the Project Team to ensure the goal of successful deployment of a compliant PMTS. Specifically, the Steering Committee provides the forum for:

- (i) The project manager to advise on progress against plan;
- (ii) The project manager to advise of any required changes to the agreed program, schedule or specification;
- (iii) The project manager to advise the technical solutions being employed and the reasoning for such;
- (iv) The project manager to advise of project risks and the mitigation being put in place to manage these risks;
- (v) The Steering Committee to provide the project manager regarding their level of comfort with the technical solutions being envisaged by project team and provide guidance regarding their acceptability and any requirement to evaluate potential alternatives;
- (vi) The Steering Committee to provide the project manager guidance regarding the level of project risk and guidance regarding acceptability of such and any additional mitigation required; and
- (vii) The Steering Committee to provide the project manager with a sounding board to explore potential solutions and project delivery options.

### **3.0 DEEPGREEN OWNER'S TEAM**

**3.1 Representatives.** Allseas agree to accommodate no less than two DeepGreen full time engineer representatives at its working premises. The representatives shall integrate with the Allseas project team and shall be responsible for ensuring effective and comprehensive cooperation and collaboration between the Parties.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

**THIRD AMENDMENT TO PILOT MINING TEST AGREEMENT AND FIRST AMENDMENT TO STRATEGIC ALLIANCE AGREEMENT**

This Third Amendment to Pilot Mining Test Agreement and ("Third Amendment") is effective as of March 4, 2021, and is entered into by and among DeepGreen Engineering Pte Ltd ("DeepGreen"), DeepGreen Metals Inc. ("DGM") and Allseas Group S.A. ("Allseas") (each is referred to as a "Party" and together as the "Parties").

**RECITALS**

- A. Allseas and DeepGreen entered into that certain Pilot Mining Test Agreement dated July 8, 2019 (as amended by Change Order Number 1, and again by Amendment Number 2 dated February 20, 2020 and as otherwise amended) (collectively, the "Agreement").
- B. Allseas, and DGM entered into that certain Strategic Alliance Agreement, dated March 29, 2019 ("SAA").
- C. DGM is entering into a Business Combination Agreement on or about the date hereof with Sustainable Opportunities Acquisition Corp. and certain other parties thereto (the "BCA").
- D. DGM is becoming a party to the Agreement only to the extent set forth in this Third Amendment.
- E. The Parties wish to amend the Agreement and SAA as set forth in this Third Amendment.

**NOW, THEREFORE**, in consideration of the premises set forth above and other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties hereto agree as follows:

1. Definitions.

Capitalized terms used and not defined in this Third Amendment have the respective meanings assigned to them in the Agreement.

2. Amendments. Effective as of the Closing of the Transactions (as such terms are defined in the BCA), the Agreement and SAA are hereby amended as follows:

2.1. Principles. Clause 1.2(f)(2) of the SAA is deleted in its entirety and replaced with the following:

- 2.1.1. if DGM or any of its applicable Affiliates need a new nodule collection and shipping system and can finance it, DGM shall, and shall cause any of its applicable Affiliates to, offer Allseas a new Nodule Collection and Shipping Agreement. If Allseas refuses, DeepGreen and its applicable Affiliates will be free to offer it to another offshore service provider (**Allseas' Right of Refusal to Follow-on Nodule Collection and Shipping Systems**).

2.2. Governing Law. Clause 5 of the SAA is deleted in its entirety and replaced with the following:

"This Strategic Alliance Agreement will be governed by the laws of the Province of British Columbia and the federal laws of Canada applicable therein. The invalidity or unenforceability of any provision of the Agreement will not affect the validity or enforceability of any other provision. The Parties agree that any dispute arising out of or in connection with this Strategic Alliance Agreement shall be resolved by arbitration in accordance with the arbitration rules of the International Chamber of Commerce. The number of arbitrators shall be three. The seat and legal place of the arbitration shall be London."

2.3. Permits, Licences and Compliance with Law

2.3.1. Clause 7.5 of the Agreement is deleted in its entirety and replaced with the following:

"Allseas will save, indemnify and hold harmless DeepGreen Group from and against any Claims by reason of a failure of Allseas, its Affiliates or their respective Subcontractors to comply fully with its obligations under this clause 7. DeepGreen will save, indemnify and hold harmless Allseas Group from and against any Claims by reason of negligence, willful misconduct or breach of law (including, without limitation, breach of any contract with the International Seabed Authority) by DeepGreen or its Affiliates".

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

---

2.4. Payment; Credit.

- 2.4.1. Clause 12.1 of the Agreement is deleted in its entirety and replaced with the following: “The amounts payable by DeepGreen to Allseas and equity compensation to be issued pursuant to this Agreement are set forth on Annex 2.”
- 2.4.2. Clause 12.2 of the Agreement is deleted in its entirety.
- 2.4.3. In connection with the Credit Amount provided for pursuant to Section 2.4.4 below, Allseas agrees that the aggregate value of all the shares underlying the Warrant (as defined below) as of 6:00 PM Eastern Time on June 1, 2022 for the purposes of this Section 12 (the “Warrant Credit Value”), shall be determined as follows:
- (i) if the shares underlying the Warrant (on an as-exercised basis) are traded on a national stock exchange, the aggregate value of such shares shall be equal to (x) the total number of shares underlying the Warrant multiplied by (y) the price per one share of the class and series of shares into which the Warrant is then exercisable (assuming for such purposes only that the Warrant is exercisable in full at such time) at the end of the trading day on June 1, 2022 as published by Bloomberg L.P. or any successor thereof (and if not available, by another internationally-recognized market data agency), and (ii) if the shares underlying the Warrant (on an as-exercised basis) are then not publicly traded, the aggregate value of such shares shall be equal to (x) the total number of shares underlying the Warrant multiplied by (y) the price per one share of the class and series of shares into which the Warrant is then exercisable (assuming for such purposes only that the Warrant is exercisable in full at such time) as determined by an independent valuer appointed by Allseas.
- 2.4.4. Allseas agrees that on the Vesting Date (as defined in the Warrant), automatically, and without any further action by Allseas, DGM, DeepGreen or any other person, DeepGreen and DGM shall be, and hereby are, entitled to the following aggregate amount from Allseas (the “Credit Amount”): (i) if the Warrant Credit Value is One Hundred Fifty Million U.S. Dollars (\$150,000,000) or less, the Credit Amount shall be Zero Dollars (\$0.00), and (ii) if the Warrant Credit Value shall be more than One Hundred Fifty Million U.S. Dollars (\$150,000,000), the Credit Amount shall be equal to the excess of the Warrant Credit Value over One Hundred Fifty Million U.S. Dollars (\$150,000,000). For illustration purposes only, (i) if the Warrant Credit Value shall be One Hundred Million U.S. Dollars (\$100,000,000) the Credit Amount shall be Zero Dollars (\$0.00), and ( ) if the Warrant Credit Value shall be Three Hundred Million U.S. Dollars (\$300,000,000) the Credit Amount shall be One Hundred Fifty Million U.S. Dollars (\$150,000,000).
- 2.4.5. The Parties agree that Allseas shall have no obligation to pay the Credit Amount in cash unless it elects to do so, in whole or in part. The Parties further agree that the Credit Amount shall be, and is hereby made, available to DeepGreen and DGM (and any of their subsidiaries, direct or indirect) to offset (and by so doing reduce) the amount of any obligation to make any payment to Allseas or any of its subsidiaries, for any and all costs, both operating and capital, incurred after the date upon which Allseas commences extraction work under the Nodule Collection and Shipping Contract (or similar agreement) with DeepGreen or its Affiliates (“Project Zero Commencement Date”) and until the first year anniversary of production after Project Zero Commencement Date (“Allowed Offset Costs”).
- 2.4.6. Allseas agrees that all cost and expenses related to any Allowed Offset Costs shall be deemed timely and fully paid upon notice by DGM or DeepGreen that such payment is made by a reduction of an amount equal thereto from the Credit Amount. For illustration purposes only, if the Credit Amount shall be One Hundred Million U.S. Dollars (\$100,000,000) and Allowed Offset Costs are in an amount of Twenty Million U.S. Dollars (\$20,000,000) from Allseas, then when the payment for such Allowed Offset Costs becomes due, a notice of credit by DeepGreen to Allseas in an amount of Twenty Million U.S. Dollars (\$20,000,000) shall be deemed to be full payment thereof and the Credit Amount shall thereupon be correspondently reduced and set at Eighty Million U.S. Dollars (\$80,000,000).

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

2.4.7. Allseas shall, and cause any of its applicable subsidiaries to, deliver to DGM or DeepGreen (and any of their subsidiaries, direct or indirect), as applicable, together with any invoice for such product or services, a notice of updated Credit Amount, listing the Allowed Offset Costs the amount credited against the Credit Amount, and the then updated Credit Amount. Allseas, on behalf of itself and its subsidiaries, agrees that use of the Credit Amount as form of payment for Allowed Offset Costs is an agreed upon form of payment by the Parties, and that Allseas will not, and cause its subsidiaries not to, charge DeepGreen, DGM (or any of their subsidiaries, direct or indirect) any amount in addition thereto.

2.5. Annex 2 Amendment. Clause 1.1 of Annex 2 is deleted in its entirety and replaced with the following:

“1.1 (a) DeepGreen will pay Allseas Ten Million U.S. Dollars (USD \$10,000,000) on June 30, 2021, and thereupon Allseas shall provide DeepGreen with a report with respect to the riser contract placed and a minimum of [\*\*\*] progress on harvester buoyancy/lars/umbilical/hydraulic&electrical pack/jumper. In addition, DeepGreen will pay Allseas Ten Million U.S. Dollars (USD \$10,000,000) on the later of (i) January 1, 2022 and (ii) confirmation of successful harvest north sea drive test. In addition, DeepGreen will pay Allseas Ten Million U.S. Dollars (USD \$10,000,000) upon Successful Completion. The foregoing payments will be due against proper invoices and payable within 30 days of such invoice. For the avoidance of doubt, all payments set forth above are inclusive of VAT and any other applicable taxes, fees and/or charges.”

“1.1 (b) On the date of Closing of the Transactions under the BCA (or prior thereto in the discretion of DGM), DGM shall issue to Allseas a Warrant in the form attached hereto as Attachment 1 (the “Warrant”). The Warrant shall be for such number of shares, with such exercise price, term or exercise and other terms as set forth therein.”

2.6. Successful Completion. Clause 15 is deleted in its entirety and replaced with the following:

“15.1 Allseas shall deliver the PMTS in accordance with the dates and milestones set out in this Agreement, including as may be specified in Annex 3: Programme. Successful Completion shall occur after the PMTS meets the requirements of Annex 6 attached to the Third Amendment (“Success Criteria”).

15.2 Where Allseas considers that the PMTS meets the Success Criteria, Allseas must notify DeepGreen and request the issue of a Completion Certificate.

15.3 DeepGreen must independently evaluate such results to ensure that the Success Criteria have been met, and upon such verification (which shall not be unreasonably withheld, delayed or conditioned and shall be done in good faith) (a) issue to Allseas a Completion Certificate in respect of the whole or the relevant part of the PMTS, which constitutes “Success Completion”; or (b) notify Allseas of any Defects in all or any relevant part of the PMTS. The verification process above shall be completed in 24 hours, provided Allseas made available to DeepGreen sufficient information (in a form agreed in good faith by the parties) to make its determination.

15.4 Any notice issued under clause 15.3(b) will include details of the specific nature of each Defect and will specify the part or parts of this Agreement containing the obligations which Allseas has failed to meet. Allseas must on receipt of any such notice use commercially reasonable endeavors to promptly correct all Defects. When it has completed such correction, it must notify DeepGreen in accordance with clause 15.1 and the Parties will repeat the above process until Successful Completion.”

2.7. Clause 16.1 of the Agreement is deleted in its entirety and replaced with the following:

"Allseas must provide to DeepGreen all relevant data and information with respect to the design, construction, performance and likely environmental impacts of the PMTS, including environmental data, performance results, and any other information required by the ISA and reasonably requested by DeepGreen to understand the performance parameters of the PMTS. Allseas shall provide reasonable assurances with respect to the accuracy, sufficiency and completeness of such data provided. In providing such data and information to the ISA, DeepGreen shall, and shall cause its applicable Affiliates to (i) ensure that any portions of such data or information marked confidential by Allseas are designated as confidential when submitted or transferred to the ISA and (ii) consult with the ISA regarding the designation of such data or information as confidential and the establishment of appropriate safeguards for its use."

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

2.8. Clause 16 of the Agreement is amended by addition of a new clause 16.3 worded as follows:

"The Parties' rights and obligations under this Clause 16 are subject to Clause 21 of this Agreement."

2.9. Reference to Shares.

2.9.1. Clause 17.3(b) of the Agreement is deleted in its entirety and replaced with the following: "(b) any additional costs reasonably incurred by DeepGreen as a direct result of Allseas' default or other events giving rise to termination are recoverable from Allseas but always limited to deductions from the cash portion of the Success Fee or any other payment or fee due in accordance with this Agreement, including all payments set forth in Annex 2."

2.9.2. Clause 17.6 of the Agreement is deleted in its entirety and replaced with the following: "Intentionally Omitted".

2.9.3. The Parties agree that notwithstanding anything to the contrary in the Agreement, the SAA or otherwise, (i) other than the Warrant, Allseas will not be, and Allseas is not entitled to, any shares, options or other forms of ownership interests or any right convertible into, exchange for or that otherwise that may result in any obligation of DGM or DeepGreen or any of their affiliates to issue, grant or otherwise allocate to Allseas, any shares, options or other forms of ownership interests in connection with the Agreement, the SAA or otherwise, and (ii) any call right, redemption right, right of first refusal or other similar right in the SAA or the Agreement with respect to shares of DeepGreen or DGM is hereby cancelled and terminated in its entirety in consideration for the mutual rights and benefits of the parties under this Third Amendment.

2.10. Ownership, liens. Clause 20 of the Agreement deleted in its entirety and replaced with the following:

"Title to any deliverables or outputs in or arising from the performance or utilization of the PMTS (including any data, drawings, reports and technical documents) will vest in and be held by Allseas, provided however that DeepGreen personnel shall be entitled to witness, and examine all aspects of the development of the PMTS. The risk of loss or damage to the PMTS remains with Allseas and Allseas remains responsible for the PMTS in accordance with the terms of this Agreement.

For the avoidance of doubt, subject to clauses 16, 21 and 25 of this Agreement, DeepGreen shall be entitled to submit all data, drawings, reports and other technical documents to the ISA without restriction and under any terms as may be required by the ISA to meet applicable regulatory requirements concerning the pilot mining test project."

2.11. Intellectual property.

2.11.1. Clause 21.2 of the Agreement is deleted in its entirety and replaced with the following:

"Allseas shall be entitled to exclusive ownership of any new Intellectual Property developed in connection with the design, engineering, development and operation of the PMTS. DeepGreen and DGM acknowledge that, upon Successful Completion, it is Allseas' intention to apply for a patent over the PMTS."

2.11.2. Clause 21 is amended by addition of a new Clause 21.4 worded as follows:

"If DeepGreen or its applicable Affiliates are required to give undertakings to third parties regarding technology transfer under Article 5 of Annex III of the United Nations Convention on the Law of the Sea, DeepGreen shall, and shall cause its applicable Affiliates to, ensure that any such undertakings identify the extent to which the technology includes or comprises Intellectual Property owned by Allseas. In the event that DeepGreen or its Affiliates receive a request for technology transfer in accordance with any such undertaking, DeepGreen shall promptly consult and cooperate with Allseas to ensure that any transfer of technology that includes or comprises Intellectual Property owned by Allseas is made on reasonable commercial terms and conditions."

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

2.12. Audit and Storage of Documents. Clause 23.1 of the Agreement is deleted in its entirety and replaced with the following:

"During the course of the contract and for a period ending six (6) years thereafter, DeepGreen or its duly authorized representative (including a well-reputed third party auditor appointed by DeepGreen at its own cost) has the right to audit at all reasonable times and, upon request, take copies of all of Allseas's financial records (including financial data stored on computers) books, personnel records, financial accounts, correspondence, financial memoranda, receipts, vouchers and other financial papers relating to any provision of this Agreement under which Allseas has obligations the performance of which is capable of being verified by audit."

2.13. Assignment. Clause 24.3 of the Agreement is deleted in its entirety and replaced with the following:

" DeepGreen may, with the prior consent of Allseas, which shall not be unreasonably withheld, assign or novate to any other party the whole or any part of this Agreement. Allseas may with the prior consent of DeepGreen, which shall not be unreasonably withheld, assign or novate to any other party the whole or any part of this Agreement."

2.14. Confidentiality. Clause 25 of the Agreement is amended by addition of a new clause 25.6 worded as follows:

"The Parties' rights and obligations under clause 25.5 are subject to clause 16 and clause 21 of this Agreement."

2.15. Indemnities. Clause 26.6 of the Agreement is deleted in its entirety and replaced with the following:

"Each Party expressly agrees that the indemnities set out in this clause 26 do not extend to criminal prosecution, Willful Misconduct, fine or penalty arising from, relating to or in connection with the performance or non-performance of this Agreement."

2.16. Exclusion of consequential loss. Clause 27.2(a) of the Agreement is deleted in its entirety and replaced with the following:

"indemnities given under clause 26."

2.17. Limitation of Liability. Clause 28 of the Agreement is deleted in its entirety and replaced with the following:

"28.1 Except for indemnity obligations and the provisions of clause 17.6, Allseas' obligations and liabilities under this Agreement or arising out of or related to the performance of the obligations under this Agreement, whether in contract, tort or otherwise at law, shall always be limited to forfeiture of the value of the consideration paid and to be paid in cash by DeepGreen under Annex 2 below.

28.2 Except for indemnity obligations, DeepGreen's obligations and liabilities under this Agreement or arising out of or related to the performance of the obligations under this Agreement, whether in contract, tort or otherwise at law, shall always be limited to forfeiture of the value of the consideration paid and to be paid by DeepGreen in cash under Annex 2 below."

2.18. Governing law and language:

2.18.1. Clause 34.2(a) of the Agreement is deleted in its entirety and replaced with the following:

"the seat and venue of the arbitration shall be London"

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

2.18.2. Clause 34 of the Agreement is amended by addition of new clauses 34.3 and 34.4 worded as follows:

"34.3 DGM acknowledges that, by virtue of the Third Amendment, DGM became bound by certain clauses of this Agreement. DGM agrees to resolve any disputes, differences or claims arising out of the provisions of this Agreement that bind DGM by arbitration in accordance with this clause 34.

34.4 In the event both DGM and DeepGreen are named as parties in an arbitration under this Agreement, DGM and DeepGreen shall form one side, and constituted a single Party, for the purposes of jointly appointing one arbitrator and taking other steps necessary to constitute the arbitral tribunal under clause 34.2 above."

2.19. Force Majeure: Clause 33.3(e) of the Agreement is deleted in its entirety and replaced with the following:

"changes to applicable legislation or ISA Regulations preventing development and delivery of the PMTS in entirety."

2.20. Waiver. New Clause 35.10 is added to the Agreement as follows: "Waiver. The failure of a Party to enforce any term or condition of this Agreement may not be construed as a waiver by such Party of such term or condition, nor will a waiver of any breach of a term or condition of this Agreement on any one occasion constitute a waiver of any subsequent breach of the same or similar term or condition. All remedies are cumulative unless expressly stated otherwise, and exercise of any right or remedy shall not prejudice any other right or remedy."

3. Observer Rights. Effective as of the Closing of the Transactions pursuant to the BCA, Allseas shall be entitled to appoint one observer to the board of directors of DGM's parent company as per the terms of the Observer Letter attached hereto as Attachment 2. As of the Closing of the Transaction, Allseas shall cease to have any right to appoint any director to the board of directors of DGM, its parent company or any of their respective affiliates, and shall cause any such director, to the extent then serving to resign as of the Closing.

4. Termination. Notwithstanding anything to the contrary in the Agreement or the SAA or otherwise, effective as of the Closing of the Transactions pursuant to the BCA, Allseas may not terminate the Agreement or the SAA before DeepGreen or its applicable Affiliate receives its required Exploitation Contract with the ISA except pursuant to clause 17.1(b) of the Agreement. Neither the SAA nor the Agreement (except as permitted in clause 17.1(b)), may be terminated by Allseas for any reason before DeepGreen or its applicable Affiliate receives its required Exploitation Contract with the ISA, and Allseas may not separate from or exit its arrangements with DeepGreen as described in such documents until such time (except for termination of the Agreement as permitted in clause 17.1(b)) without DeepGreen's prior written consent to be granted or withheld in its sole discretion. In addition, if the Agreement is terminated (for any reason) after DeepGreen or its applicable Affiliate receives its required Exploitation Contract with the ISA, then Allseas will take all such actions and provide all such information and assistance as reasonably requested by DeepGreen from time to time to enable DeepGreen or an affiliate thereof to engage a third party to (or internally) design, develop and build a new pilot mining test system or a new production-ready mining system for ISA nodule exploitation rights (the "Transition Services"). DeepGreen will pay for such Transition Services based on then prevailing rates of Allseas for similar services as charged to its other customers, and DeepGreen shall be entitled to make such payment by applying credit against the Credit Amount to the extent still available. In the event that DeepGreen or its applicable Affiliate is unable to secure an Exploitation Contract with the ISA within five (5) years of the Successful Completion, then this Section 4 shall expire, and all termination rights of Allseas shall be restored.

5. Entire Agreement. This Third Amendment shall be read together with the Agreement as a single agreement, and together constitute the entire agreement between the Parties with respect to the subject matter hereof and thereof. Each Party agrees to execute, acknowledge and deliver such further instructions, and to do all such other acts, as may be necessary or appropriate in order to carry out the purposes and intent of this Third Amendment. This Third Amendment may be executed in multiple originals, each of which shall be considered an original for all purposes and, collectively, shall be considered to constitute this Third Amendment. Signatures transmitted by facsimile or in a Portable Document Format (pdf) may be considered an original for all purposes, including, without limitation, the execution of this Third Amendment and enforcement of this Third Amendment. Where applicable, this Third Amendment shall be deemed to amend the SAA.

## ANNEX 4 – SPECIFICATIONS

With design codes for explorations and exploitation for deep-sea mining operations currently under development, the design of the PMTS will, where reasonably practical for the purpose of the PMT, be in accordance to industry standards design codes applied in the oil & gas industry as listed in table 2, complemented with the recommendations as listed in table 3.

Modification to Hidden Gem will be in accordance with the vessel's classification under Lloyds register rules for ships and Valetta flag-state requirements. Legislation of applicable laws and conventions as listed in table 1 for Deep Sea Mining operations and vessel operations shall be adhered to.

Table 1 Rules and Regulations

<b>Regulations</b>	<b>By</b>	<b>Date</b>
United Nations Convention on the Law of the Sea	United Nations	1994
Convention on the Prevention of Marine Pollution by Dumping of Wastes and Other Matter	International maritime organization	1972
International Convention for the Prevention of Pollution from Ships (MARPOL)	International maritime organization	1978

## ANNEX 6--SUCCESS CRITERIA

The following shall be achieved in order to meet the Success Criteria:

- Production run 1 (PR.1) – [\*\*\*] nominal production rate
- Production run 2 (PR.2) – [\*\*\*] nominal production rate

Nominal production rate defined as [\*\*\*]/hour of wet nodules

The PR.1 & PR.2 shall be considered to be successful if, in addition to the rates set forth above, there shall be during the tests:

- Continuous operations during PR.1 & PR.2, no start/stops due to mechanical breakdown
- Average continuous production speed of the collector between [\*\*\*] and [\*\*\*]
- Collected nodules for PR.1 & PR.2 shall be [\*\*\*] and [\*\*\*], respectively.

All tests prior to PR.1 & PR.2 shall be deemed to suffice to collect the required data for environmental impact assessment, technical confirmation and scalability as listed under ANNEX I. Such prior tests will be executed but will not be part of the criteria for successful completion PMTA.

Success Criteria for Successful Completion of the PMTA shall be: successful completion of PR.1 & PR.2, and a total nodule collection of >[\*\*\*].

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

**INVESTMENT AND PARTICIPATION AGREEMENT****DEEPGREEN****RESOURCES**

**THIS AGREEMENT** made as of the 15<sup>th</sup> day of March, 2017 (the Effective Date) between:

Maersk Supply Service NS (Company no. 31424377), a corporation incorporated under the laws of Denmark (and together with any Permitted Transferee, **Maersk**)

- and -

Maersk Supply Service Subsea UK Limited (Company no. 09843677), a limited liability company incorporated under the laws of England and Wales (and together with any Permitted Transferee, **Maersk UK**)

- and -

DeepGreen Resources Inc. (Company no. BC0901047), a corporation incorporated under the laws of British Columbia (the **Corporation**),

(each of Maersk, Maersk UK and the Corporation may be referred to herein individually as a **Party** and collectively as the **Parties**).

**WHEREAS** the Corporation and Maersk each acknowledge the importance to the other Party of the collaboration of the Corporation and Maersk in the Clarion Clipperton Zone (the CCZ);

**AND WHEREAS** Maersk has agreed to complete four Marine Cruises, being Cruise 3, Cruise 4, Cruise 5 and Cruise 6, and Maersk UK has agreed to complete the fifth Marine Cruise, being Cruise 7, in accordance with each BIMCO;

**AND WHEREAS** the Corporation has agreed that Maersk and Maersk UK, respectively, will be entitled to receive a number of Common Shares upon Completion of a Marine Cruise based on the aggregate expenditures made by Maersk or Maersk UK, as applicable, for such cruise;

**AND WHEREAS** the Corporation has agreed that Maersk will have a right to match both technically and financially proposals, tenders or offers from service providers other than Maersk for other marine cruises or Marine Services;

**AND WHEREAS** the Corporation has agreed that Maersk will have a pro-rata participation right in respect of certain equity financings;

**AND WHEREAS** the Corporation has agreed that Maersk will be entitled to nominate a board observer or board representative in certain circumstances;

**NOW THEREFORE THIS AGREEMENT WITNESSETH** that, for good and valuable consideration, the receipt whereof is hereby acknowledged, the Parties have agreed as follows:

**Article 1**  
**Definitions**

1.1 In addition to terms defined elsewhere herein, in this Agreement:

**Additional Subscription Right** has the meaning set forth in the Articles.

---

**Affiliate** means a Person connected with another Person because:

- (a) one of them is the direct or indirect subsidiary of the other, or
- (b) each of them is, directly or indirectly, controlled by the same Person.

**Agreement** means this Agreement, and the terms “**hereof**”, “**hereunder**”, “**hereto**”, “**herein**” and other similar terms refer to this Agreement and not any particular Article, section, clause or schedule hereto (except as specifically stated).

**Articles** means the articles of the Corporation, as amended, and as may be further amended from time to time.

**BIMCO** means the applicable BIMCO Supplytime 2005 Time Charter Party for Offshore Service Vessels for a particular Marine Cruise.

**Board** means the Board of Directors of the Corporation.

**CFPO** has the meaning set forth in Section 5.1(j).

**Change of Control** means, in one transaction or a series of related transactions: (i) the completion of a consolidation, take-over bid (whether exempt or non-exempt), reverse take-over, amalgamation, arrangement or merger, in each case involving the Corporation, in which the registered holders of Shares immediately prior to such consolidation, take-over bid, reverse take-over, amalgamation, arrangement or merger do not, immediately after such consolidation, take-over bid, reverse take-over, amalgamation, arrangement or merger, own shares representing a majority of the outstanding voting power (based on the right to elect directors generally) of the Corporation or the surviving or consolidated corporation; (ii) the direct or indirect sale, lease, or transfer of all or substantially all of the assets of the Corporation; or (iii) any other form of corporate reorganization in which outstanding Shares of the Corporation are exchanged for or converted into cash, securities of another corporation or business organization (including the surviving entity of a take-over bid, reverse take-over, amalgamation, arrangement or merger), or other property in which the registered holders of Shares immediately prior to such reorganization do not, immediately after such reorganization, own shares representing a majority of the outstanding voting power (based on the right to elect directors generally) of the Corporation; provided that in each case the registered holders of Shares immediately prior to such transaction receive, or may elect to receive, cash or share-based consideration for all or a portion of their Shares, as applicable.

**Class B Preferred Shares** means Class B preferred shares in the capital of the Corporation without par value and having the rights and restrictions set forth in the Articles.

**Common Shares** means common shares in the capital of the Corporation without par value.

**Completion** shall *be* deemed to occur at the time and on the date when the vessel for a particular Marine Cruise is redelivered to Maersk in accordance with the BIMCO for that Marine Cruise.

**Concurrent Financing** means the proposed issue and sale of Class B Preferred Shares at a price of US\$1.25 per share on a non-brokered private placement basis in accordance with applicable securities laws for gross proceeds of up to approximately US\$150,000,000 in the aggregate (including proceeds (if any) received upon exercise of the Preferred Share Purchase Option), such financing which may be completed (including at all, and in one or more tranches) and closed or terminated at any time all in the Corporation’s sole discretion.

**Control** shall be determined in accordance with Section 1(3) of the *Securities Act* (British Columbia), as amended.

**Data Room Information** means all information, summaries, presentations, reports, memoranda, models, calculations, certificates, charters, policies, plans, videos, agreements, minutes, registers, financial statements, correspondence, licences, patent applications, resolutions, analyses, maps, records, files, data, interpretations, papers or other documents relating to the Corporation, its Subsidiaries or their respective businesses, properties or assets, contained in the internet-based data room established by the Corporation, hosted by ansarada and made available to Maersk and its advisors prior to the Effective Date at the weblink <https://dataroom.ansarada.com/deeporeen%7C17535/>.

**Definitive Agreement** has the meaning set forth in Section 11.2(a).

**Denominator** has the meaning set forth in Section 2.3.

**Dispute** has the meaning set forth in Section 11.1.

**Effective Date** has the meaning set forth in the preamble to this Agreement.

**Encumbrance** means any mortgage, lien, charge, pledge, security interest, hypothec, encumbrance, claim or demand whatsoever.

**Environmental Laws** means any law, regulation or other applicable requirement relating to: (a) the release or threatened release of Hazardous Substance; (b) pollution; (c) protection of employee health or safety, public health or the environment; or (c) the manufacture, handling, transport, use, treatment, storage, or disposal of Hazardous Substances.

**Existing Dispute** has the meaning set forth in Section 11.2(a).

**Expenses** has the meaning set forth in Section 4.3(b).

**Final Costs** means the agreed aggregate Marine Cruise Costs incurred by Maersk or Maersk UK, as applicable, in respect of a particular Marine Cruise.

**Financial Statements** has the meaning set forth in Section 5.2(p).

**Forward Looking Statements** has the meaning set forth in Section 5.2(u).

**Going Public Transaction** means:

- (a) an initial public offering of Common Shares pursuant to which the Corporation becomes a Reporting Issuer and Common Shares of the Corporation are listed on a stock exchange;
- (b) a transaction or series of transactions which: (i) involves a Reporting Issuer listed on a stock exchange or holders of securities of that Reporting Issuer acquiring Shares, securities or assets of the Corporation or that Reporting Issuer effecting a merger, amalgamation, arrangement, reorganization, business combination or other similar transaction with the Corporation or its security holders and which, in any case; (ii) results in: (x) the registered holders of Shares immediately prior to such transaction or transactions having Control of the Reporting Issuer or the entity resulting from such transaction; (y) such Reporting Issuer or entity resulting from such transaction being a Reporting Issuer listed on a stock exchange; and (z) the business of such Reporting Issuer or entity resulting from such transaction being substantially the same as the business of the Corporation immediately prior to such transaction or transactions; or

- (c) a transaction or series of transactions which: (i) involves the Corporation or holders of Shares acquiring securities or assets of a Reporting Issuer listed on a stock exchange or the Corporation effecting a merger, amalgamation, arrangement, reorganization, business combination or other similar transaction with that Reporting Issuer or its security holders and which, in any case; (ii) results in: (x) the registered holders of shares of that Reporting Issuer immediately prior to such transaction or transactions having Control of the Corporation or the entity resulting from such transaction; (y) the Corporation or the entity resulting from such transaction or transactions being a Reporting Issuer listed on a stock exchange; and (z) the business of the Corporation or entity resulting from such transaction being substantially the same as the business of the Corporation immediately prior to such transaction or transactions, and

for greater certainty, all cases above do not include any transaction or series of transactions which constitutes a take-over bid pursuant to applicable securities laws.

**Hazardous Substances** has the meaning set forth in Section 5.1(i).

**IFRS** has the meaning set forth in Section 5.2(p).

**Indemnified Persons** has the meaning set forth in Section 5.5.

**In-Kind Common Share Investment** has the meaning set forth in Section 2.3.

**International Seabed Area** means the seabed and ocean floor and subsoil thereof, beyond the limits of national jurisdiction.

**ISA** means the International Seabed Authority and any successor thereto.

**ISA Exploration Contract** means the contract for exploration for polymetallic nodules between the ISA and NORI, dated July 22, 2011, and any amendment thereto.

**ISA Regulations** means the legally binding regulations adopted by the ISA applicable to the activities of the Corporation and its Subsidiaries in the International Seabed Area.

**Information Circular** means an information circular in respect of a shareholder meeting as required pursuant to the Act or National Instrument 51-102 Continuous Disclosure Obligations of the Canadian Securities Administrators, as amended or replaced.

**Marine Cruise** means the five marine cruises, being Cruise 3, Cruise 4, Cruise 5, Cruise 6 and Cruise 7, pursuant to the applicable BIMCO.

**Marine Cruise Costs** has the meaning set forth in Section 2.1.

**Marine Services** means services provided by Maersk or Maersk UK, as applicable, pursuant to a BIMCO.

**Material Adverse Effect** means a material adverse effect on the business, assets (including intangible assets), liabilities, financial condition, property or results of operations of a Party, on a consolidated basis.

**NORI** means Nauru Ocean Resources Inc., a company incorporated under the laws of Nauru. **Other Contractors** has the meaning set forth in Section 4.1(b).

**Other Costs** means any allocable costs attributable to the provision of Other Services. **Other Services** has the meaning set forth in Section 4.2.

**Participating Financing** has the meaning set forth in Section 3.1(a).

**Permitted Encumbrance** means:

- (a) any lien arising by operation of law or regulation and in the ordinary course of trading and not as a result of any default or omission by the Corporation or any of its Subsidiaries;
- (b) any Encumbrance created by and or between the Corporation and any of its Subsidiaries;
- (c) any Encumbrance which has been granted with the prior written consent of Maersk (such consent not to be unreasonably withheld or delayed)
- (d) any Encumbrance created as a result of, or pursuant to, this Agreement or any other agreement or documentation in connection with it; and/or
- (e) any Encumbrance in favour of the Republic of Nauru resulting from their sponsorship of NORI.

**Permitted Issuance** means any issuance pursuant to subparagraphs 8(a) — 8(c) of the definition of ‘Permitted Issuance’ in the Articles.

**Permitted Transferee** has the meaning set forth in Section 12.1.

**Person** includes any individual, partnership, association, body corporate, organization, trust, estate, trustee, executor, administrator, legal representative, government, syndicate or other entity, whether or not having legal status.

**Preferred Share Purchase Option** means the irrevocable option to purchase up to 50,000,000 Class **B** Preferred Shares granted by the Corporation to Maersk pursuant to the Preferred Share Purchase Option Agreement,

**Preferred Share Purchase Option Agreement** means the Preferred Share Purchase Option Agreement between Maersk Supply Service A/S (Company no. 31424377) and the Corporation dated March 15, 2017.

**Pro-Rata Participation Right** has the meaning set forth in Section 3.2(a).

**Pro-Rata Share** means the amount expressed as a percentage determined by dividing the number of Shares (and other voting equity, if any) then held, directly or indirectly, by Maersk by the number of Shares (and other voting equity, if any) then issued and outstanding prior to issuing Shares (or other voting equity, as applicable) pursuant to a Participating Financing or a Strategic Financing, as applicable, and in each case excluding any Shares issuable pursuant to the then unearned portion of the In-Kind Common Share Investment or the unexercised Preferred Share Purchase Option.

**Prospectus** shall be interpreted in accordance with National Instrument 41-101 - General Prospectus Requirements of the Canadian Securities Administrators, as amended or replaced.

**Protective Non-Disclosure Agreement** means the Protective Non-Disclosure Agreement among the Corporation, Maersk and Maersk UK dated March 15, 2017.

**Related Dispute** has the meaning set forth in Section 11.2(b).

**Reporting Issuer** has the same meaning as set forth in Section 1(1) of the *Securities Act* (British Columbia), as amended.

**Revenue** has the meaning set forth in Section 4.3(b).

**Rules** has the meaning set forth in Section 11.1.

**Share Limit** has the meaning set forth in Section 7.1.

**Share Reorganization** has the meaning set forth in Section 2.9.

**Shares** means, collectively, the Common Shares and the Class B Preferred Shares and any other shares in the capital of the Corporation.

**Strategic Financing** has the meaning set forth in Section 3.1(b).

**Subscription Agreement** has the meaning set forth in Section 2.5.

**Subsidiaries** means DeepGreen Engineering Pte. Ltd., DeepGreen Resources LLC, Nauru Education and Training Foundation Inc., Nauru Health and Environmental Foundation Incorporated and NORI.

**Termination** has the meaning set forth in Section 3.7.

**Termination Date** has the meaning set forth in Section 13.1.

1.2 The following schedules are incorporated into and form a part of this Agreement:

- (a) Schedule A — Confirmation of Funds (Corporation)
- (b) Schedule B — Confirmation of Aggregate Costs (Maersk / Maersk UK)
- (c) Schedule C — Subscription Agreement (Maersk / Maersk UK)

## **Article 2**

### **In-kind Common Share Investment**

- 2.1 Subject to Section 2.2, Maersk agrees to complete four Marine Cruises, being Cruise 3, Cruise 4, Cruise 5 and Cruise 6, and Maersk UK agrees to complete the fifth Marine Cruise, being Cruise 7, in accordance with the applicable BIMCO. The scope of Marine Cruise related services to be performed by Maersk, Maersk UK and the Corporation, respectively, and the allocable costs of each Marine Cruise of Maersk, Maersk UK and the Corporation, respectively, (such costs, the **Marine Cruise Costs**) shall be as set forth in the BIMCO for that particular Marine Cruise. For greater certainty, each of Maersk, Maersk UK and the Corporation acknowledge and agree that the other Party may sub-contract such Marine Cruise related services to Affiliates and third parties in accordance with the applicable BIMCO, which sub-contract services shall be included in the Marine Cruise Costs of such Party.
- 2.2 Prior to Maersk or Maersk UK, as applicable, commencing mobilization expenses for a Marine Cruise, the Corporation agrees to provide to Maersk or Maersk UK, as applicable, confirmation (in the form set forth in Schedule A) that the Corporation has sufficient funds to undertake its allocable portion of the Marine Cruise Costs for such Marine Cruise, such costs to be determined in accordance with the BIMCO for that particular Marine Cruise.
- 2.3 Maersk or Maersk UK, as applicable, shall receive a number of Common Shares (the **In-kind Common Share Investment**) equal to the agreed Final Costs for a particular Marine Cruise divided by US\$1.25 (the **Denominator**), subject to adjustment pursuant to Section 2.9.
- 2.4 Within 30 days of Completion of a Marine Cruise, Maersk or Maersk UK, as applicable, shall use commercially reasonable efforts to provide to the Corporation confirmation (in the form set forth in Schedule B) of the aggregate Marine Cruise Costs incurred by Maersk or Maersk UK, as applicable, in respect of such Marine Cruise, such aggregate costs to be calculated in accordance with the BIMCO for that particular Marine Cruise.

- 2.5 If the Corporation does not object to the aggregate Marine Cruise Costs incurred by Maersk or Maersk UK, as applicable, in respect of such Marine Cruise, such costs shall be Final Costs and the Corporation shall request Maersk or Maersk UK, as applicable, to provide a duly executed subscription agreement (in the form set forth in Schedule C) (a **Subscription Agreement**) in respect of the particular In-Kind Common Share Investment and such other ancillary documents as the Corporation may reasonably request.
- 2.6 If the Corporation objects to the aggregate Marine Cruise Costs incurred by Maersk or Maersk UK, as applicable, in respect of such Marine Cruise, the Corporation shall, within 60 days of receipt of the confirmation delivered by Maersk or Maersk UK, as applicable, pursuant to Section 2.4, notify Maersk or Maersk UK, as applicable, of the amount of such Marine Cruise Costs:
- (a) which are disputed together with the Corporation's reasons, the disputed amount of such Marine Cruise Costs which shall be subject to review, audit and dispute resolution (as the case may be) pursuant to the applicable BIMCO; and
  - (b) which are not disputed, and such costs shall be Final Costs and the Corporation shall request Maersk or Maersk UK, as applicable, to provide a revised Subscription Agreement for the amount of the In-Kind Common Share Investment equivalent to such Final Costs and such other ancillary documents as the Corporation may reasonably request, and upon receipt thereof Maersk or Maersk UK, as applicable, shall be treated as the holder of record of the Common Shares comprising such In-Kind Common Share Investment notwithstanding any delay in the issuance and delivery of the certificate(s) for such Common Shares.
- 2.7 If upon resolution of any dispute pursuant to Section 2.6(a):
- (a) any further In-Kind Common Share Investment is due to Maersk or Maersk UK, as applicable, Maersk or Maersk UK, as applicable, shall provide to the Corporation confirmation (in the form set forth in Schedule B) together with a duly executed Subscription Agreement in respect of such In-Kind Common Share Investment and such other ancillary documents as the Corporation may reasonably request, and upon receipt thereof Maersk or Maersk UK, as applicable, shall be treated as the holder of record of the Common Shares comprising such In-Kind Common Share Investment notwithstanding any delay in the issuance and delivery of the certificate(s) for such Common Shares.
  - (b) a credit is due to the Corporation, Maersk or Maersk UK, as applicable, shall credit such amount against its aggregate Marine Cruise Costs for the immediately following Marine Cruise or, if no further Marine Cruise is to occur, shall refund such amount to the Corporation in cash.
- 2.8 The Corporation shall, within 15 days following receipt by the Corporation of a subscription agreement pursuant to Section 2.5, Section 2.6(b) or 2.7(a), issue and deliver a share certificate representing the Common Shares as set forth in such subscription agreement, such issued Common Shares which shall be in full satisfaction of the Final Costs in respect of the applicable Marine Cruise and the Corporation shall have no further obligation in respect of such Final Costs (including to issue any Common Shares or pay any amount in respect thereto).
- 2.9 In the event of a subdivision, consolidation, split or reclassification of the Common Shares or similar circumstances (a **Share Reorganization**), the Denominator shall be adjusted at the time of any In-kind Common Share Investment to an amount equal to the product of:
- (a) the Denominator in effect immediately before the effective date or record date of the Share Reorganization; multiplied by

- (b) a fraction the numerator of which is the total number of Shares outstanding on that effective date or record date before giving effect to the Share Reorganization, and the denominator of which is the total number of Shares that are or would be outstanding immediately after such effective date or record date after giving effect to the Share Reorganization.
- 2.10 This Article 2 shall not entitle Maersk or Maersk UK, as applicable, to any rights whatsoever as a shareholder of the Corporation with respect to any Common Shares until it has delivered to the Corporation a duly executed Subscription Agreement and such other ancillary documents as the Corporation may reasonably request in accordance with this Article 2 and Maersk or Maersk UK, as applicable, and the Corporation have agreed to the Final Costs.
- 2.11 For so long as Maersk or Maersk UK, as applicable, is precluded from receiving Common Shares by virtue of the Share Limit, the Final Costs in respect of any subsequent Marine Cruise(s) (or portion thereof) shall be paid in cash by the Corporation within 60 days of agreement of Maersk or Maersk UK, as applicable, and the Corporation to the Final Costs as set forth in this Article 2 *mutatis mutandis*, such cash payment which shall be in full satisfaction of such Final Costs and the Corporation shall have no further obligation in respect of such Final Costs (including to issue any Common Shares or pay any amount in respect thereto).
- 2.12 Maersk's rights to receive Common Shares or cash for the Final Costs in respect of a Marine Cruise pursuant to an In-Kind Common Share Investment and the Corporation's obligations to issue such Common Shares or pay cash shall terminate and be of no further force or effect upon the issuance of the Common Shares or the payment of cash (in lieu of such Common Shares) for the Final Costs for the fourth completed Marine Cruise, being Cruise 6, in accordance with this Article 2.
- 2.13 Maersk UK's rights to receive Common Shares or cash for the Final Costs in respect of its Marine Cruise pursuant to an In-Kind Common Share Investment and the Corporation's obligations to issue such Common Shares or pay cash shall terminate and be of no further force or effect upon the issuance of the Common Shares or the payment of cash (in lieu of such Common Shares) for the Final Costs for the fifth completed Marine Cruise, being Cruise 7, in accordance with this Article 2.

### **Article 3 Pro-Rata Participation Right**

- 3.1 In addition to the Concurrent Financing, and except with respect to the Pro-Rata Participation Right, the Corporation may without restriction from time to time and at any time:
- (a) issue such number of Shares or other securities for cash proceeds (including, without limitation, upon conversion of any convertible debt in accordance with the terms thereof), at such prices and to such investors as the Corporation may determine in its sole discretion (any such issuance, a **Participating Financing**);
  - (b) issue such number of Shares or other securities (including in-kind equity issuances) in exchange or as consideration for services to such service providers as the Corporation may determine in its sole discretion including with respect to strategic alliances relating to matters other than Marine Services (any such issuance, a **Strategic Financing**); or
  - (c) incur debt with such lender(s) and on such terms (including on a secured or unsecured basis) as the Corporation may determine in its sole discretion, and (i) Maersk shall not have any right (including, without limitation, the Pro-Rata Participation Right) to participate in any such debt issue; and (ii) the Corporation shall not be obliged to offer Maersk an opportunity to participate in any such debt issue.

- 3.2 From and after the date Maersk first becomes a shareholder of the Corporation pursuant to either the In-Kind Common Share Investment or exercise of the Preferred Share Purchase Option and prior to Termination, Maersk shall:
- (a) in respect of any Participating Financing or Strategic Financing (in each case other than a Permitted Issuance), have the right (the **Pro-Rata Participation Right**), but not the obligation, to purchase up to its Pro-Rata Share of the Shares (or other equity) offered pursuant to any such financing on the same terms as offered to other investors in such financing; and
  - (b) in respect of a Going Public Transaction, have a Pro-Rata Participation Right but not the obligation, to purchase up to its Pro-Rata Share of the Shares (or other equity) offered pursuant to the Going Public Transaction on the same terms as offered to other investors in the Going Public Transaction, provided such right is permitted pursuant to applicable laws and approved by the underwriter(s) or investment dealer(s) for such Going Public Transaction (in their sole discretion).

Maersk acknowledges and agrees that: (i) the Company may, without restriction from time to time and at any time, incur debt with such lender(s) and on such terms (including on a secured or unsecured basis) as the Company may determine in its sole discretion; (ii) Maersk shall not have any right (including, without limitation, the Pro-Rata Participation Right) to participate in any such debt issue; and (iii) the Corporation shall not be obliged to offer Maersk an opportunity to participate in any such debt issue.

- 3.3 Maersk agrees to notify the Corporation in writing within 20 days of receipt of notice by the Corporation of a Participating Financing or a Strategic Financing whether Maersk will participate in such financing and, if so, the number of Shares or other equity not exceeding its Pro-Rata Share to be purchased by Maersk.
- 3.4 In each 12 month period from the date Maersk first becomes a shareholder of the Corporation pursuant to either the In-Kind Common Share Investment or exercise of the Preferred Share Purchase Option and prior to Termination, Maersk may exercise once in each such 12 month period the Pro-Rata Participation Right to purchase up to its Pro-Rata Share of the aggregate number of Shares (or other equity) issued pursuant to Permitted Issuances during such 12 month period, such Shares (or other equity) to be purchased at the volume weighted average price per Share calculated by dividing the total value of Shares (or other equity) issued during such twelve month period by the total number of Shares (or other equity) issued during such 12 month period; provided that, if at the time of such Permitted Issuance Maersk participated in such Permitted Issuance, that Permitted Issuance shall be excluded for the purposes of determining Maersk's Pro-Rata Share pursuant to this Section 3.4.
- 3.5 In respect of any purchase pursuant to Section 3.3 or Section 3.4, Maersk agrees to deliver to the Corporation a duly executed subscription agreement (in substantially the form provided by the Corporation to other purchasers under the Participating Financing, Strategic Financing or Permitted Issuance, as applicable) and such other documents as the Corporation may reasonably request and tender payment in cash in full to the Corporation for the Shares (or other equity) so purchased by wire transfer to such account as directed by the Corporation in writing.
- 3.6 The Pro-Rata Participation Right shall not entitle Maersk to any rights whatsoever as a shareholder of the Corporation with respect to any Shares (or other equity), subject to the Pro-Rata Participation Right, unless Maersk has elected in accordance with Section 3.3 or 3.4 to so participate and has delivered a duly executed subscription agreement in the applicable form and such other ancillary documents as the Corporation may reasonably request and tendered payment each in accordance with Section 3.5.

- 3.7 The Pro-Rata Participation Right shall terminate and be of no further force or effect upon the earliest of:
- (a) immediately prior to closing of a Going Public Transaction if the Pro-Rata Participation Right is not permitted pursuant to applicable laws or approved by the underwriter(s) or investment dealer(s) for such Going Public Transaction (in their sole discretion);
  - (b) closing of a Going Public Transaction if the Pro-Rata Participation Right is permitted pursuant to applicable laws and approved by the underwriter(s) or investment dealer(s) for such Going Public Transaction (in their sole discretion); or
  - (c) immediately prior to a Change of Control, (any such termination, **Termination**).
- 3.8 Subject to Article 12, the Pro-Rata Participation Right is non-transferable.

**Article 4**  
**Right to Match and Services to Other Contractors**

- 4.1 The Parties acknowledge and agree as follows:
- (a) collaboration of the Corporation and Maersk in the CCZ is of importance to each Party;
  - (b) that Maersk intends to offer offshore services to other contractors involved in the seafloor polymetallic nodule industry (**Other Contractors**), and nothing contained in this Agreement shall act as, or be construed as granting the Corporation or any of its Affiliates, a veto or other similar right to restrict Maersk from providing such services (including marine cruises) to any Other Contractor; and
  - (c) the Corporation is relying on Maersk and Maersk UK for the provision of the Marine Cruises (as applicable) to the exclusion of other service providers and each of Maersk and Maersk UK agree to provide the Corporation with the Marine Cruises (as applicable) on a preferential basis in accordance with this Agreement and each BIMCO.
- 4.2 The Parties agree (i) to use their joint efforts to offer the provision by Maersk or Maersk UK and the Corporation of offshore services to Other Contractors (**Other Services**); (ii) Other Services may be provided separately from, or in conjunction with, a Marine Cruise; and (iii) Other Services may include but are not limited to vessels, technical support services provided by Maersk or Maersk UK, as applicable, or the Corporation or the rental of equipment supplied by Maersk or Maersk UK, as applicable, or the Corporation.
- 4.3 If Maersk or Maersk UK, as applicable, intends to bid for the provision of Other Services which are to be provided not during a Marine Cruise, then:
- (a) Maersk or Maersk UK, as applicable, shall notify the Corporation that it intends to bid for such provision and advise the Corporation of the services and/or equipment to be provided by the Corporation. If the Corporation is able to provide such services and/or equipment, then the Corporation agrees to provide Maersk or Maersk UK, as applicable, with a quote for such services and/or equipment to be included in Maersk's or Maersk UK's bid, as applicable, to the Other Contractor. If Maersk's or Maersk UK's bid, as applicable, is successful and it secures the contract award for such Other Services, Maersk or Maersk UK, as applicable, and the Corporation agree to negotiate a mutually acceptable agreement between Maersk or Maersk UK, as applicable, and the Corporation for the provision of the services and/or equipment to be provided by the Corporation; and

- (b) within 30 days of completion of the Other Services Maersk or Maersk UK, as applicable, shall provide to the Corporation a final statement of the Other Services provided, the aggregate amount paid by the Other Contractor for the Other Services (Revenue) and Maersk's or Maersk UK's, as applicable, actual Other Costs incurred for the Other Services provided, and following receipt thereof the Corporation shall advise Maersk or Maersk UK, as applicable, in writing of the Corporation's actual Other Costs incurred (if any) for the Other Services (such Other Costs incurred by Maersk or Maersk UK, as applicable, and the Corporation in respect of the Other Services, Expenses). The amount remaining after deducting Expenses from Revenue shall be shared equally and paid to each of Maersk or Maersk UK, as applicable, and the Corporation (or, if directed by a Party, applied as a set-off against other costs owing by such Party to the other Party).

4.4 If the Corporation intends to bid for the provision of Other Services which are to be provided during a Marine Cruises, then:

- (a) if the Corporation's bid is successful and it secures the contract award for such Other Services, Maersk or Maersk UK, as applicable, shall provide such services in accordance with the BIMCO for that Marine Cruise; and
- (b) within 30 days of Completion of the Other Services the Corporation shall provide to Maersk or Maersk UK, as applicable, a final statement of the Other Services provided, the aggregate Revenue from the Other Services provided and the Corporation's actual Expense incurred for the Other Services provided, and following receipt thereof Maersk or Maersk UK, as applicable, shall advise the Corporation in writing of Maersk's or Maersk UK's, as applicable, actual Expenses for the Other Services. The amount remaining after deducting Expenses from Revenue shall be shared equally and paid to each of Maersk or Maersk UK, as applicable, and the Corporation (or, if directed by a Party, applied as a set-off against other costs owing by such Party to the other Party).

4.5 If:

- (a) the Corporation or any of its Affiliates wishes to seek a proposal, tender or offer for other marine cruises or Marine Services from service providers other than Maersk or Maersk UK, as applicable, then, subject to Section 4.5(c), the Corporation agrees that it will first request in writing a proposal, tender or offer from Maersk for the provision of such services. The Corporation shall be permitted to seek one or more proposals, tenders or offers from any such other service providers. The Corporation or its Affiliate(s), as applicable, shall be entitled to seek third party review of Maersk's or any other service provider's proposal, tender or offer including the market competitiveness of such proposal, tender or offer in the current market. In no circumstance shall the Corporation be obligated to accept any proposal, tender or offer from Maersk or any other service provider.
- (b) the Corporation or any of its Affiliates receives a proposal, tender or offer from one or more other service providers that it wishes to accept, then, subject to Section 4.5(c), the Corporation shall notify Maersk of the terms of such proposal, tender or offer and provide Maersk with the right, exercisable within 30 days, to match both technically and financially the proposal, tender or offer from the other service provider. If Maersk notifies the Corporation of its decision to match both technically and financially such proposal, tender or offer and if the Corporation or its Affiliate, as applicable, has decided to contract such services, then the Corporation or its Affiliate, as applicable, shall be obliged to contract with Maersk for the provision of such other marine cruises or Marine Services on such terms. For greater certainty, if the Corporation does not receive a proposal, tender or offer from any other service providers, or if the Corporation receives a proposal, tender or offer from one or more other service providers that it does not wish to accept, the Corporation shall not be obligated to so notify Maersk or provide Maersk with any such right to match.

- (c) the Corporation or any of its Affiliates wishes to seek a proposal, tender or offer for other marine cruises or Marine Services from service providers other than Maersk or Maersk UK, as applicable, and, upon consultation with Maersk, Maersk advises the Corporation that it does not wish to provide such services (such advise not to be unreasonably delayed or withheld), then the Corporation shall be entitled to seek a proposal, tender or offer for such services from any other service providers and the Corporation shall have no further obligation to notify Maersk of the terms of such proposal, tender or offer or provide Maersk with the right to match such proposal, tender or offer.
- 4.6 The Corporation agrees not to disclose to any such other service providers the terms of any such Maersk proposal, tender or offer pursuant to Section 4.5(b).
- 4.7 During the term of this Agreement as set forth in Section 13.1, Maersk and Maersk UK and their respective Affiliates shall not, without the Corporation's prior written consent, directly or indirectly, provide financing for any activities related to the seafloor polymetallic nodule industry to any entity engaged in seafloor polymetallic nodule activities, or enter into any joint venture, partnership, offtake, purchase, tribute mining or other similar arrangement with any other party with the intent to explore for, mine or process seafloor polymetallic nodules.

## **Article 5 Representations and Warranties**

- 5.1 Maersk represents, warrants and covenants to the Corporation (and acknowledges that the Corporation is relying thereon) as of the Effective Date that:
- (a) Maersk is a corporation duly formed and validly existing under the laws of its jurisdiction of incorporation or continuance;
  - (b) Maersk has all requisite corporate power and capacity to enter into this Agreement and to perform its obligations under this Agreement;
  - (c) Maersk is an "accredited investor" within the meaning of National Instrument 45-106 *-Prospectus Exemptions* of the Canadian Securities Administrators by satisfying one or more of the criteria specified therein;
  - (d) this Agreement has been duly authorized, executed and delivered by Maersk and constitutes a legal, valid and binding obligation of Maersk enforceable in accordance with its terms, except as such enforceability may be subject to the effects of bankruptcy, insolvency, reorganization, moratorium, receivership, or similar laws or judicial decisions now or hereafter in effect relating to, limiting, or affecting the rights of creditors generally or by general principles of equity;
  - (e) the execution and delivery of this Agreement by Maersk and the performance by Maersk of its obligations hereunder do not and will not conflict with or result in a breach or violation of any of the terms or provisions of, or constitute a default under (whether after notice or lapse of time or both), (i) any statute, rule or regulation applicable to Maersk; (ii) the constating documents or resolutions of the directors or shareholders of Maersk which are in effect at the date hereof; (iii) any contract to which Maersk is a party; or (iv) any judgment, decree or order binding upon Maersk;

- (0) Maersk has all franchises, permits, licenses and any similar authority necessary for the conduct of its business, except in respect of any such franchises, permits, licenses or any similar authority the lack of which would not have a Material Adverse Effect. Maersk is not in default in any material respect under any of such franchises, permits, licenses or other similar authority;
- (g) there is no claim, action, suit, proceeding, arbitration, complaint, charge or investigation pending or, to Maersk's knowledge, threatened against Maersk: (i) that questions the validity of this Agreement, the right of Maersk to enter into this Agreement, or to consummate the transactions contemplated by this Agreement; or (ii) that would reasonably be expected to have, either individually or in the aggregate, a Material Adverse Effect;
- (h) Maersk is not in breach, violation or default: (i) of any provision of any statute, rule or regulation applicable to Maersk which has any implication on this Agreement; (ii) of any provisions of its constituting documents or the resolutions of its directors or shareholders which are in effect at the date hereof; (iii) of any contract to which it is a party which has any implication on this Agreement; or (iv) of any judgment, decree or order binding upon it, except where any such breach, violation or default would not have a Material Adverse Effect;
- (i) except in respect of any non-compliance, release or generation that does not have any implication on this Agreement: (i) Maersk is in compliance with all Environmental Laws; (b) there has been no release of any pollutant, contaminant or toxic or hazardous material, substance or waste or petroleum or any fraction thereof (each a **Hazardous Substance**), on, upon, into or from any site or vessel currently or heretofore owned or leased by, or otherwise under the control or management of, Maersk; and (c) there have been no Hazardous Substances generated by Maersk that have been disposed of or come to rest at any site not in conformity with Environmental Laws; and
- (i) In connection with the matters that are the subject of this Agreement, neither Maersk, nor any of its Affiliates, nor any of Maersk's or its Affiliates' directors, officers, employees or agents have, directly or indirectly, made, offered, promised or authorized any payment or gift of any money or anything of value to or for the benefit of any "foreign public official" (as such term is defined in the *Corruption of Foreign Public Officials Act (Canada)*, as amended (the **CFPO**)), foreign political party or official thereof or candidate for foreign political office for the purpose of (i) influencing any official act or decision of such official, party or candidate, (ii) inducing such official, party or candidate to use his, her or its influence to affect any act or decision of a foreign governmental authority, or (iii) securing any improper advantage, in each case in order to assist the Corporation or any of its Affiliates in obtaining or retaining business for or with, or directing business to, any Person in violation of any applicable law, rule or regulation. In connection with the matters that are the subject of this Agreement, neither Maersk, nor any of its Affiliates, nor any of Maersk's or its Affiliates' directors, officers, employees or agents have, directly or indirectly, made or authorized any bribe, rebate, payoff, influence payment, kickback or other unlawful payment of funds or received or retained any funds in violation of any applicable law, rule or regulation. Maersk further represents insofar as it has implications for the matters that are the subject of this Agreement, it maintains, and each of its Affiliates maintains, systems of internal controls (including, but not limited to, accounting systems, purchasing systems and billing systems) to ensure compliance with any applicable anti-bribery or anti-corruption law. In connection with the matters that are the subject of this Agreement, neither Maersk, nor any of its Affiliates, nor, to Maersk's knowledge, any of Maersk's or its Affiliates', directors, officers, employees or agents are the subject of any allegation, voluntary disclosure, investigation, prosecution or other enforcement action related to any anti-bribery or anti-corruption law.

- 5.2 The Corporation represents, warrants and covenants to Maersk (and acknowledges that Maersk is relying thereon) as of the Effective Date that:
- (a) the Corporation is a corporation duly formed and validly existing under the laws of the Province of British Columbia;
  - (b) the Corporation has all requisite corporate power and capacity to enter into this Agreement and to perform its obligations under this Agreement;
  - (c) each of the Subsidiaries is a corporate entity duly and validly existing under the laws of its jurisdiction of incorporation or continuance;
  - (d) (i) the Corporation has no direct or indirect subsidiaries, other than the Subsidiaries; (ii) the Corporation owns directly, or indirectly through one or more Subsidiaries, all of the issued and outstanding shares in the capital of each of the Subsidiaries, free and clear of all Encumbrances, and all of such shares have *been* duly authorized and are outstanding as fully paid and non-assessable shares; and (iii) there are no outstanding options, warrants, rights (including conversion or pre-emptive rights and rights of first refusal or similar rights) or agreements, orally or in writing, to purchase or acquire any shares in the capital of a Subsidiary, or any securities convertible into or exchangeable for shares in the capital of a Subsidiary;
  - (e) each of the Corporation and the Subsidiaries is duly qualified to transact business and is in good standing in each jurisdiction in which the failure to so qualify would have a Material Adverse Effect;
  - (f) the Common Shares, when issued in accordance with Article 2, and Shares, when issued in accordance with Article 3, will be issued as fully paid and non-assessable shares in the capital of the Corporation;
  - (g) (i) 91,329,912 Common Shares, 440,000 Class B Preferred Shares and 6,350,000 options to purchase Common Shares were issued and outstanding (prior to giving effect to any Shares that may be issued pursuant to the In-kind Common Share Investment, the Preferred Share Purchase Option, the Concurrent Financing or the Additional Subscription Right); and (ii) other than the foregoing options and Shares that may be issued pursuant to the In-kind Common Share Investment, the Preferred Share Purchase Option, the Concurrent Financing or the Additional Subscription Right, there are no outstanding options, warrants, rights (including conversion or pre-emptive rights and rights of first refusal or similar rights) or agreements, orally or in writing, to purchase or acquire from the Corporation any Shares, or any securities convertible into or exchangeable for Shares.
  - (h) this Agreement has been duly authorized, executed and delivered by the Corporation and constitutes a legal, valid and binding obligation of the Corporation enforceable in accordance with its terms, except as such enforceability may be subject to the effects of bankruptcy, insolvency, reorganization, moratorium, receivership, or similar laws or judicial decisions now or hereafter in effect relating to, limiting, or affecting the rights of creditors generally or by general principles of equity.
  - (i) the execution and delivery of this Agreement by the Corporation, the performance by the Corporation of its obligations hereunder, the issue and sale of Shares pursuant to the In-kind Common Share Investment or exercise of the Preferred Share Purchase Option, the grant of the Preferred Share Purchase Option and the consummation of the transactions contemplated by this Agreement, do not and will not conflict with or result in a breach or violation of any of the terms or provisions of, or constitute a default under (whether after notice or lapse of time or both), (i) any statute, rule or regulation applicable to the Corporation, any of its Subsidiaries or any of their respective properties or assets including, without limitation, the ISA Regulations; (ii) the constating documents or resolutions of the directors or shareholders of the Corporation or any of its Subsidiaries which are in effect at the date hereof; (iii) any contract to which the Corporation or any of its Subsidiaries is a party or by which any of their properties or assets is bound including, without limitation, the ISA Exploration Contract; or (iv) any judgment, decree or order binding upon the Corporation, any of its Subsidiaries or any of their respective properties or assets;

- (j) NORI is the legal and beneficial owner of its interests under the ISA Exploration Contract, free and clear of all Encumbrances other than Permitted Encumbrances;
- (k) the ISA Exploration Contract is valid and in good standing under the ISA Regulations;
- (l) neither the Corporation nor any of its Subsidiaries has received from the ISA any notice alleging that NORI is in breach of, or in default under, the ISA Contract or the ISA Regulations;
- (m) the Corporation and each of its Subsidiaries has all franchises, permits, licenses and any similar authority necessary for the conduct of its business as currently conducted, except in respect of any such franchises, permits, licenses or any similar authority the lack of which would not have a Material Adverse Effect. Neither the Corporation nor any of its Subsidiaries is in default in any material respect under any of such franchises, permits, licenses or other similar authority;
- (n) there is no claim, action, suit, proceeding, arbitration, complaint, charge or investigation pending or, to the Corporation's knowledge, threatened: (i) against the Corporation or any of its Subsidiaries; (ii) that questions the validity of this Agreement, the right of the Corporation to enter into this Agreement, or to consummate the transactions contemplated by this Agreement; or (iii) that would reasonably be expected to have, either individually or in the aggregate, a Material Adverse Effect;
- (o) neither the Corporation nor any of its Subsidiaries is in breach, violation or default: (i) of any provision of any statute, rule or regulation applicable to the Corporation, any of its Subsidiaries or any of their respective property or assets including, without limitation, the ISA Regulations; (ii) of any provisions of its constituting documents or the resolutions of its directors or shareholders which are in effect at the date hereof; (iii) of any contract to which it is a party or by which any of its properties or assets is bound including, without limitation, the ISA Exploration Contract; or (iv) of any judgment, decree or order binding upon it or any of its assets or properties, in each case except where any such breach, violation or default would not reasonably be expected to have a Material Adverse Effect;
- (p) (i) the Corporation has delivered to Maersk its audited financial statements as at and for the fiscal year ended December 31, 2015 (the **Financial Statements**); (ii) the Financial Statements have been prepared in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board (**IFRS**) applied on a consistent basis throughout the periods indicated. The Financial Statements fairly present in all material respects the financial condition and operating results of the Corporation and its Subsidiaries as of the dates, and for the periods, indicated therein; (iii) except as set forth in the Financial Statements, the Corporation and its Subsidiaries have no material liabilities or obligations, contingent or otherwise, other than: (A) liabilities incurred in the ordinary course of business subsequent to December 31, 2015; (B) obligations under contracts and commitments incurred in the ordinary course of business; and (C) liabilities and obligations of a type or nature not required under IFRS to be reflected in the Financial Statements, which, in all such cases, individually and in the aggregate would not have a Material Adverse Effect; and (iv) the Corporation maintains a standard system of accounting established and administered in accordance with IFRS;

- (q) except as disclosed in the Data Room Information, since December 31, 2015 there has not been any change in the assets, liabilities, financial condition or operating results of the Corporation or its Subsidiaries, on a consolidated basis, from that reflected in the Financial Statements, except changes in the ordinary course of business that have not caused, in the aggregate, a Material Adverse Effect;
- (r) except in respect of any non-compliance, release or generation that have not caused, in the aggregate, a Material Adverse Effect: (i) the Corporation and each of its Subsidiaries is in compliance with all Environmental Laws; (b) there has been no release of any Hazardous Substance, on, upon, into or from any site or vessel currently or heretofore owned or leased by, or otherwise under the control or management of, the Corporation or any of its Subsidiaries; and (c) there have been no Hazardous Substances generated by the Corporation or any of its Subsidiaries that have been disposed of or come to rest at any site not in conformity with Environmental Laws;
- (s) neither the Corporation, nor any of its Subsidiaries, nor any of the Corporation's or its Subsidiaries' directors, officers, employees or agents have, directly or indirectly, made, offered, promised or authorized any payment or gift of any money or anything of value to or for the benefit of any "foreign public official" (as such term is defined in the CFPO), foreign political party or official thereof or candidate for foreign political office for the purpose of (i) influencing any official act or decision of such official, party or candidate, (ii) inducing such official, party or candidate to use his, her or its influence to affect any act or decision of a foreign governmental authority, or (iii) securing any improper advantage, in each case in order to assist the Corporation or any of its Affiliates in obtaining or retaining business for or with, or directing business to, any Person contrary to the CFPO and any applicable anti-bribery or anti-corruption law. Neither the Corporation, nor any of its Subsidiaries, nor any of the Corporation's or its Subsidiaries' directors, officers, employees or agents have, directly or indirectly, made or authorized any bribe, rebate, payoff, influence payment, kickback or other unlawful payment of funds or received or retained any funds in violation of any applicable law, rule or regulation. The Corporation further represents that it has maintained, and has caused each of its Subsidiaries and Affiliates to maintain, systems of internal controls (including, but not limited to, accounting systems, purchasing systems and billing systems) to ensure compliance with the CFPO and any other applicable anti-bribery or anti-corruption law. Neither the Corporation, nor any of its Subsidiaries, nor, to the Corporation's knowledge, any of the Corporation's or its Subsidiaries', directors, officers, employees or agents are the subject of any allegation, voluntary disclosure, investigation, prosecution or other enforcement action related to the CFPO or any other anti-bribery or anti-corruption law;
- (t) the Corporation has made available to Maersk in the Data Room Information all material information in the possession or control of the Corporation that relates to the Corporation, its Subsidiaries and their respective businesses, properties and assets. All Data Room Information (excluding Data Room Information prepared by a third party other than at the request of the Corporation or its Affiliates) was accurate and complete in all material respects as at its respective date as stated therein, or, if any such Data Room Information is undated, as of the date of its delivery to the Data Room Information website. There has been no change to the Data Room Information since the date posted to the Data Room Information website that is material to the Corporation (taken as a whole), except as has been disclosed to Maersk in writing or in a more recently posted document in the Data Room Information website; and
- (u) where Data Room Information reflects the opinion or view of the Corporation or its Affiliates including opinions or views which are forward looking or otherwise relate to projections, forecasts or estimates of future performance or results (operating, financial or otherwise) (**Forward Looking Statements**), at the time such opinion or view was given such opinion or view was honestly held and believed to be reasonable in the circumstances in which it was given, provided, however, that it shall not constitute a breach of this section solely if actual results vary or differ from those contained in Forward Looking Statements.

- 5.3 Each of the Parties acknowledges and agrees that its representations, warranties and covenants set out in this Agreement will not merge upon the completion of any In-kind Common Share Investment or the grant of the Preferred Share Purchase Option or the issuance of any Option Shares (as defined in the Preferred Share Purchase Option Agreement) upon exercise of the Preferred Share Purchase Option pursuant to the Preferred Share Purchase Option Agreement, but will survive until completion of the final In-kind Common Share Investment in connection with the final Marine Cruise, being Marine Cruise 7.
- 5.4 Each of the Parties agrees as follows:
- (a) The Corporation shall provide to Maersk or Maersk UK, as applicable, in each confirmation required under Section 2.2 (in the form set forth in Schedule A) certification that: (i) the Corporation has, in all material respects, complied with all covenants and satisfied all terms and conditions hereof to be complied with and satisfied by the Corporation at or prior to the date of such confirmation; and (i) the representations and warranties contained in Section 5.2 were true and correct, in all material respects, as of the Effective Date; and
  - (b) Maersk shall provide to the Corporation in each confirmation required under Section 2.4 (in the form set forth in Schedule B), including the confirmation of Maersk UK in respect of the fifth Marine Cruise, being Cruise 7, certification that: (i) Maersk has, in all material respects, complied with all covenants and satisfied all terms and conditions hereof to be complied with and satisfied by Maersk at or prior to the date of such confirmation; and (i) the representations and warranties contained in Section 5.1 were true and correct, in all material respects, as of the Effective Date.
- 5.5 Each Party agrees to indemnify and save harmless the other Party and its respective Affiliates, shareholders, directors, officers, employees, counsel and agents (**Indemnified Persons**) against all losses, claims, costs, expenses and damages or liabilities (but excluding loss of profits, incidental and consequential damages and diminution in value) which any Indemnified Person may suffer or incur which are caused or arise from a breach by that Party of its representations, warranties and covenants herein.

#### **Article 6** **Reservation of Shares and Fractional Shares**

- 6.1 The Corporation shall at all times during the term of this Agreement, reserve and keep available a sufficient number of unissued Shares in its authorized capital to satisfy the requirements hereof.
- 6.2 No fractional Shares shall be issued pursuant to Article 2 or Article 3. If, as a result of any adjustment pursuant to Section 2.9, the In-Kind Common Share Investment or exercise of the Pro-Rata Participation Right, Maersk or Maersk UK, as applicable, would become entitled to a fractional Share, Maersk or Maersk UK, as applicable, shall have the right to acquire only the adjusted number of full Shares (with any such fractional share rounded up or down to the nearest whole number) and no payment or other adjustment will be made with respect to the fractional Shares.

**Article 7**  
**Restrictions on Vesting and Exercise**

7.1 Notwithstanding anything to the contrary in this Agreement:

- (a) Maersk or Maersk UK, as applicable, will not be entitled to receive Common Shares pursuant to the In-kind Common Share Investment, the Corporation will not be obligated to issue any Common Shares in respect thereof and the In-kind Common Share Investment shall not provide Maersk or Maersk UK, as applicable, with the right to become the owner of Common Shares;
- (b) Maersk will not exercise the Pro-Rata Participation Right, the Corporation will not be obligated to issue any Shares (or other equity) in respect thereof and the Pro-Rata Participation Right shall not provide Maersk with the right to become the owner of Shares (or other equity); and
- (c) Maersk or Maersk UK, as applicable, will not exercise any other rights to acquire Shares or otherwise acquire any Shares, the Corporation will not *be* obligated to issue or approve any transfer of any Shares (or other equity) in respect thereof (as applicable) and such rights shall not provide Maersk or Maersk UK, as applicable, with the right, and Maersk or Maersk UK, as applicable, shall not otherwise agree, to become the owner of Shares (or other equity),

if the issuance of Common Shares pursuant to the In-kind Common Share Investment, the exercise of the Pro-Rata Participation Right or the issuance of Shares pursuant thereto or the exercise of any other rights to acquire Shares or the issuance or transfer of Shares pursuant to any other rights to acquire Shares, in either case taken together with any other Shares Maersk, Maersk UK or any of their respective Affiliates, directly or indirectly, owns or exercises control or direction over, would result in Maersk, Maersk UK or any of their Affiliates (taken together), directly or indirectly, owning or exercising control or direction over more than 33% of the then issued and outstanding Shares (the **Share Limit**).

7.2 In respect of any Common Shares or other Shares the issuance or transfer of which would exceed the Share Limit, Maersk or Maersk UK, as applicable, shall not be entitled to receive Common Shares pursuant to the In-kind Common Share Investment or Shares pursuant to the Pro-Rata Participation Right or any other rights to acquire Shares, as applicable, and none of the foregoing rights shall be exercised (as applicable), for so long as the issuance or transfer of Common Shares or other Shares (as the case may be) pursuant to any such rights would exceed the Share Limit.

**Article 8**  
**Concurrent Financing, Future Shareholders and Going Public Transaction**

- 8.1 Maersk and the Corporation agree to jointly develop disclosure regarding the transactions set forth in the Definitive Agreements, including Maersk's 'lead order' In-kind Common Share Investment, or any other disclosure for the Concurrent Financing or any other financing or any transaction including a Going Public Transaction (including, in each case, as required in accordance with applicable securities laws), such assistance not to be unreasonably withheld or delayed, all of which may be utilised by Maersk and the Corporation from time to time including as may be provided by the Corporation to prospective investors or other parties, as applicable.
- 8.2 The Corporation and Maersk agree that managing reputational risk, including regarding non-compliance with the CFPO and other applicable foreign corrupt practices legislation as well as applicable corporate and securities laws, is of paramount importance to each of the Corporation and Maersk. In that regard and prior to completing a Going Public Transaction:
  - (a) the Corporation will not accept as a shareholder any Person that has been convicted of, or otherwise found to have committed, a violation of the CFPO or other applicable foreign corrupt practices legislation;

- (b) except as may otherwise be agreed in writing between the Corporation and Maersk (not to be unreasonably withheld), the Corporation will obtain from each subscriber and all providers of funds to the Concurrent Financing and all other financings a representation and warranty in a subscription agreement or other applicable document (as determined by the Corporation in its sole discretion) as follows:

“the Subscriber has not committed a violation of the *Corruption of Foreign Public Officials Act* (Canada), the United States *Foreign Corrupt Practices Act of 1977*, as amended, or any other applicable foreign corrupt practice legislation and the Aggregate Subscription Price which will be advanced by the Subscriber to the Corporation hereunder has not been sourced in violation of such legislation and will not represent proceeds of crime for the purposes of the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act* (Canada) (the **PCMLA**) or otherwise contravene the PCMLA and the Subscriber acknowledges that the Corporation may in the future be required by law to disclose the Subscriber’s name and other information relating to this Subscription Agreement and the Subscriber’s subscription hereunder, on a confidential basis, pursuant to the PCMLA; and to the best of its knowledge (i) none of the subscription funds to be provided by the Subscriber (A) have been or will be derived from or related to any activity that is deemed criminal under the laws of Canada, the United States of America, or any other jurisdiction, or (B) are being tendered on behalf of a person or entity who has not been identified to the Subscriber, and (ii) it shall promptly notify the Corporation if the Subscriber discovers that any of such representations ceases to be true, and to provide the Corporation with appropriate information in connection therewith;”

- 8.3 Both the Corporation and Maersk see the general benefit of the Corporation undertaking a Going Public Transaction. In the event that the Corporation determines to undertake such a Going Public Transaction, Maersk agrees to either: (i) use reasonable efforts to support such undertaking; or (ii) not support such Going Public Transaction in which case it shall not to publicly oppose such a transaction.

**Article 9**  
**Board Observer; Board Representative**

- 9.1 Prior to a Going Public Transaction, a Change of Control or Maersk becoming a shareholder pursuant to either the In-Kind Common Share Investment or exercise of the Preferred Share Purchase Option, Maersk shall be entitled to nominate one representative to serve as an observer at meetings of the Board, such observer to be permitted to attend (in a non-voting capacity) any such meeting either in person or by electronic means as available and permitted from time to time pursuant to the Articles. The observer may be excluded from any Board meeting (or portions thereof) for reasons of confidentiality, solicitor-client privilege or conflict of interest as determined by the Board, acting in good faith.
- 9.2 Upon Maersk becoming a shareholder through any issuance of Shares to Maersk pursuant to either the In-Kind Common Share Investment (in part or in full) or exercise of the Preferred Share Purchase Option (in part or in full) and prior to a Going Public Transaction or Change of Control, Maersk shall be permitted to designate one nominee for inclusion in the management director nominees recommended by management for election to the Board by shareholders of the Corporation.

- 9.3 The rights of Maersk to nominate an observer or designate a board nominee shall terminate and be of no further force or effect upon the earliest of:
- (a) immediately prior to closing of a Going Public Transaction; or
  - (b) upon a Change of Control if, as a result of any disposition(s) of Shares by Maersk or any of its Affiliates pursuant to or in connection with such Change of Control, Maersk and its Affiliates (taken together), directly or indirectly, own or exercise control or direction over less than 10% of the then issued and outstanding Shares.

- 9.4 During the term of this Agreement, Maersk and its Affiliates shall not directly or indirectly recruit, solicit, or otherwise induce or attempt to induce any employee or consultant of the Corporation to terminate his or her employment with the Corporation or otherwise to act contrary to the interests of the Corporation; provided that Maersk and its Affiliates will not be prevented from making a general advertisement of employment opportunities in any published media of general circulation that is not directed specifically at employees of the Corporation or prevented from hiring an employee of the Corporation in response to any such general advertisement or who approaches Maersk or its Affiliates on his or her own initiative.

#### **Article 10 Tax Withholding**

- 10.1 The Corporation may take reasonable steps for the withholding of any taxes that it is required by applicable law or the requirements of any governmental authority to remit in connection with this Agreement or any issuance of Shares.

#### **Article 11 Dispute Resolution**

Any dispute, controversy or claim (a **Dispute**) arising out of or relating to this Agreement, or the breach, termination or invalidity thereof, shall be settled by arbitration in accordance with the provisions of the UNCITRAL Arbitration Rules as adopted in 2013 and as may be further revised or adopted prior to the date of a Dispute (the **Rules**) and the following: (i) the arbitration shall be heard by an arbitral tribunal consisting of three arbitrators, with each Party having the right to appoint one arbitrator and the two so appointed arbitrators appointing the third arbitrator who shall act as chair; (ii) the place of arbitration shall be Vancouver, British Columbia; (iii) the language to be used in the arbitration proceedings shall be English; and (iv) the Parties hereby waive their right to any form of recourse against an award to any court or other competent authority, insofar as such waiver can validly be made under the applicable law.

- 11.2 Subject to Section 11.3, where:

- (a) a Dispute has been referred to arbitration (an **Existing Dispute**) under this Agreement, the Preferred Share Purchase Option Agreement, the Subscription Agreement, the Protective Non-Disclosure Agreement or a BIMCO (each, a **Definitive Agreement**); and
- (b) a new Dispute has arisen under a Definitive Agreement relating either to issues or to facts which are substantially the same as those to be determined in an Existing Dispute (a **Related Dispute**),

then (i) the Parties may agree that the three arbitrators appointed or to be appointed in respect of such Existing Dispute shall also be appointed in respect of such Related Dispute; or (ii) if three arbitrators have been appointed in the Existing Dispute, and no arbitrators have been appointed in a Related Dispute or is composed of the same arbitrators as in the Existing Dispute, the three arbitrators in the Existing Dispute shall have the power, upon the request of a Party to the Existing Dispute or a Related Dispute, to order the consolidation of the whole or part of both sets of arbitration proceedings in accordance with the Rules; provided in either case the three arbitrators determine that it would be just and equitable and procedurally efficient to do so and no Party to either the Existing Dispute or the Related Dispute would be materially prejudiced as a result.

- 11.3 The Parties agree that any Dispute arising out of or relating to Marine Cruise Costs or a BIMCO (or the breach, termination or invalidity thereof) shall be settled in accordance with the applicable BIMCO.

#### **Article 12 Assignment**

- 12.1 This Agreement shall be binding upon and inure to the benefit of the Parties and their respective successors and permitted assigns. No Party may assign, transfer, convey, or pledge either this Agreement or any of its rights, interests, or liabilities hereunder without the prior written consent of the other Party, such consent not to be unreasonably withheld or delayed; provided that:
- (a) Maersk may, subject to applicable securities laws, assign or transfer: (i) the Pro-Rata Participation Right; or (ii) its rights and obligations under this Agreement, in each case, to an Affiliate of Maersk as verified by Maersk to the satisfaction of the Corporation acting reasonably (any such transferee of a Party pursuant to this Section 12.1, a **Permitted Transferee**), and in the event of any such assignment or transfer, this Agreement shall be read as applying *mutatis mutandis* to Maersk, the Corporation and a Permitted Transferee, as applicable;
  - (b) Maersk or Maersk UK, as applicable, may, subject to applicable securities laws, request that any Shares issuable to Maersk or Maersk UK, as applicable, hereunder be issued to an Affiliate of Maersk or Maersk UK, as applicable, as verified by Maersk or Maersk UK, as applicable, to the satisfaction of the Corporation acting reasonably; and
  - (c) Maersk or Maersk UK, as applicable, may, subject to applicable securities laws, request that any Shares Maersk or Maersk UK, as applicable, directly or indirectly, owns or exercises control or direction over, be transferred to an Affiliate of Maersk or Maersk UK, as applicable, as verified by Maersk or Maersk UK, as applicable to the satisfaction of the Corporation acting reasonably.
- 12.2 Concurrent with an assignment or transfer to a Permitted Transferee pursuant to Section 12.1, the Permitted Transferee of a Party shall be bound by the provisions of this Agreement as if an original party hereto and shall execute and deliver to the other Party an executed assignment, assumption and novation agreement and other documentation reasonably requested, in form reasonably satisfactory to the other Party, acting reasonably, agreeing to be bound by the terms of this Agreement.

#### **Article 13 Term and Termination**

- 13.1 The term of this Agreement shall commence on the Effective Date and continue in full force and effect until the date that is 3 years following the date of Completion of the fifth Marine Cruise, being Cruise 7 (the **Termination Date**).
- 13.2 This Agreement and all rights and obligations of the Parties pursuant to this Agreement shall terminate and be of no further force or effect on the Termination Date.

**Article 14**  
**Regulatory Approval**

- 14.1 Notwithstanding anything to the contrary in this Agreement, Maersk and Maersk UK hereby agree that the Corporation will not be obliged to issue any Shares hereunder if the issuance of the Shares would constitute a violation by Maersk or Maersk UK, as applicable, or the Corporation of any applicable law or regulation or of any rule of any governmental authority, regulatory body or, following completion of a Going Public Transaction, stock exchange having jurisdiction.
- 14.2 Maersk and Maersk UK hereby acknowledges that any Shares issued in accordance with this Agreement shall be subject to such terms, conditions or restrictions with respect to resale as may be imposed pursuant to the Articles, applicable law or by any securities commission or, following completion of a Going Public Transaction, stock exchange having jurisdiction with respect thereto, and Maersk and Maersk UK hereby agree to comply with such terms, conditions and restrictions, and the Corporation shall in no event be obliged, by any act of Maersk or Maersk UK, as applicable, or otherwise, to issue, register or qualify for resale or distribution any securities issuable hereunder pursuant to a Prospectus or similar document or to take any other affirmative action in order to cause the exercise of any rights hereunder or the issue, resale or distribution of Shares issuable pursuant hereto to comply with any law or regulation or any rule of any governmental authority, regulatory body or, following completion of a Going Public Transaction, stock exchange.

**Article 15**  
**General**

- 15.1 Whenever the singular or masculine or neuter is used in this Agreement, the same shall be construed as meaning the plural, feminine, or body corporate and vice versa *where* the context or the parties hereto so require.
- 15.2 Any notice to be given pursuant to the provisions hereof shall be in writing and shall be conclusively deemed to have been given and received by a party hereto and to be effective on the day on which it is delivered to such party at the address for such party set forth below (or at such other address that such party shall provide to the other party in writing), or if sent by email and received prior to 5:00 p.m. (Vancouver time) on the day such email is received (failing which such email shall be deemed to be received on the next following business day):
- (a) If to Maersk:
- Maersk Supply Service A/S  
Esplanaden 50

- Attention Chief Strategy Officer  
Email: [jonas.agerskov@maersksupplyservice.com](mailto:jonas.agerskov@maersksupplyservice.com)
- (b) If to Maersk UK:
- 13th Floor, Aldgate Tower 2 Leman Street  
London, United Kingdom E1 8FA
- Attention: Company Secretary  
Email: [john.kilby@maersk.com](mailto:john.kilby@maersk.com)

(c) If to the Corporation:

Suite 1620, 200 Burrard Street  
Vancouver, B.C., V6C 3L6 Canada

Attention Chief Executive Officer  
Email: office@deepgreenresources.com

- 15.3 Maersk and Maersk UK hereby acknowledge that the Corporation may be required to disclose, pursuant to applicable securities laws or rules or regulations of applicable governmental authorities, regulatory bodies or stock exchange(s), and will be required to disclose as part of a Prospectus or Information Circular, as the case may be, in respect of a Going Public Transaction, information regarding Maersk and Maersk UK including, without limitation, their respective name, address and the number of Shares held, as applicable, and that such information will be disclosed by the Corporation to the Corporation's registrar and transfer agent and legal counsel to the Corporation. By executing this Agreement, Maersk and Maersk UK consent to the foregoing collection, use and disclosure of such information.
- 15.4 The Parties covenant that they shall from time to time as may be reasonably requested by a Party do and perform such further acts and things and execute all such deeds, documents and writings as may be required to give effect to this Agreement.
- 15.5 Each Party shall bear its own costs and expenses incurred in connection with the negotiation and execution of this Agreement, including, without limitation, legal and other professional fees and expenses.
- 15.6 This Agreement (including the Schedules hereto and any documents referred to herein including the Definitive Agreements) represents the entire agreement between the Parties relating to the subject matter hereof, superseding the term sheet between Maersk and the Corporation dated December 23, 2016 and all other prior oral and written agreements, understanding, representations and warranties and courses of conduct and dealing between the Parties, and there are no representations, covenants or other agreements relating to the subject matter hereof except as stated or referred to herein (or in such documents referred to herein).
- 15.7 Subject to the other provisions hereof, this Agreement shall enure to the benefit of and be binding upon the Parties hereto and their respective heirs, executors, administrators, successors and permitted assigns.
- 15.8 This Agreement shall be governed by the laws of the Province of British Columbia and the federal laws of Canada applicable therein.
- 15.9 Time is of the essence hereof.
- 15.10 Neither this Agreement nor any provision hereof shall be amended, modified or changed except by an instrument in writing signed by both Parties.
- 15.11 Either Party may: (a) extend the time for the performance of any of the obligations or acts of the other Party; (b) waive compliance, except as provided herein, with any of the other Party's agreements or the fulfilment of any conditions to its own obligations contained herein; or (c) waive inaccuracies in any of the other Party's representations or warranties contained herein or in any other agreement, confirmation, instrument, certificate or other document required to be delivered pursuant to this Agreement; provided, however, that any such extension or waiver shall be valid only if set forth in an instrument in writing signed on behalf of such Party and, unless otherwise provided in the written waiver, will be limited to the specific breach or condition waived.
- 15.12 The invalidity, illegality or unenforceability of any provision of this Agreement does not affect the validity, legality or enforceability of any other provision hereof.
- 15.13 The headings used in this Agreement have been inserted for convenience of reference only and shall not affect the meaning or interpretation of this Agreement or any provision hereof.
- 15.14 This Agreement may be executed in any number of counterparts by the Parties to it on separate counterparts, each of which shall be deemed an original but all of which together shall constitute one and *the* same instrument. A PDF copy of a signature delivered electronically by email shall be deemed to be an original for the purposes of this Agreement.

**TERMS AND CONDITIONS OF SUBSCRIPTION FOR  
SHARES OF DEEPGREEN RESOURCES INC.**

**Terms of the Offering**

1. The Subscriber acknowledges (on its own behalf and, if applicable, on behalf of each person on whose behalf the Subscriber is contracting) that this subscription is irrevocable on the part of the Subscriber.
2. The Subscriber acknowledges (on its own behalf and, if applicable, on behalf of each person on whose behalf the Subscriber is contracting) that the Shares subscribed for by it hereunder form part of the issuance and sale by the Corporation of Shares at a subscription price of \$1.25 per Share pursuant to the Investment and Participation Agreement dated March 15, 2017 among Maersk Supply Service A/S (Company no. 31424377), Maersk Supply Service Subsea UK Limited (Company no. 09843677) and the Corporation (Company no. BC0901047) (the **IPA**, and such issuance and sale of Shares, the **Offering**). The Subscriber further acknowledges that the Corporation may offer or sell additional securities concurrently with the Offering or in the future.

**Representations, Warranties and Covenants of the Subscriber**

3. The Subscriber (on its own behalf and, if applicable, on behalf of each person on whose behalf the Subscriber is contracting) represents, warrants and covenants to the Corporation (and acknowledges that the Corporation and its counsel, are relying thereon) that as of the date hereof (the **Closing Date**):
  - (a) it has been independently advised as to restrictions with respect to trading in the Shares imposed by applicable securities laws, confirms that no representation (written or oral) has been made to it by or on behalf of the Corporation with respect thereto other than as set forth herein, acknowledges that it is aware of the characteristics of the Shares, the risks relating to an investment therein and of the fact that it may not be able to resell the Shares except in accordance with limited exemptions under applicable securities laws and regulatory policy until expiry of the applicable restricted period and compliance with the other requirements of applicable law; and
  - (b) it acknowledges that the Corporation is not now a “reporting issuer” under the securities laws of any province or territory in Canada, that the Corporation has no obligation to become a reporting issuer and that there is no guarantee that it will become a reporting issuer in the future; and the Subscriber further acknowledges that as a result of the Corporation not being a reporting issuer the Shares will be subject to an indefinite “restricted period” under applicable Canadian securities laws of 4 months and a day from the later of the Closing Date and the date the Corporation becomes a reporting issuer under the securities laws of any province or territory of Canada, during which time the Subscriber may not trade the Shares without filing a prospectus or being able to rely on one of the limited exemptions from the requirement to file a prospectus under applicable securities laws **and it agrees that any certificates representing the Shares may bear the following legend indicating that the resale of such securities is restricted:**

“Unless permitted under securities legislation, the holder of this security must not trade the security before the date that is 4 months and a day after the later of (i) the Closing Date, and (ii) the date the issuer became a reporting issuer in any province or territory.”

and the Subscriber further acknowledges that it has been advised to consult its own legal counsel in its jurisdiction of residence for full particulars of the resale restrictions applicable to it; and

- (c) other than the Data Room Information (as defined in the IPA), it has not received or been provided with, nor has it requested, nor does it have any need to receive, any offering memorandum, prospectus, sales or advertising literature, or any other document describing or purporting to describe the business and affairs of the Corporation which has been prepared for delivery to, and review by, prospective purchasers in order to assist them in making an investment decision in respect of the Shares; and

- (d) it has not become aware of any advertisement in printed media of general and regular paid circulation (or other printed public media), radio, television or telecommunications or other form of advertisement (including electronic display and the internet) with respect to the distribution of the Shares; and
- (e) it understands that the Shares are being offered for sale only on a “private placement” basis and that the sale and delivery of the Shares is conditional upon such sale being exempt from the requirements as to the filing of a prospectus or delivery of an offering memorandum or upon the issuance of such orders, consents or approvals as may be required to permit such sale without the requirement of filing a prospectus or delivery of an offering memorandum and, as a consequence (i) the Subscriber is restricted from using most of the civil remedies available under securities legislation, (ii) the Subscriber may not receive information that would otherwise be required to be provided to it under securities legislation, and (iii) the Corporation is relieved from certain obligations that would otherwise apply under securities legislation; and
- (f) unless it is purchasing under subsection 3(g), it is purchasing the Shares as principal for its own account, not for the benefit of any other person, for investment only and not with a view to the resale or distribution of all or any of the Shares, it is resident in, was offered the Shares in and executed this Subscription Agreement in the jurisdiction set out as the “Subscriber’s Residential Address” on the face page hereof and it (A) is an “accredited investor”, as such term is defined in National Instrument 45-106 “*Prospectus Exemptions*” (NI 45-106); (B) was not created and is not being used solely to purchase or hold securities as an accredited investor as described in paragraph (m) of the definition of “accredited investor” in NI 45-106; (C) will concurrently execute and deliver a Representation Letter in the form attached to this Subscription Agreement as Exhibit 1 and specifically represents and warrants that one or more of the categories set forth in Appendix A attached to the Representation Letter correctly, and in all respects, describes the Subscriber, and will describe the Subscriber as at the Closing Date, and the Subscriber has so indicated by initialling next to the category in such Appendix A which so describes it; or
- (g) if the Subscriber is resident in or otherwise subject to applicable securities laws in Canada and is not purchasing as principal, it is duly authorized to enter into this Subscription Agreement and to execute and deliver all documentation in connection with the purchase on behalf of each beneficial purchaser, each of whom is purchasing as principal for its own account, not for the benefit of any other person, and not with a view to the resale or distribution of all or any of the Shares, it acknowledges that the Corporation may be required by law to disclose to certain regulatory authorities the identity of each beneficial purchaser of Shares for whom it may be acting, and it and each beneficial purchaser is resident in the jurisdiction set out as the “Subscriber’s Residential Address” or the “Disclosed Beneficial Purchaser’s Residential Address”, as applicable, and the Subscriber is acting as agent for a Disclosed Beneficial Purchaser, who is disclosed on the face page of this Subscription Agreement, who is resident in the jurisdiction set out as the “Disclosed Beneficial Purchaser’s Residential Address” and who complies with subsection 3(f) hereof as if all references therein were to the Disclosed Beneficial Purchaser rather than to the Subscriber and the Subscriber has concurrently executed and delivered a Representation Letter in the form attached hereto as Exhibit 1 on behalf of such Disclosed Beneficial Purchaser (and executed and delivered Exhibit 2 if applicable) on behalf of such Disclosed Beneficial Purchaser; and
- (h) if the Subscriber or any other purchaser for whom it is acting hereunder is resident in or otherwise subject to the applicable securities laws of a jurisdiction outside of Canada, it has concurrently executed and delivered a Representation Letter in the form attached to this Subscription

Agreement as Exhibit 2 and will provide such evidence of compliance with all matters described in such Representation Letter as the Corporation or its counsel may request; and

- (i) it acknowledges that:
  - (i) no securities commission or similar regulatory authority has reviewed or passed on the merits of the Shares; and
  - (ii) there is no government or other insurance covering the Shares; and
  - (iii) there are risks associated with the purchase of the Shares; and
  - (iv) there are restrictions on the Subscriber's ability to resell the Shares and it is the responsibility of the Subscriber to find out what those restrictions are and to comply with them before selling the Shares; and
  - (v) the Corporation has advised the Subscriber that the Corporation is relying on an exemption from the requirements to provide the Subscriber with a prospectus under the *Securities Act* (British Columbia) and other applicable securities laws (the **Securities Laws**) and, as a consequence of acquiring securities pursuant to this exemption, certain protections, rights and remedies provided by the Securities Laws, including statutory rights of rescission or damages, will not be available to the Subscriber; and
  - (vi) the certificate representing the Shares will be endorsed with a legend stating that the Shares will be subject to restrictions on resale in accordance with applicable securities legislation; and
- 6) it further acknowledges that: (i) the Class B Preferred Shares of the Corporation (**Class B Shares**) have attached to them special rights or restrictions as set out in Part 28 of the Articles of the Corporation (the **Articles**), including without limitation, if, at any time within 36 months after the Issue Date (as defined in the Articles) the Corporation issues Additional Shares (as defined in the Articles) for consideration in cash that is less than the Issue Price (as defined in the Articles) (**Subsequent Financing Securities**), then each Class B Holder (as defined in the Articles) shall have the right to acquire Common Shares (the **Additional Subscription Right**) at an issue price of US\$0.05 per share (the **Additional Subscription Price**), subject to adjustment as provided in Section 28.7(4) of the Articles, being such number of Common Shares as is required to lower the average acquisition cost of the holder's Class B Shares (taken together with such Common Shares purchased by the holder at the Additional Subscription Price) to the Subsequent Financing Securities purchase price; (ii) such special rights or restrictions, including the Additional Subscription Right, do not apply to Common Shares and the Subscriber will not be entitled to any such special rights, including the Additional Subscription Right, in respect of any Common Shares held by the Subscriber; (iii) if the Subscriber holds any Class B Shares in the future and such Class B Shares have attached to them special rights or restrictions including the Additional Subscription Right, the Additional Subscription Right will not entitle the Subscriber to any such adjustment with respect to any Common Shares held by the Subscriber; (iv) the exercise of any such special rights, including the Additional Subscription Right, may negatively affect the rights of the holders of Common Shares including, without limitation, by virtue of the dilutive effect of the Additional Subscription Right; and (v) the Subscriber has been encouraged to read the Articles in their entirety including to understand the special rights or restrictions attached to the Common Shares and the Class B Shares, respectively; and
- (k) the Shares have not been offered to the Subscriber (or any person on whose behalf the Subscriber is contracting) in the United States, and any person making the order to purchase the Shares and executing and delivering this Subscription Agreement was not in the United States when the order was placed and this Subscription Agreement was executed and delivered, unless such person is a dealer or other professional fiduciary organized, incorporated, or (if an individual) resident in the United States signing on behalf of a discretionary account or similar account (other than an estate or trust) held for the benefit or account of a Disclosed Beneficial Purchaser which is not in the United States or a U.S. Person (as described below); and

- (l) it is not a U.S. Person (as defined in Regulation S under the United States *Securities Act of 1933*, as amended (the **U.S. Securities Act**), which definition includes, but is not limited to, an individual resident in the United States, an estate or trust of which any executor or administrator or trustee, respectively, is a U.S. Person and any partnership or corporation organized or incorporated under the laws of the United States) and is not purchasing the Shares on behalf of, or for the account or benefit of, a person in the United States or a U.S. Person; and
- (m) it is aware that the Shares have not been and will not be registered under the U.S. Securities Act or the securities laws of any state and that these securities may not be offered or sold in the United States without registration under the U.S. Securities Act or compliance with requirements of an exemption from registration and the applicable laws of all applicable states and acknowledges that the Corporation has no present intention of filing a registration statement under the U.S. Securities Act in respect of any of the Shares; and
- (n) it undertakes and agrees that it will not offer or sell any of the Shares in the United States unless such securities are registered under the U.S. Securities Act and the securities laws of all applicable states of the United States or an exemption from such registration requirements is available, and further that it will not resell the Shares, except in accordance with the provisions of applicable securities legislation, regulations, rules, policies and orders and stock exchange rules; and
- (o) it has not purchased the Shares as a result of any form of directed selling efforts in the United States, as such term is defined in Regulation S under the U.S. Securities Act; and
- (p) it understands and acknowledges that the Corporation (i) is under no obligation to be or to remain a “foreign issuer”, as such term is defined in the U.S. Securities Act, (ii) may not, at the time the Subscriber sells the Shares or at any other time, be a foreign issuer, and (iii) may engage in one or more transactions that could cause the Corporation not to be a foreign issuer; and
- (q) it pre-existed the offering of the Shares and has a bona fide business purpose other than the investment in the Shares and was not created, formed or established solely or primarily to acquire securities, or to permit purchases of securities without a prospectus, in reliance on an exemption from the prospectus requirements of applicable securities legislation; and
- (r) it is a corporation, partnership, trust, unincorporated association or other entity and it has the legal capacity to enter into and be bound by this Subscription Agreement and further certifies that all necessary approvals of directors, trustees, fiduciaries, shareholders, partners, stakeholders, holders of voting securities or otherwise have been given and obtained; and
- (s) the entering into of this Subscription Agreement and the transactions contemplated hereby will not result in a violation of any of the terms or provisions of any law applicable to the Subscriber (or any person on whose behalf the Subscriber is contracting), or if the Subscriber (or any person on whose behalf the Subscriber is contracting) is not a natural person, any of such person’s constating documents, or any agreement to which such person is a party or by which it is bound; and
- (t) this Subscription Agreement has been duly and validly authorized, executed and delivered by and constitutes a legal, valid, binding and enforceable obligation of the Subscriber; and

- (u) in the case of a subscription by it for Shares acting as agent for a principal, it is duly authorized to execute and deliver this Subscription Agreement and all other necessary documentation in connection with such subscription on behalf of such principal and this Subscription Agreement has been duly authorized, executed and delivered by or on behalf of, and constitutes a legal, valid and binding agreement of, such principal; and
- (v) it has such knowledge and experience in financial and business affairs as to be capable of evaluating the merits and risks of its investment in the Shares and is able to, and agrees to, bear the economic risk of loss of its investment or, where it is not purchasing as principal, each beneficial purchaser is able to, and agrees to, bear the economic risk of loss of its investment; and
- (w) it has relied solely upon publicly available information relating to the Corporation and not upon any verbal or written representation as to fact or otherwise made by or on behalf of the Corporation; and
- (x) it acknowledges that the Corporation's counsel is acting as counsel to the Corporation and not as counsel to the Subscriber (or any person on whose behalf the Subscriber is contracting); and
- (y) if required by applicable securities legislation, regulations, rules, policies or orders or by any securities commission, stock exchange or other regulatory authority, the Subscriber will execute, deliver, file and otherwise assist the Corporation in filing, such reports, undertakings and other documents with respect to the issue of the Shares; and
- (z) no person has made to the Subscriber (or any person on whose behalf the Subscriber is contracting) any written or oral representations (i) that any person will resell or repurchase the Shares (except in accordance with the articles of the Corporation), or (ii) that any person will refund the purchase price of the Shares, or (iii) as to the future price or value of the Shares, or (iv) as to any of the Shares being issued pursuant to this Subscription Agreement being listed on any stock exchange; and
- (aa) in connection with the matters that are the subject of this Subscription Agreement, the Subscriber has not committed a violation of the *Corruption of Foreign Public Officials Act* (Canada) or other applicable foreign corrupt practice legislation and the Aggregate Subscription Price which will be advanced by the Subscriber to the Corporation hereunder have not been sourced in violation of such legislation and will not represent proceeds of crime for the purposes of the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act* (Canada) (the **PCMLA**) or otherwise contravene the PCMLA and the Subscriber acknowledges that the Corporation may in the future be required by law to disclose the Subscriber's name and other information relating to this Subscription Agreement and the Subscriber's subscription hereunder, on a confidential basis, pursuant to the PCMLA; and to the best of its knowledge (i) none of the subscription funds to be provided by the Subscriber (A) have been or will be derived from or related to any activity that is deemed criminal under the laws of Canada, the United States of America, or any other jurisdiction, or (B) are being tendered on behalf of a person or entity who has not been identified to the Subscriber, and (ii) it shall promptly notify the Corporation if the Subscriber discovers that any of such representations ceases to be true, and to provide the Corporation with appropriate information in connection therewith;
- (bb) the Subscriber (including any person on whose behalf the Subscriber is contracting) has been encouraged to obtain independent legal, income tax and investment advice with respect to this subscription for Shares and accordingly, has had the opportunity to acquire an understanding of the meanings of all terms contained herein relevant to the Subscriber (and each person on whose behalf the Subscriber is contracting) for purposes of giving representations, warranties and covenants under this Subscription Agreement.

## Closing

4. The Subscriber agrees to deliver to the Corporation this duly completed and executed Subscription Agreement, including all applicable exhibits, on the Closing Date.
5. The Corporation shall be entitled to rely on an executed copy of this Subscription Agreement delivered via facsimile or electronically (including e-mail), and acceptance by the Corporation of such executed copy of this Subscription Agreement shall be legally effective to create a valid and binding agreement between the Subscriber and the Corporation in accordance with the terms hereof. In addition, this Subscription Agreement may be executed in counterparts, each of which shall be deemed to be an original and all of which shall constitute one and the same document. If less than a complete copy of this Subscription Agreement is delivered to the Corporation, the Corporation shall be entitled to assume that the Subscriber accepts and agrees with all of the terms and conditions of this Subscription Agreement unaltered on the pages not delivered.

## General

6. The Subscriber, on its own behalf and (if applicable) on behalf of others for whom it is contracting hereunder, agrees that the representations, warranties and covenants of the Subscriber herein will be true and correct both as of the Subscriber's execution of this Subscription Agreement and as of the Closing Date. The representations, warranties and covenants of the Subscriber herein are made with the intent that they be relied upon by the Corporation and its counsel in determining the eligibility of a purchaser of Shares and the Subscriber agrees to indemnify and save harmless the Corporation and its affiliates, shareholders, directors, officers, employees, counsel and agents against all losses, claims, costs, expenses and damages or liabilities which any of them may suffer or incur which are caused or arise from a breach thereof. The Subscriber undertakes to immediately notify the Corporation of any change in any statement or other information relating to the Subscriber set forth herein which takes place prior to the Closing Date.
7. The Subscriber acknowledges that this Subscription Agreement and the exhibits hereto require the Subscriber to provide certain personal information to the Corporation. Such information is being collected by the Corporation for the purposes of completing the Offering, which includes, without limitation, determining the Subscriber's eligibility to purchase the Shares under applicable securities laws, preparing and registering certificates representing the Shares to be issued to the Subscriber and completing filings required by relevant securities regulatory authorities including the British Columbia Securities Commission, as applicable. The Subscriber's personal information will also be included in closing books prepared in connection with the Offering and may be disclosed now or in the future by the Corporation to one or more of the following: (i) stock exchanges and securities regulatory authorities; (ii) the Corporation's registrar and transfer agent; (iii) Canadian tax authorities; (iv) any of the other parties involved in the Offering, including legal counsel; and (v) other parties subsequent to the Offering, including legal counsel, reviewing closing books prepared in connection with the Offering in furtherance of a business transaction or other legitimate business purpose of the Corporation. By executing this Subscription Agreement, the Subscriber:
  - (a) acknowledges that it has been notified by the Corporation:
    - (i) that the Corporation may be required to deliver to the relevant securities regulatory authorities or regulators the full name, residential address, telephone number and email address of the Subscriber, the number and type of securities purchased, the total purchase price, the date of distribution, whether or not the Subscriber is an insider of the Corporation or a registrant and the exemption relied upon;
    - (ii) that this information is being collected by the various securities regulatory authorities or regulators under the authority granted in securities legislation;

- (●) that this information is being collected for the purposes of the administration and enforcement of the securities legislation of the local jurisdiction; and
  - (i) that the contact information of the public official in the local jurisdiction who can answer questions about the security regulatory authority's or regulator's indirect collection of this information can be found in Schedule B to this Subscription Agreement;
  - (b) consents to the collection, use and disclosure of the Subscriber's personal information described in this Section 7; and
  - (c) consents to the filing of copies or originals of any of the Subscriber's documents delivered in connection with this Subscription Agreement as may be required to be filed with any stock exchange or securities regulatory authority in connection with the transactions contemplated hereby.
8. The Subscriber acknowledges and agrees that all costs incurred by the Subscriber (including any fees and disbursements of any counsel retained by the Subscriber) relating to the sale of the Shares to the Subscriber shall be borne by the Subscriber.
9. The Subscriber acknowledges that it has consented to and requested that all documents evidencing or relating in any way to the sale of the Shares be drawn up in the English language only. Le soussigné reconnaît par les présentes avoir consenti et exige que tous les documents faisant foi ou se rapportant de quelque manière à la vente d'actions soient rédigés en anglais seulement.
10. The contract arising out of this Subscription Agreement and all documents relating thereto is governed by and construed in accordance with the laws of the Province of British Columbia and the federal laws of Canada applicable therein.
11. Any dispute, controversy or claim (a **Dispute**) arising out of or relating to this Agreement, or the breach, termination or invalidity thereof, shall be settled by arbitration in accordance with the provisions of the UNCITRAL Arbitration Rules as adopted in 2013 and as may be further revised or adopted prior to the date of a Dispute (the **Rules**) and the following: (i) the arbitration shall be heard by an arbitral tribunal consisting of three arbitrators, with each Party having the right to appoint one arbitrator and the two so appointed arbitrators appointing the third arbitrator who shall act as chair; (ii) the place of arbitration shall be Vancouver, British Columbia; (iii) the language to be used in the arbitration proceedings shall be English; and (iv) the Parties hereby waive their right to any form of recourse against an award to any court or other competent authority, insofar as such waiver can validly be made under the applicable law. Except as set forth herein, where:
- (a) a Dispute has been referred to arbitration (an **Existing Dispute**) under this Agreement, the Preferred Share Purchase Option Agreement (as defined in the **IPA**), the Protective Non-Disclosure Agreement (as defined in the **IPA**), a BIMCO (as defined in the **IPA**) or the **IPA** (each, a **Definitive Agreement**); and
  - (b) a new Dispute has arisen under a Definitive Agreement relating either to issues or to facts which are substantially the same as those to be determined in an Existing Dispute (a **Related Dispute**),

then (i) the Parties may agree that the three arbitrators appointed or to be appointed in respect of such Existing Dispute shall also be appointed in respect of such Related Dispute; or (ii) if three arbitrators have been appointed in the Existing Dispute, and no arbitrators have been appointed in a Related Dispute or is composed of the same arbitrators as in the Existing Dispute, the three arbitrators in the Existing Dispute shall have the power, upon the request of a Party to the Existing Dispute or a Related Dispute, to order the consolidation of the whole or part of both sets of arbitration proceedings in accordance with the Rules; provided in either case the three arbitrators determine that it would be just and equitable and procedurally efficient to do so and no Party to either the Existing Dispute or the Related Dispute would be materially prejudiced as a result. Notwithstanding the foregoing, the Parties agree that any Dispute arising out of or relating to Marine Cruise Costs (as defined in the **IPA**) or a BIMCO (or the breach, termination or invalidity thereof) shall be settled in accordance with the applicable BIMCO.

12. Time is of the essence hereof.
13. This Subscription Agreement (including the exhibits) and the Agreement constitutes the entire agreement of the parties hereto relating to the subject matter hereof, superseding all prior oral and written agreements, understanding, representations and warranties and courses of conduct and dealing between the parties, and there are no representations, covenants or other agreements relating to the subject matter hereof except as stated or referred to herein.
14. The terms and provisions of this Subscription Agreement are binding upon and enure to the benefit of the Subscriber and the Corporation and their respective heirs, executors, administrators, successors and assigns; provided that, except as otherwise provided in the Agreement, this Subscription Agreement is not assignable by any party hereto without prior written consent of the other parties.
15. Neither this Subscription Agreement nor any provision hereof shall be modified, changed, discharged or terminated except by an instrument in writing signed by the party against whom any waiver, change, discharge or termination is sought.
16. The invalidity, illegality or unenforceability of any provision of this Subscription Agreement does not affect the validity, legality or enforceability of any other provision hereof.
17. Either Party may: (a) extend the time for the performance of any of the obligations or acts of the other Party; (b) waive compliance, except as provided herein, with any of the other Party's agreements or the fulfilment of any conditions to its own obligations contained herein; or (c) waive inaccuracies in any of the other Party's representations or warranties contained herein or in any other agreement, confirmation, instrument, certificate or other document required to be delivered pursuant to this Subscription Agreement; provided, however, that any such extension or waiver shall be valid only if set forth in an instrument in writing signed on behalf of such Party and, unless otherwise provided in the written waiver, will be limited to the specific breach or condition waived.
18. Each of the Parties acknowledges and agrees that the representations, warranties and covenants set out in this Subscription Agreement will not merge upon the completion of any In-kind Common Share Investment (as defined in the IPA) or the grant of the Preferred Share Purchase Option pursuant to the Preferred Share Purchase Option Agreement or the issuance of any Option Shares upon exercise of the Preferred Share Purchase Option pursuant to the Preferred Share Purchase Option Agreement, but will survive until completion of the final In-kind Common Share Investment in connection with the final Marine Cruise (as defined in the IPA), being Marine Cruise 7. **Preferred Share Purchase Option and Option Shares** have the same meaning as set forth in the Preferred Share Purchase Option Agreement.
19. Each Party agrees to indemnify and save harmless the other Party and its respective Affiliates, shareholders, directors, officers, employees, counsel and agents (**Indemnified Persons**) against all losses, claims, costs, expenses and damages or liabilities (but excluding loss of profits, incidental and consequential damages and diminution in value) which any Indemnified Person may suffer or incur which are caused or arise from a breach by that Party of its representations, warranties and covenants herein.
20. The headings used in this Subscription Agreement have been inserted for convenience of reference only and shall not affect the meaning or interpretation of this Subscription Agreement or any provision hereof.
21. In this Subscription Agreement (including the exhibits), all references to \$ are to U.S. dollars unless otherwise stated.
22. This Subscription Agreement may be executed in any number of counterparts by the Parties to it on separate counterparts, each of which shall be deemed an original but all of which together shall constitute one and the same instrument. A PDF copy of a signature delivered electronically by email shall be deemed to be an original for the purposes of this Agreement.

**SCHEDULE A  
DEFINITIONS**

In this Subscription Agreement (including the exhibits attached to this Subscription Agreement), the following terms have the following meanings:

**affiliate** means an issuer connected with another issuer because

- (a) one of them is the subsidiary of the other, or
- (b) each of them is controlled by the same person;

**bank** means a bank named in Schedule I or II of the *Bank Act* (Canada);

**Canadian financial institution** means

- (a) an association governed by the *Cooperative Credit Associations Act* (Canada) or a central cooperative credit society for which an order has been made under section 473(1) of that Act, or
- (c) a bank, loan corporation, trust company, trust corporation, insurance company, treasury branch, credit union, caisse populaire, financial services cooperative, or league that, in each case, is authorized by an enactment of Canada or a jurisdiction of Canada to carry on business in Canada or a jurisdiction of Canada;

**control person** means

- (a) a person or company who holds a sufficient number of the voting rights attached to all outstanding voting securities of an issuer to affect materially the control of the issuer, and if a person or company holds more than 20% of the voting rights attached to all outstanding voting securities of an issuer, the person or company is deemed, in the absence of evidence to the contrary, to hold a sufficient number of the voting rights to affect materially the control of the issuer, or
- (b) each person or company in a combination of persons or companies acting in concert by virtue of an agreement, arrangement, commitment or understanding, who holds in total a sufficient number of the voting rights attached to all outstanding voting securities of an issuer to affect materially the control of the issuer, and if a combination of persons or companies holds more than 20% of the voting rights attached to all outstanding voting securities of an issuer, the combination of persons or companies is deemed, in the absence of evidence to the contrary, to hold a sufficient number of the voting rights to affect materially the control of the issuer;

**director** means

- (a) a member of the board of directors of a company or an individual who performs similar functions for a company, and
- (b) with respect to a person that is not a company, an individual who performs functions similar to those of a director of a company;

**eligibility adviser** means

- (a) a person that is registered as an investment dealer and authorized to give advice with respect to the type of security being distributed, and
- (b) in Manitoba, also means a lawyer who is a practicing member in good standing with a law society of a jurisdiction of Canada or a public accountant who is a member in good standing of an institute or association of chartered accountants, certified general accountants or certified management accountants in a jurisdiction of Canada provided that the lawyer or public accountant must not:
  - (i) have a professional, business or personal relationship with the issuer, or any of its directors, executive officers, founders, or control persons, and
  - (ii) have acted for or been retained personally or otherwise as an employee, executive officer, director, associate or partner of a person that has acted for or been retained by the issuer or any of its directors, executive officers, founders or control persons within the previous 12 months;

**executive officer** means, for an issuer, an individual who is

- (a) a chair, vice-chair or president,
- (b) a vice-president in charge of a principal business unit, division or function including sales, finance or production, or
- (c) performing a policy-making function in respect of the issuer;

**financial assets** means

- (a) cash,
- (b) securities, or
- (c) a contract of insurance, a deposit or an evidence of a deposit that is not a security for the purposes of securities legislation;

**foreign jurisdiction** means a country other than Canada or a political subdivision of a country other than Canada;

**founder** means, in respect of an issuer, a person who,

- (a) acting alone, in conjunction, or in concert with one or more persons, directly or indirectly, takes the initiative in founding, organizing or substantially reorganizing the business of the issuer, and
- (b) at the time of the distribution or trade is actively involved in the business of the issuer;

**fully managed account** means an account of a client for which a person makes the investment decisions if that person has full discretion to trade in securities for the account without requiring the client's express consent to a transaction;

**holding entity** means a person that is controlled by an individual;

**individual** means a natural person, but does not include

- (a) a partnership, unincorporated association, unincorporated syndicate, unincorporated organization or a trust, or

- (b) a natural person in the person's capacity as trustee, executor, administrator or other legal personal representative;

insider means:

- (a) a director or officer of the Corporation;
- (b) a director or officer of a person or company that is itself an insider or subsidiary of the Corporation;
- (c) a person or company that has
  - (i) beneficial ownership of, or control or direction over, directory or indirectly, or
  - (ii) a combination of beneficial ownership of and control or direction over, directly or indirectly,

securities of the Corporation carrying more than 10% of the voting rights attached to all of the Corporation's outstanding voting securities, excluding, for the purpose of the calculation of the percentage held, any securities held by the person or company as underwriter in the course of a distribution;

- (d) a person designated as an insider in an order made by a securities commission; or
- (e) a person that is in a prescribed / designated class of persons;

**investment fund** means a mutual fund or a non-redeemable investment fund, and, for greater certainty in British Columbia, includes an employee venture capital corporation that does not have a restricted constitution, and is registered under Part 2 of the *Employee Investment Act* (British Columbia) and whose business objective is making multiple investments and a venture capital corporation registered under Part 1 of the *Small Business Venture Capital Act* (British Columbia) whose business objective is making multiple investments;

**local jurisdiction** means the province or territory of Canada in which the applicable Canadian securities regulatory authority is situate;

**mutual fund** has the meaning ascribed to it under the securities legislation of the local jurisdiction; **non-redeemable investment fund** means an issuer,

- (a) whose primary purpose is to invest money provided by its securityholders,
- (b) that does not invest:
  - (i) for the purpose of exercising or seeking to exercise control of an issuer, other than an issuer that is a mutual fund or a non-redeemable investment fund, or
  - (ii) for the purpose of being actively involved in the management of any issuer in which it invests, other than an issuer that is a mutual fund or a non-redeemable investment fund, and
- (c) that is not a mutual fund;

**person** includes

- (a) an individual,
- (b) a corporation,
- (c) a partnership, trust, fund and an association, syndicate, organization or other organized group of persons, whether incorporated or not, and
- (d) an individual or other person in that person's capacity as a trustee, executor, administrator or personal or other legal representative;

**promoter** means

- (a) a person or company, acting alone or in conjunction with one or more other persons or companies or a combination of them, that, directly or indirectly, takes the initiative in founding, organizing or substantially reorganizing the business of the issuer, or
- (b) a person or company that, directly or indirectly, receives in consideration of services or property, or both,
  - (i) 10% or more of any class of securities of the issuer, or
  - (ii) 10% or more of the proceeds from the sale of any class of securities of a particular issue, in connection with the founding, organizing or substantial reorganizing of the business of the issuer, but does not include a person or company that receives securities or proceeds solely
  - (iii) as underwriting commissions, or
  - (iv) in consideration of property transferred to the issuer,

if that person or company does not otherwise take part in founding, organizing or substantially reorganizing the business;

**registrant** means a person registered or required to be registered under any securities legislation in Canada;

**regulator** means, for the local jurisdiction, the person referred to in Appendix D of National Instrument 14-101 and includes: (i) in Alberta, the Executive Director as defined under section 1 of the *Securities Act* (Alberta), (ii) in Ontario, the Director as defined under section 1 of the *Securities Act* (Ontario), and (iii) in British Columbia, the Executive Director as defined under section 1 of the *Securities Act* (British Columbia);

**related entity** means, for an issuer, a person that controls or is controlled by the issuer or that is controlled by the same person that controls the issuer;

**related liabilities** means

- (a) liabilities incurred or assumed for the purpose of financing the acquisition or ownership of financial assets, or
- (b) liabilities that are secured by financial assets;

**Schedule III bank** means an authorized foreign bank named in Schedule III of the *Bank Act* (Canada);

**securities regulatory authority** means, for the local jurisdiction, the securities commission or similar regulatory authority listed in Appendix C of National Instrument 14-101, and includes the Alberta Securities Commission, the Ontario Securities Commission and the British Columbia Securities Commission;

**spouse** means an individual who,

- (a) is married to another individual and is not living separate and apart within the meaning of the *Divorce Act* (Canada), from the other individual,
- (b) is living with another individual in a marriage-like relationship, including a marriage-like relationship between individuals of the same gender, or
- (c) in Alberta, is an individual referred to in paragraph (a) or (b), or is an adult interdependent partner within the meaning of the *Adult Interdependent Relationships Act* (Alberta); and

**subsidiary** means an issuer that is controlled directly or indirectly by another issuer and includes a subsidiary of that subsidiary.

### **Control**

Other than in respect of the definitions of “holding entity” or “related entity” above, a person (first person) is considered to control another person (second person) if

- (a) the first person beneficially owns or, directly or indirectly exercises control or direction over securities of the second person carrying votes which, if exercised, would entitle the first person to elect a majority of the directors of the second person, unless that first person holds the voting securities only to secure an obligation,
- (b) the second person is a partnership, other than a limited partnership, and first person holds more than 50% of the interests of the partnership, or
- (c) the second person is a limited partnership and the general partner of the limited partnership is the first person.

In respect of the definitions of “holding entity” and “related entity” above, a person (first person) is considered to control another person (second person) if the first person, directly or indirectly, has the power to direct the management and policies of the second person by virtue of

- (a) ownership of or direction over voting securities in the second person,
- (b) a written agreement or indenture,
- (c) being the general partner or controlling the general partner of the second person, or
- (d) being a trustee of the second person.

**EXHIBIT 1**

**REPRESENTATION LETTER  
(FOR ACCREDITED INVESTORS)**

**TO: DeepGreen Resources Inc. (the Corporation)**

*(Capitalized terms not specifically defined in this Exhibit have the meaning ascribed to them in the Subscription Agreement to which this Exhibit is attached.)*

In connection with the execution by the undersigned Subscriber of the Subscription Agreement of which this Representation Letter forms a part, the undersigned Subscriber hereby represents, warrants, covenants and certifies to the Corporation that:

1. the undersigned Subscriber is resident in the jurisdiction set out as the "Subscriber's Residential Address" on the face page of the Subscription Agreement and if the undersigned Subscriber is purchasing as agent for a Disclosed Beneficial Purchaser, the Disclosed Beneficial Purchaser is resident in the jurisdiction set out as the "Disclosed Beneficial Purchaser's Residential Address" on the face page of the Subscription Agreement;
2. the undersigned Subscriber is either (a) purchasing the Shares as principal for its own account, or (b) acting as agent for a Disclosed Beneficial Purchaser who is purchasing the Shares as principal for its own account;
3. the undersigned Subscriber (or if the undersigned Subscriber is purchasing as agent for a Disclosed Beneficial Purchaser, the Disclosed Beneficial Purchaser) is an "accredited investor" within the meaning of National Instrument 45-106 "Prospectus Exemptions" (NI 45-106) by virtue of satisfying the indicated criterion as set out in Appendix A to this Representation Letter;
4. the undersigned Subscriber (or if the undersigned Subscriber is purchasing as agent for a Disclosed Beneficial Purchaser, the Disclosed Beneficial Purchaser) was not created, and is not used, solely to purchase or hold securities as an accredited investor as described in paragraph (m) of the definition of "accredited investor" in NI 45-106; and
5. upon execution of this Representation Letter by the undersigned Subscriber, this Representation Letter, including Appendix A hereto, shall be incorporated into and form a part of the Subscription Agreement.

**IMPORTANT: PLEASE INITIAL THE APPLICABLE PROVISION(S) IN  
APPENDIX A ON THE FOLLOWING PAGES**

APPENDIX A

TO EXHIBIT 1

In this Appendix A all monetary references are in Canadian Dollars.

**NOTE: PLEASE MARK YOUR INITIALS BESIDE THE APPLICABLE CATEGORY OR CATEGORIES OF “ACCREDITED INVESTOR” TO WHICH YOU BELONG.**

**Accredited Investor** (as defined in NI 45-106) means:

- (a) (i) except in Ontario, a Canadian financial institution, or a Schedule III bank; or
  - (ii) in Ontario, (A) a bank listed in Schedule I, II or III to the *Bank Act* (Canada); (B) an association to which the *Cooperative Credit Association Act* (Canada) applies or a central cooperative credit society for which an order has been made under subsection 473(1) of that Act; or (C) a loan corporation, trust company, trust corporation, insurance company, treasury branch, credit union, caisse populaire, financial services cooperative or credit union league or federation that is authorized by a statute of Canada or Ontario to carry on business in Canada or Ontario, as the case may be;
- \_\_\_\_\_ (b) the Business Development Bank of Canada incorporated under the *Business Development Bank of Canada Act* (Canada);
- \_\_\_\_\_ (c) a subsidiary of any person referred to in paragraphs (a) or (b), if the person owns all of the voting securities of the subsidiary, except the voting securities required by law to be owned by directors of that subsidiary;
- \_\_\_\_\_ (d) a person registered under the securities legislation of a jurisdiction of Canada as an adviser or dealer, except as otherwise prescribed by the regulations;
- \_\_\_\_\_ (e) an individual registered under the securities legislation of a jurisdiction of Canada as a representative of a person referred to in paragraph (d);
  - (e.1) an individual formerly registered under the securities legislation of a jurisdiction of Canada, other than an individual formerly registered solely as a representative of a limited market dealer under one or both of the *Securities Act* (Ontario) or the *Securities Act* (Newfoundland and Labrador);
- \_\_\_\_\_ (f) the Government of Canada or a jurisdiction of Canada, or any crown corporation, agency or wholly owned entity of the Government of Canada or a jurisdiction of Canada;
- \_\_\_\_\_ (g) a municipality, public board or commission in Canada and a metropolitan community, school board, the Comité de gestion de la taxe scolaire de l'île de Montreal or an intermunicipal management board in Quebec;
- \_\_\_\_\_ (h) any national, federal, state, provincial, territorial or municipal government of or in any foreign jurisdiction, or any agency of that government;
- \_\_\_\_\_ (i) a pension fund that is regulated by the Office of the Superintendent of Financial Institutions (Canada), a pension commission or similar regulatory authority of a jurisdiction of Canada;
- \_\_\_\_\_ (j) an individual who, either alone or with a spouse, beneficially owns financial assets having an aggregate realizable value that, before taxes, but net of any related liabilities, exceeds \$1,000,000;

\_\_\_\_\_ (j.1) an individual who beneficially owns financial assets having an aggregate realizable value that, before taxes but net of any related liabilities, exceeds \$5,000,000;

\_\_\_\_\_ (k) an individual whose net income before taxes exceeded \$200,000 in each of the two most recent calendar years or whose net income before taxes combined with that of a spouse exceeded \$300,000 in each of the two most recent calendar years and who, in either case, reasonably expects to exceed that net income level in the current calendar year;

*(Note: if individual accredited investors wish to purchase through wholly-owned holding companies or similar entities, such purchasing entities must qualify under section (t) below, which must be initialled.)*

\_\_\_\_\_ (l) an individual who, either alone or with a spouse, has net assets of at least \$5,000,000;

\_\_\_\_\_ (m) a person, other than an individual or investment fund, that has net assets of at least \$5,000,000 as shown on its most recently prepared financial statements;

\_\_\_\_\_ (n) an investment fund that distributes or has distributed its securities only to

(i) a person that is or was an accredited investor at the time of the distribution,

(ii) a person that acquires or acquired securities in the circumstances referred to in sections 2.10 (minimum amount investment) or 2.19 (additional investment in investment funds) of NI 45-106, or

(iii) a person described in paragraph (i) or (ii) that acquires or acquired securities under section 2.18 (investment fund reinvestment) of NI 45-106;

\_\_\_\_\_ (o) an investment fund that distributes or has distributed securities under a prospectus in a jurisdiction of Canada for which the regulator or, in Quebec, the securities regulatory authority, has issued a receipt;

\_\_\_\_\_ (p) a trust company or trust corporation registered or authorized to carry on business under the *Trust and Loan Companies Act* (Canada) or under comparable legislation in a jurisdiction of Canada or a foreign jurisdiction, acting on behalf of a fully managed account managed by the trust company or trust corporation, as the case may be;

\_\_\_\_\_ (q) a person acting on behalf of a fully managed account managed by that person, if that person is registered or authorized to carry on business as an adviser or the equivalent under the securities legislation of a jurisdiction of Canada or a foreign jurisdiction;

\_\_\_\_\_ (r) a registered charity under the *Income Tax Act* (Canada) that, in regard to the trade, has obtained advice from an eligibility adviser or an adviser registered under the securities legislation of the jurisdiction of the registered charity to give advice on the securities being traded;

\_\_\_\_\_ (s) an entity organized in a foreign jurisdiction that is analogous to any of the entities referred to in paragraphs (a) to (d) or paragraph (i) in form and function;

\_\_\_\_\_ (t) a person in respect of which all of the owners of interests, direct, indirect or beneficial, except the voting securities required by law to be owned by directors, are persons that are accredited investors (as defined in NI 45-106);

\_\_\_\_\_ (u) an investment fund that is advised by a person registered as an adviser or a person that is exempt from registration as an adviser;

\_\_\_\_\_ (v) a person that is recognized or designated by the securities regulatory authority or, except in Ontario and Quebec, the regulator as an accredited investor; or

\_\_\_\_\_ (w) a trust established by an accredited investor for the benefit of the accredited investor's family members of which a majority of the trustees are accredited investors and all of the beneficiaries are the accredited investor's spouse, a former spouse of the accredited investor or a parent, grandparent, brother, sister, child or grandchild of that accredited investor, of that accredited investor's spouse or of that accredited investor's former spouse.

EXHIBIT 2

REPRESENTATION LETTER

(FOR NON-CANADIAN RESIDENT INVESTORS  
EXCLUDING U.S. PERSONS)

**TO:** DeepGreen Resources Inc. (the **Corporation**)

*(Capitalized terms not specifically defined in this Exhibit have the meaning ascribed to them in the Subscription Agreement to which this Exhibit is attached)*

In connection with the execution by the undersigned Subscriber of the Subscription Agreement which this Representation Letter forms a part of, the undersigned Subscriber hereby represents, warrants, covenants and certifies to the Corporation that:

1. The undersigned Subscriber and (if applicable) any other purchaser for whom it is acting hereunder, is resident in the jurisdiction set out as the “Subscriber’s Residential Address” on the face page of the Subscription Agreement (the **Foreign Jurisdiction**) and the undersigned Subscriber certifies that it and (if applicable) any other purchaser for whom it is acting hereunder is not resident in or otherwise subject to applicable securities laws of any province or territory of Canada.
2. The undersigned Subscriber and (if applicable) any other purchaser for whom it is acting hereunder, is a purchaser which is purchasing the Shares pursuant to an exemption from any prospectus or securities registration or similar requirements under the applicable securities laws of the Foreign Jurisdiction or any other securities laws to which the Subscriber and (if applicable) any other purchaser for whom the Subscriber is acting hereunder are otherwise subject.
3. If the undersigned Subscriber, or any other purchaser for whom it is acting hereunder, is resident in or otherwise subject to applicable securities laws of a member state (**Member State**) of the European Economic Area (**EEA**) which has implemented Directive 2003/71/EC (the **Prospectus Directive**) other than the United Kingdom, the Subscriber (as principal for its own account or acting as agent for a Disclosed Beneficial Purchaser who is disclosed on the face page of the Subscription Agreement) represents and warrants that it is either:
  - (a) a qualified investor within the meaning of the law in that Member State of the EEA which implements Article 2(1)(e) of the Prospectus Directive; and (2) is not acting as a financial intermediary as that term is used in Article 3(2) of the Prospectus Directive, or, if so acting (i) the Shares which it proposes to acquire are not being acquired on behalf of, nor are they being acquired with a view to their offer or resale to, persons in a Member State of the EEA other than qualified investors as defined in the Prospectus Directive or persons who have agreed to purchase at least €100,000 worth of Shares; or (ii) where it proposes to acquire Shares on behalf of persons in a Member State of the EEA other than qualified investors or persons who have agreed to purchase at least €100,000 worth of Shares, the offer of those Shares to it is not treated under the Prospectus Directive as having been made to such persons; or
  - (b) not a qualified investor within the meaning of the law in that Member State of the EEA which implements Article 2(1)(e) of the Prospectus Directive; and is purchasing at least €100,000 worth of Shares

(collectively, a **permitted participant**).

4. If the undersigned Subscriber, or any other purchaser for whom it is acting hereunder, is resident in or otherwise subject to applicable securities laws of the United Kingdom:
- (a) the Subscriber is either: (i) purchasing the Shares as principal for its own account, (ii) acting as agent for a Disclosed Beneficial Purchaser who is disclosed on the face page of the Subscription Agreement and who is purchasing the Shares as principal for its own account; or (iii) purchasing the Shares on behalf of discretionary client(s) in circumstances where section 86(2) of the Financial Services and Markets Act 2000 (as amended by the Financial Services Act 2012) (**FSMA**) applies;
  - (b) the Subscriber (and if the undersigned Subscriber is purchasing as agent for a Disclosed Beneficial Purchaser, the Disclosed Beneficial Purchaser) is a person in the United Kingdom who: (i) is a permitted participant, (ii) is a “qualified investor” for the purposes of section 86(7) of the FSMA, (iii) is such a person as is referred to in Article 19 (investment professionals) or Article 49 (high net worth companies, unincorporated associations, etc.) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005; and (iv) has complied with and undertakes **to** comply with all applicable provisions of the FSMA and other applicable securities laws with respect to anything done by it in relation to the Shares in, from or otherwise involving the United Kingdom; and
  - (c) it confirms that, to the extent applicable to it, it is aware of, has complied and will comply with its obligations in connection with the Criminal Justice Act 1993, the Proceeds of Crime Act 2002 and Part VIII of the FSMA, it has identified its clients in accordance with the Money Laundering Regulations 2007 (the **Regulations**) and has complied fully with its obligations pursuant to the Regulations and will, as a condition precedent of any acceptance of this subscription, provide all such information and documents as may be required in relation to it (or any person on whose behalf it is acting as agent) that may be required by the Corporation or any agent or person acting for it in order to discharge any obligations under the Regulations.
5. The purchase of Shares by the Subscriber, and any other purchaser for whom it is acting hereunder, does not contravene any of the applicable securities laws in the Foreign Jurisdiction or any other securities laws to which the Subscriber and (if applicable) any other purchaser for whom the Subscriber is acting hereunder are otherwise subject and does not result in: (i) any obligation of the Corporation to prepare and file a prospectus, an offering memorandum or similar document; or (ii) any obligation of the Corporation to make any filings with or seek any approvals of any kind from any regulatory body in such jurisdiction or any other ongoing reporting requirements with respect to such purchase or otherwise; or (iii) any registration or other obligation on the part of the Corporation under the applicable securities laws in the Foreign Jurisdiction or any other securities laws to which the Subscriber and (if applicable) any other purchaser for whom the Subscriber is acting hereunder are otherwise subject.
6. The Shares are being acquired for investment purposes only and not with a view to the resale or distribution of all or any of the Shares.
7. The Subscriber, and any other purchaser for whom it is acting hereunder, are knowledgeable of, and have been independently advised as to, the securities laws of the Foreign Jurisdiction or any other securities laws to which the Subscriber and (if applicable) any other purchaser for whom the Subscriber is acting hereunder are otherwise subject.

8. Upon execution of this Exhibit by the undersigned Subscriber, this Exhibit shall be incorporated into and form a part of the Subscription Agreement.

**PROJECT MANAGEMENT**

**FRAMEWORK AGREEMENT**

**Maersk Supply Service Integrated Solutions A/S**

**AND**

**Nauru Ocean Resources Inc**

---

## SECTION 1: FORM OF AGREEMENT

This Agreement is entered into on 6 April 2018 (**Effective Date**)

### Parties

**Maersk Supply Service Integrated Solutions A/S** with registered address at Esplanaden 50, 1263 Copenhagen K, Denmark with company reg. no.: 38417622 (**Project Manager**);

and

**Nauru Ocean Resources Inc.**, a company incorporated in the Republic of Nauru with registered address c/ DeepGreen Resources Inc. 10th Floor, 595 Howe Street, Vancouver, British Columbia V6C 2T5, Canada and company reg. no. 1-2028 (**Company**),

each referred to as a Party or collectively as the Parties.

### RECITALS

- A. The Company is the registered holder, and the legal and beneficial holder, of the ISA Contract.
- B. Company wishes to carry out Operations within the Contract Area and requires Services in relation to such Operations.
- C. The Parties wish to enter into this Agreement to appoint the Project Manager to perform the Services and to define, as from the Effective Date, their respective rights and obligations with respect to the Services.

### THE PARTIES AGREE AS FOLLOWS.

#### 1. **Effective Date.**

This Agreement takes effect on Effective Date and unless earlier terminated in accordance with its terms terminates on the latter of:

- (a) 31 December 2020;
- (b) the last day of the final Campaign (being Campaign 7c) as reflected in the final Campaign Schedule,

(the **Term**).

#### 2. **Documents comprising this Agreement.** This Agreement is comprises the following sections:

- (a) Section 1: Form of Agreement
- (b) Section 2: Terms and Conditions for the Project Management Services

- ( ) Section 3: Rates and Prices
- (a) Section 4: Scope of Work
- (b) Section 5: Change Order
- (c) Section 6: Purchase Order

**3. Order of precedence.**

To the extent of any ambiguity, inconsistency or conflict between provisions of any of the documents comprising this Agreement then the relevant provision of the documents will prevail in the order of precedence set out in clause 2.

**4. Call off process.**

4.1 The Project Manager must provide the Services to the Company in accordance with:

- (a) this Agreement; and
- (b) each Purchase Order agreed between the Parties in accordance with clause 4.2 below.

4.2 In respect of each Purchase Order:

- (c) the Company must give notice to the Project Manager setting out the proposed Campaign Schedule overview in accordance with clause 8.2(b) of Section 2; such notice must be given not later than 3 months before commencement of the mobilization window of the vessel;
- (d) as soon as practicable after the Company's notice pursuant to clause 4.2(a) of this Section 1: Form of Agreement, the Project Manager, together with input from the Company Representative, shall provide the Company with the draft Project Schedule (including proposed budget, Contracts and personnel required for the Services);
- (e) at least two (2) months before commencement of the mobilization window of the vessel for the Company's relevant Campaign Schedule:
  - (i) the Parties shall agree the content of the Purchase Order, including Project Schedule, budget, Services, Contracts and personnel required in respect of that Campaign; and
  - ( ) the Company will issue to the Project Manager the Purchase Order as agreed pursuant to paragraph (i)(Call Off Date).

	<b>Timing</b>	<b>Action</b>	<b>Responsible Party</b>
1.	Not later than 3 months before commencement of mobilization window of vessel	Campaign Schedule:  Company gives notice to Project Manager of Campaign Schedule	Company
2.	As soon as practicable after Company gives notice of Campaign Schedule	Draft Project Schedule:  Project Manager submits to Company the draft Project Schedule	Project Manager, with Company Representative input

## SECTION 2 -TERMS AND CONDITIONS FOR PROJECT MANAGEMENT SERVICES

### 1 DEFINITIONS AND INTEPRETATION

1.1 In this Agreement the initialized terms have the following meaning.

**ABC Laws** includes (i) the UK Bribery Act 2010 and any other anti-corruption law of the United Kingdom (including any applicable common law, law of equity, any written law, statute, regulation or other instrument made under statute); (ii) the United States Foreign Corrupt Practices Act, regardless of whether the relevant person or entity is a “domestic concern” for the purposes of that statute; (iii) the principles described in the OECD Convention on Combating Bribery of Foreign Public Officials in International Business Transactions, signed in Paris on 17 December 1997 which came into force on 15 February 1999, and the Convention’s commentaries, and other such Conventions including the United Nations Convention against Corruption which entered into force on 14 December 2005; (iv) the Canadian Corruption of Foreign Public Officials Act and all other applicable laws and regulations in Canada (including each Canadian province) with respect to bribery or corruption; and (v) any other anticorruption law of a country which applies to Project Manager or the Company from time to time in relation to the Agreement.

**Affiliate** means any entity controlling, controlled by, or under common control with Project Manager or Company respectively, including (i) any person under common Control with a Party or under common Control with a person under the direct or indirect Control of the Party; or (H) any person under the direct or in direct Control of a person that has the direct or indirect control of the Party.

**Agreement** means this agreement (including all of the Sections).

**Background Intellectual Property** means any Intellectual Property that is owned by or licensed to either Party independently of the Agreement, and includes Intellectual Property that may be used in the performance of the Services or which is incorporated into the Services or otherwise made available by either party in connection with this Agreement.

**Business Day** means a day on which the banks are open for business in London, England and Copenhagen, Denmark, other than a Saturday, Sunday or public holiday in those cities.

**Call Off Date** has the meaning given to it in clause 4.2(e)(ii) of Section 1.

**Campaign** means the activities described in the applicable Campaign Schedule as agreed in the applicable Purchase Order.

**Campaign Schedule** means each schedule of activities (including list of all required Contracts) for the Operations provided by the Company pursuant to clause 8.2(b).

**Claim** means any cost, demand, legal proceedings, claims, actions, fines, penalties, obligations or liabilities of any nature, including legal costs on a full indemnity basis, arising under any statute or in equity or under a contract or at common law or otherwise at law of whatsoever nature.

**Company** means the entity designated as such in Section 1: Form of Agreement.

**Company Group** means the Company, its Contractors of any tier, its and their respective Affiliates, its and their respective directors, officers, employees, invitees and agents but does not include any member of the Project Manager Group.

**Company Representative** is the person appointed by the Company for the purposes of clause 9 of Section 1.

**Consequential Loss** means:

- (a) consequential or indirect loss under English law; and
- (b) loss and/or deferral of production, loss of product, loss of use, loss of revenue, profit or anticipated profit (if any), in each case whether direct or indirect to the extent that these are not included in paragraph (a), and whether or not foreseeable at the Effective Date.

**Contract** means any agreement, contract, purchase order or other arrangement under which a Contractor is engaged (or proposed to be engaged, as relevant) by the Project Manager for a part of the Operations.

**Contract Area** is the physical area falling within the scope of the ISA Contract.

**Contractor** means any person appointed as a contractor for a part of the Operations, whether directly by the Project Manager, and such person's successors in title except subcontractors engaged by Project Manager in respect of the Services.

**Control** means control which a person has over an Affiliate and any of the following: (i) direct or indirect ownership of 50% (fifty per cent) or more of the share capital or other ownership interest in any other entity; or (ii) the right to exercise 50% (fifty per cent) or more of the votes in any other entity; or (iii) the contractual right to designate more than half of the members of such entity's board of directors or similar executive body; or by virtue of any power conferred by the law, constitutional documents, agreements or arrangements regulating or relating to such undertaking.

**Effective Date** means the date of this Agreement as recorded in Section 1: Form of Agreement.

**Force Majeure** has the meaning given to that term in clause 24.2.

**Free Issue Items** means any plant, facilities, and all other things whether of a temporary or permanent nature that is provided by the Company to the Project Manager to be used in the performance of the Services; Free Issue Items will include the vessel provided by the Company in accordance with the Campaign Schedule in connection with the Operations.

**Government** means any national or local government, including any department, agency or other instrumentality thereof, and any government owned or controlled enterprise.

**HSE** means health, safety and environment.

**Insolvency Event** means the relevant person becoming bankrupt or making a composition or arrangement with its creditors or an order for the winding up of such person being made or (except for the purposes of amalgamation or solvent reconstruction) a resolution for its voluntary winding-up being passed or a provisional liquidator, receiver, examiner, administrator or manager of its business or undertaking being appointed or presenting a petition or having a petition presented, applying for an administration order to be made, or possession being taken by or on behalf of the holders of any debenture secured by a floating charge or any property comprised in or subject to the floating charge, or any equivalent act or thing being done or suffered under any applicable law.

**Intellectual Property** means any invention, patent or application for a patent, design (registered or unregistered), trademark (registered or unregistered), name, copyright (including future copyright), circuit layout, trade secret, know-how, proprietary information or other right in respect of any data, information, process, work, material or method.

**ISA Contract** means the contract awarded to Nauru Ocean Resources Inc. by the International Seabed Authority pursuant to UNCLOS for the exploration for polymetallic nodules in the areas as specified in the contract.

**Key Personnel** means the following positions: offshore manager, HSE advisor, shift supervisor, contracts manager and the senior project manager as described in clause 4.2.3 of Section 3 (Scope of Work).

Loss means any loss, damage, liability, injury, claim or expense arising out of or in connection with this Agreement.

**New Intellectual Property** means any Intellectual Property that arises out of, or is created in the course of, the performance of the Agreement.

**Operations** means exploration operations carried out pursuant to, and to satisfy the conditions of, the ISA Contract in the Project Area.

**Operations Consents** has the meaning given to it in clause 11.4.

**Project Area** means the NORI Area D as shown on the map attached in Annexure A to Section 2: Terms and Conditions for the Project Management Services.

**Project Manager** means the entity appointed as such pursuant to clause 2.1.

**Project Manager Group** means Project Manager, its Affiliates, and their respective directors, officers, employees, contract personnel, invitees and agents but does not include any member of the Company Group.

**Project Costs** means all costs and expenses incurred by the Project Manager on behalf of the Company in providing the Services under this Agreement including:

- (a) any and all costs authorized pursuant to a Purchase Order;
- (b) amounts incurred by the Project Manager pursuant to clause 6 in relation to Contracts or clause 7 in relation to emergencies; and
- (c) agreed amount of the markup fee applied by the Project Manager pursuant to Section 3: Rates and Prices.

**Public Official** means any (a) officer or other person employed in any capacity (i) at any level of Government, (ii) any official or employee of a labor union controlled by any Government or political party, or (iii) in any public international organization, such as the United Nations or the European Union, including any department, agency or other instrumentality thereof; (b) any candidate or officer or other person employed by a political party; or (c) any person acting in any official capacity for or on behalf of any person or organization listed in (a) or (b).

**Purchase Order** means purchase order agreed between the Parties and issued by the Company in accordance with clause 4 of Section 1: Form of Agreement.

**Project Schedule** means a detailed schedule of activities (including list of all required Contracts) prepared by the Project Manager for each Campaign Schedule.

**Representative** means either the Company representative or the Project Manager representative, as relevant, appointed pursuant to clause 6 of Section 1: Form of Agreement.

**Service Fee** means an amount calculated in accordance with Section 3: Rates and Prices for carrying out the Services pursuant to this Agreement.

**Services** means the project management services as set out in Section 4: Scope of Work of this Agreement.

**Services Consents** is defined in clause 11.1.

**Total Value** means an amount equal to the total aggregate consideration payable under the relevant Contract, measured in USD.

**Term** is defined in clause 1 of Section 1: Form of Agreement.

**UNCLOS** means the United Nations Convention on the Law of the Sea.

**VAT** has the meaning given to that term in clause 12.1.

1.2 **Interpretation.** In this Agreement, unless the context otherwise requires:

- (a) headings or subheadings are for convenience only and do not govern the meaning or construction of any provision of this Agreement;
- (b) a reference to any agreement or document is to that agreement or document as amended, novated, supplemented or preplaced from time to time;
- (c) words expressed in singular include the plural and vice versa;
- (d) a 'person' includes a company, partnership, firm, joint venture, association, authority, corporation or other body corporate;
- (e) references to parts, sections, clauses, schedules and annexures are references to parts, sections, clauses, schedules and annexures to this Agreement;
- (f) a reference to a Party to this Agreement includes that Party's successors and permitted assigns;
- (g) no rule of construction will apply to the disadvantage of a Party because that Party was responsible for drafting this Agreement or any of the provisions of this Agreement;
- (h) a reference to any law contained in this Agreement is deemed to include any amendment, re-enactment or consolidation of that law; and
- (i) if anything is required to be done under this Agreement within a certain number of days and the last day of the specified period falls on a non working day in the location where the relevant act or thing must be done, then the last day of the relevant period is deemed to be on the first following working day.

2 **APPOINTMENT OF PROJECT MANAGER**

- 2.1 Company appoints Maersk Supply Service Integrated Solutions A/S as the Project Manager to provide the Services in relation to the Operations to the Company.
- 2.2 The Project Manager will provide the Services to the Company in accordance with this Agreement, and as authorized by the Company, from time to time.
- 2.3 The Project Manager will remain solely liable for the performance of its obligations under this Agreement (including the provision of Services to the Company) and for the acts or omissions of Key Personnel, agents, officers or employees of the Project Manager engaged directly in the provision of the Services and any subcontractors engaged by the Project Manager to perform its obligations in respect of the Services.

3 **SERVICE FEE AND PROJECT COSTS**

- 3.1 In consideration of the Project Manager providing the Services, the Company must pay to the Project Manager the Service Fee.
- 3.2 The Company must pay or reimburse the Project Manager for Project Costs in accordance with clause 12.1.

4 **PROJECT MANAGER'S OBLIGATIONS**

- 4.1 The Project Manager must perform and carry out all of its obligations under the Agreement and must provide the Services with all due care and diligence and with the skill to be expected of a reputable Project Manager experienced in the types of Services to be provided and Operations to be performed under the Agreement.
- 4.2 In the conduct of the Services, the Project Manager will:
- (a) perform the Services in accordance with the applicable law, this Agreement, the decisions of the Company Representative not in conflict with this Agreement or any applicable law and, to the extent practicable, in accordance with any requirements of the ISA Contract that have been notified by the Company to the Project Manager under clause 8.2(a);
  - (b) provide the Services in accordance with the dates and milestones set out in the Company's Campaign Schedule;
  - (c) prepare and submit to the Company Representative in a timely manner, and as contemplated by this Agreement, all proposed Contracts, Project Schedules and any relevant procedures;
  - (d) upon receipt of reasonable advance notice, permit representatives of the Company to have at all reasonable times during normal business hours and at Company's risk and cost reasonable access to Services, to observe and inspect the Services; in respect of any Services being provided offshore such access shall be granted 24 hours per day during operational periods;
  - (e) establish and implement in accordance with clause 14 an HSE plan and perform the Services in a safe manner in accordance with the HSE plan;

- (j) seek Company approval prior to the engagement or appointment of Key Personnel to provide Services and prior to replacing any of the Key Personnel;
- (k) ensure that sufficient number of personnel are assigned to the performance and completion of the Services in accordance with the provisions of the Agreement. Where the Project Manager reasonably believes that additional personnel are required to meet any deadlines for the Services, the Project Manager will seek the Company Representative's approval prior to engaging additional personnel in relation to the Services;
- (l) ensure that all persons employed by the Project Manager on the Services must be competent, properly qualified, skilled and experienced in accordance with good industry practice. If any person employed on the Services fails, in the reasonable opinion of the Company, to perform the Services in a competent manner, then the Company may require, by written notice to the Project Manager, that such person is removed and replaced. Upon such request the Project Manager shall ensure that a replacement person who is reasonably acceptable to the Company is appointed without delay; and (ii) the replacement person possesses the required skills necessary for the provision of the Services in question;
- (i) prior to appointing or procuring any Contractor, in compliance with the Project Manager's procurement procedures conduct appropriate and proportionate due diligence, including with respect to such proposed Contractor's ability to perform its obligations on time, within budgeted cost, and in compliance with applicable legal and contractual requirements;
- (m) as required by the Company or requirements relating to Operations, organize travel for Project Manager and Contractor personnel, provided the Project Manager uses reasonable endeavors to minimize the cost of such travel;
- (n) include in any Contracts, and to the extent practical and lawful, provisions that:
  - (i) establish that such Contractors can only enforce their Contract against Company;
  - (H) permit Project Manager, on behalf of the Company, to enforce contractual warranties and indemnities against such Contractors, and to recover from such Contractors losses and damages that are recoverable under their Contracts;
  - (Hi) require such Contractors to comply with applicable laws; and
  - (iv) ensure that the Company obtains ownership of, or is granted a license to use the outputs under the Contract (to the extent relevant) to the extent such outputs are relevant to the Operations.

4.3 The Services expressly exclude, and the Project Manager will not be responsible for, the following:

- (a) preparing, providing or approving the Campaign Schedule;

- (b) subject to clause 4.2(a), maintaining the ISA Contract in full force and effect and ensuring that Services or the Operations meet the minimum or other work obligations under the ISA Contract;
- (c) payment to the Government, within the periods and in the manner prescribed by the ISA Contract and the applicable laws, any payments, taxes, interests, penalties, fees and other payments in any way relating to the ISA Contract or the Operations;
- (d) carrying out the obligations of an operator of the ISA Contract, including preparing and furnishing such reports, records and information as may be required under the ISA Contract or the applicable laws;
- (e) representing the Company in any dealings with the Government with respect to matters arising in relation to the ISA Contract or the Services.

## **5 INFORMATION PROVIDED BY PROJECT MANAGER**

5.1 Project Manager shall provide the Company in a timely manner with copies of the following information, data and reports relating to the Services in digitized format and if not available then in hard-copy as they are currently produced or compiled from Services:

- (a) Contracts entered into pursuant to clause 6;
- (b) weekly and monthly cost reports; weekly cost reports shall include a high level overview of costs incurred during the previous week (commencing from end date of the previous weekly cost report where relevant); and monthly cost reports shall provide an overview of the monthly spend to date (starting from the previous monthly cost report where relevant) and a forecast of costs for the following month;
- (c) during operational periods—vessel daily progress reports;
- (d) weekly progress reports on operations, which progress reports shall at least set out the then current Project Schedule, progress against it and the status of the activities to date;
- (e) key performance data under the HSE plan established in accordance with clause 14;
- (f) key performance data relating to any key performance indicators agreed between the Company and the Project Manager;
- (g) such additional information (including copies of invoices for costs incurred in the performance of Services) as the Company may reasonably request, provided that the preparation of such information will not unduly burden Project Manager's administrative and technical personnel, that the Company pays the costs of preparation of such information.

## 6 CONTRACTING

6.1 The Project Manager will procure Contractors for the purposes of the Operations in accordance with this clause 6. The Project Manager will carry out day to day management and administration of each Contract and each Contractor and do all reasonable things, subject to this Agreement, to supervise and control each Contractor's performance of its obligations under the applicable Contract.

6.2 The Project Manager will award the Contracts in respect of the Operations in accordance with the below procedures A (Contracts for less than or equal to USD 30,000 Total Value) and B (Contracts for over USD 30,000 Total Value).

### Procedure A — Contracts for less than or equal to USD 30,000 Total Value

6.3 In respect of contracts with an estimated Total Value, prior to entry into the contract, of less than or equal to USD 30,000, the Project Manager will award contracts to the best qualified contractors, as determined by the Project Manager's procurement procedures (including considerations of cost, quality and ability to perform such contract properly, on time, within budgeted costs and in compliance with applicable legal and contractual requirements) without the obligation to conduct a tender and without seeking the approval of the Company.

6.4 All Contracts must be awarded on arm's length terms and in accordance with clause 6.8.

### Procedure B — Contracts in excess of USD 30,000 Total Value

6.5 In respect of contracts with an estimated Total Value, prior to entry into the contract, in excess of USD 30,000, the Project Manager will:

- (a) at the Company's election, conduct a tender in accordance with the Project Manager's procurement procedures;
- (b) conduct due diligence in accordance with clause 4.20);
- (c) prepare and provide the Company with a recommendation as to the contractor that the Project Manager considers best qualified to be awarded the relevant Contract and the commercial considerations for such decision; and
- (d) to the extent that the Contract is subject to negotiations, the Company may, at its election, have the negotiations handed over to the Company Representative. The Company will be the contracting party for the purposes of such contracts.

6.6 The Company may, but is not obliged to, enter into Contracts following a recommendation by the Project Manager under clause 6.5. If the Company enters into a Contract following a recommendation by the Project Manager under clause 6.5, the Project Manager will be entitled to payment in respect of that Contract as follows:

- (i) an amount equal to the Project Manager's actual incurred costs calculated pro rata at the daily rates set out in sections 1 (Onshore) or 2 (Offshore) (as applicable) of Section 3: Rates and Prices for personnel engaged in the procurement and daily administration of that Contract (**Contract Costs**); plus
- (H) an additional amount equal to five per cent of the relevant Contract Costs (**Mark-up**).

- 6.7 If the Company does not accept the Project Manager's recommendation under clause 6.5 and, instead, enters into an agreement with a third party for the provision of the goods or services the subject of that Contract, the Project Manager will be entitled to the Contract Costs, but not the Mark-up.
- 6.8 Before the award of any Contract, the Project Manager must, in compliance with its procurement procedures, conduct a due diligence on the proposed Contractor's ability to comply with ABC Laws and Trade Control Laws. The Project Manager must not award a Contract to an entity that demonstrates a track record of non-compliance or shows disregard for the requirements of ABC Laws or Trade Control Laws.

## **7 EMERGENCIES**

7.1 The requirements contained in the Agreement in relation to Services shall be without prejudice to the Project Manager's rights and duties to make immediate expenditures, incur commitments and/or take actions in response to an emergency and to:

- (a) take all necessary and proper measures for the protection of life, health, the environment and property; and
- (a) incur such expenditures and liabilities as necessary to deal with the emergency without the prior approval of the Company or the Company Representative,

provided that the Project Manager will, as soon as reasonably practicable and in accordance with the Project Manager's emergency response manual and bridging document, report to the Company details of such event and any measures the Project Manager has taken or plans to take in response to the emergency. All costs incurred by the Project Manager pursuant to this clause are Project Costs.

## **8 COMPANY TO PROVIDE INFORMATION AND FREE ISSUE ITEMS**

8.1 The Company will provide the Project Manager with all Free Issue Items as is necessary to perform the Services. All Free Issue Items provided by the Company are in good working order and suitable for use in connection with the Services. Unless otherwise notified by the Company, all Free Issue Items must be returned to the Company in a clean condition, good repair and working order, except only for damage caused by fair wear and tear.

8.2 In order to enable the Project Manager to provide the Services, the Company must provide to the Project Manager the following information in relation to the Operations:

- (a) any requirements as may be applicable to the Project Manager or to the Services set out in the conditions of the ISA Contract;
- (b) Campaign Schedules in relation to each Campaign related to the Operations; each Campaign Schedule must as a minimum set out:
  - (i) the commencement and end date of the relevant Campaign and proposed mobilization date of the vessel;
  - (ii) the scope of Operations that must be carried out during that Campaign; and (Hi) types of Services required in respect of that Campaign.
- (c) copies of all licenses, permits, consents and authorizations obtained by the Company in relation to the ISA Contract and Operations pursuant to clause 11.4;
- (d) all other information reasonably requested by the Project Manager relating to Operations.

8.3 The Company acknowledges that the Project Manager is entitled to rely on the information provided by the Company, including its accuracy and completeness, in preparing the Project Schedule and agreeing the Purchase Order. To the extent that any variations to the Project Schedule or the Purchase Order are required after the Call Off Date:

- (a) the Project Manager will, upon written request by the Company, make such variations but only if they are feasible and are within the scope of Services; and
- (b) the cost of such variations will be deemed to be Project Costs.

The Project Manager will have no liability to the Company if, in providing the Services, the Project Manager uses and relies on information provided to it by the Company, except to the extent that the Project Manager knew that such information was untrue or incorrect.

## **9 CLAIMS RELATED TO CONTRACTS**

- 9.1 Where the Project Manager becomes aware of a Claim in relation to a Contract, it must give the Company notice within 15 days of the date it receives notice of the Claim, or becomes aware of the Claim; such notice must include all information which can be reasonably provided, including the amount claimed and details of all circumstances relevant to the Claim, copy of the Contract to which the Claim relates and any other relevant information.
- 9.2 Subject to clause 9.5, the Company will be solely responsible for the defense, compromise or settlement (as relevant) of any Claim in relation to a Contract. The Project Manager must provide the Company, as and when required, with all information and necessary assistance, including access to electronic or hard copy files or notes or access to Key Personnel, employees or agents of the Project Manager to enable the Company to defend or settle any such Claims.
- 9.3 The Company indemnifies the Project Manager in respect of any reasonable costs that the Project Manager has incurred in relation to a Claim contemplated by clause 9.2.
- 9.4 The Company shall promptly notify the Project Manager of any Claim made against the Company by a third party that arises out of or may affect the Operations or the Services.
- 9.5 Where a Claim in relation to a Contract arises from a negligent act or omission, or willful misconduct, of the Project Manager, the Project Manager will be solely responsible, at the Project Manager's costs (which may not be claimed as Project Costs), for the defense, compromise or settlement (as relevant) of such Claim, together with any award or damages arising from such Claim.
- 9.6 The Project Manager indemnifies the Company in respect of any reasonable costs that the Company has incurred in relation to a Claim as contemplated by clause 9.5.

## **10 CHANGE TO SERVICES**

- 10.1 Subject to clause 10.3, the Company may, by written Change Order in the form provided in Section 5: Change Order and signed by Company Representative, direct the Project Manager to make a change to the Services. The Project Manager must comply with the direction, provided the increase or decrease in the Project Costs and/or Service Fee payable in relation to the change is determined in accordance with clause 10.3 or agreed in accordance with clause 10.4.
- 10.2 The Project Manager must comply with the directions of the Company provided that such directions do not materially or substantially change the Services.
- 10.3 The increase or decrease in the Service Fee to be paid to the Project Manager due to a change to the Services referred to in clause 10.1 is to be determined in accordance with Section 3: Rates and Prices (where applicable).
- 10.4 If the increase or decrease in the Service Fee cannot be determined by reference to Section 3: Rates and Prices, the Parties will negotiate in good faith to agree the increase or decrease in the Service Fee within a reasonable time (by reference to the nature of the change requested and the desired timing for implementation as set out in the respective Change Order).
- 10.5 The change to the Services referred to in clause 10.1 will not be effective and binding on the Project Manager until the increase or decrease in the Service Fee is agreed. Notwithstanding the foregoing, the Project Manager must not suspend Services and must continue to perform the Services in accordance with this Agreement (for clarity, other than the Services the subject of the Change Order). If a change to the Services is agreed, the Project Manager must continue to perform the Services, as varied in accordance with this clause 10, in accordance with this Agreement and the applicable Change Order.

## **11 SERVICES CONSENTS AND OPERATIONS CONSENTS**

### SERVICES CONSENTS

The Project Manager must carry out the Services in compliance with all applicable laws (national or international), including all rules and regulations of any Government authority or regulatory body having jurisdiction over the Services. Subject to clause 11.2, any licenses, permits, consents and authorizations required in relation to the Services (**Services Consents**) are the sole responsibility of the Project Manager. The Project Manager must ensure that all such Services Consents remain in full force and effect for the duration of the performance of the Operations and the Services.

- 11.2 If there are Services Consents that can only be legally obtained by the Company, the Project Manager must give notice of this to the Company in good time so as to ensure that such are able to be obtained well in advance of the time they are needed in order not to delay the performance of any part of the Services or the Operations. The Project Manager must provide such reasonable assistance as may be requested by the Company.

- 11.3 Upon receipt of notice under clause 11.2, the Company must procure that it, or the relevant Company Group entity, obtains the notified Services Consents and must provide evidence of the same to the Project Manager. The Company must ensure that all such Services Consents remain in full force and effect for the duration of the performance of the Operations and the Services.

#### OPERATIONS CONSENTS

- 11.4 The Company must obtain all licenses, permits, consents and authorizations that are required by the applicable laws, rules and regulations governing the ISA Contract and Operations (**Operations Consents**). The Company must ensure that all such Operations Consents remain in full force and effect for the duration of the performance of the Operations and the Services. For certainty, the obligations of this clause only apply in respect of the Project Area.
- 11.5 If there are Operations Consents that can only be legally obtained by the Project Manager or a Project Manager Group entity engaged in the Operations, the Company must give notice of this to the Project Manager in good time so as to ensure that such are able to be obtained well in advance of the time they are needed in order not to delay the performance of any part of the Services or the Operations. The Company must provide such reasonable assistance as may be requested by the Project Manager.
- 11.6 Upon receipt of notice under clause 11.5, the Project Manager must procure that it, or the relevant Project Manager Group entity, obtains the notified Operations Consents and must provide evidence of the same to the Company. The Project Manager must ensure that all such Operations Consents remain in full force and effect for the duration of the performance of the Operations and the Services.

#### INDEMNITIES

- 11.7 The Company will save, indemnify and hold harmless the Project Manager Group from and against any Claims by reason of a failure of the Company to comply with its obligations under clauses 11.3, 11.4 and 11.5. For certainty, the indemnity in this clause is provided in respect of Operations and the Project Area only.
- 11.8 The Project Manager will save, indemnify and hold harmless the Company Group from and against any Claims by reason of a failure of the Project Manager to comply with its obligations under clause 11.1, 11.2 or 11.6.

#### **12 INVOICING AND PAYMENT**

- 12.1 The Project Manager will prepare and submit monthly fully itemized invoices showing both Service Fee and Project Costs in arrears, as relevant. Where the invoice includes Project Costs or expenses incurred by the Project Manager then these amounts must be itemized and supported by such documentary evidence as the Company reasonably requires.

Invoices must be in English and reference the applicable Purchase Order number. With regards to taxes each invoice must show (i) the country and governing value added tax or any similar tax (**VAT**) rate applicable to the charges being invoiced, and (H) the VAT registration number of the Project Manager. All payments contemplated under the Agreement are exclusive of VAT, which shall be charged by and accounted to the relevant tax authority by the relevant Party as is required under prevailing VAT legislation.

- 12.2 The Company will, subject to the terms of this Agreement, pay each properly submitted and supported invoice within thirty (30) days of receipt of the invoice to the Project Manager's nominated bank account. Unless otherwise specified in this Agreement, invoices must be made out and paid in the same currency or currencies as stated in Section 3: Rates and Prices.
- 12.3 If the Company disputes any part of the Project Manager's invoice then:
- (a) the Company must notify the Project Manager of the sum in dispute and provide particulars as to the reason for the dispute;
  - (b) the Company may withhold payment of the disputed portion provided the Company pays the undisputed amount in accordance with the payment terms of this clause 12.2; and
  - (c) the Parties will endeavor to resolve the dispute as soon as possible. On settlement of the dispute, any amount found to be due by one Party to the other must be paid and payment terms of clause 12.2 apply to such payments.
- 12.4 Any amounts due to the Project Manager pursuant to an invoice submitted in accordance with clause 12.1 which are not paid on the date due for payment as prescribed, and except for any amounts disputed pursuant to clause 12.3, shall accrue interest on the amount not paid from the date payment is due until the date payment is made. Interest shall be calculated at 6% per annum.
- 12.5 The Project Manager must use its best endeavors to submit the final invoice no later than hundred and twenty (120) days following completion of the Services.
- 12.6 Where the Project Manager has incurred Project Costs and those costs are payable by the Company in accordance with the terms of this Agreement, then the Company indemnifies the Project Manager in respect of any Claims arising as a result of the Company's breach of its payment obligations under clause 12.1.
- 12.7 The Company is not entitled to withhold monies or remuneration under any other contracts with the Project Manager Group (including any contracts relating to the vessel) as set off against disputes under this Agreement, nor is it entitled to withhold remuneration due under this Agreement as set off against disputes under any other contract with the Project Manager Group.

### **13 SUSPENSION, TERMINATION AND DEFAULT**

- 13.1 Without prejudice to the Project Manager's rights pursuant to clause 13.3, where the Company fails to pay the Project Manager on the due date as required under clause 12.2, the Project Manager may suspend all Services under this Agreement and resume the Services only upon Company's full payment of all outstanding invoices. The Project Manager will have no liability to the Company for any delays or costs suffered by the Company as a result of such suspension.
- 13.2 The Company may, by written notice to the Project Manager, terminate the Agreement for any or all of the following reasons:
- (a) subject to clause 13.4, in the event of material default by the Project Manager;
  - (b) for Force Majeure exceeding 60 consecutive days; and
  - (c) in the event of the Project Manager suffering an Insolvency Event.
- 13.3 The Project Manager may, by written notice to the Company, terminate the Agreement for any or all of the following reasons:
- (a) subject to clause 13.4, in the event of material default by the Company. For the avoidance of doubt, the Company's failure to pay the Project Manager within three (3) months of the due date as required by clause 12.2 is deemed to be a material default;
  - (b) for Force Majeure exceeding 60 consecutive days; and
  - (c) in the event of the Company suffering an Insolvency Event.
- 13.4 Before the issue by the Company or the Project Manager of a notice of termination of the Agreement as contemplated by paragraphs 13.2(a) and 13.3(a), the notifying Party must give notice to the Party in default of the details of such default. The notified Party must, within 30 days of receipt of the notice, remedy such default at its own cost. If the notified Party does not remedy the default within 30 days, then the notifying Party may issue a notice of termination in accordance with the provisions of clause 13.2(a) or clause 13.3(a) as relevant.
- 13.5 A notice of termination issued pursuant to clauses 13.2 or 13.3 becomes effective on the date specified in the notice (or in the absence of any specified date then at the date of receipt of the notice).
- 13.6 In the event of termination of the Agreement, the Project Manager is entitled to payment for the part of the Services performed in accordance with the Agreement together with such other amounts as may have been incurred as Project Costs to date of termination. The Company shall be entitled to set off any sums payable to the Project Manager against any liability of the Project Manager for reasonable and documented costs of the Company arising as a result of such breach.
- 13.7 Termination of this Agreement (whether under this clause 13 or any other provision of this Agreement) will be without prejudice to any rights or remedies that may have accrued to either Party prior to such termination.

- 13.8 On termination of this Agreement pursuant to this clause 13:
- (a) each Party shall return without delay any Confidential Information and any other material in its possession supplied or owned by the other Party;
  - (b) the Company will pay any outstanding amounts due to the Project Manager in accordance with clause 12.
  - (c) where the Company terminates the Agreement pursuant to clause 13.2(a) and the Company appoints a new project manager to perform services in relation to the Operations instead of the Project Manager, the Project Manager must provide all reasonable assistance to facilitate the transition of the Services from the Project Manager to the new project manager.
- 13.9 If the Company terminates this Agreement under clause 13.2(a) while a Campaign is still ongoing, the Project Manager must, at the Company's discretion, complete that Campaign provided that the Company will remain obliged to pay any amounts payable to the Project Manager under this Agreement for such Campaign.

#### **14 HEALTH AND SAFETY AND SECURITY**

- 14.1 The Project Manager will, as part of the Services:
- (a) prepare and present for Company Representative approval an HSE plan designed to achieve safe and reliable conduct of activities, to avoid significant and unintended impact on the safety and health of people, on property, and on the environment, and to comply with laws relating to HSE;
  - (a) subject to Company Representative approval to the HSE plan, carry out the HSE plan; and
  - (b) plan and conduct Services consistent with the HSE plan. In this regard, the Project Manager must perform the Services in a manner that gives priority to safety in order to protect life, health, property and environment.
- 14.2 The Company may request the Project Manager at any time to provide health and safety information associated with the performance of the Services, including evidence of compliance with the HSE plan, and the Project Manager must comply with such requests.

#### **15 INTELLECTUAL PROPERTY**

- 15.1 Nothing in this Agreement affects a Party's title to its Background Intellectual Property.
- 15.2 All New Intellectual Property will vest in the Company as soon as the preparation or production thereof commences and the Project Manager hereby assigns to the Company any interest it may have in such New Intellectual Property.
- 15.3 The Company grants to the Project Manager a royalty free, irrevocable, non-exclusive, perpetual, sub-licensable, transferable, worldwide license to use (including modify, adapt, copy and distribute) the Company's Background Intellectual Property and any Company's New Intellectual Property, in connection with and for the purposes of providing the Services. The Company shall indemnify and hold harmless the Project Manager against any Loss incurred by the Project Manager in connection with any claim, action or proceedings by a third party alleging that the use of the Company's Background Intellectual Property by the Project Manager infringes that third party's intellectual property rights.

15.4 The Project Manager grants to the Company a royalty free, non-exclusive, transferable and sub-licensable worldwide license to use the Project Manager's Background Intellectual Property which is made available by the Project Manager to the Company under this Agreement for the purpose of enjoying the full benefits of the Services and any outputs of the Services and otherwise exercising its rights in relation to the Services. The Project Manager shall indemnify and hold harmless the Company against any Loss incurred by the Company in connection with any claim, action or proceedings by a third party alleging that the use of the Project Manager's Background Intellectual Property by the Company infringes that third party's intellectual property rights.

## **16 TAXATION**

16.1 The Project Manager is responsible for the payment of all taxes, duties, levies, charges and contributions (and any related interest or penalties) arising as a result of this Agreement for which the Project Manager is liable, including, but not limited to, those calculated by reference to income, profits, capital gains, turnover and employment income (solely of employees of Project Manager and Project Manager Affiliates), now or hereafter levied or imposed by any appropriate governmental authority of the country of incorporation of the Project Manager.

16.2 The Company is responsible for the payment of all other taxes, duties, levies, charges and contributions (and any related interest or penalties) arising as a result of this Agreement, now or hereafter levied or imposed by any appropriate governmental authority.

16.3 Company may, without liability to Project Manager, withhold sums in respect of taxation ('withholding taxes') from payments under this Agreement to the extent that such withholding is required by applicable laws. Where Project Manager is lawfully exempt from the requirement for any withholding of tax, Project Manager shall inform the Company hereof and forward the relevant documentation in support of this prior to any relevant payment being made by Company to Project Manager.

16.4 Where Project Manager is not able to obtain a full credit, offset or deduction for any such withholding taxes ('irrecoverable withholding taxes') against its own tax liabilities, Project Manager shall provide all reasonable details to the Company to substantiate the inability to obtain a full credit, offset or deduction. The Company shall pay an additional amount to the Project Manager such that Project Manager's net position remains unaffected by the inability to claim a full credit, offset or deduction for such withholding taxes. No additional amount is payable if the inability to claim a full credit, offset or deduction arises merely because the Project Manager has current year or brought forward tax losses.

16.5 Company shall pay Project Manager in addition to and together with the consideration due under this Agreement, any VAT (or similar tax) chargeable in respect of goods or services supplied by Project Manager under this Agreement, upon receipt of a valid tax invoice as may be required under applicable laws.

16.6 Project Manager accepts no liability for taxes, duties, levies, charges and contributions (and any related interest or penalties) for which Contractors are liable as imposed by any appropriate governmental authority. Should Project Manager lawfully be required to remit any taxes, duties, levies, charges and contributions (and any related interest or penalties) to any appropriate governmental authority on behalf of Contractors and Project Manager is not able to recover such amounts from Contractors within a reasonable amount of time, Company shall pay such amounts to Project Manager on receipt of evidence of payment of such amounts.

## **17 AUDIT AND STORAGE OF DOCUMENTS**

17.1 During the course of the Services and for a period ending three (3) years thereafter, the Company or its duly authorized representative (including a well-reputed third party auditor appointed by the Company at its own cost) has the right to audit at all reasonable times and, upon request, take copies of all of the Project Manager's records (including data stored on computers) books, personnel records, accounts, correspondence, memoranda, receipts, vouchers and other papers of every kind relating to:

- (a) all invoiced charges made by the Project Manager on the Company; and
- (b) any provision of this Agreement under which the Project Manager has obligations the performance of which is capable of being verified by audit.

However, the Company is not entitled to investigate the make-up of rates and lump sums included in the Agreement.

17.2 The Company (including an external auditor appointed by the Company) has the right to require that an audit cover the Project Manager's financial procedures, controls and systems upon reasonable notice for the purposes of ensuring the Project Manager's compliance with this Agreement.

17.3 The Project Manager must co-operate fully with the Company and/or its representatives in the carrying out of any audit required by the Company and must provide all necessary assistance (including making Project Manager's personnel and facilities available on request) to the auditors. The Company will conduct any audit in a manner which will keep to a reasonable minimum any inconvenience to the Project Manager.

17.4 The Project Manager must use its reasonable endeavors to obtain equivalent rights of audit to those set out above in this clause from Contractors engaged in relation to the Operations and will cause such rights to extend to the Company.

## **18 CONFIDENTIALITY**

18.1 Neither Party (the 'receiving Party') may without the prior agreement of the other Party (the 'disclosing Party'):

- (a) make any publicity releases or announcements concerning the subject matter of this Agreement; or
- (b) except as may be necessary to enable the Project Manager to perform its obligations under the Agreement, use, reproduce, copy, disclose to, place at the disposal of or use on behalf of, any third party or enable any third party to use, peruse or copy any information including but not limited to drawings, data, and computer software which:
  - (i) is provided to the receiving Party by or on behalf of the disclosing Party or disclosing Party's Group in relation to the Agreement;

- (ii) vests in the Party in accordance with the Agreement; or
- (iii) the Project Manager prepares in connection with the Services.

18.2 The provisions of clause 18.1 do not apply to information which:

- (a) is part of the public domain;
- (b) was in the possession of the receiving Party prior to award of the Agreement and which was not subject to any obligation of confidentiality owed to the receiving Party;
- (c) was received from a third party whose possession is lawful and who is under no obligation not to disclose;
- (d) is required to be disclosed in order to comply with the requirements of any law, rule or regulation or any governmental or regulatory body having jurisdiction over the Services or the disclosing Party, or any relevant stock exchange; or
- (e) is used or disclosed by the receiving Party two (2) years or more after the completion of the Services.

18.3 Nothing in this Agreement prevents a Party from making a public announcement in relation to its operations, provided that where such public announcement refers to the other Party the announcing Party must provide the affected Party a reasonable opportunity to review and approve publication of that part of the announcement that contains the relevant reference. Approval under this clause 18.3 must not be unreasonably withheld.

## **19 EXCLUSION OF CONSEQUENTIAL LOSS**

Subject to clause 20.4, neither Party is liable to the other for, and each Party waives and releases the other from, any claim for Consequential Loss arising from, relating to or in connection with the Agreement (including any Consequential Loss that may be suffered by the Parties' respective Groups).

## **20 LIMITATION OF LIABILITY**

20.1 Nothing in this clause 20 shall be deemed to relieve the Project Manager from its obligation to perform the Services in accordance with this Agreement.

20.2 Subject to clause 9.5, the Project Manager Group shall not bear any damage, loss, cost, or liability whether based on contract (including contractual indemnity), negligence or otherwise resulting from a Contractor failing to perform under its Contract, and the Project Manager Group is hereby released from liability to the Company for any and all damages, losses, costs, and liabilities, including fines and penalties, arising out of, incident to, or resulting from such Contractor performance or failure to perform.

20.3 The Project Manager's total aggregate liability to the Company under and in connection with this Agreement, howsoever arising and irrespective of any negligence, breach of contract, tort or otherwise at law, shall be limited to the aggregate value of the Service Fees paid pursuant to this Agreement.

20.4 Nothing this Agreement relieves a Party from:

- (a) any liability under clauses 16, 18 and 23;
- (b) any liability in relation to any claim of a third party under any applicable law;
- (c) any liability arising from fraud or fraudulent misrepresentation;
- (d) any liability for death or personal injury resulting from the negligence of any Party.

## 21 INSURANCES

21.1 The Project Manager shall procure and maintain, for its own account and in respect of the Services:

- (a) workers' compensation and employer's liability (or equivalent) insurance covering all claims and liabilities in respect of any person employed by the Project Manager or deemed to be a worker of the Project Manager as required by the applicable laws;
- (b) professional indemnity insurance for any incident or series of incidents covering the operations of the Project Manager in the performance of the Agreement;
- (c) any additional insurance required by any applicable law.

21.2 Any insurance policy effected and maintained under this clause 21 shall:

- (a) name the Company as additional insured;
- (b) be primary and without right of contribution from other insurance which may be available to the Company;
- (c) if negotiable with the relevant insurers, state that the relevant insurers agree to waive in favour of the Company and its and their agents, officers and employees any rights, remedies or relief to which they may become entitled by subrogation; and
- (d) prohibit the lapse of or any cancellation or non-renewal of such insurance, without the prior written consent of the Company.

21.3 In addition to the insurances to be obtained by the Project Manager pursuant to this clause 21, the Project Manager may obtain such additional insurances at its own cost as it deems necessary to cover the liabilities it has assumed under this Agreement.

21.4 The Project Manager will, at the request of the Company, provide for inspection copies of certificates of currency in respect of the insurances required to be taken out by the Project Manager pursuant to this clause.

**22 TRADE CONTROLS**

22.1 The Project Manager undertakes that it is familiar with the trade control and sanctions laws maintained by the EU, Canada and US (**Trade Control Laws**) and that it shall not take any action that would cause the Company to be in violation of such Trade Control Laws.

**23 BUSINESS ETHICS**

23.1 Each Party undertakes and warrants to the other Party that neither it nor any member of its Group, nor any agent, consultant or other intermediary acting on behalf of its Group, will directly or indirectly, in relation to this Agreement, give, promise or attempt to give, or approve or authorize the giving of, anything of value to:

- (a) any employee, officer or director of or any person representing the other Party's Group;
- (b) any other person, including any Public Official;
- (c) a political party or a labor union controlled by any Government or political party; or
- (d) a charitable or other organization, or an officer, director or employee thereof, or any person acting directly or indirectly on behalf of the same, for the purpose of (i) securing any improper advantage for the relevant Party Group; (ii) inducing or influencing that Public Official improperly to take any action or refrain from taking any action in order for either Party's Group to obtain or retain business, or to secure the direction of business to either Group, or (iii) inducing or influencing that Public Official to use his/her influence with any Government or public international organization, or any or any department, agency or other instrumentality thereof, for any such purpose.

23.2 Each Party further warrants and undertakes to the other Party that:

- (a) to the best of its knowledge, neither it nor any of its Affiliates, officers, directors, shareholders, employees, or agents or other intermediaries, or any other person acting directly or indirectly on its behalf, has carried out any of the actions described in clause 23.1, above; and
- (b) the persons described in paragraph (a) above, will comply with the provisions of this clause 23; and
- (c) it will otherwise comply with the ABC Laws.

23.3 Each Party warrants and undertakes it shall maintain adequate records in order to be able to verify its compliance with the provisions of this clause 23 and, without prejudice to the other provisions of this Agreement involving audits, it shall permit the other Party or a certified public accountant designated by the other Party to conduct an audit of such records, at that Party's reasonable discretion, in case of any dispute between the Parties regarding such compliance, or in case of any investigation by or allegation from any applicable public authority regarding potential violations of any ABC Laws. The Parties will cooperate in any such audit and otherwise in providing documentation relating to any such dispute or investigation.

23.4 Each Party saves, indemnifies, defends and holds harmless the other Party from all fines, penalties, Claims and all associated expenses arising out of or resulting from the violation by it of any of its obligations in this clause 23.

23.5 Before the award of any Contract, Project Manager must use reasonable endeavors to procure a warranty in the same terms as set out in clause 23.2 from such Contractor.

## 24 **FORCE MAJEURE**

24.1 Neither Party will be liable to the other Party for any failure to fulfil any term or condition of the Agreement if and to the extent that such fulfilment has been delayed or temporarily prevented by occurrence of a Force Majeure event, which is beyond the control and without the fault or negligence of the Party affected and which, by the exercise of reasonable diligence, the affected Party is unable to provide against.

24.2 For the purposes of this Agreement only the following occurrences are deemed force majeure (**Force Majeure**):

(a) war, civil war, acts of terrorism or armed conflict;

(b) nuclear, chemical or biological contamination;

(c) national strikes or lock outs or other national industrial disputes but excluding any industrial disputes or strikes involving only the workforce of the affected Party or any of its subcontractors;

(d) earthquake, flood, fire, explosion and/or other natural physical disaster, but excluding weather conditions as such, regardless of severity;

(e) changes to applicable legislation preventing execution of any of the Services.

24.3 Where an event of Force Majeure occurs, the affected Party must notify the other Party without delay and give full particulars of the event. Save as expressly provided in the Agreement, no payments of whatever nature will be payable in respect of a Force Majeure occurrence and each Party will bear its own costs arising from this event.

24.4 The Party claiming to be prevented or delayed in the performance of any of its obligations under this Agreement by reason of Force Majeure will use all reasonable endeavors to bring the Force Majeure event to a close or to find a solution in the event of continuance of the Force Majeure event.

## 25 **GOVERNING LAW AND LANGUAGE**

25.1 The Agreement and all questions arising in connection with it are governed by and will be construed in accordance with the laws in force in England and Wales, excluding those choice of law rules and choice of law principles which would deem otherwise.

- 25.2 A dispute, difference or claim whatsoever arising in connection with this Agreement which cannot be resolved amicably by the Parties may be referred by either Party to arbitration in accordance with the Arbitration Act 1996 as then in force. The arbitration will be conducted in accordance with, and subject to the London Maritime Arbitrators Association (LMAA) terms current at the time when the arbitration proceedings are commenced. The arbitration will be conducted on the following basis:
- (a) the venue of arbitration must be London, England;
  - (b) the arbitration will be conducted in the English language;
  - (c) unless the remainder of this paragraph (c) applies, three arbitrators will be appointed by agreement between the Parties. The Party wishing to refer a dispute to arbitration must appoint its arbitrator and send notice of such appointment in writing to the other Party requiring the other Party to appoint its own arbitrator within 14 calendar days of that notice and stating that it will appoint its arbitrator as sole arbitrator unless the other Party appoints its own arbitrator and gives notice that it has done so within the 14 days so specified. If the other Party does not appoint its own arbitrator and does not give notice that it has done so within the 14 days, the Party referring the dispute to arbitration may, without the requirement of any further prior notice to the other Party appoint its arbitrator as the sole arbitrator and will advise the other Party accordingly. Absent manifest error, the award of a sole arbitrator will be binding on both Parties as if the arbitrator had been appointed by agreement; and
  - (d) if the claim nor the counterclaim exceeds the amount of USD50,000 (or such other sum as the Parties may agree) the arbitration will be conducted in accordance with the LMAA small claims procedure current at the time when the arbitration proceedings are commenced.

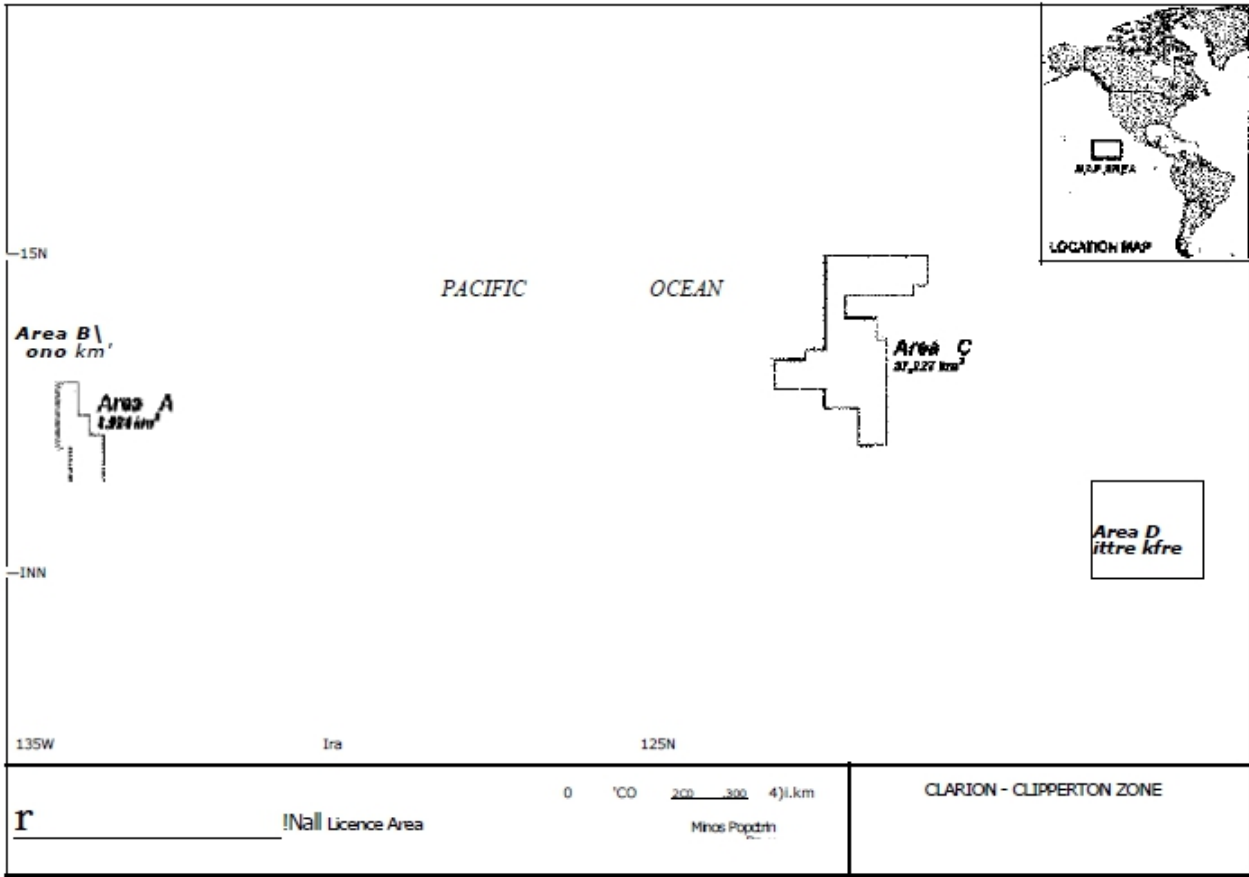

Nothing in this clause 25 prevents a Party from obtaining injunctive, declaratory or other interlocutory relief from a court which may be urgently required.

## 26 GENERAL

- 26.1 **Contracts (Rights of Third Parties) Act 1999.** The interpretation of this Agreement shall exclude any rights under legislative provisions conferring rights under a contract to persons not a party to that contract including rights solely by virtue of the Contracts (Rights of Third Parties) Act of 1999.
- 26.2 **Notices.** Except as otherwise stated in the Agreement, any notice in respect of the Agreement must be in the English language, given in writing and delivered by hand, or sent by email or by post to the relevant address specified in Section 1: Form of Agreement. Any such notice will be effective:
- (a) if delivered by hand, at the time of delivery;
  - (b) if sent by email, at the time of transmission unless transmitted after the close of normal business hours or on a non-working day, in which case it is effective on the next Business Day following the date of sending; and
  - (c) if sent by post, fifth Business Day after the date of posting.
- 26.3 **Entire Agreement.** To the extent permitted by law, in relation to its subject matter, this Agreement embodies the entire understanding of the Parties and constitutes the entire terms and conditions agreed by the Parties; and supersedes any prior written or other agreement of the Parties.

- 26.4 **Amendments.** Unless otherwise provided in this Agreement no amendment or addition to this Agreement shall be binding on the Parties unless in writing and signed on behalf of each Party.
- 26.5 **Nature of relationship between the Parties.**
- (a) Except as expressly stated otherwise in this Agreement, the obligations and liabilities of the Parties pursuant to this Agreement are several and neither joint nor joint and several and each Party is responsible only for its individual obligations hereunder.
  - (b) It is neither the purpose nor the intention of this Agreement to create, nor should this Agreement be construed as creating any partnership of any kind, an association, a trust or joint venture or as imposing upon a Party any duty, obligation or liability of a partnership or association or trust or joint venture nature.
  - (c) The Project Manager is an independent party and neither it nor any of its personnel or that of the Company's will be, or be deemed to be: (i) in partnership or in a joint venture relationship; or (ii) an employee, servant or agent of the other Party.
- 26.6 **Counterparts.** The Agreement may be executed in any number of counterparts each of which when executed and delivered will be an original and all the counterparts together will constitute one and the same instrument.
- 26.7 **Illegality.** Any provision in this Agreement which is illegal, void or unenforceable will be ineffective to the extent only of such illegality, voidness or unenforceability and such illegality, voidness or unenforceability will not invalidate any other provision of this Agreement. If the removal of a clause or part of a clause under this clause materially alters the commercial allocation of benefit and risk (or management of risk) under this Agreement, the Parties agree to negotiate in good faith to amend or modify the terms of this Agreement as may be necessary or desirable having regard to the original terms of the bargain and the prevailing circumstances.
- 26.8 **Survival.** Provisions in this Agreement which for any reason require action of forbearance after termination, including but not limited to provisions of liabilities, indemnities, warranties and confidentiality, shall remain in full force and effect regardless of termination.
- 26.9 **Expenses.** Each Party must pay its own costs and expenses in connection with the negotiation, preparation, execution and performance of this Agreement.

## SECTION 4: SCOPE OF WORK

### 1. Definitions

**SERVICE:** Services provided by MSS under this Agreement

**Work:** Activities performed by the Company

### 2. Scope of SERVICE

This Scope of SERVICE defines both the responsibilities and interfaces between MSS and the Company's Contractors. This document does not attempt to describe every activity or item of supply that may be required by the Company. It relies on the knowledge and experience of MSS to be aware that items not specified might be required in order to provide the complete service that is intended.

The SERVICE shall comprise project management, planning and procurement necessary to the performance of the WORK in relation to the Company's Offshore Campaigns.

MSS shall be responsible for managing all interfaces which affect the Work and resolving all issues that may arise with its sub-contractors, regulatory bodies (as agreed with the Company), the Company, Contractors and any other third parties.

MSS shall develop management procedures for all activities not adequately addressed by a standard procedure or the Company's contractor procedure.

Each Work activity shall be subject to a MSS readiness review and be attended by the relevant Personnel to ensure all preparatory works are complete and all actions closed out prior to a phase of the Work commencing. MSS shall ensure all tasks performed as part of the Work are subject to formal risk assessment and such risk assessments are reviewed prior to task being undertaken. In addition, MSS shall ensure appropriate controls are in place and MSS Personnel carry out a suitable toolbox talk prior to commencing the Work. All actions from risk assessments shall be closed before any relevant phases of the Work commencing.

MSS Support will be provided from MSS offices in Copenhagen and any travel and associated expenses which are required to visit the Company's premises, vessel or any other site will be fully reimbursable at cost + 10%.

### 3. HSE and Environmental Protection

MSS will provide HSE Advisors to the Company at the Work Site to provide guidance to the Company and the Contractors in delivering expected HSE performance. MSS shall work openly to promote MSS HSE culture and performance at Work or on vessels. In addition, the Company and the Contractors if required shall fully participate in HSE related initiatives and activities and Project Inductions for all personnel and training in MSS systems and processes.

MSS will ensure that appropriate risk assessments are carried out and that all its contractor Personnel are fully briefed on site HSE systems and have and use appropriate procedures and Personal and Protective Equipment (PPE) for the Work being undertaken.

MSS will ensure that Contractors will perform the Work in a manner whereby:

- environmental factors are taken into account in all decisions;
- environmental efforts should be preventative rather than remedial;
- waste is minimised and resource consumption is reduced.
- Control of Substances Hazardous to Health (COSHH) assessments shall be undertaken and provided to the Company.

#### 4. Detailed Scope

The Scope of Work is broken down into the following Work packages below:

Work Package 1: Project Management

Work Package 2: Offshore Operations

##### 4.1 Work Package 1: - Project Management

###### 4.1.1 General

MSS's project manager will provide management, co-ordination and direction to all Contractors' activities throughout the performance of the WORK. In relation to the WORK for which MSS is responsible, the project manager will ensure all necessary project management deliverables are prepared and maintained and will co-ordinate the required additional support in the following areas:

- HSEQ
- Planning and Scheduling
- Document Control
- Cost Control
- Procurement

MSS shall establish and maintain a Project Management team throughout the duration of the Contract, consisting of Personnel of sufficient quantity, skill and experience to ensure timely and safe execution of the Work.

MSS will provide a HSE Advisor responsible for preparing project HSE Plans and procedures for the safe execution of the WORK and will in addition review the requirement to allow successful interface between all management systems. The HSE advisor will also chair any and all necessary HSE reviews and risk assessments and will provide input where required to the procurement process pre and post award.

A Contract manager will be integrated to the project team in order to evaluate the proposed suppliers and negotiate robust subcontracts with each. The Contract manager will manage each of the Contracts from a contractual and commercial perspective and will provide weekly updates of the cost incurred and the forecast spend with each supplier. MSS will provide technical support input when required to assist with the RFQ/ITT process and will provide bid evaluation and recommendation to award.

For the sake of clarity, MSS will enter as an agent into procurement contracts with contractors, for and on behalf of the Company; to this extent, the contractors will only be able to enforce the contracts against the Company and not MSS.

#### 4.1.2 Project Execution Plan (PEP).

MSS shall issue a project execution plan for the Work no later than twenty (20) working days after the Contract Effective Date.

The PEP shall include but not be limited to:

- Project Objectives
  - Execution Strategy
  - Project Management Plans
  - Key Dates and Milestones
- Scope Description, Exclusions and Clarifications
- Responsibilities of the Company, MSS and Contractors
  - Project Key Performance Indicators (KPIs)
- Project Schedule and reporting
- Project Organization (including sub-contractors)
- Administration and Communication
- Project document register and document control matrix.
- Health Safety, Security and Environment Management
- Capital Cost Estimating
- Interface Management
- Risk Management
- Management of Change Procedure (MoC)

It is the responsibility of the Project Management Team to ensure that all Work is executed in compliance with the PEP and the Project Management Plans referenced therein.

MSS shall ensure that all work procedures and other documentation to execute the Work are in place. Work procedures shall cover all key activities to be performed during execution of the Work.

#### 4.1.4 Project Kick-Off

MSS shall arrange a formal Kick-off Meeting for introductions between key members of MSS and the Company project teams including discipline leads. Scope work, interfaces, deliverables, schedule, risks, opportunities, execution plan, communication protocol and other key elements of the project shall be covered. Further, the provisions to be put in place for health and safety in all aspect of the Work shall be covered.

#### 4.1.5 HAZID and Risk Assessments

MSS shall conduct a HAZID, complete risk assessments and develop contingency plans for the WORK and all related marine operations. All actions shall be closed and agreed with the Company before commencement of each phase of the WORK.

Company representatives shall be made available to support the risk management process which should follow the methodologies outlined in DNV-RP-H101.

#### 4.1.6 Risk Management

MSS shall issue a risk management plan for the project no more than twenty (20) working days after the Contract Effective Date.

Regular risk workshops shall be conducted throughout the project, to be agreed with the Company. Any risk shall be captured in a risk register and proactively managed and closed prior to relevant activities taking place.

#### 4.1.7 Lessons Learned

Four (4) weeks after the Contract Effective Date, MSS shall conduct a lessons learned workshop such that organisation and project learnings are identified at any early stage and incorporated. The workshop shall cover project management, engineering, interfaces, transportation and security as a minimum. Further workshops shall be agreed with the Company.

#### 4.1.8 Management of Interfaces and Co-ordination with Third Parties

Throughout the execution of the Work, MSS shall assist the Company in the management and co-ordination of all external interfaces associated with the performance of the Work. The Company shall be copied on all associated correspondence.

MSS shall ensure that all parties involved in the WORK are properly coordinated and that interfaces are dealt with in a prompt, pro-active and efficient manner. MSS shall ensure that all communications to external interface parties are made through the Company interface management system.

MSS shall initiate and implement appropriate interface procedures. MSS shall issue interface procedures for the Company's approval. This procedure should detail how external and internal interfaces are managed.

Where commercial and/or financial issues are raised, the Company shall remain as the first and sole point of contact, and the only authority to take the decisions relating thereto.

MSS shall issue to the Company all communications between the parties involved in the WORK. Accordingly, MSS shall:

- Initiate and organise contacts through the Company, as necessary, at the technical level with the parties involved and attend interface meetings.
- For areas where MSS is the responsible party or when requested by the Company, MSS shall prepare minutes of meetings.
- MSS shall formally advise the Company of any interface problems which may arise from such meetings. These should be detailed in the weekly report as a minimum.

MSS shall schedule its Work relating to Interface matters to coincide with the schedules of other parties in the approved Interface Plan.

#### 4.1.9 Deliverables

As a minimum MSS shall produce the following deliverables during the execution of the Work:

##### **Project Management -**

Project Execution Plan (PEP)

Organisation Chart with responsibilities

Document Register (MDR) for project

Risk Management Plan

Planning of operations

Quantitative Risk Assessment Report

Interface Management Plan

Interface co-ordination procedure

QHSE Management Plan

HAZID schedule and report

HAZOP schedule and report

#### 4.2 Work Package 2 : Offshore Operations

##### 4.2.1 Offshore Operations Planning

MSS shall seek and obtain approval for all of the proposed offshore operations associated with the WORK from the Company.

4.2.2 MSS shall be responsible for the following as a minimum, where required:

- 1) Mobilisation and demobilisation of all equipment, any other equipment, marine crew, consumables and any other required crew/personnel;
- 2) Seafastening;
- 3) Transportation of equipment;

##### 4.2.3 Provision of Offshore Personnel

##### **Offshore Manager**

Offshore Manager as the responsibility for the safe and efficient execution of the work in accordance with the relevant legislation and the Company policies and procedures. His main responsibilities are to :

- Provide effective management onboard the vessel during Mobilisation, offshore operations and demobilisation.
- Plan, organise and schedule offshore operations in liaison with the project manager, Captain and client representative whilst considering the constraints of the overall project schedule.
- Liaise with the Captain for all aspects related to the management and safe operations of the vessel.

- Provide the shift Supervisors with an overview of the upcoming operation of the vessel and direct them as required in the specific operation to be executed during their shift.
- Direct and consult with the field and project engineers for technical/operational input to offshore activities.
- Verify that task plans, onshore risk assessments, updates and changes to procedures (Subject to effective MOC) are produced and approved.
- Follow-up and implement any corrective and/or mitigating action arising from audits, inspections, reviews, non-conformances, observations and flashes received from Safety management systems, and other internal notices.
- Issue daily progress reports, which covers project and marine activities in accordance with the recommended format and have the same approved by client representative on-board.
- Plan and organise crew changes in liaison the onshore organisation and the Captain.
- In liaison with Captain, verify that adequate systems and personnel are in place to effectively respond to any emergency or critical situation.

### **Shift Supervisor**

The Shift Supervisor is in charge of supervising and coordinating all deck activities and has the following responsibilities .

- Ensure that all equipment used by the project team is in a satisfactory condition as regards performance, maintenance and calibration necessary to carry out the operation.
- Keep the DP operator informed of any change in status of the operation. He will keep the bridge informed of all equipment deployed and equipment movements from the vessel.
- He shall inform the bridge immediately in the event of an emergency.
- Has a specific duty to terminate the operation if he/she considers that any malfunction or operation of the equipment would prejudice the safety and/or satisfactory completion of the operation.
- Ensuring that all reporting requirements as laid out in the Maersk supply service project documentation are undertaken.
- Ensure that all personnel involved in the operation receive sufficient coaching and supervision to assist them in carrying out their appointed tasks in a safe and effective manner.
- Be familiar with and implementation of the Maersk supply service management of change Process & Procedures.
- Any other duties as directed by the Offshore Manager.

### **HSE Advisor**

HSE Advisor Promoting and driving MSS safety mind-set, and the continuous performance towards a zero incident goal through the following responsibilities:

- Drive safety/incident free workshops for the project, including crew, client and 3rd party contractors;
- Act as trusted advisor and courageous advocate for the offshore project construction manager (OPCM) on all safety related matters;
- Ensure that HSE Plans and relevant HSE Management System and Emergency Response documentation is established, implemented and maintained for the life of the Project.
- Promote safety related industry best practices and lessons learned;
- Report on HSE matters to the project/OPM;
- Together with the HSEQ coordinators propose or co-ordinate safety activities and ensure they are properly implemented;
- Provide support and advice to all project and worksite personnel on matters related to HSE
- Chair, participate and review of Hazard Identification and Risk Assessments as required
- Participate in incident and near miss investigations and implementation of corrective actions where required
- Resolve any HSE related problems that may arise.

**Date:** March 3, 2021

**To:** DeepGreen Metals Inc. and Sustainable Opportunities Acquisition Corp.

**From:** Maersk Supply Service A/S and Maersk Supply Service Subsea UK Limited

Reference is made to the investment and participation agreement (the “**IPA**”) made as of March 15, 2017 between Maersk Supply Service A/S, Maersk Supply Service Subsea UK Limited (collectively “**Maersk**”) and DeepGreen Metals Inc. (“**DGM**”), as amended. All capitalized terms used but not otherwise defined herein shall have the meaning ascribed to them in the IPA.

We understand that DGM will be entering into a business combination agreement on or about March 4, 2021 pursuant to which, among other things, Sustainable Opportunities Acquisition Corp. (“**SOAC**”), a special purpose acquisition company whose shares will be listed on Nasdaq, will agree to acquire all of the issued and outstanding shares in the capital of DGM in exchange for common shares and special shares in the capital of SOAC (the “**Transaction**”).

In connection with the Transaction, SOAC will raise equity capital by way of private placement (such financing and any other financing by SOAC consummated in connection with the Transaction, the “**PIPE**”) that is expected to be at least \$200 million.

As of the date hereof, Maersk hereby irrevocably:

- (i) waives any and all rights that it may have under Article 3 of the IPA in connection with the Transaction and the PIPE;
- (ii) agrees that the Pro-Rata Participation Right and any and all rights that it may have under Article 9 of the IPA shall terminate and be of no further force and effect upon the closing the Transaction;
- (iii) acknowledges that all amounts owing to Maersk for services rendered through February 5, 2021, in the aggregate amount of US\$4,582,834.17, have been satisfied by the issuance of 3,666,267 common share of DGM at a price per share of US\$1.25 pursuant to your notice to us of 2 March 2021 confirming such share issuance;
- (iv) agrees that all Final Costs for services rendered from and after February 5, 2021 will be settled in cash and that Maersk shall not be entitled to any further In-kind Common Share Investment;
- (v) agrees that clause 13.1 of the IPA is amended by deleting the words ‘Maine Cruise, being Cruise 7’ and replacing them with ‘TOML 1 Marine Cruise or January 8, 2022, whichever is the later’
- (vi) agrees to lower the charter vessel hire operational day rates to US\$19,000 per day, and that idle day rates shall continue at US\$10,000; and
- (vii) agrees all other commercial arrangements, payment terms and terms and conditions of the IPA remain unchanged.

For the avoidance of doubt, Maersk shall maintain its rights under the Article 4 “Right to Match and Service to Other Contractors” and all terms of the IPA not amended by above continue in full force. DG agrees to undertake that, after closing of the Transaction, the IPA is assigned and novated to any successor entity that will continue the business of DGM upon listing.

Article 15 of the IPA is incorporated herein and shall apply to this letter agreement *mutatis mutandis*.

1. **Tonga Offshore Mining Limited (TOML).**
2. **The Kingdom of Tonga (the *State*).**

**Recitals**

- A. TOML intends to apply to the ISA in March 2008 for a Polymetallic Nodule exploration contract in an area of approximately 75,000 square kilometres in international waters.
- B. The intention is that TOML, its agents, contractors, nominees or assignees, will have the exclusive right to carry out the Works in the Licence Area for TOML's sole enjoyment or that of its nominees or assignees.
- C. The State has been given the opportunity to Sponsor TOML in its Application to the ISA.
- D. In return for Sponsoring TOML's Application and TOML's future Works in the Licence Area, the State will receive a Mining Production Fee from TOML during Commercial Production.
- E. The objectives of this Agreement are to set out the terms on which the State agrees to Sponsor TOML, as well as to enable the State to satisfy its ISA Obligations.

**It is agreed** as follows.

**1. Term**

- 1.1 This Agreement commences on the Commencement Date and continues for a term of 30 years (the *Initial Term*), unless terminated earlier pursuant to its terms.
- 1.2 The Parties may agree to extend the term of this Agreement for such period and on such terms as are agreed in writing between the Parties.

**2. State's Right to Withdraw**

- 2.1 The purpose of this clause 2 is to provide the State with additional time, if required, to familiarize itself with any issues related to this Agreement and its Sponsorship role.
- 2.2 The State will have until June 30, 2008 to decide whether it wishes to continue with Sponsorship, during which time TOML agrees that no Works whatsoever will commence within the Licence Area.
- 2.3 If the State wishes to withdraw Sponsorship it may do so without penalty by providing a Notice to withdraw to TOML on or before June 30, 2008, and if a Notice to withdraw is given, this Agreement will terminate in accordance with clause 13.
- 2.4 If a Notice to withdraw is not received from the State on or before June 30, 2008, TOML may commence the Works.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

### 3. Sponsorship

3.1 The State agrees to Sponsor TOML in an application to the ISA, expected to be made in 2008, for a Polymetallic Nodule exploration contract covering approximately 75,000 square kilometres of international waters, and agrees, subject to clause 2, to continue to Sponsor TOML's Works (including any application for a Mining Contract or licence that may be made by TOML) in the Licence Area for the Term of this Agreement. The State agrees to do all things reasonably necessary to give effect to its Sponsorship of TOML, including undertaking any communications with, and providing any necessary documentation to, the ISA required in respect of the Sponsorship.

3.2 The State hereby agrees to maintain Sponsorship unless:

- (a) TOML's Contract for Exploration or Mining Contract is terminated by the ISA as a result of TOML failing to comply with the Contract for Exploration or Mining Contract; or
- (b) TOML is in material breach of its Contract for Exploration or Mining Contract and has not remedied such breach within a reasonable time after Notice of the breach is received by TOML from either the ISA or the State.

In the event of (a) or (b) the State may withdraw Sponsorship without penalty and this Agreement will terminate in accordance with clause 13.

### 4. Relationship of Parties

Nothing in, or contemplated by, this Agreement will be construed or interpreted as constituting a relationship between the State and TOML, of partners, joint venturers, fiduciaries, or principal and agent, or similar relationship.

### 5. Mining Production Fee

In exchange for continued State Sponsorship, TOML will pay to the State a Mining Production Fee in accordance with Schedule 1.

### 6. Undertaking to Comply with ISA Contract Terms

6.1 TOML undertakes to the State that all Works in the Licence Area will be carried out in accordance with the terms and conditions of the Contract for Exploration and Mining Contract.

6.2 The State acknowledges and agrees that TOML may delegate to and/or contract with third parties to undertake aspects of the Works and activities in the Licence Area, with TOML retaining responsibility to ensure such third parties comply with the terms and conditions of the Contract for Exploration and Mining Contract.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

**7. Indemnification**

- 7.1 TOML indemnifies the State from and against claims by the ISA and expenses owed to the ISA that the State suffers, incurs or becomes liable to pay if:
- (a) there has been a breach by the State of its ISA Obligations; and
  - (b) the claims by the ISA against the State or expenses owed to the ISA by the State are a consequence of TOML failing to comply with its obligations under the Contract for Exploration and/or Mining Contract.
- 7.2 TOML indemnifies the State for its reasonable legal costs in the event that the State is made a party to proceedings in respect of this Agreement, the Contract for Exploration or the Mining Contract under article 190 of UNCLOS.
- 7.3 TOML agrees that, if this Agreement is terminated, for a period of 5 years after the date of termination:
- (a) TOML will continue to have responsibility to the ISA for any damage arising out of wrongful acts in the conduct of its operations, in particular damage to the marine environment; and
  - (b) TOML indemnifies the State for any liability that the State has to the ISA in relation to and resulting from TOML's activities.

This clause 7.3 survives termination of this Agreement.

**8. Insurance**

TOML will ensure that appropriate insurance policies are maintained with internationally recognized carriers, in accordance with generally accepted international maritime practice.

**9. Environmental Compliance**

- 9.1 The purpose of this clause 9 is to aid the State satisfy its ISA Obligations and to ensure TOML's environmental compliance with the Contract for Exploration and Mining Contract.
- 9.2 TOML will engage suitably qualified environmental officers to conduct an environmental monitoring program at appropriate times on board vessels and installations used to carry out exploration and mining activities in the Licence Area.
- 9.3 TOML will fund the reasonable direct costs of the environmental officers such as time, accommodation and travel.
- 9.4 The environmental officers will monitor and verify TOML's environmental compliance with the terms and conditions of the Contract for Exploration and Mining Contract.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- 9.5 To facilitate the environmental monitoring program TOML shall submit information to the Designated State Officer and environmental officers that may be reasonably required for the environmental officers to effectively monitor and verify TOML's environmental compliance, including where relevant:
- (a) The ISA approved Plan of Work;
  - (b) TOML's environmental monitoring programs approved by the ISA;
  - (c) Information submitted by TOML to the ISA prior to the commencement of Significant Activities; and
  - (d) TOML's contingency plans approved by the ISA.
- 9.6 TOML will ensure that the environmental officers are assisted in the performance of their duties and shall ensure that the environmental officers:
- (a) have prompt and safe boarding of vessels and installations;
  - (b) have necessary cooperation and assistance with their environmental monitoring on vessels and installations;
  - (c) have access to relevant equipment, facilities and personnel on vessels and installations at reasonable times;
  - (d) are provided reasonable facilities, including, where appropriate, food and accommodation; and
  - (e) have safe disembarkation from vessels and installations.
- 9.7 TOML will ensure that reports prepared by the environmental officers concerning TOML's environmental compliance are submitted to the Designated State Officer.
- 9.8 The State will protect the confidentiality of data and information that is obtained through this environmental monitoring in accordance with clause 11.
- 10. Satisfying ISA Obligations**
- 10.1 TOML shall, within 90 days of the end of each calendar year, submit a report to the State covering its programme of activities in the Licence Area and containing, as applicable, information on TOML's exploration and/or mining activities, including:
- (a) A checklist detailing TOML's compliance with its Contract for Exploration and/or Mining Contract in sufficient detail to enable the State to verify TOML's compliance;

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- (b) Information on the exploration work and/or mining work carried out during the calendar year;
  - (c) The results obtained from environmental monitoring programmes;
  - (d) A statement of the quantity of polymetallic nodules Extracted from the Licence Area;
  - (e) A statement, in conformity with internationally accepted accounting principles and certified by a duly qualified firm of public accountants of the actual and direct exploration expenditures of TOML in carrying out the programme of activities during TOML's accounting year;
  - (f) Details of any proposed adjustments to the Plan of Work.
- 10.2 Reasonable direct costs incurred by the State in administering its ISA Obligations will be reimbursed by TOML, to be capped at the amount of ten thousand United States dollars (\$US10,000) per year.
- 10.3 If TOML is at any time notified by the ISA that it is not in compliance with its Contract for Exploration or Mining Contract, TOML will immediately inform the Designated State Officer of such notice.
- 10.4 If the State receives communication or notice from the ISA relating to the State's ISA Obligations or TOML, it shall immediately provide TOML with Notice of the details of such ISA communication or notice.
- 10.5 The State shall protect the confidentiality of data and information that is obtained under this clause in accordance with clause 11.
- 11. Confidentiality**
- 11.1 Subject to clause 11.2, the State must not disclose to a third party Confidential Information.
- 11.2 The State is not obliged to keep confidential any information:
- (a) which is required or permitted to be disclosed by this Agreement;
  - (b) which is being used solely for the purpose of communicating with the ISA and fulfilling the State's ISA Obligations;
  - (c) which is in the public domain through no default of the State;
  - (d) which is given to a Court in the course of proceedings to which the State is a party or to an agreed arbitrator;

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- (e) which is given to its legal advisers, consultants, officers or employees provided that such parties undertake to keep the information confidential and provided the disclosure is reasonably necessary in connection with the State exercising its rights or performing its obligations under this Agreement or performing its ISA Obligations; or
- (f) to which TOML has given prior written consent to disclose.

## 12. Assignment

The State agrees that TOML may Assign the Contract for Exploration and/or Mining Contract to any third party nominated in writing by TOML. If the Contract for Exploration and/or Mining Contract is assigned under this clause 12, the Agreement will terminate in accordance with clause 13 and both Parties will be relieved from all of their respective obligations arising under the Agreement.

## 13. Termination

13.1 This Agreement will continue in force for the Term unless it is terminated earlier due to any of the following:

- (a) The State withdraws Sponsorship under clause 2.3;
- (b) The State withdraws Sponsorship in accordance with clause 3.2;
- (c) TOML fails to execute a Contract for Exploration with the ISA by June 30, 2010;
- (d) TOML Assigns its Contract for Exploration and/or Mining Contract in accordance with clause 12;
- (e) TOML elects to terminate this Agreement pursuant to clause 13.2; or
- (f) The Parties mutually agree in writing to terminate the Agreement.

13.2 If TOML's Contract for Exploration or Mining Contract in respect of the Licence Area expires, is surrendered, revoked or terminated (other than in circumstances where such expiry, surrender, revocation or termination occurs in the course of TOML applying for or obtaining a substitute Contract for Exploration, Mining Contract or other licence in the same Licence Area or part thereof), TOML may, by giving Notice to the State, terminate this Agreement.

13.3 For the avoidance of doubt, termination in accordance with clause 13.1 will result in the State being relieved from all of its obligations arising under this Agreement from the date of termination, and the State will cease to have any rights or claim to the Mining Production Fee (other than in respect of any Commercial Production up until the date of termination).

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

**14. Governing Jurisdiction**

This Agreement is governed by and will be construed according to the laws of British Columbia, Canada, and the parties irrevocably submit to the jurisdiction of the courts of British Columbia, Canada.

**15. International Arbitration**

15.1 Any dispute or difference arising out of or in connection with this Agreement must be submitted to arbitration in accordance with, and subject to, UNCITRAL Arbitration Rules.

15.2 Subject to any contrary provision in the UNCITRAL Arbitration Rules:

- (a) There must be one arbitrator;
- (b) The language of the arbitration must be English; and
- (c) The place of arbitration must be British Columbia, Canada.

15.3 Despite the existence of a dispute or difference each Party must continue to perform this Agreement.

**16. Notices**

Any notice, demand, consent or other communication (a Notice) given or made under this Agreement:

- (a) must be in writing and signed by the Party or a person duly authorised by the Party;
- (b) must be addressed and delivered to the intended recipient by hand or registered post at the address or fax number below or the address or fax number last notified by the intended recipient to the sender after the date of this Agreement:
  - (i) to: Tonga Offshore Mining Limited  
P.O. Box 893 Nuku'alofa  
Tonga South Pacific  
Attention: Mr David Heydon
  - (ii) to: Ministry of Lands, Survey and Natural Resources and Environment  
P.O. Box 5 Nuku'alofa  
Tonga South Pacific  
Attention: Chief Executive Officer
- (c) will be taken to be duly given or made when delivered, received or left at the above fax number or address. If delivery or receipt occurs on a day that is not a business day in the place to which the Notice is sent or is later than 4pm (local time) at that place, it will be taken to have been duly given or made at the commencement of business on the next business day in that place.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

**17. Entire Agreement**

The terms and conditions referred to herein constitute the entire agreement between the Parties with respect to the Agreement. Any prior arrangements, agreements, representations or undertakings are superseded and any modification or alteration of the Agreement will not be valid except if made in writing and signed by the Parties.

**18. Non Reliance**

The State warrants that it:

- (a) did not in any way rely upon any information, representation, statement or documentation, made by or provided to the State by TOML or anyone on behalf of TOML for the purposes of entering into the Agreement except to the extent that any such information, data, representation, statements or document forms part of the Agreement; and
- (b) enters into this Agreement based on its own investigations, interpretations, deductions, information and determinations, and acknowledges that it is aware that TOML has entered into the Agreement relying upon the warranties contained in this clause 18.

**19. Amendment**

This Agreement may only be amended by mutual agreement in writing by the Parties.

**20. Severability of Provisions**

Any provision of this Agreement that is prohibited or unenforceable in any jurisdiction is ineffective as to that jurisdiction to the extent of the prohibition or unenforceability. That does not invalidate the remaining provisions of this Agreement nor affect the validity or enforceability of that provision in any other jurisdiction.

**21. Further Assurances**

Each Party must do anything necessary or desirable (including executing agreements and documents) to give full effect to this Agreement and the transactions contemplated by it.

**22. Interpretation**

Headings are for convenience only and do not affect interpretation. The following rules of interpretation apply unless the context requires otherwise.

- (a) If a word or phrase is defined, its other grammatical forms have a corresponding meaning.
- (b) A reference to dollars and \$ is to United States currency.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

- (c) All references to time and to dates are to Tongan times and dates.

### 23. Definitions

The following definitions apply unless the context requires otherwise.

**Agreement** means this agreement;

**Application** means TOML's application to the ISA for a Polymetallic Nodule Contract for Exploration over approximately 75,000 square kilometres within international waters;

**Assign** means the assignment, novation or transfer of TOML's rights and obligations under the Contract for Exploration and/or Mining Contract in whole or in part to another entity in another country, including, but not limited to, the transfer of all the rights and obligations that TOML may have under its Contract for Exploration and/or Mining Contract, as well as TOML's exclusive right to explore for and/or exploit Polymetallic Nodules in the Licence Area.

**Commencement Date** means the date of this Agreement;

**Confidential Information** means all information about TOML, its nominees or assignees (referred to hereafter in this definition as TOML), which has been provided to the State or learned by the State in its Sponsorship role (but does not mean information which is generally known to the public), including but not limited to, information relating to the Works, all technology, processes and know-how of TOML, the location and prospective locations of Polymetallic Nodules; confidential information that is restricted or proprietary under any contract or agreement that TOML has with a third party, business details, customers or suppliers of TOML, all technical and research data relating to the Works, financial information, new business and product ideas and strategies, and business relationships;

**Contract for Exploration** means any exploration contract for Polymetallic Nodules entered into between TOML and the ISA;

**Designated State Officer** means an officer designated by the State to manage the State's ISA Sponsorship role and facilitate communication between NSDR and the State;

**Extract** means recovered from the seafloor to the surface;

**Licence Area** means that area allocated by the ISA to TOML under its Contract for Exploration and/or Mining Contract over which TOML has the exclusive right to explore and/or exploit Polymetallic Nodules;

**ISA** means the International Seabed Authority;

**ISA Obligations** means the State's obligations under article 139, article 153, paragraph 4, and Annex III, article 4, paragraph 4, of UNCLOS, in relation to its Sponsorship of TOML;

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

**Mining Contract** means any mining contract for Polymetallic Nodules entered into between TOML and the ISA;

**Mining Production Fee** means the fee payable by TOML calculated in accordance with Schedule 1 of this Agreement;

**Notice** has the meaning given to that term in clause 16;

**Plan of Work** means the programme of TOML's exploration activities in the Licence Area approved by the ISA;

**Polymetallic Nodules** means any mineral deposit, on or just below the surface of the seabed, which contains either manganese, nickel, cobalt or copper;

**Significant Activity** means an exploration or mining activity for which the ISA requires a prior environmental impact assessment to be done, as well as an environmental monitoring programme to be carried out during and after the specific activity;

**Sponsorship** means sponsorship of TOML by the State as required by the ISA and under TOML's Contract for Exploration and/or Mining Contract;

**Term** means the Initial Term as provided for in clause 1.1 and any extension thereof in accordance with clause 1.2;

**UNCLOS** mean the United Nations Convention on the Law of the Sea of 10 December 1982;

**Works** means the exploration, managing, developing, mining, exploiting, transporting and/or dealing in Polymetallic Nodules within the Licence Area carried out by or on behalf of TOML under TOML's Contract for Exploration and/or Mining Contract.

**Sponsorship Agreement**

Title: Dated:

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

**Schedule 1****Payment Mechanism****1. Definitions**

In this Schedule 1:

**Auditor** means a person appointed to conduct an audit of the amount of Polymetallic Nodules Extracted from the Licence Area in a year in accordance with clause 3.1 of this schedule.

**Commercial Production** is deemed to have occurred in any calendar year where there has been Extraction of greater than 1 million Dry Tons of Polymetallic Nodules by TOML from the Licence Area in that calendar year;

**Dry Ton** means 70% of the weight of a ton of moist Polymetallic Nodules measured at port of unloading;

**Excess Tonnage** means the amount, if any, by which the Auditor determines that the amount of Polymetallic Nodules Extracted by TOML from the Licence Area in a calendar year exceeds the amount of Polymetallic Nodules upon which TOML has paid an MPF for that same year.

**Extract** means recovered from the seafloor to the surface;

**MPF** means Mining Production Fee; and

**Polymetallic Nodules** means seafloor mineral deposits that contain potentially economic amounts of either Manganese, Nickel, Copper or Cobalt.

**2. Mining Production Fee**

- 2.1 TOML shall pay the State a MPF in accordance with this clause 2 for each year that TOML is in Commercial Production.
- 2.2 The MPF will be paid based on a sliding scale of US dollars per Dry Ton of Polymetallic Nodules Extracted by TOML from the Licence Area at the following rates:
  - (a) US \$[\*\*\*] per Dry Ton for the first 3 million Dry Tons Extracted in that calendar year; and
  - (b) US \$[\*\*\*] per Dry Ton for all Dry Tons Extracted thereafter in that calendar year.
- 2.3 The MPF shall be paid in arrears and on an annual basis, on or before the last day of the month immediately following the calendar year in which the Polymetallic Nodules have been Extracted.

**CERTAIN CONFIDENTIAL INFORMATION CONTAINED IN THIS DOCUMENT, MARKED BY [\*\*\*], HAS BEEN OMITTED BECAUSE THE INFORMATION (I) IS NOT MATERIAL AND (II) WOULD LIKELY CAUSE COMPETITIVE HARM IF PUBLICLY DISCLOSED.**

2.4 The State warrants that the MPF is tax deductible to TOML, against its income.

### 3. Audit

- 3.1 The State may, at its expense and not more than once each calendar year, request in writing an independent audit of the amount of Polymetallic Nodules Extracted from the Licence Area in the preceding calendar year. If the State requests an audit, the State and TOML shall seek to agree on a suitably qualified and independent auditor to conduct the audit. If the parties do not agree on the identity of the auditor within 60 days of the State requesting the audit, the independent auditor shall be nominated by the Secretary-General of the ISA.
- 3.2 TOML will provide the Auditor with reasonable access to its operations and records for the purpose of undertaking the audit.
- 3.3 The parties will require the Auditor to provide a written report to both parties on the findings of the audit within 30 days of completion of the audit.
- 3.4 In the absence of manifest error, the findings of the Auditor will be binding on the parties.
- 3.5 If the Auditor determines that TOML Extracted a larger amount of Polymetallic Nodules from the Licence Area in the preceding year than TOML paid an MPF in respect of pursuant to clause 2, then within 30 days of receipt of the Auditor's report, TOML must pay any additional MPF to the State in respect of the Excess Tonnage.

**Date**

**PARTIES**

**The Republic of Nauru** (the “*Republic*”) and **The Nauru Seabed Minerals Authority**, established under the International Seabed Minerals Act 2015 (the “*Act*”) and **Nauru Ocean Resources Inc.** (No. T/2028) a Nauruan company having its registered office at 1<sup>st</sup> Level, Civic Centre, Aiwo District, Republic of Nauru, South Pacific (“**NORI**”)

**RECITALS**

NORI has the exclusive right to explore for Polymetallic Nodules in the International Seabed Area pursuant to the ISA Exploration Contract.

The Republic has Sponsored NORI’s Activities in the International Seabed Area pursuant to the Certificate of Sponsorship, and agrees to maintain Sponsorship on the terms of this Agreement.

In exchange for the Republic’s sponsorship, NORI will pay a Seabed Mineral Recovery Payment during Exploitation in accordance with Section 40 of the Act.

The Seabed Mineral Recovery Payment will be paid to the Seabed Minerals Fund, in accordance with the Act to provide benefits to Nauru’s current and future generations in a transparent manner. In this way, the Seabed Mineral Recovery Payment paid by NORI during Exploitation is intended to provide great benefits with a high social rate of return to the people of Nauru.

NORI currently provides capacity building initiatives for Nauruan nationals and proposes to continue to provide such initiatives during the Exploration and

The International Seabed Area for the prospective exploration and exploitation is outside the sovereign jurisdiction of the Republic and the Republic does not own the Polymetallic Nodules contained in NORI’s Tenement Area.

The seafloor minerals contained in the Tenement Area are administered by the ISA and NORI will be required to make payments to the ISA for the right to recover the minerals during Exploitation.

It is acknowledged that considerable funds will be required to be expended at risk before any commercial development of the Polymetallic Nodules in the Tenement Area. The Republic is not making any monetary investment in the Exploration and Exploitation activities in the Tenement Area, and accordingly is not exposed to the risk of loss associated with such investment.

NORI undertakes that its Polymetallic Nodule Exploitation in the International Seabed Area will not directly impact on the environment in the Republic of Nauru and will not cause depletion of the Republic of Nauru’s own mineral resources.

With regard to the respective obligations and commitments under this Agreement, each of the parties covenant that it shall act in good faith and deal fairly with the other party.

For good and valuable consideration, the Parties hereto agree to be bound by the following terms and conditions:

#### **CLAUSE 1**

##### **TERM**

1.1 This Agreement will remain in force for the duration of NORI's 15 year ISA Exploration Contract, and will automatically extend for a further 20 years upon NORI reaching the Minimum Recovery Level under an ISA Exploitation Contract, unless:

- (a) NORI's ISA Contract is terminated by the ISA as a result of NORI breaching the ISA Contract; or
- (b) this Agreement is terminated pursuant to clauses 10.6, 11, 21, or 22 of this Agreement.

#### **CLAUSE 2**

##### **SPONSORSHIP**

2.1 The Republic agrees to:

- (a) provide and maintain Sponsorship of NORI and NORI's Exploration and Exploitation of the Tenement Area (including providing Sponsorship of NORI's Exploitation application to the ISA) for the Term of this Agreement;
- (b) do all things reasonably necessary to give effect to NORI having the full benefit of the Sponsorship, including renewing NORI's Certificate of Sponsorship, undertaking communications with, and providing documentation, certificates and undertakings to, the ISA or other regulatory body required in respect of the Sponsorship; and
- (c) fulfil its responsibilities under Section 30 of the Act.

2.2 For clarity, the Republic acknowledges that the Sponsorship is provided by the Republic, as a signatory to UNCLOS, for the purposes of UNCLOS and the ISA Regulations and that neither this Agreement nor Sponsorship confers on the Republic any rights to or in connection with:

- (i) the Tenements;
- (ii) the Polymetallic Nodules contained within the Tenements or recovered therefrom; or
- (iii) any product produced from the processing of the Polymetallic Nodules.

2.3 NORI will have the exclusive enjoyment and right to carry out the Exploration and Exploitation in the Tenement Area, and NORI may at its sole discretion deal with the title and ownership of Tenements and Polymetallic Nodules in any way, and the NORI Group may at their sole discretion make an Assignment upon providing notification to the Republic.

2.4 The Republic recognizes that the Exploration and Exploitation within the Tenements shall require significant international financing, and the Republic agrees to use its best efforts to assist the NORI Group to obtain financing, including entering into agreements and providing formal documents that the lenders, investors and other third parties may reasonably require in relation to Sponsorship and the provision of regulatory certainty, however nothing herein will require or be deemed that the Republic has provided or guaranteed any such financing.

2.5 For the avoidance of doubt, the Republic is only sponsoring NORI, and is not sponsoring or responsible for the activities of any other entity in the NORI Group.

### **CLAUSE 3**

#### **SEABED MINERAL RECOVERY PAYMENT**

3.1 In exchange for the Republic agreeing to provide continued Sponsorship for the Term on the terms set out in this Agreement, NORI shall pay to the Republic during Payment Years a Seabed Mineral Recovery Payment (“**SMRP**”) in accordance with this Clause 3.

3.2 The Seabed Mineral Recovery Payment will be US\$[\*\*\*] per Tonne of Polymetallic Nodules Recovered from the Tenement Area during Payment Years.

3.3 The SMRP shall be paid in arrears on or before the last day of the month immediately following the end of each calendar quarter during Payment Years.

3.4 The SMRP is fixed for the first five years of this Agreement, and shall be adjusted (on a compounding basis) on the first day of January in each following year by the relevant factor in each following year that represents official inflation in the United States of America using the All Items Consumer Price Index for All Urban Consumers (CPI-U) for the U.S. City Average published from time to time by the United States Department of Labour, Bureau of Labour Statistics. For example, if official inflation in the US is 3% in the 6th year of this Agreement the SMRP will be increased by 3% from US\$[\*\*\*] to US\$[\*\*\*].

3.5 Until such time as NORI reaches the Minimum Recovery Level within the Tenement Area, no SMRP or other amounts or payments will be payable by NORI to the Republic, except for the Administration Fee under Section 18 of this Agreement.

3.6 Subject to Sections 9 and 18 of this Agreement:

(a) the Republic hereby agrees that the SMRP contemplated under this Section 3 represents the totality of the monetary contributions, payments and Taxes the NORI Group is required to make to the Republic;

(b) the NORI Group will not be subject to or required to pay any other Taxes for the Term, including without limitation any Tax related to the Exploration, Exploitation, the NORI Rights, the Business and/or Sponsorship.

3.7 The Republic hereby undertakes and affirms that at no time will the rights (and the full and peaceful enjoyment thereof) granted by it under this Agreement be discriminately derogated from or otherwise prejudiced by any Nauruan Law or the action or inaction of the Republic, or any official thereof, or any other person whose actions or inactions are subject to the control of the Government. To the extent there is inconsistency between any future Nauruan Law related to taxation or the financial terms between the Republic and the NORI Group, then this Agreement will govern.

#### CLAUSE 4

##### AUDIT

4.1 The Republic may, not more than once each calendar year, request in writing an independent audit of the amount of Polymetallic Nodules Recovered in the preceding calendar year ("**Production Audit**"). If the Republic requests a Production Audit, NORI and the Republic shall seek to agree on a suitably qualified and independent auditor to conduct the Production Audit.

4.2 NORI will provide the auditor with reasonable access to its records for the purpose of undertaking the Production Audit.

4.3 The Parties will require the auditor to provide a written report to the Parties on the findings of the Production Audit within 30 days of completion of the Production Audit. In the absence of manifest error, the findings of the auditor will be binding on the Parties.

4.4 If the auditor determines that a materially larger or smaller (i.e. more than 5%) amount of Polymetallic Nodules were Recovered from the Tenement Area in the preceding year than reflected in the SMRP calculated by NORI for the year pursuant to clause 3, then within 30 days of receipt of the auditor's report, NOM must recalculate in accordance with the accurate and revised figures determined by the auditor for that year the SMRP under clause 3, and pay to (or deduct from future payments to) the Republic the difference between the SMRP already paid and the SMRP due under clause 3 on the basis of the revised figures.

4.5 The cost of an audit under this clause will be borne equally between the Republic and NOM.

## CLAUSE 5

### UNDERTAKING TO COMPLY WITH ISA CONTRACT TERMS

5.1 NORI shall ensure that the Activities carried out in the International Seabed Area will be in compliance with:

(i) the terms and conditions of the applicable ISA Contract that is in existence at the time and that pertains to the Activities in the International Seabed Area, including the environmental terms and conditions contained in the applicable ISA Contract; and

(ii) NORI's ISA Obligations that pertain to the Activities in the International Seabed Area.

5.2 NOM and its Subcontractors will not commit any actions, or make any omissions that would cause the Republic to materially breach its Sponsorship Obligations.

5.3 The Republic will not commit any actions or make any omissions that would cause NORI to breach its obligations under clause 5.1.

5.4 NOM will comply with its obligation under Section 29 of the Act.

## CLAUSE 6

### SUBCONTRACTORS

6.1 Subject to the provisions of this clause, the Republic acknowledges and agrees that NOM may delegate to and/or contract with Subcontractors to undertake all or part of the Exploration and Exploitation.

(a) agrees that the Exploration and Exploitation shall be carried out in accordance with NORI's ISA Obligations and the Act, whether the Exploration or Exploitation is being carried out by NORI or a Subcontractor; and

(b) is responsible to the Republic for any monetary damage the Republic suffers under UNCLOS for a breach of its Sponsorship Obligations resulting from the acts, negligence, omissions or defaults of any Subcontractor in carrying out the Activities in the International Seabed Area, as if they were the acts, negligence, omissions or defaults of NORI.

6.2 NORI shall take reasonable and appropriate measures to ensure that the Activities carried out in the International Seabed Area are executed by and under the supervision of appropriately qualified, experienced and skilled personnel.

**CLAUSE 7**

**TRAINING AND CAPACITY BUILDING**

NORI will implement training and capacity building initiatives for Nauruan nationals in accordance with a program to be developed by NORI in compliance with Section 8 of the ISA Contract.

**CLAUSE 8**

**INDEMNIFICATION**

8.1 Except to the extent that an award of damages is available as a consequence of a breach of this Agreement and subject to clause 8.3, NORI indemnifies and will keep indemnified the Republic from and against all costs, expenses, losses, charges, demands, actions, damages and Claims or other monetary liabilities under UNCLOS that the Republic suffers, incurs, sustains or becomes liable for under UNCLOS to the extent to which the costs, expenses, losses, charges, demands, actions, damages and Claims or other monetary liabilities arise as a consequence of the Activities in the International Seabed Area being carried out wrongfully and directly causing the Republic to breach its Sponsorship Obligations.

8.2 Upon

(a) the Republic becoming aware:

(i) of any actual or potential Claim against it under UNCLOS; and/or

(ii) that it has or may incur a cost, expense, loss, liability or any damage, for which NORI has indemnified the Republic under clause 8.1, or:

(b) if the Republic can make:-

(i) a Claim against NORI under the clause 8.1 indemnification; and

(ii) the Claim relates to a Claim or liability under UNCLOS against the Republic made from or owed to a third party, including without limitation, a Claim made against the Republic by the ISA or another country,

the Republic must:

(i) Notify NORI in writing of the alleged Claim or liability as soon as is reasonably practicable after the Republic becomes aware of such Claim or liability;

(ii) give NORI (and any of NORI's nominees) at the time of Notification the option to at NORI's expense conduct the defence of the Claim or liability and make any appeals;

8.3 The Republic must not pay out any amounts claimed against the Republic under the Claim or liability until:

(i) NORI has been Notified in accordance with clause 8.2 and has advised that it will not defend the Claim or liability; and

(ii) in the event that NORI or any of its nominees has elected to defend the Claim or liability; not pay out any amounts claimed against the Republic under the Claim or liability until NORI has provided written approval, which it will do acting reasonably and in any case upon a Final Determination.

8.4 The Republic must act in good faith to avoid prejudicing or adversely affecting any defence of the Claim that NORI may pursue and provide NORI (at NORI's expense) with any assistance requested by NORI in conducting the defence of such Claim or liability as may be requested in writing by NORI from time to time (and in the case that such assistance is provided by the Republic's legal team, such engagement will be on commercial terms with fees and disbursements to be agreed prior to engagement).

8.5 Notwithstanding anything contained in this clause 8, NORI will only be liable for direct damages, and shall not be liable for any indirect or consequential damages, and shall not be liable for, and the indemnity in clause 8.1 will be proportionately reduced to the extent that, any costs, expenses, losses, charges, demands, actions, damages or Claims or any other liabilities that the Republic suffers, incurs, sustains or becomes liable for or may suffer, incur, sustain or become liable for, to the extent that they arise from:

(a) a negligent or reckless act of the Republic or at the Republic's direction or on its behalf;

(b) a situation where the Republic fails to act in good faith or acts in a way that discriminates against NORI; or

(c) a Material Republic Breach.

8.6 This clause 8 survives termination or expiry of this Agreement until the date that the Republic no longer has any responsibilities or potential liabilities under UNCLOS that may arise as a consequence of the Activities being carried out wrongfully.

## **CLAUSE 9**

### **APPLICABLE TAXES AND PAYMENTS**

9.1 Notwithstanding anything contained in this Agreement, NORI agrees that it will be subject to the following payments and conditions, where applicable:

(a) Payments that are classified as a Penalty;

(b) the Administration Fee;

(c) ISA Application Costs;

(d) taxes imposed on representatives of NORI which are built into the cost of goods and services, such as departure tax, consumption tax and bed tax;

(e) taxes imposed on NORI employees working in or residing in Nauru as well as taxes imposed on entities and individuals providing services to NORI in Nauru in accordance with the Employment and Services Tax Act 2014;

(f) taxes imposed on entities and individuals providing services to NORI in Nauru in accordance with the Business Tax Act 2016;

(g) Visa fees for NORI representatives;

(h) the registration aspects under the Administration Tax Act; and

(i) ordinary corporate administration fees such as the costs associated with the annual renewal of the certificate of incorporation.

provided that such payments and conditions are applied on a fair and reasonable basis and are imposed on a non-discriminatory basis to all Nauruan entities and nationals.

9.2 For the avoidance of doubt, the NORI Group will not be subject to or required to pay any other Taxes for the Term, including without limitation any Tax related to the Exploration and Exploitation (in so far as the Exploration and Exploitation occur outside the jurisdiction of Nauru), the NORI Rights, the Business and/or Sponsorship, with the exception of the SMRP and those Taxes detailed in Section 9.1 (a) to (i) above.

## **CLAUSE 10**

### **NAURUAN LAWS, EXPROPRIATION AND CORPORATE EXISTENCE**

10.1 The Republic agrees and warrants that:

(a) any Nauruan Laws and regulations brought into effect after the Commencement Date will not interfere with or diminish NORI's rights with respect to any Tenements, the Business or the rights arising under this Agreement and must not be a Discriminatory Change in Nauruan Law, except to the extent the Republic has an obligation at International Law to enact such laws in order to fulfil the Republic's Sponsorship Obligations;

(b) to the extent that NORI or the NORI Group's rights and obligations under this Agreement conflict with their rights and obligations under any discriminatory Nauruan Law, this Agreement will take precedence, and NORI and the NORI Group will be relieved of any obligations under Nauruan Law to the extent that their rights and obligations conflict with Nauruan Law;

(c) the Republic will take such actions necessary to give effect to the exemptions from applicable law and tax law expressly provided in this Agreement. For clarity, NORI will not be subject to any taxation with respect to NORI's activities that occur outside of the Republic, including the Exploration and Exploitation.

10.2 Prior to bringing in any laws or regulations that are required by International Law to fulfil the Republic's Sponsorship Obligations the Republic will provide NORI with reasonable and meaningful consultation.

10.3 The Republic must also notify NORI from time to time as to any applicable Nauruan Law that may be brought in to effect to fulfil the Republic's Sponsorship Obligations and shall provide NORI sufficient time to ensure that it is able to comply with those laws or otherwise seek dispute resolution between the Parties with regards to the application of such Nauruan Law. In the event any such change comes into force and materially impacts on the financial obligations of NORI, then the parties agree to negotiate in good faith appropriate amendments to the payments contemplated to the Republic under this Agreement in order to maintain the same level of financial burden on NORI as of the date of execution of this Agreement.

10.4 The Republic shall not impose, nor shall it permit or authorise any of its agencies or instrumentalities or any local or other authority of the Republic to impose any Taxes, impositions, rates or charges of any nature whatsoever on or in respect of the titles, property, or other assets, products, materials, or services used or produced by or through the Activities or by any or all of the NORI Group otherwise in the conduct of its business pursuant to the NORI Rights nor will the Republic take or permit to be taken by any such Republic authority any other discriminatory action which would deprive the NORI Group of full enjoyment of the rights granted and intended to be granted by the NORI Rights or otherwise under this Agreement.

10.5 In enacting and implementing Nauruan Laws and regulations the Republic shall at all times accord NORI fair and equitable treatment, and will provide a stable and predictable legal framework and make decisions consistently and transparently and in accordance with the legitimate expectations of NORI and the NORI Group.

10.6 In the event there occurs any change in Nauruan Laws (including without limitation provisions relating to imposts, duties, fees, charges, penalties, and Tax related legislation) after the date of this Agreement, and if upon NORI's representation it appears that on a reasonable interpretation and application of the law it would have the effect of divesting, decreasing, or in any way limiting, reducing or withholding any rights or benefits accruing to NORI or the NORI Group under this Agreement or under current legislation, then the Parties shall, in good faith, negotiate to modify this Agreement so as to restore the economic rights and benefits of the NORI Group to a level equivalent to or as close as possible to what they would have been if such change had not occurred. If the economic rights and benefits of the NORI Group are not restored then NORI may at its election terminate this agreement.

10.7 The Republic will permit all bona fide monetary conversions and transfers related to the NORI Rights or the Business (including currency conversions, transfers to, by or on behalf of NORI, or any member of the NORI Group) to be made freely and without delay into and out of the Republic of Nauru provided the procedural laws applicable to the transfer of funds out of jurisdiction applicable to all persons are complied with.

10.8 The Republic acting in good faith shall not do or cause to be done or permit any act, thing or omission whether legislative, executive or administrative which discriminates adversely and unfairly against NORI, any member of the NORI Group, the NORI Rights or the Business if it results, upon its application, in a deprivation of the full enjoyment of the rights granted or intended to be granted under this Agreement.

10.9 The Republic warrants and defends NORI's title to possession and peaceful enjoyment of the NORI Rights and all property of NORI and any member of the NORI Group against Expropriation, confiscation, condemnation, and wrongful possession and, to the extent possible, destruction, disruption or interference by the Republic or any other person controlled by or acting on behalf of the Republic.

10.10 The Republic acknowledges that the Exploration, Exploitation and commercialisation of the NORI Rights will require a significant level of expenditure and commercial risk by the NORI Group. The Republic assures, agrees with and warrants to NORI that the Republic has no intention as at the date of this Agreement to, and that the Republic will not (and will not attempt, take any action to, or institute any measures to), directly or indirectly, nationalise or Expropriate NORI, any member of the NORI Group and/or their property (including the NOM Rights, the Business and any other rights or assets of the NORI Group). The Republic further agrees that it will not, directly or indirectly, subject the NORI Group to a measure or measures having the same nature or effect equivalent to nationalization or Expropriation (or attempt, take any action to, or institute any such measure or measures).

10.11 In the event of any inconsistency between the provisions contained within this Agreement, the Parties agree that an interpretation of this Agreement will be preferred which gives NORI and the NORI Group the benefit of this Agreement without nationalisation or expropriation.

10.12 Provided NORI is in material compliance with this Agreement and the *Corporations Act 1972*, the Republic will take all necessary actions for the Term to ensure that the corporate existence of NORI (as well as any other Nauruan incorporated member of the NORI Group) as bodies corporate duly organized and validly existing and in good standing under the laws of the Republic of Nauru is maintained, including ensuring that all such authorisations, approvals, consents and licences are issued as may be required to enable NORI (and such other members of the NORI Group) to maintain its good standing, including ensuring that certificates evidencing annual renewal of registration of incorporation are issued in a timely manner in accordance with the *Corporations Act 1972*. Unless NORI (or such other members of the NORI Group incorporated in the Republic) are in material breach of this Agreement and/or the *Corporations Act 1972*, the Republic shall ensure that no action is taken (either by the government or by any government entity or instrumentality) to interfere with the continued corporate existence and registration of NORI and such other members of the NORI Group incorporated in the Republic.

10.13 The Republic guarantees the conversion and transfer overseas of NORI earnings and savings or earnings of expatriate personnel, their affiliates and subcontractors, resulting from the Activities.

10.14 With respect to earnings of NORI servants or agents, and expatriate personnel, whilst the Republic will not place unnecessary restriction of transfer of funds legitimately earned by NORI servants or agents, and expatriate personnel, such transfers will comply with the procedural laws applicable to transfer of funds out of jurisdiction applicable to all persons.

## CLAUSE 11

### ASSIGNMENT OF NORI RIGHTS

11.1 The Republic agrees that any or all members of the NORI Group may Assign the NORI Rights or any part thereof at any time, at their sole discretion, without reason and without prior consultation, upon providing notification to the Republic.

11.2 In the event that a member of the NORI Group notifies the Republic that an Assignment is to be made or is proposed to be made the Republic shall sign all documents, do all things and take all measures reasonably requested by the NORI Group to facilitate that Assignment, and will not act in any way to prevent or delay the Assignment.

11.3 Upon the later of:

(a) an Assignment being completed in favour of an assignee; or

(b) a certificate of sponsorship being signed by a new country pursuant to the ISA Regulations under which that country sponsors the assignee under the Assignment (or the assignees nominee) as the new holder of the NORI Rights,

this Agreement will terminate effective immediately and:

(c) NORI will no longer have any obligations to pay an Administration Fee or SMRP to the Republic except:

(i) to cover the calendar year's Administration Fee during which the Agreement is terminated; and

(ii) to cover any SMRP owing in respect of any seabed mineral production that has occurred up to the day before completion of an Assignment;

(d) No Party shall be liable to any other Party, whether arising under contract, tort, strict liability or otherwise, for any:

(i) loss of anticipated profits, loss of opportunity, loss of use, loss of production, loss of contracts; or

(ii) consequential or indirect loss or damage, of any nature arising at any time from any cause whatsoever; and

(e) The indemnity provided to the Republic under clause 8.1 shall continue in force until the date that the Republic no longer has any responsibilities or potential liabilities under UNCLOS that may arise as a consequence of the Activities being carried out wrongfully.

11.4 For avoidance of any doubt, and subject to Clause 9.1, the Republic will not impose any Tax (including without limitation capital gains tax, stamp duty, sales tax or transfer tax) on any sale or transfer of:

- (a) the NORI Rights;
- (b) any asset held by the NORI Group;
- (c) any NORI Group entity; or
- (d) any shares in the NORI Group.

11.5 This Section 11 survives termination or expiry of this Agreement.

## **CLAUSE 12**

### **NOTIFICATION TO NORI**

12.1 Should the Republic or the Nauru Seabed Minerals Authority receive material information, correspondence or notices from the ISA or other regulatory body relating to:

- (a) NORI;
- (b) NORI's ISA Obligations;
- (c) the Republic's Sponsorship Obligations;
- (d) any Subcontractor;
- (e) the Activities; or
- (f) the Tenements,

it shall promptly inform NORI and provide a copy of such material information, correspondence or notice.

## **CLAUSE 13**

### **EXPLOITATION APPLICATION**

13.1 The Republic will cooperate with NORI to facilitate the preparation, submission and support of:

- (i) Applications to extend the ISA Exploration Contract; and
- (ii) Applications to the ISA for Exploitation.

13.2 The costs of presenting the applications to the ISA referred to in clause 13.1 shall be met by NORI, including any costs reasonably incurred by the Republic in taking actions either requested by NORI or deemed necessary by the Republic under the rules of the ISA, to support the application before the ISA (“**ISA Application Costs**”).

#### CLAUSE 14

##### ENVIRONMENTAL AND SAFETY PERFORMANCE MONITORING PROGRAM

14.1 Subject to clause 14.4, NORI acknowledges that the Republic has the right to carry out an environmental and safety performance monitoring program (“**Environmental and Safety Performance Monitoring Program**” or “**ESPMP**”) to, *inter alia*:

(a) Assist the Republic satisfy its Sponsorship Obligations;

(b) Verify whether the Activities, Subcontractors, Vessels and Installations are in compliance with NORI’s ISA Obligations;

(c) Verify whether any Activities or Subcontractors are causing or have caused Pollution Incidents or Serious Harm to the Marine Environment; and/or

(d) Verify whether the Activities, Subcontractors, Vessels and/or Installations are in compliance with NORI’s ISA Obligations pertaining to Safety at Sea.

14.2 NORI acknowledges that it must permit, and must ensure that all relevant Subcontractors permit, the Republic, the Republic’s nominees, any suitably qualified person authorized by the Republic, or any independent qualified environmental or safety officers engaged by the Republic or acting on the Republic’s behalf (collectively referred to as “**ESPMP Officers**”), to conduct an ESPMP in accordance with this clause 14.

14.3 NORI acknowledges that it must give, and must ensure that all relevant Subcontractors give, the ESPMP Officers access to any Vessel or Installation being used in the Activities that is relevant to the ESPMP, except where such access is impracticable or would cause unreasonable interference with the Activities, and provide the ESPMP Officers with:

(a) reasonable assistance requested by the ESPMP Officers to allow them to access, inspect, assess, audit and/or monitor the relevant Activities, including:

(i) safe boarding of Vessels and Installations;

(ii) cooperation and assistance with the ESPMP on Vessels and Installations;

(iii) reasonable access to relevant log books, records, documents, equipment, facilities and personnel on Vessels and Installations at reasonable times;

(iv) provision of reasonable accommodation and facilities, including, where appropriate, food and means of adequate subsistence while on any Vessel or Installation; and

(v) safe disembarkation from Vessels and Installations; and

(b) Copies of any documents requested by the ESPMP Officers that are in the possession of NORI and/or a relevant Subcontractor and are strictly necessary to carry out the ESPMP (subject to confidentiality constraints).

14.4 The Republic shall, and shall ensure that all ESPMP Officers engaged in the ESPMP shall, keep confidential all information provided to them by or on behalf of NORI or any Subcontractors or otherwise obtained by the Republic or ESPMP Officers in connection with any ESPMP and which relates to NORI, the Activities or any Subcontractor. NORI reserves the right to require any ESPMP Officer before receiving such information to first sign a confidentiality agreement in person that strictly limits the approved purpose of disclosure to that of carrying out the ESPMP and reporting to the Republic.

## **CLAUSE 15**

### **ESPMP OFFICERS**

15.1 Notwithstanding anything contained in this Agreement:

(a) ESPMP Officers must follow all instructions and directions pertaining to Safety at Sea given to them from NORI, a relevant Subcontractor, the captain and/or other relevant safety officers on board Vessels and Installations whether given in writing, verbally or via signage, and NORI is not liable (including under any indemnity in this Agreement) for injury, loss or damage caused by a failure of any ESPMP Officers to follow any instructions and directions or any negligence on the part of such ESPMP Officers; and

(b) NORI has the right to:

(i) request and receive from any ESPMP Officer, prior to their involvement in any aspect of the Activities, all reasonable information necessary to assess the officer's suitability and qualifications for participation in the Activities, including without limitation relevant criminal records, medical information and certification of health including a test for contagious diseases and drugs (with NORI reserving the right to refuse participation in any aspect of the Activities should NORI deem an ESPMP Officer or candidate unsuitable or unsafe);

(ii) at NORI's sole discretion, deny any ESPMP Officer access to or remove any ESPMP Officer from any aspect of the Activities in the event that the Officer poses an unreasonable risk to Safety at Sea, the Activities or does not possess the necessary safety qualifications or training including survival training; and

(iii) order any ESPMP Officers to undergo, if necessary, offshore safety training before or while on board Vessels or Installations,

#### **CLAUSE 16**

#### **COMPLETION CRITERIA**

NORI will comply with NORI's ISA Obligations pertaining to completion of the Exploitation, including safe removal of Installations from the Tenement Area.

#### **CLAUSE 17**

#### **CONFIDENTIALITY**

17.1 Subject to clause 17.2, the Republic must not disclose to a third party Confidential Information.

17.2 The Republic may disclose information:

- (a) in enforcing this Agreement or in a proceeding arising out of or in connection with this Agreement;
- (b) if required under a binding order of the ISA;
- (c) if it is required or permitted to be disclosed by this Agreement;

(d) to its legal advisers, consultants, directors, officers and employees provided that such parties undertake to keep the information confidential and provided the disclosure is reasonably necessary in connection with the Republic exercising its rights or performing its obligations under this Agreement or performing the Republic's Sponsorship Obligations; or

- (e) if NORI has given prior written consent.

17.3 If the Republic becomes aware of a suspected or actual breach of this Section 17, the Republic will immediately Notify NORI and take all practicable steps to prevent or stop the suspected or actual breach.

17.4 This Section 17 survives termination or expiry of this Agreement.

#### **CLAUSE 18**

#### **ADMINISTRATION FEE**

18.1 NORI will pay US\$[\*\*\*] per calendar year to the Republic to cover the costs associated with the Republic's administration of its Sponsorship in that calendar year ("**Administration Fee**"). The fee will be paid annually on the anniversary of the signing of the Certificate of Sponsorship, or such other date mutually agreed from time to time between NORI and the Nauru Seabed Minerals Authority.

18.2 The Republic may review the amount of the Administration Fee, and may reasonably increase the amount where this is required to cover the actual costs to the Republic of administering and supervising the sponsorship, provided that the Republic obtains NORI's written consent where the increase in any year is greater than US\$[\*\*\*].

18.3 The Administration Fee will be reviewed once NORI receives an ISA Exploitation Contract to include any additional costs to the Republic of administering and supervising the sponsorship, including the costs of ESPMP Officers.

## CLAUSE 19

### NORI DEFAULT AND REPUBLIC DEFAULT

19.1 A NORI default occurs if:

- (a) there is a material breach of an obligation under this Agreement by NORI; or
- (b) NORI is in material breach of NORI's ISA Obligations ("**NORI Default**"); or
- (c) NORI Fails to Act in Good Faith.

19.2 If a NORI Default occurs the Republic may give NORI a Notice in writing ("**NORI Default Notice**") stating that a NORI Default has occurred and requiring NORI to Remedy the NORI Default within a reasonable time from the date of such Notice.

19.3 Upon receipt of a NORI Default Notice NORI shall promptly commence, and continue to pursue with diligence, the Remedy of the NORI Default within 60 days, and must, whenever requested by the Republic, advise progress of the Remedy.

19.4 A Republic default ("**Republic Default**") occurs if:

- (a) the Republic breaches this Agreement, its obligations under UNCLOS, Regulations or the Act; or
- (b) the Republic fails to act in good faith or discriminates against NORI (including through a Discriminatory Change in Nauruan Law); or
- (c) the Republic ceases to Sponsor NORI and the Activities, fails to confirm Sponsorship of NORI and the Activities, takes any action towards ceasing its Sponsorship or purports to cease its Sponsorship of NORI and the Activities; or
- (d) the Republic directly or indirectly Expropriates the ownership, rights or assets of the NORI Group, or takes any action to directly or indirectly Expropriate the ownership, rights or assets of the NORI Group.

19.5 If a Republic Default occurs NORI may give the Republic a Notice in writing (“**Republic Default Notice**”) stating that a Republic Default has occurred and requiring the Republic to

Remedy the Default expeditiously not exceeding 60 days from the date of such Notice.

## CLAUSE 20

### TEMPORARY SUSPENSION OF ACTIVITIES

20.1 In the event that:

(a) an Emergency exists; or

(b) NORI or a Subcontractor, in spite of written warnings by the ISA or the Republic, has conducted its activities in such a way as to result in serious persistent and willful violations of the fundamental terms of this Agreement, an ISA Contract or NORI’s ISA Obligations and:

(i) the Republic has served a written Notice of its intention to order suspension under this clause (“**Republic Suspension Notice**”) on NORI; and

(ii) the Republic Suspension Notice specifies in detail the reasons why the Republic Suspension Notice is given and that the Republic requires NORI to Remedy the breach within 60 days of receipt of the Notice, the Republic may by written Notice to NORI:

(c) in the case of 20.1(a) above, demand the suspension of the portion of the Activities necessary to end or mitigate the Emergency for such period as is reasonably necessary;

(d) in the case of 20.1(b) above, demand the suspension of the Activities (for such period as is reasonably necessary) on the day falling 60 days after the date NORI receives the Republic Suspension Notice, unless:

(i) in the case that the breach can be Remedied and NORI has Remedied the breach in that period;

(ii) in the case that the breach cannot be Remedied (or cannot be Remedied within the time specified in clause 20.1(d)), NORI has adequately compensated the Republic for the demonstrable damages incurred by the Republic as a result of the breach; or

(iii) the Republic withdraws in writing the Republic Suspension Notice. 20.2 If suspension is ordered in accordance with clause 20.1:

(e) NORI will take reasonable and appropriate measures to ensure that the relevant Subcontractors comply with the suspension orders and carry out those orders in a way that does not cause or exacerbate a Safety Incident or Serious Harm to the Marine Environment;

(f) the suspended Activities may be resumed when NORI is provided with written direction from the Republic to resume the Activities (always provided that the resumption is allowed under International Law), which the Republic must give immediately if:

(i) in the case of an Emergency, the Emergency has ceased;

(ii) in the case that the breach can be Remedied; NORI has Remedied the breach;

(iii) in the case that the breach cannot be Remedied (or cannot be Remedied within the time specified in clause 20.1(d)), NORI has adequately compensated the Republic for the demonstrable damages incurred by the Republic as a result of the breach; and

(g) NORI will not be relieved of its other responsibilities and obligations under this Agreement, except to the extent that such responsibilities and obligations cannot be performed as a result of the suspension.

20.2 NORI shall provide any necessary assistance to the Republic in the exercise of its rights under this Section 20.

20.3 In the event that NORI disputes the reasons why the Suspension Notice has been issued by the Republic or there is a dispute as to the demonstrable damages incurred by the Republic as a result of the breach, or whether or not the grounds for suspension have been Remedied by NORI, the matter will be referred as a dispute under Section 23 and the suspension under this clause 20 will either not take effect or cease to continue until such time as the dispute resolution has been completed in accordance with that Section 23.

20.4 In the spirit of good faith and co-operation the parties will endeavour to have any dispute referred to under clause 20.4 to be finalised in no later than 60 days.

## CLAUSE 21

### MATERIAL NORI BREACH TERMINATION

21.1 In the event of a Material NORI Breach, and:

(a) the Republic has served a written Notice of its intention to terminate this Agreement under this Section 21 ("**Republic Termination Notice**") on NORI; and

(b) the Republic Termination Notice specifies in detail the Material NORI Breach in respect of which the Republic Termination Notice is given and that the Republic requires NORI to remedy the breach within 60 days of receipt of the Notice, this Agreement will terminate, without penalty to the Republic, on the day falling 60 days after the date NORI receives the Republic Termination Notice, unless:

(c) in the case that the Material NORI Breach can be Remedied; NORI rectifies or overcomes the effect of the Material NORI Breach in that period, or can demonstrate that it has commenced and is diligently proceeding to remedy the breach;

(d) in the case that the Material NOM Breach cannot be Remedied (or cannot be Remedied within the time specified in clause 21.1(b)), NOM has adequately compensated the Republic for the demonstrable material damages incurred or to be incurred by the Republic as a result of the Material NORI Breach; or

(e) the Republic withdraws in writing the Republic Termination Notice.

21.2 For avoidance of doubt this Agreement will not terminate if:

(a) there are no demonstrable material damages to the Republic as a result of the Material NORI Breach; or

(b) if NORI compensates the Republic for the demonstrable material damages incurred by the Republic as a result of the Material NORI Breach.

21.3 Termination of this Agreement under Section 21 shall not in any way prejudice or affect the Republic's rights to Claim and recover damages under the indemnity provided in clause 8.1.

21.4 In the event that NORI disputes the reasons why the Republic Termination Notice has been issued by the Republic or there is a dispute as to the demonstrable damages incurred by the Republic as a result of the breach, or as to whether or not the grounds for termination have been Remedied by NORI, the matter will be referred as a dispute under Section 23. The termination under this Section 21 will not take effect until the later of the time period specified under this clause 21.1 or such time as the dispute resolution has been completed in accordance with Section 23.

21.5 The Republic acknowledges and agrees that termination of this Agreement by the Republic under Section 21 shall not cause the grant of or otherwise create any entitlement, rights or title to the Republic in the NORI Rights which will at all times remain the property of the NORI Group notwithstanding the termination of this Agreement, and the NORI Group will remain entitled to effect an Assignment of the NORI Rights or to otherwise take steps to preserve the operation of and NORI's entitlement to the NORI Rights without further notification to the Republic.

21.6 Notwithstanding anything contained in this Agreement, if the Republic terminates this Agreement it must not revoke the Certificate of Sponsorship until at least six months from the date of the Republic Termination Notice, and must, if requested by NORI, continue to do all things necessary to:

(a) maintain sponsorship during this period; and

(b) assist NORI Assign the NOM Rights.

21.7 This Section 21 survives termination or expiry of this Agreement.

## CLAUSE 22

### MATERIAL REPUBLIC BREACH

22.1 In the event of a Material Republic Breach, and:

(a) NORI has served a written Notice of its intention to terminate this Agreement under this clause 22.1 (“**NORI Termination Notice**”) on the Republic; and

(b) the NOM Termination Notice specifies the Material Republic Breach in respect of which the NORI Termination Notice is given, and that NORI requires the Republic to remedy the breach within 60 days of receipt of the Notice,

22.2 A Material Republic Breach event will occur on the day falling 60 days after the date the Republic received the NORI Termination Notice (“**Material Republic Breach Event**”), unless:

(a) in the case that the Material Republic Breach can be remedied; the Republic Remedies the Material Republic Breach in that period;

(b) in the case that the Material Republic Breach cannot be remedied (or cannot be Remedied within the time specified in clause 22.1(b)), the Republic adequately compensates NORI for the demonstrable damages incurred and/or to be incurred by it, its affiliates or its Subcontractors as a result of the Material Republic Breach; or

(c) NORI withdraws in writing the NORI Termination Notice.

22.3 Without prejudice to any other rights NORI may have, under this Agreement or at Law, if a Material Republic Breach Event occurs NORI may, at its discretion, terminate the Agreement.

22.4 Notwithstanding anything contained in this Agreement, in the case that the Material Republic Breach relates to an event contemplated in clause 19.4(c) or (d) a Material Republic Breach Event will be immediately triggered upon the occurrence of the event without the requirement for a written Notice to be given by NORI.

22.5 Without prejudice to any other rights available at law to NORI, the Republic acknowledges the NORI Rights will at all times remain the property of the NORI Group notwithstanding the termination of this Agreement under this clause 22 and the NORI Group will remain entitled to effect an Assignment of the NORI Rights or to otherwise take steps to preserve the operation of and its entitlement to the NORI Rights without further notification to the Republic.

22.6 This Section 22 survives termination or expiry of this Agreement.

## **CLAUSE 23**

### **DISPUTE RESOLUTION**

23.1 If a dispute between the Republic and NORI arises out of or in connection with the Agreement, either the Republic or NORI may give to the other disputing Party a Notice of dispute in writing adequately identifying the matters and the subject of the dispute together with detailed particulars of the dispute. Notwithstanding anything in this Section 23 the Parties may, by mutual agreement in writing, conduct dispute resolution in any other way or vary the following dispute resolution procedures as they see fit.

23.2 Within 20 days after service of a Notice of dispute, the Parties must meet at least once, to attempt to resolve the dispute.

23.3 If, within 20 days after service of a Notice of dispute, the dispute is not resolved, the chief executive officer of NORI and a relevant Republic Minister must meet within 20 days of expiry of that 20 day period and use their best endeavours, acting in good faith, to resolve the dispute (in whole or in part). If the dispute is resolved at the meeting referred to in this clause then any such resolution will be reduced to writing and will be contractually binding on the Parties.

23.4 Any dispute, controversy or claim arising out of or relating to this contract, or the breach, termination or validity thereof, that has not been resolved in accordance with Section 23.3 shall be settled by arbitration in accordance with the UNCITRAL Arbitration Rules as at present in force. The appointing authority shall be the International Chamber of Commerce acting in accordance with the rules of the ICC for this purpose. The number of arbitrators shall be one. The place of arbitration shall be Brisbane, Australia. The language to be used in the arbitral proceeding shall be English.

23.5 Notwithstanding anything in this Section 23:

(a) nothing will prejudice the right of a Party to seek urgent injunctive, interrogatory or declaratory relief from a court of competent jurisdiction; and

(b) each Party must continue to perform its obligations under the Agreement.

## **CLAUSE 24**

### **AUTHORISATION TO ENTER AGREEMENT**

The Republic warrants that it has done everything under the Act necessary to authorize it to enter in to this Agreement, and the Agreement is enforceable in accordance with its terms

## **CLAUSE 25**

### **GOVERNING JURISDICTION**

25.1 The Governing law and the jurisdiction shall be the Republic, provided however that with respect to any arbitration, the governing procedural laws of the situs of the arbitration shall govern the arbitration. For the avoidance of doubt, all matters arising hereunder shall be resolved pursuant to the Dispute Resolution procedures set forth in Section 23.

25.2 The Nauru Supreme Court will be responsible for enforcing a decision of the arbitration tribunal under clause 23.

25.3 Any appeals from the Supreme Court judgement, decision or ruling lies to the High Court of Australia in accordance with Appeals (Amendment) Act 1974 and where leave to appeal may be required, the parties agree not to object to any such leave being granted.

25.4 It is the intention of the Parties that the High Court of Australia must have the jurisdiction to hear the appeal on its merits.

25.5 This clause must be reviewed if the Australian High Court no longer remains as the Highest Appellate Court of the Republic in which case parties have liberty to mutually agree to change the jurisdiction to the courts in Australia with the applicable law being the laws of Nauru.

## CLAUSE 26

### INTERNATIONAL LAW

26.1 To the extent that NORI's obligations under this Agreement conflict with NORI's ISA Obligations, the latter shall take precedence, and the Parties agree that NORI shall be relieved of its obligations under this Agreement to the extent and for the period that those obligations conflict with NORI's ISA Obligations or other obligations at International Law.

26.2 Any relief provided to NORI under this Section 26 does not invalidate the remaining provisions of this Agreement nor affect the validity of that provision at a future date if it ceases to cause NORI to be in breach of NORI's ISA Obligations.

## CLAUSE 27

### NOTICES

Any notice, demand, consent or other communication ("**Notice**") given or made under this Agreement:

(a) must be in writing and signed by the Party or a person duly authorised by the Party;

(b) must be addressed and delivered to the intended recipient at the address below or the address last Notified by the intended recipient to the sender after the date of this Agreement:

(i) to the Republic:

Nauru Seabed Minerals Authority  
Government Offices  
Yaren District  
Republic of Nauru

(ii) to Nauru Ocean Resources Inc., Nauru Education and Training Foundation Inc. or Nauru Health and Environment Foundation Incorporated:

1<sup>st</sup> Level, Civic Centre, Aiwo District  
P.O. Box 30, Aiwo District  
Republic of Nauru

With an electronic copy to: office@nauroceanresources.com to be delivered at the same time

(c) will be taken to be duly given or made when left at the above address (or the address last Notified by the intended recipient to the sender) and signed for by the recipient. If delivery or receipt occurs on a day that is not a business day in the place to which the Notice is sent or is later than 4pm (local time) at that place, it will be taken to have been duly given or made at the commencement of business on the next business day in that place.

#### **CLAUSE 28**

#### **ENTIRE AGREEMENT**

This Agreement constitutes the entire Agreement between the Parties hereto in respect of the matters referred to herein and there are no representations, warranties, covenants or agreements, express or implied, collateral hereto other than as expressly set forth or referred to herein. Any prior arrangements, agreements, representations or undertakings are superseded by the terms contained in this Agreement.

#### **CLAUSE 29**

#### **FORCE MAJEURE**

29.1 Subject to clause 29.4, either Party shall be excused from performance and shall not be in default in respect of any obligation hereunder to the extent that the failure to perform such obligation is due to an Event of Force Majeure.

29.2 For the purpose of this Agreement, an “Event of Force Majeure” means any of the circumstance detailed in clause 29.3 that are not within the reasonable control of the Party or parties affected, but only if and to the extent that:

(a) such circumstance, despite the exercise of reasonable diligence, cannot be, or be caused to be, prevented, avoided or removed by such Party;

(b) such circumstance materially and adversely affects the ability of the Party to perform its obligations under this Agreement, and such Party has taken all reasonable precautions, due care and reasonable alternative measures in order to avoid the effect of such event on the Party’s ability to perform its obligations under this Agreement and to mitigate the consequences thereof; and

(c) The affected Party notifies the other Party of the Event of Force Majeure as soon as reasonably possible.

29.3 The circumstances giving rise to an Event of Force Majeure include:

(a) an act of God such as, but not limited to, fires, explosions, earthquakes, drought, tidal waves and floods;

(b) war, hostilities (whether war be declared or not), invasion, act of foreign enemies, mobilisation, requisition, or embargo;

(c) rebellion, revolution, insurrection, or military or usurped power, or civil war;

(d) contamination by radio-activity from any nuclear fuel, or from any nuclear waste from the combustion of nuclear fuel, radio-active toxic explosive, or other hazardous properties of any explosive nuclear assembly or nuclear component of such assembly;

(e) riot, commotion, strikes, go slows, lock outs or disorder, unless solely restricted to employees of the Parties;

(f) a change (beyond the control of the parties) to an international law that governs the parties and relates to seabed exploration or exploitation; or

(g) acts or threats of terrorism.

29.4 Notwithstanding anything contained in this Section 29, the parties will not be relieved of their rights and obligations contained in Section 11 of this Agreement.

### **CLAUSE 30**

#### **AMENDMENT**

This Agreement may only be amended by mutual agreement in writing by the Parties.

### **CLAUSE 31**

#### **SEVERABILITY OF PROVISIONS**

Any provision of this Agreement that is prohibited or unenforceable in any jurisdiction is ineffective as to that jurisdiction to the extent of the prohibition or unenforceability. That does not invalidate the remaining provisions of this Agreement nor affect the validity or enforceability of that provision in any other jurisdiction.

**CLAUSE 32**

**FURTHER ASSURANCES**

The Parties must do anything necessary or desirable (including executing agreements and documents and performing such acts that lie within their power) to give full effect to this Agreement and the transactions contemplated by it.

**CLAUSE 33**

**NO LIMITATION**

Without limiting the generality of any other provision of this Agreement, any waiver or delay in the exercise by a Party of any rights under this Agreement will not relieve the other Party of any of their obligations under this Agreement.

**CLAUSE 34**

**REPRESENTATIONS AND WARRANTIES**

(a) The representations and warranties provided in this Agreement are continuing representations and warranties and will be repeated on each day while any obligation under this Agreement remains outstanding, with reference to the facts and circumstances then subsisting.

(b) Each Party warrants to each other Party that at the date of this Agreement it has full power and lawful authority to execute and deliver this Agreement and to perform its obligations under this Agreement. Except as expressly provided in this Agreement, no representation, inducement or warranty was, prior to the execution of this Agreement, given or made by one of the Parties hereto with the intent of inducing the other Party to enter into this Agreement, and any representations, inducements or warranties that may have been so given are hereby denied and negated.

(c) The Republic further represents and warrants that the execution, delivery and performance of this Agreement has received all necessary governmental approvals and authorizations and constitutes the legal, valid and binding obligation of the Republic and is enforceable in accordance with its terms, and the Republic cannot claim sovereign immunity.

(d) Each Party represents and warrants that they are in compliance with applicable anti-bribery and anti-corruption legislation.

**CLAUSE 35**

**NON RELIANCE**

The Parties warrant that they:

(a) did not in any way rely upon any information, representation, arrangement, understanding, statement or documentation, made by or provided to the Party from any other Party or anyone on behalf of the other Party for the purposes of entering into this Agreement except to the extent that any such information, data, representation, arrangement, understanding, statements or document is expressly set out or referred to in this Agreement; and

(b) enter into this Agreement based on their own investigations, interpretations, deductions, information and determinations, and acknowledge that they are aware that the other Parties have entered into this Agreement relying upon the warranties contained in this Section 35.

**CLAUSE 36**

**COUNTERPARTS**

This Agreement may be executed in any number of counterparts and by different parties in separate counterparts. Each counterpart when so executed is deemed an original but all of which together constitute one and the same instrument.

**CLAUSE 37**

**INTERPRETATION**

The following rules of interpretation apply unless the context requires otherwise.

(a) If a word or phrase is defined, its other grammatical forms have a corresponding meaning.

(b) A reference to dollars and \$ is to Australian currency unless otherwise stated.

(c) All references to time and to dates are to Nauruan times and dates.

(d) No rule of construction is to apply to the disadvantage of a Party on the basis that that Party drafted the whole or any part of this deed.

(e) Headings do not affect the interpretation of this Agreement.

**CLAUSE 38**

**DEFINITIONS**

The following definitions apply unless the context requires otherwise.

**Act** means the International Seabed Minerals Act 2015 of the Republic of Nauru.

**Activities** means any and all activities that are carried out in, on or over the International Seabed Area by NORI and/or a Subcontractor for which the Republic has a responsibility under its Sponsorship Obligations and for which the Republic could be held liable in accordance with UNCLOS due to its Sponsorship of NORI.

**Nauru Seabed Minerals Authority** means the body established under the Act to administer Nauru's sponsorship of Seabed Mineral Activities.

**Agreement** means this agreement.

**Assign** or **Assignment** means the assignment or transfer of the NORI Rights to an entity incorporated or existing outside of the Republic of Nauru, including without limitation in conjunction with a change of sponsorship to a new country.

**Business** means each and any business being conducted by the NORI Group arising as a result of or connected with the Exploration, the Exploitation, the Activities and/or the Tenements.

**Certificate of Sponsorship** means the certificate of sponsorship signed on the 11<sup>th</sup> day of April, 2011 by the Nauruan Minister for Commerce, Industry and Environment under which the Republic certified that it sponsored NORI's application to the ISA to explore for Polymetallic Nodules in the International Seabed Area and assumed responsibility in accordance with article 139, article 153, paragraph 4, and Annex III, article 4, paragraph 4, of UNCLOS.

**Claim** includes any action, claim, demand or proceeding arising under UNCLOS. Commencement Date means the date this Agreement is executed by the Parties.

**Confidential Information** means all information that is not in the public domain that is disclosed to the Republic by the NORI Group including but not limited to, information relating to the Activities, technology, processes and know-how, the location and prospective locations of Polymetallic Nodules, confidential information that is restricted or proprietary under any contract or agreement with a third party, business details, customers or suppliers, all technical and research data relating to the Activities, financial information and business relationships including the names of any Subcontractors, and shall include the terms of this Agreement. Corporate Tax means any corporate income tax levied by the Republic on corporations incorporated in Nauru or that engage in business in Nauru.

**Corporations Act** means the Corporations Act 1972 of the Republic of Nauru as in force from time to time, or any law concerning corporations that may succeed the 1972 Act. Discriminatory Change in Nauruan Law means a change in Nauruan Law that is categorically enacted for the sole purposes to:- :-

- (a) materially changes the commercial intent of this Agreement or the Sponsorship arrangement between NORI and the Republic;  
or
- (b) materially increases the total quantum of benefits required to be given by the NORI Group (whether economic or intangible) to the Republic in such a way as to materially change the intent contemplated under this Agreement;

but does not include a change in Nauruan Law that is required by international law for the Republic to fulfil its Sponsorship Obligations.

**Emergency** means a circumstance where the Activities have caused or pose an immediate and probable threat of causing Serious Harm to the Marine Environment, a Pollution Incident or a Safety Incident, as well as any other event or circumstance connected to or arising from the Activities that is classified by the ISA as an emergency.

**Entity** includes a body corporate, a partnership, joint venture or a trust.

**ESPMP**, see clause 14.1.

**ESPMP Officer**, see clause 14.2.

**Exploitation** means the exploitation of Polymetallic Nodules in the Tenement Area for commercial purposes, and includes without limitation:

- (a) the extraction, lifting, dewatering, treatment, processing and transportation in the Tenement Area of Polymetallic Nodules and all other work, operations and activities required thereof;
- (b) transporting, constructing, installing, testing, commissioning, using, operating, maintaining and repairing equipment and Installations;
- (c) loading and unloading of Polymetallic Nodules to and from any treatment, processing facility and/or any transport vessel in the Tenement Area; and
- (d) any other activity in the International Seabed Area deemed necessary by NORI or a Subcontractor to carry out the exploitation that would not breach any of NORI's ISA Obligations.

**Exploitation Contract** means any contract or licence permitting NORI to Exploit Polymetallic Nodules in the International Seabed Area entered into between NORI and the ISA or granted by the ISA to NORI.

**Exploration** means the exploration for Polymetallic Nodules in the Tenement Area and includes without limitation:

- (a) sonar, oceanographic, geophysical and geological surveying, sampling and dredging;
- (b) testing of collecting systems and equipment and recovery of bulk samples; and
- (c) environmental and technical studies,

in the International Seabed Area, as well as any other activity or operation in the International Seabed Area deemed necessary by NORI or a Subcontractor to carry out the exploration that would not breach NORI's ISA Obligations, and includes prospecting carried out by NORI pursuant to the ISA's rules and regulations.

**Exploration Contract** means any contract or licence permitting NORI to Explore for Polymetallic Nodules in the International Seabed Area entered into between NORI and the ISA or granted by the ISA to NORI, and includes the ISA Exploration Contract.

**Expropriate** or **Expropriation** means to dispossess of ownership, to deprive of property, to deprive of use of property, to deprive of property for the public use, to make an Entity or assets (tangible and intangible) the property of the Republic (in whole or in part), or a measure or measures having an equivalent effect (directly or indirectly), and includes without limitation:

- (a) the transfer of title, physical seizure or an executive or legislative act for the purpose of transferring property or interests into the public domain;
- (b) subjecting an Entity, property or assets (tangible or intangible) to taxation, regulation, or other action that is confiscatory or that prevents, unreasonably interferes with, or unduly delays, effective enjoyment of such property or assets;
- (c) regulations by the Republic which constitutes dispossession or devaluation of an asset, property or right or that reduces or eliminates the economic value or viability of an asset, property or right subject to those regulations, including application of otherwise lawful measures in such a way as to deprive ultimately the enjoyment of value of property;
- (d) any measure or measures that inhibit the ability to transfer bona fide assets, rights and/or property out of the Republic of Nauru;
- (e) a measure or series of measures the effect of which would be direct or indirect dispossession, including but not limited to the levying of taxation, the compulsory sale of all or part of an investment or asset, or the impairment or deprivation of its management,

as well as any other measure or series of measures which together are tantamount to expropriation or that results in dispossession or devaluation of an asset or right, irrespective of whether compensation is provided. However, Expropriation does not include an act by the Republic that is reasonably required to fulfil the Republic's Sponsorship Obligations.

**Final Determination** means a decision of a court or of any agency having jurisdiction to resolve the dispute:

- (a) from which no appeal can be taken and in respect of which no application for special leave to appeal can be made; or
- (b) in respect of which the relevant appeal or special leave application period has expired without an appeal being taken or an application for special leave to appeal being made, but does not include an interlocutory order.

**Fails to Act in Good Faith** means acting with willful or reckless disregard for the consequences of its actions

**Installation** means any structure, installation or artificial island in the International Seabed Area used in or intended to be used in the Activities and for which the Republic is responsible and potentially liable in accordance with its Sponsorship Obligations.

**International Law** means any legally binding international treaties and conventions and other legally binding international rules including UNCLOS and the ISA regulations as in force from time to time.

**International Seabed Area** means the seabed and ocean floor and subsoil thereof, beyond the limits of national jurisdiction.

**ISA** means the International Seabed Authority and any successor institution to the ISA. **ISA Contract** means any contract or licence granted to NORI by the ISA, and includes any Exploration Contract and any Exploitation Contract, and all terms and conditions contained therein.

**ISA Exploration Contract** means the contract for exploration for Polymetallic Nodules signed between the ISA and NORI on the 22nd day of July, 2011 at Kingston, Jamaica and any amendment or replacement thereto.

**ISA Regulations** means the legally binding regulations adopted by the ISA applicable to the Activities.

**Licence** and **Licences** means any licences, permits or contracts required under Nauruan law to carry out exploration and/or exploitation in the International Seabed Area.

**Material NORI Breach** means the occurrence of any of the following:

- (a) an ISA Contract is suspended or terminated by the ISA as a direct result of NORI or any Subcontractor failing to comply with the conditions of the ISA Contract;
- (b) a serious breach of NORI's ISA Obligations or obligations under this Agreement, that has caused or will cause material and direct monetary damage to the Republic and has not been Remedied within a reasonable time;
- (c) NORI or any Subcontractor, in spite of written warnings by the ISA, has conducted its activities in such a way as to result in serious persistent and willful violations of the fundamental terms of this Agreement, ISA Contract or NORI's ISA Obligations; or NORI has failed to pay the SMRP in accordance with Section 3.

**Material Republic Breach** means a Republic Default that has not been Remedied within 60 days in accordance with Section 19.

**Minimum Recovery Level** shall be deemed to have occurred when Exploitation of Polymetallic Nodules yields a quantity of greater than [\*\*\*] tonnes of Polymetallic Nodules from the Tenement Area in any one calendar year.

**Nauruan Law** means all applicable laws in Nauru, including without limitation, legislation and regulations.

**NORI** includes NORI and its authorized servants or agents as well as any other entities affiliated with NORI.

**NORI Group** includes NORI as well as any other entities affiliated with NORI.

**NORI Rights** means the rights held by NORI under the ISA Regulations and under any ISA Contracts, or held in relation to the International Seabed Area or the Tenement Area, and without limitation includes the Tenements and all rights held therein.

**NORI's ISA Obligations** means the legally binding obligations NORI has under the ISA Contract, ISA Regulations and/or UNCLOS, as in force from time to time, and includes without limitation all legally binding obligations and responsibilities that NORI has under any ISA Contract, ISA Regulation and/or UNCLOS the breach of which would result in monetary liability to the Republic under UNCLOS due to the Republic's Sponsorship of NORI.

**Notice**, see Section 27.

Payment Year means any calendar year in which NORI reaches the Minimum Recovery Level. Parties means the parties to this Agreement.

Penalty means a penalty imposed by the Republic on NORI which either:

(1) (a) arises as a direct result of a breach of NORI's ISA Obligations;

(b) is required to be imposed by International Law in order for the Republic to fulfil its Sponsorship Obligations; and

(c) is for an amount not exceeding the reasonable amount required for the Republic to satisfy its Sponsorship Obligations.

or

(2) arises as a direct result of NORI breaching criminal or civil law in the Republic.

**Pollution Incident** means any event involving pollution that seriously breaches NORI's ISA Obligations.

**Polymetallic Nodules** has the meaning given to that term by the ISA.

**Production Audit**, see Section 4.

**Recovered** means extracted and recovered from the seafloor in the Tenement Area to the sea surface (for example, to a sea surface platform or Vessel) and then placed on to a transport ship. Remedy or Remedied means to remedy or redress or to have remedied or redressed (as applicable) the relevant occurrence or overcome its consequences and effects so that there ceases to be any continuing material detrimental effect of that occurrence.

**Safety at Sea** means safety of life and property at sea, and includes, inter alia:

- (a) safe Vessel or Installation management and navigation;
- (b) collision prevention;
- (c) maintaining appropriate safety procedures and medical standards;
- (d) appropriate provision of safety equipment, first aid, rescue and fire fighting services;
- (e) protecting the safety, health and welfare of personnel used in the Activities;
- (f) preventing injury to personnel that may be affected by the Activities; and
- (g) taking measures to effectively deal with safety Emergencies.

**Safety Incident** means any event involving Safety at Sea that seriously breaches NORI's ISA Obligations.

**Serious Harm** to the Marine Environment means any serious harm to the marine environment caused by one or more Activities that constitutes a serious breach of NORI's ISA Obligations. SMRP see clause 3.1.

**Sponsorship** means sponsorship of NORI by the Republic as required by the ISA, the ISA Regulations, UNCLOS, and/or under NORI's Exploration Contract and/or Exploitation Contract and Sponsored shall have a similar meaning.

**Sponsorship Obligations** means any and all responsibilities and obligations the Republic has under UNCLOS or the ISA Regulations with which it is legally required to comply and that pertain to the Republic's Sponsorship of NORI and/or the Activities, including its responsibility to ensure NORI's compliance with NORI's ISA Obligations.

**Subcontractor** means any person or entity who is subcontracted (either by the NORI Group or their subcontractors or their affiliates and whether via contract or through a joint venture or similar arrangement) to carry out all or part of the Activities in the Tenement Area, and includes without limitation any of the subcontractors' officers, employees, agents, contractors, or assignees. [For the avoidance of doubt, this definition only includes those persons or Entities for whom the Republic has a responsibility and is potentially liable in accordance with its Sponsorship Obligations]. This definition does not include any officer or employee of the Republic or any person who represents or is contracted by the Republic, ISA or other regulatory body.

**Tax** means any tax, fee, Corporate Tax, sales tax, capital gains tax, resource rent tax, transfer tax, impost, royalty, duty (including import duty and stamp duty), excise charge, surcharge, contribution, levy, rate, rent or any other charge however it is described, whether direct or indirect, whether monetary or non-monetary, and whatever method collected or recovered, imposed by any Nauruan governmental, semi governmental or other Nauruan body authorised by law.

**Tenement Area** means that part of the International Seabed Area, as may change from time to time, over which NORI has Tenements.

**Tenements** includes any ISA Contract and any lease, contract, licence, claim or permit issued or to be issued to NORI by the ISA or any other regulatory body which confers or may confer on NORI a right to prospect, explore for, mine and/or process any mineral in the International Seabed Area, or which may facilitate the enjoyment of such right, and includes any application for, and any extension, renewal, conversion or substitution of, any of those tenements, and for the avoidance of doubt includes without limitation any and all ISA Contracts and the rights of access and to enjoy the income and/or product derived thereof.

**Term** means the term as provided for in clause 1.1.

**Tonne** means the weight of one thousand (1000) kilograms of Polymetallic Nodules Recovered from the Tenement Area measured at the first onshore port of unloading.

**UNCLOS** means the United Nations Convention on the Law of the Sea of 10 December 1982. Vessel means any sea-going vessel and any seaborne craft of any type whatsoever used in the Activities and for which the Republic is responsible and potentially liable for in accordance with its Sponsorship Obligations.

## ISA Contract for Exploration Public Information Template

	Type of resource: Polymetallic Nodules
	Name of Contractor: Nauru Ocean Resources Inc.
	Contract Start: July 22, 2011
Sponsoring State: Republic of Nauru	Contract End: July 22, 2026
	Location: 4 Areas in the Clarion-Clipperton Zone of the Pacific Ocean

---

## CONTENTS

Introduction	1
1. Contract Information	1
2. Coordinates and Illustrative Chart of the Exploration Area	2
3. Plan of Work (approved by Council)	4
4. Programme of Activities and Exploration Expenditure	5
5. Training Programme	9
6. Standard clauses	13

**Introduction**

The information contained in this ISA Contract for Exploration – Public Information Template is made available to the public in response to the request by the Council of the ISA to make contracts publicly available, subject to restrictions on confidential information, industrial secrets and proprietary data.

The content of the present template is in accordance with the Regulations on Prospecting and Exploration for [Polymetallic Nodules in the Area] [ISBA/19/C/17] (the “Regulations”).

**1. Contract Information**

Annex III of the Regulations.

<b>Type of resource</b>	Polymetallic Nodules
<b>Name of Contractor</b>	Nauru Ocean Resources Inc.
<b>Contract Start</b>	July 22, 2011
<b>Contract End</b>	July 22, 2026
<b>Location</b>	4 Areas in the Clarion-Clipperton Zone of the Pacific Ocean
<b>Contract Area (km<sup>2</sup>)</b>	74,830

**2. Coordinates and Illustrative Chart of the Exploration Area**

Schedule 1 of Annex III of the Regulations.

Exploration area located between

**Area A (8,924 Km<sup>2</sup>)**

	<b>Latitude</b>	<b>Longitude</b>
	13.0000 N	Longitude -134.583 W (the point of commencement)

Then to	11.08333 N	-117.816670 W (being the point of commencement)

### 3. Plan of Work (approved by Council)

Summary of Plan of Work for Exploration including the Programme of Activities for the first and/or the current 5-year period (Regulation 18).

NORI is currently in its second 5-year period of exploration. In this period NORI plans to:

- (i) Optimise the onshore processing and offshore production systems;
- (ii) Commence a pre-feasibility study (PFS) to analyze technical and economic viability of the mining system and metallurgical process, as well as verify capital and operating costs to a greater accuracy;
- (iii) Identify the Collector Test site in the NORI Area;
- (iv) Commence the environmental baseline studies pertaining to the Collector Test Environmental Impact Assessment (EIA) programme;
- (v) Commence the geotechnical studies pertaining to the Collector Test programme;
- (vi) Carry out metallurgical test work aimed at achieving better operating efficiencies of the process;
- (vii) Carry out studies to identify potential sites for the process plant; and
- (viii) Test the metallurgical process at pilot plant scale.

#### 4. Programme of Activities and Exploration Expenditure

Section 1 of Annex IV of the Regulations and Schedule 2 of Annex III of the Regulations.

##### I. Agreed 5-year Programme of Activities

5-year Programme of Activities	Second 5-Year Period	
General Objectives	Objective	Description
	Optimise the onshore processing and offshore production systems	<p>Metallurgical studies will be aimed at reducing costs and increasing revenue streams. The metallurgical process flow sheet will continue to be refined, and further metallurgical test work will be carried out aimed at achieving better operating efficiencies of the process and confirm that processing can be undertaken without generating solid waste streams.</p> <p>Further design work for the offshore system is necessary with the aim of better defining CAPEX and OPEX as well as decreasing production and operating risks.</p>
	Commence a pre- feasibility study	To improve upon the technical and economic feasibility of the project the priority is to focus on carrying out further engineering studies. Optimizing the technical solution for the offshore production system and
	Identify the Collector Test site	Identification and ground truthing of areas potentially suitable for the Collector Test, which will provide important engineering and environmental data
	Commence the environmental baseline studies pertaining to the Collector Test EIA programme	These baseline studies will play an important role in carrying out the Collector Test EIA in order to study impacts of the Collector
	Commence the geotechnical studies pertaining to the Collector Test programme	These studies will feed in to both the engineering design for the Collector as well as the overall environmental programme
	Carry out metallurgical test work aimed at achieving better operating efficiencies of the process. Studies will also be carried out to identify potential sites for the process plant	Work will be carried out to improve metal recovery from the metallurgical process, as well as to identify sites best suited for location of the processing plant.
	Test the metallurgical process at pilot plant scale	This pilot plant testing will be critical to verify the process at a larger scale and on a semi continuous basis.

II. **Results achieved during reported year (#): [year]**

Annual objectives and activities			
Year	No.	Agreed Objectives	Objective: Completed, Modified, Postponed or Replaced
2017	6	<p>Investigate the requirements for upgrading part of the NORI Resource to a higher 2017resource category</p> <p>Survey cruise planning</p> <p>Refinement of NORI Area D site selection</p> <p>Offshore system engineering studies</p> <p>Onshore metallurgical process studies</p>	<p><b>Completed.</b> NORI carried out a study to determine the sampling technique and sampling frequency required for upgrading the NORI Inferred Resource to an Indicated Resource.</p> <p><b>Completed.</b> NORI finalized the preparation for a cruise to NORI Area D, scheduled to mobilize in 2018. This work involved determining which areas in NORI Area D to focus the 2018 Cruise work, as well as determining the requirements for upgrading part of the NORI Area D Resource to a higher resource category (i.e. from inferred to indicated). This work in 2017 enabled NORI to finalize the program for the 2018 Cruise, the objectives of which are to:</p> <ol style="list-style-type: none"> <li>1) Collect data required to select the site for the future Seafloor Polymetallic Nodule Collector Test and thus the location for environmental studies;</li> <li>2) Commence undertaking sampling to support an indicated resource for a project life of 30 years of production; and</li> <li>3) Collect high-resolution imagery and bathymetry of the seafloor to support engineering studies.</li> </ol> <p><b>Completed.</b> In 2017 NORI made a final decision on which areas in NORI Area D to focus the 2018 Cruise work. Four sites were selected. The 2018 Cruise will then focus its efforts on those sites, and collect data required to select the site within those four sites for the future Seafloor Polymetallic Nodule Collector Test and thus location for the environmental studies.</p> <p><b>Completed.</b> Preparatory work for the Pre-Feasibility Study (PFS) phase continued. Technical reviews were conducted and the proposed PFS work-scope was optimised and matured. A Technology Readiness Level (TRL) review exercise and a Basis of Design (BOD) exercise was also carried out</p> <p><b>Completed.</b> In 2017 development of a process to produce final metal products from polymetallic nodules was advanced. The metallurgical process was progressed through activities such as benchmarking of the technology against possible alternatives and monitoring the markets for products, in particular the continued emergence of a market for Ni, Co, Cu and Mn in the batteries and other emerging clean energy technologies. . Decision was made to evaluate an alternative flowsheet.</p>

Annual objectives and activities			
Year	No.	Agreed Objectives	Objective: Completed, Modified, Postponed or Replaced
2018	7	<p>Cruise to NORI Area D</p> <p>Update the NORI Area Geological Model and Resource Estimate to Incorporate the results of the 2018 Cruise</p> <p>Carry out planning for a subsequent cruise to obtain bulk samples of polymetallic nodules necessary for larger scale metallurgical process studies</p> <p>Process and interpret data from the 2018 Cruise</p> <p>Produce a 3-D / 4-D interactive computer model of the offshore system</p> <p>Continue investigations in to commencing long-term environmental studies, including with respect to installing long oceanographic moorings and seasonal studies including conductivity, temperature, depth (CTD) profiles, and sampling of water, plankton and fish.</p>	<p><b>Completed.</b> All cruise objectives were met. The cruise resulted in:</p> <p>(i) successful delineation of collector test site;  (ii) delineation of two potential Preservation Reference Zones; and  (iii) sampling to upgrade the resource estimate and geological model.</p> <p><b>Completed.</b> An updated resource statement based on the results of the 2018 cruise was compiled.</p> <p><b>Completed.</b> In 2018 market engagement was carried out seeking the optimal collection methodology to obtain the bulk samples required for metallurgical and engineering purposes.</p> <p><b>Completed.</b> Resource samples were analysed and resource estimates carried out. Sediment environmental samples were analysed and report completed.</p> <p><b>Completed.</b> A state-of-the-art virtual reality simulator of the offshore system was developed. The simulator is fully immersive and provides a technically realistic 4D (i.e., 3D visuals plus real-time control) experience of interacting with the offshore system. The VR Simulator is a dimensionally accurate and representation of the system in which components (vessel, sea, risers, current, vehicles, seabed, nodules) all interact in a physically realistic manner. Key components can be adjusted, in order to simulate both individual and system-wide responses, and scenarios can be played out.</p> <p><b>Completed.</b> The development of the mooring design for the long-term oceanographic studies was completed, aimed at commencing NORI's physical and chemical oceanography program. This will be a key component of the environmental baseline studies required to support the NORI Area D Environmental Impact Assessment as well as providing key data to refine engineering designs. A tender process was initiated to secure a contractor to conduct the met ocean work on Campaign 4a.</p>

III. **Actual and direct exploration expenditures during reported year [#]: [year]**

	Anticipated annual expenditure	Actual and direct exploration expenditures	Comments
Year 6 (2017)	US\$1 Million	US\$3,716,541	
Year 7 (2018)	US\$1 Million	US\$11,553,123	Expenditure was increased due to the cruise and subsequent analysis of the results.
Year 8 (2019)	US\$1 Million	US\$14,956,072	Expenditure was increased due to the 3 cruises conducted in 2019.

5. **Training Programme**

Schedule 3 of Annex III of the Regulations.

I. **2012-2016 Training Programme**

Type of Training	At sea exploration training programme (4 opportunities)	Fellowship programme (2 opportunities)	Engineering training programme (2 opportunities)
<b>Institutions</b>	Training opportunity will be provided by NORI and its contractors	University of Hawaii, University of the South Pacific, Imperial College	NORI's engineering department or contractor
<b>Duration</b>	Dependent on at-sea cruise length	5 months	4 - 6 weeks
<b>Scope</b>	Geological exploration, geophysical survey or environmental baseline studies	Graduate training based on the candidates educational background	Assist with NORI's offshore engineering programme
<b>Fields</b>	Marine geology, geophysics, marine environment, oceanography	Marine, biology/ecology/environment	Engineering
<b>Qualification required</b>	Undergraduate or Masters degree in a relevant degree such as marine geology, geophysics, marine environment, oceanography	Bachelor degree in science marine, biology/ecology/environment or an equivalent education	Bachelor or Masters degree in mechanical, electrical, mining or marine engineering
<b>Financing</b>	NORI will cover all costs associated with the training opportunity	NORI will cover all costs associated with the training opportunity	NORI will cover all costs associated with the training opportunity

II. 2017-2021 Training Programme

Type of Training	At sea exploration training programme (4 opportunities)	Fellowship programme (2 opportunities)	Engineering training programme (2 opportunities)
<b>Institutions</b>	Training opportunity will be provided by NORI and its contractors	Training opportunity will be provided by NORI and its environmental contractors	Not specified
<b>Duration</b>	Dependent on at-sea cruise length	4 – 5 days	Not specified
<b>Scope</b>	Geological exploration, geophysical survey or environmental baseline studies	Participation in technical and stakeholder workshops to plan and discuss NORI's environmental social impact assessment programme	Support relevant research to the seafloor minerals industry
<b>Fields</b>	Marine geology, geophysics, marine environment, oceanography	Marine, biology/ecology/environment	Environmental science, engineering or geology
<b>Qualification required</b>	Undergraduate or Masters degree in a relevant degree such as marine geology, geophysics, marine environment, oceanography	Bachelor degree in science marine, biology/ecology/environment or an equivalent education	Bachelor or Masters degree
<b>Financing</b>	NORI will cover all costs associated with the training opportunity	NORI will cover all costs associated with the training opportunity	NORI will cover all costs associated with the training opportunity

### III. Trainings conducted up to 2019

Start Year	End Year	Name of Trainee	Nationality	Gender	Type of Programme	Details	Duration
2012	2016	Mr. Sankey Deluckner	Nauruan	Male	Educational – University of South Pacific, Fiji	Undergraduate degree in engineering	4 years
2012	2015	Ms Marlaina Aroi	Nauruan	Female	Educational – University of South Pacific, Fiji	Undergraduate degree in environmental science – did not complete	3 years
2013	2013	Dody Darmawan	Indonesian	Male	At-sea	Geophysical survey & nodule sampling	October 2013
2014	2014	Dody Darmawan	Indonesian	Male	Cruise report writing	Trainee assisted with cruise report writing	March 2014
2015	2015	Ms Renee McDonald	Jamaica	Female	Environmental Workshop	Participation in workshop	11 - 12 Dec 2015
2015	2015	Bamidele Oresajo of Nigeria.	Nigeria	Male	Environmental Workshop	Visa denied to enter UK	11 – 12 Dec 2015
2019	2019	Aganze Baciunjuze Gloire	Congo	Male	At-sea	Exploration & biological cruise – box core and gravity cores	23 August -1 October
2019	2019	Lucia Villar Munoz	Chile	Female	At-sea	Metocean, seasonal study campaign & deployment of 3 environmental monitoring moorings	9-23 October
2019	2019	Raphel Di Carlo Silva dos Santos	Brazil	Male	At-sea	Metocean, seasonal study campaign & deployment of 3 environmental monitoring moorings	9-23 Oct.
2020	2020	Matheus Bose	Brazil	Male	Environmental Workshop	Environmental Workshop	3-6 February
2020	2020	Troy Franklin	Jamaica	Male	Environmental Workshop	Environmental Workshop	3-6 February
2020	2020	Sereima Koli	Fiji	Female	Environmental Workshop	Environmental Workshop	3-6 February
2020	2020	Bamidele Oresajo	Nigeria	Male	Environmental Workshop	Denied VISA to the US, so unable to attend	3-6 February
2020	2020	Toluwanimi Victory Afolayan	Nigeria	Female	Environmental Workshop	Denied VISA to the US, so unable to attend	3-6 February
2020	2020	Titie Afuhia Kaufusi	Tonga	Male	At-sea	Nodule bulk sampling campaign	6 January - 6 February

Training Notes:

- 1) NORI is currently in discussions with the ISA to amend the 5-month fellowship training opportunity from its 2012 – 2016 training programme. NORI in conjunction with the University of the South Pacific (USP) would like to offer a scholarship for a student interested in pursuing a Master’s Degree Programme in Marine Management, Biology, Environmental Science, Marine Science or Earth Sciences. In addition to supporting the student complete their Master’s programme, NORI will also offer the successful applicant the opportunity to participate in a NORI offshore campaign during their studies or following the completion of their Programme. NORI will also offer the successful applicant access to NORI staff if the applicant is interested in researching a topic related to polymetallic nodules.
- 2) NORI’s engineering training opportunity from its 2012-2016 training programme was delayed to better align the training opportunity with NORI’s offshore engineering programme. This delay will now allow two engineering students to assist with the engineering and development of NORI’s nodule collection system. Unfortunately, no candidates applied for the 4-6 week internship when it was advertised in early 2020. NORI and ISA agreed to re-advertise the opportunity in the hopes of attracting candidates.

**IV. Completed Trainings per Year**

	<b>At Sea</b>	<b>Engineering Training</b>	<b>Fellowship Programme</b>	<b>Environmental Workshop</b>	<b>Study / Research relating to seafloor minerals and the environment</b>
<b>Year 2 (2013)</b>	1 training opportunity offered – include cruise report writing in 2014				
<b>Year 4 (2015)</b>				2 training opportunities offered (NORI Env Workshop)	
<b>Year 5 (2016)</b>					2 training opportunities offered (University of South Pacific)
<b>Year 8 (2019)</b>	3 training opportunities offered				
<b>Year 9 (2020)</b>	5 training opportunities scheduled	2 Training opportunities advertised for 2020	Revised training opportunity under consideration by ISA	4 Training opportunities scheduled for Feb. 2020	
<b>Year 10 (2021)</b>					Planned for 2021

**6. Standard clauses**

Annex IV of the Regulations.

**STANDARD CLAUSES FOR EXPLORATION CONTRACT**

**SECTION 1**

**DEFINITIONS**

1.1 In the following clauses:

(a) "Exploration area" means that part of the Area allocated to the Contractor for exploration, described in schedule 1 hereto, as the same may be reduced from time to time in accordance with this contract and the Regulations;

(b) "Programme of activities" means the programme of activities which is set out in schedule 2 hereto as the same may be adjusted from time to time in accordance with sections 4.3 and 4.4 hereof;

(c) "Regulations" means the Regulations for Prospecting and Exploration for Polymetallic Nodules in the Area, adopted by the Authority.

1.2 Terms and phrases defined in the Regulations shall have the same meaning in these standard clauses.

1.3 In accordance with the Agreement relating to the Implementation of Part XI of the United Nations Convention of the Law of the Sea of 10 December 1982, its provisions and Part XI of the Convention are to be interpreted and applied together as a single instrument; this contract and references in this contract to the Convention are to be interpreted and applied accordingly.

1.4 This contract includes the schedules to this contract, which shall be an integral part hereof.

**SECTION 2**

**SECURITY OF TENURE**

2.1 The Contractor shall have security of tenure and this contract shall not be suspended, terminated or revised except in accordance with sections 20, 21 and 24 hereof.

2.2 The Contractor shall have the exclusive right to explore for polymetallic nodules in the exploration area in accordance with the terms and conditions of this contract. The Authority shall ensure that no other entity operates in the exploration area for a different category of resources in a manner that might unreasonably interfere with the operations of the Contractor.

2.3 The Contractor, by notice to the Authority, shall have the right at any time to renounce without penalty the whole or part of its rights in the exploration area, provided that the Contractor shall remain liable for all obligations accrued prior to the date of such renunciation in respect of the area renounced.

2.4 Nothing in this contract shall be deemed to confer any right on the Contractor other than those rights expressly granted herein. The Authority reserves the right to enter into contracts with respect to resources other than polymetallic nodules with third parties in the area covered by this contract.

### **SECTION 3**

#### **CONTRACT TERM**

3.1 This contract shall enter into force on signature by both parties and shall remain in force for a period of fifteen years thereafter unless:

(a) The Contractor obtains a contract for exploitation in the exploration area which enters into force before the expiration of such period of fifteen years; or

(b) The contract is sooner terminated,

provided that the term of the contract may be extended in accordance with sections 3.2 and 17.2 hereof.

3.2 Upon application by the Contractor, not later than six months before the expiration of this contract, this contract may be extended for periods of not more than five years each on such terms and conditions as the Authority and the Contractor may then agree in accordance with the Regulations. Such extensions shall be approved if the Contractor has made efforts in good faith to comply with the requirements of this contract but for reasons beyond the Contractor's control has been unable to complete the necessary preparatory work for proceeding to the exploitation stage or if the prevailing economic circumstances do not justify proceeding to the exploitation stage. 3.3 Notwithstanding the expiration of this contract in accordance with section 3.1 hereof, if the Contractor has, at least 90 days prior to the date of expiration, applied for a contract for exploitation, the Contractor's rights and obligations under this contract shall continue until such time as the application has been considered and a contract for exploitation has been issued or refused.

### **SECTION 4**

#### **EXPLORATION**

4.1 The Contractor shall commence exploration in accordance with the time schedule stipulated in the programme of activities set out in schedule 2 hereto and shall adhere to such time periods or any modification thereto as provided for by this contract.

4.2 The Contractor shall carry out the programme of activities set out in schedule 2 hereto. In carrying out such activities the Contractor shall spend in each contract year not less than the amount specified in such programme, or any agreed review thereof, in actual and direct exploration expenditures.

4.3 The Contractor, with the consent of the Authority, which consent shall not be unreasonably withheld, may from time to time make such changes in the programme of activities and the expenditures specified therein as may be necessary and prudent in accordance with good mining industry practice, and taking into account the market conditions for the metals contained in polymetallic nodules and other relevant global economic conditions.

4.4 Not later than 90 days prior to the expiration of each five-year period from the date on which this contract enters into force in accordance with section 3 hereof, the Contractor and the Secretary-General shall jointly undertake a review of the implementation of the plan of work for exploration under this contract. The Secretary-General may require the Contractor to submit such additional data and information as may be necessary for the purposes of the review. In the light of the review, the Contractor shall indicate its programme of activities for the following five-year period, including a revised schedule of anticipated yearly expenditures, making such adjustments to its previous programme of activities as are necessary. Schedule 2 hereto shall be adjusted accordingly.

## **SECTION 5**

### **ENVIRONMENTAL MONITORING**

5.1 The Contractor shall take necessary measures to prevent, reduce and control pollution and other hazards to the marine environment arising from its activities in the Area as far as reasonably possible using the best technology available to it.

5.2 The Contractor shall, in accordance with the Regulations, gather environmental baseline data as exploration activities progress and develop and shall establish environmental baselines against which to assess the likely effects of the Contractor's activities on the marine environment.

5.3 The Contractor shall, in accordance with the Regulations, establish and carry out a programme to monitor and report on such effects on the marine environment. The Contractor shall cooperate with the Authority in the implementation of such monitoring.

5.4 The Contractor shall, within 90 days of the end of each calendar year, report to the Secretary-General on the implementation and results of the monitoring programme referred to in section 5.3 hereof and shall submit data and information in accordance with the Regulations.

5.5 Prior to the commencement of testing of collecting systems and processing operations, the Contractor shall submit to the Authority:

- (a) A site-specific environmental impact statement based on available meteorological, oceanographic and environmental data collected during the preceding phases of exploration and containing data that could be used to establish an environmental baseline against which to assess the likely effect of the mining tests;
- (b) An assessment of the effects on the marine environment of the proposed tests of collecting systems;
- (c) A proposal for a monitoring programme to determine the effect on the marine environment of the equipment that will be used during the proposed mining tests.

## **SECTION 6**

### **CONTINGENCY PLANS AND EMERGENCIES**

6.1 The Contractor shall, prior to the commencement of its programme of activities under this contract, submit to the Secretary-General a contingency plan to respond effectively to incidents that are likely to cause serious harm to the marine environment arising from the Contractor's activities at sea in the exploration area. Such contingency plan shall establish special procedures and provide for adequate and appropriate equipment to deal with such incidents and, in particular, shall include arrangements for:

- (a) The immediate raising of a general alarm in the area of the exploration activities;
- (b) Immediate notification to the Secretary-General;
- (c) The warning of ships which might be about to enter the immediate vicinity;
- (d) A continuing flow of full information to the Secretary-General relating to particulars of the contingency measures already taken and further actions required;
- (e) The removal, as appropriate, of polluting substances;
- (f) The reduction and, so far as reasonably possible, prevention of serious harm to the marine environment, as well as mitigation of such effects;
- (g) As appropriate, cooperation with other contractors with the Authority to respond to an emergency; and
- (h) Periodic emergency response exercises.

6.2 The Contractor shall promptly report to the Secretary-General any incident arising from its activities that has caused or is likely to cause serious harm to the marine environment. Each such report shall contain the details of such incident, including, inter alia:

- (a) The coordinates of the area affected or which can reasonably be anticipated to be affected;
- (b) The description of the action being taken by the Contractor to prevent, contain, minimize and repair the serious harm to the marine environment;
- (c) A description of the action being taken by the Contractor to monitor the effects of the incident on the marine environment; and
- (d) Such supplementary information as may reasonably be required by the Secretary-General.

6.3 The Contractor shall comply with emergency orders issued by the Council and immediate measures of a temporary nature issued by the Secretary-General in accordance with the Regulations, to prevent, contain, minimize or repair serious harm to the marine environment, which may include orders to the Contractor to immediately suspend or adjust any activities in the exploration area.

6.4 If the Contractor does not promptly comply with such emergency orders or immediate measures of a temporary nature, the Council may take such reasonable measures as are necessary to prevent, contain, minimize or repair any such serious harm to the marine environment at the Contractor's expense. The Contractor shall promptly reimburse the Authority the amount of such expenses. Such expenses shall be in addition to any monetary penalties which may be imposed on the Contractor pursuant to the terms of this contract or the Regulations.

## **SECTION 7**

### **OBJECTS OF AN ARCHAEOLOGICAL OR HISTORICAL NATURE**

The Contractor shall immediately notify the Secretary-General in writing of any finding in the exploration area of an object of an archaeological or historical nature and its location. Following the finding of any such object of an archaeological or historical nature in the exploration area, the Contractor shall take all reasonable measures to avoid disturbing such object.

## **SECTION 8**

### **TRAINING**

8.1 In accordance with the Regulations, the Contractor shall, prior to the commencement of exploration under this contract, submit to the Authority for approval proposed training programmes for the training of personnel of the Authority and developing States, including the participation of such personnel in all of the Contractor's activities under this contract.

8.2 The scope and financing of the training programme shall be subject to negotiation between the Contractor, the Authority and the sponsoring State or States.

8.3 The Contractor shall conduct training programmes in accordance with the specific programme for the training of personnel referred to in section 8.1 hereof approved by the Authority in accordance with the Regulations, which programme, as revised and developed from time to time, shall become a part of this contract as schedule 3.

## **SECTION 9**

### **BOOKS AND RECORDS**

The Contractor shall keep a complete and proper set of books, accounts and financial records, consistent with internationally accepted accounting principles. Such books, accounts and financial records shall include information which will fully disclose the actual and direct expenditures for exploration and such other information as will facilitate an effective audit of such expenditures.

## **SECTION 10**

### **ANNUAL REPORTS**

10.1 The Contractor shall, within 90 days of the end of each calendar year, submit a report to the Secretary-General covering its programme of activities in the exploration area and containing, as applicable, information in sufficient detail on:

(a) The exploration work carried out during the calendar year, including maps, charts and graphs illustrating the work that has been done and the results obtained;

(b) The equipment used to carry out the exploration work, including the results of tests conducted of proposed mining technologies, but not equipment design data; and

(c) The implementation of training programmes, including any proposed revisions to or developments of such programmes.

10.2 Such reports shall also contain:

(a) The results obtained from environmental monitoring programmes, including observations, measurements, evaluations and analyses of environmental parameters;

(b) A statement of the quantity of polymetallic nodules recovered as samples or for the purpose of testing;

(c) A statement, in conformity with internationally accepted accounting principles and certified by a duly qualified firm of public accountants, or, where the Contractor is a State or a state enterprise, by the sponsoring State, of the actual and direct exploration expenditures of the Contractor in carrying out the programme of activities during the Contractor's accounting year. Such expenditures may be claimed by the contractor as part of the contractor's development costs incurred prior to the commencement of commercial production; and

(d) Details of any proposed adjustments to the programme of activities and the reasons for such adjustments.

10.3 The Contractor shall also submit such additional information to supplement the reports referred to in sections 10.1 and 10.2 hereof as the Secretary-General may from time to time reasonably require in order to carry out the Authority's functions under the Convention, the Regulations and this contract.

10.4 The Contractor shall keep, in good condition, a representative portion of samples of the polymetallic nodules obtained in the course of exploration until the expiration of this contract. The Authority may request the Contractor in writing to deliver to it for analysis a portion of any such sample obtained during the course of exploration.

## **SECTION 11**

### **DATA AND INFORMATION TO BE SUBMITTED ON EXPIRATION OF THE CONTRACT**

11.1 The Contractor shall transfer to the Authority all data and information that are both necessary for and relevant to the effective exercise of the powers and functions of the Authority in respect of the exploration area in accordance with the provisions of this section.

11.2 Upon expiration or termination of this contract the Contractor, if it has not already done so, shall submit the following data and information to the Secretary-General:

(a) Copies of geological, environmental, geochemical and geophysical data acquired by the Contractor in the course of carrying out the programme of activities that are necessary for and relevant to the effective exercise of the powers and functions of the Authority in respect of the exploration area;

(b) The estimation of mineable areas, when such areas have been identified, which shall include details of the grade and quantity of the proven, probable and possible polymetallic nodule reserves and the anticipated mining conditions;

(c) Copies of geological, technical, financial and economic reports made by or for the Contractor that are necessary for and relevant to the effective exercise of the powers and functions of the Authority in respect of the exploration area;

(d) Information in sufficient detail on the equipment used to carry out the exploration work, including the results of tests conducted of proposed mining technologies, but not equipment design data; and

(e) A statement of the quantity of polymetallic nodules recovered as samples or for the purpose of testing.

11.3 The data and information referred to in section 11.2 hereof shall also be submitted to the Secretary-General if, prior to the expiration of this contract, the Contractor applies for approval of a plan of work for exploitation or if the Contractor renounces its rights in the exploration area to the extent that such data and information relates to the renounced area.

## **SECTION 12**

### **CONFIDENTIALITY**

Data and information transferred to the Authority in accordance with this contract shall be treated as confidential in accordance with the provisions of the Regulations.

## **SECTION 13**

### **UNDERTAKINGS**

13.1 The Contractor shall carry out exploration in accordance with the terms and conditions of this contract, the Regulations, Part XI of the Convention, the Agreement and other rules of international law not incompatible with the Convention.

13.2 The Contractor undertakes:

- (a) To accept as enforceable and comply with the terms of this contract;
- (b) To comply with the applicable obligations created by the provisions of the Convention, the rules, regulations and procedures of the Authority and the decisions of the relevant organs of the Authority;
- (c) To accept control by the Authority of activities in the Area as authorized by the Convention;
- (d) To fulfil its obligations under this contract in good faith; and
- (e) To observe, as far as reasonably practicable, any recommendations which may be issued

from time to time by the Legal and Technical Commission.

13.3 The Contractor shall actively carry out the programme of activities:

- (a) With due diligence, efficiency and economy;
- (b) With due regard to the impact of its activities on the marine environment; and
- (c) With reasonable regard for other activities in the marine environment.

13.4 The Authority undertakes to fulfil in good faith its powers and functions under the Convention and the Agreement in accordance with article 157 of the Convention.

## **SECTION 14**

### **INSPECTION**

14.1 The Contractor shall permit the Authority to send its inspectors on board vessels and installations used by the Contractor to carry out activities in the exploration area to:

- (a) Monitor the Contractor's compliance with the terms and conditions of this contract and the Regulations; and
- (b) Monitor the effects of such activities on the marine environment.

14.2 The Secretary-General shall give reasonable notice to the Contractor of the projected time and duration of inspections, the name of the inspectors and any activities the inspectors are to perform that are likely to require the availability of special equipment or special assistance from personnel of the Contractor.

14.3 Such inspectors shall have the authority to inspect any vessel or installation, including its log, equipment, records, facilities, all other recorded data and any relevant documents which are necessary to monitor the Contractor's compliance.

14.4 The Contractor, its agents and employees shall assist the inspectors in the performance of their duties and shall:

- (a) Accept and facilitate prompt and safe boarding of vessels and installations by inspectors;
- (b) Cooperate with and assist in the inspection of any vessel or installation conducted pursuant to these procedures;
- (c) Provide access to all relevant equipment, facilities and personnel on vessels and installations at all reasonable times;
- (d) Not obstruct, intimidate or interfere with inspectors in the performance of their duties;
- (e) Provide reasonable facilities, including, where appropriate, food and accommodation, to inspectors; and
- (f) Facilitate safe disembarkation by inspectors.

14.5 Inspectors shall avoid interference with the safe and normal operations on board vessels and installations used by the Contractor to carry out activities in the area visited and shall act in accordance with the Regulations and the measures adopted to protect confidentiality of data and information.

14.6 The Secretary-General and any duly authorized representatives of the Secretary-General, shall have access, for purposes of audit and examination, to any books, documents, papers and records of the Contractor which are necessary and directly pertinent to verify the expenditures referred to in section 10.2 (c).

14.7 The Secretary-General shall provide relevant information contained in the reports of inspectors to the Contractor and its sponsoring State or States where action is necessary.

14.8 If for any reason the contractor does not pursue exploration and does not request a contract for exploitation, it shall, before withdrawing from the exploration area, notify the Secretary-General in writing in order to permit the Authority, if it so decides, to carry out an inspection pursuant to this section.

## **SECTION 15**

### **SAFETY, LABOUR AND HEALTH STANDARDS**

15.1 The Contractor shall comply with the generally accepted international rules and standards established by competent international organizations or general diplomatic conferences concerning the safety of life at sea, and the prevention of collisions and such rules, regulations and procedures as may be adopted by the Authority relating to safety at sea. Each vessel used for carrying out activities in the Area shall possess current valid certificates required by and issued pursuant to such international rules and standards.

15.2 The Contractor shall, in carrying out exploration under this contract, observe and comply with such rules, regulations and procedures as may be adopted by the Authority relating to protection against discrimination in employment, occupational safety and health, labour relations, social security, employment security and living conditions at the work site. Such rules, regulations and procedures shall take into account conventions and recommendations of the International Labour Organization and other competent international organizations.

## **SECTION 16**

### **RESPONSIBILITY AND LIABILITY**

16.1 The Contractor shall be liable for the actual amount of any damage, including damage to the marine environment, arising out of its wrongful acts or omissions, and those of its employees, subcontractors, agents and all persons engaged in working or acting for them in the conduct of its operations under this contract, including the costs of reasonable measures to prevent or limit damage to the marine environment, account being taken of any contributory acts or omissions by the Authority.

16.2 The Contractor shall indemnify the Authority, its employees, subcontractors and agents against all claims and liabilities of any third party arising out of any wrongful acts or omissions of the Contractor and its employees, agents and subcontractors, and all persons engaged in working or acting for them in the conduct of its operations under this contract.

16.3 The Authority shall be liable for the actual amount of any damage to the Contractor arising out of its wrongful acts in the exercise of its powers and functions, including violations under article 168, paragraph 2, of the Convention, account being taken of contributory acts or omissions by the Contractor, its employees, agents and subcontractors, and all persons engaged in working or acting for them in the conduct of its operations under this contract.

16.4 The Authority shall indemnify the Contractor, its employees, subcontractors, agents and all persons engaged in working or acting for them in the conduct of its operations under this contract, against all claims and liabilities of any third party arising out of any wrongful acts or omissions in the exercise of its powers and functions hereunder, including violations under article 168, paragraph 2, of the Convention.

16.5 The Contractor shall maintain appropriate insurance policies with internationally recognized carriers, in accordance with generally accepted international maritime practice.

## **SECTION 17**

### **FORCE MAJEURE**

17.1 The Contractor shall not be liable for an unavoidable delay or failure to perform any of its obligations under this contract due to force majeure. For the purposes of this contract, force majeure shall mean an event or condition that the Contractor could not reasonably be expected to prevent or control; provided that the event or condition was not caused by negligence or by a failure to observe good mining industry practice.

17.2 The Contractor shall, upon request, be granted a time extension equal to the period by which performance was delayed hereunder by force majeure and the term of this contract shall be extended accordingly.

17.3 In the event of force majeure, the Contractor shall take all reasonable measures to remove its inability to perform and comply with the terms and conditions of this contract with a minimum of delay; provided that the Contractor shall not be obligated to resolve or terminate any labour dispute or any other disagreement with a third party except on terms satisfactory to it or pursuant to a final decision of any agency having jurisdiction to resolve the dispute.

17.4 The Contractor shall give notice to the Authority of the occurrence of an event of force majeure as soon as reasonably possible, and similarly give notice to the Authority of the restoration of normal conditions.

**SECTION 18**

**DISCLAIMER**

Neither the Contractor nor any affiliated company or subcontractor shall in any manner claim or suggest, whether expressly or by implication, that the Authority or any official thereof has, or has expressed, any opinion with respect to polymetallic nodules in the exploration area and a statement to that effect shall not be included in or endorsed on any prospectus, notice, circular, advertisement, press release or similar document issued by the Contractor, any affiliated company or any subcontractor that refers directly or indirectly to this contract. For the purposes of this section, an “affiliated company” means any person, firm or company or State-owned entity controlling, controlled by, or under common control with, the Contractor.

**SECTION 19**

**RENUNCIATION OF RIGHTS**

The Contractor, by notice to the Authority, shall have the right to renounce its rights and terminate this contract without penalty, provided that the Contractor shall remain liable for all obligations accrued prior to the date of such renunciation and those obligations required to be fulfilled after termination in accordance with the Regulations.

29/34

**SECTION 20**

**TERMINATION OF SPONSORSHIP**

20.1 If the nationality or control of the Contractor changes or the Contractor’s sponsoring State, as defined in the Regulations, terminates its sponsorship, the Contractor shall promptly notify the Authority forthwith.

20.2 In either such event, if the Contractor does not obtain another sponsor meeting the requirements prescribed in the Regulations which submits to the Authority a certificate of sponsorship for the Contractor in the prescribed form within the time specified in the Regulations, this contract shall terminate forthwith.

## SECTION 21

### SUSPENSION AND TERMINATION OF CONTRACT AND PENALTIES

21.1 The Council may suspend or terminate this contract, without prejudice to any other rights that the Authority may have, if any of the following events should occur:

(a) If, in spite of written warnings by the Authority, the Contractor has conducted its activities in such a way as to result in serious persistent and wilful violations of the fundamental terms of this contract, Part XI of the Convention, the Agreement and the rules, regulations and procedures of the Authority; or

(b) If the Contractor has failed to comply with a final binding decision of the dispute settlement body applicable to it; or

(c) If the Contractor becomes insolvent or commits an act of bankruptcy or enters into any agreement for composition with its creditors or goes into liquidation or receivership, whether compulsory or voluntary, or petitions or applies to any tribunal for the appointment of a receiver or a trustee or receiver for itself or commences any proceedings relating to itself under any bankruptcy, insolvency or readjustment of debt law, whether now or hereafter in effect, other than for the purpose of reconstruction.

21.2 Any suspension or termination shall be by notice, through the Secretary-General, which shall include a statement of the reasons for taking such action. The suspension or termination shall be effective 60 days after such notice, unless the Contractor within such period disputes the Authority's right to suspend or terminate this contract in accordance with Part XI, section 5, of the Convention.

30/34

21.3 If the Contractor takes such action, this contract shall only be suspended or terminated in accordance with a final binding decision in accordance with Part XI, section 5, of the Convention. 21.4 If the Council has suspended this contract, the Council may by notice require the Contractor to resume its operations and comply with the terms and conditions of this contract, not later than 60 days after such notice.

21.4 In the case of any violation of this contract not covered by section 21.1 (a) hereof, or in lieu of suspension or termination under section 21.1 hereof, the Council may impose upon the Contractor monetary penalties proportionate to the seriousness of the violation.

21.5 The Council may not execute a decision involving monetary penalties until the Contractor has been accorded a reasonable opportunity to exhaust the judicial remedies available to it pursuant to Part XI, section 5, of the Convention.

21.6 In the event of termination or expiration of this contract, the Contractor shall comply with the Regulations and shall remove all installations, plant, equipment and materials in the exploration area and shall make the area safe so as not to constitute a danger to persons, shipping or to the marine environment.

## **SECTION 22**

### **TRANSFER OF RIGHTS AND OBLIGATIONS**

22.1 The rights and obligations of the Contractor under this contract may be transferred in whole or in part only with the consent of the Authority and in accordance with the Regulations.

22.2 The Authority shall not unreasonably withhold consent to the transfer if the proposed transferee is in all respects a qualified applicant in accordance with the Regulations and assumes all of the obligations of the Contractor and if the transfer does not confer to the transferee a plan of work, the approval of which would be forbidden by Annex 3, article 6, paragraph 3 (c), of the Convention.

22.3 The terms, undertakings and conditions of this contract shall inure to the benefit of and be binding upon the parties hereto and their respective successors and assigns.

## **SECTION 23**

### **NO WAIVER**

No waiver by either party of any rights pursuant to a breach of the terms and conditions of this contract to be performed by the other party shall be construed as a waiver by the party of any succeeding breach of the same or any other term or condition to be performed by the other party.

## **SECTION 24**

### **REVISION**

24.1 When circumstances have arisen or are likely to arise which, in the opinion of the Authority or the Contractor, would render this contract inequitable or make it impracticable or impossible to achieve the objectives set out in this contract or in Part XI of the Convention or the Agreement, the parties shall enter into negotiations to revise it accordingly.

24.2 This contract may also be revised by agreement between the Contractor and the Authority to facilitate the application of any rules, regulations and procedures adopted by the Authority subsequent to the entry into force of this contract.

24.3 This contract may be revised, amended or otherwise modified only with the consent of the Contractor and the Authority by an appropriate instrument signed by the authorized representatives of the parties.

**SECTION 25**

**DISPUTES**

25.1 Any dispute between the parties concerning the interpretation or application of this contract shall be settled in accordance with Part XI, section 5, of the Convention.

25.2 Any final decision rendered by a court or tribunal having jurisdiction under the Convention

relating to the rights and obligations of the Authority and of the Contractor shall be enforceable in the territory of each State Party to the Convention.

**SECTION 26**

**NOTICE**

26.1 Any application, request, notice, report, consent, approval, waiver, direction or instruction hereunder shall be made by the Secretary-General or by the designated representative of the Contractor, as the case may be, in writing. Service shall be by hand, or by telex, facsimile or registered airmail to the Secretary-General at the headquarters of the Authority or to the designated representative.

26.2 Either party shall be entitled to change any such address to any other address by not less than ten days' notice to the other party.

26.3 Delivery by hand shall be effective when made. Delivery by telex shall be deemed to be effective on the business day following the day when the "answer back" appears on the sender's telex machine. Delivery by facsimile shall be effective when the "transmit confirmation report" confirming the transmission to the recipient's published facsimile number is received by the transmitter. Delivery by registered airmail shall be deemed to be effective 21 days after posting. 26.4 Notice to the designated representative of the Contractor shall constitute effective notice to the Contractor for all purposes under this contract, and the designated representative shall be the Contractor's agent for the service of process or notification in any proceeding of any court or tribunal having jurisdiction.

26.4 Notice to the Secretary-General shall constitute effective notice to the Authority for all purposes under this contract, and the Secretary-General shall be the Authority's agent for the service of process or notification in any proceeding of any court or tribunal having jurisdiction.

**SECTION 27**

**APPLICABLE LAW**

27.1 This contract shall be governed by the terms of this contract, the rules, regulations and procedures of the Authority, Part XI of the Convention, the Agreement and other rules of international law not incompatible with the Convention.

27.2 The Contractor, its employees, subcontractors, agents and all persons engaged in working or acting for them in the conduct of its operations under this contract shall observe the applicable law referred to in section 27.1 hereof and shall not engage in any transaction, directly or indirectly, prohibited by the applicable law.

27.3 Nothing contained in this contract shall be deemed an exemption from the necessity of applying for and obtaining any permit or authority that may be required for any activities under this contract.

**SECTION 28**

**INTERPRETATION**

The division of this contract into sections and subsections and the insertion of headings are for convenience of reference only and shall not affect the construction or interpretation hereof.

**SECTION 29**

**ADDITIONAL DOCUMENTS**

Each party hereto agrees to execute and deliver all such further instruments, and to do and perform all such further acts and things as may be necessary or expedient to give effect to the provisions of this contract.

## I. ANNEX

# ISA Contract for Exploration Public Information Template

 The logo for Tonga Offshore Mining Limited features a vertical stack of five circles on the left, with the text 'TONGA OFFSHORE MINING LIMITED' in white on a red rectangular background to the right.	Type of resource: Polymetallic Nodule
	Name of Contractor: Tonga Offshore Mining Limited
	Contract Start: 11 January 2012
Sponsoring State: Kingdom of Tonga	Contract End: 11 January 2027
	Location: 6 Areas in the Clarion Clipper Zone

---

**Contents**

Introduction	1
1. Contract Information	1
2. Coordinates and Illustrative Chart of the Exploration Area	1
3. Plan of Work	4
4. Programme of Activities and Exploration Expenditure	6
5. Training Programme	15
6. Standard clauses	20

## Introduction

The information contained in this ISA Contract for Exploration – Public Information Template is made available to the public in response to the request by the Council of the ISA to make contracts publicly available, subject to restrictions on confidential information, industrial secrets and proprietary data.

The content of the present template is in accordance with the Regulations on Prospecting and Exploration for [Polymetallic Nodules in the Area] [ISBA/19/C/17] (the “Regulations”).

### 1. Contract Information

Annex III of the Regulations.

<b>Type of resource</b>	Polymetallic Nodules
<b>Name of Contractor</b>	Tonga Offshore Mining Limited
<b>Contract Start</b>	11 January 2012
<b>Contract End</b>	11 January 2027
<b>Location</b>	6 Areas in the Clarion Clipperton zone, Pacific Ocean
<b>Contract Area (km<sup>2</sup>)</b>	74,713

### 2. Coordinates and Illustrative Chart of the Exploration Area

Schedule 1 of Annex III of the Regulations.

Exploration area located between:

#### **Area A (10,281 km<sup>2</sup>)**

All that area of seafloor within the Authority’s reserved Block 2 in the Clarion-Clipperton Zone of the Pacific Ocean that is bounded by a line commencing at the north-west corner at:

	<b>Latitude</b>	<b>Longitude</b>
	8.1667 N	-152.510 W (the point of commencement)
Then to	8.1667 N	-151.667 W
Then to	7.1667 N	-151.667 W
Then to	7.1667 N	-152.510 W
Then to	8.1667 N	-152.510 W (being the point of commencement)

**Area B (9,966 km<sup>2</sup>)**

All that area of seafloor within the Authority's reserved Block 15 in the Clarion-Clipperton Zone of the Pacific Ocean that is bounded by a line commencing at the north-west corner at:

	<b>Latitude</b>	<b>Longitude</b>
	14.2900 N	-132.800 W (the point of commencement)
Then to	14.6667 N	-132.000 W
Then to	13.5801 N	-132.000 W
Then to	13.5801 N	-133.200 W
Then to	13.8667 N	-133.200 W
Then to	13.8667 N	-132.800 W
Then to	14.2900 N	-132.800 W (being the point of commencement)

**Area C (15,763 km<sup>2</sup>)**

All that area of seafloor within the Authority's reserved Block 16 in the Clarion-Clipperton Zone of the Pacific Ocean that is bounded by a line commencing at the north-west corner at:

	<b>Latitude</b>	<b>Longitude</b>
	15.800 N	-131.00000 W (the point of commencement)
Then to	15.800 N	-130.00000 W
Then to	15.333 N	-130.00000 W
Then to	15.333 N	-129.30000 W
Then to	15.500 N	-128.58333 W
Then to	15.000 N	-128.58333 W
Then to	15.000 N	-131.00000 W
Then to	15.800 N	-131.00000 W (being the point of commencement)

**Area D (15,881 km<sup>2</sup>)**

All that area of seafloor within the Authority's reserved Block 21 in the Clarion-Clipperton Zone of the Pacific Ocean that is bounded by a line commencing at the north-west corner at:

	<b>Latitude</b>	<b>Longitude</b>
	14.083333 N	-123.583333 W (the point of commencement)
Then to	13.125000 N	-123.583333 W
Then to	13.125000 N	-124.375000 W
Then to	13.375000 N	-124.375000 W
Then to	13.375000 N	-125.333300 W
Then to	13.750000 N	-125.333300 W
Then to	13.750000 N	-125.000000 W
Then to	14.083333 N	-125.000000 W
Then to	14.083333 N	-123.583333 W (being the point of commencement)

**Area E (7,002 km<sup>2</sup>)**

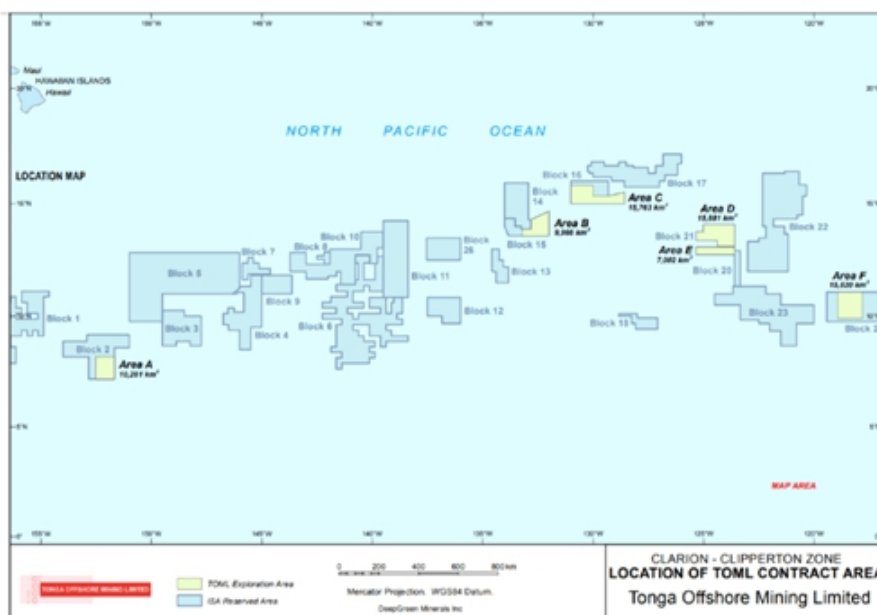

All that area of seafloor within the Authority’s reserved Block 20 in the Clarion-Clipperton Zone of the Pacific Ocean that is bounded by a line commencing at the north-west corner at:

	<b>Latitude</b>	<b>Longitude</b>
	13.0833 N	-125.333 W (the point of commencement)
Then to	13.0833 N	-123.583 W
Then to	12.7500 N	-123.583 W
Then to	12.7500 N	-125.333 W
Then to	13.0833 N	-125.333 W( being the point of commencement)

**Area F (15,820 km<sup>2</sup>)**

All that area of seafloor within the Authority’s reserved Block 25 in the Clarion-Clipperton Zone of the Pacific Ocean that is bounded by a line commencing at the north-west corner at:

	<b>Latitude</b>	<b>Longitude</b>
	11.083333 N	-117.81667 W (the point of commencement)
Then to	9.895000 N	-117.81667 W
Then to	9.895000 N	-118.91667 W
Then to	11.083333 N	-118.91667 W
Then to	11.083333 N	-117.81667 W ( being the point of commencement)

### 3. Plan of Work

Summary of Plan of Work for Exploration including the Programme of Activities for the first and/or the current 5-year period (Regulation 18).

#### **TOML Programme of Activities for the first five-year period:**

##### **Year 1**

In the first year of the programme of activities, the Contractor will undertake a compilation and detailed review of all existing data on the exploration area, including a comprehensive literature review of possible metallurgical flow paths. Engineering and metallurgy test work may be carried out to determine whether there are any conflicting elements in the historical data; some field trials and exploration work may also be required as part of this clarification. These initial studies will inform a scoping document which would be used to prepare a detailed plan aimed at placing the project on a pathway towards production.

##### **Year 2 & 3**

In the second and third year of the programme of activities, the Contractor will carry out cruises in the exploration area. The cruises will use surveys, sampling and environmental surveys to try to determine the size and grade of the deep-sea mineral resources in the exploration area; obtain sufficient quantities of samples to evaluate the principal metallurgical characteristics of the resources; and report the results to modern commercial resource reporting standards (e.g. NI 43-101). On completion of the field work, the Contractor will undertake a prefeasibility study which will incorporate the following elements:

- Base line environmental studies;
- Resource estimations;
- Preliminary engineering and metallurgical studies and design work for both the onshore and offshore components; and
- Preliminary economic and commercial studies to provide scoping estimates for CAPEX and OPEX for mining, transportation, and processing options.

The objective of the prefeasibility study will be to update the Contractor's knowledge of the characteristics of the deposit, and to narrow down the various development and related alternatives in order to enable a well-managed, appropriately funded and focused feasibility study to be undertaken

##### **Year 4 & 5**

Beginning in Year 4, the Contractor will launch a full-scale feasibility study to define to a high order of accuracy the engineering and design parameters required for the mining and processing of the nodule resource, as well as to complete detailed resource estimation work. The study will be carried out to provide sufficient resource and confidence in the resource parameters to allow project financing. As well as identifying first-generation mine sites, the Contractor will develop mining solutions to recover the nodules and transfer them to transport vessels, as well as completing a detailed environmental impact assessment of the project. Depending on results the Contractor will start to look at mining methods in Year 6 and may commence trial mining.

**TOML Proposed Programme of Activities for the second five-year period:**

TOML's proposed programme of activities for its second five-year work programme is:

- dependent on success at each stage;
- subject to change based on findings at hand at any particular time; and
- reliant on funding which is in turn in dependent to some extent on macro-economic conditions and developments with regards to the Authority and its stakeholders.

Proposed activities and expenditure for the second five-year period

Year	Description of Activities	Expenditure Plan (USD)
6-10	Continued development and collection of environmental baseline data  Complete pilot testing  Complete geotechnical studies  Complete feasibility studies  First draft EIA/EMP  Continue to provide training opportunities.	The work program for the second five years is expected total some US\$30M. Based on an expectation that the forthcoming environmental regulations pertaining to obtaining an exploitation contract are completed. This program includes a substantive program of environmental baseline survey and pilot mining monitoring. It also includes fabrication and trials of pilot scale mining equipment, metallurgical test work, and other engineering and marketing studies as well as report drafting for environmental permitting and feasibility study purposes.

#### 4. Programme of Activities and Exploration Expenditure

Section 4.1 of Annex IV of the Regulations and Schedule 2 of Annex III of the Regulations.

##### I. Agreed 5-year Programme of Activities

5-year Programme of Activities	First 5-year period	
General Objectives	Objective	Description
	<ul style="list-style-type: none"> <li>● Gaining a much better understanding of the resource through literature review and exploration</li> <li>● Developing a viable technical and economic case for production through the commencement of geotechnical studies</li> <li>● Developing a platform to conduct baseline environmental studies through the commencement of environmental baseline and start feasibility studies</li> </ul>	<p>In the first year of the programme of activities, the Contractor will undertake a compilation and detailed review of all existing data on the exploration area, including a comprehensive literature review of possible metallurgical flow paths. Engineering and metallurgy test work may be carried out to determine whether there are any conflicting elements in the historical data; some field trials and exploration work may also be required as part of this clarification. As well as identifying first-generation mine sites, the Contractor will develop mining solutions to recover the nodules and transfer them to transport vessels, as well as completing a detailed environmental impact assessment of the project.

Depending on results the Contractor will start to look at mining methods in Year 6 and may commence trial mining.

5-year Programme of Activities	Second 5-Year Period	
General Objectives	Objective	Description
	<ul style="list-style-type: none"> <li>• Continue environmental baseline</li> <li>• Complete pilot testing</li> <li>• Complete geotechnical studies</li> <li>• Complete feasibility studies</li> <li>• First draft EIA/EMP</li> <li>• Delivery training programs</li> </ul>	<p>Based on an expectation that the forthcoming environmental regulations pertaining to obtaining an exploitation contract are completed. This program includes a substantive program of environmental baseline survey and pilot mining monitoring. It also includes fabrication and trials of pilot scale mining equipment, metallurgical test work, and other engineering and marketing studies as well as report drafting for environmental permitting and feasibility study purposes. Given the slow progress on the exploitation regulations and continually changing environmental guidelines, it is difficult to develop conforming environmental baseline studies. TOML continues to adapt its program to accommodate these changes, deferring some work programs until there is certainty and modifying others.</p>

## II. Results achieved during reported year [1-8]: [2012-2019]

Annual objectives and activities			
Year	No.	Agreed Objectives	Objective: Completed, Modified, Postponed or Replaced
2012	1	Compilation and detailed review of all existing data on the exploration area, including a comprehensive literature review of possible metallurgical flow paths.	<p><b>Completed</b></p> <p>Golder Associates conducted a Mineral Resource estimate in 2012 (all to an inferred level of confidence). This required compilation of historical data and cooperation with several of the Pioneer Contractors and the German contract holder. At the time of publication, this was the first ever polymetallic nodule Mineral Resource to meet the requirements of NI 43-101 of Canada and the first ever known to publicly meet the requirements of CRIRSCO (Committee for Mineral Reserves International Reporting Standards).</p> <p>TOML provided 11 scholarship payments to students of Tonga Maritime Polytechnical Institute (TMPI). TOML was able to fulfil its ISA contract objectives for 2012 without going offshore, thus decided to expand scholarship opportunities to TMPI students in lieu of offshore work TOML provided travel and accommodation support for three Ministry of Land's officers who attend Deep Sea Minerals (DSM) Regional workshop in Nadi, Fiji. Travel and accommodation support was also provided for a Ministry of Land's officer to attend the International Geological Congress (IGC) in Brisbane, Australia. As mentioned previously, TOML's 2012 programme objectives were met without going offshore thus, the decision was made to commence the bursaries/fellowship and training for the personnel of the Authority in 2013.</p>

2013-2014	2-3	<p>Carry out cruises in the exploration area to determine the size and grade of the deep-sea mineral resources in the exploration area</p> <p>Obtain sufficient quantities of samples to evaluate the principal metallurgical characteristics of the resources</p>	<p><b>Completed:</b> TOML completed a 55-day mapping and sampling campaign (CCZ13 cruise) aboard the RV Mt Mitchell, between August and September 2013. The campaign collected and processed high quality bathymetry and backscatter data. This enabled detailed geological mapping to be completed. Nodule samples were collected using a specially designed epibenthic sled. Some environmental studies were undertaken but more importantly, data collected during this cruise was used to design and plan more detailed environmental baseline studies which TOML implemented in the second phase cruise. Documents such as this will be used by TOML as a template for developing baseline environmental studies and plans. TOML also participated in the ISA led workshop in Wilhelmshaven, Germany to standardise Mega-faunal Taxonomy for Exploration Contract Areas in the Clarion Clipperton Fracture Zone.</p> <p><b>Completed:</b> Part of the 2.1 tonnes of nodules collected was used for mineralogical characterization and metallurgical studies.</p> <p>Two primary exploration studies were completed in 2014 on nodules collected during the 2013 RV Mt Mitchell exploration cruise. An Interlab Comparison and for QA/QC Dredge Nodule Samples December 2013, completed March 2014 and an Insights on the moisture content and chemistry of TOML's CCZ nodules, completed April 2014. A processing study was commissioned in 2014 as well, a smelting option study, which was completed in November 2014. Samples processed in 2014 with scanning in February 2015 by Queensland University of Technology (QUT).</p>
-----------	-----	--	--

	<p>Report the results to modern commercial resource reporting standards (eg. NI 43-101)</p> <p>Undertake prefeasibility study</p> <p>Training</p>	<p><b>Completed:</b> In 2012 and further refined in 2016.</p> <p><b>Partially Completed:</b> TOML developed a viable technical and economic case for production with a more detailed investigation of current and historical technologies applicable to collecting, transporting, and processing of polymetallic nodules. In this respect, TOML commissioned three mining conceptual studies as part of its de-coupled underwater collection concept. The conceptual studies were in respect of a Concentrator, Reclaimer and the Mechanical hoist System. Many elements of this study were completed to PFS quality, but there were a few areas where the studies did not meet this standard and it was categorised as a Preliminary Economic Assessment.</p> <p>The bathymetry, side-scan sonar and sampling conducted in 2013 were used for preliminary environmental investigation. This work along with a more detailed baseline environmental plan and literature review was fed into baseline environmental studies in the second cruise to TOML's CCZ contract area in 2015.</p> <p><b>Completed:</b> TOML implemented a training programme in 2013 where two personnel from developing nations and a Tongan observer actively participated in and contributed to the success of the RV Mitchell cruise. TOML's parent Nautilus also ran a marine science course in PNG for 20 students, which included two students from Fiji and one from Tonga sponsored by TOML. TOML also fully funded one person of Tonga Ministry of Lands to attend the SPC-SOPAC deep-sea minerals workshop in Vanuatu in June. In addition, TOML funded the Tongan representative to the United Nations to attend the 19th session of the ISA in Jamaica.</p> <p>In 2014, TOML supported three persons from developing nations to participate in a company arranged marine science course in Papua New Guinea. Tonga also funded the Tonga representative to the United Nations to attend the 20th session in Jamaica.</p>
--	---	--

2015-2016	4-5	<p>Launch a full-scale feasibility study to define to a high order of accuracy the engineering and design parameters for the mining and processing of the nodule resources</p> <p>Develop mining solutions to recover the nodules and transfer them to transport vessels</p> <p>Completing a detailed environmental impact assessment of the project</p>	<p><b>Ongoing:</b> A gap and risk analysis was undertaken on the PEA and specific studies including lift simulations, logistical studies, material handling, metallurgical and mineralogical characterization, nodule attrition studies and revised resource assessment were undertaken to address the identified risks. A draft PFS was prepared</p> <p><b>Ongoing:</b> TOML's activities on a mining test and proposed mining technologies was largely focused on advancing a set of conceptual studies, which TOML is looking to combine into a preliminary Prefeasibility Study.</p> <p><b>Ongoing:</b> TOML completed a 96-day combined resource evaluation and environmental baseline survey (CCZ15) conducted aboard the RV Yuzhmorgeologiya (YMG).</p> <p>Environmental work was a major part of the work program. Significant progress has been made towards an environmental baseline study (a pre-requisite for a future Environmental Impact Study) with the acquisition preservation of a suitable biological sample library, water column data and the establishment of two long term environmental monitoring moorings.</p>
-----------	-----	--	--

--	--

Report the results to modern commercial resource reporting standards (eg. NI 43-101)

Apart from previous literature review (which is very useful as sediment characteristics are thought to change only slightly between different parts of the CCZ), work in 2015 involved:

- vane shear measurements in all box-cores that returned with acceptable sediment
- over 100,000 nodule size measurements that will be useful in designing the mining system

Test work in 2015 involved windrow trial on deck using intact sediment in the large area box-corer

New data collected in 2016 includes extensive megafauna logging from photographs and mud and nodule densities measured in the laboratory.

Given the slow progress on the exploitation regulations and continually changing environmental guidelines, it is difficult to develop conforming environmental baseline studies. TOML continues to adapt its program to accommodate these changes and risks, deferring some work programs until there is certainty and modifying others.

**Completed:** The CCZ15 Cruise collected sufficient data to allow definition of:

- An expanded Inferred Mineral Resource for the entire TOML area
- An Indicated Mineral Resource for the Preliminary Mining Areas candidates
- A Measured Mineral Resource for the B5338 field and adjacent areas
- New mapping interpretation on TOML contract areas B through F and from publicly available data was completed.

The geological and geotechnical results from the MM13 or (CCZ13) and CCZ15 cruises completed the updated NI 43-101, wherein a polymetallic nodule resource was defined to an Indicated and Measured level of confidence (world first), as well as upgrading of the resource at an Inferred level of confidence. The updated NI 43-101 was completed March 2016.

		Training	<p><b>Completed:</b> In 2015, Nautilus Minerals Tonga employed a Tongan National on a full-time basis, as a multidisciplinary geoscientist.</p> <p>TOML provided the following training in 2015; at sea training was provided for two students, one from Madagascar and one from Brazil, both nominated by ISA. Training opportunities were also provided to three Tongan nationals in addition to the Tongan Government observer.</p> <p>In 2016, training included training in megafauna identification for two Tongan staff members. A seminar was run by TOML staff at the Tongan Ministry of Lands and Natural Resources. A Tongan Government representative was also sponsored to attend the ISA Annual Meeting.</p>
2017-2021	6-10	Continue environmental baseline	<p><b>Ongoing:</b> TOML's continues to advance its environmental baseline knowledge.</p> <p>TOML conducted a "side cruise" to CCZ in 2017.</p> <p>The side cruise involved Yuzhmogeologiya's R/V Gelendzhik as it transited the Pacific for its own work. The program aimed to recover and redeploy/deploy long term environmental moorings and to collect additional bulk sample of nodules for future metallurgical test work.</p> <p>TOML continues its analysis and interpretation of the large volume of baseline environmental and related data including megafauna logging. Megafauna photo logging utilizes a hierarchical morphospecies classification scheme, linked with geoform and substrate classification schema. It was made available from the collaboration between TOML, consultants Fathom Pacific and National Oceanography Centre. TOML reached out to collaborate with InterOcean Metal (IOM) in the megafauna logging.</p> <p>The megafauna logging program proceeded well in 2018, with logging complete and QA/QC and independent review underway. A high degree of visual commonality is seen between the three TOML subareas surveyed.</p> <p>In 2019, the megafauna logging program was updated (QA/QC) then adapted by National Oceanographic Centre to a schema that is also being applied to other research data sets.</p> <p>In 2017 TOML started an eDNA Pilot Study using samples obtained from the 2015 CCZ cruise. The eDNA pilot program was completed in 2018, with very positive progress in meeting requirements regarding preservation and processing: including concentration and effective sequencing of micro-organisms.</p>

		<p>Complete pilot testing</p> <p>Complete geotechnical studies</p> <p>Complete feasibility studies</p> <p>First draft EIA/EMP</p> <p>Deliver training programme</p>	<p><b>In progress:</b> The designing of TOML's mining system called the Decoupled Underwater Collection Concept (DUCC) has progressed to prefeasibility study state. TOML continued to advance the project design by conducting land-based tests, closing technology gaps in areas not previously piloted. This included 1/4 scale Concentrator sled towing and steering forces and a full-scale lateral conveyor test.</p> <p><b>Ongoing:</b> A mine plan and mine equipment/schedule was completed for the TOML PMAs (Preliminary Mining Areas).</p> <p><b>Ongoing:</b> TOML continues to advance their prefeasibility study including completing seafloor concentrator, vessel conversion and lift system tests. TOML also contributed to the Blue Nodules riser pump tests managed by IHC and BGR.</p> <p><b>Postponed:</b> Given the slow progress on the exploitation regulations and continually changing environmental guidelines, it is difficult to develop conforming environmental baseline studies. TOML continues to adapt its program to accommodate these changes and risks, deferring some work programs until there is certainty and modifying others.</p> <p><b>Ongoing:</b> TOML is committed to training programs and TOML assisted Tongans through its training and community assistance programme. In country staff continued to build capacity in Tonga, through various presentations and by assisting other organizations conduct deep sea- related workshops in Tonga.</p> <p>TOML is developing a training and employment program for megafauna identification and logging in collaboration with the UK National Oceanographic Centre (University of Southampton). The program is anticipated to provide training and employment for two Tongan nationals.</p>
--	--	---	--

III. III Actual and direct exploration expenditures during reported year

Year	Expenditure Plan (in US dollars)	Actual Expenditure (in US dollars)	Comments
Year 1 (2012)	1.5 million	0.32 million	Objectives met
Year 2 to 3 (2013- 2014)	10 million	3.8 million	Objectives met
Year 4 to 5 (2015-2016)	20 million	4.9 million	Objectives met
Year 6 (2017)	30 million for year 6 to year 10  (2017–2022)	0.3 million	Progress on key collection system risk areas
Year 7 (2018)		0.3 million	Progress on key collection system risk areas
Year 8 (2019)		0.2 million	Progress on key collection system risk areas

5. **Training Programme**

Schedule 3 of Annex III of the Regulations.

I. **Training Programme**

Type of training	Maritime Polytechnical Institute (MPI) Support	Ministry of Lands, Survey & Natural Resources capacity building & training	Student bursary and fellowship	For the personnel of the authority	For candidates from other developing nations
<b>Institutions</b>	Tonga Maritime Polytechnical Support				
<b>Duration</b>	Varied depending on the course	Varied depending on the course / workshop or cruise	Up to 6 months	Dependent on the opportunity	Dependent on the opportunity
<b>Scope</b>	<p>The Contractor will expand the current Nautilus Minerals Tonga (NMT) support of the Tonga Maritime Polytechnical Institute as follows:</p> <p>(a) The Contractor will provide funding for two additional scholarships for Tongan nationals; and</p> <p>(b) The Contractor will expand the programme in order to provide “work experience” for polytechnical graduates on its cruises and/or appropriate Nautilus sponsored cruises within the South Pacific, after having identified suitable candidates.</p> <p>The scholarships will be provided annually and will be undertaken in accordance with the current NMT programme whereby, as an incentive, the Contractor will reimburse only students who pass their exams. The scholarship programme will be reviewed bi-annually.</p>	<p>Capacity within the Ministry of Lands, Survey and Natural Resources will be enhanced by providing vessel time for “Ministry observers” on vessels used by the Contractor to carry out its exploration activities, and on the occasion of appropriate NMT cruises within Tonga.</p> <p>Ministry personnel will also be sponsored to observe other deep ocean exploration work programmes at Nautilus Minerals advanced operations in Papua New Guinea. These visits will include presentations summarizing technical, environmental, and legal aspects of the company’s seafloor massive sulfide operations in a workshop convened by the Contractor. The Contractor envisages that this capacity building will be on-going throughout the duration of the contract. The programme will be reviewed annually to reset objectives and goals.</p> <p>The Contractor will also provide travel and accommodation support for up to two suitable Tongan Ministry personnel to attend short courses and conferences that are relevant to the emerging deep-sea minerals industry. These will be provided on an annual basis. Personnel, courses, and conferences will be selected by the Contractor in consultation with the Tongan Government. The training needs will focus on mining, engineering, geology, legal aspects and environment. This sponsorship will be reviewed bi-annually.</p>	<p>The Contractor will sponsor a minimum of one Tongan national and one national of a developing nation annually with the aim of undertaking studies on environmental aspects of the deep ocean. These studies will be linked into the contractor’s exploration sampling programmes, environmental baseline and monitoring studies; they will cover aspects of the physical sciences of geology, environment, or engineering, depending on candidate suitability. The fellowships will be based on similar rules and criteria to the successful “Duke University Opportunity Bursary” of NMT, whereby suitably qualified local candidates are provided sponsorship for up to six months of study, receive training from world renowned marine scientists and take courses in Marine Conservation Biology at Duke University, in the United States of America. The Contractor will seek</p>	<p>The Contractor will provide an at-sea training programme for suitably qualified personnel of the Authority on each sampling cruise with a minimum of one berth per leg. Although training requirements and personnel will be identified jointly by the Contractor and the Authority during the cruise planning stage.</p> <p>The personnel of the Authority will also be invited to attend at least one information session provided by the Contractor to the Tongan Government.</p> <p>Training requirements for the personnel of the Authority will be reviewed bi-annually, in consultation with the Secretary-General of the Authority.</p>	<p>The Contractor will provide one berth for at-sea training of suitably qualified personnel from developing nations other than Tonga during seafloor sampling programmes.</p> <p>Personnel will be identified during the cruise planning stage.</p> <p>The Contractor will advise the Authority of the expected timing for any sampling cruises planned, and the Authority will notify its members of the impending dates and student selection requirements, including the contractors preferred areas of study.</p>

to establish similar relationships with other institutes for deep-sea nodule studies.

The fellowship will be advertised in the local Tongan newspapers, and will cover geology, engineering, or environmental disciplines.

The Contractor may increase the number of sponsored students depending on data and project availability and may expand studies during the pre-feasibility and feasibility stages of its programme of work. To this end, the Contractor Fellowship will be reviewed in year two of the contract, with a view to possibly expanding it into multiple disciplines and increasing the number of students.

<b>Fields</b>	At sea training	Deep sea minerals industry	Environmental aspects of the deep ocean	At sea training	At sea training
<b>Qualification required</b>	Must pass end of year exam	Member of Ministry	<p>The selection of candidates will be based on the following criteria:</p> <p>(a) One Tongan national, one national from another developing nation;</p> <p>(b) An appropriate degree in one of the required disciplines;</p> <p>(c) A clear desire to contribute to the emerging deep ocean resource industry;</p> <p>(d) An ability to pass the contractors cruise personnel selection criteria, including but not limited to physical health;</p> <p>(e) A willingness to undertake extended voyages out on the deep ocean;</p> <p>(f) An ability to travel (candidates will need a valid passport and appropriate visas) and meet the selection criteria of the host institutes.</p>	<p>(a) Candidate(s) will be nominated by the Authority;</p> <p>(b) Candidate(s) must be physically capable and available to participate for the duration of the required cruise legs;</p> <p>(c) Candidate(s) must pass the Contractor's personnel pre-selection and medical check-ups;</p> <p>(d) The Authority and the Contractor will jointly define the training requirements expected from the participant during the cruise.</p>	<p>(a) Candidates must be a national from a developing state, and hold a valid passport;</p> <p>(b) Candidates must hold an appropriate University degree from a recognized tertiary institution;</p> <p>(c) Candidates must be capable of passing the contractors vessel personnel selection criteria, including but not limited to physical health;</p> <p>(d) Candidates must have a clear desire to contribute to the emerging deep ocean resource industry; and</p> <p>(e) Candidates must have a willingness to undertake extended voyages out on the deep ocean.</p>
<b>Financing</b>	Contractor to reimburse student's fees at the end of the term	Contractor to provide all travel expenses	Contractor to sponsor students	Contractor to provide all travel expenses	Contractor to provide all travel expenses

**II. Trainings conducted up to reported year [1-8]: [2012-2019]**

Start year	End Year	Name of Trainee	Nationality	Gender	Type of Programme	Details	Duration

Year 8 (2019)					1 trainee

**6. Standard clauses**

Annex IV of the Regulations.

**SECTION 1****DEFINITIONS**

1.1 In the following clauses:

- a) “Exploration area” means that part of the Area allocated to the Contractor for exploration, described in schedule 1 hereto, as the same may be reduced from time to time in accordance with this contract and the Regulations;
- b) “Programme of activities” means the programme of activities which is set out in schedule 2 hereto as the same may be adjusted from time to time in accordance with sections 4.3 and 4.4 hereof;
- c) “Regulations” means the Regulations for Prospecting and Exploration for Polymetallic Nodules in the Area, adopted by the Authority. 1.2

1.2 Terms and phrases defined in the Regulations shall have the same meaning in these standard clauses.

1.3 In accordance with the Agreement relating to the Implementation of Part XI of the United Nations Convention on the Law of the Sea of 10 December 1982, its provisions and Part XI of the Convention are to be interpreted and applied together as a single instrument; this contract and references in this contract to the Convention are to be interpreted and applied accordingly.

1.4 This contract includes the schedules to this contract, which shall be an integral part hereof.

**SECTION 2****SECURITY OF TENURE**

2.1 The Contractor shall have security of tenure and this contract shall not be suspended, terminated or revised except in accordance with sections 20, 21 and 24 hereof.

2.2 The Contractor shall have the exclusive right to explore for polymetallic nodules in the exploration area in accordance with the terms and conditions of this contract. The Authority shall ensure that no other entity operates in the exploration area for a different category of resources in a manner that might unreasonably interfere with the operations of the Contractor

2.3 The Contractor, by notice to the Authority, shall have the right at any time to renounce without penalty the whole or part of its rights in the exploration area, provided that the Contractor shall remain liable for all obligations accrued prior to the date of such renunciation in respect of the area renounced.

2.4 Nothing in this contract shall be deemed to confer any right on the Contractor other than those rights expressly granted herein. The Authority reserves the right to enter into contracts with respect to resources other than polymetallic nodules with third parties in the area covered by this contract.

**SECTION 3****CONTRACT TERM**

3.1 This contract shall enter into force on signature by both parties and shall remain in force for a period of fifteen years thereafter unless:

- a) The Contractor obtains a contract for exploitation in the exploration area which enters into force before the expiration of such period of fifteen years; or
- b) The contract is sooner terminated,

Provided that the term of the contract may be extended in accordance with sections 3.2 and 17.2 hereof.

3.2 Upon application by the Contractor, not later than six months before the expiration of this contract, this contract may be extended for periods of not more than five years each on such terms and conditions as the Authority and the Contractor may then agree in accordance with the Regulations. Such extensions shall be approved if the Contractor has made efforts in good faith to comply with the requirements of this contract but for reasons beyond the Contractor's control has been unable to complete the necessary preparatory work for proceeding to the exploitation stage or if the prevailing economic circumstances do not justify proceeding to the exploitation stage.

3.3 Notwithstanding the expiration of this contract in accordance with section 3.1 hereof, if the Contractor has, at least 90 days prior to the date of expiration, applied for a contract for exploitation, the Contractor's rights and obligations under this contract shall continue until such time as the application has been considered and a contract for exploitation has been issued or refused.

**SECTION 4****EXPLORATION**

4.1 The Contractor shall commence exploration in accordance with the time schedule stipulated in the programme of activities set out in schedule 2 hereto and shall adhere to such time periods or any modifications thereto as provided for by this contract.

4.2 The Contractor shall carry out the programme of activities set out in schedule 2 hereto. In carrying out such activities the Contractor shall spend in each contract year not less than the amount specified in such programme, or any agreed review thereof, in actual and direct exploration expenditures.

4.3 The Contractor, with the consent of the Authority, which consent shall not be unreasonably withheld, may from time to time make such changes in the programme of activities and the expenditures specified therein as may be necessary and prudent in accordance with good mining industry practice, and taking into account the market conditions for the metals contained in polymetallic nodules and other relevant global economic conditions.

4.4 Not later than 90 days prior to the expiration of each five-year period from the date on which this contract enters into force in accordance with section 3 hereof, the Contractor and the Secretary-General shall jointly undertake a review of the implementation of the plan of work for exploration under this contract. The Secretary-General may require the Contractor to submit such additional data and information as may be necessary for the purposes of the review. In the light of the review, the Contractor shall indicate its programme of activities for the following five-year period, including a revised schedule of anticipated yearly expenditures, making such adjustments to its previous programme of activities as are necessary. Schedule 2 hereto shall be adjusted accordingly.

## SECTION 5

### ENVIRONMENTAL MONITORING

5.1 The Contractor shall take necessary measures to prevent, reduce and control pollution and other hazards to the marine environment arising from its activities in the Area as far as reasonably possible using the best technology available to it.

5.2 The Contractor shall, in accordance with the Regulations, gather environmental baseline data as exploration activities progress and develop and shall establish environmental baselines against which to assess the likely effects of the Contractor's activities on the marine environment.

5.3 The Contractor shall, in accordance with the Regulations, establish and carry out a programme to monitor and report on such effects on the marine environment. The Contractor shall cooperate with the Authority in the implementation of such monitoring.

5.4 The Contractor shall, within 90 days of the end of each calendar year, report to the Secretary-General on the implementation and results of the monitoring programme referred to in Section 5.3 hereof and shall submit data and information in accordance with the Regulations.

5.5 Prior to the commencement of testing of collecting systems and processing operations, the Contractor shall submit to the Authority:

- a) A site-specific environmental impact statement based on available meteorological, oceanographic and environmental data collected during the preceding phases of exploration and containing data that could be used to establish an environmental baseline against which to assess the likely effect of the mining tests;
- b) An assessment of the effects on the marine environment of the proposed tests of collecting systems;
- c) A proposal for a monitoring programme to determine the effect on the marine environment of the equipment that will be used during the proposed mining tests

**SECTION 6****CONTINGENCY PLANS AND EMERGENCIES**

6.1 The Contractor shall, prior to the commencement of its programme of activities under this contract, submit to the Secretary-General a contingency plan to respond effectively to incidents that are likely to cause serious harm to the marine environment arising from the Contractor's activities at sea in the exploration area. Such contingency plan shall establish special procedures and provide for adequate and appropriate equipment to deal with such incidents and, in particular, shall include arrangements for:

- a) The immediate raising of a general alarm in the area of the exploration activities;
- b) Immediate notification to the Secretary-General;
- c) The warning of ships which might be about to enter the immediate vicinity;
- d) A continuing flow of full information to the Secretary-General relating to particulars of the contingency measures already taken and further actions required;
- e) The removal, as appropriate, of polluting substances;
- f) The reduction and, so far as reasonably possible, prevention of serious harm to the marine environment, as well as mitigation of such effects;
- g) As appropriate, cooperation with other contractors with the Authority to respond to an emergency; and
- h) Periodic emergency response exercises

6.2 The Contractor shall promptly report to the Secretary-General any incident arising from its activities that has caused or is likely to cause serious harm to the marine environment. Each such report shall contain the details of such incident, including, inter alia:

- a) The coordinates of the area affected or which can reasonably be anticipated to be affected;
- b) The description of the action being taken by the Contractor to prevent, contain, minimize and repair the serious harm to the marine environment;
- c) A description of the action being taken by the Contractor to monitor the effects of the incident on the marine environment; and
- d) Such supplementary information as may reasonably be required by the Secretary-General.

6.3 The Contractor shall comply with emergency orders issued by the Council and immediate measures of a temporary nature issued by the Secretary-General in accordance with the Regulations, to prevent, contain, minimize or repair serious harm to the marine environment, which may include orders to the Contractor to immediately suspend or adjust any activities in the exploration area.

6.4 If the Contractor does not promptly comply with such emergency orders or immediate measures of a temporary nature, the Council may take such reasonable measures as are necessary to prevent, contain, minimize or repair any such serious harm to the marine environment at the Contractor's expense. The Contractor shall promptly reimburse the Authority the amount of such expenses. Such expenses shall be in addition to any monetary penalties which may be imposed on the Contractor pursuant to the terms of this contract or the Regulations.

## **SECTION 7**

### **OBJECTS OF AN ARCHAEOLOGICAL OR HISTORICAL NATURE**

The Contractor shall immediately notify the Secretary-General in writing of any finding in the exploration area of an object of an archaeological or historical nature and its location. Following the finding of any such object of an archaeological or historical nature in the exploration area, the Contractor shall take all reasonable measures to avoid disturbing such object.

## **SECTION 8**

### **TRAINING**

8.1 In accordance with the Regulations, the Contractor shall, prior to the commencement of exploration under this contract, submit to the Authority for approval proposed training programmes of the training of personnel of the Authority and developing States, including the participation of such personnel in all the Contractor's activities under this contract.

8.2 The scope and financing of the training programme shall be subject to negotiation between the Contractor, the Authority and the sponsoring State or States.

8.3 The Contractor shall conduct training programmes in accordance with the specific programme for the training of personnel referred to in section 8.1 hereof approved by the Authority in accordance with the Regulations, which programme, as revised and developed from time to time, shall become a part of this contract as scheduled 3.

## **SECTION 9**

### **BOOKS AND RECORDS**

The Contractor shall keep a complete and proper set of books, accounts and financial records, consistent with internationally accepted accounting principles. Such books, accounts and financial records shall include information which will fully disclose the actual and direct expenditures for exploration and such other information as will facilitate an effective audit of such expenditures.

**SECTION 10****ANNUAL REPORTS**

10.1 The Contractor shall, within 90 days of the end of each calendar year, submit a report to the Secretary-General covering its programme of activities in the exploration area and containing, as applicable, information in sufficient detail on:

- a) The exploration work carried out during the calendar year, including maps, charts and graphs illustrating the work that has been done and the results obtained;
- b) The equipment used to carry out the exploration work, including the results of tests conducted of proposed mining technologies, but not equipment design data; and
- c) The implementation of training programmes, including any proposed revisions to or developments of such programmes.

10.2 Such reports shall also contain:

- a) The results obtained from environmental monitoring programmes, including observations, measurements, evaluations and analyses of environmental parameters;
- b) A statement of the quantity of polymetallic nodules recovered as samples or for the purpose of testing;
- c) A statement, in conformity with internationally accepted accounting principles and certified by a duly qualified firm or public accountants, or, where the Contractor is a State or a state enterprise, by the sponsoring State, of the actual and direct exploration expenditures of the Contractor in carrying out the programme of activities during the Contractor's accounting year. Such expenditures may be claimed by the contractor as part of the contractor's development costs incurred prior to the commencement of commercial production; and
- d) Details of any proposed adjustments to the programme of activities and the reasons for such adjustments.

10.3 The Contractor shall also submit such additional information to supplement the reports referred to in sections 10.1 and 10.2 hereof as the Secretary-General may from time to time reasonably require in order to carry out the Authority's functions under the Convention, the Regulations and this contract.

10.4 The Contractor shall keep, in good conditions, a representative portion of samples of the polymetallic nodules obtained in the course of exploration until the expiration of this contract. The Authority may request the Contractor in writing to deliver to it for analysis a portion of any such sample obtained during the course of exploration.

**SECTION 11****DATA AND INFORMATION TO BE SUBMITTED ON EXPIRATION OF THE CONTRACT**

11.1 The Contractor shall transfer to the Authority all data and information that are both necessary for an relevant to the effective exercise of powers and functions of the Authority in respect of the exploration area in accordance with the provisions of this section.

11.2 Upon expiration or termination of this contract the Contractor, if it has not already done so, shall submit the following data and information to the Secretary-General:

- a) Copies of geological, environmental, geochemical and geophysical data acquired by the Contractor in the course of carrying out the programme of activities that are necessary for and relevant to the effective exercise of the powers and functions of the Authority in respect of the exploration area;
- b) The estimation of mineable areas, when such areas have been identified, which shall include details of the grade and quantity of the proven, probable and possible polymetallic nodule reserves and the anticipated mining conditions;
- c) Copies of geological, technical, financial and economic reports made by or for the Contractor that are necessary for and relevant to the effective exercise of the powers and functions of the Authority in respect of the exploration area;
- d) Information in sufficient detail on the equipment used to carry out the exploration work, including the results of tests conducted of proposed mining technologies, but not equipment design data; and
- e) A statement of the quantity of polymetallic nodules recovered as samples or for the purpose of testing.

11.3 The data and information referred to in section 11.2 hereof shall also be submitted to the Secretary-General if, prior to the expiration of this contract, the Contractor applies for approval of a plan of work for exploitation or if the Contractor renounces its rights in the exploration area to the extent that such data and information relates to the renounced area.

**SECTION 12****CONFIDENTIALITY**

Data and information transferred to the Authority in accordance with this contract shall be treated as confidential in accordance with the provisions of the Regulations.

**SECTION 13****UNDERTAKINGS**

13.1 The Contractor shall carry out exploration in accordance with the terms and conditions of this contract, the Regulations, Part XI of the Convention, the Agreement and other rules of international law not incompatible with the Convention.

13.2 The Contractor undertakes:

- a) To accept as enforceable and comply with the terms of this contract;
- b) To comply with the applicable obligations created by the provisions of the Convention, the rules, regulations and procedures of the Authority and the decisions of the relevant organs of the Authority;
- c) To accept control by the Authority of activities in the Area as authorized by the Convention;
- d) To fulfil its obligations under this contract in good faith; and
- e) To observe, as far as reasonably practicable, any recommendations which may be issued from time to time by the Legal and Technical Commission.

13.3 The Contractor shall actively carry out the programme of activities:

- a) With due diligence, efficiency and economy;
- b) With due regard to the impact of its activities on the marine environment; and
- c) With reasonable regard for other activities in the marine environment.

13.4 The Authority undertakes to fulfill in good faith its powers and functions under the Convention and the Agreement in accordance with article 157 of the Convention.

**SECTION 14****INSPECTION**

14.1 The Contractor shall permit the Authority to send its inspectors on board vessels and installations used by the Contractor to carry out activities in the exploration area to:

- a) Monitor the Contractor's compliance with the terms and conditions of this contract and the Regulations; and
- b) Monitor the effects of such activities on the marine environment.

14.2 The Secretary-General shall give reasonable notice to the Contractor of the projected time and duration of inspections, the name of the inspectors and any activities the inspectors are to perform that are likely to require the availability of special equipment or special assistance from personnel of the Contractor.

14.3 Such inspectors shall have the authority to inspect any vessel or installation, including its log equipment, records, facilities, all other recorded data and any relevant documents which are necessary to monitor the Contractor's compliance.

14.4 The Contractor, its agents and employees shall assist the inspectors in the performance of their duties and shall:

- a) Accept and facilitate prompt and safe boarding of vessels and installations by inspectors;
- b) Cooperate with and assist in the inspection of any vessel or installation conducted pursuant to these procedures;
- c) Provide access to all relevant equipment, facilities and personnel on vessels and installations at all reasonable times;
- d) Not obstruct, intimidate or interfere with inspectors in the performance of their duties;
- e) Provide reasonable facilities, including, where appropriate, food and accommodation, to inspectors; and
- f) Facilitate safe disembarkation by inspectors.

14.5 Inspectors shall avoid interference with the safe and normal operations on board vessels and installations used by the Contractor to carry out activities in the area visited and shall act in accordance with the Regulations and the measures adopted to protect confidentiality of data and information.

14.6 The Secretary-General and any duly authorized representatives of the Secretary-General, shall have access, for purposes of audit and examination, to any books, documents, papers and records of the Contractor which are necessary and directly pertinent to verify the expenditures referred to in section 10.2 ©.

14.7 The Secretary-General shall provide relevant information contained in the reports of inspectors to the Contractor and its sponsoring State or States where action is necessary.

14.8 If for any reason the Contractor does not pursue exploration and does not request a contract for exploitation, it shall, before withdrawing from the exploration area, notify the Secretary-General in writing in order to permit the Authority, if it so decides, to carry out an inspection pursuant to this section.

**SECTION 15****SAFETY, LABOUR AND HEALTH STANDARDS**

15.1 The Contractor shall comply with the generally accepted international rules and standards established by competent international organizations or general diplomatic conferences concerning the safety of life at sea, and the prevention of collisions and such rules, regulations and procedures as may be adopted by the Authority relating to safety at sea. Each vessel used for carrying out activities in the Area shall possess current valid certificates required by and issued pursuant to such international rules and standards.

15.2 The Contractor shall, in carrying out exploration under this contract, observe and comply with such rules, regulations and procedures as may be adopted by the Authority relating to protection against discrimination in employment, occupational safety and health, labour relations, social security, employment security and living conditions at the work site. Such rules, regulations and procedures shall take into account conventions and recommendations of the International Labour Organization and other competent international organizations.

**SECTION 16****RESPONSIBILITY AND LIABILITY**

16.1 The Contractor shall be liable for the actual amount of damage, including damage to the marine environment, arising out of its wrongful acts or omissions, and those of its employees, subcontractors, agents and all persons engaged in working or acting for them in the conduct of its operations under this contract, including the costs of reasonable measures to prevent or limit damage to the marine environment, account being taken of any contributory acts or omissions by the Authority.

16.2 The Contractor shall indemnify the Authority, its employees, subcontractors and agents against all claims and liabilities of any third party arising out of any wrongful acts or omissions of the Contractor and its employees, agents and subcontractors, and all persons engaged in working or acting for them in the conduct of its operations under this contract.

16.3 The Authority shall be liable for the actual amount of any damage to the Contractor arising out of its wrongful acts in the exercise of its powers and functions, including violations under article 168, paragraph 2, of the Convention, account being taken of contributory acts or omissions by the Contractor, its employees, agents and subcontractors, and all persons engaged in working or acting for them in the conduct of its operations under this contract.

16.4 The Authority shall indemnify the Contractor, its employees, subcontractors, agents and all persons engaged in working or acting for them in the conduct of its operations under this contract, against all claims and liabilities of any third party arising out of any wrongful acts or omissions in the exercise of its powers and functions hereunder, including violations under article 168, paragraph 2, of the Convention.

16.5 The Contractor shall maintain appropriate insurance policies with internationally recognized carriers, in accordance with generally accepted international maritime practice.

**SECTION 17****FORCE MAJEURE**

17.1 The Contractor shall not be liable for an unavoidable delay or failure to perform any of its obligations under this contract due to force majeure. For the purposes of this contract, force majeure shall mean an event or condition that the Contractor could not reasonably be expected to prevent or control; provided that the event or conditions was not caused by negligence or by a failure to observe good mining industry practice.

17.2 The Contractor shall, upon request, be granted a time extension equal to the period by which performance was delayed hereunder by force majeure and the term of this contract shall be extended accordingly.

17.3 In the event of force majeure, the Contractor shall take all reasonable measures to remove its inability to perform and comply with the terms and conditions of this contract with a minimum of delay; provided that the Contractor shall not be obligated to resolve or terminate any labour dispute or any other disagreement with a third party except on terms satisfactory to it or pursuant to a final decision of any agency having jurisdiction to resolve the dispute.

17.4 The Contractor shall give notice to the Authority of the occurrence of an event of force majeure as soon as reasonably possible, and similarly give notice to the Authority of the restoration of normal conditions.

**SECTION 18****DISCLAIMER**

Neither the Contractor or any affiliated company or subcontractor shall in any manner claim or suggest, whether expressly or by implication, that the Authority or any official thereof has, or has expressed, any opinion with respect to polymetallic nodules in the exploration area and a statement to that effect shall not be included in or endorsed on any prospectus, notice, circular, advertisement, press release or similar document issued by the Contractor, any affiliated company or any subcontractor that refers directly or indirectly to this contract. For the purposes of this section, an "affiliated company" means any person, firm or company or State-owned entity controlling, controlled by, or under common control with, the Contractor.

**SECTION 19****RENUNCIATION OF RIGHTS**

The Contractor, by notice to the Authority, shall have the right to renounce its rights and terminate this contract without penalty, provided that the Contractor shall remain liable for all obligations accrued prior to the date of such renunciation and those obligations required to be fulfilled after termination in accordance with the Regulations.

**SECTION 20****TERMINATION OF SPONSORSHIP**

20.1 If the nationality or control of the Contractor changes or the Contractor's sponsoring State, as defined in the Regulations, terminates its sponsorship, the Contractor shall promptly notify the Authority forthwith.

20.2 In either such event, if the Contractor does not obtain another sponsor meeting the requirements prescribed in the Regulations which submits to the Authority a certificate of sponsorship for the Contractor in the prescribed form within the time specified in the Regulations, this contract shall terminate forthwith.

**SECTION 21****SUSPENSION AND TERMINATION OF CONTRACT AND PENALTIES**

21.1 The Council may suspend or terminate this contract, without prejudice to any other rights that the Authority may have, if any of the following events should occur:

- a) If, in spite of written warnings by the Authority, the Contractor has conducted its activities in such a way as to result in serious persistent and wilful violations of the fundamental terms of this contract, Part XI of the Convention, the Agreement and the rules, regulations and procedures of the Authority; or
- b) If the Contractor has failed to comply with a final binding decision of the dispute settlement body applicable to it; or
- c) If the Contractor becomes insolvent or commits an act of bankruptcy or enters into any agreement for composition with its creditors or goes into liquidation or receivership, whether compulsory or voluntary, or petitions or applies to any tribunal for the appointment of a receiver or a trustee or receiver for itself or commences any proceedings relating to itself under any bankruptcy, insolvency or readjustment of debt law, whether now or hereafter in effect, other than for the purpose of reconstruction.

21.2 Any suspension or termination shall be by notice, through the Secretary-General, which shall include a statement of the reasons for taking such action. The suspension or termination shall be effective 60 days after such notice, unless the Contractor within such period disputes the Authority's right to suspend or terminate this contract in accordance with Part XI, section 5, of the Convention.

21.3 If the Contractor takes such action, this contract shall only be suspended or terminated in accordance with a final binding decision in accordance with Part XI, section 5, of the Convention.

21.4 If the Council has suspended this contract, the Council may by notice require the Contractor to resume its operations and comply with the terms and conditions of this contract, not later than 60 days after such notice.

21.5 In the case of any violation of this contract not covered by section 21.1(a) hereof, or in lieu of suspension or termination under section 21.1 hereof, the Council may impose upon the Contractor monetary penalties proportionate to the seriousness of the violation.

21.6 The Council may not execute a decision involving monetary penalties until the Contractor has been accorded a reasonable opportunity to exhaust the judicial remedies available to it pursuant to Part XI, section 5, of the Convention.

21.7 In the event of termination or expiration of this contract, the Contractor shall comply with the Regulations and shall remove all installations, plant, equipment and materials in the exploration area and shall make the area safe so as not to constitute a danger to persons, shipping or to the marine environment.

## **SECTION 22**

### **TRANSFER OF RIGHTS AND OBLIGATIONS**

22.1 The rights and obligations of the Contractor under this contract may be transferred in whole or in part only with the consent of the Authority and in accordance with the Regulations.

22.2 The Authority shall not unreasonably withhold consent to the transfer if the proposed transferee is in all respects a qualified applicant in accordance with the Regulations and assumes all of the obligations of the Contractor and if the transfer does not confer to the transferee a plan of work, the approval of which would be forbidden by Annex 3, article 6, paragraph 3© of the Convention.

22.3 The terms, undertakings and conditions of this contract shall inure to the benefit of and be binding upon the parties hereto and their respective successors and assigns.

## **SECTION 23**

### **NO WAIVER**

No waiver by either party of any rights pursuant to a breach of the terms and conditions of this contract to be performed by the other party shall be construed as a waiver by the party of any succeeding breach of the same or any other term or condition to be performed by the other party.

**SECTION 24****REVISION**

24.1 When circumstances have arisen or are likely to arise which, in the opinion of the Authority or the Contractor, would render this contract inequitable or make it impracticable or impossible to achieve the objectives set out in this contract or in Part XI of the Convention or the Agreement, the parties shall enter into negotiations to revise it accordingly.

24.2 This contract may also be revised by agreement between the Contractor and the Authority to facilitate the application of any rules, regulations and procedures adopted by the Authority subsequent to the entry into force of this contract.

24.3 This contract may be revised, amended or otherwise modified only with the consent of the Contractor and the Authority by an appropriate instrument signed by the authorized representatives of the parties.

**SECTION 25****DISPUTES**

25.1 Any dispute between the parties concerning the interpretation or application of this contract shall be settled in accordance with Part XI, section 5, of the Convention.

25.2 Any final decision rendered by a court or tribunal having jurisdiction under the Convention relating to the rights and obligations of the Authority and of the Contractor shall be enforceable in the territory of each State Party to the Convention.

**SECTION 26****NOTICE**

26.1 Any application, request, notice, report, consent approval, waiver, direction or instruction hereunder shall be made by the Secretary-General or by the designated representative of the Contractor, as the case may be, in writing. Service shall be by hand, or by telex, facsimile or registered airmail to the Secretary-General at the headquarters of the Authority or to the designated representative.

26.2 Either party shall be entitled to change any such address to any other address by not less than ten days' notice to the other party.

26.3 Delivery by hand shall be effective when made. Delivery by telex shall be deemed to be effective on the business day following the day when the "answer back" appears on the sender's telex machine. Delivery by facsimile shall be effective when the "transmit confirmation report" confirming the transmission to the recipient's published facsimile number is received by the transmitter. Delivery by registered airmail shall be deemed to be effective 21 days after posting.

26.4 Notice to the designated representative of the Contractor shall constitute effective notice to the Contractor for all purposes under this contract, and the designated representative shall be the Contractor's agent for the service of process or notification in any proceeding of any court or tribunal having jurisdiction.

26.5 Notice to the Secretary-General shall constitute effective notice to the Authority for all purposes under this contract, and the Secretary-General shall be the Authority's agent for the service of process or notification in any proceeding of any court or tribunal having jurisdiction.

---

**SECTION 27****APPLICABLE LAW**

27.1 This contract shall be governed by the terms of this contract, the rules, regulations and procedures of the Authority, Part XI of the Convention, the Agreement and other rules of international law not incompatible with the Convention.

27.2 The Contractor, its employees, subcontractors, agents and all persons engaged in working or acting for them in the conduct of its operations under this contract shall observe the applicable law referred to in section 27.1 hereof and shall not engage in any transaction, directly or indirectly, prohibited by the applicable law.

27.3 Nothing contained in this contract shall be deemed an exemption from the necessity of applying for and obtaining any permit or authority that may be required for any activities under this contract.

**SECTION 28****INTERPRETATION**

The division of this contract into sections and subsections and the insertion of headings are for convenience of reference only and shall not affect the construction or interpretation hereof.

**SECTION 29****ADDITIONAL DOCUMENTS**

Each party hereto agrees to execute and deliver all such further instruments, and to do and perform all such further acts and things as may be necessary or expedient to give effect to the provisions of this contract.

**Consent of Independent Registered Public Accounting Firm**

We consent to the reference to our firm under the caption “Experts” and to the use of our report dated March 26, 2021, with respect to the consolidated financial statements of DeepGreen Metals Inc. included in the Registration Statement (Form S-4) of Sustainable Opportunities Acquisition Corp.

April 8, 2021

INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM'S CONSENT

We consent to the inclusion in this Registration Statement of Sustainable Opportunities Acquisition Corp. (the "Company") on Form S-4 of our report dated March 30, 2021, which includes an explanatory paragraph as to the Company's ability to continue as a going concern, with respect to our audits of the financial statements of Sustainable Opportunities Acquisition Corp. as of December 31, 2020 and 2019 and for the year ended December 31, 2020 and the period from December 18, 2019 (inception) through December 31, 2019, which report appears in the proxy statement/prospectus, which is part of this Registration Statement. We also consent to the reference to our Firm under the heading "Experts" in such proxy statement/prospectus.

### CONSENT OF THIRD-PARTY QUALIFIED PERSON

AMC Consultants Pty Ltd (“AMC”), in connection with the Registration Statement and Proxy Statement/Prospectus and any amendments or supplements and/or exhibits thereto (collectively, the Form S-4), consent to:

- the filing and use of the technical report summary titled “Technical Report Summary-- Initial Assessment of the NORI Property, Clarion-Clipperton Zone, for Deep Green Metals Inc.” (the “NORI Technical Report”), with an effective date of March 17, 2021, as an exhibit to and referenced in the Form S-4;
- the use of and references to our name, including our status as an expert or “qualified person” (as defined in Subpart 1300 of Regulation S-K promulgated by the Securities and Exchange Commission), in connection with the Form S-4 and any such NORI Technical Report; and
- the information derived, summarized, quoted or referenced from the NORI Technical Report, or portions thereof, that was prepared by us, that we supervised the preparation of and/or that was reviewed and approved by us, that is included or incorporated by reference in the Form S-4.

AMC is responsible for authoring, and this consent pertains to, the following Sections of the NORI Technical Report:

- Section 1: Summary
- Section 2: Introduction
- Section 3: Property description and location
- Section 4: Accessibility, climate, local resources, infrastructure, and physiography
- Section 5: History
- Section 8.2: Sample preparation and assaying
- Section 8.3: Quality assurance and quality control procedures 2018
- Section 9: Data verification
- Section 11: Mineral Resource estimates
- Section 12: Mineral Reserve estimates
- Section 13.3: Geotechnical considerations
- Section 13.7: Life of Mine nodule production
- Section 14.2: Project Zero
- Section 15.1: On-shore infrastructure
- Section 16: Market studies
- Section 17: Environmental studies, permitting and social or community impact

## **Technical Report Summary**

**Initial Assessment of the NORI Property, Clarion-Clipperton Zone**  
Deep Green Metals Inc.

In accordance with the requirements of SEC Regulation S-K (subpart 1300)

AMC Project 321012  
17 March 2021

Unearth a smarter way

---

1 Summary

1.1 Introduction

A very large resource of polymetallic nodules, containing nickel, manganese, cobalt, and copper is located on the seafloor in the Clarion-Clipperton Zone (CCZ) of the north-east Pacific Ocean. DeepGreen Metals Inc. (DeepGreen) has identified the potential to recover metals from polymetallic nodules to support increasing demand from battery and electric vehicle production. Unlike most mining processes, the proposed mineral processing flowsheet seeks to make by-products rather than substantial waste streams and is not expected to require tailings ponds or other large-scale waste storage on-site.

Nauru Ocean Resources Inc (NORI), a wholly-owned subsidiary of DeepGreen, holds exploration rights to four areas (NORI Area A, B, C, and D, the Property) in the CCZ that were granted by the International Seabed Authority (ISA) in 2011. NORI is sponsored to carry out its mineral exploration activities in the Property by the Republic of Nauru, pursuant to a certificate of sponsorship signed by the Government of Nauru on 11 April 2011. DeepGreen commissioned AMC Consultants Pty Ltd (AMC) to undertake an Initial Assessment (IA) of the Mineral Resource contained in NORI Area D (the Project) and compile a Technical Report Summary compliant with SEC Regulation S-K (subpart 1300).

Four consortia of off-shore development companies demonstrated the technical feasibility of collecting, lifting, and converting nodules into metals in the 1970s, but development of the industry was frustrated by the absence of regulation and a governing body. In 1994 the United Nations established the ISA pursuant to the United Nations Convention on the Law of the Sea (UNCLOS). The ISA governs the development of seabed resources in the territories beyond the exclusive economic zones governed by coastal states. This international territory is known as the Area. The ISA is in the process of finalising the regulations for development of seabed resources from the CCZ and other resources in the Area. The ISA had declared a target of 2020 to have the regulations approved but the COVID-19 pandemic disrupted the ISA program.

A phased development is outlined for NORI Area D. Offshore collection systems, comprising collector vehicles on the seafloor, a riser and lift system (RALS), and a production support vessel would collect polymetallic nodules. The nodules would be transferred to transport vessels and shipped to on-shore processing facilities where established processing technology would be used to produce copper cathode, nickel sulphate and cobalt sulphate suitable for Li Ion battery cathode feedstock, nickel-copper-cobalt alloy, manganese silicate, and ammonium sulphate.

A drillship, the Hidden Gem, will be converted to undertake a pre-production Collector Test in which a collector vehicle, RALS and other systems will be tested. The first phase of commercial production (Project Zero) would then commence after the upgrading of the Hidden Gem to produce a production support vessel that can produce up to 1.3 Mtpa (wet) of nodules. The nodules would be processed through existing third-party facilities on a tolling basis. In Project One, production will be expanded with an additional converted drillship (Drill Ship 2), a second upgrade to the Hidden Gem, and construction of a bespoke production support vessel (Collector Ship 1). Ultimately, the fleet of three production support vessels, each with a dedicated seafloor collection system, would produce an average of ~12.5 Mtpa of wet nodules during steady state production. In Project One, the majority of nodules would be processed at a new facility to be constructed by NORI, with the balance of production going to toll treatment.

This phased approach to development allows for management of risk and for progressive improvement of engineering and operating systems. It will also enable NORI to adopt an adaptive management approach to environmental management.

The IA indicates a positive economic outcome. Undiscounted post-tax net cash flow of US\$30.6 billion is expected. An internal rate of return of 27% has been modelled. Discounted cash flow analysis of unleveraged real cash flows, discounting at 9% per annum, indicates a current project net present value of US\$6.8 billion. The analysis indicates that the Project will generate approximately US\$7.2 billion in undiscounted royalties payable to the ISA and Nauru and US\$9.1 billion in on-shore corporate tax payable to the host nation of the process plant.

An IA is a conceptual study of the potential viability of Mineral Resources. This IA indicates that development of the NORI Area D Mineral Resource is potentially technically and economically viable, however, due to the preliminary nature of project planning and design, and the untested nature of the specific seafloor production systems at a commercial scale, economic viability has not yet been demonstrated.

## **1.2 Location**

The NORI Property is located within the CCZ of the northeast Pacific Ocean (Figure 3.1). The CCZ is located in international waters between Hawaii and Mexico. The western end of the CCZ is approximately 1,000 km south of the Hawaiian island group. From here, the CCZ extends over 4,500 km east-northeast, in an approximately 750 km wide trend, with the eastern limits approximately 2,000 km west of southern Mexico. The region is well-located to ship nodules to the American continent or across the Pacific to Asian markets.

The NORI Property comprises four separate blocks (A, B, C and D) in the CCZ with a combined area of 74,830 km<sup>2</sup>. These areas were previously explored by three Pioneer Investors. The NORI Area D Project covers 25,160 km<sup>2</sup> and is the easternmost of the four NORI exploration areas. Its centre point is at latitude 10° 29' N and longitude 116° 57' W, approximately 850 km due west of the nearest land—the uninhabited Clipperton Island.

## **1.3 The ISA and the NORI tenements**

The international seabed area (otherwise known as the Area) is defined as the seabed and subsoil beyond the limits of national jurisdiction (UNCLOS Article 1). The principal policy documents governing the Area include:

- The United Nations Convention on the Law of the Sea, of 10 December 1982 (The Convention).
- The 1994 Agreement relating to the Implementation of Part XI of the United Nations Convention on the Law of the Sea of 10 December 1982 (the 1994 implementation Agreement).

Part XI of the Convention and the 1994 Implementation Agreement deals with mineral exploration and exploitation in the Area, providing a framework for entities to obtain legal title to areas of the seafloor from the ISA for the purpose of exploration and eventually exploitation of resources.

The Convention entered into force on 16 November 1994. As of 20 August 2020, the Convention had been signed by 167 states (countries) and the European Union. The United States of America is currently not a party to the Convention.

The ISA is an autonomous international organisation established under the Convention and the 1994 Implementation Agreement to organise and control activities in the Area, particularly with a view to administering and regulating the development of the resources of the Area in accordance with the legal regime established in the Convention and the 1994 Implementation Agreement.

All rules, regulations, and procedures issued by the ISA to regulate prospecting, exploration, and exploitation of marine minerals in the Area are issued within a general legal framework established by the Convention and the 1994 Implementation Agreement.

To date, the ISA has issued regulations on prospecting and exploration for polymetallic nodules in the Area. In March 2019, the Council of the ISA released the advance and unedited text (English only) of the Draft Regulations on Exploitation of Mineral Resources in the Area (ISBA/25/C/WP.1) (ISA, 2019).

In July 2011, NORI was granted a polymetallic nodule exploration contract by the ISA. The contract was granted pursuant to the Regulations on Prospecting and Exploration for Polymetallic Nodules in the Area (adopted 13 July 2000) and formalises an exploration area, a term of 15 years for the contract, and a program of activities for the first five-year period (NORI Exploration Contract). The contract also formalises the rights of NORI around tenure. Pursuant to the Regulations, NORI has the priority right to apply for an exploitation contract to exploit polymetallic nodules in the same area (Regulation 24(2)).

The NORI Exploration Contract may be extended for periods of five years at a time beyond the initial 15-year period, provided NORI has made efforts in good faith to comply with the requirements of the plan of work.

In 2020, NORI acquired the polymetallic nodule exploration contract awarded by the ISA to Tonga Off-shore Mining Limited (TOML). TOML Area F is immediately west of NORI Area D.

#### **1.4 Geology and Mineral Resources**

Seafloor polymetallic nodules occur in all oceans but the CCZ hosts a relatively high abundance of nodules. The CCZ seafloor forms part of the Abyssal Plains, which are the largest physiographic province on Earth.

The average depth of the seafloor in the Project Area is 3,800 to 4,200 m. Overall, the seafloor slopes at approximately 0.57° (1 m per km) but the Abyssal Plains are traversed by ridges, with amplitude of 50 to 300 m (maximum 1,000 m) and wavelength of 1 to 10 km. The Abyssal Plains are punctuated by extinct volcanoes rising 500 to 2,000 m above the seafloor.

Seafloor polymetallic nodules rest on the seafloor at the seawater - sediment interface. They are composed of nuclei and concentric layers of manganese and iron hydroxides and are formed by precipitation of metals from the surrounding seawater and sediment pore waters. Nickel, cobalt and copper are also precipitated and occur within the structure of the manganese and iron minerals.

Nodules are abundant in abyssal areas with oxygenated bottom waters and low sedimentation rates (less than 10 cm per thousand years). Nodules generally range from about 1 to 12 cm in their longest dimension. Nodules of 1 to 5 cm are typically the most common in NORI Area D, where they have been classified as Type 1 nodules.

The specific conditions of the CCZ (water depth, latitude, and seafloor sediment type) are considered to be the key controls for the formation of polymetallic nodules.

Information on the mineralisation within NORI Area D comprises a combination of sampling undertaken by NORI as well as free-fall grab sampler (FFG) and box core sampler (BC) data supplied by the ISA at the time of the NORI application and also supplied by the ISA to NORI in 2012. Additional regional data, assembled by the ISA as part of its Geological Model Project during 2008 to 2010 (ISA 2010), are available. The data provide significant coverage over NORI Area D and indicate a high abundance of nodules in this region, as has been confirmed by NORI's exploration.

NORI completed off-shore exploration campaigns in 2012, 2013, 2018, 2019 and 2020. During these campaigns a variety of data was collected including:

- Bathymetric mapping of the whole of NORI Area D using a hull-mounted Kongsberg Simrad EM120 12 kHz, full-ocean depth multibeam echosounding system (MBES). This system also provided backscatter data with which seafloor characteristics could be interpreted.
- Detailed seafloor survey work with an autonomous underwater vehicle (AUV), utilising an MBES, Side Scan Sonar (SSS), Sub-Bottom Profiler (SBP), and camera payload.
- A total of 252 box core samples collected using a 0.75 m<sup>2</sup> box corer, mainly on a 10 km by 10 km square grid.

The nodules in the box cores were collected, and their characteristics measured and recorded in detail. Samples of nodules were collected in duplicate and assayed at two reputable, well-qualified laboratories: ALS and Bureau Veritas. Certified reference material, and blank samples were inserted to provide additional levels of quality control. No significant issues were identified with the assay results.

The backscatter data and the sidescan sonar and seafloor photography indicate strong continuity of nodule abundance across NORI Area D. There is a clear relationship between nodule long axis length and nodule weight and therefore it is possible to estimate nodule abundance from photographs. Several estimation techniques were tested, and methodologies were developed that are suitable for closely packed (Type 1) and less closely packed (Type 2 and 3) nodules.

Mineral Resources were estimated using a two-dimensional block model. Estimates of nodule abundance and nickel, manganese, cobalt, and copper grades were performed using kriging. A variety of methods was used to validate the estimates, including conditional simulation. The estimates of nodule abundance were used to calculate the tonnage of the Mineral Resources.

The bathymetric mapping enabled the interpretation of parts of seafloor that are possibly too steep for recovery of nodules using the systems considered in this IA. Seafloor areas with slopes steeper than 6° were excised from the 2020 Mineral Resource estimate.

The Mineral Resource was classified on the basis of the quality and uncertainty of the sample data and sample spacing, in accordance with SEC Regulation S-K (subpart 1300).

The Measured Mineral Resource was assigned to the area within NORI Area D where box-core sampling was conducted on a nominal 7 km by 7 km spacing and infilled with estimates of nodule abundance from seafloor photography to a spacing of 3.5 km by 3.5 km.

The Indicated Mineral Resource was assigned to the area within NORI Area D where box-core sampling was conducted on a nominal spacing of 7 km by 7 km or 10 km by 10 km but without additional photo-estimates of nodule abundance.

The Inferred Mineral Resource was assigned to the areas of abyssal plain in the southeast corner of NORI Area D that are largely unsampled. The volcanic high in the southeast corner was excluded from the mineral resource estimate due to the high level of uncertainty about nodule abundance and grades in this domain.

The new Mineral Resource estimate for NORI Area D, with an effective date of 31 December 2020, is reported in Table 1.1 at a 4 kg/m<sup>2</sup> abundance cut-off. This cut-off is derived from the estimates of costs and revenues presented in this Initial Assessment.

Whilst the IA focusses on the development of mining operations in NORI Area D, NORI holds another three areas in the CCZ under the same title. These Areas (NORI Area A, B and C) are estimated to contain Inferred Mineral Resources of 510 Mt (wet) at 1.28% Ni, 0.21% Co, 1.04% Cu, 28.3% Mn, at an average abundance of 11 kg (wet)/m<sup>2</sup> at a 4 kg/m<sup>2</sup> abundance cut-off (Golder, 2013) (effective date of 31 December 2020). The polymetallic nodule mineralisation in Areas A, B and C has similar characteristics to NORI Area D and it is reasonable to assume that the technology proposed in the IA would be suitable for development of these additional areas.

Table 1.1 NORI 2020 Mineral Resource estimate for NORI Area D at 4 kg/m<sup>2</sup> abundance cut-off

NORI Area	Category	Tonnes (Mt (wet))	Abundance (wet kg/m <sup>2</sup> )	Nickel (%)	Copper (%)	Cobalt (%)	Manganese (%)	Silicon (%)
D	Measured	4	18.6	1.42	1.16	0.13	32.2	5.13
D	Indicated	341	17.1	1.40	1.14	0.14	31.2	5.46
D	Measured + Indicated	345	17.1	1.40	1.14	0.14	31.2	5.46
D	Inferred	11	15.6	1.38	1.14	0.12	31.0	5.50

## 1.5 Development plan

NORI proposes to implement the project in multiple phases that will allow the seafloor mining systems to be tested and then nodule production to be gradually ramped up. The phased approach will facilitate de-risking of the project for relatively low initial capital investment. Additionally, this phased development will allow for an adaptive approach to environmental management providing learning at small-scale which would be applied as the development increases scale.

The proposed seafloor production development phases are as follows:

- The Collector Test is designed to perform proof of concept for the methods of collecting and lifting the nodules while acquiring sufficient data to design a commercial system. Nodules collected during the test would be stored on the Hidden Gem and brought to shore for use in large scale process pilot testing. The Collector Test would use a converted sixth generation drillship, the Hidden Gem. The test would not demonstrate the transshipment of nodules to a shore-based facility.
- Project Zero would be an extension of the Collector Test using an upgrade of the Hidden Gem to produce a sufficient and continuous quantity of nodules to support a relatively small commercial operation of about 1.3 Mtpa (wet) nodules delivered to a shore-based facility. This operation would demonstrate a more continuous mining operation at a larger scale than the Collector test and would demonstrate the transshipment of nodules to a processing facility. It would also allow for the implementation and testing of adaptive management systems to ensure environmental compliance.
- Project One would increase production in a further three steps: 1) introduction of a second converted drillship (Drill Ship 2) with a capacity of up to 3.6 Mtpa (wet), 2) a further upgrade of the Hidden Gem to up to 3.6 Mtpa (wet) and 3) construction of a new purpose-built production support vessel (Collector Ship 1) with capacity of up to 8.2 Mtpa (wet). Project One would benefit from lessons learned on the Collector Test and Project Zero.

The processing of the polymetallic nodules would also be ramped up in phases:

- In Project Zero, NORI proposes to toll treat polymetallic nodules at existing RKEF smelters, utilizing excess industry capacity. NORI advises there is significant interest from many parties in China to utilise RKEF plants which may become stranded as a result of the Indonesian government nickel laterite ore export ban restricting supply of the nickel laterite feedstock that they currently utilise. These RKEF plants were originally built to convert nickel laterite to nickel pig iron and could be converted to smelt polymetallic nodules.
- In Project One, a purpose-built process plant would be constructed, including pyrometallurgical and hydrometallurgical circuits. Nodule production would be increased in phases by treatment in this new plant.

## 1.6 Mining concept

The main items of off-shore infrastructure are the nodule collector vehicles, the riser, and three production support vessels (PSV): Hidden Gem, Drill Ship 2 and Collector Ship 1. Collector Ship 1 will be supported by a collector support vessel.

The nodules will be collected from the seafloor by self-propelled, tracked, collector vehicles. No rock cutting, digging, drill-and-blast, or other breakage will be required at the point of collection. The collectors will be remotely controlled and supplied with electric power via umbilical cables from the PSV. The collectors will traverse the seabed at a speed of approximately 0.5 m/s. Suction dredge heads on each collector will recover a dilute slurry of nodules, sediment, and water from the seafloor. Each collector will yield about 254 t/hr (dry) nodules to the process plant. A hopper on each vehicle will separate sediment and excess water, which will pass out of the hopper overflow, from the nodules, which will be pumped as a higher concentration slurry via flexible hoses to a riser.

The riser is a steel pipe through which nodules will be transferred to the surface by means of an airlift. The riser will consist of three main sections. The lower section will carry the two-phase slurry of nodules and water from the collectors to the airlift injection point. The mid-section will carry a three-phase mixture of slurry and air. This section will also include two auxiliary pipes: one to carry the compressed air for the airlift system, and one to return water from dewatering of the slurry to its subsea discharge point. The upper section of riser will have a larger diameter to account for the expansion of air in the airlift.

The airlift works by lowering the average density of the slurry inside the riser to a level lower than seawater. The difference between the hydrostatic pressure of the seawater at depth and the pressure caused by the weight of the low-density three-phase slurry column inside the riser forces the slurry column to rise. The energy to achieve the lift will be supplied by compressors housed on the PSV, which will be capable of generating very high air pressures—up to 15 MPa.

The PSVs will each support a RALS and its handling equipment, and will house the airlift compressors, collector vehicle control stations, and material handling equipment. All power for off-shore equipment, including the nodule collecting vehicles, will be generated on the PSVs. The PSVs will be equipped with controllable thrusters and will be capable of dynamic positioning (DP), which will allow the vessels and risers to track the collectors. The Collector Ship 1 PSV will be similar in size to an Aframax or New Panamax class of tanker, displacing approximately 103,000 t, and housing a crew of around 120 personnel. Nodules will be discharged from the RALS to the PSVs, where they will be dewatered and temporarily stored or transferred directly to a transport vessel.

A separate collector support vessel will remain at sea to support Collector Ship 1. It will be configured as a subsea support platform, as commonly used in oil industry, with a displacement of around 17,250 t. The function of the collector support vessel will be to facilitate collector maintenance and repair.

This IA assumes transportation of nodules will be by chartered vessels, with deadweight capacities of 35,000 to 100,000 tonnes. The vessels will require dynamic positioning capability to enable them to be loaded at sea alongside the PSV. Hydraulic offloading of the nodules from the PSV to the transport ships is assumed in this IA, but future studies will confirm the offloading mechanism.

## 1.7 Mineral processing and metallurgical testing

A combined pyro-metallurgical and hydro-metallurgical flowsheet was evaluated for these IA. Similar flowsheets were investigated at various times over the last several decades. NORI has undertaken bench-scale test-work and is in the process of completing pilot-scale testing of the proposed flowsheet. This work has confirmed or improved the flowsheet that was initially developed from extensive information available in the literature.

Pyrometallurgical processing of nodules has been extensively studied from the early 1970s until the present day and appears to be the preferred process for most of the other currently active nodule processing research groups. Many groups including: Kennecott; Inco; Cuban / Bulgarian; German; Indian; Japanese; and Korean have studied pyrometallurgical processing of nodules at a laboratory scale. The nodule samples for these tests were collected from their respective license areas in the CCZ. The nodules used in each of the studies have similar compositions but there are subtle variations that can have significant implications for pyrometallurgical processing. Of particular importance is the ratio of MnO:SiO<sub>2</sub> in the nodules as this impacts the choice of process operating parameters for the electric furnace smelting operation.

For Project Zero, NORI proposes to toll treat polymetallic nodules at existing RKEF smelters. During Project One, NORI proposes the progressive construction and expansion of a new pyrometallurgical and hydrometallurgical process plant for the recovery of nickel, manganese, cobalt, and copper from polymetallic nodules. This will allow for the proportion of toll treatment to be reduced.

Four rotary kiln and electric furnaces lines (RKEF) and two hydrometallurgical refineries would be required to meet the production demand for the life of the project.

The pyrometallurgical front end of the plant will use RKEF lines that calcine and smelt the nodules to form an alloy. The alloy would then be sulphidised to form a matte and then partially converted in a Peirce-Smith converter operation to remove iron. The matte from the sulphidation step would then be sent to the hydrometallurgical refinery. The pyrometallurgical process is similar to that successfully used to process some nickel laterite ores.

The hydrometallurgical refinery concept is based on a sulphuric acid leach flowsheet. A two-stage leach would be used to produce copper cathode and a pregnant leach solution rich in nickel and cobalt, while low in copper. Further processing of the pregnant leach solution is based on mixed-sulphide precipitate processing flowsheets employing solvent extraction. The final production of battery-grade nickel and cobalt sulphates would use crystallisation.

The pyrometallurgical process generates a manganese silicate stream that can be sold to the manganese industry and small converter slag stream that can be sold for industrial applications. No value has been ascribed to converter slag in this IA. The hydrometallurgical plant produces an ammonium sulphate by-product for sale to the fertiliser industry. Thus, together with the ability to recycle other hydrometallurgical side-streams to the pyrometallurgical process, the flowsheet has neither tailings ponds nor permanent slag repositories and does not generate substantial waste streams.

The average targeted processing rate for the new processing plant at full capacity is 6.4 Mtpa of nodules (dry basis). The location and host country of the processing operation has not yet been determined. Engineering design has not yet been undertaken.

Expected metallurgical recoveries are summarized in Table 1.2.

Table 1.2 Metallurgical recoveries

Process Step	Nickel Recovery (%)	Cobalt Recovery (%)	Copper Recovery (%)
Final matte	94.6%	77.4%	86.5%
Hydrometallurgical products before recycle	98.9%	98.0%	96.2%
Recycled residue	94.6%	77.4%	86.5%
Overall recovery	94.6%	77.2%	86.2%

In addition to the above base metals, 98.9% of the manganese contained in the feed will be recovered to the manganese silicate product, containing 52.6% MnO. Approximately 7.3 Mt of manganese silicate will be produced per annum (from steady state operation from 2030 onwards).

## 1.8 Market studies

CRU International Limited (CRU) was commissioned by NORI to provide market overviews for the four main products from the NORI Area D Project: nickel sulphate (NiSO<sub>4</sub>), cobalt sulphate (CoSO<sub>4</sub>), copper cathode, and a manganese product (CRU, 2020).

CRU expects NiSO<sub>4</sub> and CoSO<sub>4</sub> markets to undergo extreme growth from a relatively small current level of 181 kt nickel in sulphate and 35 kt of cobalt in sulphate in 2019, with markets to increase to 138 and 178 times their 2018 sizes respectively to 1.6 Mt nickel in sulphate and 500 kt cobalt in sulphate by 2035, with much of this growth occurring post-2025. Electric vehicle production is the driver of this forecast growth.

Copper and manganese markets are forecast to grow by 25% and 20% of their 2020 sizes by 2035 respectively. Copper and manganese demand will benefit from electric vehicle penetration, however the primary driver of growth for manganese ore will be steelmaking, and a variety of end use applications generally related to economic health for copper.

CRU expects copper and NiSO<sub>4</sub> prices to rise in real terms by 2035, while manganese and CoSO<sub>4</sub> prices are forecast to remain flat, due to current prices being at or near a high point in the cycle, recent fall in prices, and expected modest growth in the global steel industry after the COVID 19 epidemic. The long-term cost of production is expected to rise for both copper and NiSO<sub>4</sub>, helping to support prices.

## 1.9 Environmental studies, permitting, community, or social impact

Historically, a significant amount of technical work has been undertaken within the CCZ by the Contractors and a significant body of information has been acquired during the past 40 years on the likely environmental impacts of collecting nodules from the sea floor.

NORI's off-shore exploration campaigns have included sampling to support environmental studies, collection of high-resolution imagery and environmental baseline studies. A number of future campaigns are planned to collect data on ocean currents and water quality to assist plume modelling, environmental baseline studies, box core and multicorer sampling focussed on benthic ecology and sediment characteristics.

NORI has commenced the ESIA process in support of an application for an exploitation license for the commercial mining of deep-sea polymetallic nodules. A comprehensive program of metocean and biological data acquisition is in progress to characterize the baseline conditions at a designated Collector Test site and control sites in the mining lease area.

NORI intends to manage the Project under the governance of an Environmental Management System (EMS), which is to be developed in accordance with the international EMS standard, ISO 14001:2004. The EMS will provide the overall framework for the environmental management and monitoring plans that will be required.

An Environmental Monitoring Plan (EMP) will be required. The plan will specify the objectives and purpose of all monitoring requirements, the components to be monitored, frequency of monitoring, methods of monitoring, analysis required in each monitoring component, monitoring data management and reporting. The plan will be submitted to the ISA as part of the exploitation contract application. This plan will involve an ecosystem approach incorporating an adaptive management system.

The social impacts of the off-shore operation are expected to be positive. The CCZ is uninhabited by people, and there are no landowners associated with the NORI Area D nodule project. No significant commercial fishing is carried out in the area. The Project will provide a source of revenue to the sponsor country, Nauru, and to the ISA.

The on-shore environmental and social impacts have not yet been assessed because the process plant has not been designed in detail, and the location and host country (and hence regulatory regime) not confirmed. The planned metallurgical process will not generate solid waste products, and the deleterious elements (for example, cadmium and arsenic) content of the nodules is very low, indicating that with careful management the environmental impacts of the processing operation could be very low.

### 1.10 Conceptual production schedule

AMC cautions that the estimates in the production case and economic analysis are preliminary and further studies and engineering design are required before technical feasibility and economic viability can be demonstrated.

The production schedule is shown in Table 1.3.

Table 1.3 Production summary

Section	Units	Total
Nodule tonnage	Mt (wet)	254
Abundance	kg/m <sup>2</sup>	16.9
Ni Grade	%	1.39
Cu Grade	%	1.14
Co Grade	%	0.14
Mn Grade	%	31.0
Nickel recovered to Ni Sulphate	kt	2,593
Copper cathode produced	kt	1,936
Cobalt recovered to Co sulphate	kt	206
Manganese silica produced	kt	60,398
Ammonium sulphate produced	kt	7,677
Alloy product produced	kt	377
Matte product produced	kt	688

### 1.11 Capital cost

The capital cost estimates for the Project are summarised in Table 1.4. Pre-project items include data gathering and studies that will occur prior to construction. Off-shore project costs include the procurement and integration of the PSVs, the collector support vessel, the fabrication of the collectors, and the RALS. On-shore project costs consist principally of the construction of the minerals processing pyrometallurgical plant and hydrometallurgical refinery. Sustaining costs are for both on-shore and off-shore assets, and closure costs are principally for rehabilitation of the on-shore minerals processing site.

Table 1.4 Capital cost estimates

Section	Cost estimate (US\$ million)
Pre-project costs	237
Project costs	
Off-shore project costs	
Project Zero	204
Project One	2,244
Total	2,448
On-shore project costs	
Project One	4,786
Total	4,786
Total project costs	7,234
Sustaining capital costs (on-shore and off-shore)	2,637
Closure costs	500
Total	10,607

### 1.12 Operating cost

Operating costs have been estimated at US\$1.8 billion per annum during steady state production (from 2030 onwards). Expenditure of a total of \$37.5 billion over the life of the project on operating costs is expected. On-shore processing is the most significant operating cost.

Table 1.5 Average operating cost estimates during steady state operation (from 2030 onwards)

Section	Average Operating Cost over Life of Mine (US\$ million pa)	Average Unit Cost (US\$/t - wet tonne nodules recovered)	Average Unit Cost (US\$/t - dry tonne processed)
Off-shore	\$240.74	\$19.31	\$25.40
Shipping	\$254.37	\$20.40	\$26.84
On-shore	\$1,286.19	\$103.14	\$135.71
Other	\$25.00	\$2.00	\$2.64
Total	\$1,806.31	\$144.85	\$190.59

### 1.13 Initial Assessment

The IA used product prices forecast by CRU (CRU, 2020). The averages of the forecast prices used (from 2024 onwards) are listed in Table 1.6.

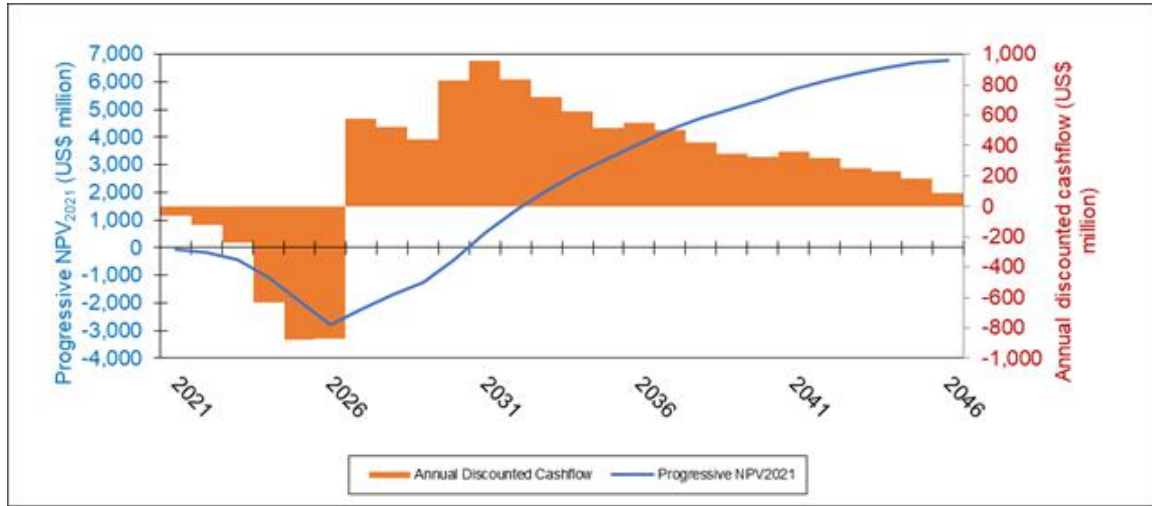

Table 1.6 Average product prices assumed in IA

Parameter	Unit	Value
Ni metal	US\$/t	\$16,106
Ni contained Ni sulphate	US\$/t	\$17,711
Mn contained in SiMn product	US\$/dry metric tonne unit	\$4.53
Cu metal	US\$/t	\$6,787
Co metal	US\$/t	\$46,416
Co contained in Co sulphate	US\$/t	\$56,991
Ammonium sulphate	US\$/t	\$90

Note: Manganese ores are priced in dmtu (dry metric tonne units). A unit is 10 kg, or 1/100th of a tonne. For example, a tonne of material grading 45% Mn priced at US\$4.00/dmtu would be worth US\$180/t.

The IA indicates a positive economic outcome. Undiscounted post-tax net cash flow of US\$30.6 billion is expected. An internal rate of return of 27% has been estimated from the financial model. Discounted cash flow analysis of unleveraged real cash flows, discounting at 9% per annum, indicates a pre-tax project net present value (NPV) of US\$11.2 billion and a post-tax project NPV of US\$6.8 billion. The discounted cash flows and progressive NPVs are shown in Figure 1.1.

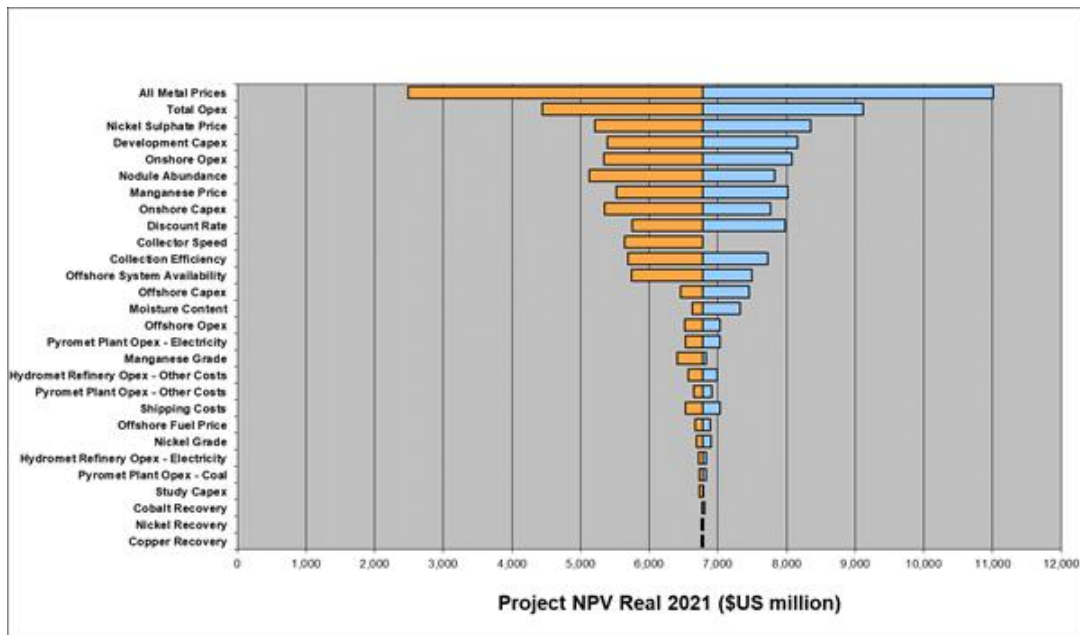

Figure 1.1 Project NPV<sub>2021</sub> and discounted cash flow

The date of the investment decision is expected to be 30 June 2023. NORI expects to spend \$237 million on pre-project activities between 2021 and 2024. The future value of the project on 30 June 2023 (after the pre-project expenditure is sunk and time has elapsed) will be US\$8.6 billion and the IRR from that point will be 29%.

The sensitivity of project economics to changes in the main variables was tested by selecting high and low values that represent a likely range of potential operating conditions. The variables with the biggest negative impact on NPV are all metal prices, total OPEX, collector speed, nickel sulphate price and development capex. In general, revenue drivers have the biggest impact, followed by OPEX variables and then CAPEX variables (Figure 1.2).

Figure 1.2 Tornado diagram of NPV sensitivity to variables

The Qualified Persons caution that this IA is preliminary in nature, and that further planning, engineering studies, design, cost estimation and seafloor tests are required before Mineral Resources can be converted to Mineral Reserves. There is no certainty that the proposals and results presented in this IA will be realized. A prefeasibility study has not yet been undertaken. Mineral Resources are not Mineral Reserves and do not have demonstrated economic viability.

## 2 Introduction

A very large nickel, manganese, cobalt, and copper resource occurring as polymetallic nodules is located in the Clarion-Clipperton Zone (CCZ) of the northeast Pacific Ocean between Hawaii and Mexico. The nodules are located at depths of between 4,000 to 6,000 m and have been explored with considerable success between the mid-1960s and the present day using a variety of deep-sea technologies. Successful trial extraction in the CCZ has also been carried out to demonstrate that the nodules can be collected and pumped to a surface platform and processed for recovery of metals.

Interest in seafloor mineral deposits grew through the 1960s. Several commercial and government funded organisations and consortia started exploring the oceans as part of a cooperative program known as the International Decade of Ocean Exploration. These organisations became known as Pioneer Investors.

Exploration of the seafloor in international waters is now administered by the International Seabed Authority (ISA) and regulated by the United Nations Convention on the Law of the Sea (UNCLOS). These institutions operate on the principle that the ocean floor beyond the limits of national jurisdiction, known as the Area, is the common heritage of mankind.

In July 2011, Nauru Ocean Resources Inc. (NORI), a subsidiary of DeepGreen Metals Inc. (DeepGreen), was granted an exploration contract over 74,830 km<sup>2</sup> (the NORI Area or the Property) in the CCZ consisting of four exploration areas (Area A, B, C and D). NORI's contract for exploration of polymetallic nodules was approved by the Council of the ISA on 19 July 2011, for a term of 15 years and then signed with the ISA on 22 July 2011.

DeepGreen commissioned AMC Consultants Pty Ltd (AMC) to undertake an Initial Assessment (IA) of the Mineral Resource contained in one of these blocks, NORI Area D, (the Project) and compile a Technical Report Summary compliant with SEC Regulation S-K (subpart 1300).

### 2.1 Purpose of the Technical Report Summary

AMC understands that DeepGreen may file this Technical Report Summary with Securities Exchange Commission as part of an S-4 filing to support the merger between Sustainable Opportunities Acquisition Corporation and DeepGreen Metals Inc.

### 2.2 Sources of information and data

This Technical Report Summary is based on information and reports supplied by NORI or in the public domain. Section 27 lists background documents that are referenced by the higher-level reports.

### 2.3 Field involvement

Ian Stevenson, an independent consultant trading as Margin - Marine Geoscience Innovation participated in the 2018 off-shore campaign (Campaign 3) on the Maersk Launcher which carried out surveys and sampling in the NORI Area D from 26 April - 4 June 2018. Ian Lipton, Principal Geologist, AMC, was involved in the development of sampling strategies and procedures and was in daily contact with the off-shore campaign as it was implemented, providing input as required to ensure data quality and veracity.

### 2.4 Personnel

The Sections that each of the Qualified Persons (QPs) were responsible for are summarised in Table 2.1. In addition, each of the QPs contributed to Sections 22 to 24, where relevant to the Sections for which they were primarily responsible.

AMC has relied upon information provided by the registrant in preparing its findings and conclusions regarding some aspects of modifying factors, as set out in Section 25.

Table 2.1 List of Qualified Persons responsible for each Section

Qualified Person	Responsible for the following report Sections:
AMC Consultants Pty Ltd	Sections 1-5, 8.2, 8.3, 9, 11, 12, 13.3, 13.7, 14.2, 15.1, 16, 17, 18 (except 18.3.1, 18.3.2, 18.6.1, 18.6.6), 19, 20-25
Margin - Marine Geoscience Innovation	Sections 6, 7, 8.1
Canadian Engineering Associates Ltd	Sections 10, 14.1, 14.3, 18.3.2, 18.6.6
Deep Reach Technology Inc	Section 13.1, 13.2, 13.4, 13.5, 13.6, 15.2, 18.3.1, 18.6.1

2.5 Reliance on other experts

The QPs have relied upon other experts for some sections in this report. These are summarised in Table 2.2.

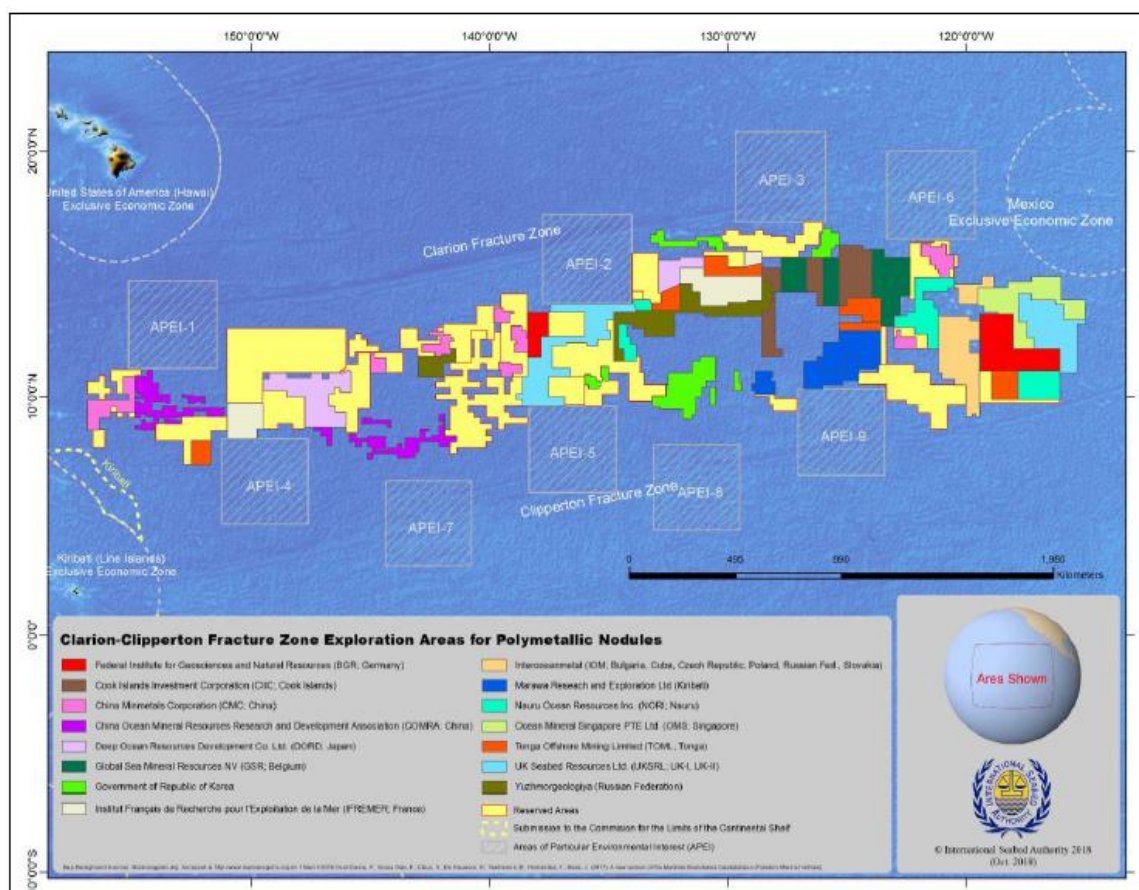

Table 2.2 Reliance on other experts

Expert	Report Sections:
Picton Group Pty Ltd	Section 17

3 Property description and location

The NORI Property is located within the CCZ of the northeast Pacific Ocean Figure 3.1. The CCZ is located in international waters between Hawaii and Mexico. The western end of the CCZ is approximately 1,000 km south of the Hawaiian island group. From here, the CCZ extends over 4,500 km east-northeast, in an approximately 750 km wide trend, with the eastern limits approximately 2,000 km west of southern Mexico. The region is well-located to ship nodules to the American continent or across the Pacific to Asian markets.

Source: <https://www.isa.org.jm/map/clarion-clipperton-fracture-zone>, downloaded 18 February 2021

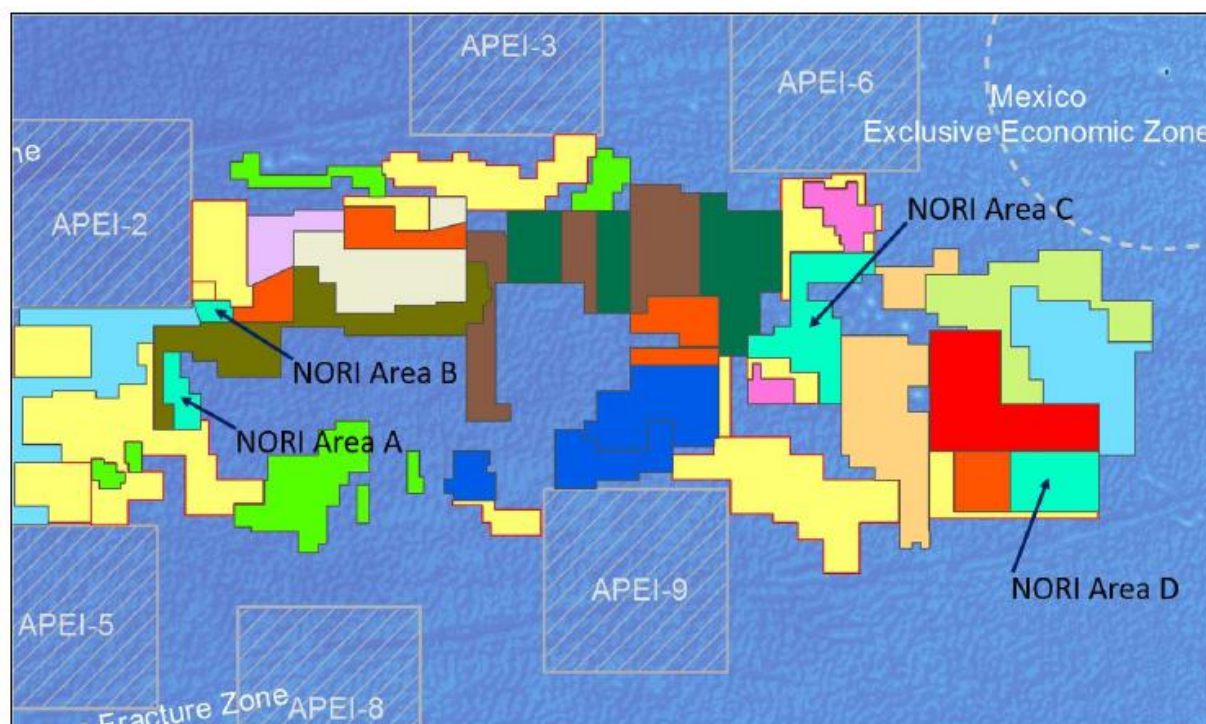

3.1 Tenements and permits

In July 2011, NORI was granted a polymetallic nodule exploration contract by the ISA (NORI Exploration Contract). The contract was granted pursuant to the Regulations on Prospecting and Exploration for Polymetallic Nodules in the Area (adopted 13 July 2000) and formalises an exploration area, a term of 15 years for the contract, and a program of activities for the first five-year period (NORI Exploration Contract). The contract also formalises the rights of NORI around tenure. Pursuant to the Regulations, NORI has the priority right to apply for an exploitation contract to exploit polymetallic nodules in the same area (Regulation 24(2)).

The NORI Exploration Contract may be extended for periods of 5 years at a time beyond the initial 15-year period, provided NORI has made efforts in good faith to comply with the requirements of the plan of work.

The NORI contract area comprises four separate blocks (A, B, C and D) in the CCZ with a combined area of 74,830 km<sup>2</sup> Figure 3.2, Table 3.1 and Table 3.2. These areas were previously explored by three Pioneer Investors.

DD – Decimal degrees, UTM - Universal Transverse Mercator map projection

To date, no exploitation licences for extracting minerals from the seafloor within the Area have been granted.

### 3.1.1 United Nations Convention on the Law of the Sea

The international seabed area (otherwise known as the Area) is defined as the seabed and subsoil beyond the limits of national jurisdiction (UNCLOS Article 1). Figure 3.3 shows a map of the Area (blue zone) as well as 200 nautical mile exclusive economic zones (grey zone) and extended continental shelf zones (orange zone). Figure 3.4 shows the relationships between depth, distance and jurisdiction.

The principal policy documents governing the Area include:

- The United Nations Convention on the Law of the Sea, of 10 December 1982 (The Convention).
- The 1994 Agreement relating to the Implementation of Part XI of the United Nations Convention on the Law of the Sea of 10 December 1982 (the 1994 implementation Agreement).

The Convention deals with, among other things, navigational rights, territorial sea limits, exclusive economic zone jurisdiction, the continental shelf, freedom of the high seas, legal status of resources on the seabed beyond the limits of national jurisdiction, passage of ships through narrow straits, conservation and management of living marine resources in the high seas, protection of the marine environment, marine scientific research, and settlement of disputes.

Part XI of the Convention and the 1994 Implementation Agreement deals with mineral exploration and exploitation in the Area, providing a framework for entities to obtain legal title to areas of the seafloor from the ISA for the purpose of exploration and eventually exploitation of resources.

The Convention entered into force on 16 November 1994. A subsequent agreement relating to the implementation of Part XI of the Convention was adopted on 28 July 1994 and entered into force on 28 July 1996. The 1994 Implementation Agreement and Part XI of the Convention are to be interpreted and applied together as a single instrument.

As of 20 August 2020, the Convention had been signed by 167 States (countries) and the European Union. The United States of America is currently not a party to the Convention.

Figure 3.3 Map of seafloor jurisdictions

Figure 3.4 Maritime space under the 1982 UNCLOS

Source: DeepGreen - adapted from UNCLOS, 1982

### 3.1.2 International Seabed Authority

The ISA is an autonomous international organisation established under the Convention and the 1994 Implementation Agreement to organise and control activities in the Area, particularly with a view to administering and regulating the development of the resources of the Area in accordance with the legal regime established in the Convention and the 1994 Implementation Agreement.

All rules, regulations, and procedures issued by the ISA to regulate prospecting, exploration, and exploitation of marine minerals in the Area are issued within a general legal framework established by the Convention and the 1994 Implementation Agreement.

To date, the ISA has issued ([https://www.isa.org.jm/mining-code/ Regulations](https://www.isa.org.jm/mining-code/Regulations)):

- The Regulations on Prospecting and Exploration for Polymetallic Nodules in the Area (adopted 13 July 2000; the Regulations).
- The Regulations on Prospecting and Exploration for Polymetallic Sulphides (adopted 7 May 2010).
- The Regulations on Prospecting and Exploration for Cobalt-Rich Ferromanganese Crusts in the Area (July 2012).

The ISA is currently working on the development of a legal framework to regulate the exploitation of polymetallic nodules in the international seabed area.

In 2014, the ISA completed a study looking at comparative extractive regulatory regimes. This was followed in March 2014 with a stakeholder survey seeking comments on what financial, environmental, and health and safety obligations should be included under the framework (ISA 2014).

In March 2019, the Council of the ISA released the advance and unedited text (English only) of the Draft Regulations on Exploitation of Mineral Resources in the Area (ISBA/25/LTC/WP.1) (ISA, 2018). The revised draft incorporated the consideration of requests addressed to the Legal & Technical Commission by the Council during the first part of the 24th Session in March 2018, comments by the Commission, and also reflected the responses to the first draft from stakeholder submissions. The ISA declared a target of July 2020 to have the regulations approved, however the July session was deferred as a result of COVID-19 pandemic.

Pursuant to paragraph 15(a) and (b) of Section 1 of the annex to the 1994 Implementation Agreement, which relates to article 162 (2)(o)(ii) of the Convention, the ISA Council must also adopt such exploitation regulations within two years of a formal request being made by any State which intends to apply for approval of a plan of work for exploitation.

### 3.2 NORI obligations and sponsorship

During exploration NORI, is required to, among other things:

- Submit an annual report to the ISA.
- Meet certain performance and expenditure commitments.
- Pay an annual overhead charge (currently US\$60,000) to cover the costs incurred by the ISA in administering and supervising the contract.
- Implement training programs for personnel of the ISA and developing countries in accordance with a training program proposed by NORI in its licence application and five-year work plans.
- Take measures to prevent, reduce, and control pollution and other hazards to the marine environment arising from its activities in the Area.
- Maintain appropriate insurance policies.
- Establish environmental baselines against which to assess the likely effects of its program of activities on the marine environment.
- Establish and implement a program to monitor and report on such effects.

NORI is sponsored to carry out its mineral exploration activities in the Area by the Republic of Nauru, pursuant to a certificate of sponsorship signed by the Government of Nauru on 11 April 2011. Sponsorship of an entity requires the sponsoring State to certify that it assumes responsibility for the entity's activities in the Area in accordance with the Convention. NORI is a Nauruan incorporated entity and is subject to applicable Nauruan legislation and regulations.

In 2015 the Republic of Nauru enacted the International Seabed Minerals Act, which establishes the Nauru Seabed Minerals Authority to administer Nauru's sponsorship of activities carried out in the Area by companies sponsored by Nauru.

In June 2017, the Republic of Nauru and NORI entered into a Sponsorship Agreement formalising certain obligations of the parties in relation to NORI's exploration and potential exploitation of the NORI Contract Area of the CCZ.

#### 3.2.1 Work program

As of the date of this Technical Report, NORI is in the ninth year of its exploration contract.

In 2016 NORI submitted to the ISA proposed activities for the second five-year period of its exploration contract. NORI indicated that work would focus on:

- Reducing project uncertainties and technical risks.
- Optimising the on-shore processing and off-shore production systems (including increasing performance and reliability).
- Improving project economics, including decreasing estimated capital and operating expenditure as well as increasing projected revenues.

NORI forecast estimated expenditure of US\$5 million over the period 2017 to 2021, however noted the figure may be revised based upon the results of the next phase of engineering work. To date NORI has exceeded this level of expenditure on the NORI Contract Area.

### 3.2.2 Royalties and taxes

Royalties and taxes payable on any future production from the NORI Area will be stipulated in the ISA's exploitation regulations. While the rates of payments are yet to be set by the ISA, the 1994 Implementation Agreement (Section 8[1](b)) prescribes that the rates of payments "shall be within the range of those prevailing in respect of land-based mining of the same or similar minerals in order to avoid giving deep seabed miners an artificial competitive advantage or imposing on them a competitive disadvantage."

An ad hoc ISA working group workshop held on 21–22 February 2019 discussed a number of potential royalty and taxation regimes supported by modelling conducted by the Massachusetts Institute of Technology. No formal recommendations were forthcoming however a 2% ad valorem royalty increasing to 6% after a period of five years of production was discussed as well as a 1% ad valorem environmental levy. This is what has been included in the IA model.

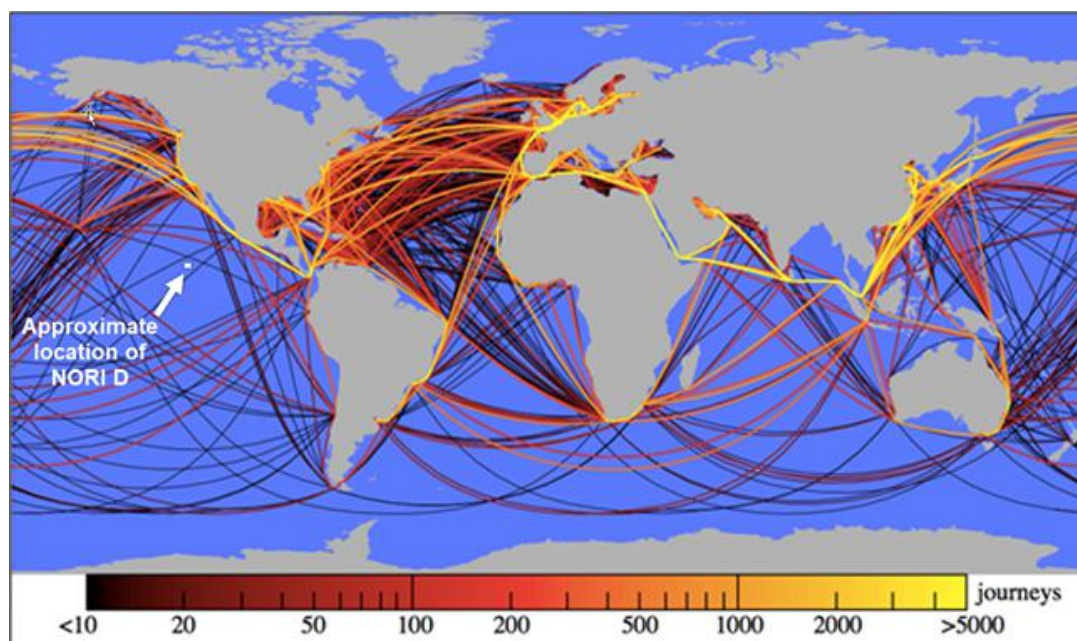

Under the Sponsorship Agreement between the Republic of Nauru and NORI, upon reaching a minimum recovery level within the tenement area, NORI has agreed to pay the Republic of Nauru a seabed mineral recovery payment for polymetallic nodules recovered from the tenement area, annually adjusted (from year 5 of production) on a compounding basis based on the official inflation rate in the USA.

## 4 Accessibility, climate, local resources, infrastructure, and physiography

### 4.1 Accessibility and infrastructure

The CCZ lies between Hawaii and Mexico and is accessible by ship from various ports in the United States and South America. As the CCZ deposit does not include any habitable land and is not near coastal waters, there is no requirement to negotiate access rights from landowners for seafloor mining operations. All personnel and material will be transported to the project area by ship. The region is well located to ship nodules to the American continent or across the Pacific Ocean to Asian markets. The CCZ is generally outside major shipping lanes as indicated in Figure 4.1 which shows the global cargo shipping network, illustrating the trajectories of all cargo ships bigger than 10,000 gross tonnage during 2007.

Figure 4.1 Global cargo shipping network

Note: The colour scale indicates the number of journeys along each route.

Source: Adapted from Kaluza et al. 2010.

### 4.2 Climate

The CCZ has a tropical oceanic climate, with average temperatures of from 20 to 32 °C. Minimum and maximum temperatures generally occur in March and September, respectively (ISA 2001), and the average sea surface temperature is 25 °C. The CCZ is located in open ocean and is subject to tropical weather patterns.

Off-shore operations are planned to run throughout the year, with the exception of hurricane events, which are expected to occur once every three years. Tropical hurricanes are difficult to predict due to their erratic frequency but have high intensity over short periods and occur mostly during the period from May to October (Tilot, 2006, GSR 2018).

## 5 History

### 5.1 Overview

Submarine ferromanganese concretions were first discovered in the Kara Sea off Siberia in 1868 (ISA 2010, citing Earney 1990). HMS Challenger, during its round the world expedition from 1873 to 1876, collected many small dark brown balls, rich in manganese and iron, which were named manganese nodules (ISA 2010 citing Murray and Reynard [1891], Manheim [1978], and Earney [1990]).

Since the 1960s, polymetallic nodules have been recognised as a potential source of nickel, copper, cobalt, and manganese, and have been comparatively well studied because of their potential economic importance (Mero 1965). Scientific expeditions demonstrated that polymetallic nodules have a widespread occurrence in the world's oceans although their metal content and concentration vary from region to region.

During the International Decade of Ocean Exploration and prior to the implementation of UNCLOS, many off-shore exploration campaigns were completed by international organisations and consortia. A number of at-sea trial mining operations were successfully carried out in the CCZ in the 1970s to test potential mining concepts. These system tests evaluated the performance of a self-propelled and several towed collection and mining devices, along with submersible pumps and airlift technology for lifting the nodules from the deep ocean floor to the support vessel.

The US National Oceanic and Atmospheric Administration (NOAA) monitored some of these tests as the principal effort of the Deep Ocean Mining Effects Study (DOMES II) program. The information collected during these activities provided key inputs to the impact analysis presented by NOAA in its Final Programmatic Deep-Sea Mining Environmental Impact Statement.

### 5.2 Pioneer Investors

For the purpose of this report the Pioneer Investors include those entities that carried out substantial exploration in the Area prior to the entry into force of the Convention, as well as those entities that inherited such exploration data. This Section describes some of the more important activities of the Pioneer Investors.

NORI Area D was originally explored by Arbeitsgemeinschaft Meerestechnisch Rohstoffe (AMR). AMR subsequently joined Ocean Management Inc. (OMI). The OMI consortium comprised Inco Ltd (Canada), AMR (Federal Republic of Germany), SEDCO Inc. (US), and Deep Ocean Mining Co. Ltd (Japan). OMI completed a successful trial mining operation in 1978. Hydraulic pumps, an air lift system, and towed collectors were tested in approximately 4,500 m of water. Approximately 800 t of nodules were recovered.

Kennecott consortium (now a division of Rio Tinto) first became seriously interested in seafloor polymetallic nodules in 1962 (Agarwal et al. 1979). In the 1970s, Kennecott developed and tested components and subsystems of a seafloor mining system, and also carried out significant polymetallic nodule metallurgical processing test work.

Using a different system to OMI, Ocean Mining Associates recovered approximately 500 t of nodules during its trial mining in the 1970s.

Between 1969 and 1974, Deepsea Ventures Inc. carried out 16 survey cruises of three to four weeks' duration each, to define the extent of the polymetallic nodule deposit discovered by them in 1969 in the CCZ. As reported by Deepsea Ventures Inc:

*“These activities included the taking of some 294 discrete samples, including the bulk dredging of some 164 tons of manganese nodules from some 263 dredge stations, 28 core stations and three grab sample stations, cutting of some 28 cores, approximately 1000 lineal miles of survey of seafloor recorded by television and still photography, etc. As a result, the deposit of nodules identified with the discovery has been proved to extend generally throughout the entire area (American Society of International Law, 1975).”*

Also active in the CCZ was the Ocean Minerals Company (OMCO), comprising Amoco Minerals Co. (United States), Lockheed Missiles and Space Company Inc. (United States), Billiton International Metals BV, and dredging company Bos Kalis Westminster (Netherlands). In a program lasting 16 years, OMCO collected thousands of free-fall grab and box core samples of nodules from its claim area (Spickermann 2012) and carried out trial mining. Lockheed's design efforts resulted in over 80 patents, a seafloor production system that consisted of a remote-controlled collector and crusher, a seafloor to surface slurry riser system, the first industrial scale dynamic positioning system for a vessel, and a metallurgical processing plant (Spickermann 2012).

In 1978, OMCO used a remote controlled fully manoeuvrable self-propelled miner with conveyor and crusher Figure 5.1 and Figure 5.2 to trial mine polymetallic nodules in the CCZ at approximately 4,500 mbsl. The miner used an Archimedes screw drive system to provide traction and accurate manoeuvrability on the seafloor. Nodules were picked up by the miner and transferred to the buffer, where they were to be pumped to the surface by an airlift system.

Figure 5.2 Remote operated collector used by the Lockheed Group in 1970s trial mining

Source: Spickerman 2012.

### 5.3 Sampling methods

Prior to NORI obtaining its exploration contract, sampling of seafloor nodules within the NORI Area was conducted by three Pioneer Investors; AMR, State Enterprise Yuzmorgeologiya of the Russian Federation and Interocanmetal Joint Organisation (IOM), a consortium formed by Bulgaria, Cuba, the Czech Republic, Poland, the Russian Federation, and Slovakia.

Nodule samples collected by the Pioneer Investors from within the NORI Area were obtained by free-fall grab samplers (FFG) along with a few from box corers. For each sample the nodule abundance (wet  $\text{kg}/\text{m}^2$ ) was derived by dividing the weight of recovered nodules by the surface area covered by the open jaws of the sampler or corer (typically  $0.25$  to  $0.5 \text{ m}^2$  but in some cases as much as  $1 \text{ m}^2$ ). Sample splits were dried and assayed by atomic absorption spectrophotometry (AAS) and X-ray fluorescence (XRF).

Free-fall grab samplers are currently the most productive tool available for sampling nodules. This is because a number of them can be deployed at any one time from the survey vessel allowing an order of magnitude increase in collection efficiency compared to box core sampling (i.e., approximately 10 to 20 samples per day for a FFG versus 2 to 3 samples per day for a box core (BC) that is winched to and from the seafloor). Figure 5.3 shows the operation of an FFG sampler.

Figure 5.3 Free fall grab sampler operation

Source: ISA 1999b.

The box core is the preferred sampling method for retrieving polymetallic samples for resource evaluation and environmental studies. The box core consists of a trigger, plunger, and cutting shovel. Upon land out on the seafloor, the trigger is released which allows the plunger to push a box cutter into the substrate during retraction. Upon retraction, the cutting shovel rotates under the box while cutting into the seafloor and sealing the sample box from below.

Figure 5.4 Box core sampler operation

Source: KC Denmark box corer manual.

Comparison of nodule abundance measurements by free-fall grab samplers and box cores suggests that free-fall grab samplers commonly underestimate the actual abundance. This is due to smaller nodules escaping the sampler during ascent and larger nodules around the edge of the sampler being knocked out during the sampling process. Additionally, free-fall grab samplers occasionally fail to return any nodules where nodule abundance is known to be very high because the sampler fails to penetrate the layer of nodules.

Lee et al. (2008) examined correction factors between FFG and BC in some detail. They found a wide range but consistent differences with FFG under-reporting compared to BC. They recommended an overall correction factor of 1.4 to convert FFG abundance to BC abundance. However, they acknowledged that any simple factor lacks precision. One of the key issues is the size of the FFG or BC relative to the nodule diameter.

No corrections were applied to the NORI Area nodule abundance data.

#### 5.4 Sample preparation and analysis

Information about sample preparation and analysis by the Pioneer Investors is summarised below. Additional information is provided in the Technical Report on NORI Area D, Clarion Clipperton Zone Mineral Resource Estimate, April 2019 (AMC, 2019).

##### 5.4.1 Ocean Minerals Company

While OMCO data are not included in the datasets used for resource estimation in the NORI Area, they are discussed here as the method described below is believed to be similar to the method practised by those contractors that did contribute to the NORI Area data.

Polymetallic nodule samples were laid out separately on a white surface marked with a scaled grid and photographed to permit determination of nodule size distribution. They were then sealed in labelled fibreglass-reinforced collection bags and stored in the ship's hold for the balance of the exploration cruise. The samples were transported from the ship to the Lockheed Ocean Laboratory in San Diego.

Prior to weighing, the samples were removed from the sample bags and placed in a single layer in labelled open trays on tables in the air-conditioned laboratory for at least 12 hours to ensure a uniform degree of air drying. The samples were then weighed using a high-capacity laboratory scale and divided into two subsamples of approximately equal weight.

The second subsample was crushed using a jaw crusher to produce a product with a maximum size of less than about 1 mm. The crushed sample was then mixed and passed through a laboratory sample splitter to produce a 5 to 10 g subsample. The subsample was further ground to a fine powder using a laboratory ball mill prior to assaying.

The powdered subsample was placed in an oven at 110 °C for at least six hours to remove adsorbed water. It was then immediately transferred to a sealed desiccator to cool to ambient temperature.

A three-acid digest was used to dissolve the samples before analysis by AAS using a Hewlett-Packard instrument. Standard analysis included determination of manganese, iron, cobalt, nickel, copper, zinc, silica, calcium, and magnesium.

Analytical accuracy was confirmed by periodic introduction of standards made from crushed, mixed, and powdered bulk nodule samples that had also been sent to three independent commercial laboratories for determination of these metal contents. Additional confirmation was achieved using standards formulated by the US Geological Survey (A-1 and P-1; Flanagan and Gottfried 1980). These standards were subjected to the entire preparation procedure to ensure that no significant contamination was occurring and that no systematic analytical errors were being included in the process.

##### 5.4.2 Yuzhmoregeologiya

The Yuzhmoregeologiya method was very similar to the method practiced by OMCO. The Yuzhmoregeologiya data cover NORI Area A and B.

The measurement of abundance of nodules at the sample site was carried out using an "enclosed" Ocean-0.25 FFG sampler with a 0.25 m<sup>2</sup> gripped surface and a depth of sampling of approximately 30 cm. The FFG sampler was combined with GFU-6-8 photography unit. This device took ocean bottom photos at the sampling point.

The procedure for sub-sampling was as follows:

1. Extraction of all nodules from the grab sampler.
2. Crushing of all nodules to a maximum particle size of up to 10 mm.
3. Drying (approximately 24 h) of all samples at 105°C until constant weight was achieved.
4. Crushing of all samples to 1 to 2 mm particle size and splitting of 400 to 500 g using a splitting device.
5. Pulverising of the split sample (not less than 400 g) was carried out in the vibrating grinder up to 100 mesh particle size (0.074 mm).
6. Formation of analytical sample (200 g) and its duplicate (200 g).

Chemical analyses were carried out on subsamples with an approximate weight of 0.5 g, selected from the analytical sample. Determination of nickel, copper, cobalt, and iron content was carried out by AAS and the content of manganese by a method of photometric (electrometric) titration.

### 5.4.3 IOM

Information regarding IOM procedures is not currently available. However, the procedures used by IOM for sample collection and assaying are likely to be similar to the sampling and assaying procedures used by the other Pioneer Investors. The results of the IOM sampling are consistent with the results obtained by other Pioneer Investors within the NORI area and within the broader CCZ.

### 5.4.4 Preussag

Preussag completed polymetallic nodule exploration programs in the CCZ aboard the Valdivia in the 1970s. Nodule sampling was mainly carried out using free-fall grab samplers and box corers.

After the sampling devices arrived on the working deck of the research vessel, the nodules were removed from the sediment surface (box corer) or taken from the FFG samplers and transported in plastic boxes into the geological laboratory. There, several sample treatments were carried out:

- Nodules were cleaned (if necessary) from adhering mud using filtered seawater.
- Nodules were carefully dried with paper towels.
- Nodules were photographed on a surface with a scaled grid.
- Individual nodules were measured.
- Individual nodules and the total nodules from one device were weighed with a special balance (determination of wet weight).

A detailed description including the identification of the types of nodules was conducted.

One part of the nodules was used for further investigations in the ship's laboratory. The other nodules were stored in plastic bags, which were weighed once more. Then the plastic bags were filled with seawater in order to keep the nodules in a water-saturated state. These samples were required for further studies and investigations in the home laboratories (e.g., physical properties, detailed chemical analyses, X-ray phase analysis, metallurgical tests, polished sections).

The first part of the nodules taken from one sampling device were crushed to a particle size smaller than 10 mm and then dried in an oven at  $\pm 105$  °C until constant weight was achieved. Further steps of grinding in the ship's laboratory took place with a final procedure of pulverising with a ball mill producing a fine powder with a particle size of less than 100 mesh (less than 74  $\mu\text{m}$ ). Then the sample was passed through a laboratory sample splitter to produce several representative subsamples.

One subsample was taken as representative archive sample. Two other subsamples were dried again for at least five hours to remove the rest of adsorbed water prior to analysis.

Two methods were used to determine the key metals nickel, copper, cobalt, manganese, iron, and zinc. The first one was the AAS analysis to measure nickel, copper, zinc, and cobalt, and the second was the energy-dispersive XRF method with ratio-isotope excitation to determine manganese and iron. A sample digestion was necessary to carry out the AAS determination. For this, the dried powder was treated with a mixture of acids in a high-pressure Teflon vessel and heated for several hours to complete the digestion. The digested fluid was diluted with distilled water and analysed with the spectrometer, and the residue was weighed. The XRF analysis was performed with the powder (pressed tablets). Data quality and analytical reliability were confirmed by intermediate introduction and measurement of reference nodule samples. These reference standards consisted of powdered material which was subjected to the same procedure as described above.

## 5.5 QA/QC procedures

Free-fall grab samplers are considered to underestimate the actual abundance but provide adequate samples for determining the grade of the nodules (Hennigar et al. 1986).

QA/QC was known to be undertaken at the time of sampling as part of the scientific process used by each Pioneer Investor. However, no systematic quality assurance and quality control (QA/QC) information is available for these programs, as this information was not provided by the ISA. Nonetheless, the acceptance of the data by the ISA suggests the ISA was satisfied with the quality of the data.

The quality of the data was assessed (Golder 2015) using comparative measures between the different datasets (Section 9.1.2). The correlation of data from different sources, including Pioneer Investors and government scientific institutes, provides a satisfactory level of quality assurance to support Mineral Resource estimates at an Inferred level of confidence.

## 5.6 Pioneer Investor sample data supplied to NORI

Upon making an application, the Pioneer Investors were required to submit sufficient data and information to enable designation of a reserved area based on the estimated commercial value. These sample data provide the basis of a database held by the ISA and were used initially to define the areas of the NORI application.

The sample sites were sampled by a combination of grab samplers and box corers of different sizes and designs, with the full details of the sampling tools at a given site mostly being unavailable. As a result, sample quality, spacing, and assay reliability vary from contractor to contractor, sample to sample, and block to block. Average sample spacing (based on the data supplied by the ISA) varies across the CCZ, ranging from less than 1 km and averaging approximately 10 km within the NORI Area.

Statistics for the samples that contain both abundance and grade data inside the NORI Area are tabulated in Table 5.1 and illustrated as boxplots in Figure 5.5. The box plots show the range of grades; the box represents the range of grades in the middle 50% of the samples, centred on the median (middle value) and box width reflects number of samples. The dashed lines represent the range of the lowest 25% and highest 25% of the data.

Cobalt in NORI Area D is significantly lower than the other NORI areas, however, abundance is consistently higher in NORI Area D than the other NORI areas and the CCZ Reserved Blocks in general Figure 5.5.

The range of the assays (as summarized by the coefficient of variation) is remarkably low compared to most terrestrial Mineral Resources. Abundance values vary more widely, making abundance estimates the key variable of uncertainty in Mineral Resource estimation.

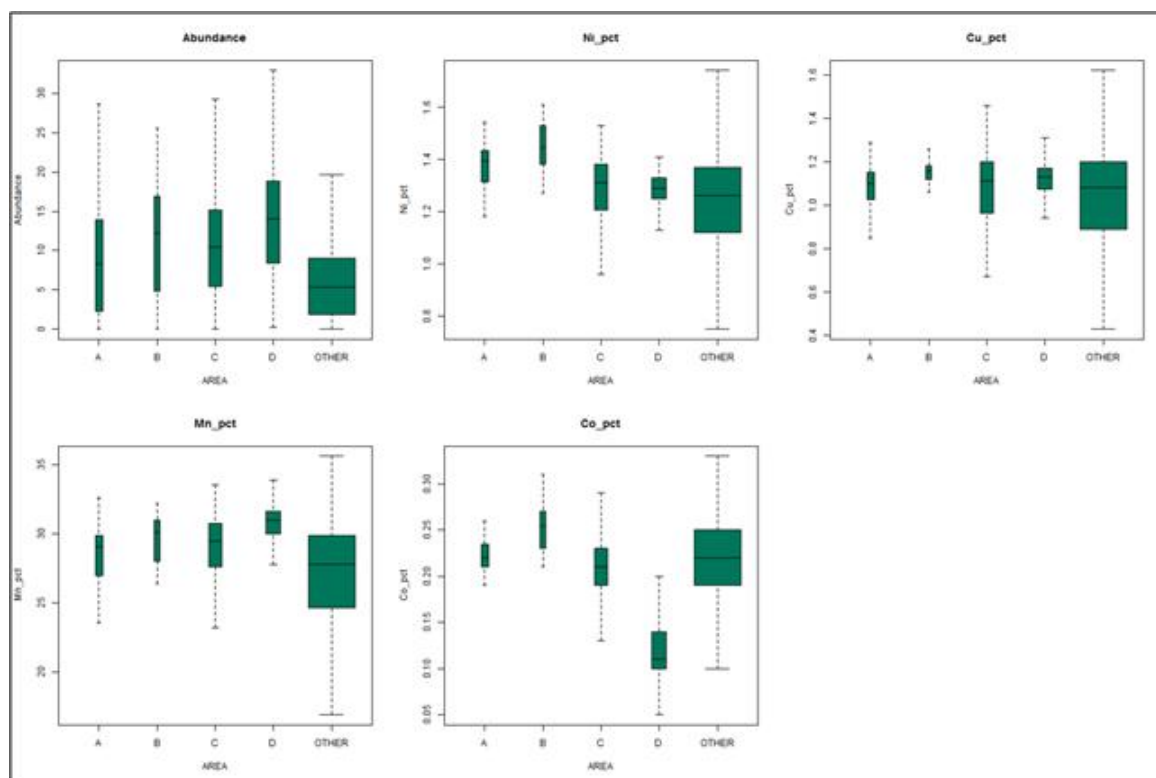

The abundance of buried nodules is poorly known at this time. Thus, buried nodules are not included in exploration information or Mineral Resource estimates.

Table 5.1 Summary of historical FFG samples in the NORI Area

NORI Area	Grade	Number	Missing	Min	Max	Mean	Median	Var	cv
A	Abundance (wet kg/m <sup>2</sup> )	50	0	0	28.7	9.3	8.2	57.366	0.81
	Ni (%)	40	10	1.04	1.75	1.37	1.39	0.016	0.09
	Cu (%)	40	10	0.66	1.29	1.07	1.1	0.017	0.12
	Mn (%)	40	10	19.77	32.6	28.06	28.98	8.577	0.1
	Co (%)	40	10	0.16	0.28	0.22	0.22	0.001	0.11
B	Abundance (wet kg/m <sup>2</sup> )	31	0	0	25.55	11.24	12	50.536	0.63
	Ni (%)	26	5	1.01	1.61	1.42	1.44	0.021	0.1
	Cu (%)	26	5	0.72	1.26	1.12	1.16	0.016	0.11
	Mn (%)	26	5	20.8	32.2	28.88	29.8	9.939	0.11
	Co (%)	26	5	0.21	0.31	0.25	0.25	0.001	0.09
C	Abundance (wet kg/m <sup>2</sup> )	152	0	0	44.1	10.55	10.33	52.902	0.69
	Ni (%)	135	17	0.68	1.53	1.27	1.31	0.025	0.12
	Cu (%)	135	17	0.4	1.46	1.05	1.11	0.048	0.21
	Mn (%)	135	17	12.84	33.54	28.63	29.42	11.648	0.12
	Co (%)	135	17	0.12	0.33	0.21	0.21	0.001	0.17
D	Abundance (wet kg/m <sup>2</sup> )	159	0	0.2	52.2	14.12	13.9	72.243	0.6
	Ni (%)	159	0	1.09	1.41	1.28	1.29	0.004	0.05
	Cu (%)	159	0	0.88	1.5	1.14	1.13	0.012	0.1
	Mn (%)	159	0	23.8	33.9	30.58	31	3.12	0.06
	Co (%)	159	0	0.05	0.2	0.12	0.11	0.001	0.26

Notes: Var = variance; CV = coefficient of variation.

Note: Box size represents 1st and 3rd quartiles centred on the median and box width reflects number of samples.

6 Geological setting and mineralisation

6.1 Global distribution of nodules

Seafloor polymetallic nodules occur in all oceans, and the CCZ hosts a relatively high abundance of nodules. Other relatively dense zones are found in the Peru Basin in the southeast Pacific, the centre of the north Indian Ocean, and the Cook Islands Figure 6.1.

Figure 6.1 Schematic diagram of average abundance of polymetallic nodules in four major locations

Source: GRID-Arendal 2014b.

6.2 Tectonic setting and topographic features

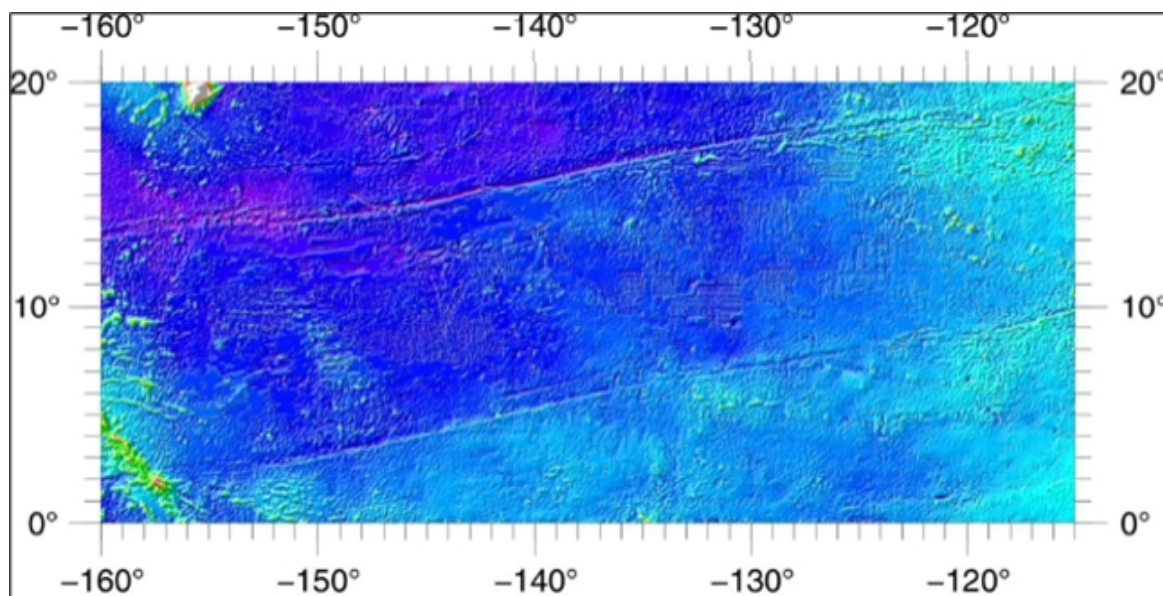

The CCZ is defined by two major west-south-west and east-north-east trending fracture zones running through the seafloor; the Clipperton Fracture Zone to the south and the Clarion Fracture Zone to the north. These fractures zones can be seen clearly on the bathymetric map Figure 6.2. The eastern and western limits can be defined by the Mathematicians Seamounts or Ridge in the east, and the Republic of Kiribati or Line Islands in the west.

The CCZ seafloor forms part of the Abyssal Plains, which are the largest physiographic province on Earth, covering some 70% of the area of ocean basins and 30% of the Earth's surface (ISA 2004). The Abyssal Plains are traversed by ridges, believed to have formed from the process of seafloor spreading. Orientation is north-north-west to south-south-east (locally  $\pm 20^\circ$ ), with amplitude of 50–300 m (maximum 1,000 m; Hoffert 2008) and wavelength of 1 to 10 km. The bathymetric map of NORI Area D Figure 7.1, shows these ridges clearly. The Abyssal Plains are punctuated by extinct volcanoes rising 500 to 2,000 m above the seafloor.

Depth increases from 3,800 to 4,200 m at 115° west to 4,800 to 5,200 m at 130° west, and 5,400 to 5,600 m at 145° west.

The sediment types exhibit trends perpendicular to the fracture zones, from predominant carbonate sediments in the south-eastern extreme to predominant siliceous red clay in the west north-west.

Figure 6.2 Bathymetric map of the Clarion-Clipperton Fracture Zone

Source: ISA 2010.

### 6.2.1 Sedimentation and nodule formation

Seafloor polymetallic nodules are composed of nuclei and concentric layers of iron and manganese hydroxides and formed by precipitation of metals from seawater. The metal accumulation rates are slow, and it generally takes millions of years to form a nodule (ISA 2004).

Nodules are abundant in abyssal areas with oxygenated bottom waters, low sedimentation rates (less than 10 cm per thousand years), and where sources of abundant nuclei occur (Hein et al. 2013). Nodules grow on 0.1 to 1 cm nuclei (e.g., pieces of pumice and older broken nodules) and generally range from about 1 to 12 cm in their longest dimension, with the low to middle-range typically the most common (1 to 5 cm).

The specific conditions of the CCZ (water depth, latitude, and seafloor sediment type) are considered to be the key controls for its formation, along with the following factors:

- Supply of metals to the growing surface.
- Presence of a nucleus.
- The corrosive / erosive forces caused by benthic currents.
- Occurrence of semi-liquid surface layer on the seafloor (sediment water interface).
- Bioturbation.

The highest values of metals in nodules are thought to be best developed on the seabed in the equatorial regions away from land sources of sediments. In these regions surface waters have high primary productivity. Tiny plants and animals concentrate the metals from seawater and when they die, they sink to the seafloor, dissolve, and release the metals into the pore water of seafloor sediments. It is believed that the upper portion of the nodules accumulate metals that are precipitated from seawater, while the lower portion of the nodules, partially buried in sediment, accumulate metals from pore-water in the underlying sediments.

Sediments from the CCZ consist mostly of clays and siliceous biological casts. Sands and larger sediments are not generally found so far from land, and the commonly formed carbonate biological casts dissolve on the seabed in these deep-water regions faster than they accumulate.

## 6.3 Polymetallic mineralisation

### 6.3.1 Nodule grades

Nodule chemistry varies only slightly with in the CCZ. Figure 6.3 shows that there is a general increase in combined cobalt, nickel and copper grades towards the south-east (Kazmin in ISA 2003; ISA 2010; Morgan 2009). The reason for this is not clear but may relate to proximity to metal sources from the East Pacific Rise or the American continents.

Average (mean) grades for elements of interest other than nickel, manganese, copper, and cobalt from 248 samples of nodules taken within the NORI area during the NORI 2018 and 2019 off-shore exploration campaigns are summarised as:

- Other base or alloy metals such as zinc (0.21% ZnO), titanium (0.43% TiO<sub>2</sub>), and lead (0.03% PbO).
- Rare earth and other transition metals such as strontium (0.071% Sr), yttrium (0.009% Y), zirconium (0.033% Zr), lanthanum (0.011% La), cerium (0.022% Ce), and neodymium (0.013% Nd).
- Other elements such as iron (6.6% Fe), magnesium (3.2% MgO), aluminium (3.95% Al<sub>2</sub>O<sub>3</sub>), sulphur (0.28% SO<sub>3</sub>), calcium (2.4% CaO), potassium (1.1% K<sub>2</sub>O), sodium (2.9% Na<sub>2</sub>O), phosphorus (0.36% P<sub>2</sub>O<sub>5</sub>), vanadium (0.049% V), and barium (0.43% Ba).

Analysis of 20 samples collected by NORI in 2012 showed that arsenic content is low (0.008% As).

### 6.3.2 Nodule abundance

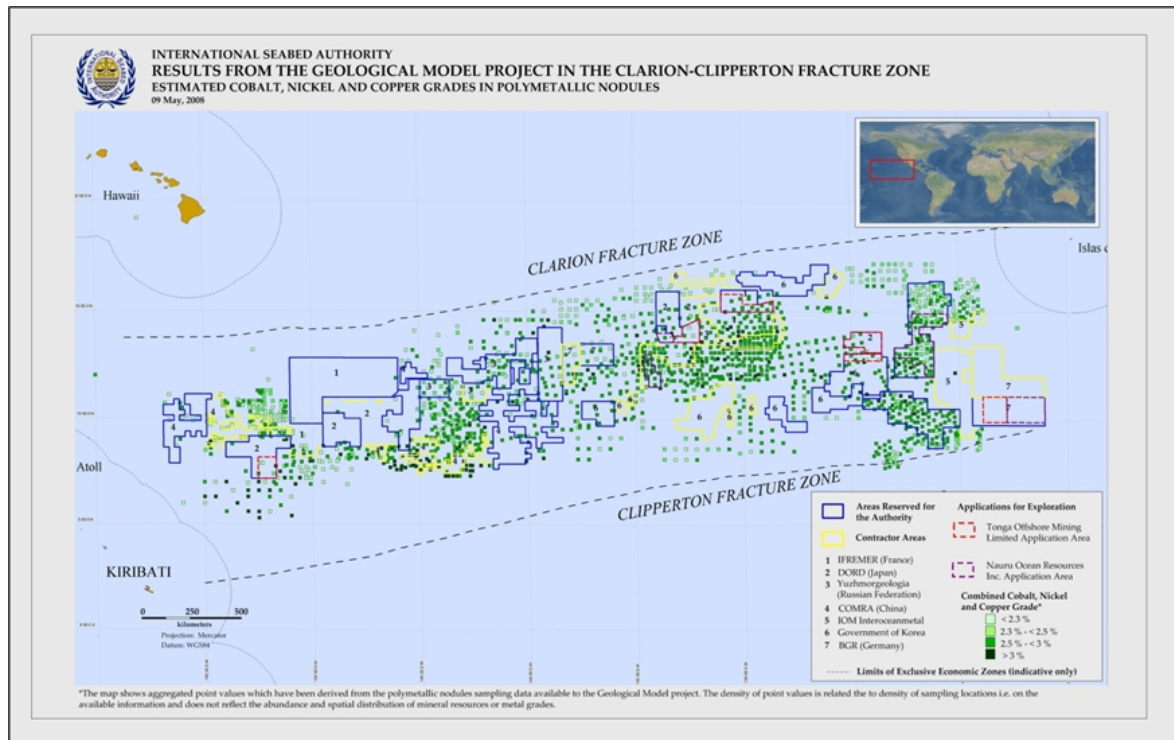

Polymetallic nodules lie on the seafloor sediment, often partly buried. Some nodules are completely buried, although the frequencies of such subsurface occurrences are very poorly defined. Kotlinski and Stoyanova (2006) document up to five discrete layers of buried nodules, although all were within 45 cm of the surface despite using sediment cores of 250 to 380 cm depth (i.e., all of these nodules are near surface). Other images of box corers also suggest that all or most of the nodules are at the surface. Consequently, drilling is not required for definition of the Mineral Resources.

During the 2018 NORI campaign, 91% of nodules sampled were situated at surface. These include nodules on the surface and nodules with their top surfaces in the upper 1 cm of sediment. A few nodules were found at depth; most of these were usually clustered around the edges of the box core and are considered to have been pushed below surface by the box coring process. Significant nodule abundance below surface was only recorded in one out of 45 samples.

The nodules vary in abundance, in some cases touching one another and covering more than 70% of the seafloor. They can occur at any depth, but the highest concentrations have been found on abyssal plains between 4,000 and 6,000 mbsl.

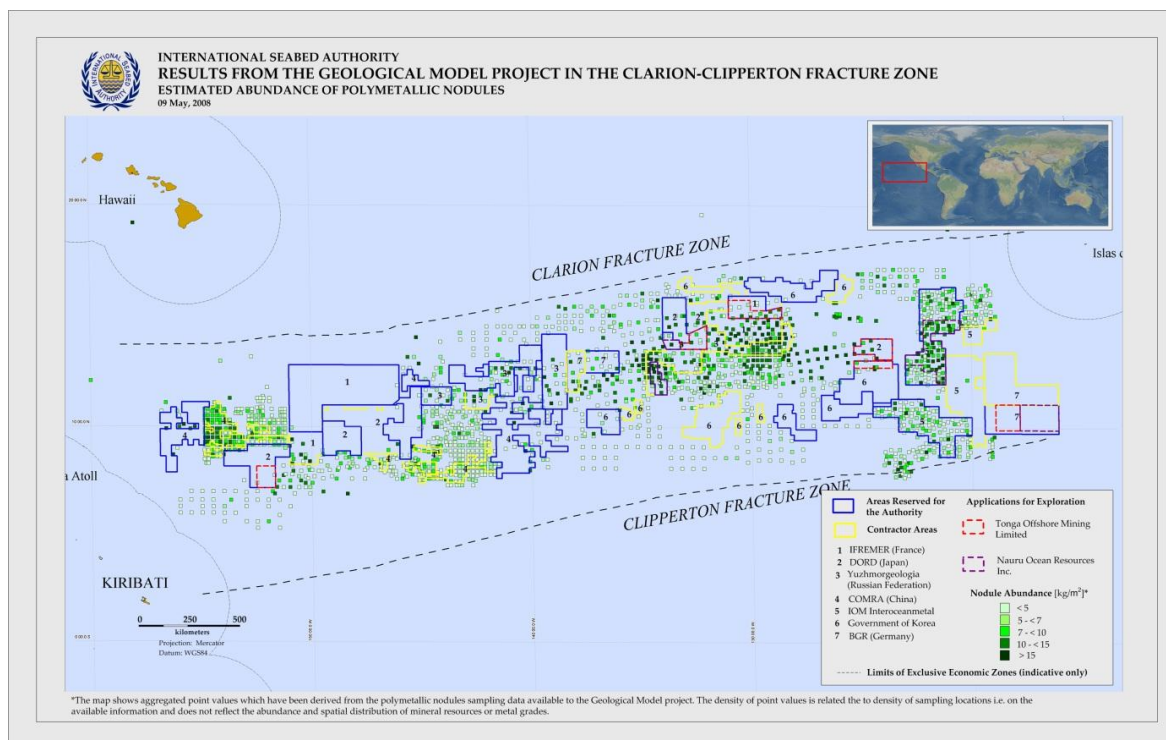

Figure 6.4 shows estimated nodule abundance data from the ISA Geological model project. Data analysis in Section 9 shows that nodule abundance variability is significantly higher than metal grades, suggesting that abundance estimation will be the key variable in Mineral Resource estimation.

Figure 6.3 Results from ISA Geological Model Project in the CCZ - combined cobalt, nickel, and copper grades

Note: The German data for NORI Area D were not included in the ISA Geological Model.  
 Source: provided by the ISA directly to NORI in 2008.

Figure 6.4 Results from the ISA Geological model project in the CCZ estimated nodule abundance

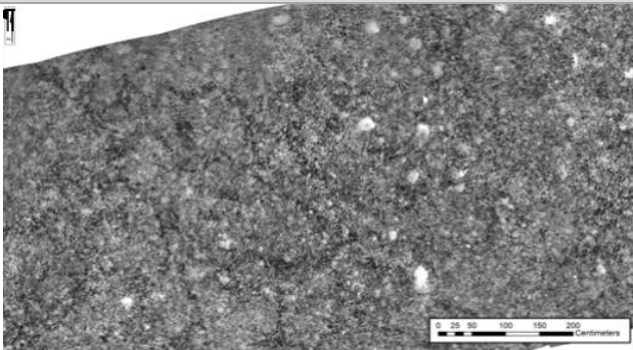

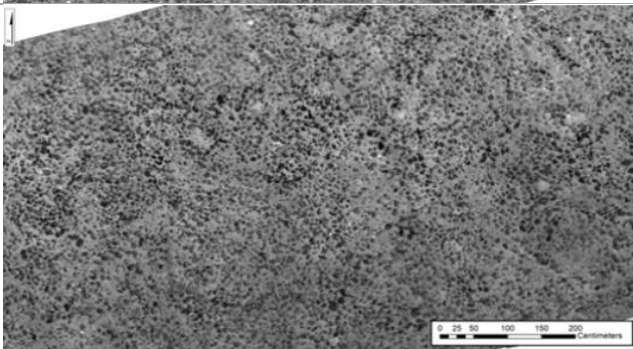

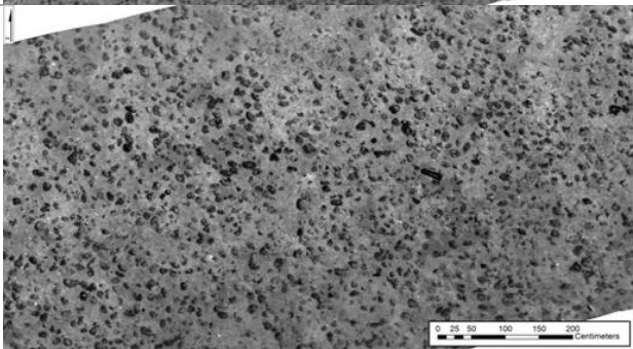

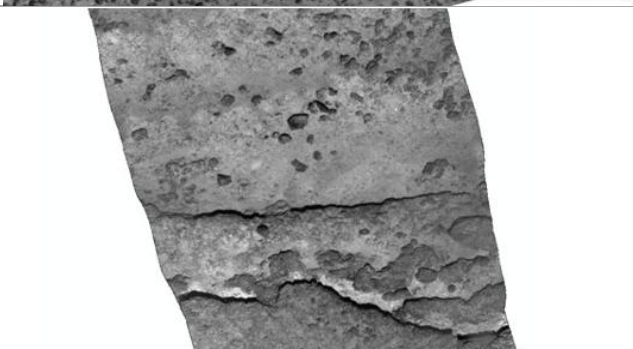

Note: The German data for NORI Area D were not included in the ISA Geological Model.  
 Source: ISA 2008.

6.4 Seafloor polymetallic nodule facies

Three broad classes of nodule distribution on the seafloor were identified, based on camera imagery. They are summarised in Figure 6.5.

Figure 6.5 Polymetallic nodule facies in NORI Area D

Nodule camera facies type	Description	Example
<p><b>Type 1 densely packed / interconnected</b></p>	<p>&gt;50% nodules                      ~1–10 cm, uncertain.                      Low to moderate confidence in camera imagery to resolve individual nodules</p>	
<p><b>Type 2 mostly individual / locally interconnected</b></p>	<p>~20–40% Nodules                      ~5–20 cm                      Moderate to high confidence in camera imagery to resolve individual nodules</p>	
<p><b>Type 3 mostly Individual / sparse</b></p>	<p>10–20% nodules                      ~5–20 cm                      Moderate to high confidence in camera imagery to resolve individual nodules</p>	
<p><b>Other</b></p>	<p>Volcanic outcrop - associated with NW-SE ridges</p>	

Type 1 nodule facies (distribution pattern) is typically characterised by >50% nodules (by area of coverage). The majority of these nodules are typically medium-sized and are closely packed, with many nodules in contact with their neighbours.

Types 2 and 3 are characterised by lower nodule abundance, larger nodules, and the nodules are typically separated (i.e., there are noticeable sediment gaps between individual nodules).

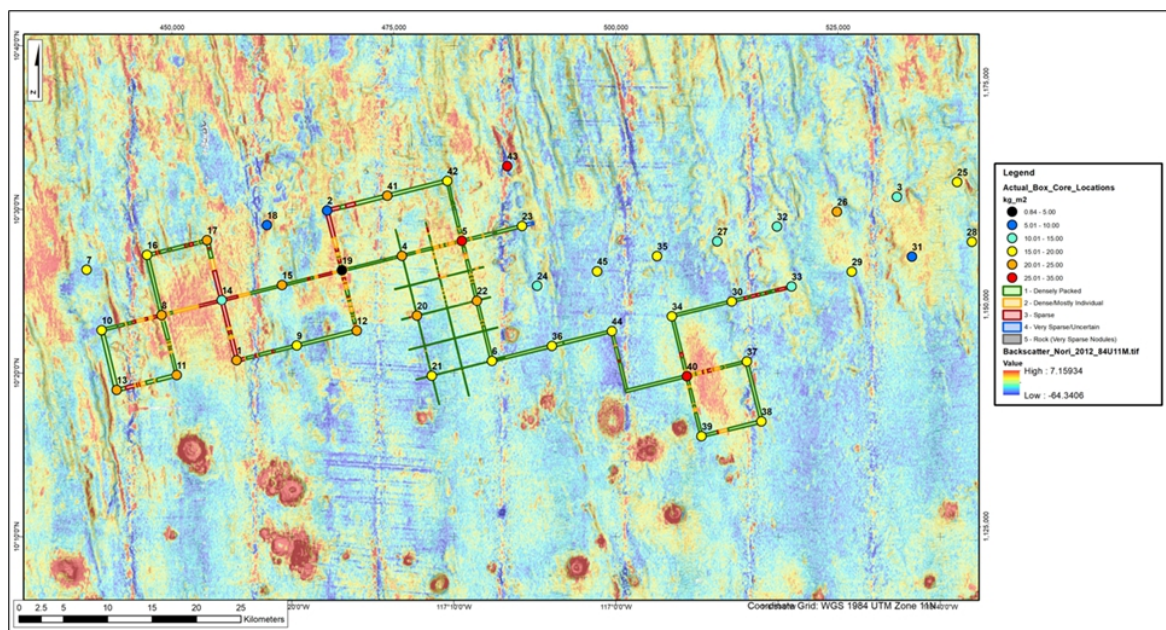

Facies boundaries are often well-defined (i.e., not gradational) and variable over short distances (<100 m), as illustrated in Figure 6.6.

Figure 6.6 Camera imagery showing change from Type 3 nodules (left), to Type 2 (right)

Nodule distributions can be mapped by measuring the backscatter (return signal) from multi-beam echo sounding (MBES) from vessels on the ocean surface. Type 1 nodule facies correlates with moderate-amplitude backscatter areas and is the most common facies. Type 2 and 3 nodule facies typically correlate with higher-amplitude backscatter areas. These correlations are shown in Figure 6.7 which shows nodule classification according to photographic traversing by autonomous underwater vehicle (AUV) (ribbon-track coloured: Type1 (green), Type 2 (yellow), Type 3 (red)) against a background of backscatter data. The backscatter responses are coloured by amplitude; high-amplitude areas associated with Type 2 and 3 nodule facies shown in warmer colours, with Type 1 represented by colder colours.

Figure 6.7 Map of nodule facies classification in NORI Area D

Note: Box core locations are labelled with box core number and coloured by abundance. Ribbon-track coloured by facies Type: Type1 (green), Type 2 (yellow), Type 3 (red)) against a background of backscatter data. The backscatter responses are coloured by amplitude; high-amplitude areas associated with Type 2 and 3 nodule facies shown in warmer colours, with Type 1 represented by colder colours.

## 6.5 Topographic / bathymetric facies

Based on analysis of bathymetric data from the 2012 and 2018 campaigns, together with the significant sampling data acquired during 2019, it was possible to refine the geological domain interpretations which characterise nodule prospectivity. Eight domains were interpreted for NORI Area D:

1. **Abyssal plains** – These constitute the majority of NORI Area D and are characterised by gentle slopes of 0° to 6°, and nodules lying on soft sediment. Nodules were observed to be ubiquitous in this domain wherever it was surveyed and sampled. It is considered a highly- prospective domain for nodules.

The Abyssal Plains can be further divided into three sub-domains based on backscatter acoustic response and ground-truthing (box core samples and land-out video footage):

- Areas considered indicative of Type 2 and 3 nodule facies, as determined from backscatter correlation (17% area coverage).
- Sediment drift domains - characterised by a soft sediment ooze with low acoustic backscatter, and extremely low to no nodule abundance (1% area coverage).
- Volcanic cones (see below) (4% area coverage).
- The remaining area (78%) is likely indicative of Type 1 nodule facies and considered highly prospective.

2. **Abyssal Hills** – These are topographically higher features, oriented NNW-SSE, and are parallel to one another. Slopes of the hills are mostly gentle at the western side, while they are very steep at the eastern side, likely representing horsts bounded by inward-dipping normal faults and outward-dipping volcanic growth faults respectively.
3. **Abyssal Hills (hard)** – Abyssal Hills where the hill crests are associated with the occurrence of hardgrounds, caused by proximity of underlying (harder) Neogene footwall succession at seafloor, typically covered by a very thin veneer of unconsolidated sediment.
4. **Slopes <sup>3</sup> 6°** – These are associated with the flanks of Abyssal Hills, where the slope is 6° or greater, and are likely associated with hardgrounds and/or volcanic debris and volcanic outcrop development typically associated with NNW trending faults. These steep slopes are considered to have low nodule prospectivity but have not been fully tested with sampling or photography.
5. **Slopes <sup>3</sup> 6° (hard)** – These are associated with the flanks of Abyssal Hills where the slope is 6° or greater, and are associated with hardground development, typified by outcropping (harder) Neogene footwall succession. These steep slopes are considered to have low nodule prospectivity, based on box core sampling, AUV SBP data and photography.
6. **Volcanic Outcrop** – This is associated with volcanic growth-faults along the Abyssal Hill flanks, which trend NNW-SSE, and are elongated, narrow bodies mapped through integration of AUV SBP and camera data with EM 122 MBES data backscatter data.
7. **Volcanic Cones** – These are typically grouped in chains and follow the ‘Hawaiian Trend’. Some of these features could be classed as Knolls, as they exhibit a 500–1000 m rise from the seafloor. These are isolated features and were not sampled during the 2018 or 2019 NORI Campaigns. However, because of their volcanic origin, steep slopes (>6°) and dominant high-intensity backscatter (typically associated with volcanic outcrop), they are also considered to have low nodule prospectivity.
8. **Volcanic High** – This is a macro-scale topographic feature situated in the SE corner of NORI Area D. It is interpreted as a relic volcanic intersection high, which also includes a relic transform parallel trough. Both are volcanic related features associated with the Clipperton transform zone, situated to the south of NORI Area D.

These domains are described further in Section 11.2.

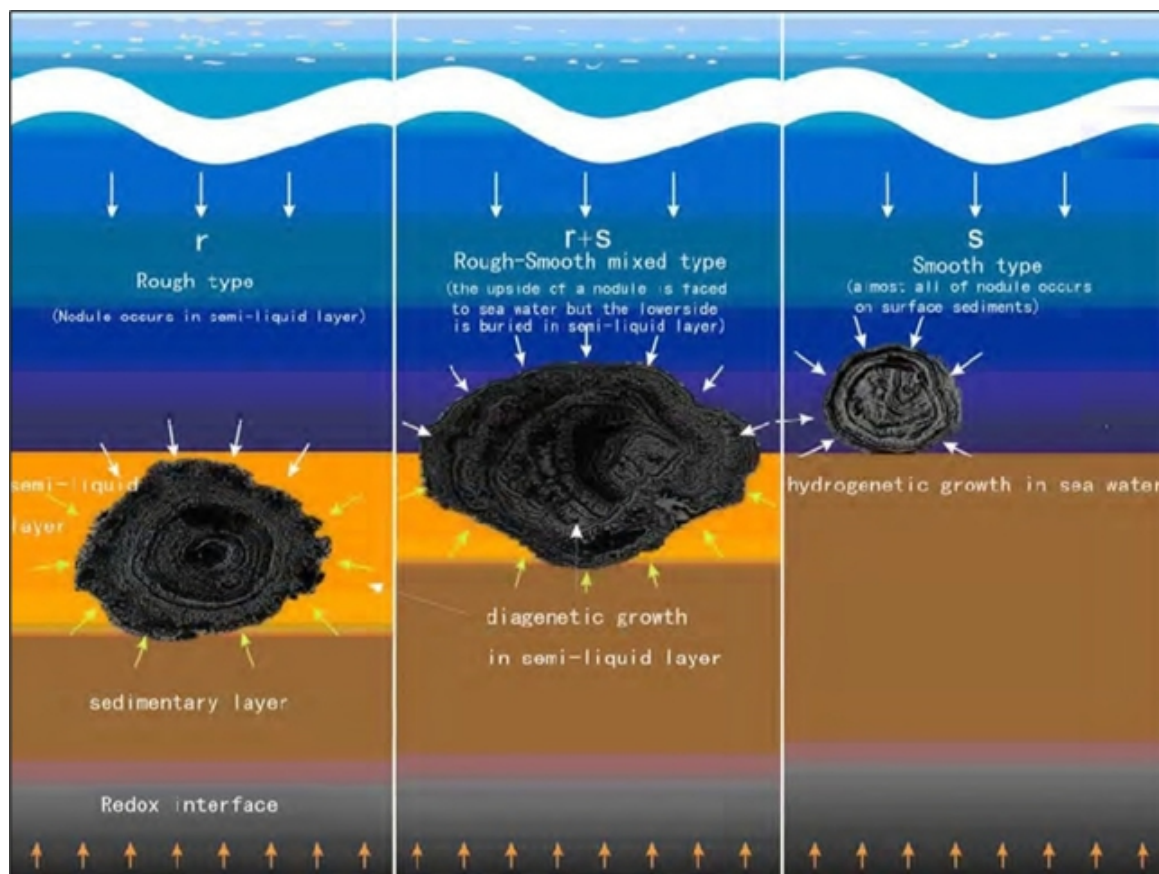

### 6.6 Nodule morphology and formation

A variety of nodule classification systems have been used in previous studies of the CCZ (for example, Haynes et al. 1985), but the three-class system promoted by the ISA (ISA 2010) prevails today Figure 6.8. Nodules are classified according to their texture, as:

- S-type (smooth type)
- R-type (rough type)
- S-R-type (smooth-rough mixed type)

It is postulated that the different textures are related to the position of the growing nodule, relative to the seafloor, as shown in Figure 6.8.

Figure 6.8 Polymetallic nodule types (ISA 2010)

## 7 Exploration

NORI completed off-shore exploration campaigns in July–August 2012, in 2013, May 2018, August to December 2019.

### 7.1 NORI 2012 campaign

The RV Mt. Mitchell, which sailed from the port of Seattle, was used for the NORI 2012 campaign. NORI conducted bathymetric mapping of the seafloor within NORI Area C and D, as well as bulk nodule sampling for metallurgical test work. Due to the nature of the bulk sampling, these samples are not suitable for use in Mineral Resource estimation.

Using a hull-mounted Kongsberg Simrad EM120 12 kHz, full-ocean depth multibeam system, approximately 25,720 km<sup>2</sup> was surveyed in NORI Area C and approximately 25,439 km<sup>2</sup> in NORI Area D. Due to swath width and vessel orientation relative to course-made-good, some data were recorded beyond the bounds of those areas. Approximately 69.1% of Area C (25,720 km<sup>2</sup>) was surveyed. Area D was surveyed in its entirety (25,439 km<sup>2</sup>). An image of the bathymetric data for NORI Area D, in plan view, is shown in Figure 7.1.

Figure 7.1 NORI Area D bathymetry data

Note: The canted box is a result of projecting a large geographic area bounds (given in latitude / longitude format) into UTM 10 N, WGS 84.

MBES data was processed during the 2012 NORI Campaign and used to locate areas of high nodule density for dredge sampling, based on the bathymetric surfaces and the backscatter intensities. Overall, the geophysical interpretation of the multibeam data was remarkably successful.

Bulk samples were collected by dredging from NORI Area C (five dredge deployments) and NORI Area D (28 dredge deployments). Approximately 280 kilograms (kg) of nodules were recovered from Area C and approximately 4,500 kg from NORI Area D. Video footage was also obtained during dredge deployments and, together with the samples recovered, provided physical verification of nodules within NORI Area C and D Figure 7.2.

Twenty (20) nodule samples (two (2) from Area C and 18 from Area D) recovered during the NORI 2012 campaign were assayed. Each sample for assaying, was a subsample of an FFG sample and weighed approximately 1 kg. Results of assaying indicated a mean grade of 1.20% nickel, 1.03% copper, 27.9% manganese, and 0.13% cobalt. These mean values are consistent with the mean grades derived from the historical grab samples within NORI Area C and D see Table 7.1. The cobalt value of 0.13% confirms the cobalt grades in the German data in Area D. A large suite of additional elements was also assayed. A drying test undertaken on a nodule sample collected during the NORI 2012 campaign indicated moisture loss of 24% at 120 °C.

Figure 7.2 Subset of nodule samples recovered during NORI's 2012 exploration campaign

## 7.2 NORI 2013 campaign

In 2013, NORI carried out a second exploration campaign within NORI Area A and B. This campaign was also undertaken using RV Mt. Mitchell and focused mapping bathymetry in NORI Area A and B, identifying nodule fields based on acoustic data (including interpretation of backscatter data), and recovering bulk polymetallic nodule samples.

A hull-mounted Kongsberg Simrad EM120 12 kHz, full-ocean depth multibeam system was used to survey approximately 8,924 km<sup>2</sup> in NORI Area A and approximately 2,911 km<sup>2</sup> in NORI Area B. The Applanix Pos MV 320 V4 system was used to measure vessel position and attitude, and a dual Trimble Zephyr unit was used as the Global Positioning System (GPS) system.

Dredging for bulk nodule sampling was carried out using an epibenthic sled Figure 7.3 that was designed specifically by KC-Denmark Research Equipment for seafloor polymetallic nodules sampling. The dredge in Area A was deployed at 12° 10.2'N, 134° 11.1'W. The dredge in NORI Area B was deployed at 13° 43.5'N, 133° 35.9'W. Approximately 190 kg of nodules were recovered from NORI Area A Figure 7.4 and approximately 85 kg of nodules were recovered from NORI Area B.

Figure 7.3 Photos showing the operation of the epibenthic sled collecting nodules during the NORI 2013 campaign

After each dredge, the nodules were retrieved from the epibenthic sled on the deck of the ship. They were collected in bags and numbered. Each dredge sample was sub-sampled for laboratory analysis using a simple random scoop sampling to obtain two 2 kg samples. During the scooping the size distribution was also considered.

Figure 7.4 Photos of nodules collected from NORI Area A during the NORI 2013 campaign

The four sub-samples from NORI Area A and B were sent to ALS Laboratories in Brisbane for preparation and analysis. The samples were dried at 120 C for 12 hours then assayed using a four-acid digest specifically designed for high-manganese samples, followed by AAS (method Mn-AA62) and four-acid digest followed by ICP-MS for concentrates (ME-MS61c). The Mn-AA62 method has a claimed precision of  $\pm 5\%$ . The results for cobalt, copper, iron, manganese, molybdenum, and nickel are included in Table 7.2, and the calculation of weight loss after drying at 120 C for 12 hours (average 28.7%) is included in Table 7.2.

Table 7.1 Assay results for NORI Area A and B nodule samples

ALS assay method code sample	ME-MS61c Co (ppm)	ME-MS61c Cu (ppm)	ME-MS61c Fe (%)	Mn-AA62 Mn (%)	ME-MS61c Mo (ppm)	ME-MS61c Ni (ppm)
NA1	2,250	10,800	5.27	29.0	589	13,600
NA2	2,240	11' 150	5.06	28.9	545	13,400
NB1	2,490	11,550	5.62	29.2	601	13,800
NB2	2,490	11' 100	5.60	28.2	590	13,750

ALS = ALS Laboratory Group; Co = cobalt; Cu = copper; Fe = iron; Mn = manganese; Mo = molybdenum; Ni = nickel; ppm = parts per million; % = percent.

Table 7.2 Weight loss of samples after drying

Sample	Wet weight (g)	Dry weight (g)	Loss (%)
NA1	536.8	374.3	30.3
NA2	574.3	396.0	31.0
NB1	616.1	452.5	26.6
NB2	588.3	431.5	26.7

### 7.3 NORI 2018 campaign

#### 7.3.1 Objectives and approach

During April to June 2018, NORI conducted a successful survey and seabed sampling program in NORI Area D using the OSV *Maersk Launcher*, mobilising out of San Diego (Campaign 3). The work completed is summarised below. Additional information is provided in the Technical Report on NORI Area D, Clarion Clipperton Zone Mineral Resource Estimate, April 2019 (AMC, 2019).

The key objectives of this program were to conduct detailed bathymetric, sonar imaging – MBES backscatter, Side Scan Sonar (SSS), and photogrammetry surveys to help facilitate:

- Identification and selection of enough suitable ground for trials of a collector (the Collector Test).
- Provision of sufficient geological and geotechnical detail to ensure future sampling and Collector Test activities recovery efficiencies can be measured, and that sampling and Collector Test programs are appropriately designed.
- Provision of appropriate seafloor imagery to assist with selection of suitable environmental monitoring sites – particularly for physical oceanographic mooring studies.
- Identification of smaller environmental baseline reference zones. An important consideration is that the habitats of these reference sites are similar in character to the site that will be selected for the Collector Test.
- Demonstration of the methodology to upgrade resource confidence from Inferred to Indicated and Measured categories.

Fugro provided turnkey survey and seabed sampling support for the campaign, including:

- AUV operational support
- Hydrographic survey support.
- Data processing.
- Geoscience support for AUV survey (data compilation and preliminary data analysis).
- Geoscience support for box coring operations (core logging, nodule processing, geotechnical testing).

Biological sampling support was provided by ERIAS Group environmental consultants.

Data QA/QC, survey design and data interpretation were undertaken by Margin – Marine Geoscience Innovation, as a Client Representative on behalf of NORI.

MBES backscatter data from the 2012 MV Mt Mitchell vessel-based MBES survey was reprocessed using the time-series data. This greatly improved the image quality Figure 7.5 compared to the original beam-averaged data and enabled geological interpretations of the data to be refined. These interpretations provided the foundation for the selection of candidate Collector Test-site targets for follow-up detailed survey by AUV.

Figure 7.5 Reprocessed EM122 backscatter data from NORI Area D 2012 survey

Note: NB – areas designated for AUV detailed survey are shown outlined in red, constituting targets deemed to have high-nodule potential and characterised by dominantly flat-lying topography.

### 7.3.2 AUV survey

AUV survey methods were identified as the best technological-fit for follow-up investigation at a site-survey scale. An AUV has the capability to provide co-registered multi-sensor datasets at the appropriate resolutions necessary to confidently select the most suitable site for a Collector Trial and provide a framework on which to build associated ongoing engineering and environmental studies.

Fugro’s ESVII 4500 m-rated Kongsberg Hugin AUV was used to conduct the detailed survey work, utilising an MBES, Side Scan Sonar (SSS), Sub-Bottom Profiler (SBP) and camera payload Figure 7.6. The AUV typically navigates using a combination of Inertial Navigation System (INS) housed within the AUV and an acoustic navigation system (Kongsberg HiPAP 501 Ultra Short Base Line (USBL) system) communicating between the AUV and the support vessel. The USBL acoustically tethers the AUV to the support vessel, which follows the AUV during its survey and provides the AUV with navigation corrections to counteract drift in the INS system over time. This mode of operation was used for all reconnaissance mapping with the AUV. For survey of the Collector Test Site, the AUV was positioned within an array of transponders positioned on the seafloor – termed a UTP (Underwater Transponder Protocol) array. This enabled the AUV to be left unaided by the support vessel to complete its survey, whilst the support vessel conducted other work within the exploration license area.

Figure 7.6 Deployment ESVII Kongsberg Hugin AUV from the stern of the *Maersk Launcher*

Source: J. Croucher.

There were four main AUV survey focus areas:

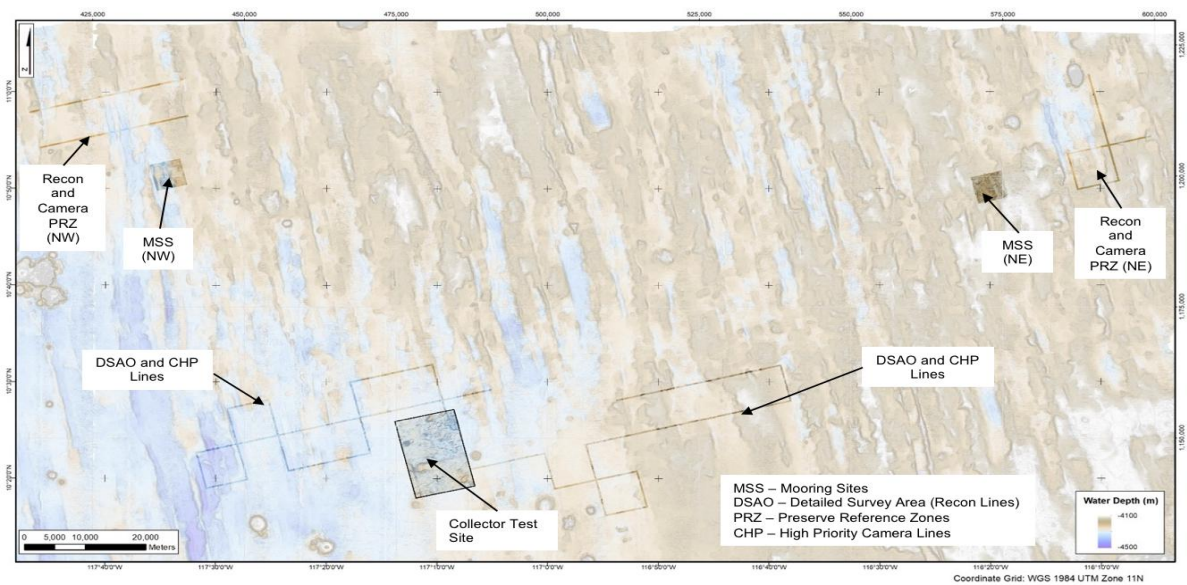

- Reconnaissance lines were collected at a 35 m AUV altitude in order to assess geological and near-surface conditions prior to acquiring low-altitude camera data. These data were also used to select the Collector Test Site location and to assess the designated Preservation Reference Zones within the NORI Area D tenement.
- Camera lines were run at a 6 m AUV altitude in order to map the distribution and abundance of the nodules. These data were also used to select the Collector Test Site location.
- Within the Collector Test Site, data were collected at a 22 m altitude and were used to evaluate geologic and near-surface conditions for future Collector Test activities.
- Within the mooring sites, data were collected at a 90 m altitude and were used to evaluate geologic and near-surface conditions for future mooring locations.

Initial reconnaissance AUV traverses were conducted over the candidate Collector Test Site Figure 7.7 using MBES, SSS and SBP payloads to provide confirmation of topographic and geological features observed in the 2012 vessel-based MBES dataset, but at a higher level of detail and confidence. There was an excellent correlation between the AUV bathymetric data and that collected by hull-based multibeam methods in 2012, providing confidence in both sets of results. These traverses were then followed-up with low-altitude surveys using the AUV's camera payload to provide visual confirmation of nodule distribution.

The reconnaissance traverses were also designed in such a manner as to provide information on nodule continuity (through acquisition of sonar and camera data) between proposed sampling sites on a 7 km rectilinear sampling grid. A key component to the success of the campaign was the ability to conduct box coring simultaneously with the detailed survey by AUV of the selected Collector Test Site, through use of the UTP seafloor acoustic positioning array.

A total of 2286 line km of data was acquired with the AUV, covering an area of approximately 375 km<sup>2</sup> of seafloor. A summary of data types and associated data resolutions collected by the AUV during the 2018 NORI campaign is presented in Table 7.3.

Figure 7.7 AUV geosurvey data acquired during the 2018 NORI campaign

All data acquired by the AUV was processed onboard the vessel to a level where preliminary interpretation could be made on the data by the Fugro Geoscience team and NORI Client Representative onboard. This was key in enabling on-site decision making for follow-up survey optimisation, particularly with regards to selecting the most suitable Collector Test Site.

Table 7.3 Summary of data types collected by the AUV during the 2018 NORI campaign

AUV altitude			Survey area							
			90 m		35 m			22 m	6 m	
Sensor	Data item	Details	MSS (NE)	MSS (NW)	DSAO	Recon PRZ (NE)	Recon PRZ (NW)	Test mine site	CHP	Camera PRZ (NW)
MBES	Bathy	Bin size	3 m	3 m	1 m	50 cm	50 cm	27 cm	15 cm	15 cm
	Backscatter	Bin size	3 m	3 m	1 m	50 cm	50 cm	15 cm	15 cm	15 cm
Side scan sonar	SSL	Bin size	50 cm	50 cm	50 cm	25 cm	25 cm	27 cm	N/A	N/A
	SSH	Bin size	N/A	N/A	50 cm	25 cm	25 cm	15 cm	N/A	N/A
	SSX	Bin size	N/A	N/A	N/A	N/A	N/A	N/A	7 cm	7 cm
Camera	Orthos	Bin size	N/A	N/A	N/A	N/A	N/A	N/A	3 mm	3 mm
Sub bottom profiler	Sub bottom	Frequency	N/A	N/A	1-10 khz	1-10 khz	1-10 khz	1-10 khz	3.5-20.5 khz	3.5-20.5 khz

Note: MBES operated at 200 or 400 kHz, depending on survey resolution requirements. SSS was operated at 240 kHz, 540 kHz, or 1,600 kHz.

### 7.3.3 Box coring

Box coring was undertaken using a 0.75 m<sup>2</sup> box corer built by K.C. Denmark A/S, deployed from a H-frame situated amidships of the Maersk Launcher Figure 7.8.

A total of 45 box cores were acquired during the campaign. All box cores were acquired within the detailed survey area on a 7 km square grid Figure 7.9. The sampling grid was designed prior to the mobilisation of the 2018 NORI campaign; therefore, the samples were selected without reference to any of the detailed geophysical data to avoid any bias.

Each box core site was located by positioning the vessel over the proposed box core location and acoustically monitoring the box core's position during descent using the vessel's USBL system communicating with a USBL transponder attached to the box core frame. Once the box core was lowered to approximately 30 m above the seafloor, the surveyor monitored when it was within a 35 m target circle displayed over the proposed target location on the USBL navigation workstation monitor. Once this condition was met, the instruction was given to lower the box core to bottom. Once on bottom a series of position fixes were acquired to solve the on-bottom position. The mean distance between the proposed target location and actual box core position was 18.4 m  $\pm$  7.9 m.

It is important to note that the hydrographic surveyors guiding the landing out of box cores were only supplied the expected seafloor datum at the proposed core site location. They did not have access to any geophysical data (backscatter, SSS or camera etc.) during these operations. This ensured that the sampling was conducted without any bias.

Once the position fix was taken, the cutting shovel was released to seal and secure the sample and the box corer was winched up off the seafloor. Once the sample was secured on deck, the samples follow three processing paths - environmental, geotechnical, and mineralogy.

A stand-alone GoPro camera system in a pressure-rated underwater housing and LED lights were attached to the legs of the box corer. This enabled post-recovery analysis of land-outs to be made and comparison of actual box core nodule recovery and in-situ nodule distribution on seafloor.

Figure 7.8 KC Denmark 0.75 m<sup>2</sup> box corer

Note: Historical sampling shown by stars. NORI 2018 campaign AUV geosurvey traverses shown in blue.

Figure 7.10 shows a sequence of box core land-out footage from the GoPro camera. The top image shows the land out site visual as box core is deployed to seafloor. The middle image shows the box corer in situ on seafloor, before sample is taken (shovel open). The bottom image shows the box corer retracting from seafloor following successful closure of shovel. Loss of the laser-scale early in the campaign meant that nodule measurements could not be accurately measured from the GoPro images.

Figure 7.10 Sequence of box core land-out footage from GoPro camera

### 7.3.3.1 Sample processing

All samples were processed onboard post-retrieval of a box core sample to deck Figure 7.11. The vessel was equipped with a biology cold laboratory and geoscience laboratory.

Once the box core was landed out on deck and safely secured, the box was separated from the box corer frame. Three processing protocols for environmental, geotechnical, and resource began immediately after collection of each box core. The processing flow on deck was undertaken in the following sequence:

- The top of the sample with the supernatant water still in situ was photographed.
- The water was then carefully siphoned, bailed and / or suctioned off the sample and processed for biological analysis by the biological team onboard.
- The undisturbed surface of the retrieved material (nodule surface) was photographed.
- A 50 × 50 cm area of the retrieved material was cordoned for biological study.
- Three sub-samples were obtained from the undisturbed areas outside of the biology exclusion area for geotechnical purposes. All nodules except for possible buried nodules captured in the 2.638-inch push samples followed the Mineral Resource processing path.
- All surface nodules, when extracted from the box, proceeded to the biology wet laboratory where they were washed with cold seawater through a sieve.
- All buried nodules in the 50 × 50 cm area reserved for biologic sampling also proceeded to the biology wet laboratory. After washing, these nodules were returned to the geology wet laboratory.
- All buried nodules outside of the area of biologic investigation were washed of mud on deck and proceeded to the geology wet laboratory for description, measurement, photography, and sequestration in sample bags within gasket sealed pails.

Figure 7.11 On deck sample processing

1. Sample with supernatant water photographed.
2. Water siphoned off for biological processing.
3. Box core with water removed showing GoPro camera mount and 50 × 50 cm frame demarcating area for biological study.
4. Example of GoPro top shot showing nodule distribution.
5. Geotechnical samples being taken.
6. Each layer was excavated for nodules, which were placed in collection trays for further biological processing and mineralogical logging.

### 7.3.4 NORI sampling

A classification system for nodules was developed by NORI prior to mobilisation to the worksite. This was largely based on guidelines set by the ISA (ISA, 2010) and work presented by TOML in their NI 43-101 resource report (AMC, 2016). Over 49,000 nodules were collected in the 45 box cores. Examples are shown in Figure 7.12. An image classification method was adopted to enable rapid measurement of each nodule for all remaining box core samples. However, descriptors such as shape, texture, and fragmentation were only recorded as the dominant types for each box core sub-sample layer, and not for each nodule.

An average nodule size of 2.95 cm (long axis measurement) was recorded for all samples recovered during the 2018 NORI Campaign. Table 7.4 presents a summary of the size distribution of the nodules within 0–1 cm of seafloor. Shape, texture and fragmentation descriptors were logged as dominant types for each box core layer. Logging was captured in a digital excel database on-board the vessel.

Table 7.4 Nodule size distribution for samples recovered during the 2018 NORI campaign

Long Axis				
<2 cm	2-5 cm			>5 cm
s (small)	sm	m (medium)	ml	l (large)
24%	37%	23%	9%	7%

Figure 7.12 Examples of nodules recovered during the 2018 NORI campaign

Notes: Upper left – example of large nodules with rough texture. Top right – close-up of large nodule. These nodules were the least-dominant size class. More common were nodules in the 2–5 cm range, as shown by examples in lower left and right.

Each box core was sampled by depth interval. Four intervals were used:

- 0–1 cm
- 1–5 cm
- 5–15 cm
- >15 cm

91% of nodules by weight occurred within the top layer and were exposed at seafloor and 99% occurred within the top 15 cm.

Nodules were processed through three stations - a weighing station, volume station and photography station, before division of the nodules into samples and storage in labelled, gasket-sealed 6-gallon pails. All data was collated in a series of Excel spreadsheets.

Samples for distribution to assay laboratories were prepared at sea so that the samples could be sent to their destinations upon demobilisation. The mass of nodules recovered in the box cores was generally much more than required for assaying, so it was necessary to divide the nodules in an unbiased manner, to produce samples for assay and for reference. This was done by the cone and quarter method Figure 7.13. The sampling protocol varied according to the weight of the nodules and is summarised in Table 7.5.

After samples were split, the samples were divided into series of sub-samples for marketing, primary assay, reference, duplicate primary sample and secondary primary sample. These were placed in sealed bags. Each sample was given a unique numbered zip tie placed inside the bag. Bar codes were generated from these unique numbers and adhered to the side of the bag, plus written on the side of the bag in permanent marker pen. Bar codes were linked to the Excel sampling database.

Certified blank samples were purchased from ALS laboratories in Reno, Nevada and inserted into the primary and duplicate sequence at a rate of 1 for every 10. One blank from the primary sequence and one blank in the duplicate sequence was spiked with approximately 50 g of nodules sourced from a marketing split. Certified nodule reference materials were purchased from the United States Geological Survey (USGS) and inserted randomly into the sample stream at the assay laboratory.

All samples were placed in gasket-sealed 6-gallon pails, sealed with tamper-proof tape.

Table 7.5 Sampling protocol

Total nodule weight	Procedure	Primary assay sample	Reference sample (retained)	Duplicate (primary lab)	Duplicate (secondary lab)	Marketing sample
0–4 kg	Crush oversize, cone & quarter. Combine opposite quarters to make two samples.	Yes	Yes	No	No	No
4–8 kg	Crush oversize, cone & quarter. Bag separately.	Yes	Yes	Yes	Yes	No
8–12 kg	Cone and quarter (uncrushed). Retain one quarter for marketing. Recombine the other three quarters and crush oversize, cone & quarter, bag the quarters separately.	Yes	Yes	Yes	Yes	Yes
> 12 kg	As for 8-12 kg, then combine opposite quarters, cone & quarter, bag the quarters separately.	Yes	Yes	Yes	Yes	Yes

Figure 7.13 Coning and quartering process

### 7.3.5 Image classification and size measurement

Image classification software was used to provide an alternative automated approach to measurement of nodule dimensions, using photographs. Figure 7.14 presents a comparison between the automated image processing method and hand-held calliper measurements and shows a very good correlation between the two datasets. The average (mean) lengths of the long axes of the nodules using the classification approach and the measured approach were both 3.31 cm. The mean for short axis estimation using the classification approach was 2.68 cm, whilst the mean for the measured approach was 2.72 cm. The test demonstrated that the image classification method was a practical, accurate method for measuring two orthogonal axes of the nodules and it was used from box core BC006 onwards.

Figure 7.14 Comparison of image classifier results vs caliper measurements

### 7.3.6 Biological sampling

The biological sampling was completed in 35 of the box cores Figure 7.15 and consisted of the following:

- 239 nodule biota specimens were sampled.
- 62 megafauna (>2 cm) specimens were sampled.

Samples were placed in cold storage for further analysis once ashore.

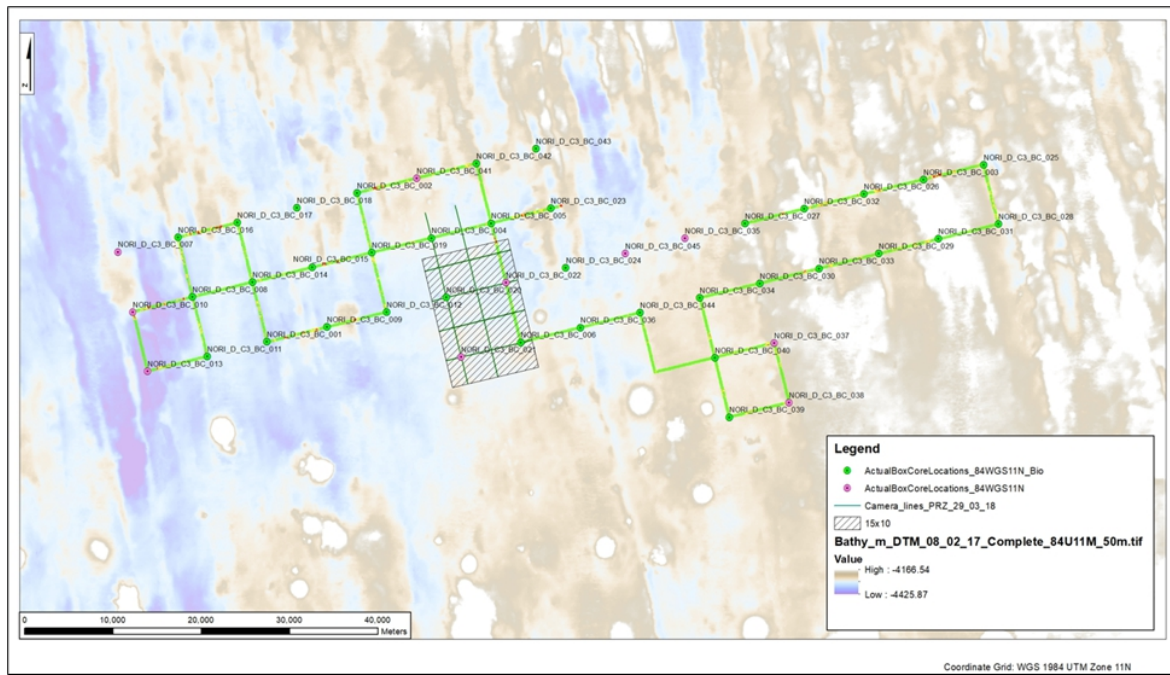

### 7.3.7 Geotechnical sampling

Three soil sub-samples for geotechnical study were obtained from the undisturbed areas of each box core. These consisted of one 2.125 inch inside diameter (ID) liner sampler, and two 2.638 inch ID clear polycarbonate tubes.

The focus of the geotechnical sampling was the clayey footwall sediment sequence. Basic off-shore index and strength laboratory tests, comprised of soil descriptions, wet density measurements, and undrained shear strength index tests (Torvane tests and intact and residual miniature vane tests) were conducted on the geotechnical subsamples obtained from the box cores.

Results from the field tests revealed that the shallow soil stratigraphy consists of a veneer (about 6 cm thick) of surficial, dark brown, very soft semi-liquid clay overlying very soft, dark brown clay to a maximum core penetration depth of about 0.5 m BSF. At about 0.15 m depth, typically, a colour change from dark brown to light brown occurs. Evidence of bioturbation of the light brown layer is indicated by mottling with dark brown and brown clays. It was noted on the high-resolution geophysical survey data that a reflector at about 15 cm to 20 cm depth was consistently present across all the box core sites sampled. This depth corresponds with the top of the light brown clay. Qualitative carbonate content testing typically indicates no reaction with dilute hydrochloric acid (10% concentration).

Figure 7.15 NORI Area D box core locations, showing those with biological sampling (in green)

### 7.3.8 Exploration results

The exploration results discussed herein include all data relevant to the Mineral Resource estimate. Additional data was acquired throughout the campaign for the purposes of selecting and mapping a Collector Test Site, environmental Preservation Reference Zones and oceanographic mooring site. These results are not discussed in any detail in this report.

#### 7.3.8.1 Box core abundance

Figure 7.16 shows the spatial distribution of nodule abundance and Figure 7.17 shows the nodule type as per the ISA system outlined in Section 6.6. The box cores had an average nodule abundance of 17.8 kg/m<sup>2</sup>, with the highest abundance reported at 30.9 kg/m<sup>2</sup> (BC005). The two lowest recorded abundances are BC019 (0.8 kg/m<sup>2</sup>) and BC031 (6.5 kg/m<sup>2</sup>).

Figure 7.16 Box core abundance (in kg/m<sup>2</sup>)

Note: Box cores labelled by box core number.

Figure 7.17 Box core size-texture classification

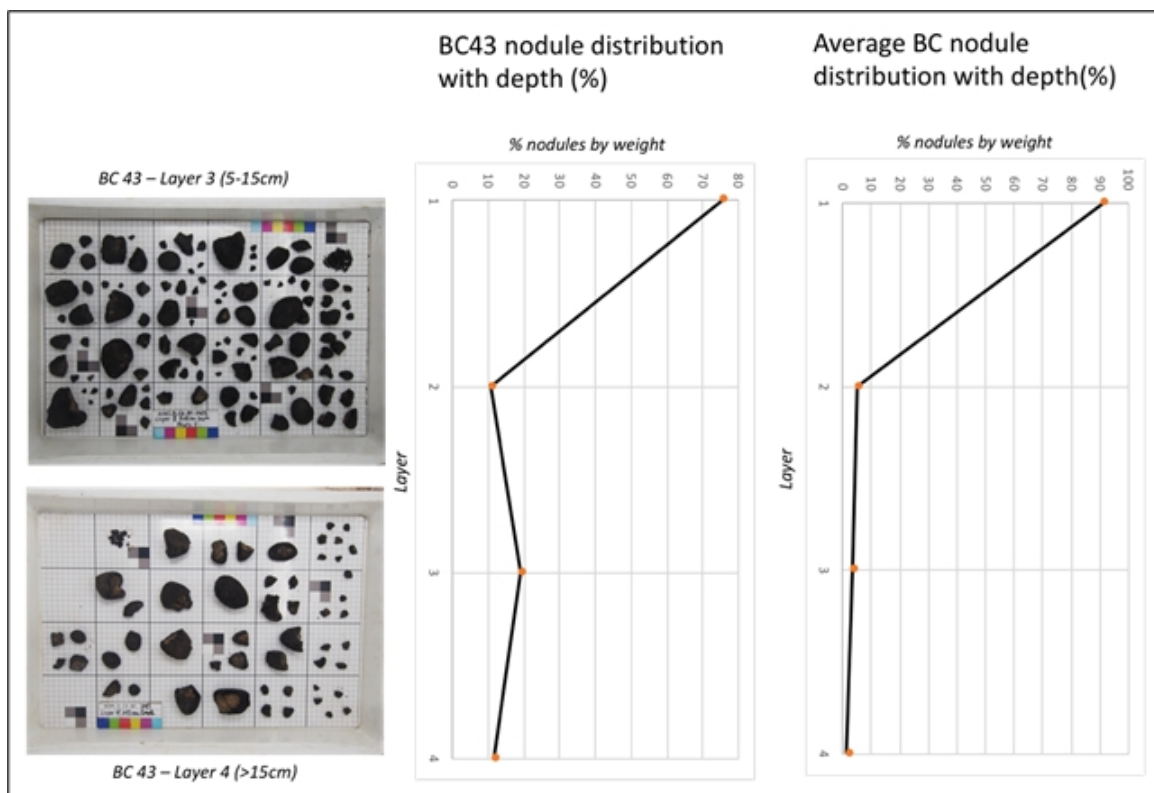

Note: ISA size classification: small (<2 cm), medium (2 – 5 cm), or large (>5 cm) grain size, and texture is smooth (S), smooth-rough (SR), or rough (R).  
 Box cores labelled by box core number.

### 7.3.8.2 Buried nodules

On average, 91% of nodules by weight were located at 0–1 cm (exposed at seafloor). This is an important consideration as it implies that a representative nodule abundance can be estimated using seafloor camera imagery to map and characterise nodule surficial distribution at seafloor.

Layers 3 and 4 logged in box cores often included a few nodules pushed down deeper from upper layers by the sides of the box core, typified by accumulation along the sidewalls of the box corer. BC043 was an exception and returned a significant weight of in-situ nodules throughout the core at all levels Figure 7.18. The buried nodules were very friable.

Figure 7.18 Profile of nodule weight by depth in BC043

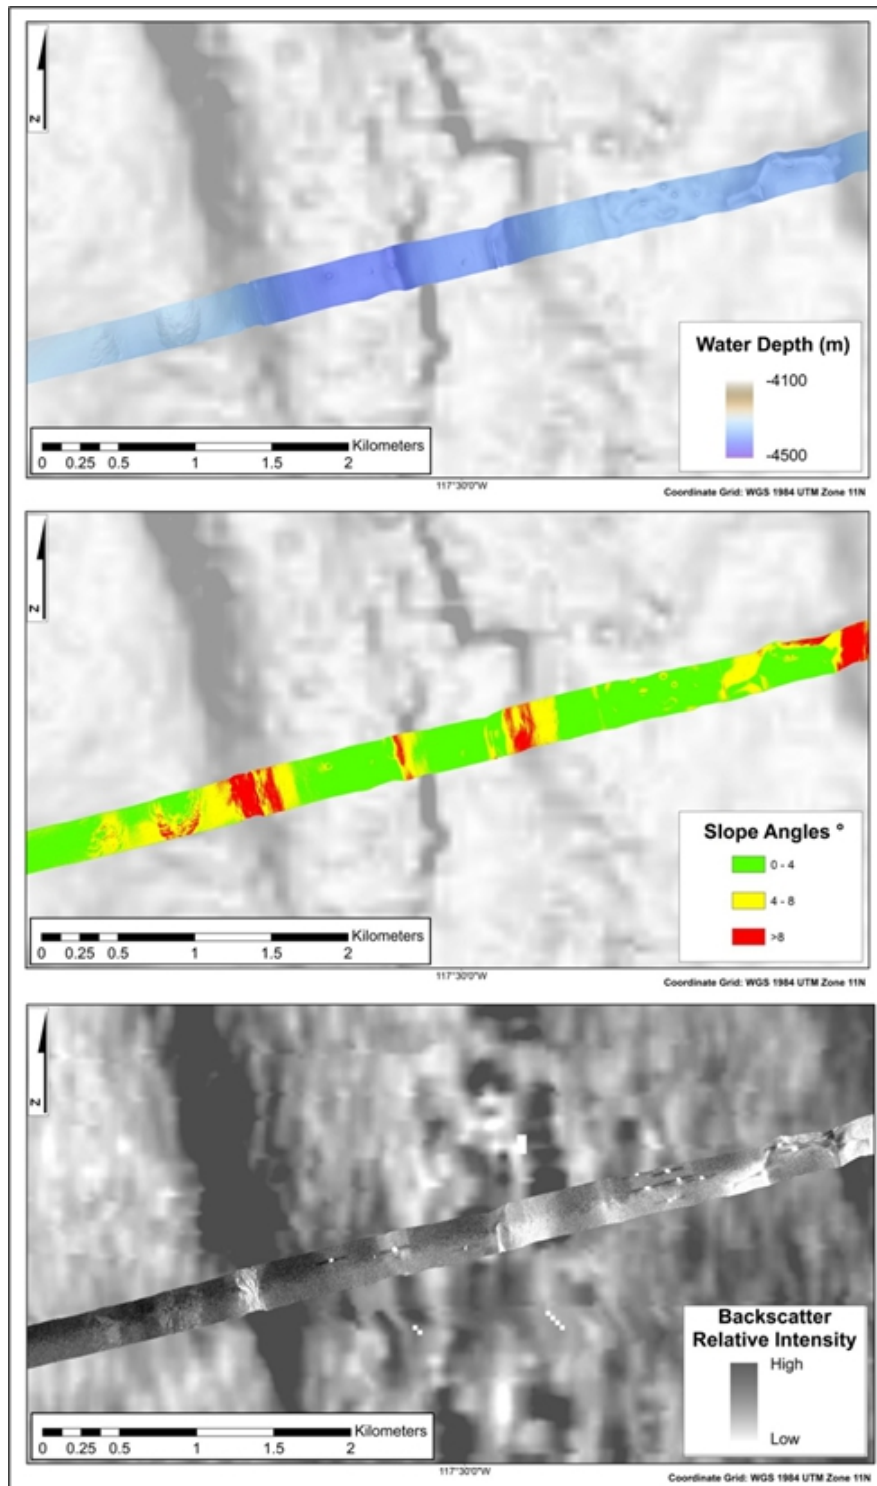

Note: Left – photo trays from layers 3 and 4, centre – nodule distribution with depth for BC43, compared to average nodule distribution with depth for all box cores (right).

### 7.3.8.3 AUV data

Reconnaissance AUV MBES traverses were conducted over the candidate Collector Test Sites to provide confirmation of topographic and geological features observed in the 2012 vessel-based MBES dataset, but at a higher level of detail and confidence. These traverses were then followed-up with low-altitude surveys using the AUV’s camera payload to provide visual confirmation of nodule distribution. The reconnaissance lines also enabled calibration and refinement of the NORI Area D regional geological interpretation. Based on these revised interpretations a geomorphological domain interpretation was developed and preliminary relationships between backscatter and nodule distribution facies observed in camera data were established.

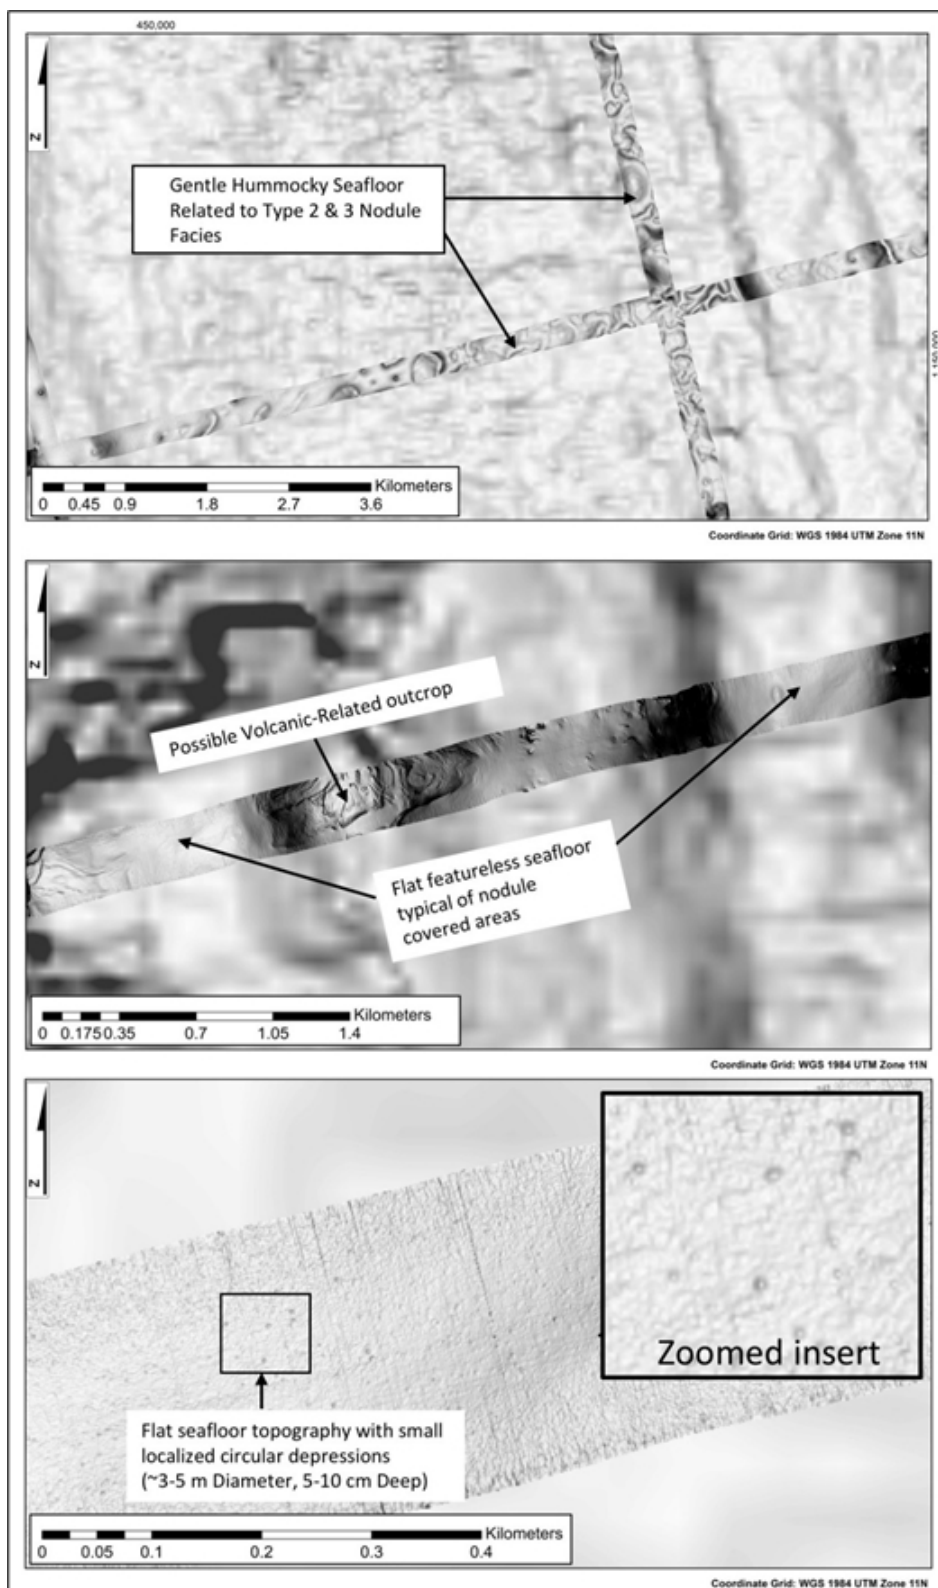

Figure 7.19 shows examples of AUV MBES data (ribbon) from reconnaissance traverses, shown against a background of EM122 vessel-based MBES background. The AUV data provides much finer-scale resolution than vessel-based bathymetry and shows good spatial correlation with macro-features. Figure 7.20 illustrates the fine geological detail provided by the AUV MBES. This type of detailed data will be useful for designing the operating path of the seafloor nodule collectors.

Figure 7.19 Comparison of AUV MBES data (ribbon) against EM122 vessel-based MBES

Note: Top – bathymetry; middle – bathymetric slope (hot colours indicate steeper slopes); bottom – backscatter.

Figure 7.20 Examples of AUV MBES data showing detailed-scale geological features

AUV camera data was acquired at 6 m altitude for 89% of the reconnaissance traverses, providing visual continuity of nodule distribution between the majority of the physical box core sample sites. In addition, a 3.5 × 3.5 km grid of camera data was acquired over the Collector Test Site. Camera data is near-continuous over the reconnaissance traverses. Photomosaic coverage along the 3.5 × 3.5 km spaced camera traverses over the selected Collector Test Site are continuous. Each camera frame is 6 m across-track and 4 m along-track. Figure 7.21 provides an example.

Figure 7.21 Example of AUV camera photo mosaic showing nodules

### 7.3.9 Nodule abundance estimation derived from AUV camera data

Although box coring is an effective method for measuring nodule abundance, it is slow and expensive. Therefore, it is advantageous if box core estimates can be supplemented by an alternative method.

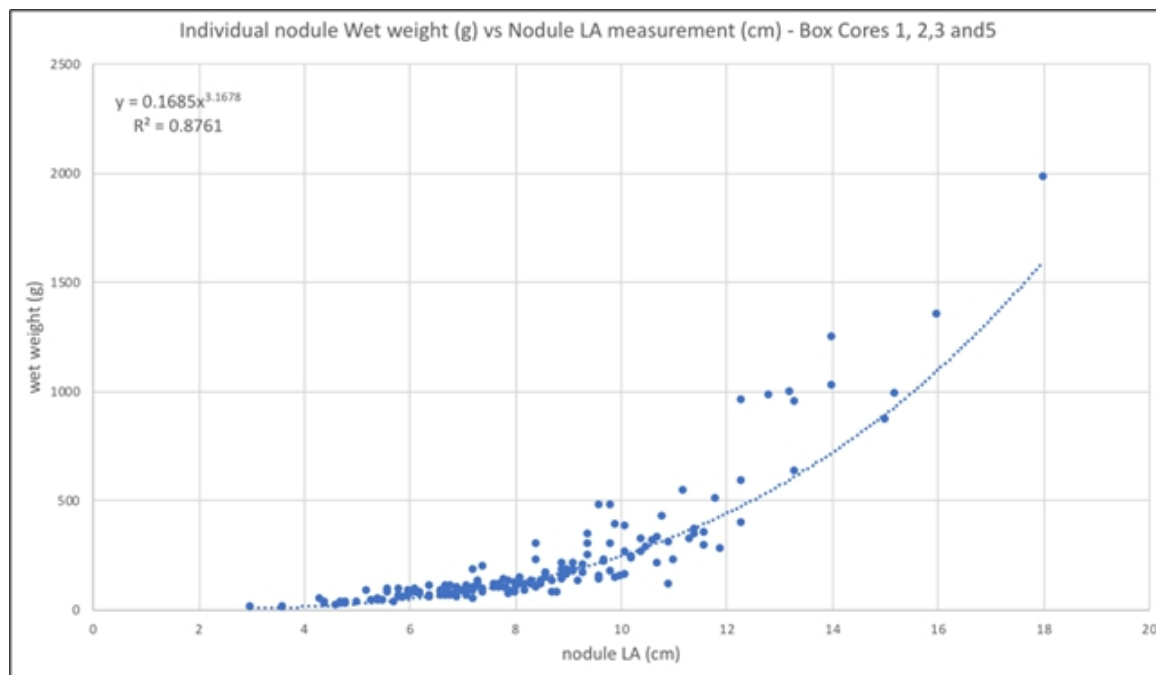

There is a well-documented relationship between nodule length and wet weight (e.g., Felix, 1980). NORI confirmed this relationship by taking measurements of individual nodule length, using digital callipers, and wet weight, for nodules from box core samples BC001, BC002, BC003, and BC005 Figure 7.22.

In areas where nodules are not closely packed, image processing techniques can be used to identify each nodule unambiguously and measure its dimensions. In this case, it is possible to estimate nodule abundance from photographs. However, if nodules are closely packed and touch each other, image processing techniques are currently unable to reliably discriminate each individual nodule.

Photographic data acquired during the 2018 NORI campaign has shown the dominant nodule distribution in NORI Area D to be closely packed small-to-medium sized nodules (average long-axes length of 2.95 cm), averaging over 900 nodules per box core sample in the surface layer. It is therefore not possible to use image processing and not practical to use manual measurements of long axes for this facies.

Several estimation techniques were tested, and an alternative methodology was developed using a combination of long-axis measurement and percentage nodule coverage which was applied to the data.

Figure 7.22 Comparison of nodule long axis measurements, taken using digital callipers, and individual nodule wet weight for BC001, BC002, BC003, and BC005

A multiple linear regression relationship between percentage nodule coverage estimated from the photographs and mean nodule long-axis measurement from six box core samples within the Collector Test Site was found to provide a good correlation with nodule abundance. The relationship is of the form:

$$Y = -15.20 + (0.24 X_1) + (5.19 X_2)$$

Where:

- Y is the estimated nodule abundance
- X<sub>1</sub> is the percentage nodule cover
- X<sub>2</sub> is the mean Long Axis measurement

The percentage nodule coverage was determined by thresholding the image and calculating the percentage area covered by nodules in the image. Nodule long-axes were manually measured where possible, for each nodule in the image Figure 7.23.

Figure 7.23 Detail of image processing

Notes:

1. Camera image.
2. Manual measurement of nodule long axes on calibrated image.
3. Image thresholding to determine percentage nodule coverage.

It was possible to obtain enough measurements to calculate representative mean long axis lengths which compared well with the mean long axis measurements from the actual box core samples Figure 7.24. Because photographs were not taken at the exact box core sites (due to loss of the camera laser-calibration system mounted on the box corer), 1 × 1 m subsets of the closest calibrated AUV camera data were used for this analysis. The average offset between the camera data and the actual box core site locations was 26 m. The offsets will have introduced some imprecision to the analysis, and it is expected that, in future, collocated photographs and box core samples will produce a better correlation.

Figure 7.24 Comparison of mean long axes lengths from AUV camera imagery and box cores

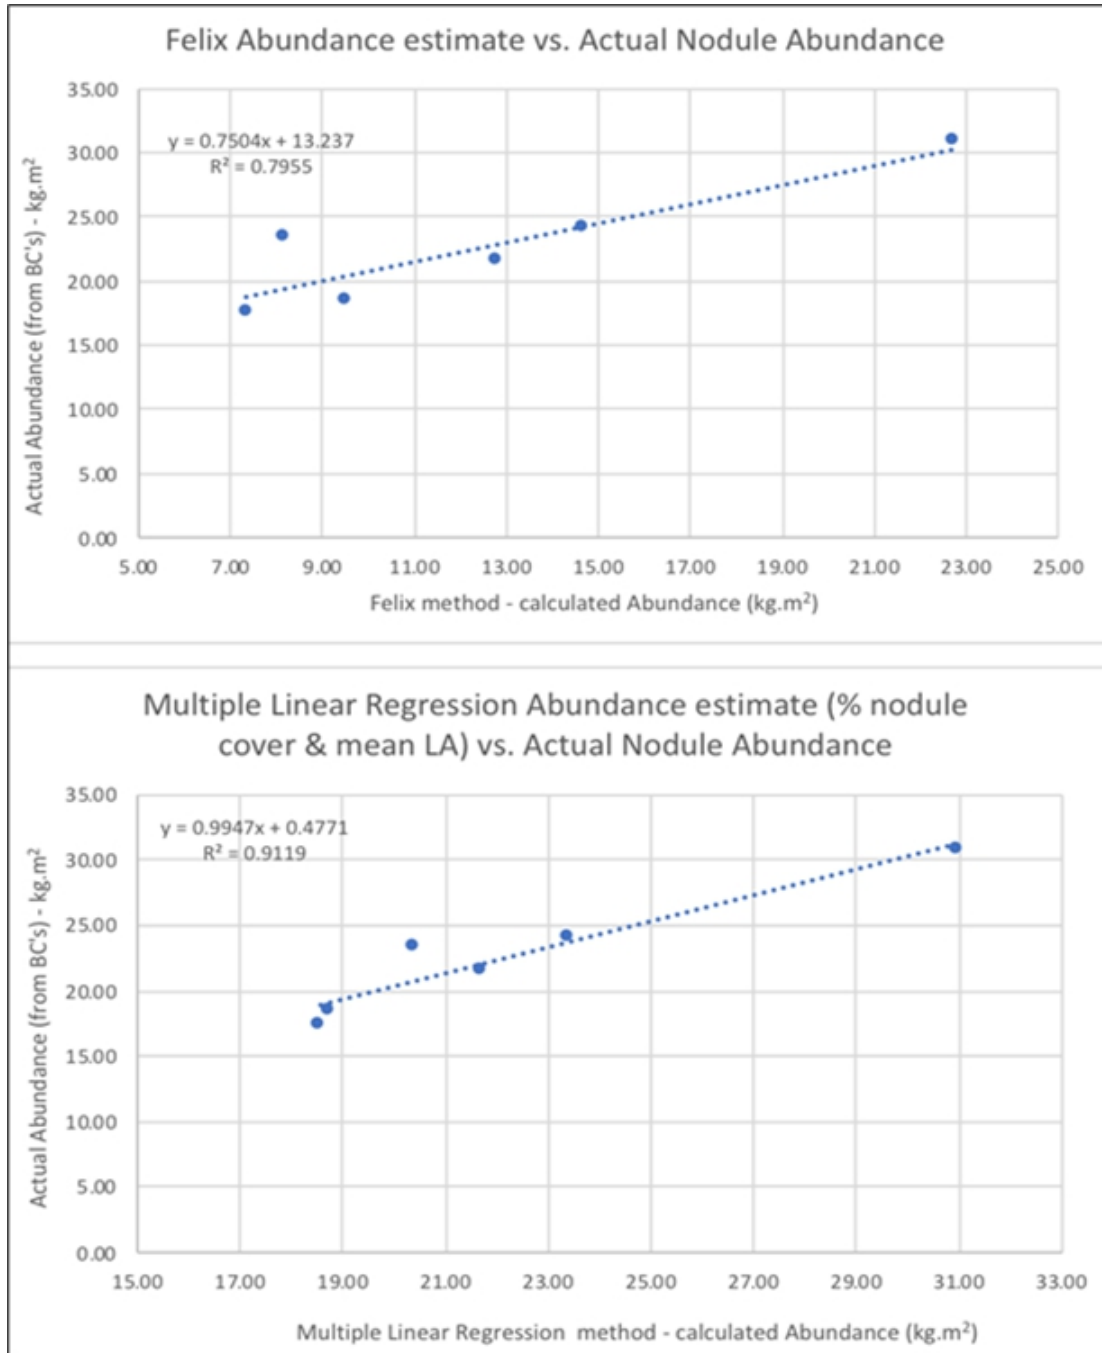

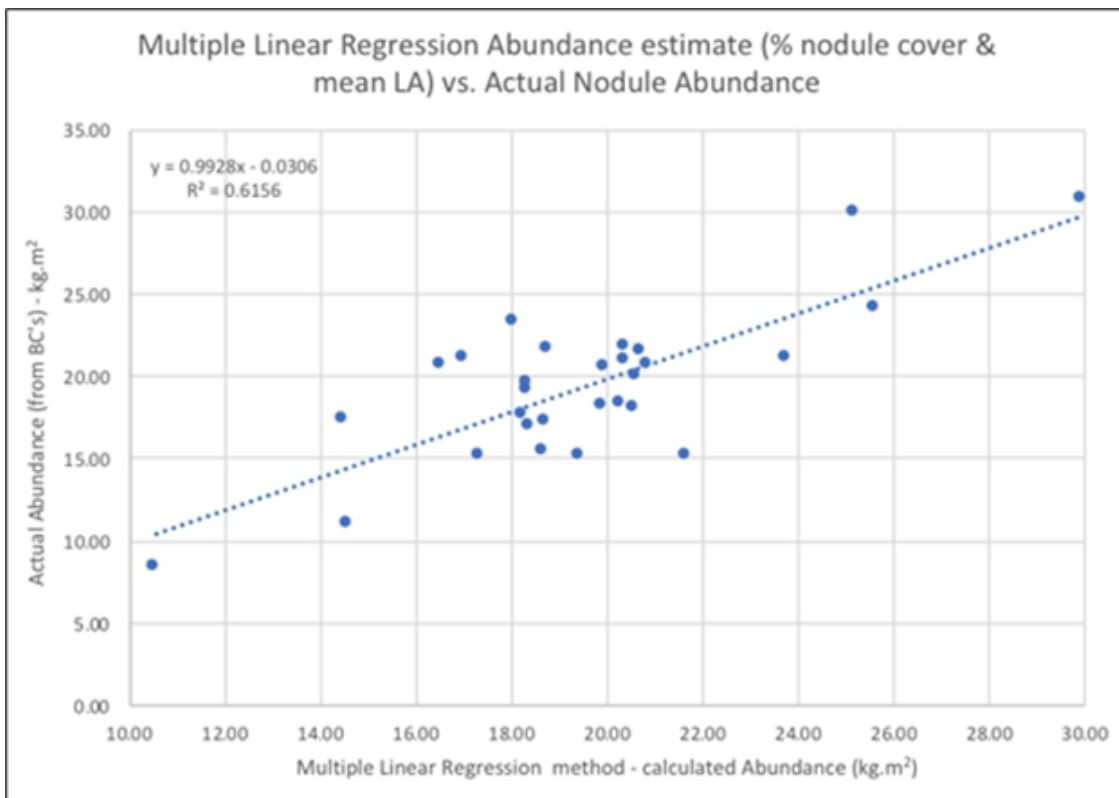

Figure 7.25 shows the estimated abundance vs. actual abundance for Felix method (top), and the multiple linear regression method (bottom) for six box cores in the Collector Test Site. Although the correlation is high for the Felix method, the multiple linear regression method provided a better correlation than the Felix method and estimates that are closer to the actual nodule abundances. This is because the method is not dependent on measurement of each-and-every nodule in the image, which is not possible with some of the images typical of Type 1 nodule facies.

Figure 7.25 Comparison of Felix method and multiple linear regression method

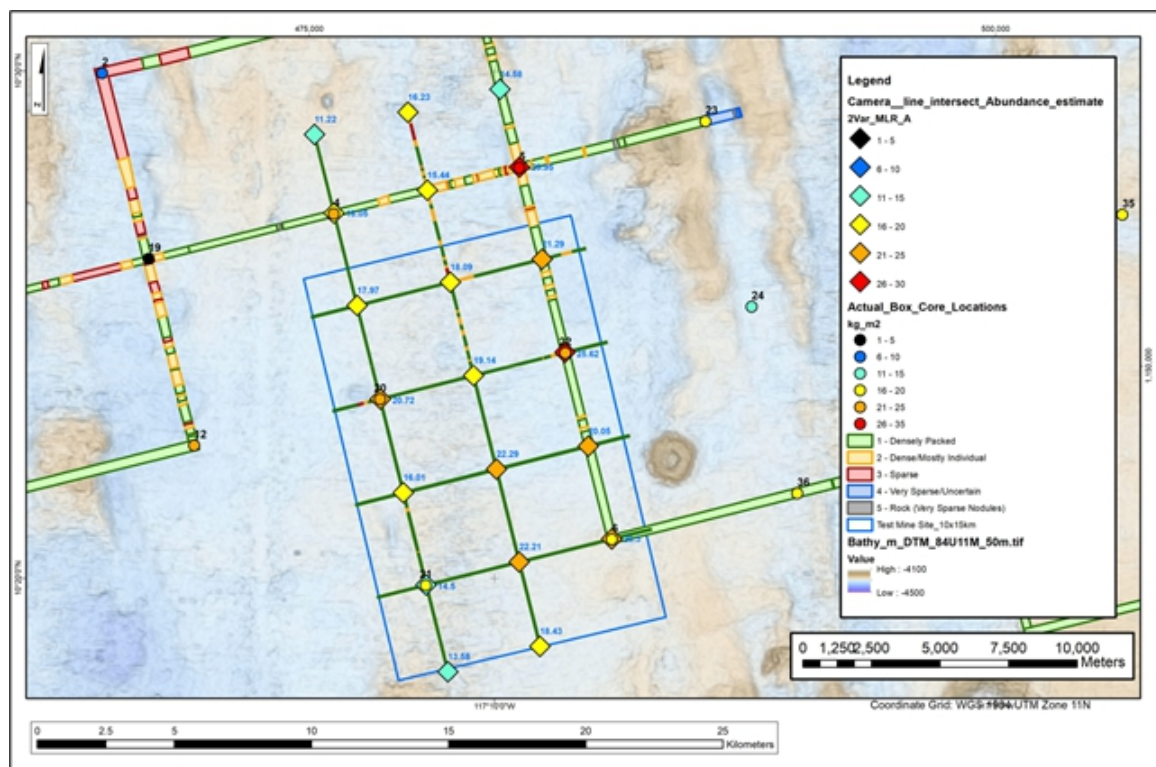

The multiple linear regression method was subsequently applied to the entire box core data set with associated AUV camera imagery (a total of 29 box cores used) to derive a more representative relationship using all available data. Extracted camera imagery was within an average offset of 15 m from actual box core site locations. The results are shown in Figure 7.26. An acceptable correlation (with an  $R^2$  coefficient of 0.62) was obtained.

Figure 7.26 Multiple linear regression model for nodule abundance

AUV camera transects were acquired on a  $3.5 \times 3.5$  km grid pattern over the Collector Test Site. Subsets ( $1 \times 1$  m) of AUV camera data were extracted for each intersection point of the survey lines and the percentage nodule coverage was extracted as per the methods outlined above. Mean nodule long axis measurements were manually extracted from these images. This was necessary, as the majority of these extraction points are situated in Type 1 nodule facies, which were therefore not suited to the automated nodule detection method. Nodule abundance estimates were then derived for each of these intersection points, resulting in a  $3.5 \times 3.5$  km grid of nodule estimation points over the Collector Test Site Figure 7.27. These estimates were used to supplement the Mineral Resource estimate.

Figure 7.27 Nodule abundance estimates at 3.5 × 3.5 km node spacing within the Collector Test Site

#### 7.4 NORI 2019 campaign

Exploration in 2019 was divided into two campaigns (6A and 6B) due to the maximum duration of 45 days that OSV Maersk Launcher can remain out at sea. Campaign 6A was undertaken from 19/08/2019 to 03/10/2019 and Campaign 6B was undertaken from 10/11/2019 to 21/12/2019. The vessel was mobilised out of San Diego, California, USA.

Leap Energy was sub-contracted to provide geological support for the box coring operations. Bluefield Geoservices was subcontracted to provide the geotechnical logging and testing component of the programme, and ERIAS was sub-contracted to undertake environmental biological of the box cores.

##### 7.4.1 Box coring

A 100 x 75 x 50 cm stainless steel box corer built by KC Denmark, and a Kongsberg Maritime HiPAP 501 Ultra Short Base Line (USBL) system were used for the sampling campaigns. The box corer was operated by an MSS marine crew and was fitted with a large Kongsberg USBL beacon for positioning Figure 7.28 and a sound velocity profiler (SVP) to monitor sound velocity variations in the water column. The positioning was monitored by two certified surveyors from the Leap Energy team. Fixes were taken during each box core landing and all sample coordinates were recorded in WGS84 UTM 11N.

Figure 7.28 Box corer on deck showing the USBL beacon mounting position

The procedures for sampling the nodules in Campaigns 6A and 6B were essentially the same as in 2018, with only minor changes in workflow to improve the efficiency of the process. The main changes were that the sampling intervals were simplified 0–1 cm, 1–15 cm, and the samples were not coned and quartered onboard the vessel. A flow chart of the sampling procedure is provided in Figure 7.29.

#### 7.4.2 Nodule sampling

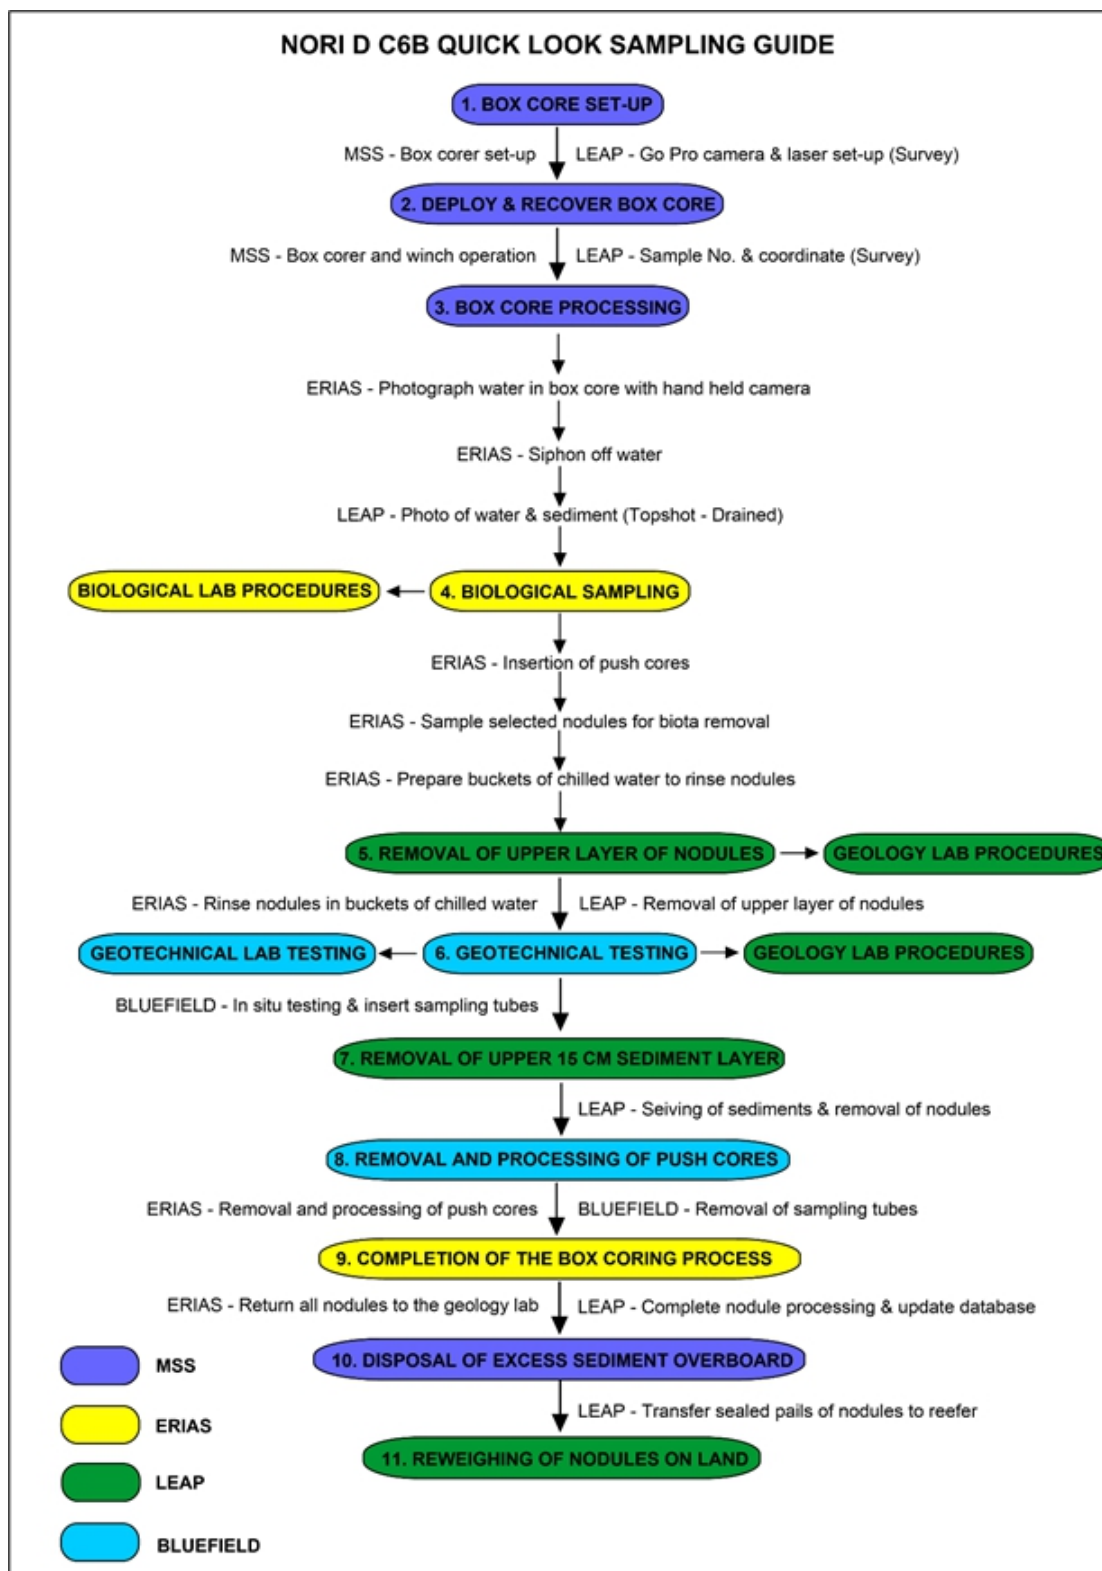

The dominant nodule shape, texture, degree of fragmentation, degree of botryoidal development together with the samples weight and nodule abundance was logged. The nodule facies classification system developed during the 2018 campaign was used. For the clay footwall succession, the sediment lithology and colour were recorded.

The dominant nodule facies in the NORI Area D license area for the samples recovered during Campaigns 6A and B was Type 1 (82%).

The nodule description and measurement procedures were the same as used in 2018.

Sample preparation procedures were the same as used in 2018, with the exception that they were coned and quartered at the on-shore laboratory, rather than onboard the vessel.

Figure 7.29 Box core processing flow sheet for Campaign 6B

Note for Campaign 6A the processing flow was similar, with the absence of biological push-cores.

### 7.4.3 Biological sampling

Biological sampling involved the collection of specimens of mega, macro, meio and microfauna from the samples of nodules and underlying sediments collected in the box cores during the 2019 campaigns. Specimens of biota were collected from a number of horizons in the box core sample, including sieving of the water layer overlying the sediments to collect motile specimens; physical removal of specimens of megafauna from sediment and attached to nodules and preserving them for later analysis; washing nodules to dislodge macro fauna; and using cores pushed into the sediment to collect meio and macro fauna from different sediment horizons. Sediment samples were also retained and preserved for environmental DNA (eDNA) analysis.

Biological material was collected and preserved from 100 box cores during Campaign 6A adding to the samples collected from 45 box cores during Campaign 3. All the samples and specimens collected during the campaigns have been appropriately preserved and are stored for identification and analysis at a later date.

Marine mammal observations were made from the bridge of the vessel and logged in a data base.

### 7.4.4 Geotechnical sampling

Bluefield Geoservices performed geotechnical testing on 206 box core samples to a maximum depth of 0.50 m below sea floor. These were performed as part of the work-flow once the box cores were landed out on deck. All samples were subject to cone penetrometer testing and a subset of samples were subject to a comprehensive series of tests, including shear vane and plate load tests, using a purpose-built geotechnical rig provided by Bluefield Geoservices. Coring and geotechnical logging were also completed off-shore. Three (3) push cores collected from each box core for laboratory analysis. A comprehensive campaign of laboratory testing was also undertaken.

The soils encountered were very soft clays. Off-shore geotechnical analysis consisted of cone penetration test (CPT), laboratory vane, Torvane and plate load testing Figure 7.30. Push core and bulk density samples were taken from the box core opportunistically to aid sample description. Samples were also collected for subsequent on-shore laboratory testing Figure 7.31. In addition, eight (8) gravity cores were collected.

Figure 7.30 Photographs of geotechnical plate load test (left) and CPT (Right)

Figure 7.31 Photographs of biological & geotechnical tube sampling

#### 7.4.5 Exploration results

Box core sampling was attempted at a total of 106 sites in the NORI Area D license area during Campaign 6A and 107 sites during Campaign 6B. Disturbed samples, considered to be unreliable, were omitted from the sample sequence.

A total of 106 box cores (BC046–BC151) and four gravity cores were acquired in the NORI Area D license area during Campaign 6A and 101 box cores (BC176–BC280) and four gravity cores were acquired during Campaign 6B. Disturbed samples, considered to be unreliable, were omitted from the sample sequence. Table 7.6 lists box core sample coordinates and polymetallic nodule weights and Figure 7.32 shows the location of the box cores.

The majority of the polymetallic nodules (92%) were found on the sediment surface (0 cm to 1 cm interval), with the remainder being predominantly encountered buried in the sediment at depths between of 1 cm and 15 cm. Occasionally, nodules were found buried deeper in the box core (15 cm to 30 cm), but these were generally in advanced stages of breakdown and were very easily broken when any attempt was made to recover them. The nodules from the deeper sedimentary layers (15 cm to 30 cm) were noted but were not collected or processed along with the nodule samples destined for the assay laboratory.

The nodules collected during the sampling campaign ranged in size from 10 mm to 250 mm in diameter. The dominant nodule shape encountered were discoidal in shape, whilst polynucleic shaped nodules were confined to the smaller Type 1 nodules.

The soils encountered in the box cores generally consisted of a lower sedimentary unit of very soft, pale brown clay, becoming dark brown with depth, and showing evidence of bioturbation.

The two sampling campaigns returned similar average nodule abundances, with the NORI\_D\_C6A campaign at 18.1 kg/m<sup>2</sup> and the NORI\_D\_C6B campaign at 17.0 kg/m<sup>2</sup>. In general, nodule abundance is higher in the north and west of NORI Area D and diminishes towards the southeast. Topographic or geological controls may control nodule type/nodule facies on a more local scale.

7.4.6 Analysis of grade distribution by size fraction

As part of the Campaign 6A and 6B box core sampling programme, a preliminary examination of the relationship between polymetallic nodule size and grade was carried out. Twenty-four (24) nodule box core samples were separated into four size fractions (+50 mm, -50 mm + 25 mm, -25 mm +10 mm, and -10 mm) using sieves.

Plots of the relative difference in grade between the assays for individual size fractions and the weight-averaged grade of the whole sample are shown in Figure 7.33 to Figure 7.36. The masses of the size fractions, in relative percentage, are shown in Figure 7.37. In general the proportion of material less than 10 mm (the -10 mm fraction) is very small.

Twenty-four samples are too few to make firm statistical conclusions, but the data is sufficient to show that distribution of nickel, cobalt, copper and manganese is not uniform across particles of different sizes. The particles may be whole nodules or abraded pieces of larger nodules. The samples show that selection of the particle size range that will be recovered by the seafloor collection system, and loss of fines by abrasion in the ore handling systems, may have small impacts on the grade of the ore recovered to the production support vessel.

8 Sample preparation, analysis, and security

This Section describes the methods used for preparing and assaying the box core samples from the 2018 and 2019 exploration campaigns. The methods used in 2019 were not materially different from those used by NORI in 2018. The assays produced from this programme, supplemented by Pioneer Investor data, were used for estimation of Mineral Resources in NORI Area D.

8.1 Security

8.1.1 Box core samples

The geoscience laboratory on board the Maersk Launcher was manned by a team of qualified geoscience staff rotating on 12-hour shifts during box coring operations. All samples were weighed at the weighing stations. Reference weights were used to periodically check the accuracy of the electronic scales. All weights and associated nodule descriptions were recorded in logbooks (also digitally scanned) and captured in a digital (Excel) database. A digital photographic archive of all samples was also compiled. Data was stored on a computer and backups to external disks were regularly made.

On completion of processing, samples were stored in polythene bags placed in gasket-sealed plastic pails. All nodule pails were assembled in the geoscience laboratory and temporarily stored there until they were transported to a refrigerated container (reefer). The reefer was secured with a tag-in, tag-out system.

Sample bags were prepared with triple redundancy- numbered zip tie, printed bar code, and hand-written in permanent ink. Tracking of samples was maintained with a bar-code scanner and digital database.

Following checking of the nodule count in each box core against the photographic record and reweighing of the nodules, the samples from the depth layers were recombined. These samples were assembled into respective storage pails depending on sample type and destination. Each sample was scanned and recorded on the sample master spreadsheet, and sample pails sealed with tamper-proof tape, and carried to the secured storage reefer Figure 8.1.

Figure 8.1 Sample storage

Source: NORI. Note: (Left to right) sealed pail containing samples, secured refrigerated container, tag-in tag-out logbook, and seal.

All samples were taken out of the reefer and reweighed on land upon arrival in San Diego. The sealed pails were reopened by geoscientists, weighed, scanned, replaced in pails, sealed with tamper-proof tape and returned to the secured storage reefer. Regular email communications were conducted with the Qualified Person for the Mineral Resource estimate during the sample acquisition operations.

### 8.1.2 Camera imagery

Camera imagery and data acquired by the Fugro ESVII AUV in 2018 was logged to the AUV's internal payload processing data storage disk. This data is co-registered, and time-date stamped with the vehicle's other geophysical sensors (e.g., SSS) and navigation systems and resultant navigation data. The vehicle was positioned with a combination of INS and USBL navigation.

Once each dive was completed and the AUV returned to deck, the data was transferred across from the payload data disk bottle to the Fugro data processing server and backed-up.

Preliminary processing of the data was undertaken on board to aid follow-up survey site selection and optimisation. Review of the data was undertaken by the Fugro Geoscience team and NORI Client Representative on the vessel. The data was fully processed post campaign completion at Fugro's Lafayette offices in Louisiana.

Additional image classification and nodule long-axes automated extraction was undertaken by the same Fugro 2018 NORI campaign Geoscience members at Fugro's offices in Houston, Texas.

## 8.2 Sample preparation and assaying

All samples were freighted to ALS Laboratory Group (ALS) in Brisbane, Australia. ALS has a biosecurity quarantine facility approved by the Australian Quarantine and Inspection Service (AQIS). All samples were irradiated before clearing quarantine. The samples were not heat-treated as this would have resulted in breakdown of some of the hydroxide minerals.

The samples were inspected by AMC staff to confirm that there had been no tampering since despatch from San Diego.

Each box core sample was divided into four: a primary sample, a duplicate (primary laboratory), a duplicate (secondary laboratory) and a reference sample. For the 2018 campaign this was carried out onboard the vessel, as described in Section 9.3.8. For the 2019 campaigns, the division was carried out by cone and quartering at the on-shore laboratory.

The primary samples were submitted to ALS. For the 2018 sampling campaign, the duplicates (secondary laboratory) were submitted to Bureau Veritas laboratory in Perth, Australia. For the 2019 sampling campaigns, the duplicates were assayed at ALS and a separate set of pulps was later sent to BV for independent analysis. Reference samples were retained by NORI and stored in Brisbane.

ALS in Brisbane was selected as the primary laboratory as it has extensive experience in the analysis of high manganese samples and polymetallic nodules. ALS operates quality systems based on international standards ISO/IEC17025:1999 "General requirements for competence of calibration and testing laboratories" and ISO9001:2000 "Quality Management Systems Requirements".

The sample preparation and assaying procedure at ALS was as follows:

- Samples were transferred to barcode-labelled aluminium trays and dried in an oven at 105 °C for three (3) days. This was a higher temperature than use in the 2018 programme but there appear to be no significant differences between the assays as a consequence. Moisture loss was measured.
- After drying, samples were jaw crushed in a Jacques jaw crusher to reduce particle size to less than 10 mm.
- The crushed samples were then pulverised in an LM5 mill to a powder with typical particle size >85% passing 75 µm. Very small samples were pulverised in a smaller bowl using an LM2 mill. A sieve test was conducted for every 20<sup>th</sup> sample to check the particle sizes.
- Pulps were analysed by a fusion/XRF method (ME-XRF26s) using a small aliquot (0.33 g) to avoid fusion problems. The following oxides were reported:
  - LOI, Al<sub>2</sub>O<sub>3</sub>, BaO, CaO, Cr<sub>2</sub>O<sub>3</sub>, CoO, Fe<sub>2</sub>O<sub>3</sub>, K<sub>2</sub>O, CuO, MgO, MnO, Na<sub>2</sub>O, P<sub>2</sub>O<sub>5</sub>, SO<sub>3</sub>, SiO<sub>2</sub>, NiO, TiO<sub>2</sub>, PbO, ZnO.
- Pulps were fused with lithium borate to create a bead that was dissolved with acid and analysed by inductively-coupled plasma emission mass spectroscopy (ICP-MS) (method ME-MS81) for:
  - Ba, Ce, Cr, Cs, Dy, Er, Eu, Ga, Gd, Hf, Ho, La, Lu, Nb, Nd, Pr, Rb, Sm, Sn, Sr, Ta, Tb, Th, Tm, U, V, W, Y, Yb, Zr.
- Pulps were analysed for:
  - As, Cd, Li, Mo, Sb by four acid ICP-AES method (ME-ICP61).
  - Bi, Ge, Se, Te, Tl by four acid digest ICP-MS (method ME-MS62s).
  - Hg by low temperature digestion in aqua regia and ICP-MS (method Hg-MS42).
  - B by ICP-MS (method B-ICP69).
  - F by KOH fusion and ion selective electrode (method F-ELE81a).
  - Loss on ignition (LOI) at 1000 °C.

Manganese can exist in different oxidation states. AMC checked the totals of all the oxides plus LOI for each sample. The totals were generally about 96%. The shortfall of about 4% appears to arise because some of the manganese occurs in higher-valence states. A more realistic conversion of elemental manganese to manganese oxide would be approximately MnO<sub>1.85</sub>.

ALS also reported a calculated total, being the sum of the reportable analytes plus LOI. Manganese was included in this calculation as Mn<sub>3</sub>O<sub>4</sub> but was reported on the certificate of analysis as MnO. This leads to the sum of analytes reported plus LOI, calculated by AMC, adding up to a lower value than the total calculated by ALS. The ALS calculation using Mn<sub>3</sub>O<sub>4</sub> is aimed at covering the middle ground of MnO and MnO<sub>2</sub>.

BV was used as the secondary laboratory, to provide an independent check on the accuracy of the sample preparation and assaying by ALS. BV operates quality systems based on international standards ISO/IEC17025:1999 and ISO9001:2000. Each sample batch included internal quality control samples (certified reference materials).

The sample preparation and assaying procedure at BV was as follows:

- Samples were dried in an oven at 105 °C. Moisture loss was measured.
- Samples crushed and split, if required, then pulverised in a vibrating pulveriser

- Pulps were cast using a 12:22 flux with added sodium nitrate to form a glass bead. The beads were analysed by XRF for: TiO<sub>2</sub>, Fe, Al<sub>2</sub>O<sub>3</sub>, SiO<sub>2</sub>, Mn, CaO, MgO, S XRF, P XRF, BaO, K<sub>2</sub>O.
- Pulps were analysed by Laser Ablation Inductively Coupled Plasma Mass Spectrometry for:
  - Ag, As, Ba, Be, Bi, Cd, Ce, Co, Cr, Cs, Cu, Dy, Er, Eu, Ga, Gd, Ge, Hf, Ho, In, La, Lu, Mn, Mo, Nb, Nd, Ni, Pb, Pr, Rb, Re, Sb, Sc, Se, Sm, Sn, Sr, Ta, Tb, Te, Th, Ti, Tl, Tm, U, V, W, Y, Yb, Zn, Zr.
- Pulps were analysed for LOI at 1000 °C.

### 8.3 Quality assurance and quality control procedures 2018

Certified reference materials (CRMs), blank samples (crushed rock samples with very low Mn, Ni, Co and Cu) and duplicate samples were used for quality control and quality assurance during the NORI 2020 campaign.

#### 8.3.1 Certified reference materials

The CRM called NOD-P-1, manufactured by the U.S. Geological Survey (USGS), was used for the NORI 2020 campaign. Material used in the preparation of the CRM was collected from the Pacific Ocean (14°50' N, 124°28' W) at a depth of 4,300 m.

Six CRMs were inserted into the NORI 2018 campaign sample submissions at a rate of 1 in 14. Table 8.1 shows the assayed oxide values for manganese, cobalt, nickel and copper for the CRMs and the certified values for NOD-1-P.

There was a slight positive bias in the manganese oxide assays and the BV (Bureau Veritas Minerals Pty Ltd) assays for nickel, manganese and cobalt were slightly elevated relative to those from ALS but these differences are not significant. The CRM results indicate that the NORI 2018 assay results are satisfactory.

Table 8.1 CRM assays from NORI 2018 campaign

Sample	NiO (%)	CuO (%)	MnO (%)	CoO (%)	Laboratory
<b>Certified value</b>	<b>1.71</b>	<b>1.44</b>	<b>37.6</b>	<b>0.28</b>	-
0367075A	1.720	1.430	38.040	0.280	ALS
0367108A	1.730	1.450	38.240	0.280	ALS
0367175A	1.720	1.420	38.000	0.280	ALS
0367177A	1.720	1.410	37.920	0.280	ALS
0367109A	1.781	1.440	38.865	0.294	BV
0367183A	1.794	1.452	38.865	0.296	BV

#### 8.3.2 Blanks

The blank samples were composed of dolomite gravel or granite, which were expected to have very low content of manganese, cobalt, nickel and copper. The blank material was not assayed prior to insertion in the NORI sample batches. A total of 11 blank samples were inserted into the NORI 2018 sample assay batches at a rate of 1 in 8. Table 8.2 shows the assayed oxide values for the blanks. The assays for the blank samples indicate slightly elevated manganese (deliberate as some of the blanks had manganese mixed in with the blank) and negligible nickel, copper and cobalt.

Table 8.2 Blank sample assays from NORI 2018 campaign

Sample	NiO (%)	CuO (%)	MnO (%)	CoO (%)	Laboratory
0367116A	0.010	0.010	0.380	0.010	ALS
0367089A	0.030	0.030	0.630	0.010	ALS
0367091A	0.010	0.010	0.230	0.010	ALS
0367118A	0.010	0.010	0.380	0.010	ALS
0367200A	0.010	0.010	0.060	0.010	ALS
0367202A	0.020	0.010	0.420	0.010	ALS
0367241A	0.010	0.010	0.460	0.010	ALS
0367052A	0.006	0.004	0.181	0.001	BV
0367088A	0.010	0.007	0.232	0.001	BV
0367149A	0.009	0.009	0.284	0.001	BV
0367239A	0.003	0.002	0.142	0.002	BV

### 8.3.3 Duplicates

Duplicate samples were prepared by cone and quartering the box core samples, as described in Section 9.3.8.

A total of 44 samples were assayed at ALS paired with duplicate samples also assayed at ALS. Figure 8.2 presents the results. The precision of the results is very good and there is no evidence of significant biases or errors.

A total of 43 samples were assayed at ALS paired with duplicate samples assayed at BV. Figure 8.3 presents the results. The precision of the results is good. There are very small high bias for nickel and manganese compared with the ALS assays Table 8.3 but this is not significant.

These results are consistent with the observation for the assays of the NOD-P-1 standard.

The maximum half absolute relative difference for the ALS paired data is NiO = 1.95%, CuO = 4.76%, MnO = 1.99%, CoO = 4.35% and for the BV assays paired with the ALS primary samples is NiO = 3.22%, CuO = 2.49%, MnO = 2.31%, CoO = 6.35%. The precision in the nodule sample assays is acceptable.

Figure 8.2 Comparison of primary samples assayed at ALS and duplicate samples assayed at ALS

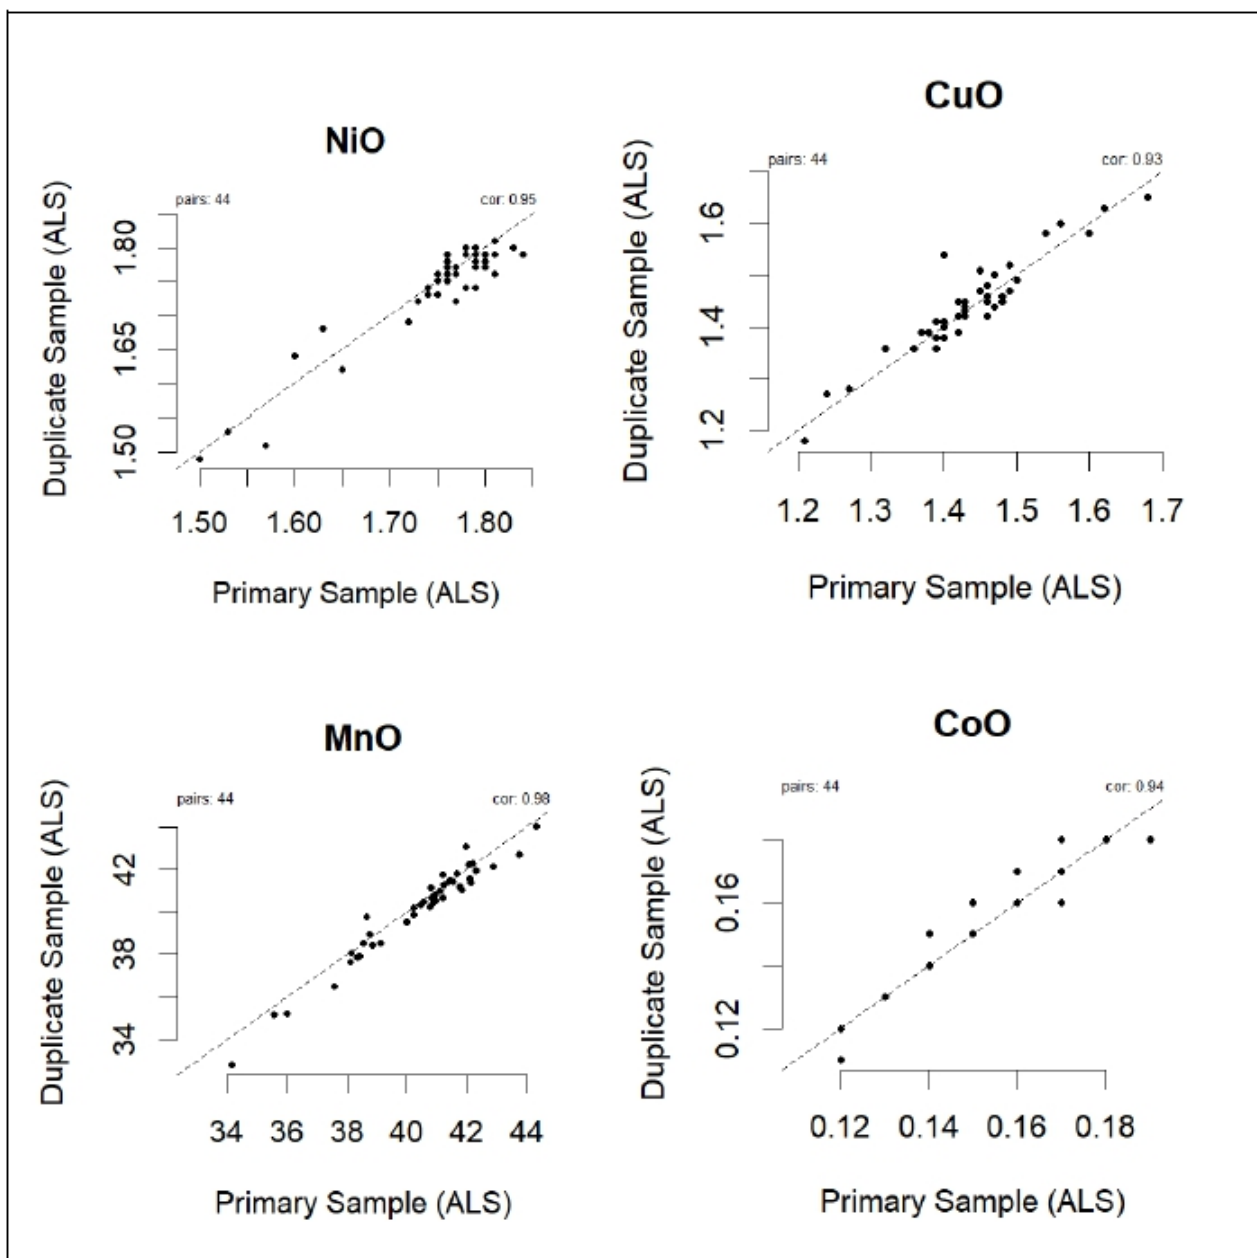

Figure 8.3 Comparison of primary samples assayed at ALS and duplicate samples assayed at BV

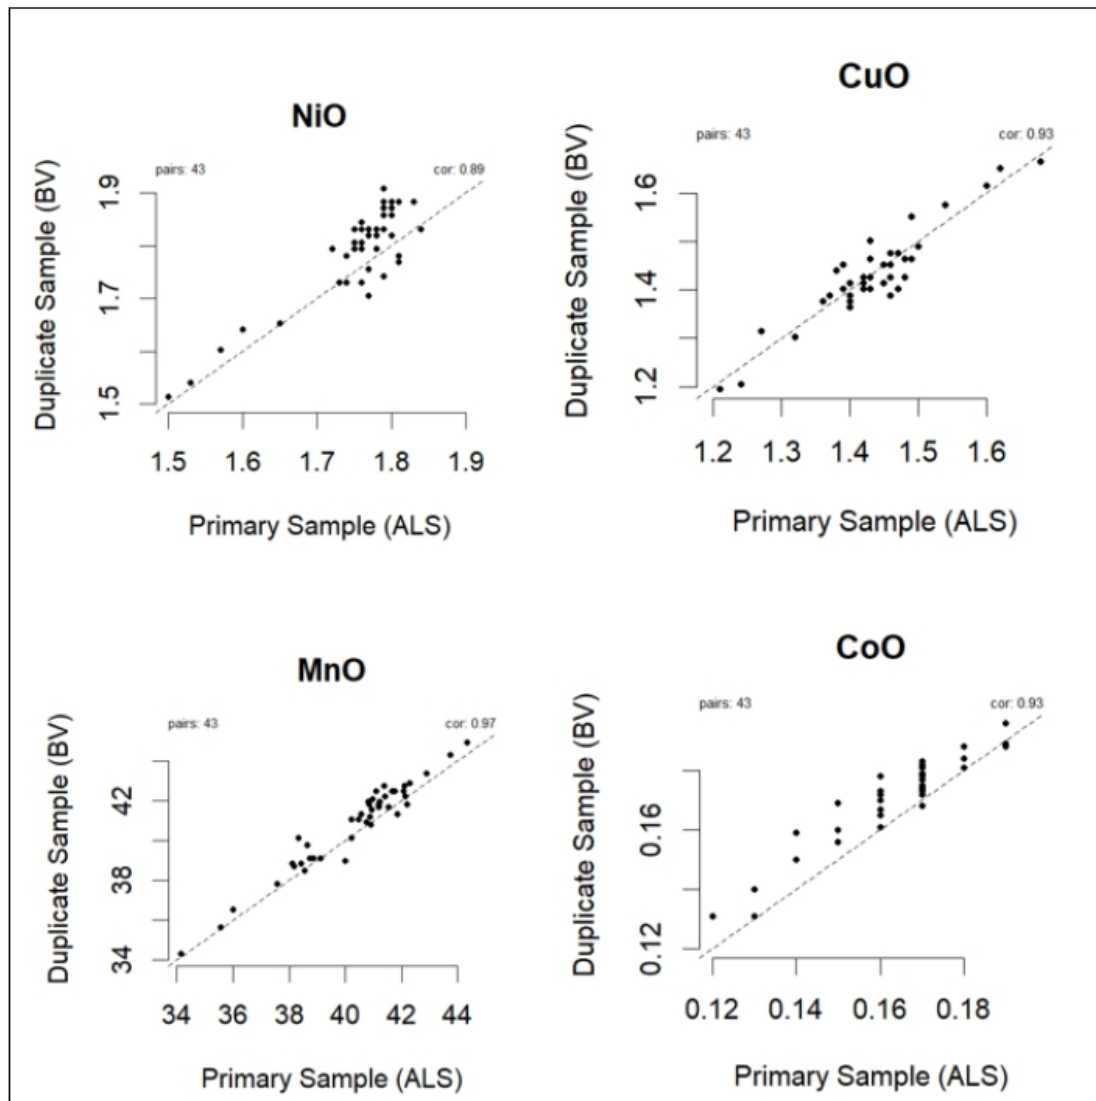

Table 8.3 Duplicate average sample grades by laboratory

Variable	ALS Primary	ALS Duplicate	BV Duplicate
NiO (%)	1.75	1.74	1.79
CuO (%)	1.44	1.44	1.43
MnO (%)	40.39	40.11	40.82
CoO (%)	0.16	0.16	0.17

## 8.4 Quality assurance and quality control procedures 2019

Certified reference materials (CRMs), blank samples, and duplicate samples were used for quality control and quality assurance during assaying of the samples collected in the 2019 campaigns.

### 8.4.1 Certified reference materials

The CRM called NOD-P-1 was used. A total of 22 CRMs were inserted into sample submissions at a rate of 1 in 10. Table 8.4 shows the assays for the CRMs and the certified values for NOD-1-P.

There was a slight positive bias in the manganese oxide assays and the BV (Bureau Veritas Minerals Pty Ltd) assays for nickel, manganese and cobalt were slightly elevated relative to those from ALS but these differences are not significant. The CRM results indicate that the NORI 2019 assay results are satisfactory.

All the assays for Nod-1-P from ALS were within two standard deviations of the certified values and were satisfactory. The single Nod-1-P sample assayed at BV returned assays for nickel, copper, manganese and cobalt that were all biased slightly high.

Table 8.4 CRM assays from NORI 2019 campaigns

Sample	NiO (%)	CuO (%)	MnO (%)	CoO (%)	Laboratory
<b>Certified value</b>	<b>1.71</b>	<b>1.44</b>	<b>37.6</b>	<b>0.28</b>	-
STD11	1.73	1.43	37.86	0.28	ALS
STD12	1.72	1.43	37.79	0.28	ALS
STD1	1.73	1.45	37.3	0.29	ALS
STD2	1.72	1.42	37.29	0.28	ALS

STD21	1.71	1.43	37.72	0.28	ALS
STD4	1.82	1.54	38.87	0.30	BV

### 8.4.2 Blanks

The blank samples were composed of recycled glass, which were expected to have very low content of manganese, cobalt, nickel and copper. The blank material was not assayed prior to insertion in the NORI sample batches. A total of 11 blank samples were inserted into the NORI 2019 sample assay batches at a rate of 1 in 19. Table 8.5 shows the assays for the blanks. The assays for the blank samples indicate negligible contamination in the sample preparation.

Table 8.5 Blank sample assays from NORI 2019 campaign

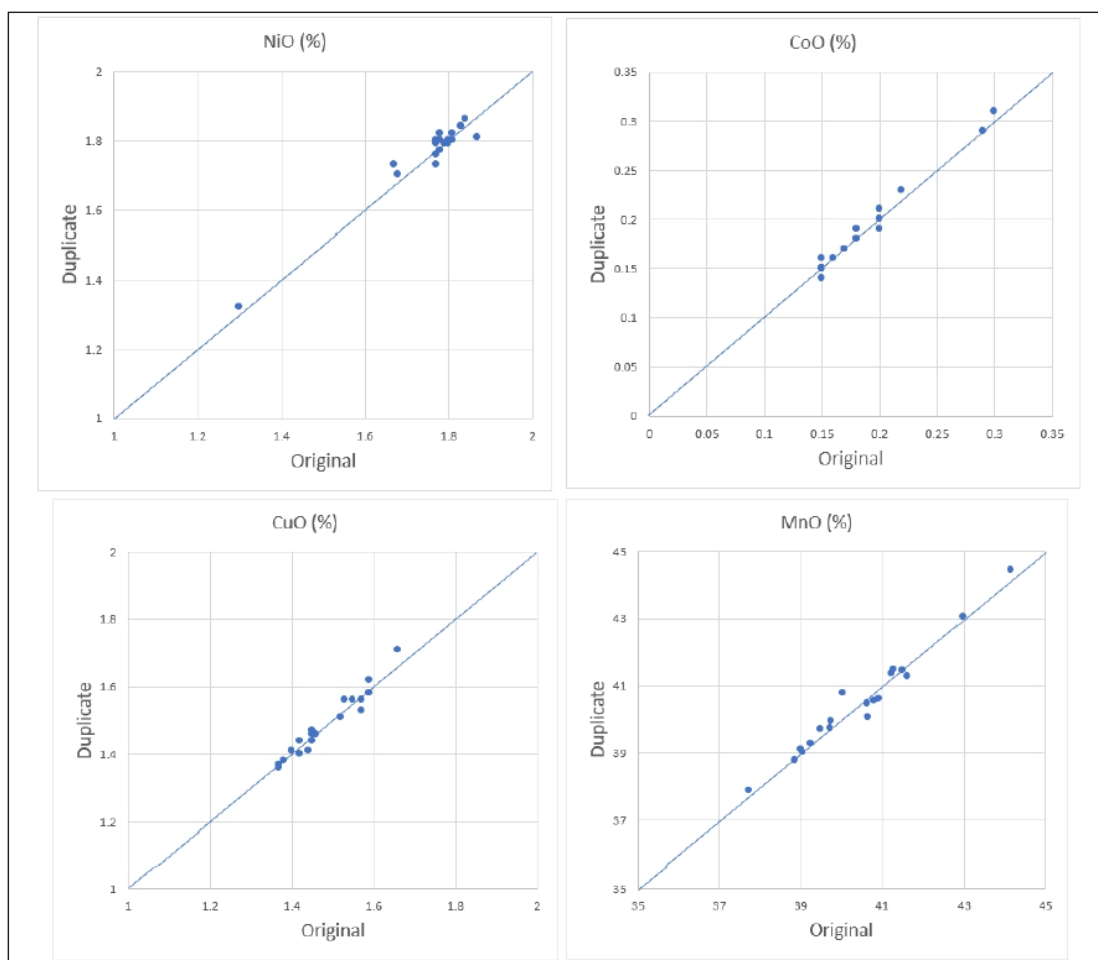

Blank name	Sample	NiO (%)	CuO (%)	MnO (%)	CoO (%)
UUM_3	Blank1	<0.01	<0.01	<0.01	<0.01
UUM_3	Blank2	0.01	<0.01	0.13	<0.01
UUM_3	Blank3	0.01	0.01	0.13	<0.01
UUM_3	Blank4	0.01	0.01	0.12	<0.01
UUM_3	Blank5	0.02	0.01	0.57	<0.01
UUM_4	Blank6	<0.01	0.02	<0.01	<0.01
UUM_4	Blank7	<0.01	0.03	<0.01	<0.01
UUM_4	Blank8	0.02	0.02	0.2	<0.01
UUM_4	Blank9	0.01	0.03	0.22	<0.01
UUM_4	Blank10	0.01	0.02	0.16	<0.01
UUM_4	Blank11	0.02	0.04	0.42	<0.01

### 8.4.3 Duplicates

Duplicate samples were prepared by cone and quartering the box core samples, as described in Section 9.3.8. A total of 19 samples were assayed at ALS paired with duplicate samples also assayed at ALS. Figure 8.4 and Table 8.6 presents the results. The precision of the results is very good and there is no evidence of significant biases or errors.

Figure 8.4 Comparison of primary samples assayed at ALS and duplicate samples assayed at ALS

Note: Diagonal blue line at 1:1 ratio

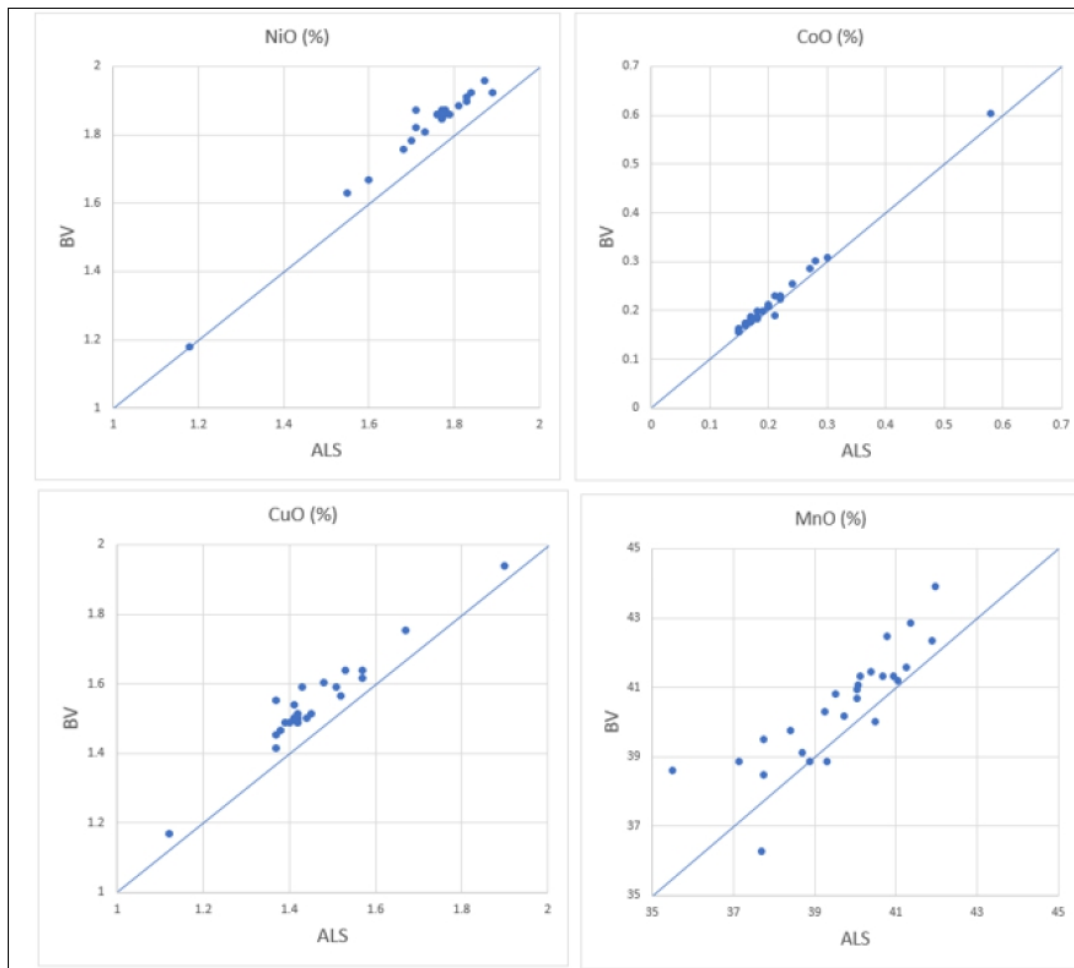

Table 8.6 Duplicate average sample grades from ALS

Variable	Number	ALS Primary	ALS Duplicate
NiO (%)	19	1.76	1.77
CuO (%)	19	1.48	1.49
MnO (%)	19	40.47	40.47
CoO (%)	19	0.19	0.19

The pulps of 27 pulp samples assayed at ALS were resubmitted for assay at BV. Figure 8.5 presents the results. The results for nickel, copper, cobalt and manganese are all biased high by approximately 3% to 5%, compared with the ALS assays Table 8.7.

These results are consistent with the observation for the assays of the NOD-P-1 standard which indicated that the BV results were biased slightly high.

Figure 8.5 Comparison of primary samples assayed at ALS and duplicate samples assayed at BV

Note: Diagonal blue line at 1:1 ratio

Table 8.7 Duplicate average sample grades from ALS and BV

Variable	Number	ALS Primary	BV Pulp Duplicate
NiO (%)	27	1.74	1.82
CuO (%)	27	1.47	1.56
MnO (%)	27	39.4	40.5
CoO (%)	27	0.21	0.22
SiO <sub>2</sub> (%)	27	12.6	12.9

### 8.5 Moisture content

The moisture content of polymetallic nodules consists of two main types of water: free water occurring with pore spaces and water of crystallisation which forms part of the mineral structure of many of the iron and manganese minerals in the nodules. There may also be moisture held in meta-stable mineral phases.

Manganese minerals with various types of crystalline lattice have different levels of thermal stability. Layered manganese minerals (buserite I, asbolane-buserite, and birnessite) are stable up to 120 °C–150 °C; asbolane up to 180 °C, vernadite, up to ~500 °C; todorokite and pyrolusite, up to 600° and 670 °C, respectively (Novikov and Bogdanova, 2007). Measures of the moisture content of polymetallic nodules are therefore highly dependent on the temperature and the length of time to which the nodules are heated.

Published data on the moisture content of polymetallic nodules is commonly inconsistent. The following moisture content information was obtained from samples collected in the NORI Areas:

- A drying test undertaken on a nodule sample collected during the NORI 2012 campaign indicated moisture loss of 24% at 120°C (Golder, 2015).
- Average moisture content of four Campaign 2 samples dried for 12 hours at 120 °C was 28.7% (Golder, 2015).
- Average moisture content of the Campaign 3 (2018) box core samples dried for three days at 60 °C (at ALS) was 19.3% and LOI at 1,000 °C was 16.8%.
- Average moisture content of the Campaign 3 (2018) box core samples dried for at 105 °C (at Bureau Veritas) was 17.0% and LOI at 1,000 °C was 16.6%.
- Average moisture content of the Campaign 6A and 6B (2019) box core samples dried for at 105 °C (at ALS) was 28.1% and LOI at 1,000 °C was 15.6%.

Ambient conditions, such as air temperature, humidity, evaporation rate and exposure time, during the handling of the nodules prior to sealing in sample bags were not recorded in these programmes. Also, the impact of drying time and oven temperature on the removal of pore water from the nodule samples has not been quantified. Consequently, the average moisture contents measured in different campaigns may not be directly comparable.

The loss on ignition data, which are measures of water of crystallization, are better controlled and show a reasonable degree of consistency.

9 Data verification

The original assay sheets for the individual samples collected by the Pioneer Investors from within the NORI Area are not available for auditing against the values in the database. Neither AMC nor DeepGreen nor NORI have had access to the original assay sheets for the individual samples that are within the Area, nor the quality control procedures used by the laboratories and the ISA. However, the consistency between the abundance and grade data collected by the Pioneer Investors, as presented in Section 9.1, supports the contention that the quality of the Pioneer Investor data is satisfactory.

It is also reasonable to infer that the Pioneer Investor data are of sufficient quality for resource estimation because the ISA is an independent agency with significant accountability under the Law of the Sea. Part of its mandate is the receipt and storage of seafloor sampling data suitable for the estimation of nodule resources and the legally binding award of licenses. It is reasonable to assume that a reasonable level of care was applied by the ISA.

Data collected by NORI is well-documented and was subject to satisfactory QA/QC processes. Documentation verified by the Qualified Person includes photographs, daily exploration reports, digital logging sheets and original assay reports. In the opinion of the Qualified Person the NORI data is of high quality and suitable for estimation of Measured Mineral Resources.

Assaying of nodules collected by NORI in 2012, 2013, 2018, and 2019 confirm the mean grades of the historical grab samples and support the contention that the quality of the Pioneer Investor data is satisfactory for inclusion in resource estimation. The main limitation with the Pioneer Investor data is the likelihood that some of the abundance values were too low, due to loss of nodules from the FFG. Estimates of abundance that include Pioneer Investor data are therefore likely to be conservative.

10 Mineral processing and metallurgical testing

### 10.1 Introduction

A combined pyro- and hydro-metallurgical flowsheet was evaluated for these IA. Similar flowsheets were investigated at various times over the last several decades. NORI initially relied on the significant body of information in the literature for process development. Subsequently, they have embarked on an extensive program of small and pilot-scale pyrometallurgical test work that has further informed definition of that part of the flowsheet. The work to date is discussed in Section 10.3.

The literature on test work for this process was reviewed and interpreted by Kingston Process Metallurgy in their report to NORI in October 2017. In turn, that report was reviewed as part of the current study, with important aspects from it being adopted for the purposes of process modelling and definition. Relevant extracts from the report are reproduced below in Section 10.2 shown in *italic* font. Comments from the Initial Assessment Section 13 author are shown as footnotes where applicable.

### 10.2 Literature review (from KPM concept study, 12 October 2017)

#### 10.2.1 Studies on the pyrometallurgical processing of polymetallic nodules

*Pyrometallurgical processing of nodules has been extensively studied from the early 1970s until the present day and appears to be the preferred process for most of the other currently active nodule processing research groups. Many groups including: Kennecott; Inco; Cuban / Bulgarian; German; Indian; Japanese; and Korean have studied pyrometallurgical processing of nodules at a laboratory scale. The nodule samples for these tests were collected from their respective license areas in the Clarion Clapperton [sic] Zone (CCZ). The composition of the nodules used in each of the studies is compared in Table 10.1 with that of the NORI Area D resource nodules. [Note: the NORI assays are from samples collected prior to 2017, not the current resource estimate].*

Table 10.1 Comparison of sea nodule composition

Element	NORI	Inco	German	Japan	Indian	USBM
Ni	1.36%	1.14%	1.36%	1.36%	1.15%	1.33%
Cu	1.14%	0.80%	1.17%	1.04%	1.10%	1.20%
Co	0.13%	0.22%	0.16%	0.18%	0.08%	0.23%
Mn	28.40%	23.20%	31.23%	28.40%	24.30%	29.70%
Fe	6.68%	6.90%	6.20%	5.07%	5.36%	5.50%
Mo	-	0.06%	0.06%	0.06%	-	-
Zn	0.15%	0.11%	0.15%	0.14%	-	0.15%
SiO <sub>2</sub>	18.40%	18.43%	12.64%	12.20%	13.14%	13.40%
Al <sub>2</sub> O <sub>3</sub>	3.89%	5.80%	4.29%	4.35%	4.5%	4.76%
MgO	2.92%	2.90%	3.20%	-	2.70%	3.12%
CaO	2.16%	1.81%	2.27%	2.19%	0.76%	1.79%
Na <sub>2</sub> O	2.40%	5.12%	2.74%	-	1.02%	2.97%
K <sub>2</sub> O		-	1.19%	-		1.13%
P		0.17%	0.21%		0.01%	0.10%
MnO / SiO <sub>2</sub>	1.99	1.63	3.19	3.01	2.39	2.86

*It should be noted that while in general the different nodule samples have similar compositions, there are subtle variations that can have significant implications for pyrometallurgical processing. Of particular importance is the ratio of MnO:SiO<sub>2</sub> in the nodules as this impacts the choice of process operating parameters for the electric furnace smelting operation. This issue is discussed further in the Sections below.*

*Based on a review of the data found in the nodule smelting literature, it was concluded that the best data for designing a preliminary pyrometallurgical flowsheet for treating NORI nodules was provided by the Inco, Japanese and German references.*

#### **10.2.1.1 Inco**

*Inco<sup>1</sup> did extensive test work in the early 1970s on smelting nodules using a conventional Rotary Kiln Electric Furnace (RKEF) flowsheet for FeNi production from laterite, as shown in Figure 10.1.*

*Inco carried out laboratory tests using as received nodules (30% moisture) to simulate drying and reduction in a rotary kiln at 1,000 °C using a reducing gas containing: 14.7% CO, 8.2% H<sub>2</sub>, 6.7% CO<sub>2</sub>, 6.7% H<sub>2</sub>O and 63.2% N<sub>2</sub> from combusting Bunker C oil with 60% stoichiometric air. Most of the Ni, Cu and Co oxides (70–90%) were reduced together with about 25% of the Fe oxides to a metal. With the addition of 4.5% anthracite coal, the extent of Fe oxide reduction to metal increased to about 45%. Inco also carried out tests to study the behaviour of the nodules in a 15 cm diameter pilot scale rotary kiln and reported that the amount of dust generated was similar to that observed in a commercial laterite rotary kiln and that the maximum temperature of operation for a kiln would be about 1,000 °C before the reduced nodules became sticky and caused plugging of the kiln. Unfortunately, no other data was reported from the pilot kiln tests.*

---

<sup>1</sup> R. Sridhar, W. E. Jones, and J. S. Warner, "Extraction of copper, nickel and cobalt from polymetallic nodules", JOM, April 1976, p 32.

Figure 10.1 Schematic flow diagram of the Inco process for treating polymetallic nodules

The Inco nodules had a low MnO:SiO<sub>2</sub> ratio of 1.6 with an estimated liquidus temperature of only about 1,300 °C. The Ni-Cu-Co-Fe alloy has a similar liquidus temperature so that no fluxes were needed to be able to smelt the nodules to produce a fluid slag and alloy at a reasonable temperature of about 1,400 °C. The pre-reduced nodules were blended with coal and smelted in crucibles at 1,380-1,420 °C for 1 hour to produce a metal phase, typically containing >90% of the Ni, Cu and Co, and a slag phase containing >97% of the Mn. No fluxes were added. Typical results are shown in Table 10.2 and Table 10.3.

Table 10.2 Results from Inco smelting tests

Element	Alloy <sup>1</sup> - Wt %	Slag <sup>2</sup> - Wt %	Recovery in Alloy Wt %
Nickel	12.5–21.0	0.05–0.15	93–98
Copper	8.5–11.5	0.04–0.12	85–95
Cobalt	2.0–3.0	0.006–0.015	90–98
Iron	60.0–70.0	0.7–1.7	80–90
Manganese	0.3–6.0	25–33	0.5–2.5

Pre reduced at 1000 °C for 1 hour and smelted at 1400 °C.

<sup>1</sup> 6–8.5% of dry nodule weight.

<sup>2</sup> 72–80% of dry nodule weight.

Table 10.3 Distribution of Elements During Reduction Smelting (Inco)

Element	Alloy <sup>1</sup> - Wt %	Slag <sup>1</sup> - Wt %	Recovery <sup>2</sup> in Alloy, Wt %
Nickel	13.7	0.05	98
Copper	8.7	0.02	95
Cobalt	2.3	0.006	98
Iron	70.7	1.26	87
Manganese	1.2	32.0	0.5
Molybdenum	0.56	< 0.01	>86
Vanadium	0.002	0.04	0.5
Titanium	0.02	0.45	0.5
Zinc	0.09	0.01	6
Lead	0.01	0.003	2
Phosphorus	0.99	0.13	36
Sodium	< 0.003	2.76	1
Arsenic	0.04		64
Antimony	0.03		~100

<sup>1</sup> Alloy was 8% of dry nodule weight and slag was 72% of dry nodule weight.

<sup>2</sup> Recovery from nodules.

*The molten Ni-Cu-Co-Fe alloy from the smelting furnace was converted using air to oxidise the Mn and about 15% of the Fe to slag. The alloy was then sulphidised by injecting elemental sulfur to form Ni<sub>3</sub>S<sub>2</sub>, Cu<sub>2</sub>S and Co<sub>9</sub>S<sub>8</sub> and the resulting highly metallised (Fe) matte was converted using air to form a high-grade (HG) matte (about 5% Fe) and a low Ni-Cu-Co slag with minimal SO<sub>2</sub> generation.*

*The ground matte was oxygen pressure leached at 110-160 °C in sulfuric acid to extract 99% of the contained Ni, Cu and Co and precipitate most of the Fe. In the Inco flowsheet, it was proposed to recover the Cu by SX/EW and the Ni and Co as metals or salts by any of the many available conventional processes. A high Mn slag (44% MnO) from one of the smelting tests was reduced with coke in an electric furnace to produce a ferro-manganese (82% Mn) alloy, the main form of Mn alloy used by the steel industry at that time.*

#### 10.2.1.2 Sumitomo

*In the 1990s, Sumitomo<sup>2</sup> investigated a smelting flowsheet similar to Inco's for processing nodules. The nodules used had a high MnO: SiO<sub>2</sub> ratio of 3 giving an estimated slag liquidus temperature of about 1,530 °C. The nodules were crushed, dried at 110 °C to remove water not chemically bound, mixed with coal and flux and heated at 900 °C for two hours. The calcine was then smelted at 1,400 °C using 5% fixed carbon addition, as coal, and with additions of 12% SiO<sub>2</sub> and 7% CaO to minimise the liquidus. The results of the laboratory smelting tests are shown in Table 10.4.*

<sup>2</sup> Tetsuyoshi Kohga et al, "Recovering Iron, Manganese, Copper, Cobalt, and High Purity Nickel from Polymetallic nodules", JOM, December 1995, p 40.

Table 10.4 Results of Sumitomo smelting tests

Element	Alloy (wt. %)	Recovery (%)	Slag (wt. %)
Ni	22.3	98.5	0.02
Cu	16.7	97.5	0.03
Co	5.4	96.8	0.01
Mn	0.22	0.05	31.3
Fe	55.0	62.1	2.79
Zn	0.01	3.2	<0.01
Mo	1.01	80	<0.1

The Ni, Cu and Co recoveries to the alloy were very high together with very little Mn reduction. After partial oxidation of the alloy to slag off the Mn and part of the Fe, the residual alloy was fully sulphidised with sulfur to convert all the Fe to FeS and then further converted to a purified matte and SO<sub>2</sub>, as shown in Table 10.5.

The purified Ni-Cu-Co matte was leached with Cl<sub>2</sub> gas and to extract 99% of the metals into a chloride pregnant liquor solution (PLS) containing: 145 g/L Ni, 74 g/L Cu, 11 g/L Co and 19 g/L Fe and a sulfur residue that would be recycled back to the converter for sulphidisation. Ni, Cu and Co metals were recovered from the chloride PLS by SX/EW and the Cl<sub>2</sub> gas recycled to the leach using the same processes as used at Sumitomo's Ni refinery.

Table 10.5 Composition of matte produced by Sumitomo

Element	Alloy (wt. %)	Recovery (%)
Ni	20.0	34.2
Cu	14.7	25.3
Co	4.83	4.05
Mn	<0.1	<0.1
Fe	34.7	10.8
S	33.2	25.7

The Mn slag from smelting was reduced in two stages: a first stage to remove Fe and P to produce a Fe-Mn alloy followed by a second stage to produce a SiMn alloy.

### 10.2.1.3 German Federal Institute for Geosciences and Natural Resources

Most recently, a German group conducted a study with the aim to develop "a sustainable, zero-waste process route to extract valuable metals from marine Mineral Resources" from the German licensed territory in the CCZ<sup>34</sup>. After reviewing historical work conducted on possible hydrometallurgical and pyrometallurgical flowsheets, it was concluded that the pyrometallurgical flowsheet developed by Inco offered the most promise to treat manganese containing nodules.

Subsequently, a preliminary thermodynamic model of the first smelting step of the Inco flowsheet was developed and validated against experimental data. The sample of the German nodules under investigation had a very high MnO: SiO<sub>2</sub> ratio of 3.2 with an estimated (FactSage) slag liquidus temperature of about 1550 °C. The thermodynamic model further estimated that the slag liquidus temperature decreases with MnO: SiO<sub>2</sub> ratio, as shown in Figure 10.2. The implications for the smelting step was that additions of silica could be used to lower the slag liquidus, allow the smelting to be conducted at a lower temperature and minimise the reduction of manganese.

<sup>3</sup> D. Friedmann, A. K. Pophanken and B. Friedrich, "Pyrometallurgical Treatment of High Manganese Containing Deep Polymetallic nodules", J. Sustain. Metall., Published Online 18 July 2016.

<sup>4</sup> Friedmann, D, et al, "Optimized slag design for maximum metal recovery during pyrometallurgical processing of polymetallic deep-polymetallic nodules", MOLTEEN16, TMS 2016, p. 97-104.

Smelting tests were carried out using a 50 kW electric furnace with 3 kg mixtures of nodules, silica flux and carbon using MnO: SiO<sub>2</sub> ratios of 1.0, 2.0 and 3.2. The alloy and slag compositions from the tests are summarised in Table 10.6.

Figure 10.2 Estimated Slag Liquidus as a function of MnO<sub>2</sub>/SiO<sub>2</sub> ratio

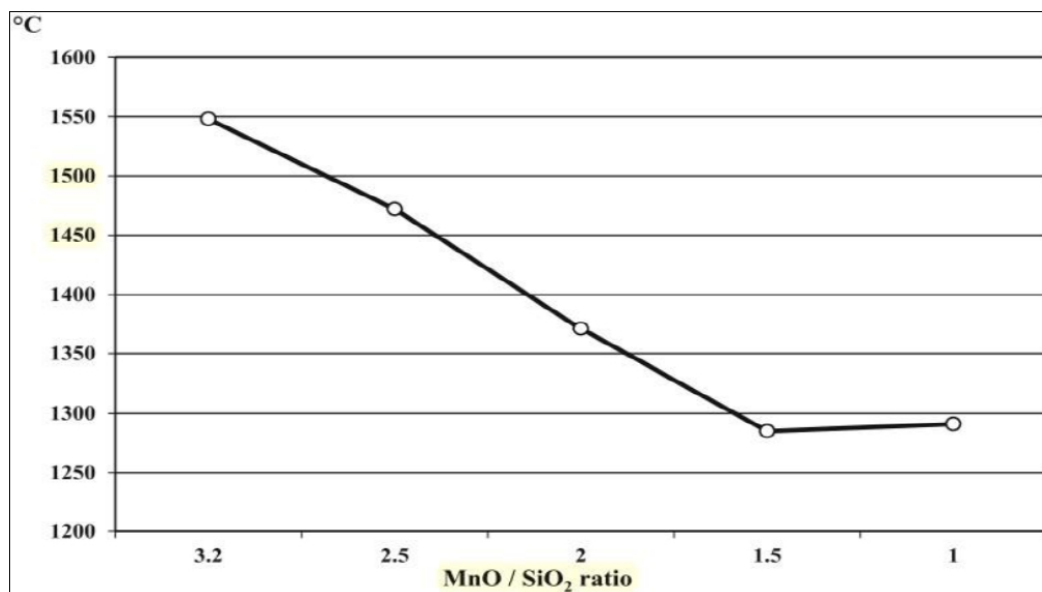

Table 10.6 Results from the German smelting tests

MnO / SiO <sub>2</sub>	Ni (%)	Cu (%)	Co (%)	Fe / FeO (%)	Mn / MnO (%)	SiO <sub>2</sub> (%)	Temperature (°C)
3.2 – alloy	13.4	9.1	0.7%	54.3	18.5	-	1650
3.2 - slag	0.5	0.7	-	9.4	55.3	14.7	
2.0 – alloy	17.0	12.7	1.9%	62.4	2.2	-	1450
2.0 - slag	-	-	-	3.5	47.4	31.0	
1.0 – alloy	17.8	10.8	2.0%	60.4	2.5	-	1400
1.0 - slag	0.1	0.2	-	3.0	38.0	41.0	

The results showed good general agreement with the predictions of the thermodynamic model and indicated that SiO<sub>2</sub> flux additions could be used to operate the smelting process at a temperature of 1400–1500°C with minimum MnO reduction. The Ni recovery in all tests was >95%. Using the nodule, matte and slag compositions and assuming a Ni recovery to matte of 96.5%, the matte and slag weights and compositions were estimated together with the Ni, Cu, Co, Fe and Mn recoveries to alloy and the partition coefficients, as shown in Table 10.7. The estimated Cu and Co recoveries, based on the assumptions used to generate the mass balances, were significantly lower than the other data ranging from 76–84% for Cu and 43–92% for Co. These recoveries are hard to explain especially since the Ni recoveries to alloy and the Fe contents of the alloy and the amount of FeO reduced were consistently high in all tests.

Table 10.7 Partition coefficients from the German smelting tests

Stream	Wt.	Ni	Cu	Co	Fe	Mn
Nodules	100	1.36%	1.17%	0.16%	6.2%	31.2%
R=3.2 – alloy	9.8	13.4%	9.1%	0.7%	54.3%	18.5%

R=3.2 – recovery to alloy		96.5%	76.2%	42.8%	85.8%	18.5%
R=3.2 – Dm/s		193	22	5	-	-
R=2.0 – alloy	7.7	17.0%	12.7%	1.9%	62.4%	2.2%
R=2.0 – slag	84.5	0.06%	0.22%	0.016%	1.6%	36.7%
R=2.0 – recovery to alloy		96.5%	83.8%	91.7%	77.7%	0.5%
R=2.0 – Dm/s		302	57	120	-	-
R=1.0 – alloy	7.4	17.8%	10.8%	2.0%	60.4%	2.5%
R=1.0 – slag	105.4	0.05%	0.37%	0.012%	1.7%	29.4%
R=1.0 – recovery to alloy		96.5%	68.1%	92.2%	71.8%	0.6%
R=1.0 – Dm/s		395	30	168	-	-

#### 10.2.1.4 United States Bureau of Mines

The USBM studied smelting of nodules in the laboratory and carried out 35 reduction tests on 1.9 kg samples of nodules blended with 350 g silica and 100 g coke in SiC crucibles<sup>5</sup>. The reduction temperature was 1400 °C and the holding time was 1.5 hours. Two tests were also conducted on reducing the smelting test slag with lime flux additions at 1450 °C to form FeMn. The results of these tests are summarised in Table 10.8.

Table 10.8 Results of USBM Smelting Tests

Stream	Ni	Cu	Co	Fe	Mn
Nodules	1.33%	1.20%	0.23%	5.46%	29.7%
Smelted alloy	14.6%	12.4%	2.54%	48.6%	9.2%
Smelted slag	0.02%	0.03%	0.009%	0.3%	29.7%
FeMn alloy	0.17%	0.24%	0.03%	6.1%	75.1%
FeMn slag	<0.01	0.07	<0.001	0.07	5.35%

The USBM also tested 4 hydrometallurgical processes: Fluid-bed reduction; Cuprion ammoniacal leach process; High temperature pressure oxidation and Fluid-bed reduction & HCl leach. EPA toxicity tests were carried out on all the leach residues and slags from the processes. It was concluded that all the slags and tailings produced would be classified as non-hazardous as defined by the EPA toxicity test<sup>6</sup>. Although this is a very encouraging conclusion, it should be noted that this work was conducted in 1985 and it is recommended that further investigation of the current relevant regulatory guidelines be conducted and, as required, specific testing NORI materials be conducted.

<sup>5</sup> Haynes, B.W., “Laboratory processing and characterization of waste materials from manganese nodules”, USBM RI 8938, 1985b.

<sup>6</sup> Note by author: The EPA toxicity test and conclusions referenced above were based on the then current testing procedure and toxicity limits (from 1985).

### 10.2.1.5 Indian National Metallurgical Laboratory

The Indian nodule smelting tests were carried out in a 50 kVA rectangular electrode furnace using 20 kg batches of nodules blended with coke and silica<sup>7</sup>. After melting an initial charge, the two graphite electrodes were immersed in the slag and the remaining charge gradually added. At the end of the test, the molten slag and alloy were tapped into a clay-graphite crucible and allowed to cool. The tests were carried out at slag temperatures in the range 1350-1450°C and with the amount of coke in the charge varying between 5 and 15%. The optimum conditions were found to be 7.5% coke at 1400 °C giving the highest recoveries to alloy of 94% Ni, 91% Cu and 78% Co, as shown in Table 10.9. These tests probably represent the best simulation for a potential commercial nodule smelting operation available from the literature.

Table 10.9 Results of Indian smelting tests

Stream	Wt.	Ni	Cu	Co	Fe / FeO	Mn / MnO	Si / SiO <sub>2</sub>
Nodules	100	1.15%	1.10%	0.08%	5.4%	24.3%	13.1%
Alloy	7	15.4%	14.5%	0.8%	61.5%	3.9%	0.3%
Slag	71.8	0.04%	0.08%	0.01%	5.60%	43.20%	29.20%
Recovery to alloy		94%	91%	78%	80.6%	1.1%	
Dm/s		385	181	84			

### 10.2.2 Ni, Cu, and Co partition coefficients

The concept of partition coefficients is useful for assessing the efficiency of metallurgical processes. In the case of smelting reduction processes, the partition coefficient is the ratio of concentrations of a specific element in the metallic and slag (or matte and slag) phases. A high partition coefficient indicates efficient recovery of that element to the metallic phase and vice versa for a low partition coefficient.

#### 10.2.2.1 Experimental test work

The Ni, Cu, and Co partition coefficients from the nodule smelting studies reviewed above are compared in Table 10.10 together with the recovery of iron to the alloy.

Table 10.10 Partition coefficients from sea nodule smelting tests

Study	Partition coefficients			
	Ni	Cu	Co	Fe to alloy
Inco	396	154	194	87%
Japan	1115	557	540	70%
German	302	57	121	86%
Indian	385	181	84	80%
USBM	730	413	282	81%
Average	586	272	244	81%

<sup>7</sup> Agarwal, S., et al, “Studies on recovery of Ni, Co, Cu from polymetallic nodules by direct reduction smelting”, COM 2009, Sudbury, p. 509-517.

The partition coefficients for Ni, Cu and Co from these tests are very high ranging between 302–1115 for Ni, 57–557 for Cu and 84–540 for Co. These values are for well-controlled laboratory conditions with slow cooling in-situ that promotes excellent settling of the small alloy prills from the slag. The partition coefficients in a commercial operation, with less ideal settling conditions, would be expected to be lower.

Barnes<sup>8</sup> investigated the smelting of cobalt in a small-scale (120–250 kW) DC furnace from a fayalitic reverberatory furnace slag that contained approximately 0.75% Co and 1.2% Cu. The results showed a correlation between the Co and Fe recoveries to the metal, as illustrated in Figure 10.3.

### 10.2.2.2 Commercial furnace operation

Solar<sup>9</sup> studied Ni/Co recovery from 11 FeNi smelting furnaces and found that Ni recoveries averaged 93.5% (range 89.6–97.0%) and Co recoveries averaged 71.9% (range 56.5–85.3%) corresponding to average partition coefficients of about 220 for Ni (range 155–264) and about 41 for Co (range 20–92). Solar also showed that Ni recovery to FeNi correlated well with the Fe recovery to the FeNi (range 13–65%), as shown in Figure 10.4.

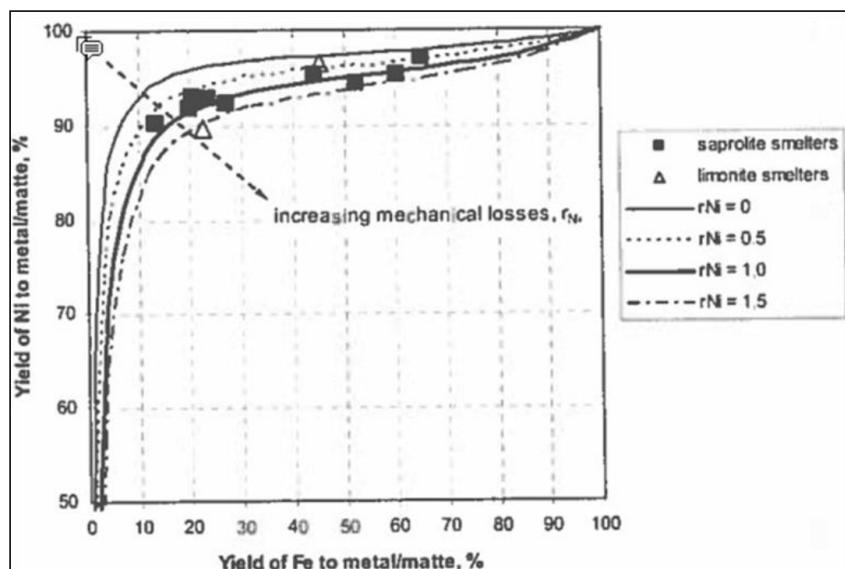

Figure 10.3 Relationship between Co and Fe recoveries to alloy from Co smelting tests (Barnes)

<sup>8</sup> Barnes, A., et al., “Cobalt from slag – Lessons in transition from laboratory to industry”, COM 2011, Montreal.

<sup>9</sup> Solar, M., “Mechanical slag losses in laterite smelting – nickel”, COM 2009, Sudbury, p. 277-291

Figure 10.4 Relationship between Ni and Fe yields in laterite smelters, actual vs theoretical

There are insignificant amounts of Cu in the laterite feeds to FeNi furnaces and the best data for the partition coefficient for Cu is from various Cu and Ni smelter slag reduction electric furnaces. The most pertinent data that could be found from Cu and Ni smelter slag reduction furnaces is summarised in Table 10.11.

Table 10.11 Partition coefficients from various Cu and Ni slag reduction electric furnaces

Data from	EF matte/alloy (%)					EF slag (%)				Partition coefficient		
	Ni	Cu	Co	Fe	S	Ni	Cu	Co	Fe	Ni	Cu	Co
Harjavalta smelter10												
Harjavalta Old Ni smelter EF	45	12	-	25	8	0.2	0.3	-	40	225	40	-
Harjavalta DON smelter EF	52	5	-	30	8	0.3	0.1	-	43	173	50	12
Mintek EF11	42	19	1.5	33	1	0.3	0.5	0.12	37	140	38	12
Konkola 2nd EF12	-	65	5	20	8	-	0.5	0.3	40	-	130	17
Amax Carteret EF13	8	25	-	60	-	0.1	0.3	-	30	80	83	-

The Cu partition coefficients range from 40 to 130 with an average of about 75. The Ni and Co partition coefficients are lower than those from FeNi smelters presumably because of the significantly lower Fe recovery to the alloy / matte phase.

<sup>13</sup> Rajcevic, H., et al., “Development of electric furnace slag cleaning at a secondary copper smelter”, J. Metals, March 1982, p. 54-56.

### 10.2.2.3 Partition coefficients assumed for plant design criteria

Based on Solar's and Barnes evaluations, the % of Fe input reduced to Fe in alloy in the nodule smelting tests should give the best correlation for Ni and Co recovery. The average % Fe reduction in the nodule smelting tests summarised in Table 10.10 was about 80%. This is higher than any of the FeNi plants. Using Solar's correlation at 80% Fe recovery to alloy, the Ni recovery should be about 97%, equivalent to a partition coefficient for Ni of about 285 based on a preliminary nodule smelting mass balance. This is about half of the average Ni partition coefficient from the laboratory nodule smelting tests, shown in Table 10.10, and in agreement with the assumption that mechanical Ni losses in an industrial furnace will be roughly equal to the chemical NiO losses. Based on a similar mechanical loss assumption for Cu and Co, their partition coefficients would be 130 and 120 respectively.

### 10.2.3 Mn reduction during smelting

The recovery of Mn to the alloy for most of the nodule smelting tests was in the range 0.5-1.0% except for the USBM tests (2.8% Mn reduction), where CaO flux was added, and the German test without flux (5.8% Mn reduction) that required a temperature >1600 °C. The conditions used in both of these tests would have significantly increased MnO reduction.

The nodule smelting tests suggest that to minimise reduction of Mn and to produce the highest Mn grade in slag, only sufficient SiO<sub>2</sub> flux should be added to the nodules to produce a MnO/SiO<sub>2</sub> ratio in slag of about 2.2, giving a slag liquidus of about 1400 °C, such that the smelting furnace can be operated at a temperature of about 1500 °C to minimise MnO reduction and produce a fluid slag to reduce mechanical metal losses and facilitate tapping.

Based on the results of the nodule smelting tests it is reasonable to assume that reduction of MnO could be maintained at < 1%.<sup>14</sup>

### 10.2.4 Processing of the EF alloy in Peirce-Smith converters

Both the Inco and Japanese studies proposed processes where the alloy would be converted into a HG<sup>15</sup> Ni-Cu-Co matte containing 5–10% Fe using Peirce Smith (PS) converters. To maintain high sulfur usage efficiency during this process, the manganese must first be eliminated prior to sulphiding the alloy. This is achieved by oxidising the molten alloy to lower its manganese content to <0.1% and fluxing with silica. The alloy is then sulphided with elemental sulfur and the sulphided bath converted using the standard method to eliminate iron as an iron silicate slag. It was found that the nickel and copper values in the slag in the early stages of converting were low enough that the slag could be discarded. The cobalt recovery in the matte was found to depend on the level of Fe remaining in the matte. The HG matte after converting typically contained: ~25% Cu, ~40% Ni, ~5% Co, ~% Fe, ~20-25% S, <0.01% Mn. There was insufficient data on converting in the Inco nodule smelting paper to determine metal distributions, but the paper reported 80% Co recovery to a 5% Fe matte and very high Ni and Cu recoveries.

<sup>14</sup> Note by author: For the purposes of the PEA, MnO reduction of 1% was assumed as a reasonable basis.

<sup>15</sup> Note by author: HG = High Grade.

The Inco study demonstrates that it is possible to produce a 5% Fe HG matte from polymetallic nodules. However, it is believed that HG matte containing 1% Fe would be more readily marketed and would receive higher contained metal valuation. The best industrial plant data for converting highly metallised Ni mattes is from the PT Vale Indonesia Soroako nickel smelter<sup>16</sup> and the converter balance is summarised in Table 10.12. The matte is processed in 3 PS converters (9 m long × 4 m dia.) blowing at about 18,000 Nm<sup>3</sup>/h. A typical converter cycle takes about 7 hours to produce about 50 t of HG matte (1% Fe). It should be noted that the recovery of Co to the matte at the Soroako smelter is purposely maintained low as Co is not desired in the product.

Table 10.12 Converter mass balance from Soroako nickel smelter

	tpd	Ni	Co	Fe	S
Matte	909.2	26.0%	0.80%	63.0%	10.0%
Partition coefficient		236	7.3	573	91
Slag	900	2.0%	0.60%	53.0%	
Partition coefficient		18.0	5.4	477.0	
HG matte	280	78.0%	1.00%	1.0%	20.0%
Partition coefficient		218.4	2.8	2.8	2.8
<b>Recovery</b>		<b>92.4%</b>	<b>38.5%</b>		

The best industrial plant data for Cu distribution in metallised Ni-Cu matte converting is from Glencore's Falconbridge Ni-Cu smelter<sup>17</sup>. This data is shown in Table 10.13 and is compared with the partition coefficients calculated from the laboratory converting data in the Japanese nodule smelting paper and data from Vale's Thompson Ni smelter<sup>18</sup>.

Table 10.13 Comparison of partition coefficients during matte converting

% Fe in matte	Partition coefficients							
	Falconbridge			Thompson		Japanese		
	Ni	Cu	Co	Ni	Co	Ni	Cu	Co
40%	-	-	-	-	-	230	150	75
30%	40	30	3.5	250	-	150	70	15
20%	40	30	3.5	150	7.5	36	18	6
10%	30	25	2.5	75	3.4			
5%	20	20	1.5	40	1.4	13	5	3

The Thompson Ni data is for oxidic Ni only. The Ni, Cu and Co partition coefficients for the Japanese laboratory study were estimated from their metal recovery data presented in Figure 10.5. These were adjusted to account for higher entrained losses in industrial practice to give recoveries to alloy of 99.0% Ni, 98.5% Cu and 97% Co when converting the alloy down to about 40% Fe.

<sup>17</sup> Bustos, A., et al., "Converting simulation at Falconbridge Limited", Extractive metallurgy of nickel and copper, TMS, 1988, p. 335-53.

<sup>18</sup> Diaz, C., et al., "A review of nickel pyrometallurgical operations" Extractive metallurgy of nickel and copper, TMS, 1988, p. 211-39.

Figure 10.5 Metal recovery versus iron content in alloy during converting (Japanese study)

Overall, it is concluded that it would be feasible to produce a HG matte with 1% Fe from the NORI polymetallic nodules and that data from analogous industrial operations can be used to prepare preliminary design criteria.

### 10.2.5 Hydrometallurgical processing of Ni-Cu-Co matte

There are several methods of leaching Ni-Cu-Co mattes to recover the valuable metals. The simplest process is that proposed by Inco<sup>19</sup> in which the finely ground matte (99% minus 45 microns) would be leached with sulfuric acid in an autoclave operating at about 110 °C to dissolve the Ni, Cu, Co, and Fe. In the laboratory batch leach tests, Inco used the following conditions:

- Matte solids density of 9%.
- 150 psi O<sub>2</sub>.
- 100 g/L of acid (85-90% stoichiometric acid requirement).

These tests achieved 99% extraction of Ni, Cu, Co and Fe in 2 hours with 99% S conversion to sulfate. The PLS contained about 20 g/L acid and 5 g/L Fe (50% Fe<sup>2+</sup>). This was neutralised with limestone to pH 3.5 and SO<sub>2</sub>/air injection used to oxidise all the Fe to Fe<sup>3+</sup> and to precipitate Fe down to about 10 mg/L Fe as a stable ferrihydrite / gypsum precipitate. After solid-liquid separation and washing, this residue could be ponded. The PLS after Fe removal contained: 40 g/L Ni, 24 g/L Cu and 5 g/L Co.

<sup>19</sup> R. Sridhar, W. E. Jones, and J. S. Warner, "Extraction of copper, nickel and cobalt from polymetallic nodules", JOM, April 1976, p 32.

The Fe in the PLS can also be precipitated in the autoclave as jarosite or hematite under different operating conditions and both alternatives have been operated commercially in Ni refineries. For example, the Rustenberg refinery<sup>20</sup> used to precipitate its Fe as sodium jarosite but it now operates its pressure oxidation process at a slightly higher temperature of about 150°C to precipitate the Fe from solution as hematite. This process gives a higher 99% Ni, Co extraction, a small amount of high Fe residue (>50% Fe) as well as lower Fe and acid in the resultant PLS. The leach residue could be recycled to the converters to maximise residual metal recovery.

There are two several proven methods for extracting the Ni, Cu and Co values from the PLS. Firstly, treatment with H<sub>2</sub>S could be used to precipitate a pure Cu sulphide and a mixed Ni/Co sulphide. Alternatively, the PLS could be processed using solvent extraction (SX) and electrowinning (EW) to recover Cu as cathode copper before recovering the Ni and Co from solution as a mixed sulphide precipitate.<sup>21</sup>

### 10.3 NORI Test Work and Piloting

NORI has embarked on an extensive program of test work at various scales in support of process development for the project. To date, small scale pyrometallurgical tests (of the order of up to kilograms of material) have been undertaken and larger scale piloting of the pyrometallurgical process has commenced with calcining approximately 70 t of nodules. Hydrometallurgical test work will follow once sufficient matte has been generated to provide feed.

NORI has retained the services of three main facilities to conduct the pyrometallurgical work:

- Kingston Process Metallurgy (KPM): Small scale calcining and smelting work
- FLSmidth: Preliminary material characterization and calcining; pilot scale calcining (0.9 m diameter x 15 m long)
- Expert Process Systems (XPS): Preliminary converting tests, pilot scale smelting, sulfidation and converting.

The over-arching objectives of the program are:

- To demonstrate at small and pilot scale the viability of the chosen process
- To measure important parameters for engineering design.

To date, results do not appear to be in any significant disagreement with the process definition as originally based on the literature review. One of the more notable findings arising from test work and investigation performed to date is that the higher oxides of manganese thermally decompose, even in the presence of carbonaceous reductant, thus reducing the amount of reductant required. In addition, the test work program has generated information that was not previously available (e.g., certain elemental deportments). Where appropriate, this information has been incorporated into the process design.

<sup>20</sup> Hofirek, Z. et al., "Pressure leach capacity expansion using oxygen-enriched air at RBMR Rustenburg Base Metal Refiners", Hydrometallurgy, 39, 1995, 91-116.

<sup>21</sup> Note by author: A third option is to remove copper via EW and separate the nickel and cobalt via SX. Supplementary purification can be done to allow the nickel and cobalt streams to be processed either via EW to create nickel and cobalt cathode, or with crystallization to produce nickel and cobalt sulphates.

### 10.3.1 Preliminary Work at FLSmidth

Early work at FLSmidth included:

- Measurement of physical properties, e.g.,
  - Free moisture content
  - Specific gravity
  - Bulk density
  - Particle size distribution
- Differential Thermal Analysis (DTA)
- Sintering tests
- Batch kiln reduction calcining (0.3 m diameter x 1 m long)
- Speciation (oxidation states) of manganese, iron, nickel in nodules and calcine
- Tumble tests.

Some of the key findings have been:

- Both the batch kiln and sintering tests indicate that sintering temperatures are well above the target commercial operating temperature of 900 °C.
- A high degree of reduction of iron and nickel (to metal) can be achieved during calcination as well as almost complete decomposition and reduction of manganese oxides to  $Mn^{2+}$ .
- Results from the tumble test suggest that calcining the nodules in a commercial rotary kiln should incur less dust generation than a nickel laterite operation.

### 10.3.2 KPM Work

The test work at KPM has been supplemented by thermodynamic modelling, which is providing very useful insights into the process as well as calculation of important parameters.

The primary work at KPM involved calcining and smelting at two relatively small scales:

- 100 g, using a small batch kiln for calcining and a small induction furnace for smelting.
- 1–1.5 kg using a larger induction furnace for both calcining and smelting.

Additional work was completed to further understand the speciation, thermal decomposition and reduction behaviour of manganese oxides in the nodules.

Alloy liquidus temperature was measured using DTA and the slag liquidus was mapped out by thermodynamic modelling.

Some of the key findings have been:

- The calcining and smelting work at KPM has demonstrated that, in addition to making an alloy of the expected composition for further processing, it is possible to make a slag phase that is low in Cu, Ni and Co and, importantly for saleability as a product, low in phosphorus.
- Tests were carried out under various conditions—in particular the amount of reductant was varied and this revealed that:
  - Less reductant was required than had been predicted by the process model. This led to the investigation into manganese oxide behaviour.

- The metallurgical outcome is quite sensitive to the amount of reductant added and design of the commercial plant must recognize this.
- One of the best-outcome tests was reviewed for metal deportments, which were found to be in reasonable agreement with the process model values. Some key additional information was added to the model.
- The slag and metal liquidus' were such that the process model design temperatures could be confirmed.
- The understanding gained from the manganese investigation has been incorporated into the process model, resulting in a prediction of lower reductant requirements.

### 10.3.3 Small Scale Work at XPS

The preliminary work at XPS focused on the converting part of the proposed process. A significant part of the objectives for this early work is to establish experimental techniques that can be carried into the pilot scale work for this challenging part of the process flowsheet.

Two types of testing have been carried out so far:

- Converting an artificial matte.
- Removing manganese and adding sulphur to make matte, using an artificial alloy (corresponding to the electric furnace product in the proposed process).

A 30 kW induction furnace was used for the work, melting charges in the 2–10 kg range.

#### 10.3.3.1 Converting of Artificial Matte

An artificial matte was made by melting various components such as pig iron, local nickel matte, manganese powder, etc. Only the main elemental components of metallurgical significance were included in the recipe. The target matte composition was calculated to subsequently pass along the expected converting path for the matte targeted in the commercial operation. The matte was successfully made in an induction furnace and it was then blown down (converted) to a matte containing only 5% iron using a silicon carbide lance immersed in the melt. Silica flux was added to form a fayalite slag of an appropriate iron/silica ratio.

In addition to establishing experimental methodologies, the work provided valuable information on the deportment of elements of interest between matte and slag. While there is deportment information on elements such as Ni, Cu and Co from the non-ferrous industry, others, such as Mn and phosphorus, are not as well understood. The work generated preliminary partition coefficients for elements of interest as a function of iron in matte that were included in the process model. This improves understanding of the implications of different set points for intermediate and final matte iron levels on pay-metal recovery and residual unwanted elements.

#### 10.3.3.2 Manganese Removal and Sulphidation

The proposed pilot-scale work at XPS is to receive calcined nodules from FLS and first smelt them to an alloy, then to sulphidize to a matte and convert to a final matte for hydrometallurgical processing. In the proposed commercial operation, sulphur will be introduced to the molten material in liquid form, per the practice at SLN's Doniambo operation prior to 2016. This was considered to be impractical with the proposed equipment set-up available at XPS. Instead, sulphur can be added in the form of sulphur-bearing compounds. Both pyrrhotite and pyrite were tested, with additions being to the surface and by submerged injection via a lance.

Addition of pyrrhotite via lance injection was the most successful in terms of sulphur efficiency. The additional iron units will simply lengthen the converting time somewhat.

The alloy from the smelting process is expected to contain a few per cent manganese. Manganese is known to form a separate phase (in addition to matte and slag) in the presence of significant amounts of sulphur. This phase is described as 'mushy' at converting temperatures and may pose some complications for the pilot work. It may be desirable to remove the manganese from the alloy before adding sulphur. (It is unlikely that this will be an issue for the proposed commercial operation, with alloy addition being made to intermediate matte.)

Tests were conducted to blow out the manganese using a lance and silica flux prior to adding sulphur. The work demonstrated that manganese levels can be lowered in metal and captured in slag, however, if the slag remains in the vessel when sulphur is then added, the 'mushy' phase will still manifest.

11 Mineral Resource estimates

Mineral Resources were first estimated for NORI Areas A, B, C and D by Golder Associates in late 2012 (Golder, 2013), primarily using data collected by the Pioneer Investors. Data collected by NORI in 2018 was used by AMC Consultants Pty Ltd to update the Mineral Resource estimate for NORI Area D in 2018, and data collected in 2019 was used to update the Mineral Resource estimate in 2020. The estimates of the combined Mineral Resources in NORI Areas A, B, C, and D are summarized in Table 11.1. This IA only considers development of NORI Area D. The cut-off of 4 kg/m<sup>2</sup> abundance is derived from the estimates of costs and revenues presented in this Initial Assessment.

Table 11.1 NORI 2020 Mineral Resource estimate for the NORI Areas within the CCZ at 4 kg/m<sup>2</sup> nodule cut-off.

NORI Area	Category	Tonnes	Abundance	Nickel	Copper	Cobalt	Mn	Silicon
		(Mt (wet))	(wet kg/m <sup>2</sup> )	(%)	(%)	(%)	(%)	(%)
D	Measured	4	18.6	1.42	1.16	0.13	32.2	5.1
D	Indicated	341	17.1	1.4	1.14	0.14	31.2	5.5
D	Measured + Indicated	345	17.1	1.40	1.14	0.14	31.2	5.5
D	Inferred	11	15.6	1.38	1.14	0.12	31.0	5.5
A	Inferred	72	9.4	1.35	1.06	0.22	28.0	-
B	Inferred	36	11	1.43	1.13	0.25	28.9	-
C	Inferred	402	11	1.26	1.03	0.21	28.3	-

The estimates for NORI Areas A, B and C are the NORI 2012 estimates (Golder 2015).

Abbreviations used for statistical terms in this section are: Min = minimum, Max = maximum, Var = variance, CV = coefficient of variation.

### 11.1 Polymetallic nodule sample data

All polymetallic nodule sample data (historic box-core and free-fall grab samples, and the NORI 2018 box-core) and the abundance estimates derived from photographs were combined into a single data set. The data set contains assays for nickel (%), copper (%), manganese (%), cobalt (%), silicon (%), iron (%) and phosphorus (%), and measurements of nodule abundance (kg/m<sup>2</sup>).

#### 11.1.1 Historic sample data

Historic data provided by the ISA and BGR to NORI included 392 samples (Table 11.2). The data includes measurement of nodule abundance (kg/m<sup>2</sup>) and the assays manganese (%), cobalt (%), nickel (%) and copper (%). The data were checked for anomalous or erroneous data and cross-checked with data supplied directly by the ISA.

Table 11.2 Summary statistics of historic polymetallic nodule data within NORI Areas A, B, C and D used for the 2012 Mineral Resource estimate

Variable	Samples	Missing	Min	Max	Mean	Var	CV	Median
Ni (%)	360	32	0.68	1.75	1.30	0.016	0.10	1.31
Co (%)	360	32	0.05	0.33	0.17	0.004	0.35	0.19

Abundance (wet kg/m <sup>2</sup> )	392	0	0	52.2	11.9	64.303	0.67	12.00

Source: Golder 2015. Var = variance; CV = coefficient of variation

**11.1.2 TOML sample data**

TOML Area F is adjacent to the western border of NORI Area D. In 2020, NORI acquired the data from this area, including 26 nodule samples (1 historic sample and 25 samples collected by Nautilus Minerals Inc.). The TOML data includes measurements for abundance (kg/m<sup>2</sup>) and assays for manganese (%), nickel (%), copper (%) and cobalt (%). All assays were converted from oxides to elemental values. AMC included this data for estimating the NORI Area D mineral resource because it provides more control of abundance and grade estimates along the western margin of NORI Area D. Summary statistics are presented in Table 11.3.

Table 11.3 Summary statistics of TOML Area F polymetallic nodule assays

Variable	Samples	Missing	Min	Max	Mean	Median	Var	CV
Ni (%)	26	0	1.05	1.51	1.41	1.42	0.008	0.06
Co (%)	26	0	0.09	0.17	0.13	0.13	0.000	0.14
Cu (%)	26	0	1.10	1.35	1.24	1.23	0.005	0.06
Mn (%)	26	0	30.1	33.6	32.2	32.4	0.813	0.03
Abundance (wet kg/m <sup>2</sup> )	26	0	1.2	29.1	17.9	18.1	45.359	0.38

**11.1.3 NORI 2018 sample data**

NORI Campaign 3, in 2018, focused on collecting close spaced (7 km by 7 km spacing) box core samples, supplemented by seafloor photography in an area selected for trial mining.

Forty-five sites were sampled with a box core. The assay data set includes 45 primary box core samples Table 11.4 and a further 87 duplicates, standards, blanks and other samples. The data includes a suite of multivariate assays which including manganese, copper, nickel, cobalt, silicon, iron and phosphorus. The primary sample assays were used for resource estimation. The duplicate sample data were included in the variography because they provide information about the nugget variance.

During the NORI 2018 campaign, seafloor photographs were captured along with the box-core sampling. The photographs were used to estimate nodule abundance from the relationships between nodule long-axis length, the percentage of the photo covered by identified nodules, and nodule weight. Fourteen (14) seafloor photographs within the Measured Mineral Resource boundary were used to estimate nodule abundance.

Table 11.4 Summary statistics of the 2018 NORI Area D primary assay data.

	Number	Missing	Min	Max	Range	Mean	Median	Var	CV
Abundance (wet kg/m <sup>2</sup> )	45	1	6.50	29.90	23.40	18.00	18.10	23.694	0.2700
Nickel (%)	45	0	1.18	1.45	0.27	1.37	1.39	0.004	0.0455
Copper (%)	45	0	0.97	1.34	0.38	1.15	1.14	0.005	0.0614
Cobalt (%)	45	0	0.09	0.15	0.05	0.13	0.13	0.000	0.1010
Manganese (%)	45	0	26.44	34.33	7.88	31.28	31.69	2.557	0.0511
Silicon (%)	45	0	4.81	8.06	3.25	5.53	5.34	0.420	0.1170
Iron (%)	45	0	4.27	8.21	3.94	6.66	6.86	0.696	0.1250
Phosphorus (%)	45	0	0.12	0.25	0.13	0.16	0.15	0.001	0.1460

#### 11.1.4 NORI 2019 sample data

NORI Campaigns 6A and 6B, in 2019, focused on upgrading the NORI Area D Inferred Mineral Resource to Indicated Mineral Resource by collecting close spaced (10 km by 10 km spacing) box core samples.

Box core sampling was attempted at a total of 106 sites in the NORI Area D license area during Campaign 6A and 101 sites during Campaign 6B. Disturbed samples, considered to be unreliable, were omitted from the sample sequence. Summary statistics for the remaining 207 primary box core samples are presented in Table 11.5.

The data includes a suite of multivariate assays which include manganese, copper, nickel, cobalt, silicon, iron, and phosphorus.

Table 11.5 Summary statistics of the 2019 NORI Area D primary assay data.

	Number	Missing	Min	Max	Range	Mean	Median	Var	CV
Abundance (wet kg/m <sup>2</sup> )	207	0	0.08	32.99	32.92	17.55	17.13	28.98	0.3070
Nickel (%)	207	4	0.91	1.49	0.57	1.38	1.40	0.006	0.0558
Copper (%)	207	4	0.77	1.41	0.65	1.15	1.14	0.007	0.0721
Cobalt (%)	207	4	0.09	0.45	0.36	0.14	0.13	0.001	0.2130
Manganese (%)	207	4	24.23	34.46	10.24	30.95	31.19	2.543	0.0515
Silicon (%)	207	4	4.74	8.97	4.23	5.61	5.39	0.472	0.1220
Iron (%)	207	4	3.81	11.16	7.35	6.73	6.81	0.704	0.1250
Phosphorus (%)	207	4	0.11	0.51	0.40	0.16	0.15	0.002	0.2640

#### 11.1.5 Representativeness of sampling

Comparison of the seafloor photographs at the box core sites and the observed distribution of nodules in the box cores indicated that the box core samples were largely undisturbed and representative of the sampled locations.

Sampling in 2018 and 2019 confirmed the earlier assessment of continuity of grade and nodule abundance. Continuity of grades and abundance between sample points can be reasonably assumed for the following reasons:

- Statistics of the nodule samples within the reserve blocks of the CCZ show a very low coefficient of variation, which indicates a low risk in estimating and interpolating grades.
- Variography of the samples within the NORI Area shows reasonable spatial continuity with ranges greater than the average sample spacing for nickel, copper, cobalt, and manganese. Abundance has a more erratic variogram with shorter ranges.
- The continental scale of the deposit and mode of formation leads to the expectation of low variability.

The sample density and spacing within the NORI Area are sufficient to demonstrate continuity of nickel, copper, cobalt, and manganese. The reprocessed backscatter data and the low-level seafloor photography from the 2018 campaign indicate strong continuity of nodule abundance across NORI Area D.

#### 11.1.6 Data integration

The historic, TOML and NORI nodule sample data were combined into a single data set. The combined data set (Areas A, B, C and D) contains 1299 records. This data includes both the primary assays and duplicated primary assays.

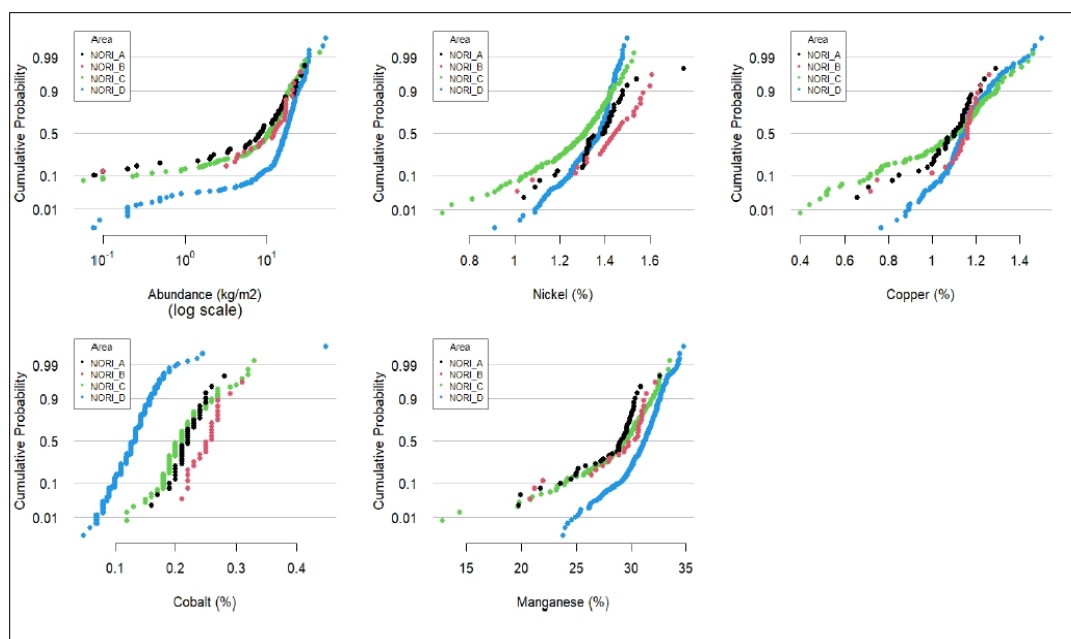

Summary statistics for all manganese nodule data within NORI Areas, including the nodule abundance estimated from photographs for NORI Area D and the duplicate samples, are listed in Table 11.6. Note the very low coefficient of variation for nickel, copper, manganese and cobalt.

Table 11.6 Summary of all manganese nodule data within NORI Area D

	Number	Missing	Min	Max	Mean	Median	Var	CV
Abundance (wet kg/m <sup>2</sup> )	763	1	0.00	52.20	14.77	15.50	54.898	0.5020
Nickel (%)	763	50	0.68	1.75	1.34	1.37	0.012	0.0833
Copper (%)	763	50	0.40	1.50	1.12	1.14	0.018	0.1180
Cobalt (%)	763	50	0.05	0.45	0.16	0.14	0.003	0.3220
Manganese (%)	763	50	12.84	34.80	30.27	30.84	6.217	0.0824
Silicon (%)	763	410	4.70	9.00	5.60	5.40	0.463	0.1210
Iron (%)	763	410	3.80	11.20	6.70	6.80	0.720	0.1260
Phosphorus (%)	763	410	0.10	0.50	0.20	0.20	0.001	0.2300

Cumulative probability plots of the polymetallic nodule sample data within the NORI Areas are provided in Figure 11.1. The plots show that the distributions for nodule abundance and the assays manganese, cobalt, nickel and copper are different across the NORI Areas. The biggest differences are exhibited in the cobalt distributions with Area D being significantly lower than Areas A, B and C. The plots also show that there are only a couple of potential outliers (extreme values) including a high nickel assay (>1.6% Ni) from Area A and low manganese values (<15% Mn) from Area C. NORI Areas A, B and C show very similar distributions for abundance, manganese, cobalt, nickel and copper.

Figure 11.1 Cumulative probability plots of abundance and assays for the integrated sample data

## 11.2 NORI Area D

### 11.2.1 Geological domains

Geological interpretation and definition of geological and geomorphological domains were completed by Ian Stevenson of Margin - Marine Geoscience Innovation, using the bathymetry and backscatter data sets.

Domains include abyssal plains, abyssal hills, high seafloor slope, volcanic outcrops and discrete volcanic cones. The abyssal hills and slope domains have been separated on the basis of whether the box core sampling indicates a hard substrate or not.

Analysis of land-out video footage, AUV camera data and AUV sub-bottom profiler showed a good correlation between slopes steeper than 6° and the presence of hard ground where there were a high number of failed box core recoveries (21 sites). Areas where the slope gradient exceeds 6° were assumed to be too steep for nodule collection and were excluded from the Mineral Resource estimate, as shown in Figure 11.2. The steep slope domain covers only 6% of NORI Area D.

Volcanic outcrop occurs frequently along and parallel to the ridges and frequently occur along the margins between the abyssal hill and abyssal plain domains. Volcanic cones are found mostly along the southern margin of NORI Area D, in a line running roughly east-west. The volcanic domains are interpreted to be rugged and to carry few nodules. They have been excluded from the Mineral Resource.

NORI Area D is dominated by the abyssal plains domain which covers 68.6% of the area. The areas that are considered unlikely for harvesting (high slope and volcanic domains) cover 16.9% of NORI Area D. The proportions of the various domains are shown graphically in Figure 11.3.

Figure 11.2 Map of NORI Area D geological domains.

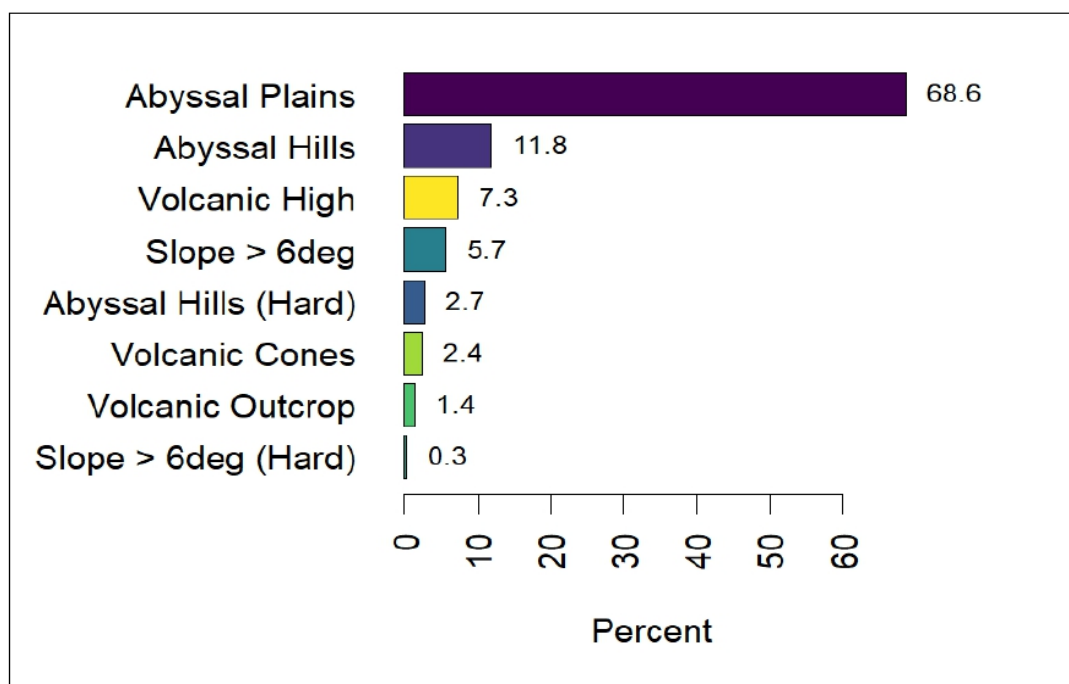

Figure 11.3 Proportions of geological domains in NORI Area D

### 11.2.2 Nodule type and sediment drift

Nodule type (Type 1 and Type 2/3) areas and areas covered by sediment drift were interpreted from the backscatter data and the box core land out videos and box core logging. The distribution of nodule types is shown in Figure 11.4. The areas marked as “NA” are volcanic areas where the presence of nodules is not confirmed.

Figure 11.4 NORI Area D nodule type domains.

The larger Type 2 and 3 nodules only cover approximately 17% of NORI Area D. The smaller Type 1 nodules are the most common nodule type across NORI Area D, covering approximately 78% of the area. The sediment drift domain, a soft sediment ooze with low backscatter, is rare within NORI Area D. A large proportion of the sediment drift occurs in the volcanic high areas. The impact of the sediment drift domain on the mineral resource estimate is considered to be negligible. The areas marked as “NA” are volcanic areas where the presence of nodules is not confirmed.

### 11.2.3 Backscatter

The backscatter data was collected during 2012 and reprocessed in 2018. The data was collected on 20 m by 20 m resolution over the area from 405215.4 mE to 606235.4 mE and from 1087387 mN to 1240007 mN. The backscatter data was converted to the same resolution and extent as the interpreted geological domains to allow direct comparison between datasets.

### 11.2.4 Bathymetry

The bathymetry data was collected during 2012 and reprocessed in 2018. The data was collected on 50 m by 50 m resolution over the area from 405694.2 mE to 606294.2 mE and from 1086099 mN to 1240249 mN. The bathymetry data was converted to the same extent as the interpreted geological domains to allow direct comparison between datasets. Additional layers representing slope angle Figure 11.5 and aspect, in degrees, were calculated from the bathymetry and then added as separate raster layers to the bathymetry raster.

Figure 11.5 NORI Area D slope angle

### 11.2.5 PRZ areas

NORI is considering the location of areas that may, in future, be designated as Preservation Reference Zones (PRZ) for the preservation of biological diversity. Two possible locations for PRZs are shown on the Figures in this report e.g., Figure 11.5. Their locations are not yet finalized, and they may be repositioned. For this reason, the PRZ areas are included in the resource estimate. It is anticipated that the areas finally selected as PRZs will be excised from the Mineral Reserves when they are estimated.

### 11.2.6 Data processing

For estimation of resources in the NORI Area D, the integrated NORI data was filtered to only include NORI Area D and TOML Area F samples. The combined data set contains 556 records of which 26 records are from TOML Area F Figure 11.6. Further preparation of the nodule sample data included:

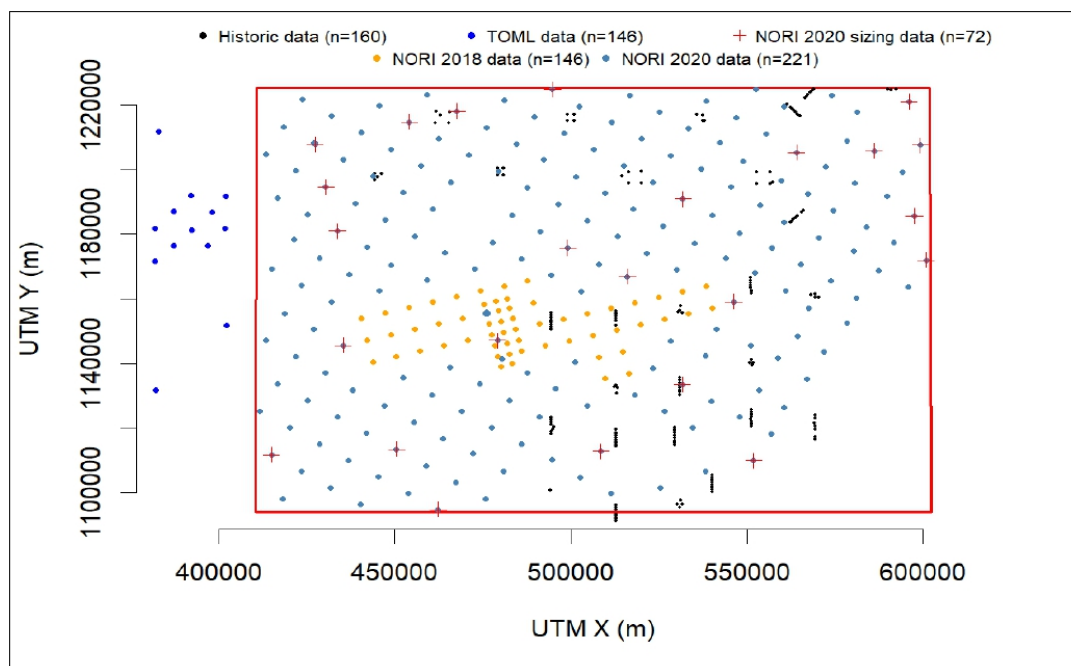

- Calculate average values for duplicate pairs of box core samples.
- Combine clustered historic samples.
- Check for outliers.
- Assign domains.
- Apply top cuts.

The grades that comprise the polymetallic nodules have a unit sum constraint. That is, the sum of the elements (including oxygen and hydrogen) is 100%. Consequently, the elements of interest in the Mineral Resource are not entirely independent. Conventional estimation methods are based on the assumption of independence. For the 2020 estimate of Mineral Resources, AMC decided to use a mathematical transformation to generate a set of independent variables that could be estimated into a block model and then back-transformed to grade estimates. To prepare the data it was necessary to:

- Impute (replace) missing values for silicon, iron and phosphorus.
- Apply projection pursuit multivariate transform (PPMT) to manganese, copper, nickel, cobalt, silicon, iron and phosphorus values.
- Apply normal scores transform to abundance values.

These preparation steps are discussed below. The backscatter, slope, aspect (slope dip direction) and geological domain features were extracted from the GIS raster data at the nodule sample locations. This data was combined with the nodule sample data for analysis.

Figure 11.6 Plan showing location of data points and the NORI Area D boundary.

### 11.2.7 Declustering

The historic data exhibits two forms of spatial clustering Figure 11.6. Along the northern boundary of NORI Area D there are locations with multiple historic samples (up to 5 samples) collected within a tight square 'X' configuration (separation distances of ~1800 m to ~3600 m). While in the south of NORI Area D, the historic sample locations are arranged in strings of multiple samples in linear configurations. These are likely to be free-fall grab samples. Both forms of clustered data may introduce bias during grade estimation with methods that use spatially weighted averages, such as kriging.

A cell declustering algorithm was used to decluster the sample data. The spatially weighted (declustered) means and unweighted means for nodule abundance, nickel, copper and cobalt are compared in Table 11.7. The original and declustered means are very similar due to the low variance and high spatial continuity of the abundance and assay data.

Table 11.7 Spatially weighted mean assays for NORI Area D samples

	Mean	Weighted Mean
Abundance (kg/m <sup>2</sup> )	17.42	16.7
Nickel (%)	1.37	1.37
Copper (%)	1.15	1.15
Cobalt (%)	0.136	0.135
Manganese (%)	31.07	31.01
Silicon (%)	5.62	5.62
Iron (%)	6.73	6.67
Phosphorus (%)	0.16	0.16
MnO:SiO <sub>2</sub> (%)	3.4	3.36

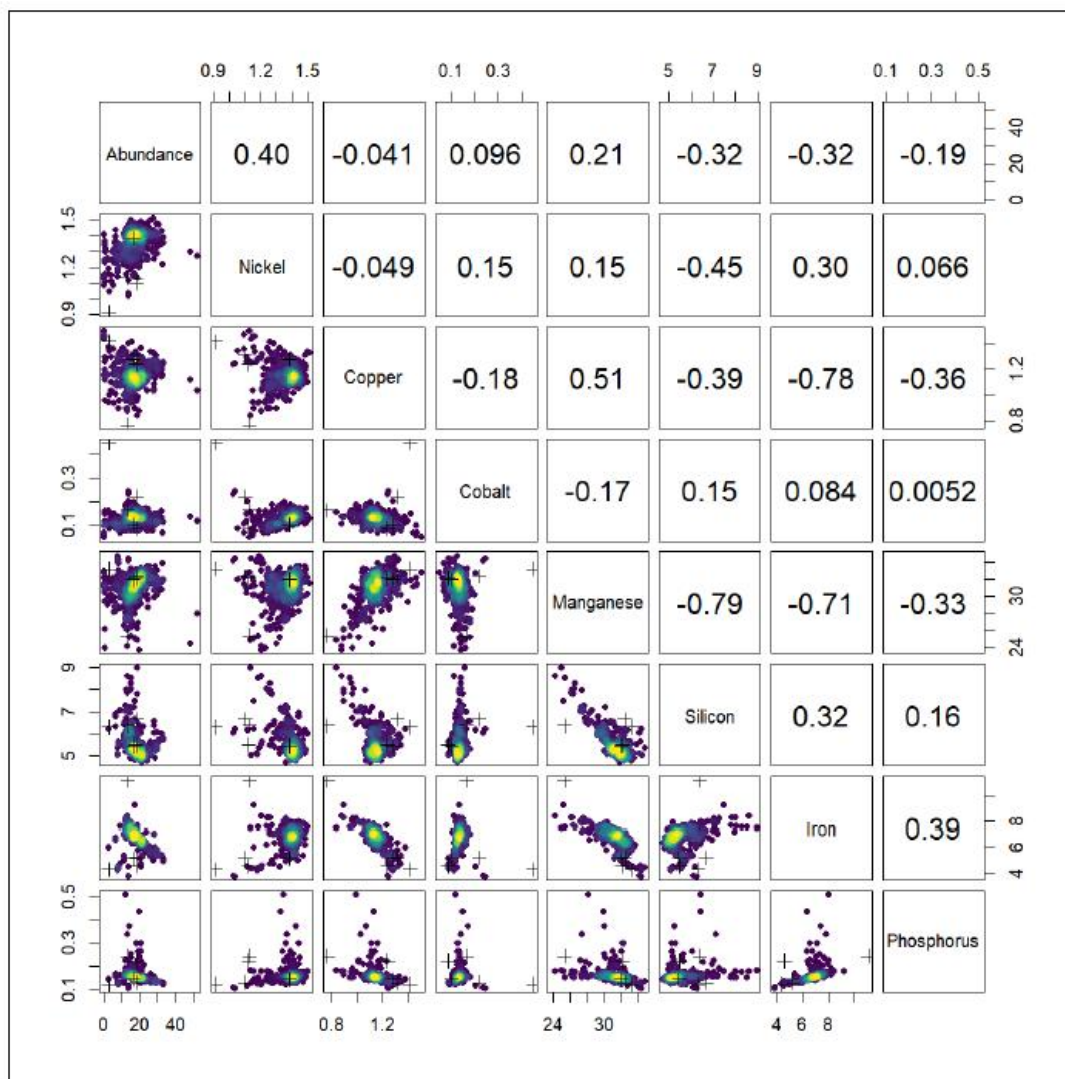

### 11.2.8 Outliers within the sample data

Outliers (extreme values) detected using the Local Outlier Factor algorithm are highlighted (black crosses) in the pairs plot shown in Figure 11.7 and listed in Table 11.7. All identified outliers are historic nodule samples. The location of these outliers relative to all samples within NORI Area D is shown in Figure 11.8. The identified outliers appear to be low in manganese and/or high in abundance.

The plot also reveals that nickel is moderately positively correlated with abundance and cobalt, while manganese is moderately positively correlated with copper and moderately negatively correlated with cobalt. Abundance also shows a weak correlation with copper and cobalt. Copper shows a weak correlation with nickel. Silicon shows a strong negative correlation with manganese.

The sample with anomalously high assay of 0.58% Co is the +50 mm fraction of NORI box core 227. The assay was confirmed by reanalysis of the sample pulp. The mass weighted cobalt assay for sample BC 227 is 0.29%.

Figure 11.7 Pairs plot showing correlations between NORI Area D sample values

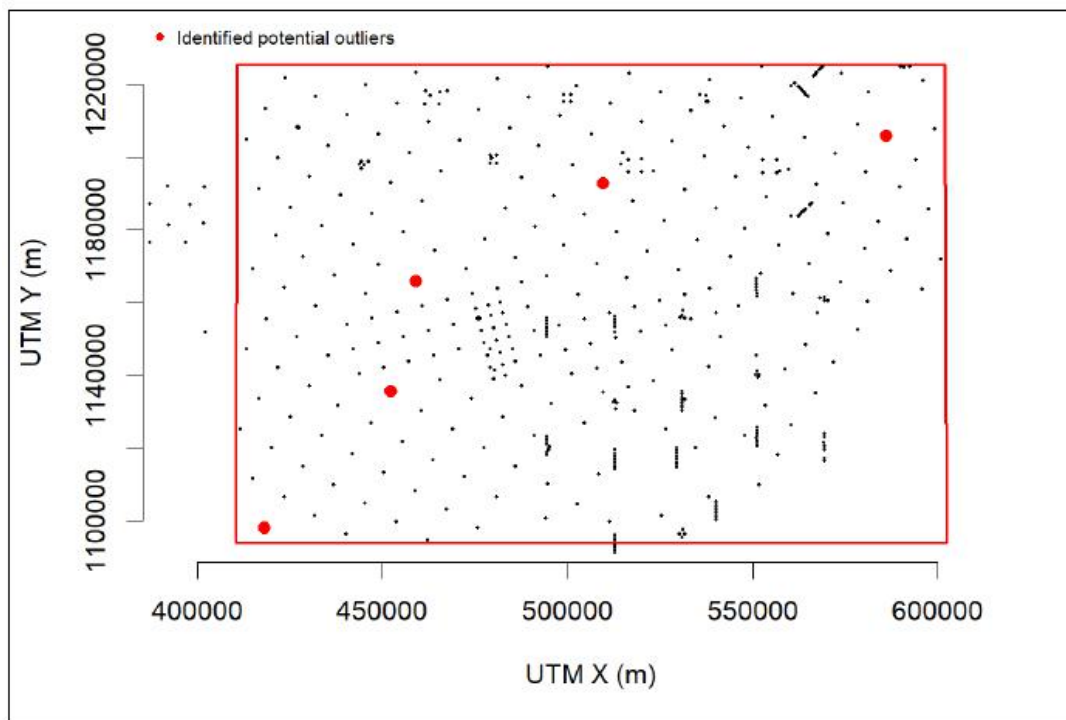

Note: Axes labelled in percentage. Potential outliers are shown as a red cross. The upper panels show the Pearson correlation coefficient. Averaged co-located data point values.

Table 11.8 Detected polymetallic nodule sample outliers

UTM X (m)	UTM Y (m)	Abundance (kg/m <sup>2</sup> )	Nickel (%)	Copper (%)	Cobalt (%)	Manganese (%)	Silicon (%)	Iron (%)	Phosphorus (%)
586058.9	1205748	3.1	0.9	1.4	0.4	33.2	6.3	4.3	0.1

Figure 11.8 Location of identified outliers

### 11.2.9 Top-cuts

To reduce the influence of outliers on the estimation of local grades the most common approach is to trim those outliers to some arbitrary value (typically the 97.5, 98 or 99 percentile or mean plus twice standard deviation). Table 11.9 shows the top-cuts that could be considered using these methods. Other methods include selecting the top-cut value by inspecting log-probability plots and looking for where the distribution breaks down in the high values or looking at the inflection point in a mean-variance plot.

Table 11.9 Potential top-cut values for abundance, nickel, copper, manganese and cobalt values

	97.5%	98.0%	99.0%	Mean+2*sd	Median+1.5*IQR
Abundance (wet kg/m <sup>2</sup> )	29.80	29.90	30.54	28.44	26.32
Nickel (%)	1.48	1.48	1.49	1.53	1.46
Copper (%)	1.32	1.33	1.34	1.31	1.26
Cobalt (%)	0.17	0.17	0.21	0.19	0.16
Manganese (%)	33.59	33.73	34.31	34.38	34.20
Silicon (%)	7.54	7.85	8.16	6.98	6.53
Iron (%)	7.99	8.03	8.27	8.41	8.05
Phosphorus (%)	0.25	0.26	0.32	0.24	0.18

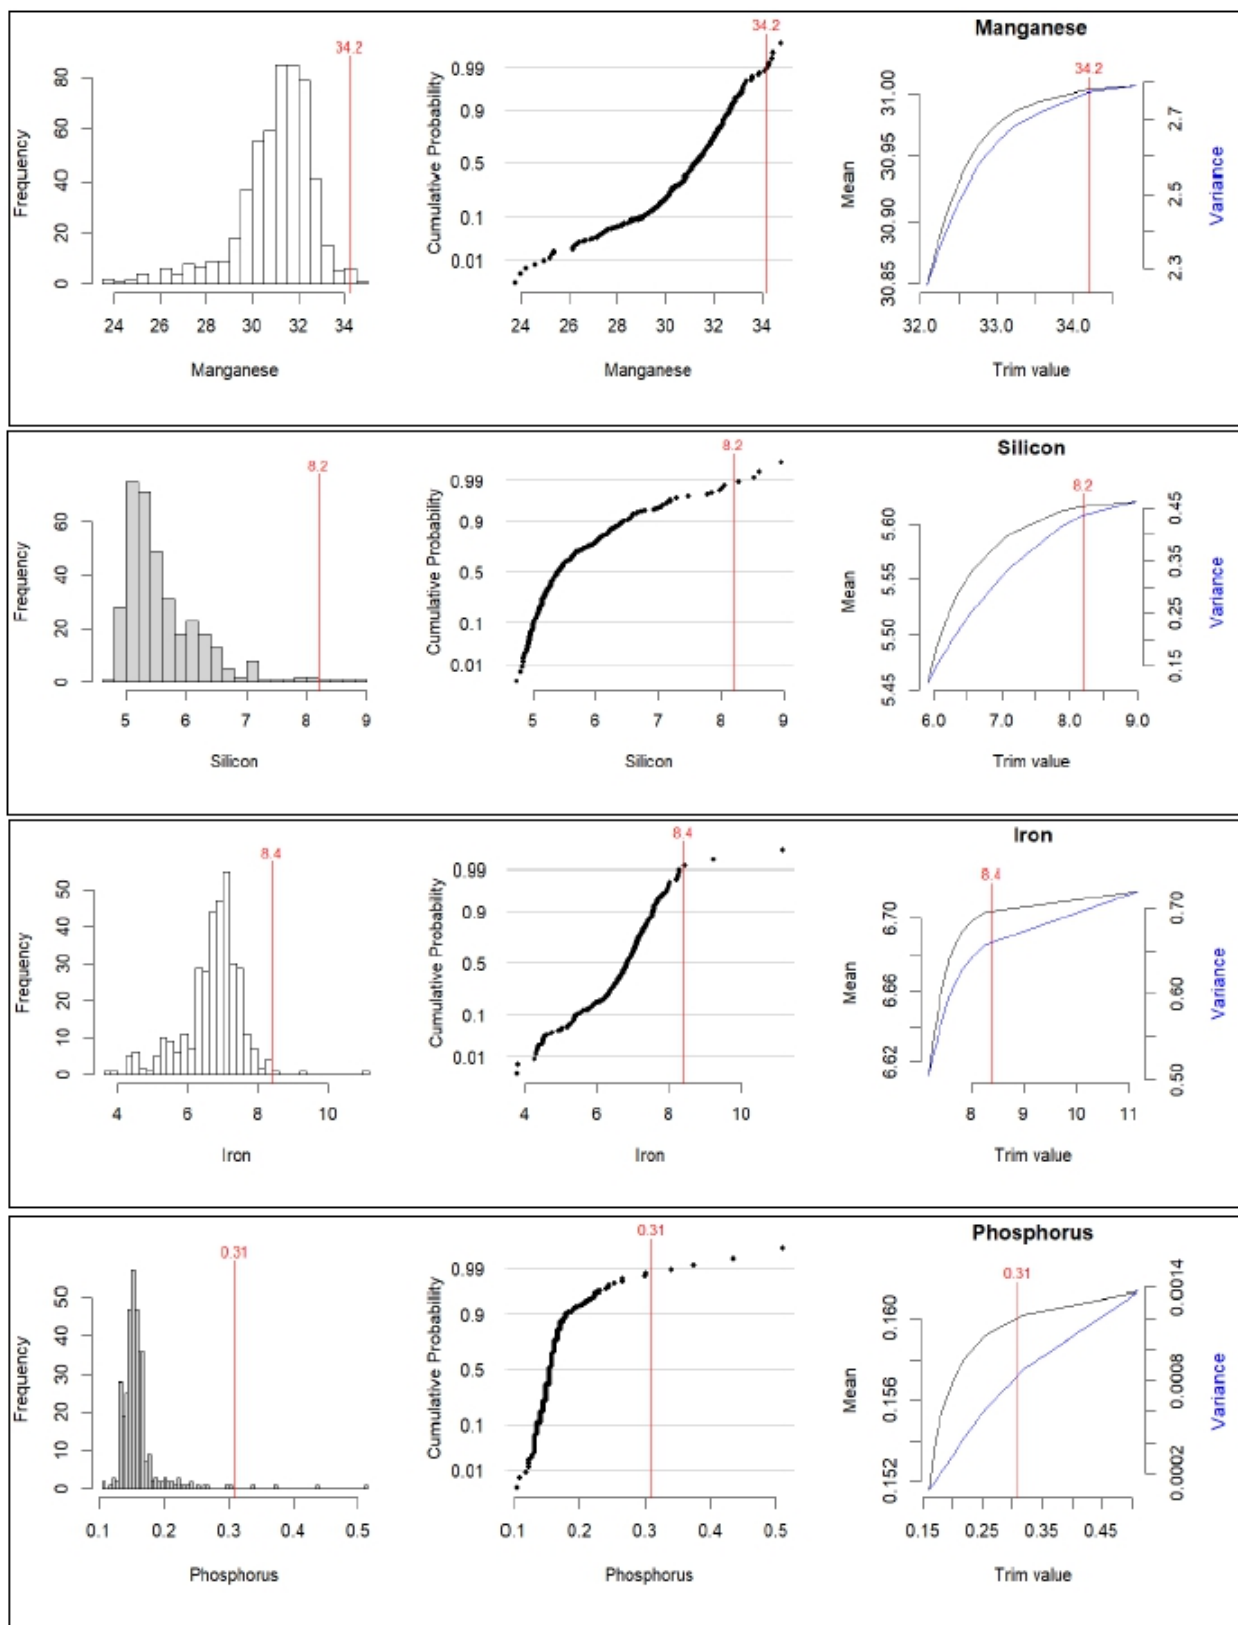

The top-cuts applied to the nodule sample data are listed in Table 11.10 and are shown as red lines in the plots provided in Figure 11.9. The mean-variance curves by top-cut value Figure 11.9 show that the top-cut values were selected where the tails of the distributions become unstable.

Table 11.10 Top-cut values applied to abundance, nickel, copper, manganese and cobalt values

<b>Variable</b>	<b>Top-cut</b>
Abundance	33
Nickel (Ni)	1.48
Copper (Cu)	1.45
Cobalt (Co)	0.197
Manganese (Mn)	34.2
Silicon (Si)	8.2
Iron (Fe)	8.4
Phosphorus (P)	0.31

Figure 11.9 Histogram, cumulative probability and mean-variance plots of abundance and grades for NORI Area D nodule samples

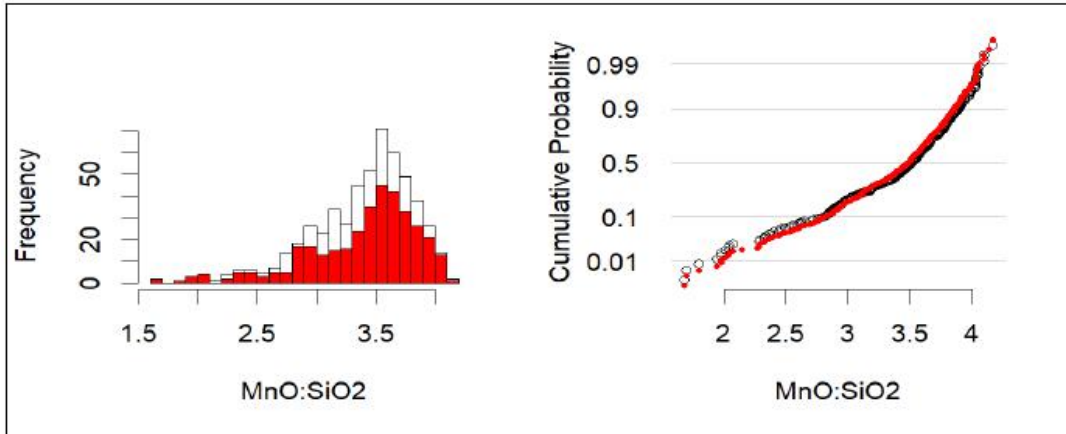

**11.2.10 Missing value imputation**

Silicon, iron and phosphorus assays are only present in the NORI and TOML data. The historic data only contains assays for manganese, nickel, copper and cobalt. To be able to apply a multivariate transform to the data, it is necessary that there are no missing values. Where there are missing values either the sample must be removed from the transform or the missing values must be imputed.

Linear regression models were developed to predict silicon ( $R^2 = 0.758$ ), iron ( $R^2 = 0.788$ ), and phosphorus ( $R^2 = 0.758$ ), using the manganese, nickel, copper, and cobalt data. Histograms and cumulative probability plots of the silica to manganese oxide ratio Figure 11.10 show that imputing the missing silicon values did not alter the distribution of the silica to manganese oxide ratio significantly.

Figure 11.10 Histogram and cumulative probability plots of MnO:SiO<sub>2</sub> ratio for NORI Area D nodule samples

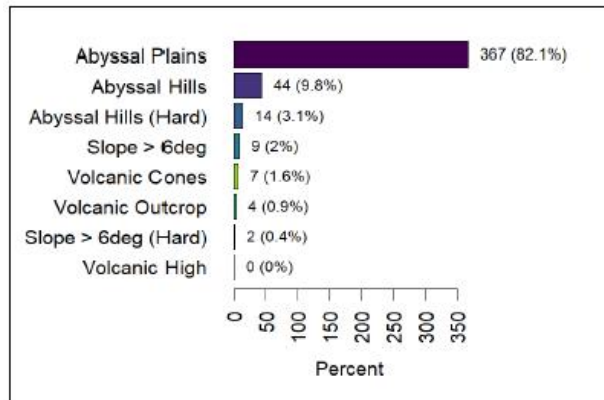

Note: Black data series is the original NORI Area D data. Red data series is NORI Area D data with missing silicon values imputed using linear regression.

**11.2.11 Domain modelling**

Geological domains were assigned to the NORI Area D samples by extracting the values from the geological domain raster at the sample UTM locations. The TOML Area F samples were all assigned to abyssal plains domain. The majority of the samples (367 samples, 82.1%) fall within the abyssal hills/plains domains. The proportions of nodule samples by geological domain are shown graphically in Figure 11.11.

Figure 11.11 Frequency of NORI Area D nodule samples by geological domains

Nodule type domains were assigned to the NORI Area D samples by extracting the values from the nodule type domain raster at the sample UTM locations. The TOML Area F samples were all assigned to Type 1 domain. The majority of the samples (379 samples, 84.8%), fall within the abyssal hills/plains domains. Due to the small size of the sediment drift domain, there is only one sample that falls within this domain. This is insufficient to describe the grade and nodule distributions for this domain. The proportions of nodule samples by nodule domain are shown graphically in Figure 11.12.

Figure 11.12 Frequency of NORI Area D nodule samples by nodule type domains

Boxplots of abundance and grades by domain Figure 11.13 suggest that as the slope increases the silicon content in the nodules increases, iron slightly increases and the manganese decreases. Also, the nickel and copper grades appear to decrease with increasing slope. This suggests that the nodules forming on the hills may be influenced by hydrothermal fluids from fissures/fractures associated with the hills or by the chemistry of the footwall rocks and sediment.

The high-slope (>6°) domains have very different distributions for all assays compared with the abyssal hills/plains domains which comprise bulk of the NORI Area D area. Because of this difference it is necessary to exclude the samples from the high-slope domains when estimating grades for the abyssal hills/plains domains. Also, because of the low number of samples in the high-slope domains and the volcanic domains it will be necessary to assign average grades to the resource model for these domains.

The boxplots of abundance and grades by nodule type Figure 11.14 suggest that the three samples within the sediment drift domain are significantly different from the Type 1 and 2/3 nodules. This domain contains an outlier cobalt value. Nodules within the sediment drift domain are low in nickel, high in copper, high in manganese and silicon and low in iron and phosphorus, compared with the other nodule domains. Comparison of Type 1 and Type 2/3 nodule grades indicates small differences. Type 1 nodules show higher nickel, iron, phosphorus and lower copper and silicon than the Type 2/3 nodules. These differences are also reflected in the nodule sizing analysis.

Due to the anomalous grade and abundance values for the sediment drift domain, these samples were excluded from the resource estimate. The low nodule abundance samples within the abyssal hills/plains domains, classified as either Type 1 or Type 2/3 nodules, may actually be occurring within unidentified sediment drift areas or on volcanic outcrops.

Figure 11.13 Boxplots of NORI Area D nodule abundance and assays by geological domain

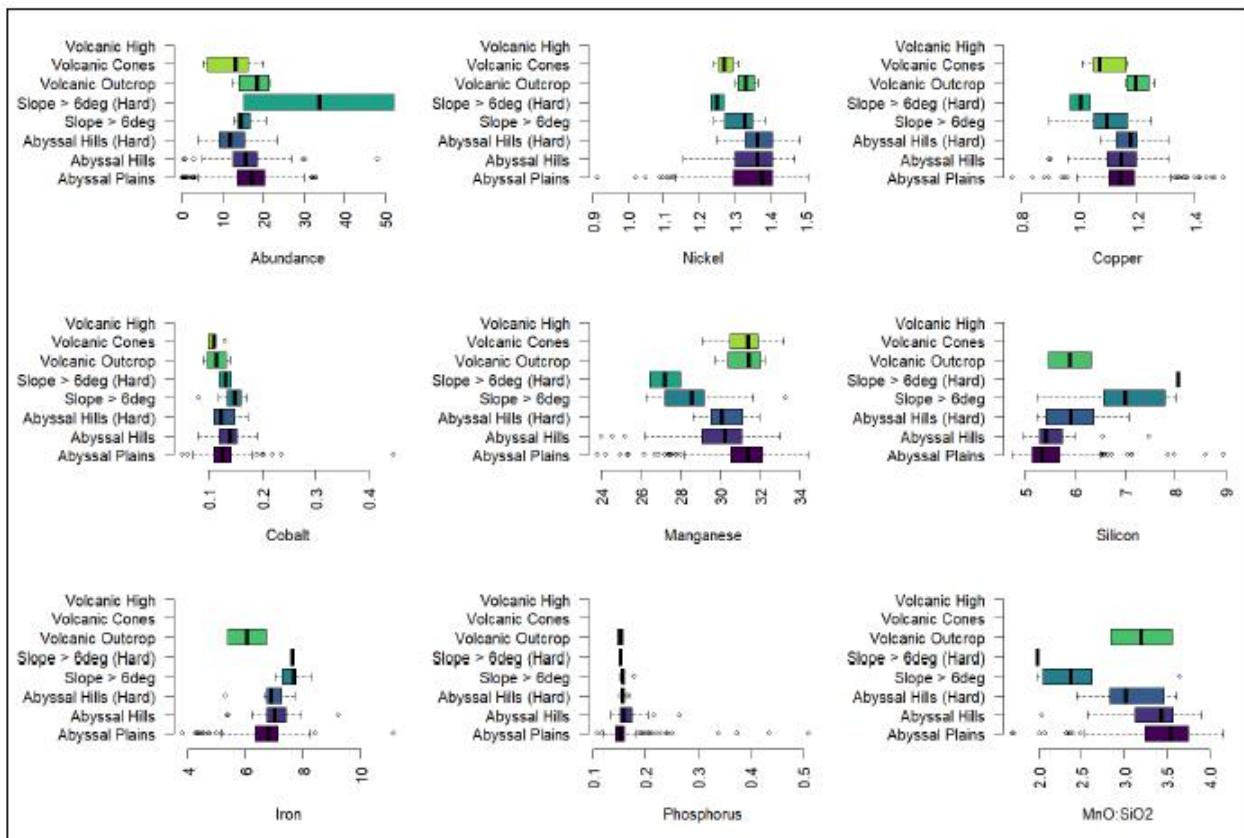

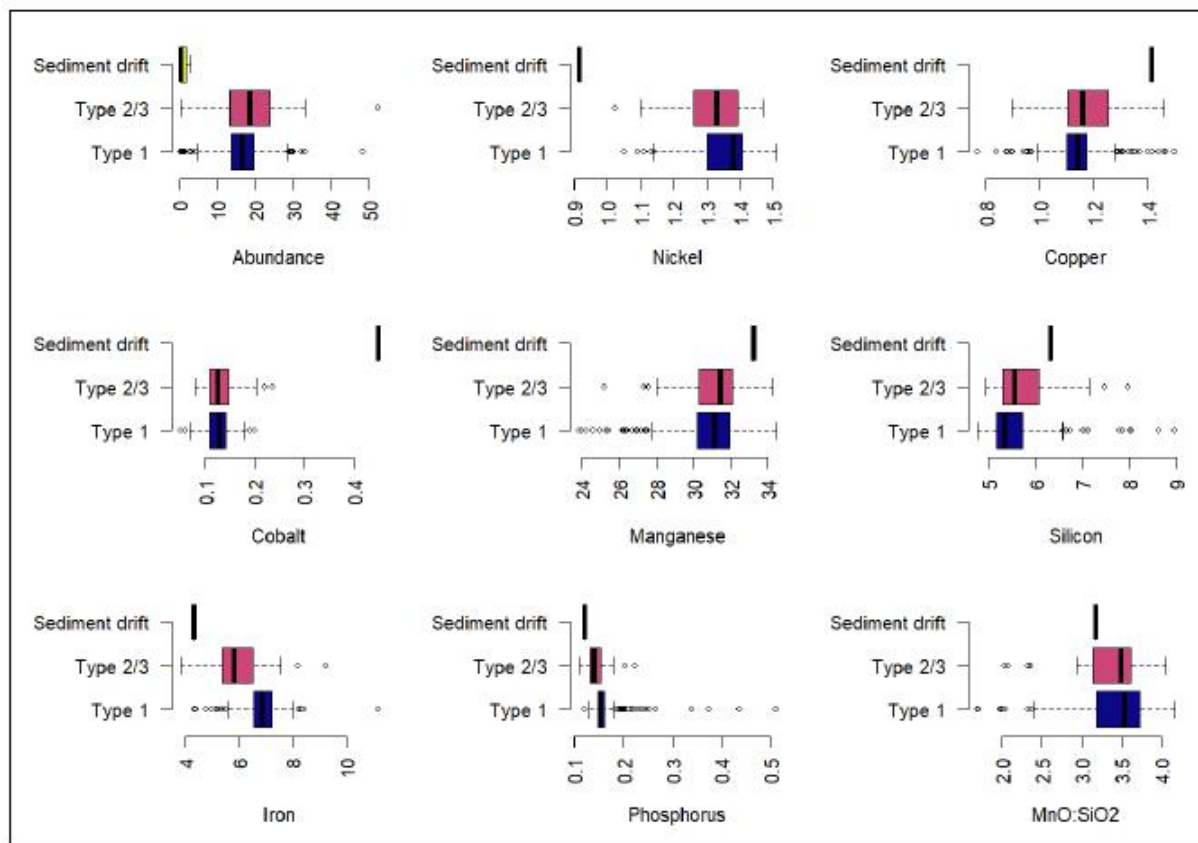

Figure 11.14 Boxplots of NORI Area D nodule abundance and assays by nodule type domain

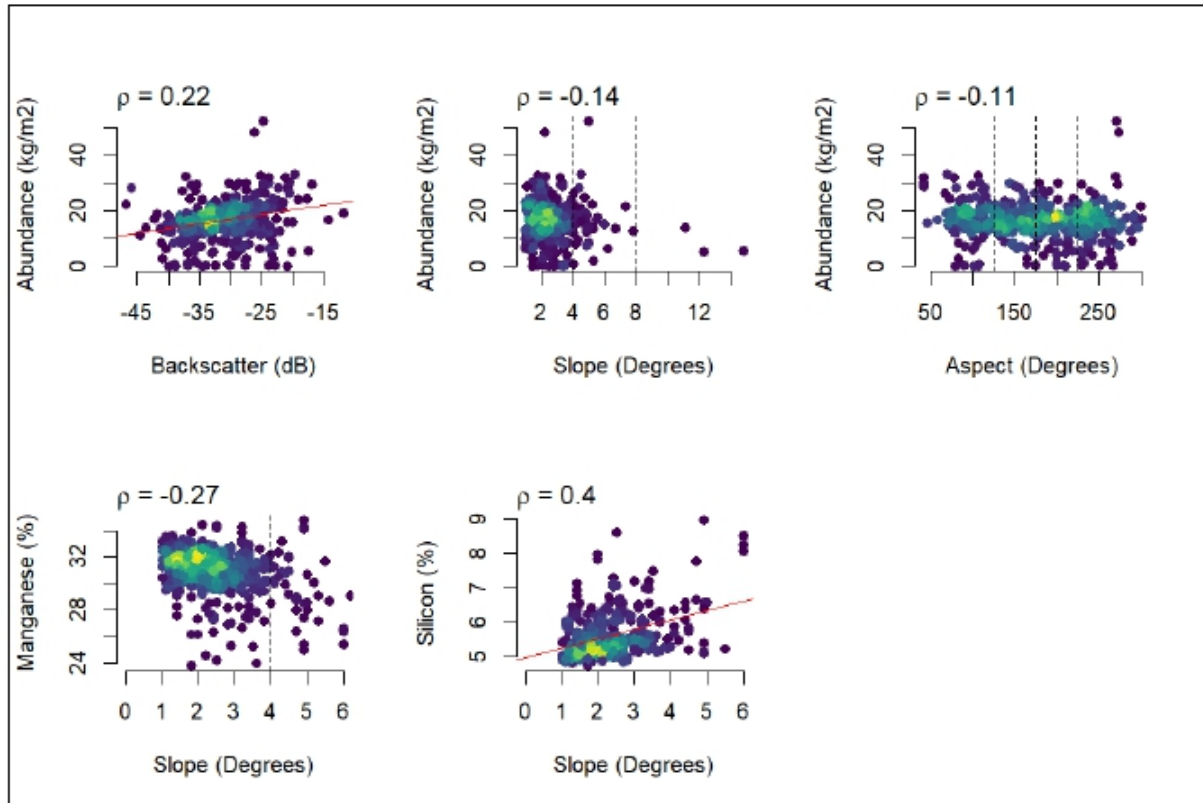

Comparison of nodule abundance with backscatter, slope and aspect was undertaken to assess the influence of these features on the distribution of nodules and nodule abundance. Scatter plots of nodule abundance versus backscatter, slope and aspect are provided in Figure 11.15. Also shown are scatter plots of manganese and silicon versus slope.

The plots suggest that there is linear relationship between backscatter and abundance which has a Pearson correlation coefficient of 0.35. Abundance does not appear to be influenced by slope or aspect. However, there are few samples in areas with a slope greater than 4°. Also note that there appears to be slightly lower abundance in areas where the aspect ranges from 125° to 175°. Silicon appears to increase with increasing slope (Pearson correlation coefficient of 0.38).

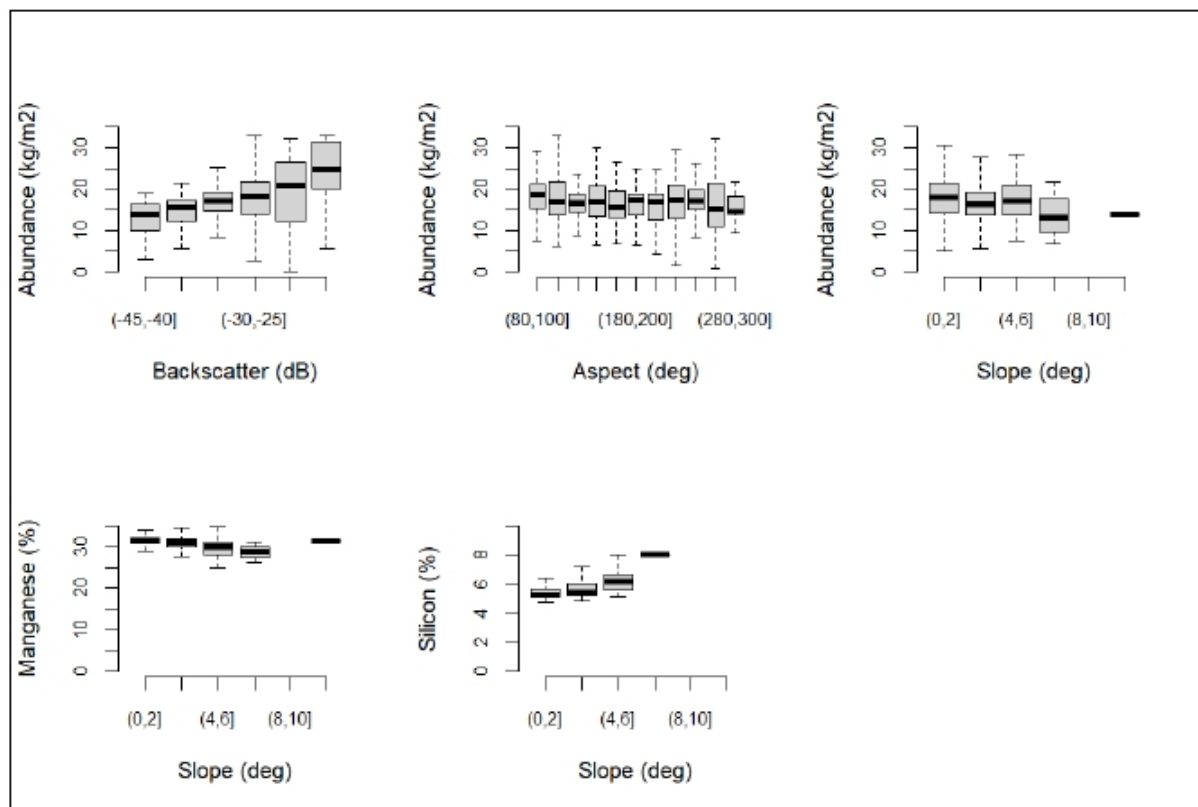

Figure 11.15 Scatter plots of NORI Area D nodule abundance versus backscatter, slope and aspect and manganese and silicon versus slope.

Boxplots Figure 11.16 were also generated to help visualize the trends seen in the scatter plots. The boxplot of abundance versus slope suggests that abundance is lower in areas with a slope greater than 6°. The trend in abundance versus backscatter is clear but also highlights a much higher variance in abundance in areas with higher backscatter.

Figure 11.16 Boxplots of NORI Area D nodule abundance versus backscatter, slope and aspect and manganese and silicon versus slope.

### 11.2.12 Data transformations

Missing values for silicon, iron and phosphorus were imputed using linear regression models. A Projection Pursuit Multivariate Transformation was then performed on the data. PPMT is a method to transform multivariate numeric data into multigaussian data. The transform aims to remove all bivariate correlations between the variables making them independent and to transform each variable to a normal distribution. The transform allows for independent random estimation or simulation of gaussian variables using simple kriging. The kriged estimates are then back-transformed into the original multivariate space, where all bivariate correlations and trends are restored. The transform is useful for simple kriging and sequential gaussian conditional simulations, where the variables are required to be independent and gaussian. The transform ensures that, even when using different variograms for each transformed variable, the bivariate relationships are maintained.

### 11.2.13 Summary statistics of processed sample data

Summary statistics for the data used for the NORI Area D resource estimate are provided in Table 11.11 to Table 11.15.

Table 11.11 Summary of samples within NORI Area D used for resource estimation

	Number	Missing	Min	Max	Mean	Median	Var	CV
Abundance (wet kg/m <sup>2</sup> )	320	1	0.08	32.99	17.42	17.07	28.861	0.3080
Nickel (%)	320	18	0.91	1.51	1.37	1.40	0.006	0.0572
Copper (%)	320	18	0.77	1.41	1.15	1.14	0.007	0.0732
Cobalt (%)	320	18	0.07	0.45	0.14	0.13	0.001	0.2030
Manganese (%)	320	18	24.23	34.46	31.07	31.35	2.520	0.0511
Silicon (%)	320	72	4.74	8.97	5.62	5.41	0.466	0.1210
Iron (%)	320	72	3.80	11.16	6.73	6.82	0.703	0.1250
Phosphorus (%)	320	72	0.11	0.51	0.16	0.15	0.002	0.2430

Note the 14 missing values for nickel, copper, manganese and cobalt are the photo samples where only abundance is recorded and 4 box core samples with low abundances that were not assayed. The samples with missing silicon, iron and phosphorus are comprised of TOML samples, historic samples and NORI samples derived from photography.

Table 11.12 Summary statistics of historic (declustered) samples within NORI Area D and TOML Area F

	Number	Missing	Min	Max	Mean	Median	Var	CV
Abundance (wet kg/m <sup>2</sup> )	29	0	6.73	28.10	14.88	14.01	25.396	0.3390
Nickel (%)	29	0	1.18	1.34	1.29	1.29	0.001	0.0280
Copper (%)	29	0	0.98	1.37	1.14	1.12	0.008	0.0804
Cobalt (%)	29	0	0.07	0.18	0.12	0.11	0.001	0.2420
Manganese (%)	29	0	25.88	32.90	30.55	30.86	2.175	0.0483
Silicon (%)	0	29						
Iron (%)	0	29						
Phosphorus (%)	0	29						

Note 28 samples are within NORI Area D and 1 sample is within TOML Area F.

Table 11.13 Summary of NORI 2018 nodule box-core and photo samples within NORI Area D used for resource estimation

	Number	Missing	Min	Max	Mean	Median	Var	CV
Abundance (wet kg/m <sup>2</sup> )	59	1	6.50	29.90	17.90	18.00	20.387	0.2520

### 11.2.13.1 Spatial continuity

Spatial continuity of abundance and the grades of manganese, nickel, copper, cobalt, silicon, iron and phosphorus were assessed using semi-variograms. For convenience, semi-variogram is abbreviated to variogram in the following discussion.

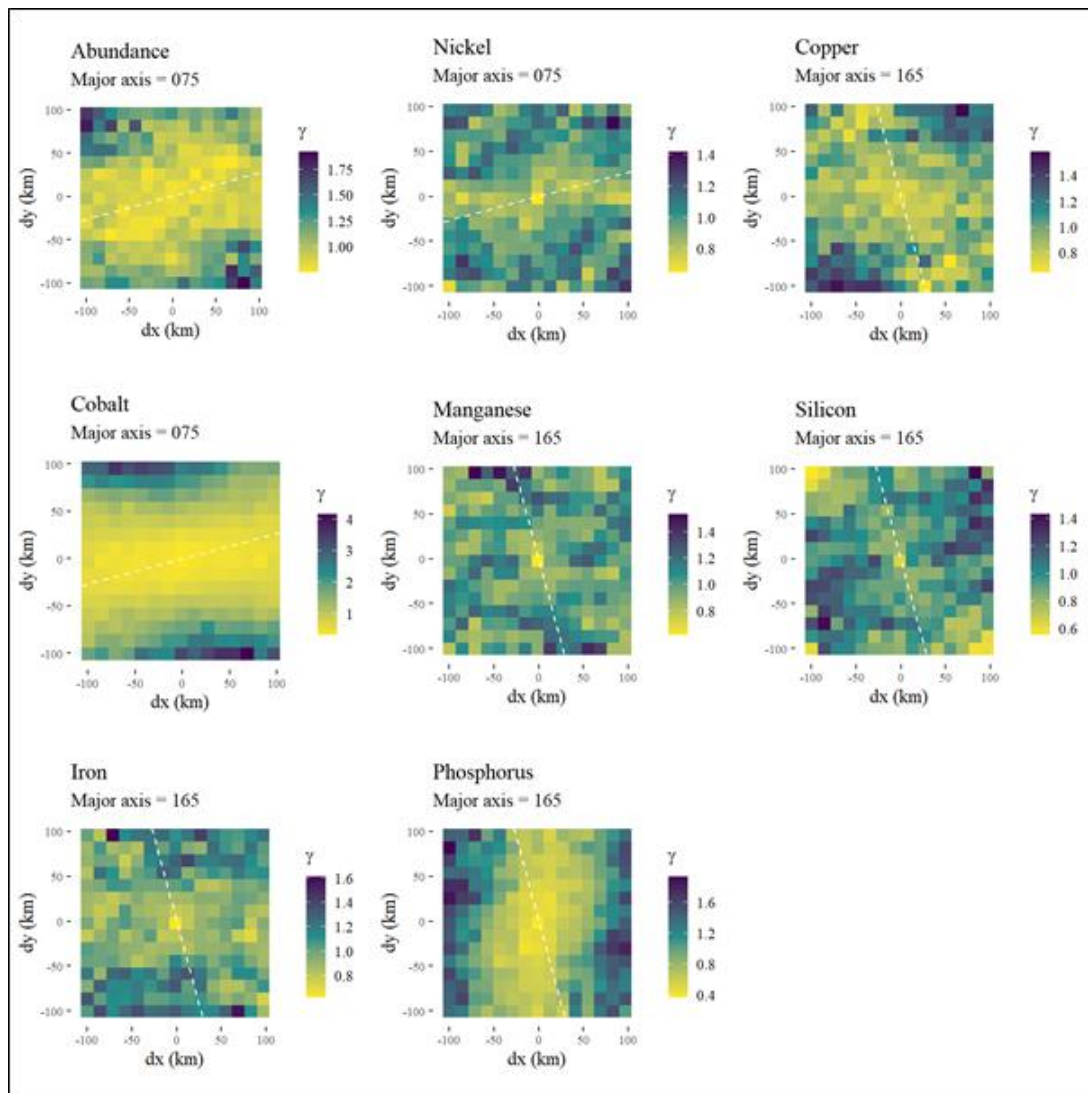

A variogram is a graphical representation of the variance between pairs of points at different separation distances. For data that is spatially correlated, it is expected that closely-spaced pairs of data will have lower variance than widely-spaced pairs. At a particular distance, known as the range, the pairs become uncorrelated and the variance no longer increases. Experimental variograms are generated from the data in different orientations to see if there is greater continuity in a particular direction (anisotropy). If there is no strong evidence of anisotropy, the directional variograms can be combined into an omnidirectional variogram for ease of interpretation. The experimental variogram can be fitted with a mathematical model (the variogram model) from which spatial weights can be determined during the kriging estimation process.

### 11.2.13.2 Polymetallic nodule abundance and nodule grades

All NORI box-core samples and nodule abundances derived from photos within NORI Area D were used for analysis of spatial continuity. The PPMT transformed data was used for calculating the experimental variograms.

The direction of greatest continuity suggested by the variogram maps Figure 11.17 is approximately 075° or 165°. This direction is an artefact of the sparseness of the sampling and the orientation of the sampling grid which is oriented 075°, roughly parallel to the broad regional trend of the CCZ.

Figure 11.17 Variogram maps of NORI Area D nodule sample assays

Two-structure, spherical models were fitted to the experimental variograms for abundance, nickel, copper, and manganese, while cobalt was fitted with only one structure. The experimental variograms for cobalt suggest very long ranges in the 075° direction.

The variogram models used for estimating block nodule abundance and grades are listed in Table 11.16 and illustrated in Figure 11.18 to Figure 11.25.

Table 11.16 Variogram models

	Abundance	Nickel	Copper	Cobalt	Manganese	Silicon	Iron	Phosphorus
Nugget	0.1	0.1	0.10	0.10	0.10	0.10	0.10	0.10

### 11.2.13.3 Backscatter

Acoustic backscatter is considered to reflect the substrate hardness of the seafloor. Absorption of the acoustic signal is expected to occur highest in areas covered by soft sediment (ooze) and lowest in areas of hard outcropping volcanics. The presence of nodules on the seafloor is expected to influence local absorption and be dependent on nodule packing which is a function of nodule abundance and nodule type.

Continuity of abundance is expected to be reflected in the backscatter data. Experimental variograms Figure 11.26 were calculated from the backscatter data and fitted with spherical variogram models. Omni-directional and directional variograms (065° and 155°) were calculated. The variograms are well-structured and consistent with the variograms of abundance.

Figure 11.26 Backscatter omni-directional, 065 and 155 directional variograms.

### 11.2.14 Estimation of nodule abundance and grades

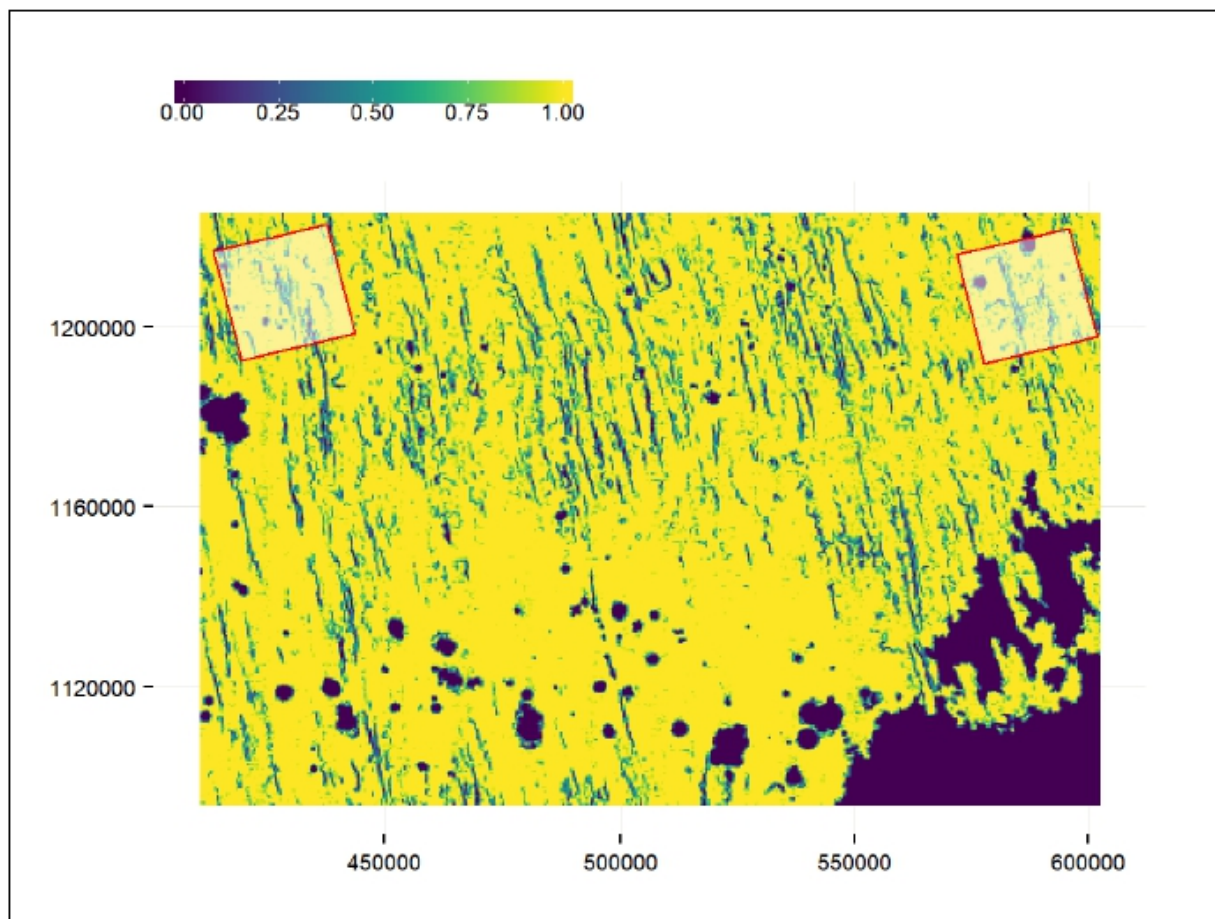

A geological raster grid model of NORI Area D was constructed from the geological domaining GIS raster data by aggregating the raster by a factor of 10. This expanded the raster cell size from 50 m to 500 m. The origin, extent and cell size are outlined in Table 11.17.

Table 11.17 NORI Area D grid model extents

	<b>Easting</b>	<b>Northing</b>
Model origin	410444.2110	1093899.210
Model limit	602444.2110	1225399.210
Cell size	500	500
Number of cells	263	263

The geological grid model contains a layer (NOD) which identifies the percent coverage of nodules within the 500 m by 500 m panel. This layer was constructed by aggregating the 50 m by 50 m reclassified geological domain raster. The geological domain raster was reclassified by assigning a value of 1 for the abyssal plains, abyssal hills and abyssal hills (hard) domains. All other domains were assigned a value of 0. The 500 m by 500 m geological grid model is shown in Figure 11.27.

Figure 11.27 NORI Area D 500 m by 500 m grid model, showing percentage coverage of nodules

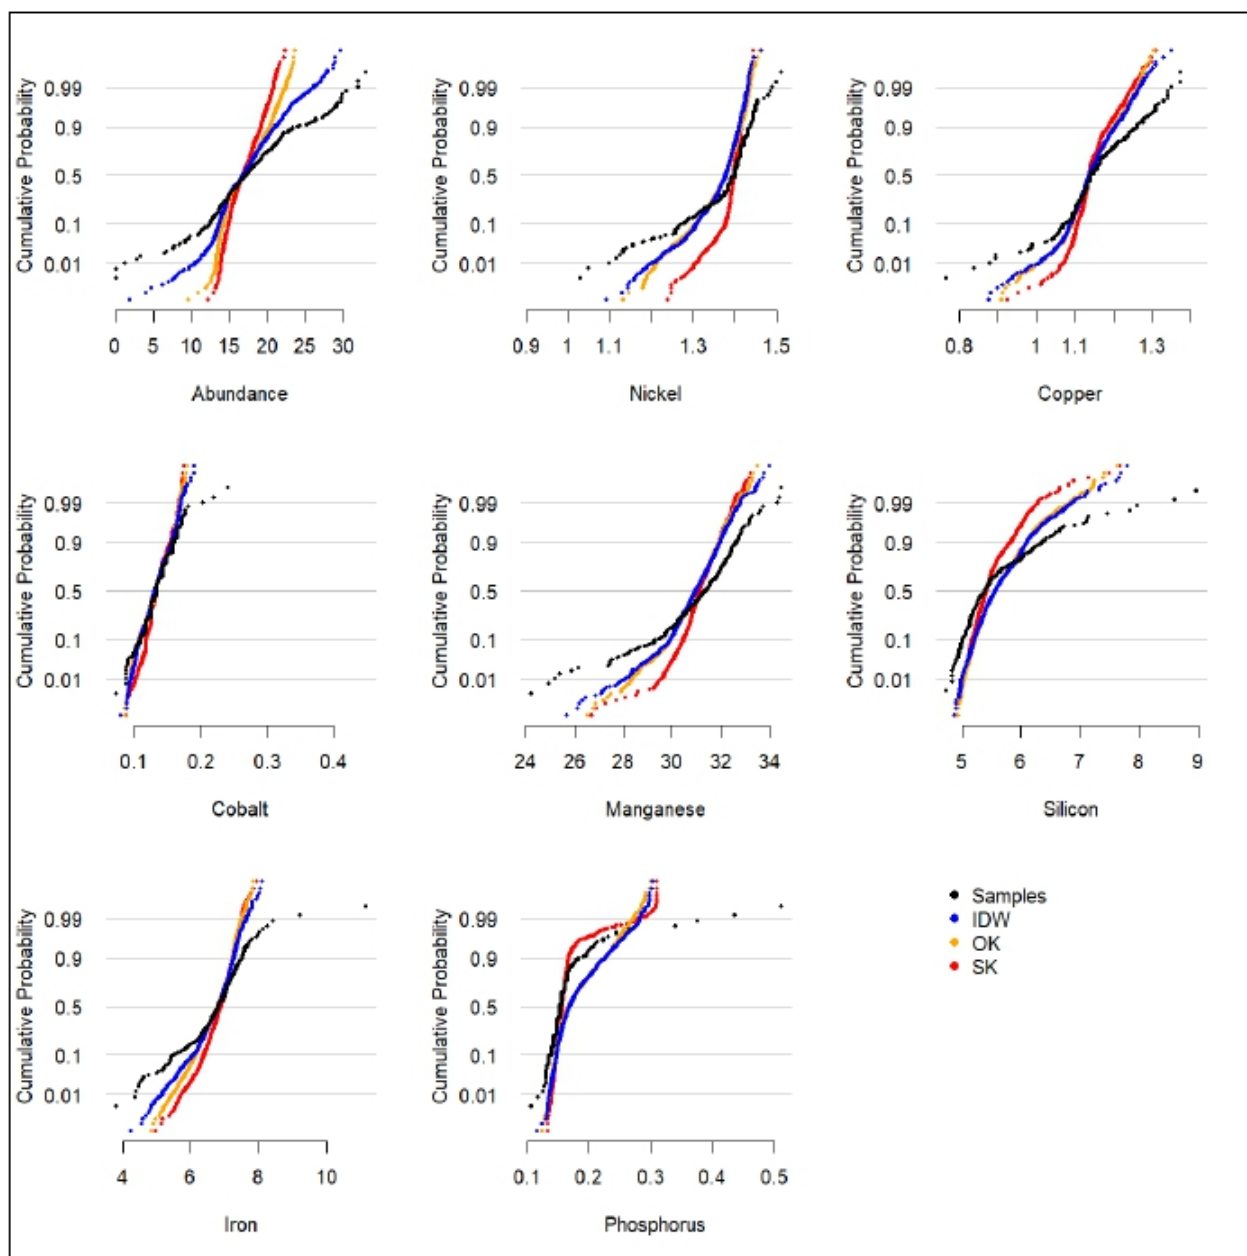

Points coloured by percent nodule coverage

The geological grid model was used as the discretization points for 3.5 km by 3.5 km sized panels. Inverse distance weighting (power of 2) and simple kriging were used to estimate nodule abundance and nodule grades into the geological grid model. Simple kriging was selected because ordinary kriging is not suited to the transformed grade variables. The 500 m by 500 m point estimates were aggregated to a grid with dimensions of 3.5 km by 3.5 km.

The prepared and transformed data was used for estimating nodule abundance and nodule grades. Samples falling within the high-slope ( $> 6^\circ$ ) geological domains were excluded from the estimation. A minimum of 1 and a maximum of 10 samples were used in informing the estimates.

Comparison of the inverse distance (IDW), ordinary kriging (OK) and simple kriging estimates with nodule sample data are illustrated in Figure 11.28. The cumulative probability plots show, as expected, that the simple kriging panel estimates are smoother (lower variance) than inverse distance panel estimates which are smoother than the nodule samples. The smoothing for the simple kriging estimates of nodule abundance is higher than the smoothing exhibited by the nodule grades. This is interpreted to be due to 70% of the sill in the spatial variogram for nodule abundance occurring at 3 km. The medians for the three distributions are very similar for nodule abundance and nodule grades.

Figure 11.28 Cumulative probability plots comparing nodule samples with IDW and SK estimates.

### 11.3 Cut-off grade

Due to the extremely low variance in the grades and the high metal content of the nodules, a conventional cut-off based on grades is not relevant to definition of the Mineral Resources. A cut-off based on abundance is a more effective basis for determining the limits of economic exploitation. A cut-off of 4 kg/m<sup>2</sup> abundance was chosen, derived from the estimates of costs and revenues presented in this Initial Assessment.

The metal prices assumed in the calculation of the cut-off were: nickel metal US\$16,472/t; nickel in nickel sulphate US\$18,807/t Ni; copper metal US\$6,872/t; cobalt metal US\$46,333/t; cobalt in cobalt sulphate US\$56,920/t Co; manganese in manganese silicate US\$4.50/dmtu. The price estimates are long term (2034 – 2046) forecasts provided in a report by CRU International Limited (CRU, 2020). The QP considers that this timeframe is reasonable in view of the likely time required to bring the majority of the NORI Mineral Resources into production.

### 11.3.1 Mineral Resource classification

The limiting factor for Mineral Resource classification for NORI Area D is confidence in the estimates for abundance. Confidence in the resource estimate was assessed using the probability of abundance being greater than  $\pm 15\%$  of mean abundance over one quarter production (Measured) and one year's production (Indicated) at 90% confidence.

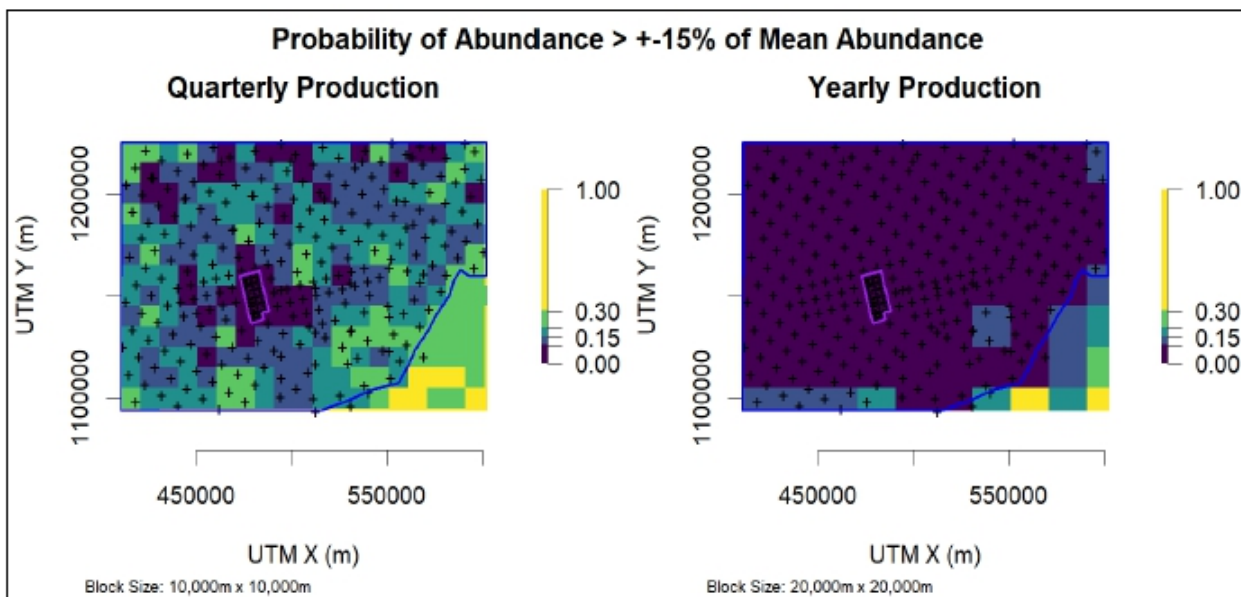

The risk in quarterly production estimates was assessed by using Conditional Gaussian simulation was used to simulate abundance. Each simulation was an equiprobable realization of the modelled data. The simulation was run 100 times using the same data and same estimation parameters and variogram model as used for kriging.

Assuming an annual production rate of 8 Mt (wet) of nodules per year (240 Mt over 30 years), the panel size for a quarter of a year's production is 10,846 m by 10,846 m assuming an average abundance of 17 kg/m<sup>2</sup>. To simplify the conditional simulation, the area covered by a quarter of a year's production was set at 10 km by 10 km while one year's production was set at 20 km by 20 km. This equates to a yearly production rate of 6.4 Mt and one quarter of a year's production of 1.6 Mt with an average abundance of 16 kg/m<sup>2</sup>.

The conditional simulations of 500 m by 500 m panels were aggregated up to 10 km by 10 km and 20 km by 20 km panels. The probability of abundance being greater than  $\pm 15\%$  of mean abundance over one quarter production (Measured) and one year's production (Indicated) is shown in Figure 11.29.

The conditional simulation of abundance Figure 11.29 suggests that in the small area near the centre of NORI Area D where sample spacing is 3.5 km by 3.5 km the estimates are of high confidence and could be classified as Measured Mineral Resource. In the rest of NORI Area D, where there are samples at a spacing of 7 km by 7 km and 10 km by 10 km, the estimates are of sufficient confidence to be classified as Indicated Mineral Resource. The south-east corner of NORI Area D where there are generally no samples, and which is mostly covered by the volcanic high domain is considered to be estimated with low confidence. Note that there are some areas covered by 10 km by 10 km spacing that have high confidence.

Figure 11.29 Abundance: Probability of exceeding 15% of mean at 90% confidence for quarterly and yearly production.

Perimeters: (purple) Area of high confidence = Measured Mineral Resource; (blue) Area of moderate confidence = Indicated Mineral Resource.

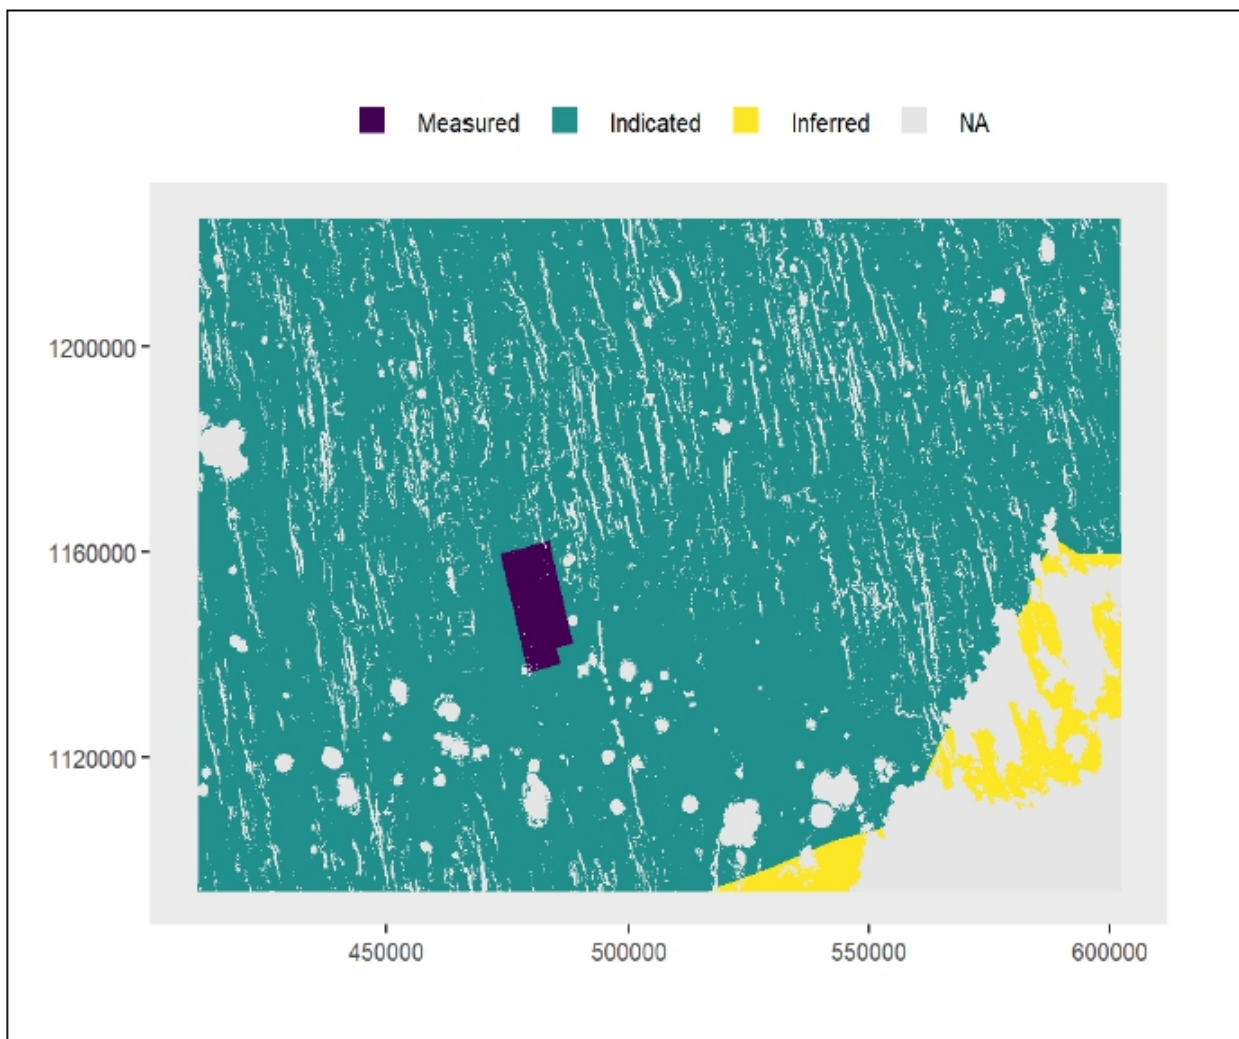

The Mineral Resource was classified on the basis of the quality and uncertainty of the sample data and sample spacing, in accordance with SEC Regulation S-K (subpart 1300).

The Measured Mineral Resource was assigned to the area within NORI Area D where box-core sampling was conducted on a nominal 7 km by 7 km spacing and infilled with estimates of nodule abundance from seafloor photography to a spacing of 3.5 km by 3.5 km.

The Indicated Mineral Resource was assigned to the area within NORI Area D where box-core sampling was conducted on a nominal spacing of 7 km by 7 km but without additional photo-estimates of nodule abundance, or 10 km by 10 km.

The Inferred Mineral Resource was assigned to the areas of abyssal plain in the southeast corner of NORI Area D that are largely unsampled. The volcanic high in the southeast corner was excluded from the mineral resource estimate due to the high level of uncertainty about nodule abundance and grades in this domain. Mineral Resource classification boundaries are shown in Figure 11.30.

Figure 11.30 Mineral Resource classification boundaries

The reasons for excluding the Volcanic High from the Mineral Resource include:

- Uncertainty in distinguishing between volcanic outcrop and high abundance nodules using the backscatter data.
- No nodule samples have yet been collected within the volcanic high and as such it is unknown whether there are any nodules occurring within the domain.
- The geological domain interpretation used for this resource update is based on significant supporting data compilation and re-interpretation of all existing license-scale data. In addition, it considers integration of associated basin-scale geological and geophysical data and interpretations. The previous resource estimation (2018) and data interpretation primarily focused on interpretation of AUV data over the small, closely-sampled area near the centre of NORI Area D.

- The volcanic high is interpreted as a relic volcanic intersection high, which also includes a relic transform parallel trough. Both are volcanic related features related to the Clipperton transform zone. The volcanic high is interpreted to have formed when the Clipperton transform fault was active, at a time when the seafloor was situated at the East Pacific Rise mid-ocean ridge. This is supported by comparison of backscatter texture, outcropping structural fabric within this domain and the associated bathymetric geomorphology.
- The terrain across the volcanic high is extremely rugged and is at a much shallower depth than the rest of NORI Area D. The volcanic high is less than 50 km from a significant  $\text{CaCO}_3$  anomaly seen in the compilation of basin-scale surficial sediment lithology data. This strongly suggests that the volcanic high sits above the carbonate compensation depth in a region that is therefore not favorable for nodule formation.
- The evidence that nodule chemistry is affected by substrate means that it is not reasonable to infer the grades of nodules that might occur in the Volcanic High domain from grades of nodules in other domains.

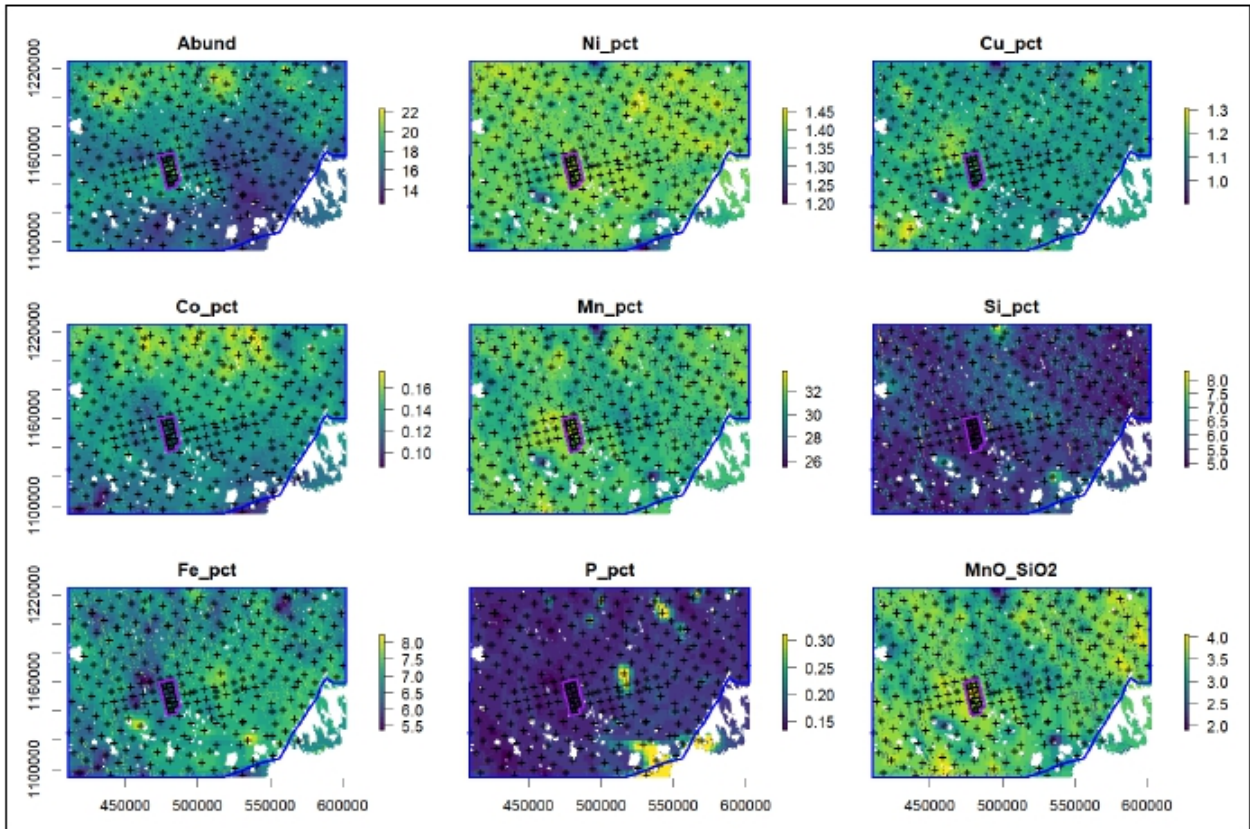

### 11.3.2 Estimation results

The 3.5 km by 3.5 km panel estimates were added back onto the 50 m by 50 m geological domaining GIS raster model. Nodule abundance and nodule grades for cells identified as either high-slope ( $> 6^\circ$ ) or volcanic outcrop domains were set to the mean values from the nodule samples. Cells identified as volcanic cone or volcanic high or sediment drift were set to null.

Resource categories were added to the 50 m by 50 m raster grid model using the perimeters defined by conditional simulation.

Results of the simple kriging (SK) estimates are shown in the spatial plots Figure 11.31. Note the two very small spots of high silicon estimated in the abyssal domains. These two spots are interpreted to be the result of miss-labelling of high slope domains which have high silicon. Also note the high phosphorus in the south-eastern near the volcanic high domain. Cobalt is relatively high in the north of NORI Area D and relatively low in the south while manganese, nickel, copper and iron are relatively uniformly distributed across NORI Area D. Abundance and cobalt grade appears to be higher in the north.

Figure 11.31 Nodule abundance and nodule grades 3.5 km by 3.5 km SK panel estimates for NORI Area D

The nodule abundance and tonnage curves for NORI Area D at various nodule abundance cut-offs are shown in Figure 11.32. The curves indicate that there are no 3.5 km by 3.5 km panels with abundance of less than 12 kg/m<sup>2</sup>. The volcanic outcrop, volcanic high, volcanic cones and high-slope (>6°) domains were excluded from the estimate.

Figure 11.32 NORI Area D abundance-tonnage curve.

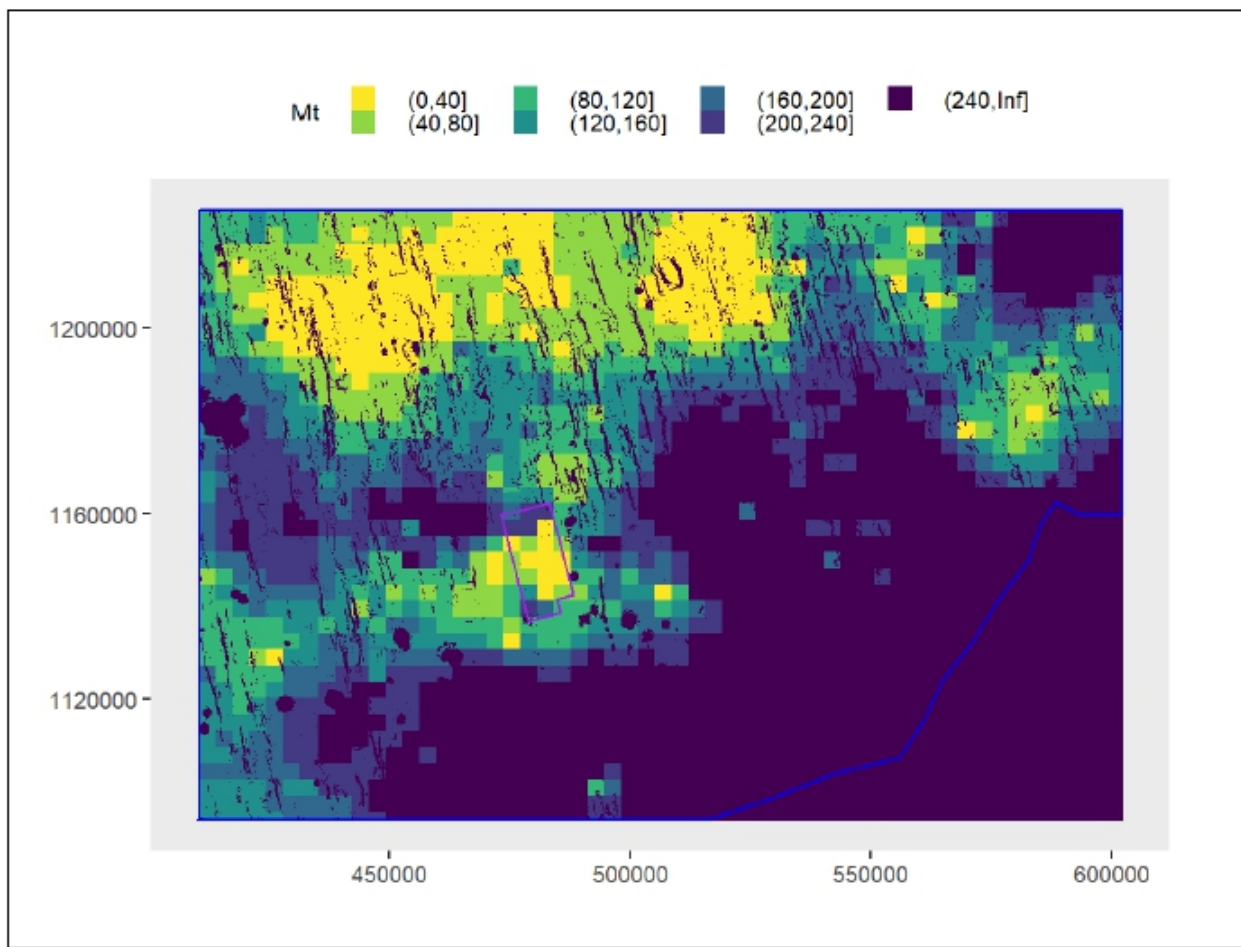

The Mineral Resource is reported in Table 11.18 at a nominal abundance cut-off value of 4kg/m<sup>2</sup>.

Table 11.18 2020 Mineral Resource estimate for NORI Area D at 4 kg/m<sup>2</sup> abundance cut-off

NORI Area	Category	Tonnes (Mt (wet))	Abundance (wet kg/m <sup>2</sup> )	Nickel (%)	Copper (%)	Cobalt (%)	Manganese (%)	Silicon (%)
D	Measured	4	18.6	1.42	1.16	0.13	32.2	5.13
D	Indicated	341	17.1	1.40	1.14	0.14	31.2	5.46
D	Measured + Indicated	345	17.1	1.40	1.14	0.14	31.2	5.46
D	Inferred	11	15.6	1.38	1.14	0.12	31.0	5.50

Figure 11.33 shows the panels coloured by abundance, with the colour intervals corresponding to seven sequential 40 Mt (wet) increments, ranked from highest abundance to lowest abundance. The figure shows that abundance is highest along the northern margin of NORI Area D, which is also high in cobalt.

Figure 11.33 2020 Mineral Resource model coloured by abundance, in seven 40 Mt (wet) increments

**11.3.3 Comparison with previous resource estimates**

The first resource estimate for NORI Area D, completed in 2012, was 399 Mt (wet) of polymetallic nodules and was based solely on historic samples.

In 2018 NORI completed a box core sampling campaign that focused on a small area near the centre of Area D which was selected as a potential trial mining site. Where box core sampling was conducted on a nominal 7 km by 7 km spacing and infilled with estimates of nodule abundance from seafloor photography on a 3.5 km by 3.5 km grid the Mineral Resource was classified as Measured. Where sampling was at a nominal spacing of 7 km by 7 km but did not have any additional photo-estimates of nodule abundance, the Mineral Resource was classified as Indicated. The additional samples resulted in an updated resource estimate of 383 Mt (wet), consisting of 4 Mt Measured and 34 Mt Indicated and 345 Mt Inferred Mineral Resources.

The latest exploration campaigns (2019) added box core sampling at a spacing of 10 km by 10 km across most of the remainder of NORI Area D. The latest Mineral Resource estimate (2020) is 356 Mt (wet), consisting of 4 Mt Measured and 341 Mt Indicated and 11 Mt Inferred Mineral Resources. Taking into account the conversion of the majority of Inferred to Indicated Mineral Resources, the remaining Inferred Mineral Resource has decreased by 26 Mt as a result of excluding the Volcanic High domain in the south-eastern corner of NORI Area D, due to uncertainty about the occurrence of nodules in this area. The 2020 resource estimate is also slightly higher in abundance (5.4% higher), and nickel (6.1% higher), cobalt (5.4% higher) and manganese (2.2% higher) grades than the 2018 estimate.

Comparison of the area covered by Inferred, Indicated and Measured Mineral Resource for the 2020 estimate and the same area in the 2018 model shows that nickel grade has increased by 6% (1.32% to 1.40% Ni) while abundance has increased by 6% (16.0 to 17.0 kg/m<sup>2</sup>). Mineral Resource tonnage has increased by 10% (from 10 to 11 Mt) in the Inferred area and 7% (from 320 to 341 Mt) in the Indicated area. The positive conversion rates arising from infilling the sampling grid with high quality box core sample data (rather than extending the area sampled) are exceptionally high compared to the typical outcomes from infill sampling of terrestrial mineral deposits.

To allow direct comparison between the 2018 and 2020 resource estimates the 2018 block model was converted to polygons, one rectangular polygon for each block, and then rasterized to match the 2020 raster model. The two models were combined by dividing the 2020 estimate of abundance at each raster pixel location by the 2018 estimate of abundance to obtain a conversion rate from the 2018 estimate to the 2020 estimate. The abundance conversion rate from the 2018 model to the 2020 model is shown in Figure 11.34. A value below 1.0 indicates a reduction in abundance and a value above 1.0 indicates an increase in abundance for the 2020 model over the 2018 model. Overall, the area previously identified as Measured and Indicated Mineral Resource has not changed other than some slight changes along the margins due to the addition of the 2019 Campaign 6A and 6B sampling. The biggest change is along the western margin where the area previously identified as Inferred\_2 (not supported by sampling) has increased in abundance. Also, the abundance along the western margin of the Inferred\_1 boundary (red dashed line on the plot) has decreased in abundance due to better constraint of higher abundance, historic sampling in the area. The biggest increase in abundance is in the north-eastern corner where it has increased by nearly a factor of 2.

Figure 11.34 Ratio 2020:2018 abundance estimates, showing the 2018 resource classification boundaries

Note: Measured Resource: inner red solid polygon, Indicated Resource: outer solid red polygon, Inferred\_1 Resource: dashed red polygon, Inferred\_2 Resource: remainder

#### 11.4 NORI Area A, B and C

The Mineral Resource estimates for NORI Areas A, B and C have not been updated. The existing Mineral Resource estimate generated by Golder in 2012 remains the current estimate. There has been no new exploratory work conducted in the areas to warrant an update to the estimates.

All information for this section has been summarized from Golder 2015 technical report. The information presented for NORI Area D in this section, is superseded by the information presented in Section 11.2.

### 11.4.1 Boundaries and geological domains

Based on the geophysical interpretation of the NORI multibeam there are areas identified as low nodule density and possible lava flows and outcrops in NORI Area C. These areas cover a lower percentage of NORI Area C than the areas identified as high, medium, or indeterminate nodule density. The areas identified as low nodule density and possible lava flows and outcrops are numerous, discontinuous, and are generally smaller than the average sample spacing. As such, no domaining was done using the mapped areas of potential lava flow and outcrop.

Since the NORI Area falls within a single bathymetric domain (abyssal hill province) and entirely within the CCZ deposit boundary, it was not considered necessary to domain the data for an Inferred Mineral Resource.

### 11.4.2 Nodule sample data

The polymetallic nodule data for NORI Areas A, B and C have not changed since the 2012 Mineral Resource estimate (Golder 2015). The nodule data used for the 2012 resource estimate included only the historic polymetallic nodule sample data. The summary statistics for this data is listed in Table 11.19. Note that this summary includes NORI Area D.

Table 11.19 Summary statistics of samples within the NORI Area used for the 2012 Mineral Resource estimate.

Variable	Samples	Missing	Min	Max	Mean	Var	CV	Median
Ni (%)	360	32	0.68	1.75	1.30	0.016	0.10	1.31
Co (%)	360	32	0.05	0.33	0.17	0.004	0.35	0.19
Cu (%)	360	32	0.40	1.50	1.10	0.028	0.15	1.13
Mn (%)	360	32	12.84	33.90	29.45	8.406	0.10	30.20
Abundance (wet kg/m <sup>2</sup> )	392	0	0	52.2	11.9	64.303	0.67	12.00

Source: Golder 2015. Var = variance; CV = coefficient of variation; Ni = nickel; Co = cobalt; Cu = copper; Mn = manganese

### 11.4.3 Data processing

The data were checked for anomalous or erroneous data and cross-checked with data supplied directly by the ISA. Data preparation steps included in order:

- Data validation.
- Conversion of latitude/longitude coordinates to UTM coordinates using WGS 84 datum:
  - These areas cover several UTM zones but were overlaid to facilitate modelling of all areas in one model.
  - The minimum and maximum UTM coordinates for each of the NORI areas are listed in Table 11.20.
- A plan of the tenement or Area locations is presented in Figure 11.35.
- Resetting 0 assay values to missing and 0 abundance values to 0.01 where there are assay values.
- Application of top cuts (see Table 11.22).

Figure 11.35 NORI Areas A, B, C and D, showing location of historic data

NB: Areas A, B, C and D cover several UTM zones but were overlaid to facilitate modelling of all areas in one model. The apparent distances between the Areas in this figure are not real distances.

Table 11.20 Minimum and maximum UTM coordinates for NORI Exploration Areas

NORI Area	Pioneer Investor		UTM Easting	UTM Northing	UTM Zone
A	Yuzmorgeologiya	Minimum	546318.6	1276704.2	8
		Maximum	612250.2	1438373.8

#### 11.4.4 Declustering

Declustering was used to remove potential biases in statistics that can arise from variable sample spacing, which can arise from the multiple sampling at close locations as the ship undertakes its voyage.

Normal cell declustering without any boundaries can present issues where the edge cells become overweighted as the cell size is increased. A modified cell declustering algorithm was used that weights the cells to the block model volume within each cell. The process provides a declustering weight which is used to weight the univariate statistics Table 11.21. For this method, the cell size was optimized for a square window size of 30 km and the origin offset 10 times.

Table 11.21 NORI Areas A, B, C and D declustered statistics (historic data only).

Variable	Samples	Min	Max	Mean	Var	CV	Median
Ni (%)	360	0.68	1.75	1.29	0.021	0.11	1.32
Co (%)	360	0.05	0.33	0.19	0.003	0.27	0.20
Cu (%)	360	0.40	1.50	1.08	0.035	0.17	1.12
Mn (%)	360	12.84	33.90	28.91	10.524	0.11	29.81
Abundance (wet kg/m <sup>2</sup> )	392	0	52.20	11.57	66.736	0.71	11.00

Source: Golder 2015 Var = variance; CV = coefficient of variation

#### 11.4.5 Top-cuts

The coefficient of variation is very small for nodule abundance, nickel, copper, manganese, and cobalt, suggesting that the application of top-cuts is not necessary. However, due to the wide spacing of samples, a top-cut was applied to trim the high (99.5th percentile) values to reduce the likely impact of the high-grade outliers.

The presence of outliers (extreme values) and the need to apply “top-cut” values or “capping” (where samples above a certain threshold are assigned the top-cut value) to sample populations was assessed using a number of techniques:

- Examination of grade distributions using cumulative probability plots.
- Statistical assessment of the grade distributions.
- Examination of the spatial locations of identified outlier samples.

Top cuts defined in Table 11.22 are roughly equivalent to the 99.5th percentile of the mineralized samples and do not have a significant impact on the average grade. Application of top cuts reduced the mean only for manganese, which was reduced by a very low 0.2% of the uncut mean. This is simply because the grades within the CCZ are very consistent due to the deposit’s hydrogenetic and diagenetic origin.

Table 11.22 NORI Areas A, B, C and D top cuts used for NORI 2012 Mineral Resource estimate.

Variable	Top-Cut Value (%)
Ni	1.56
Co	0.31
Cu	1.46
Mn	33
Abundance	32

Source: Golder 2015

11.4.6 Spatial continuity

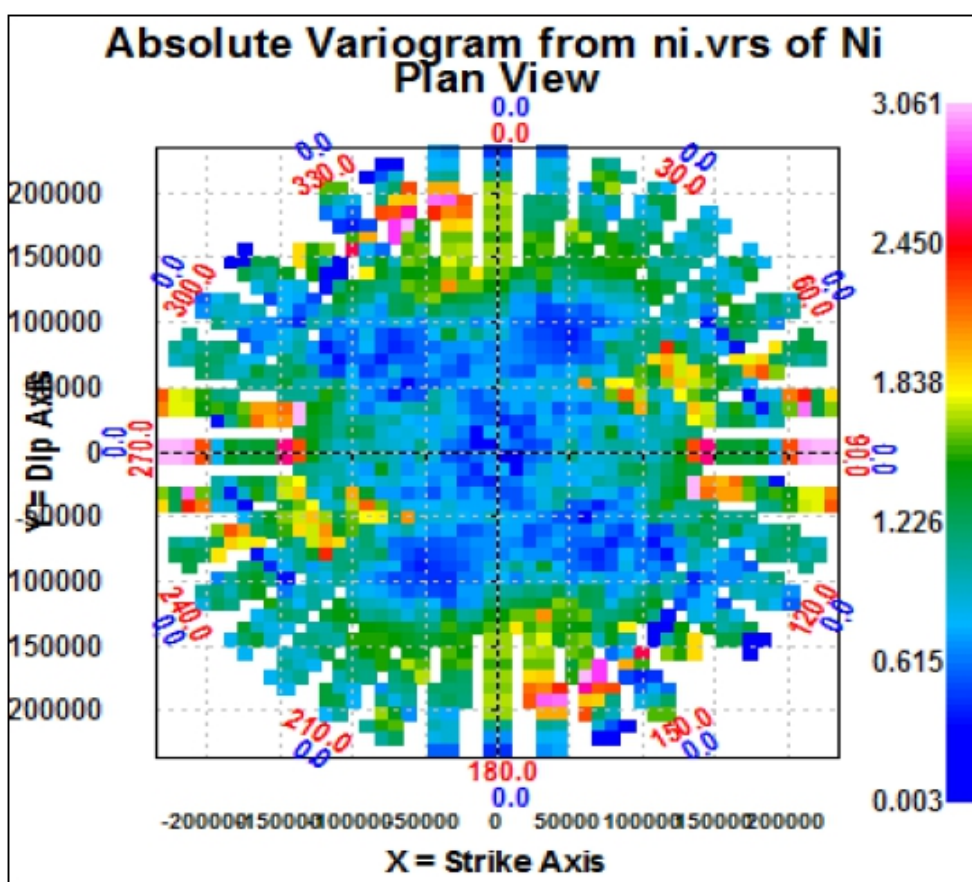

The variograms for NORI Areas A, B and C were not updated as there has been no new sampling collected from these areas since 2012. This Section is summarised from the Golder 2015 technical report.

The samples with top-cuts applied were used for variogram analysis. Traditional variograms showed good structure and were used for all variogram modelling. The variograms were scaled to the population variance. Variogram maps were calculated for the purpose of determining direction of greatest continuity. An example variogram (nickel) shown in Figure 11.36. Variogram models are presented in Table 11.23.

Table 11.23 Variogram models, NORI Area A, B and C

Variable	Nugget	Sill	Range Along Strike(km)	Range Cross Strike(km)
Ni	0.2	0.8	20	20
Co	0.2	0.8	30	30
Cu	0.2	0.8	30	30
Mn	0.2	0.8	50	50
Abundance	0.2	0.8	30	30

Figure 11.36 Variogram map for nickel, NORI Areas A, B and C

Where possible, variogram model parameters were retained at similar values between orientations, and between the different variables, so as not to produce artefacts in the estimations. This was done to ensure element relationships or correlations evident between samples were respected implicitly during estimation and reflected in the resource estimate. Also, the same type of variogram model was fitted to the experimental variograms.

Gaussian variogram models were fitted to the experimental variograms. Typically, spherical models are sufficient for modelling the spatial continuity, but in this case the Gaussian model better fit the data. Gaussian models give greater weight to the very close samples (in the range of 0 to 5 km) and then rapidly decay to the sill compared with the spherical model. This fits in with the likely short-range variability possibly being controlled by the ridges, which are of the frequency of 3 to 5 km and oriented approximately north-northwest.

The directions of greatest continuity from the variogram maps is 060° and 150°, which are roughly parallel and orthogonal to the broad regional trend of the CCZ. Smaller scale local trends oriented parallel with ridges are not visible in the wide-spaced data. The long-range experimental variograms for abundance are erratic with an almost nugget model.

Additional variogram parameters used in most cases for variogram calculation include:

- Single structure Gaussian models with common nugget and incremental sill levels.
- Lag distance of 5 km.
- Horizontal search angle of 15°.
- Vertical search angle of 15°.
- Horizontal distance of 30 km.

Major and semi-major variograms for nickel are shown in Figure 11.37.

Figure 11.37 Major and semi-major variograms for nickel (red line is actual data and blue line is modelled curve)

#### 11.4.7 Geological block model

The block model contains 931 blocks, representing nickel, cobalt, copper, manganese, and abundance of polymetallic nodules. The model was built using the model framework defined in Table 11.24 and with additional block attributes listed in Table 11.25. A vertical block size of 1 m was used, essentially creating a two-dimensional model. The 1 m thickness is simply to give the blocks a default value. The tonnage of nodules in each block was estimated from the surface area of the block multiplied by the abundance estimate.

Blocks were added to the model using the limits of the NORI Areas. Parent blocks were split into sub-blocks to ensure reasonable resolution of the tenement boundaries.

Table 11.24 NORI Area A, B and C block model framework (UTM coordinates).

	<b>Easting</b>	<b>Northing</b>	<b>Elevation</b>
Model origin (m)	195000	1093000	-0.5
Model limit (m)	775000	1653000	0.5
Model extent (m)	580000	560000	1
Parent block dimensions (m)	10000	10000	1
Number of parent blocks	58	56	1
Minimum sub-block size	500	500	1

Table 11.25 NORI Area A, B and C model variables.

<b>Variable</b>	<b>Type</b>	<b>Description</b>
AREA	alphanumeric	Tenement area (A to D)
Ni	numeric	Estimated Ni weight % value
Co	numeric	Estimated Co weight % value
Cu	numeric	Estimated Cu weight % value
Mn	numeric	Estimated Mn weight % value
Abundance	numeric	Estimated nodule abundance wet kg/m <sup>2</sup>

The total area of the block model is 74,840 km<sup>2</sup> which is 100.01% of the actual total area of the NORI Area of 74,830 km<sup>2</sup>. This indicates that the sub-blocks were adequate for estimating the NORI Area boundaries.

#### 11.4.8 Estimation of nodule abundance and grades

Ordinary kriging (OK) was used to estimate nickel, cobalt, copper, manganese, and abundance in the block model. Grades were estimated on a parent block basis using block discretisation of 3 by 3 by 1. Grades were also estimated using IDW to the power of 2 and NN for validation of the OK estimates.

To ensure that all blocks in the model had values for nickel, cobalt, copper, manganese, and abundance, a three-pass elliptical search strategy was used for selecting the neighbouring samples for estimation. Dimensions of the search ellipse radii were based on the ranges of the variogram models and average sample spacing. The search pass ellipse radii that were used are:

- PASS 1: 30 km by 30 km.
- PASS 2: 60 km by 60 km (pass 1 expanded by a factor of 2).
- PASS 3: 90 km by 90 km (pass 1 expanded by a factor of 3).

A minimum of 1 and a maximum of 8 samples were allowed per octant for each search pass, with a minimum of 4 and maximum of 32 samples per estimate. The required minimum number of samples per estimate was relaxed to 1 sample for the third search pass. The relatively large number of samples used in the estimate will ensure the estimates are smoothed for this early stage of evaluation.

To complete the block estimates and avoid potential issues for missing grades the third and final search passes used large search radius to ensure most relevant blocks were assigned estimated grades. This ensured that nearly all mineralised blocks were assigned estimates. Any remaining unassigned grades were set to 0.01% for nickel, cobalt, and copper, and to 26.86% for manganese.

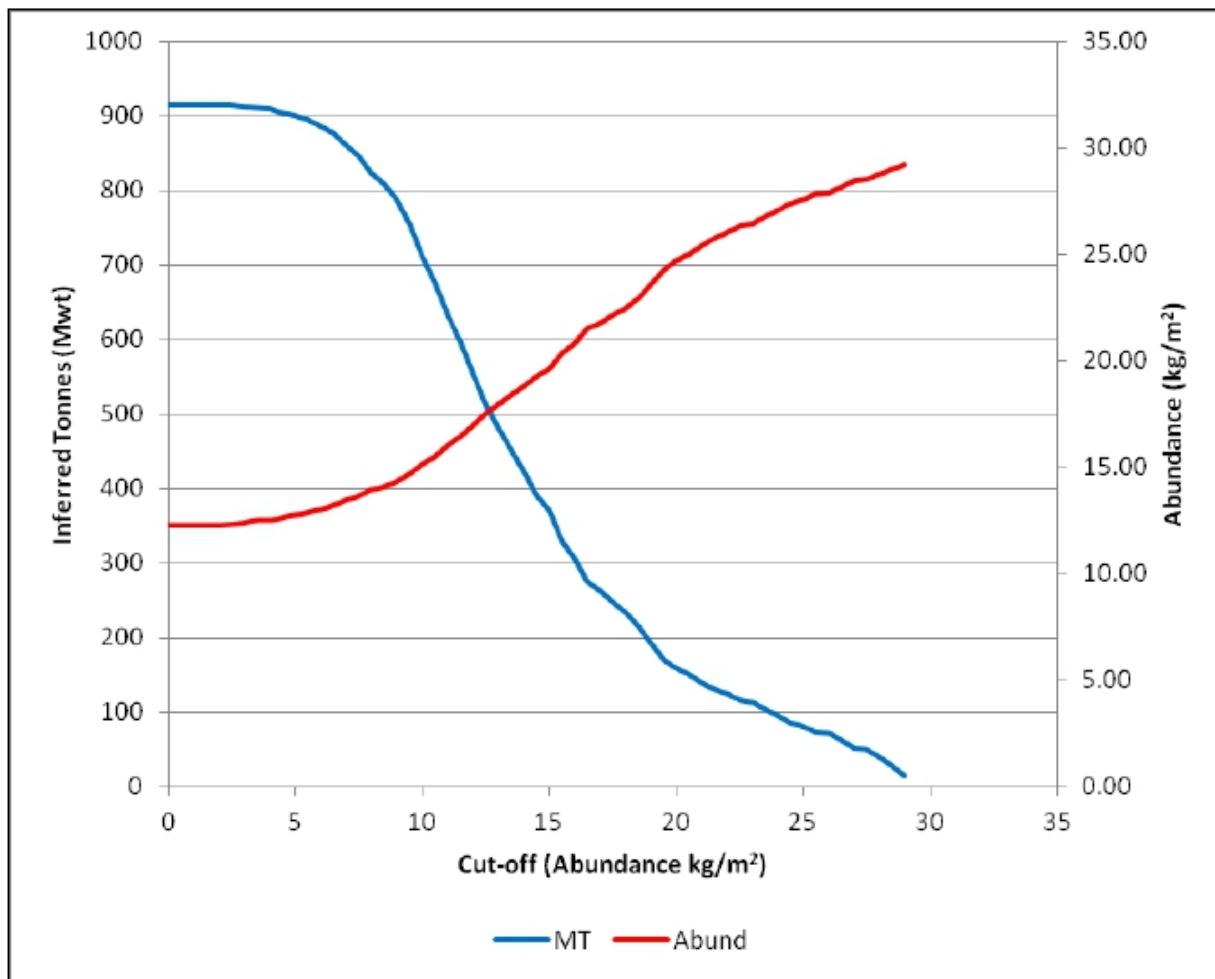

**11.4.9 Mineral Resource classification**

Resource classification was done on the basis of the quality and uncertainty with the sample data. Accordingly, NORI Areas A, B and C are considered to have sufficient continuity to warrant Inferred Mineral Resource classification in accordance with SEC Regulation S-K (subpart 1300).

**11.4.10 Estimation Results**

The nodule abundance and tonnage curves for various nodule abundance cut-offs ( $\text{kg/m}^2$ ) are presented in Figure 11.38. The curves indicate rapid reduction in global tonnage between abundance cut-offs of approximately 6 to 20  $\text{kg/m}^2$ , which brackets the mean abundance for the NORI Area.

Figure 11.38 NORI Area A, B and C Mineral Resource abundance tonnage curves

The Mineral Resource, with an effective date of 31 December 2020, is reported in Table 11.26 at an abundance cut-off value of 4  $\text{kg/m}^2$ . This cut-off is justified by the estimates of costs and revenues presented in this Initial Assessment.

Table 11.26 NORI Area A, B and C Mineral Resource estimate at 4 kg/m<sup>2</sup> abundance cut-off

NORI Area	Category	Nodule tonnage (Mt (wet))	Abundance (wet kg/m <sup>2</sup> )	Ni (%)	Cu (%)	Co (%)	Mn (%)
A	Inferred	72	9.4	1.35	1.06	0.22	28.0
B	Inferred	36	11	1.43	1.13	0.25	28.9
C	Inferred	402	11	1.26	1.03	0.21	28.3

Source: Golder 2015. kg/m<sup>2</sup> = kilograms per square metre; Ni = nickel; Co = cobalt; Cu = copper; Mn = manganese; % = percent; t = tonne

Figure 11.39 shows sample locations and estimated block grades for nickel (similar plots for copper, cobalt, and manganese are included in Appendix C). Figure 11.40 shows sample locations and abundance within the NORI Area. The figures indicate there is continuity of grade and abundance at ranges (40 to 80 km) several times greater than the average sample spacing. The patterns in distribution appear consistent between nickel, copper, cobalt, and manganese, reflecting the homogenous nature of the nodule chemistry across the NORI Area.

Figure 11.39 Map of sample distribution and block model estimates of nickel, NORI 2012 estimates

NB: Areas A, B, C and D cover several UTM zones but were overlaid to facilitate modelling of all areas in one model. The apparent distances between the Areas in this figure are not real distances.

Figure 11.40 Map of sample distribution and block model estimates of abundance, NORI 2012 estimates

## 12 Mineral Reserve estimates

There are no Mineral Reserve estimates for the NORI Property, and the potential viability of the Mineral Resources has not yet been supported by detailed mine design or optimization processes nor a pre-feasibility study or a feasibility study.

## 13 Mining methods

This Section provides a description and operating concept for the proposed nodule collection at NORI Area D. The seabed system is an extrapolation of existing technologies in deep ocean operations and previous seabed development activities. Much of the technology is a direct derivative of previous experience in nodule developments, such as consortium activities in the 1970s, including significant pilot testing, and advances in deep water oil and gas development. There still remain particular component and sub-systems that are not “off-the-shelf” and require further development. The technical readiness of some of the described components and assumptions need to be verified by further testing.

### 13.1 Development plan

NORI proposes to implement the project in multiple phases that will allow the seafloor production systems to be tested and then nodule production to be gradually ramped up. The phased approach will facilitate de-risking of the project for relatively low initial capital investment. The proposed development phases are as follows:

- The Collector Test is designed to perform proof of concept for the methods of collecting and lifting the nodules while acquiring sufficient data to design a commercial system. Nodule collected during the Collector Test would be stored on the Hidden Gem and brought to shore for use in large scale process pilot testing. The Collector Test would use a converted sixth generation drillship, the Hidden Gem. The Collector Test would not demonstrate the transshipment of nodules to a shore-based facility.
- Project Zero would be an extension of the Collector Test using an upgrade of the converted drillship to produce a sufficient and continuous quantity of nodules to support a relatively small commercial operation of about 1.3 Mtpa (wet) nodules delivered to a shore-based facility. This operation would demonstrate a more continuous mining operation at a larger scale than the Collector Test and would demonstrate the transshipment of nodules to a processing facility. This initial commercial system would operate for five years.
- Project One would increase production in a further three steps:
  - a further upgrade of the Hidden Gem for up to 3.6 Mtpa (wet) production, for a 20-year production life.
  - introduction of a second converted drillship (Drill Ship 2) with a capacity of up to 3.6 Mtpa (wet), designed for a 20 year production life.
  - construction of a new purpose-built production support vessel (Collector Ship 1) with capacity of up to 8.2 Mtpa (wet). Project One would benefit from lessons learned on the Collector Test and Project Zero.

All projects involve similar methods for collection of nodules: a self-propelled collector using hydraulic methods to pick up the nodules from the seafloor, and an airlift driven riser and lift system (RALS) to raise the nodules to the surface. Project Zero and Project One would both deliver nodules in the form of a slurry to a bespoke converted bulk mineral carrier positioned aft of the production support vessel (PSV) and connected by floating slurry hoses. The nodules delivered to the transport vessels would be dewatered and placed in the cargo holds, while the water would be returned to the PSV via separate floating hose and disposed of at some depth through a special riser fall pipe.

The main differences are in the specific vessels (converted drillship or new build), the number of collectors operating in tandem and the scale of the operation.

### 13.2 Off-shore system concept

The off-shore system concept for Collector Ship 1 is illustrated in Figure 13.1. Nodule collection will be managed from PSVs on the surface. The nodules will be collected from the seafloor by self-propelled, tracked, collector vehicles. The collector design includes technology for reducing or eliminating the introduction of sediment into the lift system. This technology is being developed by Deep Reach Technology, Inc. under funding from the U. S. Department of Energy. Deep Green is participating in this research by contribution sediment samples from the NORI Area D box cores.

Material collected by the collector vehicles will be pumped into a concentrator / hopper where fine material and excess water will be separated, yielding a higher concentration slurry, which will be transferred via flexible hoses to the RALS. The RALS consists of steel riser pipe engineered with varying diameter and bundled with buoyancy and other auxiliary lines. The sub-sea flexible hose and RALS architecture is based almost entirely on standard deep-water components from the upstream oil and gas industry.

Lifting will be accomplished using an airlift method. Compressed air will be inserted in the riser pipe at approximately 1,500 m depth, resulting in low density in the mixture above this point. The density difference causes suction in the lower section of the RALS, which results in lift of the nodule slurry. Airlift systems were proven during trial nodule recovery operations at site in the 1970s (Lecourt & Williams, 1971, Kaufman, Latimer, & Tolefson, 1985, Shaw, 1993) and are currently used in shallow off-shore diamond mining operations in South Africa at approximately 120 m depth (MHWirth, 2020).

To achieve a high-efficiency airlift operation, and to limit the exit velocities, the discharge of the airlift mixture will be pressurised to 800 kPa. The slurry will first be discharged into a pressurised surge tank and subsequently fed to a pressure let-down system to reduce the pressure to atmospheric. The flow from the pressure let-down system will be either pumped to a transport vessel or, if a transport vessel is not connected, to buffer storage tanks on board the PSV.

The collector vehicles will make parallel, linear traverses of the seafloor. Long collection paths are regarded as favourable as that will minimize the number of turns required to start a new collection path. The collector vehicles will turn 180° in a wide arc, by operating the inner and outer tracks at different speeds. The PSV will adjust its position and the position of the RALS in coordinated movements.

Figure 13.2 is a schematic diagram of the overall flow process in the extraction operation.

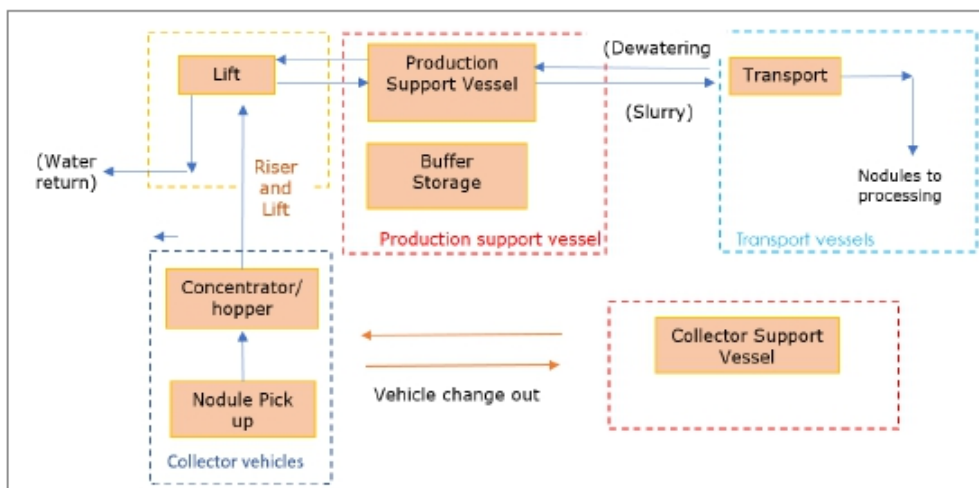

Figure 13.1 Overall extraction operation

Source: NORI

Figure 13.2 Flow of nodule material

The basic design parameters adopted for the off-shore systems are presented in Table 13.1. The parameters are updated from a scoping study by Deep Reach Technology, Inc. (2015). The nodule recovery efficiency is based, in part, on tests performed in the 1970s for KCON by Marconaflo Corporation on a decanted sample of a nodule slurry produced in a pump loop simulating comminution in a lift pump system. System availability is an average including allowances for periodic (5-year) special surveys of the vessel requiring drydocking. The nodule production sequence and the financial model consider the timing of these surveys.

Table 13.1 Key design data for off-shore systems

Parameter	Project Zero		Project One	
Maximum annual production (Mtpa (wet))	1.3	3.6	8.5	
Nodule abundance (kg/m <sup>2</sup> (wet))	20	20	20	
Mining recovery efficiency (%)	77%	77%	77%	
Annual system availability (days)	229	229	267	
Maximum seabed slope	6°	6°	6°	
Moisture content of dewatered cargo	10%	10%	10%	
Size distribution of dewatered cargo	95% minus 16 mm, 5% minus 0.5 mm	95% minus 16 mm, 5% minus 0.5 mm	95% minus 16 mm, 5% minus 0.5 mm	

### 13.3 Geotechnical considerations

The physical characteristics of the seafloor sediments will have important influence on the mobility of the collector vehicles, the detailed design of the collection path, and the volume of sediment that will be disturbed by production activities. Little data was available for NORI Area D prior to 2018 but, as described in Section 9.35 and 9.4.4, NORI systematically collected geotechnical measurements from box core samples in Campaigns 3, 6A and 6B (Fugro, 2019). Analysis of the data is still at an early stage.

UTEC Geomarine (UTEC) completed a review of the track selection and sizing of the collector vehicle, as part of the scoping study project completed by DRT. For the purpose of the scoping study, it was assumed that the subsea collector will be self-propelled and use either a tracked system with skid steering or an Archimedes Screw Driven (ASD) system. UTEC noted that tracked systems have been proven reliable and versatile system for subsea vehicles such as mining vehicles and trenching machines, whereas ASD vehicles have only been proven for land-based usage.

The geotechnical parameters used as input to the study were based on a report on the sediments cored on Leg 86 of the Deep-Sea Drilling Project, this document was not sighted by AMC as part of this review. The report considered the track designs for sea floor clays with the material strength parameters presented in Table 13.2.

Table 13.2 Geotechnical properties of clays defined by UTEC, 2015.

Depth (m)	Shear Strength (kPa)	Submerged Unit Weight (kN/m <sup>3</sup> )
0–5	2–7	2.74

Using the parameters in Table 13.2 UTEC calculated:

- Maximum bearing pressures, for clays with a uniform shear strength of 2kPa and 10kPa.
- Mobility envelopes for clays with a uniform shear strength of 2kPa and 10kPa.
- Immediate settlement was only calculated for clay with a uniform shear strength of 10 kPa.
- The effect of the collector vehicle loading on slope stability for slopes between 2° and 20°.

A range of vehicle loads were studied over a range of slopes, both in roll and in pitch, in varying soil strengths. UTEC noted that it was difficult to draw any firm conclusions although it appeared that slopes of greater than about 3° to 5° have the potential to generate stability difficulties for the collector vehicle.

UTEC provided recommendations to DRT for the track area and submerged weights for the collector vehicle, based on estimates of the ultimate and dynamic bearing capacities. UTEC also recommended further investigation into the efficiency of skid-steering, and the dynamic effects of the collector vehicle on the bearing capacity of the sea floor clays.

During the Campaign 3 box coring program, undisturbed samples were brought to the surface and either sent for laboratory testing or were subject to testing on board the ship. The Campaign 3 data suggests that below the top 400 mm the shear strength range considered in the UTEC report is valid. Very low residual shear strengths were also recorded, with undrained shear strengths between 0.5 and 1.5 kPa below 400 mm. These very low residual strengths would result in soft or boggy conditions in high traffic areas depending on ground disturbance. At the mine design stage, the collector paths are to be designed to minimize movement over previously disturbed areas.

Submerged unit weights below 400 mm were estimated to vary between 1.65 and 2.25 kN/m<sup>3</sup>. These values are lower than the 2.75kN/m<sup>3</sup> used by UTEC in their stability analysis work. Potentially this could reduce slope stabilities further when a loading is applied to the slope.

The geotechnical data collected during Campaign 6A and 6B provided more detailed characterization of the seafloor sediments and produced results broadly consistent with the earlier testing.

Based on the geotechnical reports provided, the seabed will comprise around 110 mm of dark brown clayey silt sludge overlying a very soft yellow brown, clayey silt. The yellow brown clayey silt has a typical undrained shear strength between 3–10 kPa, which is consistent with the assumptions in the 2015 UTEC study.

Further stability analysis and 3D numerical modelling are required to improve the reliability of the geotechnical assessment. The Collector Test will provide critical information and allow calibration of performance of the collector vehicle on a range of slope angles. This will provide a basis for improvement of design and operating parameters.

### 13.4 Collector Test and Hidden Gem conversion

NORI plans to conduct a Collector Test in 2022. This will test the systems for nodule collection and will have a design production rate of 1800 tpd (wet), or about 75 tph, but it will not transport nodules to shore.

NORI entered into a contract with Allseas Group S.A. (Allseas), in July 2019, to develop and deliver the Collector Test. DeepGreen also entered into a strategic alliance agreement with Allseas, where Allseas will undertake the development and operation of a system to collect 200 Mt of nodules from NORI Area D. In February 2020, Allseas acquired the Hidden Gem, a Samsung 10,000 drillship, to undertake the Collector Test and with the aim of supporting Project Zero Figure 13.3.

Figure 13.3 Hidden Gem drillship (courtesy Allseas)

Source: NORI

Allseas proposes to convert the Hidden Gem from 6<sup>th</sup> generation drillship to a vessel to support the Collector Test, as follows:

- The Hidden Gem would be refurbished and recertified for the Collector Test under Lloyds Rules. Thrusters will be removed and seals replaced during the docking period, before reinstalling.
- The main derrick and associated riser handling equipment will be reactivated and certified. All equipment for handling drill pipe and perform drilling operations that is obsolete for the intended prototype test will systematically be isolated from the operating systems, maintenance seized and ultimately be removed from the vessel. This will include drill pipe, top drive, marine riser, mud pumps etc.
- All cranes will be certified and operations including man riding certificates.
- For mining operations, the Hidden Gem will be equipped with a prototype mining collector and 4.2 km 8" airlift riser, corresponding to a 20% prototype scale. The system will have a production capacity of 420 ktpa (wet).
- The collector dry weight is 75 t. The collector nozzle array spans 6 m width and can travel at maximum 0.5 m/s.
- The collector comes with a dedicated launch and recovery system (LARS) rated 90 t safe working load (SWL) that can deploy a <10m wide collector. For the deployment it will use its 1MW aramid reinforced umbilical, with a 35 t SWL. The LARS will be installed on portside aft between frames 49 and 55.
- Nodule collection operations will be supported by a dedicated deep-water WROV from Schilling rated for operational water depths up to 4,500 m. Launch and recovery will be from starboard aft between frames 30 and 35.
- The crude oil tank between frames 67 and 76, with 5910 m<sup>3</sup> capacity will be converted to store the 3,600 t of nodules that will be collected during the Collector Test. This tank will have a top hatch that allows access after Collector Test to offload the 3600t nodules using bulk grab and mobile bob cat lowered onto the tank top.
- Nodule dewatering and separator placed on main deck on top of nodule storage tank. Separator will be a double shaker deck that can process 80t/hr. It includes the permanent work consisting of piping from riser head and to storage tank.
- Flexible TCP jumper hose ID 7", including connectors and buoyancy to connect the collector to riser base in a submerged lazy-S configuration. Jumper hose has dedicated reel and a LARS for deployment over the vessel side starboard aft of drill tower between frames 75 and 80.
- Containerised air compressor spread will be demobilised after the Collector Test. The base case for the Collector Test is to rent three containerised sets. Piping to connect and supply will remain as part of the permanent work.

### 13.5 Project Zero

NORI plans to commence commercial operations on a small scale (Project Zero) with low capital cost, using the Hidden Gem with further modifications after the Collector Test.

Project Zero would initially deliver up to 1.3 Mtpa (wet) of nodules to a shore based processing or stockpiling location (transportation and logistics are discussed in Section 18). This project phase will serve as a proof of concept of the entire mining operation (including pyrometallurgical processing).

Project Zero will be designed to produce for up to 5-years before dry docking for refurbishment. The results of initial operations will be used to optimize the design for Project One.

NORI asked DRT to evaluate upgrade of the Hidden Gem from the Collector Test to Project Zero. DRT's evaluation (Deep Reach Technology, Inc., 2020) is based on the information received from Allseas (Bosland, 2020), regarding the conversion of the Hidden Gem from 6<sup>th</sup> generation drillship to a vessel to support the Collector Test. Based on this information and assessment of the drawings and specifications of the original Vittoria 10,000 Samsung drillship, DRT assumed that upgrading the Hidden Gem for Project Zero, would involve these steps:

- Addition of collector heads and modifications to the existing Collector Test collector to achieve 8.7 m effective collection width.
- Upgrade of the LARS umbilical winches to accommodate a larger umbilical for deploying the collector and powering it.
- Adding airlift pressure let-down system.
- Adding a compressor module to drive the airlift.
- Replacing the Collector Test 8" riser with a 12" riser with appropriate larger diameter sections for the airlift.
- Adding a decanting weir to the buffer storage for gravity separation.
- Adding a hopper and re-slurrying equipment (in-tank Dyna-Jets) to the buffer storage tank for offloading.
- Adding a material handling system including piping, pumps, offloading reels with hoses to transfer nodules to a transport vessel.

Other than the information presented above, DRT has not participated in any design reviews nor is DRT privy to detailed information about the Collector Test design. The assumptions DRT has made need to be verified.

The transport model for Project Zero indicates that two 35,000 dwt bulk mineral carriers are required assuming the nodules will be transported to a port on the west coast of Mexico. Under the assumed conditions the loading time is greater than eight days, and the queuing model indicates a returning vessel would arrive while the other vessel is being loaded. The loading time includes interruptions for collector maintenance. The minimum buffer storage, to avoid shut down for transport unavailability, would be the time to break a connection and makeup a new connection, or about 6 – 8 hours. This corresponds to about 2,700 t minimum buffer capacity required, which is within the capacity given above for the Collector Test.

### 13.6 Project One

Project One would be the progressive implementation of larger scale operations to ultimately achieve nodule production of up to 14 Mtpa (wet) from three vessels.

The Hidden Gem would be upgraded to include two 12 m collector vehicles and a larger riser to achieve a nominal capacity of up to 3.6 Mtpa.

A second modified drillship, Drill Ship 2, would also be commissioned with two 12 m collector vehicles.

Hidden Gem and Drill Ship 2 would be joined by a new purpose-built PSV, Collector Ship 1, that would commence production in 2026 with two 12 m wide collectors. A third collector would be added at the end of 2026 and a fourth at the end of 2027. All collectors would operate in tandem and would be connected to a single production riser as illustrated in Figure 13.1 for four collectors. Operations would also be boosted by the introduction of a Collector Support Vessel dedicated to maintenance of the collector vehicles deployed by Collector Ship 1. When fully operational, there will be eight collectors in production supported by three PSVs (Hidden Gem, Drill Ship 2 and Collector Ship 1). Project One will benefit from lessons learned on the Collector Test and Project Zero.

### 13.6.1 Upgrade of the Hidden Gem

After the Hidden Gem has operated for five years at 1.3 Mtpa, it would be upgraded to be capable of producing up to 3.6 Mtpa for a 20-year design life. The upgrade includes engineering, procuring and integrating the following changes/additions:

- Increasing riser diameter from 12" to 16" and adding buoyancy to maintain the top tension withing the derrick capacity of the drillship.
- Increased air compressor capacity to operate the air lift riser for the design production rate.
- Refurbishment of the hull structure and coatings to achieve the design life of 20 years with minimal steel renewal at special survey drydockings.
- Providing collector equipment redundancy to provide the reliability and availability to achieve the total annual nodule production tonnage required.
- Providing additional electrical switchgear and motor control centres (MCCs) to operate the additional redundant mining equipment.
- Relocate and upgrade the collector LARS system from the port side aft to the starboard side forward of the moonpool where space exists to handle, store, and maintain larger collectors on deck. Figure 13.6, Figure 13.7 and Figure 13.8 illustrate the proposed changes to the Hidden Gem deck plan.
- Providing two additional 7 MW power generation units to provide additional power for larger air compressor capacity.

Two 12 m wide collectors will be operated in tandem. The existing flexible jumper hose power reel and collector umbilical system will be used but a second new flexible jumper hose reel, and collector umbilical system will be purchased to enable the installation and operation of a second subsea collector.

The collector umbilicals will be integrated with the riser. The concept of operations for collector maintenance in Project One will require adding the capability to make and break umbilical connections on the seafloor, whereas in the Collector Test and Project Zero the collector umbilical will be used for lowering and raising the collectors. Both Project Zero and Project One will require a subsea disconnectible connection between the collector and flexible jumper, and the riser and flexible jumper.

The 12" riser will be replaced with a 16" riser to accommodate 3.6 Mtpa production (about 16,000 tpd wet). Larger upper sections will be added for more air volume. The flexible jumper and riser from the 1.3 Mtpa case will be replaced with a larger flexible jumper.

Additional buffer storage will be required to meet the minimum storage requirements for transport. Tanks that could potentially be used for buffer storage are identified in Table 13.3. Tanks aft of the moonpool would provide the most accessibility. For this IA we assume that two additional crude oil tanks between frames 67 and 76 will be converted to buffer storage tanks to achieve approximately 15,000 m<sup>3</sup> of storage. Sloping sides and nodule re-slurrying equipment will be added. Further surveys would be required to determine the suitability of these tanks.

Figure 13.9 shows a process flow diagram for the material handling and offloading system.

Figure 13.9 Material handling, dewatering and offloading systems

**13.6.1 Conversion of Drill Ship 2**

Conversion of Drill Ship 2 to a PSV assumes the same design as for the upgraded (3.6 Mtpa) Hidden Gem. However, the costs include refurbishment and conversion work that was performed on the Hidden Gem prior to the Collector Test.

It should be noted that vessel refurbishment and conversion costs are a function of the state of the vessel at the time of purchase and cannot accurately be estimated without a vessel survey and assessment. It is recommended that for the PFS or DFS phase specific candidate vessels be chosen for evaluation.

**13.6.2 Collector Ship 1**

The purpose-built PSV used in the cost estimate for Project One (Collector Ship 1) has been sized specifically for the NORI Area D project. The conceptual design is shown in Figure 13.10.

Figure 13.10 Collector Ship 1, production support vessel

Source: DRT

The Collector Ship 1 specifications are shown in Table 13.4. Collector Ship 1 will be similar in size to an Aframax or New Panamax class of tanker.

Table 13.4 Specifications for Collector Ship 1 PSV for Project One

Parameter	Value
Length	225 m
Beam	38 m
Depth	20 m
Design draft	13.5 m
Displacement	103,000 t
Deadweight tonnage	79,000 t
Nodule buffer storage	60,000 t cargo ~ 48,000 t nodules
People on board	120
Installed power (approx.)	100 MW

All the PSVs will be equipped with controllable thrusters and will be capable of dynamic positioning (DP), which will allow the vessel and riser to track the collectors. The airlift system will include a main compressor and makeup and booster compressors, which will be integrated on the PSV. All power for off-shore equipment, including the nodule collecting vehicles, will be generated on the PSV.

### 13.6.3 Collector vehicle

The off-shore system will incorporate self-propelled, tracked, collecting vehicles

Figure 13.11. The collectors will traverse the seabed in a pre-determined pattern at a speed of up to 1,800 meters per hour (up to 0.5 m/s). Suction dredge heads on each collector will recover a dilute slurry of nodules, sediment, and water from the seafloor. A hopper or slurry concentrator on each vehicle will allow the larger, heavier nodules to fall into the underflow where they are to be pumped as a higher concentration slurry (in terms of nodule density) to the riser through flexible hoses. Excess water and sediment will pass out of the hopper overflow.

Figure 13.11 Preliminary design for the collector vehicle

The vehicles will be of comparable size and weight to the largest pipeline trenching machines used in deep water in the upstream oil and gas industry. Trenching machines have been used for years for the trenching, burial, and maintenance of pipelines and power cables, and for ploughing operations for burial depths greater than 1.5 m. The collectors will also be of comparable size and weight (in air) to the large machines that were built for seafloor massive sulphide mining in deep water, off-shore Papua New Guinea (for Nautilus Minerals Inc., in 2015), albeit that those machines are designed to operate on a seafloor composed of hard rock.

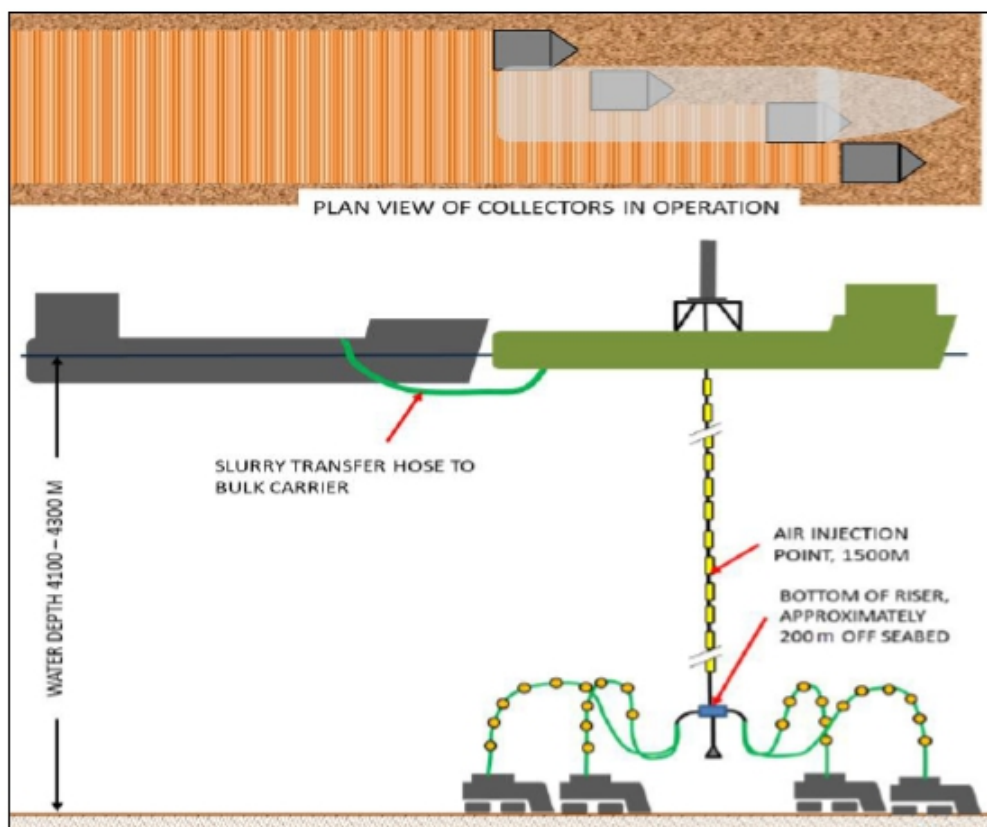

The specifications of the collector vehicles are summarised in Table 13.5 and compared to an oil and gas trenching machine and Nautilus's bulk cutter. Several tests have been performed, and are being planned, for tracked vehicles in soft pelagic clays including in the CCZ. The NORI collectors will carry a substantial volume of buoyancy foam to control the machine's weight in water and therefore the bearing pressure.

Table 13.5 Collector vehicle specifications

Parameter	NORI's collector	Perry XT1500 trencher	Nautilus's bulk cutter
Length	18.4 m	9.4 m	15.0 m
Width	12.8 m	6.1 m	4.2 m
Height	5.75 m	3.9 m	
Weight in air	256 t	30.1 t	275 t
Weight in water	25 t	2.2 t	
Bearing pressure	1.5 kPa	2.8 kPa	
Undrained shear strength	2.0 kPa	2.5 kPa	-
Maximum transit speed	0.5 m/sec	0.7 m/sec	
Operating depth	5,000 m	1,500 m	2,500 m
Operating power	1,500 kW	1,100 kW	
Installed / peak power	2,050 kW	-	

During normal operations, the collectors will follow a predetermined path based on the analysis of site survey data and such considerations as nodule abundance, nodule grade, seabed topography, and any obstructions. Normal collecting operations are illustrated in Figure 13.12.

Figure 13.12 Normal collecting operations

The collectors will generally operate in semi-autonomous mode. However, an array of forward-looking obstacle avoidance imaging systems will process and report approaching terrain in real time and manual/supervisory control will be returned, as and when required.

In Project One, maintenance for the collector vehicles deployed by Collector Ship 1 will be performed by a separate collector support vessel (CSV). When a collector requires repair, either planned or unplanned, it will be disconnected from the jumper hose and power umbilical (which connect it to the RALS) by a remotely operated vehicle (ROV). The CSV will maintain a spare collector, which will be deployed by a wireline hoist to reconnect with the seafloor spread. The collector requiring maintenance will be hoisted to the surface by the CSV. The storyboard procedure for collector change out is shown in Figure 13.13.

Figure 13.13 Collector change-out operations concept

### 13.6.4 Plume mitigation

The collector described above picks up seafloor sediment along with the nodules it collects. The fine-grained sediment consists primarily of either the microscopic, calcareous or siliceous shells of phytoplankton or zooplankton; clay-size siliciclastic sediment; or some mixture of these. When the water and sediment are discharged from the nodule concentrator, or as excess water from shipboard dewatering of the nodules, a plume will be generated in the water column.

DRT was recently awarded a research grant by the U. S. Department of Energy, Advanced Research Projects Agency – Energy (Deep Reach Technology, Inc., 2021), to advance a concept for mitigating or eliminating the sediment plumes by:

- Preventing all the sediment laden water from entering the lift system, thus eliminating sediment in the wastewater produced by dewatering (except for sediment and nodule fines released by nodule attrition, and
- Active flocculation of the sediment discharged from the collector using electrocoagulation.

NORI is participating in this research by providing sediment samples from NORI Area D for electrocoagulation tests.

The work to date has shown, in theory, that sediment can be eliminated from the riser by adding an additional pump to collect clean water for conveying nodules to the riser, and by implementing a special underflow mechanism that will allow control of a small amount of upflow in the separation hopper to prevent water from the pick-up head from entering the riser, while nodules (greater than about 5 mm) will pass to the riser. Figure 13.14 is a conceptual illustration of a collector with this concept. The collector costs used in this IA all have an allowance for adding this feature to the collectors. The addition of electrocoagulation, while showing promise, adds complexity to the collector and is still the subject of evaluation. Further government support is expected in 2021 to perform testing of both these concepts at a laboratory scale.

Figure 13.14 Illustration of collector vehicle with plume mitigation (patent pending)

### 13.6.5 RALS

#### 13.6.5.1 Riser

The RALS will take in the combined slurry from the collector vehicles and deliver the slurry to the PSV via airlift. The main riser pipe will consist of three main sections. The lower section (RALS-1) will carry the two-phase slurry in nominal 28" outside diameter (OD) pipe from the collectors to the airlift injection location. The second section (RALS-2) will carry a three-phase mixture of slurry and air in 28" OD pipe. This section will also include three 12 3/4" OD auxiliary pipes. The former will carry the compressed air for the airlift system. The latter will carry the effluent from dewatering of the slurry to the discharge point. The depth of the discharge point is yet to be selected and will depend on plume modelling and other environmental considerations. The upper section of pipe (RALS-3) will have a larger diameter to account for the expansion of air in the airlift. It will also include the discharge and air supply piping. Umbilical cables for powering the collectors and carrying data will be attached to the riser.

The entire riser string will be supported on a detachable buoy that is latched into the moon pool of the PSV (an opening in the floor or base of the ship's hull giving access to the water below). The buoy may be detached during a hurricane emergency. When this is necessary, the lower riser manifold will rest on the ocean floor on an emergency ground anchor and the riser string will be supported by the buoy about 100 m below the sea surface. This position is below the depth of high wave energy. This will enable the PSV to transit away from the storm area. After the hurricane has passed, the PSV will re-engage with the buoy. This process is identical to the operation of disconnectable risers on off-shore floating production and storage vessels in the Gulf of Mexico. The specifications of the RALS are shown in Table 13.6.

13.6.5.2 Airlift system

The airlift power will be derived from three compressors: a main compressor, a booster compressor, and a make-up compressor. The specifications of the airlift compressors for Project One Collector Ship 1 are shown in Table 13.7. These parameters are based on a nominal production rate of 6.4 Mtpa (wet) (Deep Reach Technology, Inc., 2015) and need to be upgraded for the modified design basis in this IA (up to 8.2 Mtpa). CAPEX and OPEX estimates in Section 21 have been scaled to account for this increased capacity. The main compressor used as a basis for the IA cost estimate is shown in Figure 13.15. It is an Elliott Group model 46M6I two-stage centrifugal compressor with inter-cooling. To control the compressor performance for varying loads due to variable nodule abundance on the ocean floor, for example, the compressor is equipped with adjustable inlet guide vanes.

Table 13.6 Riser pipe stack up

Riser Joint Type	Description	Weight In Air (mt)	Weight In Water (mt)	OD (m)	Number of Joints	Water Depth (m)

Figure 13.15 Main air compressor (Elliott Group model 46M6I)

Source: Provided by Elliott Group.

Airlift was successfully tested in three deep-water pilot tests in the 1970s: two by the Ocean Mining Associates consortium, and one by Ocean Management Inc. There have also been several large terrestrial tests and at least one successful use of airlift for hoisting coal in a Soviet mine. Table 13.8 shows the main parameters of relevant airlift operations and tests for comparison with those proposed for this project.

The proposed airlift design discharges the 3-phase slurry under an 800 kPa pressure. The compressed air is dried and recycled in the compressors. This results in a reduced size of riser required at the discharge, and reduced compression ratio, compared to airlift systems with atmospheric discharge. It does require a specialized pressurized de-aeration tank and slurry depressurization on the production support vessel. Previous studies have shown that this approach results in a lower overall cost for the airlift system including the riser, but this conclusion needs to further be evaluated in the next study phase. The pressurized discharge has never been field tested, and the Collector Test is currently planned with one atmosphere discharge, hence large scale on-land testing of the pressurized discharge should be performed prior to its implementation on Project Zero or Project One.

Data from the KCON Tests (Doyle & Halkyard, 2007) have been used for validation of DRT’s proprietary airlift simulation numerical model, which has been used for design of the airlift in this IA (Deep Reach Technology, Inc., 2019). The conclusion of this validation indicates the predicted flow rates were within ±10% for 3-phase flows (air-water-solids), and ±40% for 2-phase flows (air-water). DRT attributes the lower accuracy for 2-phase results to a difference in flow regimes, for example, slug flow for low air volumes, whereas the KCON model assumes froth flow (homogenous conditions). From observations made in the test work, particularly the KCON experiments, the presence of larger solids in the mixture results in breakup of air bubbles and a more stable froth flow. Although this data is based on smaller diameters and shorter lifts than the proposed deep ocean mining system, the experience with the Soviet mine is very close in terms of pipe diameters and flow rates, albeit for a shorter lift. Lift column tests have been completed and the air-lift system will be tested during the Collector Test.

Table 13.8 Relevant airlift experience and tests

Reference	Vertical lift (m)	Pipe diameter (mm)	Lifting rate (tph)	Solids volumetric concentration (%)	Solids diameter (mm)

The slurry from the RALS will pass through a diffuser to an airlift discharge system located on the deck of the PSV that will consist of a surge tank pressurised to 800 kPa and four lock hopper tanks operating in batch mode to reduce the pressure to atmospheric.

Figure 13.16 is an illustration of this design. The high-pressure discharge system will allow optimum efficiency for the airlift operation.

Figure 13.16 Nodule and air discharge concept

Source: Feenan 2009

The airlift discharge, or pressure let-down, system shown in Figure 13.16 is a batch system. An alternate continuous flow system has been proposed Figure 13.17 which is considered potentially a more reliable method.

Figure 13.17 Continuous Flow Pressure Let-down System shown with dewatering equipment (patent pending)

### 13.6.6 PSV operations

A Dynamic Positioning (DP) system will keep the PSVs on a specified track using only propellers or thrusters and without external moorings or other physical restraints. The DP control system will be linked to the collector tracks to control riser loads on the collectors. The DP system will be composed of the power supply from the PSV main power system, the thruster systems, and the DP-control system. DP is used by the off-shore oil industry in locations such as the North Sea, Persian Gulf, Gulf of Mexico, West Africa, and off the coast of Brazil. There are currently more than 1,800 DP ships across the globe.

To accurately position the PSVs, a locating system will also be required. This will consist of a long baseline acoustic network set up with beacons spread out over the seabed and covering the site to be collected. The beacons will provide acoustic signals to each other and also the collectors, the bottom of the riser, and the PSV. The long baseline will also communicate with the differential GPS to ensure high precision geo-location for the system, at all times.

The same long baseline acoustic network for positioning the PSVs will be used to position the transport vessel, but likely enhanced with a telemetry system between the transport and the PSVs. The telemetry system will have functionality to execute disconnection of the transfer hoses, in the event of drive off or loss of power on either vessel.

If a transport vessel is connected to a PSV, the slurry from the RALS discharge system will be pumped directly to the transport vessel through floating hoses. The transport vessel, also dynamically positioned, will track in the wake of the PSV at about 100 m. Nodules will be dewatered by gravity settling in the holds of the transport vessel. Floating decanter weirs will recover the liquid containing water and sediment. This return water and sediment will be pumped back to the PSV through an additional floating hose to be returned to deep water via an auxiliary riser pipe that is part of the RALS.

If a transport vessel is not connected to a PSV, slurry from the discharge system will be pumped into buffer storage holds where it will also be dewatered by gravity settling.

Figure 13.18 is a schematic diagram of the airlift discharge and slurry handling system for Collector Ship 1. Figure 13.9 shows the equivalent system for the drillship cases. When the transport vessel is subsequently connected, the buffer storage will be liquefied using a jetting system, and the slurry from the buffer will be combined with the slurry from the discharge system to be pumped to the transport.

Figure 13.18 Schematic of buffer storage and material handling on Collector Ship 1

**13.6.7 Collector support vessel**

In Project One, in order to minimise the effect of collector maintenance on PSV operations, maintenance of the collectors deployed by Collector Ship 1 will be performed by a separate semi-submersible collector support vessel. Preliminary specifications of the CSV are listed in Table 13.9. The CSV will be similar to a subsea support platform such as the one shown in Figure 13.19.

When a collector requires repair, either planned or unplanned, it will be disconnected from the jumper hose and power umbilical (which connect it to the RALS) by ROV. The collector support vessel will maintain a spare collector that will be deployed by a wire line hoist to reconnect with the seafloor spread. The collector to be serviced will be hoisted to the deck of the collector support vessel. A preliminary deck plan for the collector support vessel is shown in Figure 13.20.

### 13.7 Life of Mine nodule production

#### 13.7.1 Introduction

An assessment was conducted to prioritize the seafloor production, targeting areas of higher abundance. The assessment is not a detailed production plan but rather a conceptual plan of production increments linked to equipment operating schedules and the basis of design (BOD) production parameters. The mineral resource data has been adjusted using modifying factors and then accumulated into annual increments in accordance with the BOD parameters. The conceptual sequencing of production areas is summarized in Figure 13.21, showing the production blocks in five-year intervals over a life of mine (LOM) of over 27 years.

Figure 13.21 NORI 30-year potential production areas

### 13.7.2 LOM basis of design

The nominal design parameters for the PSVs and their seafloor collector systems are summarized in Table 13.10 and Table 13.11. The tables distinguish between years in which the vessels dry dock and non-dry dock years. Every five years the production vessels (and collector support vessel in the case of Collector Ship 1) are required to dry-dock for Class special survey. Collector and riser replacement would also be conducted during this period. An allowance of 60 days is included for this based on experience with dry dockings for South African diamond mining vessels. Project Zero only operates for five years, so no allowance is required for dry docking the Hidden Gem. After five years, the Hidden Gem is upgraded.

Two utilization (operating days per year) values are tabulated. The nominal values assume 20 days downtime per year for manoeuvring. The “Utilization excluding manoeuvring” value is used below is estimating LOM production rates wherein a specific turning allowance is calculated for each year.

The BOD for the seafloor production systems is summarized in Table 13.12 to Table 13.14.

Table 13.10 Nominal engineering parameters for Hidden Gem and Drill Ship 2

Hidden Gem/Drill Ship 2 (no spare collector)	Pre-2030	Post 2030

Turning of the PSV, collector vehicles and RALS has not yet been extensively investigated but will be assessed during the proposed Collector Test. Analysis of a towed system in the 1970s indicated a turn radius of greater than 1,000 m (KCON Feasibility report, 1976). For this IA, a self-propelled turn with a radius of 500 m has been assumed Table 13.15. It has also been conservatively assumed that no nodules will be collected during the turns.

Table 13.15 Collector system turning parameters basis of design

	Units	Value
Turning interval assuming 180° input	m	30,000
Seafloor collector availability		100%
Collector turning radius	m	500
Time to establish turn	h	0.25
Time to make 180° turn	h	1.11
Total time to complete turn	h	1.36

Figure 13.22 shows the conceptual arrangement of collection paths. The path is developed as follows:

- 1) Collection path No 1 proceeds in a west to east direction.
- 2) Collection path No 2 is accessed by a 180° south turn and then proceeds in an east to west direction.
- 3) Collection path No 3 is accessed by a 180° north turn and then proceeds in a west to east direction with a 1.0 m offset from the edge of path No.1.
- 4) Collection path No 4 is accessed by a 180° south turn and then proceeds in an east to west direction with a 1.0 m offset from the edge of path No.2.
- 5) The extraction sequence progress in a southwards direction until the collection panel is completely traversed.
- 6) At this point the PSV, RALS, and collectors are relocated to the adjacent panel to the south and the sequence 1 to 5 is repeated.

Collector location will be guided by an array of long baseline (LBL) beacons on the seafloor. On completion of a rectangular panel, the equipment would repeat the operation in an adjacent panel.

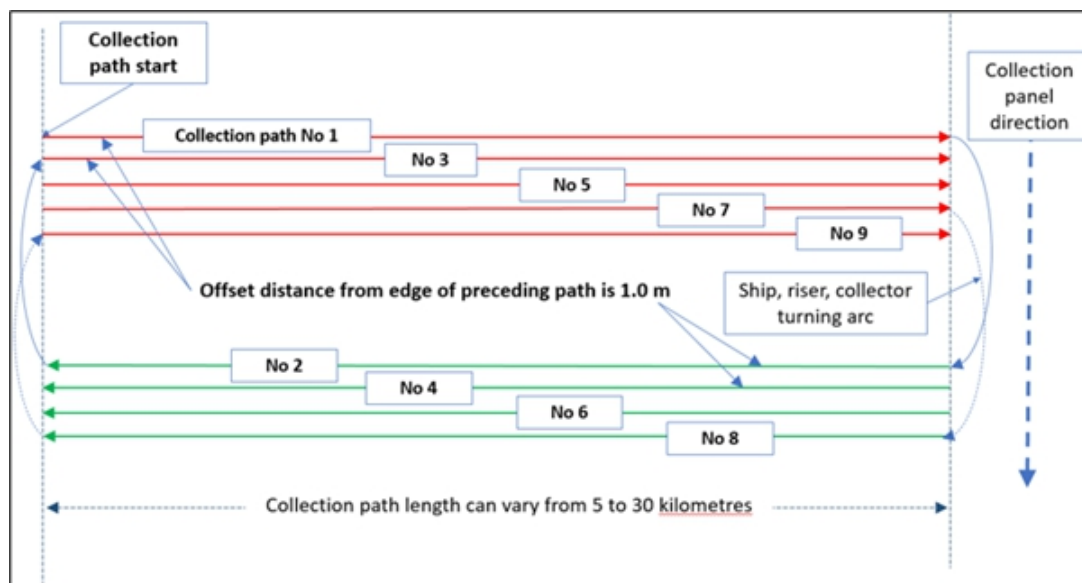

Further studies will be required to optimise the collector paths and their orientation. The Collector Test is expected to provide essential information to inform these studies.

The annual production rate of each collector is a function of average nodule abundance (A), collector width (B), speed (C), number of days per year availability (D), and nodule recovery (E). The relationship is expressed by the following formula:

$$\text{Individual collector production rate (F)} = A \cdot B \cdot C \cdot D \cdot 24 \cdot E$$

A maximum velocity of 0.5 m/sec was assumed for the collector (DRT, 2015). Recovery includes factors to account for nodules that fail to be picked up (collector efficiency), nodules lost in the concentration process on the collector, and fine nodule material that is lost in the dewatering process on board the PSV and transport vessels (dewatering efficiency).

Figure 13.22 Conceptual nodule collection path sequencing

The mining system is designed to operate at a constant speed. Short scale variations in abundance on the seafloor will result in fluctuations in the flow through the collector and RALS. This is accounted for by designing for peak production of twice the average for the collector and 1.3 times the average for the lift system, taking into account the averaging times (nodule residence times) for these systems. This additional short-term capacity avoids the need to continually vary the speed of the collector.

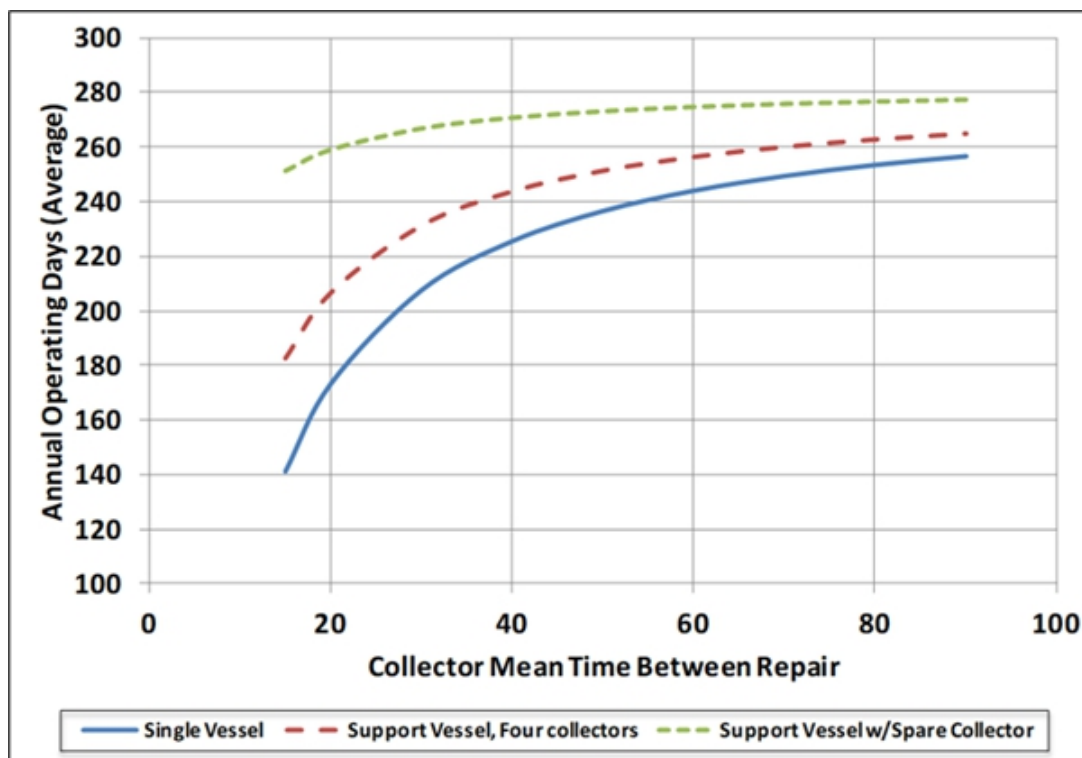

The collecting operation is assumed to work 264 days per year. Estimates of annual availability of the production system were derived from an assessment of weather and mechanical downtime which indicated that 267 days could be expected.

Current experience with off-shore drilling and production suggests an uptime between 95 - 98% is possible with well-designed equipment, adequate redundancy, and planned maintenance. One of the most important factors for the deep-sea extraction project is the reliability and maintainability of the collectors themselves. The mean time between repairs, or service, of the collectors is uncertain until actual operations begin.

In order to mitigate the effect of this uncertainty, the collector change-out method described in Figure 13.13, has been adopted to minimise the time required to replace a collector for maintenance. It is estimated that the swap-out operation on Collector Ship 1 could be performed in as little as 12 hours. Figure 13.23 shows the effect of collector mean time between repair on overall utilisation based on this maintenance concept compared with other concepts for repair that do not involve spare collector swap out.

For this IA, the mean time between repair is assumed to be 30 days. Note that in comparison with the other strategies for collector repair shown in Figure 13.23, the total annual operating days for the proposed method is less sensitive to the mean time between repair. Crawler vehicles used for subsea diamond mining are typically recovered every 5-7 days for planned maintenance. The reason for such frequent maintenance of these vehicles is leakage of seals on hydraulic cylinders used for raising and lowering a large boom with a cutting head. The nodule collectors will not require any hydraulic cylinders. Pilot test collectors in the 1970s succeeded in operating continuously up to about four days.

Figure 13.23 Impact of collector mean time between repair on overall utilisation - Collector Ship 1

Aside from failures of lift pumps, collector failure was typically due to leakage of an oil filled electric motor (Shaw, 1993). This technology has subsequently been superseded by the advent of subsea water-cooled electric motors, which have recently been implemented in the subsea oil and gas industry and are achieving multiple years of life without maintenance (Millward, 2008). Reliability can now be greatly improved by employing direct electric drives, using water-cooled motors, for pumps and tracks instead of hydraulic power. Other measures to improve reliability include implementation of 100% redundancy for critical components such as suction pumps and instrumentation.

The overall nodule recovery efficiency is estimated at 80%. The recovery value is based upon test work conducted in the 1970s. Nodule recovery efficiency is the product of nodule entrainment efficiency, subsea concentrator recovery, and dewatering system efficiency. The estimate of dewatering recovery used in this IA is higher than indicated by the 1970s test work because data that has come to light recently suggests the amount of breakup during lifting the nodules up the RALS may be significantly less than previously assumed (Kennecott (1978), DRT (2015)).

The modifying factors applied to the mineral resource to estimate production tonnages are detailed in Table 13.16.

Table 13.16 Mineral Resource modifying factors

Modifying factors	Value	Description
Resource area efficiency	92%	The resource area efficiency factor is defined as the width of the collector divided by the width of the collector path. A 0.5 m undisturbed strip is to be left either side of the collector. For a 12 m wide collector, the resource area efficiency is calculated as 12 / 13.
Collector pick-up efficiency	90%	This is the percentage of nodule mass passed over by the collector that is pickup up by the collector head. Reference Table 6 Recovery efficiencies assumed for this study, DRT-1412-RP-02-R02: Seafloor Polymetallic Nodule Off-shore Scoping Study - Technical Report.
Collector underflow efficiency	95%	This is percentage of nodule mass that is pickup up that is passed to the collector underflow. Reference Deep Green Material Balance Summary, Preliminary for information only Thursday, November 28, 2020 (Collector nodule mass underflow/ Collector nodule mass picked up, 435.7/458.6).
Nodule attrition	0%	This is the percentage of mass of nodule lost through attrition from the sea floor to trans-shipment. It is included in the trans-shipment efficiency.
Trans-shipment efficiency	93%	This is the percentage of nodule mass transferred from the production vessel to trans-shipment. Reference Deep Green Material Balance Summary, Preliminary for information only Thursday, November 28, 2020. (Transport fill/ (Buffer fill + Buffer discharge), 508.8/ (435.7+129.6).
Overall collector efficiency	80%	This is the percentage of nodule mass passed over by the collector that is delivered to the transport vessel. It includes losses in the pick-up, overflow, attrition and trans-shipment (90%*95%*100%*93%).
Overall resource recovery factor	73%	Is the product of the resource area efficiency * collector pick-up efficiency * collector under flow efficiency * (1 - nodule attrition (%)), * trans-shipment efficiency (92%*90%*95%*100%*93%).

The resource accumulation excludes parts of each block that are considered not suitable for production, such as areas with volcanic rocks or where the sea floor slope is too steep. The collector was designed with a maximum operating slope of 8° but the Mineral Resource and production plan are based on a more conservative 6° limit.

The resource area efficiency factor includes a 0.5 m undisturbed strip either side of the collector path and encompasses an allowance for the collector turning zone at the end of each strip. The efficiency of the collector in the turning circle is unknown at this stage and nodules may be partially or non-recoverable. The 0.5 m strip either side of the collector is an allowance for inaccuracy in steering the collector. The proposed Collector Test is expected to provide valuable information on location control. The collectors will be turned at predefined points to avoid volcanic rocks, slopes greater than 6° and at the end of collection paths. The ability to recover nodules effectively in an area previously traversed and disturbed by turning needs to be evaluated. An estimate of 92% efficiency is considered reasonable for this high-level assessment.

Collector pick up efficiency of 90% was assumed, based on trials by the Kennecott consortium in 1976 (Kennecott Exploration Inc., 1976) and preliminary tank tests. The collector underflow efficiency of 95% accounts for the nodule mass that is to be pumped to the riser and nodule loss of 5% to the collector overflow. The collector overflow and nodule loss are ejected at the sea floor.

The mechanism of collecting and pumping of the nodules from the sea floor, through the airlift riser, to the surface vessel will cause nodules to collide with the collector system, riser walls and with other nodules. These collisions will result in attrition which will cause some reduction in the nodule particle size. The nodules that report to the surface production vessel will be dewatered and depressurized prior to trans-shipment transfer to a transport vessel. During this process, nodule mass loss of 7% has been estimated, including the fine products of attrition in the riser. Lost nodules report to the dewatering discard flow.

The LOM incorporates the following parameters and processes:

- Block size selection was estimated to align with approximate one-week nodule production of 0.1 Mt. The block size is 2,300 m by 2,300 m with data being consolidated from the geological model, as is detailed in Figure 13.21.
- The following parameters (label, units) were accumulated into the LOM data set:
  - Nodule abundance ( $\text{kg/m}^2$ ).
  - Nodule grades (%): Ni, Cu, Co, Mn, Si, Fe, P.
  - Manganese oxide silicon dioxide ratio.
  - Proportion of area covered by nodule domain (Nodule %).
  - Proportion of area covered by slopes greater than  $6^\circ$ .
  - Proportion of area covered by volcanic rocks.
  - Block designation by 5-year period (first 35 years).
- The following parameters were calculated and used in the LOM:
  - In situ nodule resource tonnes were calculated from the block area, nodule abundance and nodule area percentage.
  - Available nodule tonnes were calculated from the in situ nodule resources and the resource area efficiency factor and accumulated by 5-year periods.
  - Product tonnes were calculated from the available nodule tonnes, collector pick up efficiency factor, collector under flow efficiency factor, nodule attrition factor, and the trans-shipment efficiency factor.
  - Cumulative manganese oxide silicon dioxide ratio was determined from the weighted average block manganese oxide silicon dioxide ratios.
  - Travel distance for one collector was calculated from the block area, percentage nodule area, collector width and allows for the strip left in situ.
  - Pumping modifying factor was calculated to lower the travel speed of the collector when the nodule abundance is larger than the pumping maximum design rate. The pumping adjustment factor was used in determining the overall operated hours by multiplying the block time (travel distance / collector speed).
  - Collector operating hours were determined by:
    - Collector traverse distance divided by the average collector travel speed as defined in the BOD.
    - Additional time was estimated to take account of the turns required, as defined by the collection path. At this level of analysis there is no detailed collection path, hence an allowance was made for the number of turns and total time to complete a turn, as per the BOD. The number of turns per block was estimated by dividing the collector travel distance by the ship turning interval of 30,000 m. Figure 16-31, Figure 16-32 and Figure 16-33 details the LOM collector speeds and nodule abundance.
    - The collector operating time is for a single collector only and these hours were then multiplied by the number of collectors, as defined in BOD.

- The pumping adjustment factor was used in determining the overall operated hours by multiplying this factor by the block time (travel distance / collector speed).

**13.7.3 LOM production summary**

The LOM production sequence aims to maximize nodule production. It is a conceptual sequence based on mining the areas with the highest abundance first. Production blocks in each nominal 5-year production zone were ranked by abundance. The production sequence accumulates tonnage progressively down through the ranked blocks. Detailed collection paths for the PSVs and seafloor production systems were not developed nor was the production sequence optimized. The production blocks in the sequence are not necessarily spatially contiguous. Twenty (20) days were allowed in the LOM production summary for relocation between non-contiguous blocks. This approach would need to be evaluated through a rigorous mine design and optimization process.

The production summaries for the Hidden Gem, Drill Ship 2 and Collector Ship 1 are provided respectively in Table 13.17, Table 13.18, and Table 13.19. The consolidated LOM production is summarized in Table 13.18 and

Figure 13.24. Over the period 2024 to 2046 a total of 254 Mt is produced with annual production ranging from 0.96 Mt in 2024 to maximum of 14.32 Mt in 2031.

Figure 13.25 LOM operational parameters

The LOM grades and manganese oxide silicon dioxide ratio are detailed in Table 13.20 and depicted in Figure 13.26 and Figure 13.27. All are relatively constant across the LOM period.

Figure 13.26 Variation in grades of nickel, copper, cobalt and phosphorus across LOM

Figure 13.27 Variation in grades of manganese, iron, silicon and MnO:SiO<sub>2</sub> ratio across LOM

Figure 13.28 details the cumulative nodule product and cumulative abundance and Figure 13.29 shows the nodule product tonnages divided into abundance classes.

Figure 13.28 Cumulative LOM nodule production

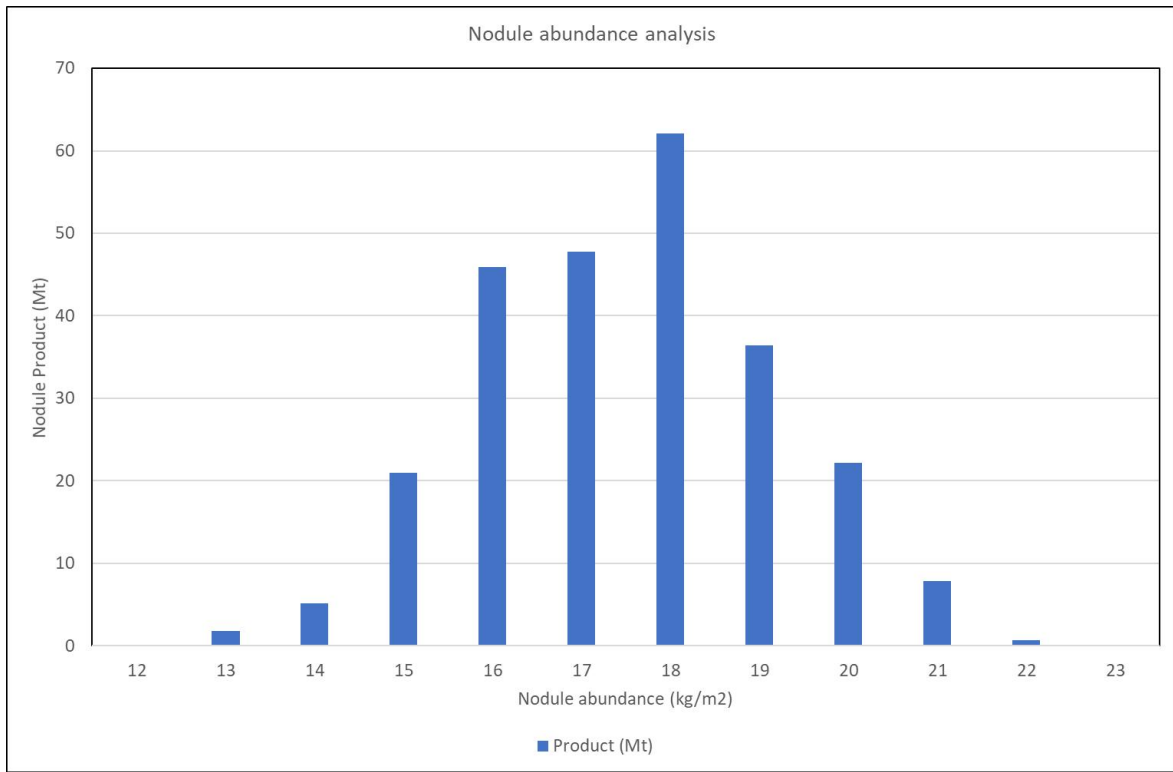

Figure 13.29 Histogram of nodule abundance

The LOM collector speed and nodule abundance over the LOM are detailed in Figure 13.30, Figure 13.31 and Figure 13.32.

Figure 13.30 Hidden Gem collector speed nodule abundance relationship

Figure 13.31 Drill Ship 2 collector speed nodule abundance relationship

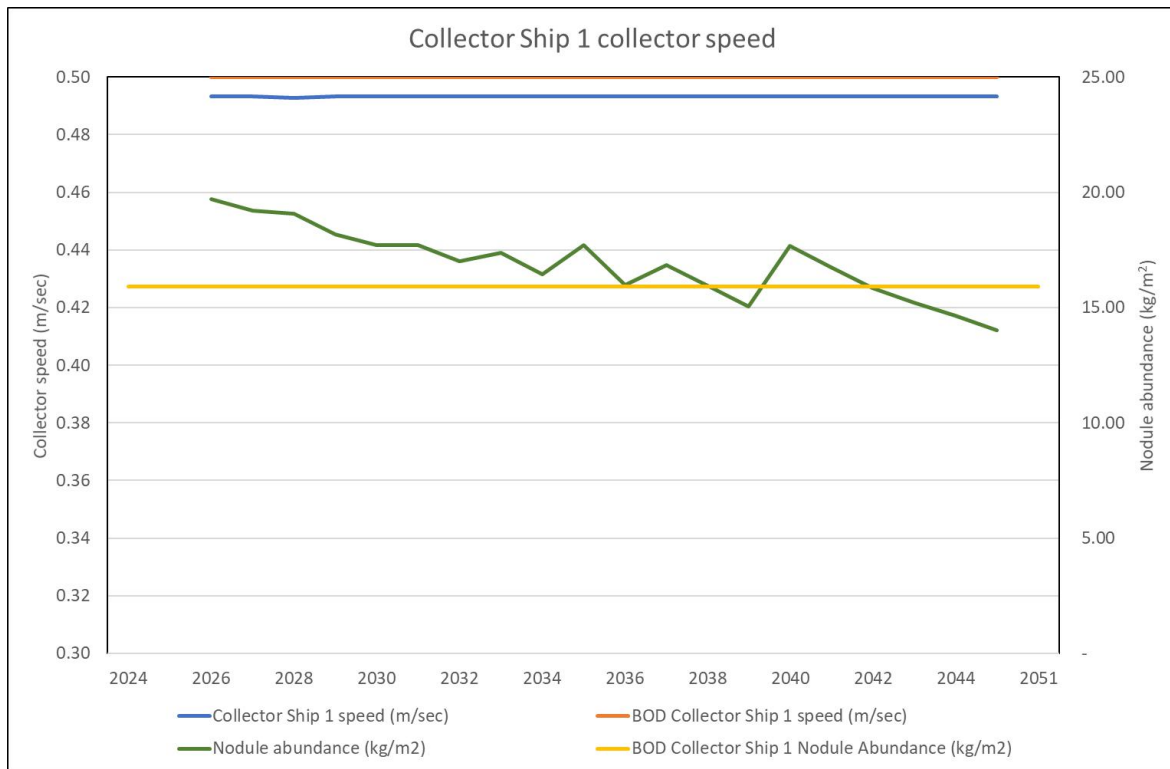

Figure 13.32 Collector Ship 1 collector speed nodule abundance relationship

### 13.7.4 Inferred Mineral Resources

The LOM production sequence includes 6 Mt (wet) of nodules that are classified as Inferred Mineral Resources. This is approximately 2% of the total LOM production. Inferred Mineral Resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves.

## 14 Processing and recovery methods

The following subsections with respect to process description, production rates and consumables were developed for a processing rate of 4.88 Mt/y (dry basis) of nodules. Subsequently, the resource definition has allowed for an increase in proposed processing rate and, with it, additional processing lines. The extrapolated production information, including toll processing at existing RKEF plants (Project Zero), is discussed in Sections 21 and 22 - this was developed by DeepGreen and forms the basis of the economic evaluation.

### 14.1 Process design basis

NORI has selected a combined pyro- plus hydrometallurgical process as the basis for the recovery of Ni, Cu, Co and Mn from polymetallic nodules for this IA. This is one of the process alternatives discussed in various literature sources (see Section 13). A pyrometallurgical front end of the plant uses the well-known nickel laterite process featuring rotary kilns and electric furnaces (RKEF) that respectively calcine and smelt the nodules to form an alloy and a slag. The alloy is then sulphidised to form a matte and then partially converted in a Peirce-Smith converter operation to remove iron, following the processing route that Société Le Nickel used to operate at their Doniambo plant in New Caledonia. The matte from the sulphidation step will then be sent to the hydrometallurgical refinery.

The hydrometallurgical refinery design is based on a sulphuric acid leach flowsheet. A two-stage leach based on the flowsheets of the base metal refineries applied by several platinum producers in South Africa and the United States, particularly Lonmin and Sibanye Stillwater, will be used to produce copper cathode and a pregnant leach solution rich in nickel and cobalt, while low in copper. Further processing of the pregnant leach solution is based on mixed-sulphide precipitate processing flowsheets employing solvent extraction. The final production of battery-grade nickel and cobalt sulphates would use crystallisation.

The pyrometallurgical process generates a manganese silicate stream that can be sold to the manganese industry and a small slag stream that can be sold for construction, while the hydrometallurgical plant produces an ammonium sulphate by-product for sale to the fertiliser industry. Thus, together with the ability to recycle other hydrometallurgical side-streams to the pyrometallurgical process, the flowsheet has neither tailings ponds nor permanent slag repositories and does not generate substantial waste streams.

The following sections provide a description of the assumed process flowsheet and processing parameters.

#### 14.1.1 Plant throughput and availability

The targeted processing rate for the proposed processing plant is 4.88 Mtpa of nodules, dry basis.

In RKEF plants, the kilns and furnaces are close-coupled due to the need to transfer hot calcine from the kilns to the furnaces, with only the transfer system and the furnace feed bins as a buffer between them. An Operating Factor of 85% was assumed for the pyrometallurgical facility based on typical RKEF design. Operating Factor considers planned and unplanned equipment outages and periods of slow-down. It relates the nominal hourly throughput (the rate at which the equipment should be able to operate) to annual throughput:

Annual Throughput = Nominal Hourly Rate × 8,760 hours per year × Operating Factor.

The hydrometallurgical process is decoupled from the pyrometallurgical process by intermediate storage and is assumed to operate for 8,000 hours per year at the nominal rate (equivalent to an Operating Factor of 91.3%).

Production values are reported in Section 14.3.2.2.13.

#### 14.1.2 Feed properties

The nodules are expected to arrive at site largely intact and partially drained of excess sea water. They have a size distribution that is unspecified, but the majority are expected to be <50 mm, i.e., suitable for feeding to the kilns. Incoming nodules will be screened, and the oversize will be crushed.

#### 14.1.3 Nodule composition, speciation, and assay reconciliation

Assay information based on recent (2018, NORI Area D Campaign 3 and 2020, Campaign 6A and 6B) core box samples was provided by NORI. A few adjustments were made to provide an input assay to process modelling that adds up to 100%. The assay as used in process modelling is given in Table 14.1.

Table 14.1 Nodule assay for use in process modelling

Component	Weight %
Loss on Ignition (LOI)	15.87
<i>Oxygen in Mn Compounds</i>	5.14
<i>Crystalline Water</i>	10.73
Al <sub>2</sub> O <sub>3</sub>	3.95
CaO	2.43
CoO	0.18
Cr <sub>2</sub> O <sub>3</sub>	0.01
CuO	1.43
Fe <sub>2</sub> O <sub>3</sub>	9.49
MgO	3.18
Mn <sub>Total</sub>	31.2
MnO	0.0
MnO <sub>2</sub>	39.44
Mn <sub>2</sub> O <sub>3</sub>	8.95
MoO <sub>3</sub>	0.09
NiO	1.78
P <sub>2</sub> O <sub>5</sub>	0.36
S	0.11
SiO <sub>2</sub>	11.68
ZnO	0.21
Other (assayed)	5.60
Other (unaccounted)	0.37
<b>Total</b>	<b>100</b>

The principal changes that were made were:

- Manganese was reported as MnO, but it is predominantly MnO<sub>2</sub> in polymetallic nodules. Recent test work (Section 13) has shown the manganese to be MnO<sub>1.9</sub>. For the purposes of process modelling, this has been apportioned to the compounds MnO<sub>2</sub> and Mn<sub>2</sub>O<sub>3</sub> as shown above.

- While LOI for nickel laterites is virtually all crystalline water, this is not the case for the nodules. Higher oxides of manganese decompose when heated to LOI measurement temperatures. Hence the reported LOI has been split into crystalline water and the oxygen that is expected to be lost upon heating as shown in Table 14.1.
- Molybdenum was added to the assay in accordance with measurements during recent test work. Although molybdenum is only present in small amounts, it increases in concentration during processing and becomes of metallurgical significance in the converting operation. The current refining flowsheet does not account for molybdenum. Additional processing steps are required to separate molybdenum and will necessitate additional capital and operating expenditure. While it may be possible to produce a marketable molybdenum by-product, further development would be required to determine the process requirements.
- Process modelling for the RKEF plant was based on using existing METSIM models for nickel laterite plants, modified for the abundance of manganese and copper (and the presence of molybdenum). The assay provided by NORI had a comprehensive list of elements, many at the ppm level, much of which would likely report to EF slag. This part of the assay was therefore assigned as 'Other (assayed)' and dealt with accordingly.
- The revised assay still did not add up to 100%. The missing assay was assigned to 'Other (unaccounted)' and also assumed to report to slag.

Free moisture content of well drained nodules is assumed to be 20% based on recent test work.

#### 14.1.4 Final product specifications

The facility design is based on achieving the preliminary product specifications for nickel and cobalt sulphate products shown in Table 14.2.

Table 14.2 Preliminary Ni, Co product specifications

Component	Units	NiSO <sub>4</sub> -6H <sub>2</sub> O	CoSO <sub>4</sub> -7H <sub>2</sub> O
Ni	wt%	>22.0	<0.0001
Co	wt%	<0.001	>20.5
Cu	wt%	<0.0001	<0.0005
Fe	wt%	<0.0001	<0.001
Cr	wt%	<0.0001	<0.0005
Mn	wt%	<0.0001	<0.0001
Pb	wt%	<0.0001	<0.0001
Zn	wt%	<0.0001	<0.0005
Mg	wt%	<0.01	<0.01
Na	wt%	<0.02	<0.03
K	wt%	<0.0001	<0.0005
Ca	wt%	<0.0005	<0.005
Si	wt%	<0.002	<0.02

Copper is to be electrowon to cathode without a solvent extraction stage ahead of it. This is to maximise Ni and Co recovery in the subsequent stages. As a result, the Cu cathode quality is expected to be ≥99.9% for the assumed converter matte composition.

The slag produced by the EF operation is rich in manganese and would be marketed as feed to the ferro-manganese, silico-manganese industry.

Converter aisle slag that is not recycled internally may be sold as useful product, e.g., for road construction, sand blasting, or cement additive.

## 14.2 Project Zero

For Project Zero, NORI proposes to toll treat polymetallic nodules at existing RKEF smelters, utilizing excess industry capacity.

NORI has completed surveys of existing plants in China and Indonesia and commenced discussion with potential partners in Malaysia that are interested in Mn silicate offtake and interested in constructing and operating RKEF furnace lines. NORI advises there is significant interest from many parties in China to utilise RKEF plants which may become stranded as a result of the Indonesian government nickel laterite ore export ban restricting supply of the nickel laterite feedstock that they currently utilise or the general overbuilding of capacity for the nickel pig iron and ferronickel market. These RKEF plants were originally built to convert nickel laterite to nickel pig iron. A review by Kingston Process Metallurgy (Kingston Process Metallurgy, 2020) concluded that existing RKEF lines could be readily converted to process polymetallic nodules to marketable NiCuCo intermediate product(s) and a manganese silicate slag product for sale.

The availability of a total of four 1 Mtpa (wet) third party RKEF lines was assumed for the IA.

Options for toll treatment of matte in hydrometallurgical refineries were identified in Europe and Canada.

As part of Project Zero, NORI is also investigating the option of selling a nickel alloy product, which also contains copper and cobalt. The alloy would be produced at the end of RKEF process. Rather than reporting to the sulphidation stage of the pyrometallurgical plant, the alloy would be sold the market. This alloy is assumed to have a nickel grade of 15.5%.

## 14.3 Project One

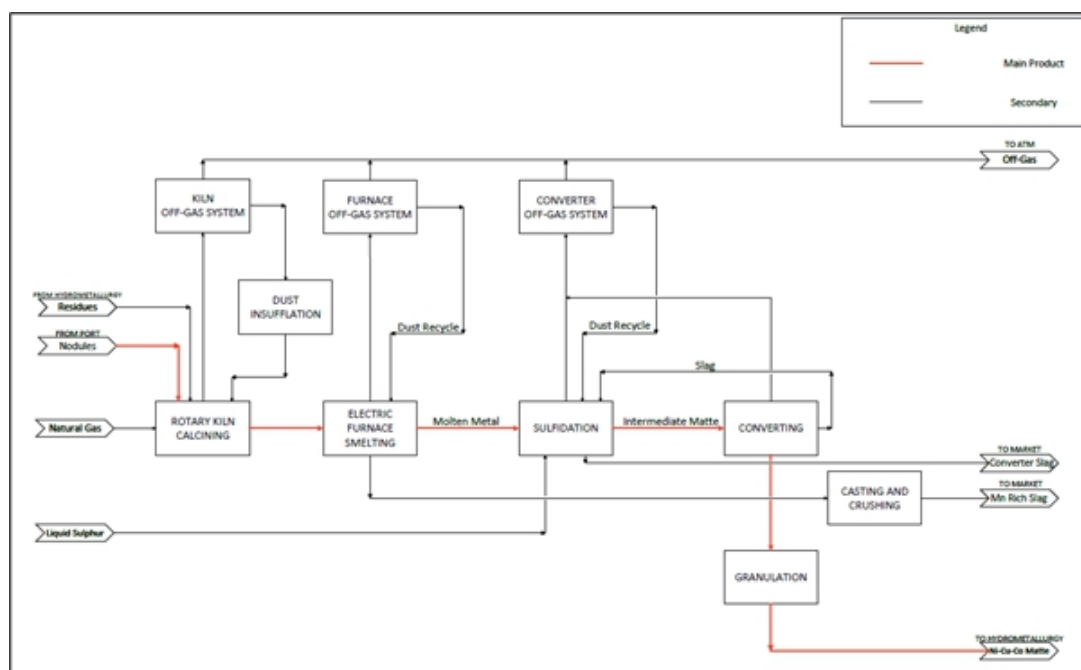

### 14.3.1 Process description

#### 14.3.1.1 Pyrometallurgical processing

Figure 14.1 shows the pyrometallurgical process flowsheet. It differs from most RKEF plants producing ferronickel in that:

- Dryers have been omitted. At 20% free moisture, the moisture content of the nodules is similar to dry ore discharged from the dryers at most nickel laterite plants. Nickel laterite ores have very variable moisture contents due to exposure to rainfall and can be muddy, sticky and difficult to handle and crush. The dryers therefore serve to render the ore easier to handle and provide a steady moisture feed to the kilns. These are not deemed to be issues for the nodules.
- Free moisture associated with the nodules is sea water.
- A converting operation is not normally part of a ferronickel plant (post tap-hole refining is typically performed in ladle operations). The proposed process follows SLN's former practice of adding molten sulphur to the ferronickel in Peirce-Smith converters and blowing out most of the iron. PT Vale Indonesia also has a converter aisle after the EFs, however they add the sulphur to the kiln discharge and use the converters solely for iron removal. (Sulphur addition to the kiln discharge is highly inefficient and releases substantial amounts of sulphur dioxide and was therefore not selected for this project.)

Figure 14.1 Pyrometallurgical process block flow diagram

### 14.3.1.2 Pyrometallurgical process steps

Processing through the pyrometallurgical plant can be summarised as follows:

- Nodules are assumed to arrive at the plant on a continuous, 24-hour basis. Limited storage is therefore required at the plant—a 3-day stockpile has been allowed for.
- The nodules are screened at 2 inches and the oversize (expected 10–15%) are crushed.
- Nodules are conveyed to the kiln feed bins.
- Nodules are fed to the four, gas-fired kilns together with reductant coal, silica flux and residues from the hydrometallurgical refinery. Silica flux is added to target a given slag composition in the EF.
- The nodules are dried, calcined and partially reduced in the kilns.
- Off-gas from the kilns is taken from the feed end of the kilns and sent to particulate cleaning (electrostatic precipitators).
- Collected kiln dust is recycled dry via dust insufflation, i.e., by pneumatically conveying it via a carefully metered dosing system through a lance (pipe) placed through the hot end of the kiln and aimed at the burner flame.
- Hot calcine discharges continuously from the hot end of the kilns into hoppers that periodically discharge into refractory-lined calcine transfer containers.
- The calcine transfer container moves on rails away from the kiln and is hoisted up to the EF feed floor by crane where it is discharged to one of several furnace feed bins. It then returns to the kiln discharge hopper for the next load.
- With four kilns and three EFs, there is provision for cross-feeding.
- In the three, six-in-line (Soderberg electrodes) EFs, the calcine is smelted to produce a metal alloy and a large volume of manganese bearing slag.
- The manganese slag is cast, crushed and trucked to port for export.
- The metal alloy is tapped intermittently into ladles and taken to the converter aisle by crane.

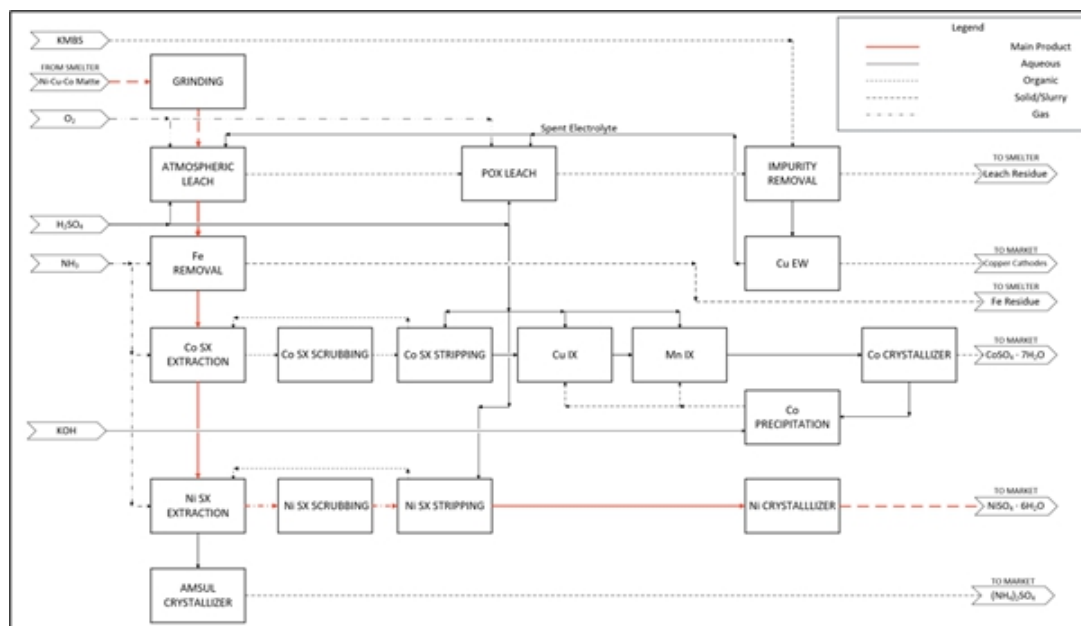

- Off-gas from the furnace is cooled and cleaned of particulate. Collected dust is recycled back to the furnace via the kiln discharge hoppers.
- A large portion (e.g., 50%) of the molten alloy is sent to one of two pig casting machines, forming 20 kg ingots. The pig casters have enough capacity to cast the entire 60 t/h alloy production rate, allowing decoupling of the EF and converter aisle operations.
- In the converter aisle, molten alloy from the EFs is poured into one of two sulphidation vessels (SV). These are large Peirce-Smith converters (15' diameter by 35' long).
- Solid alloy ingots are added to the SVs as coolant to help maintain a suitable temperature.
- Silica flux is added to form slag with the iron that is being removed in the SV.
- As part of the converter aisle area, there is a sulphur melting facility where the sulphur is melted and warmed to 140 °C. It is then pumped to the Peirce-Smith vessels through heat-traced lines (steam). Although only two of the four Peirce-Smith vessels will be in use for sulphidation at any one time, there is provision for putting it into any of the vessels when one is down for maintenance/rebuild.
- In the SVs, liquid sulphur to transform the alloy to matte is pumped through a few of the tuyères in the barrel. Air is blown through the remaining tuyères at the same time. Before and after sulphur is pumped, i.e., during roll-in, roll-out, steam is passed through the sulphur tuyères.
- The SVs operate with a large heel in a semi-continuous mode, i.e., relatively small amounts of product matte are removed at a time. The matte is an intermediate matte containing around 30% iron. Slag from the SVs is relatively low in pay-metals and can be granulated.
- The intermediate matte from the SVs is taken to the third large finishing vessel (FV) (also with 15' diameter by 35' long). The fourth vessel serves as spare for use when another vessel is down for maintenance/reline.
- Silica flux is added to form slag with the iron that is being removed in the FV.
- When there is sufficient intermediate matte in the FV, blowing commences and continues until the iron in the matte is 5%. This is product matte and it is removed at the end of the batch and water-granulated. Granulated matte is then sent to the hydrometallurgical refinery.
- Slag from the FV is too rich in pay-metals to discard and it is therefore sent back to the SVs.
- Sulphur usage efficiency is assumed to be very high and as a result the matte is sufficiently sulphur-deficient (metallised) that very little sulphur dioxide is formed in the process. The gases from the Peirce-Smith vessels can therefore be treated for particulate capture only and discharged to stack. (It is understood that the one practitioner of this process, SLN in New Caledonia, did not require any sulphur dioxide scrubbing for their sulphidation process). Treatment for SO<sub>2</sub> will depend on the sulphur usage efficiency, but also on any limits on stack emissions and/or air quality in the smelter and nearby areas.

#### 14.3.1.3 Hydrometallurgical processing

Figure 14.2 shows the hydrometallurgical process flowsheet. It consists of a unique combination of proven hydrometallurgical steps based on platinum base metal refineries and battery-grade sulphate production.

Figure 14.2 Hydrometallurgical process block flow diagram

### 14.3.1.4 Hydrometallurgical process steps

Processing through the hydrometallurgical refinery can be summarised as follows:

- Ni-Cu-Co rich matte is transported from the pyrometallurgical facility to matte storage. An allowance of 3 days of storage space has been made.
- The matte is ground in a mill to reduce particle size before leaching. The ground matte is then pulped and stored with 8 hours of storage capacity.
- Pulped matte feed is then pumped to the first stages of atmospheric leaching, where oxygen and spent electrolyte from copper electrowinning leach the matte. In the final stages of atmospheric leaching, no oxygen is added, promoting metathesis reactions where copper in solution substitutes the nickel remaining in the matte. This leads to a solution high in nickel and low in copper, and a matte depleted in nickel and upgraded in copper.
- The remaining upgraded matte then proceeds to pressure leaching at 220 °C that uses autoclave technology to leach as much of the matte as possible using spent electrolyte, make-up acid and oxygen.
- Any residue remaining is collected and returned to the pyrometallurgical refinery for further recovery, while the copper rich solution from the autoclave is purified, cooled and sent to copper electrowinning to produce copper cathodes. Spent electrolyte is recycled to the atmospheric and pressure leach steps.
- Nickel solution from atmospheric leaching proceeds to iron removal, where ammonia is added to raise the pH and precipitate iron. The iron precipitate is separated and sent back to the smelter to recover any entrained pay metals and to avoid generating an iron waste stream.
- The iron free solution then proceeds to cobalt solvent extraction (SX), where cobalt is extracted using an organic solvent. The cobalt-free raffinate then proceeds to nickel SX, while the cobalt is stripped from the organic using dilute acid.
- The cobalt strip solution passes through purification, where copper and manganese Ion Exchange (IX) are used to purify any remaining impurities. Cobalt hydroxide precipitated from the cobalt crystalliser bleed is used for pH control to avoid introducing potassium as an impurity.

- The pure cobalt solution is then sent to crystallisation to produce cobalt sulphate heptahydrate, which is bagged for sale.
- The cobalt free raffinate, which is rich in nickel then has the nickel extracted using a nickel selective organic extractant. The nickel is then stripped from the organic using dilute acid before being sent to crystallisation to produce nickel sulphate hexahydrate for sale.
- The remaining raffinate from nickel SX is sent to ammonium sulphate crystallisation to produce ammonium sulphate for use as a fertiliser.
- A small bleed from the ammonium sulphate crystalliser is sent to an effluent treatment system, where mixed-metal hydroxides are produced in the first step and magnesium and manganese hydroxides are produced in the second step. The mixed-metal hydroxides are recycled back to atmospheric leaching while the magnesium and manganese hydroxides are recycled back to the pyrometallurgical plant. The remaining solution is recycled back to ammonium sulfate crystallizer.

### 14.3.2 Key process parameters

Process parameters relating to throughput, stream assays, energy and reagent consumption are summarised in the tables shown in the following sub-sections.

#### 14.3.2.1 Pyrometallurgical plant

##### 14.3.2.1.1. Calcining

Calcining has four large kilns 6 m in outside diameter and 135 m long. These are amongst the largest in use in the nickel laterite industry. The information given in Table 14.3 is for each kiln operating at nominal throughput.

Table 14.3 Kiln parameters

Parameter	Value
Nodules to kiln (dry basis)	164 t/h
Nodule moisture (wet basis)	20%
Silica flux to kiln	9.4 t/h
Insufflated recycle dust to kiln	10.3 t/h
Reductant coal to kiln (dry basis)	14.0 t/h
Calcine production	144 t/h
Calcine temperature	900 °C
Natural gas to kiln	8,271 Nm <sup>3</sup> /h

##### 14.3.2.1.2. Electric furnace smelting

The design includes three high power EFs. They are rectangular with six Soderberg electrodes. Slag will be laundered to pits for solidification and subsequent reclaim. Alloy will be tapped intermittently into ladles—the hourly rates indicated are the average rates at which slag and alloy are made inside the furnace. The information given in Table 14.4 is for each furnace operating at nominal throughput.

Table 14.4 Electric furnace parameters

Parameter	Value
Calcine feed rate	192 t/h
Power input	87 MW
Average alloy production rate	18.7 t/h
Average slag production rate	165 t/h
Alloy temperature	1,450 °C
Slag temperature	1,500 °C
Metal composition (wt%)	15.8 Ni, 61.9 Fe, 12.5 Cu, 1.52 Co, 3.64 Mn
Slag composition (wt%)	52.6 MnO, 23.4 SiO <sub>2</sub> , MnO/SiO <sub>2</sub> =2.25

#### 14.3.2.1.3. Converter aisle

Alloy from the electric furnaces is tapped periodically into ladles and transferred by crane to the converter aisle. A large part of it (in the range of 50%) is cast into ingots to help with the converter heat balance in the SVs. The molten alloy is fed directly to the SVs. There are two SVs making an intermediate matte which is then transferred to a single operating FV. Unlike the information for the kilns and electric furnaces (per unit), the information given in Table 14.5 is for the entire production coming from the electric furnaces. Once again, while converter aisle operations are semi-continuous and batch, the production rates shown below are hourly average except for blowing rates, which are instantaneous.

Table 14.5 Converter aisle parameters

Parameter	Value
Total alloy to sulphidation	56.1 t/h
Sulphur to sulphidation	4.2 t/h
Silica flux to sulphidation	12.2 t/h
Air blowing rate (two vessels, instantaneous)	90,000 Nm <sup>3</sup> /h
Operating temperature	1,300 °C
Intermediate matte production	32.7 t/h
Discard slag production	67.5 t/h
Intermediate matte composition (wt%)	27.3% Ni, 30.0% Fe, 20.6% Cu, 3.03% Co, 13.0% S
Silica flux to finish vessel	4.7 t/h
Air blowing rate (one vessel, instantaneous)	45,000 Nm <sup>3</sup> /h
Operating temperature	1,300 °C
Final matte production	21.2 t/h
Recycle slag production	20.1 t/h
Final matte composition (wt%)	40.9% Ni, 5.0% Fe, 30.5% Cu, 3.35% Co, 20.0% S

#### 14.3.2.2 Hydrometallurgical refinery

##### 14.3.2.2.1. Matte storage and grinding

This area consists of storage and stockpile space for the finished Ni-Co-Cu matte from the pyrometallurgical facility to allow decoupling of the hydrometallurgical refinery. An allowance of 3 days of storage space has been made. The matte is ground in a mill to reduce particle size to a P<sub>80</sub> of 30 µm before leaching.

#### 14.3.2.2.2. Atmospheric leaching

Atmospheric leaching has two goals:

1. The dissolution of the contained metals within the matte.
2. Providing separation between the copper and nickel by producing:
  - a. A leach solution high in nickel and cobalt and low in copper.
  - b. A residual matte enriched in copper but depleted in nickel and cobalt.

The first step in atmospheric leaching consists of ground matte slurring and storage, providing eight hours of surge capacity. This matte slurry is fed continuously to five atmospheric leach tanks operating at 85 °C, where it is mixed with spent electrolyte from copper electrowinning. Oxygen is sparged into the first three tanks, which promotes leaching of the matte. The nickel in the matte, which primarily exists as heazlewoodite (Ni<sub>3</sub>S<sub>2</sub>), reacts according to the following reaction:

Note that solid millerite (NiS) is left as a by-product of the reaction. No oxygen is added in the final two tanks, allowing metathesis reactions between the copper in solution from electrowinning and any copper leached in the first three tanks and the remaining heazlewoodite. This process enhances the leaching extent of nickel and depletes the solution of copper. The principal metathesis reactions occur as follows:

Similar reactions occur for cobalt leaching and metathesis as well. The nickel and cobalt rich solution are then separated from the remaining matte and proceeds to iron removal and then cobalt solvent extraction (SX). The remaining matte is sent to pressure oxidative leaching. See Table 14.6 for a summary of key process parameters. Note that the hourly values reported are on the basis of 8,000 operating hours per year (see Section 14.1.1).

Table 14.6 Atmospheric Leaching Parameters

Parameter	Value
Matte feedrate	19.75 t/h
Solids fraction of leach feed slurry	55%
Leach operating temperature	85-90 °C
Oxygen addition	1.72 t/h
Spent electrolyte addition	109.2 t/h
Nickel concentration in leach discharge solution	85 g/L Ni
Copper concentration in leach discharge solution	<1 g/L Cu
Iron Concentration in Leach Discharge Solution	<2 g/L Fe
Acidity of leach discharge solution	<1 g/L H <sub>2</sub> SO <sub>4</sub>

#### 14.3.2.2.3. Pressure oxidative leaching

Pressure oxidative (POX) leaching is intended to maximise the dissolution of the copper enriched matte from atmospheric leaching. The matte is first mixed with spent electrolyte from electrowinning and 93% sulfuric acid in a feed tank before being pumped to the autoclave operating at 2800 kPa and 220 °C. Oxygen and cooling water are added directly to the autoclave. After leaching, any residue remaining is separated from the solution and is sent to the pyrometallurgical refinery. The copper rich solution from the autoclave is purified, cooled and sent to copper electrowinning. Key parameters for the POX leach are provided in Table 14.7.

Table 14.7 Pressure oxidative leaching parameters

Parameter	Value
Residence Time	1.5 hours
Pressure	2800 kPa
Operating temperature	220 °C
Oxygen utilisation	85%
Oxygen addition	11.2 t/h
Cooling method	Direct Injection
Cooling water addition	96.0 t/h
Spent electrolyte addition	127.4 t/h
93% sulfuric acid addition	3.2 t/h
Nickel concentration in POX discharge solution	34 g/L Ni
Copper concentration in POX discharge solution	72 g/L Cu
Acidity of POX discharge solution	10 g/L H <sub>2</sub> SO <sub>4</sub>

#### 14.3.2.2.4. Impurity removal and copper electrowinning

Copper solution from pressure oxidative leaching is purified and cooled before proceeding to copper electrowinning (EW). Impurities like selenium and tellurium are removed via reduction with potassium metabisulfite before EW. Note that this impurity removal step may not be necessary but has been left in as a cost allowance.

Purified copper solution from POX leaching proceeds to the electrowinning cellhouse. The electrowinning cellhouse is a well-ventilated building that houses two parallel rows of electrowinning cells. Ventilation serves to prevent the accumulation of acid mist, which is a health hazard and can result in electrical fires. A single overhead crane services the cells. Servicing activities include harvesting the copper cathode product, replacing them with fresh cathode sheets, replacing damaged anodes and maintenance. Rectifiers and transformers provide the power at the correct potential difference for effective operation.

In EW, guar and other trace additives are added to improve the properties of cathode produced, which form when electrical current is applied across the electrowinning cells.

Purified copper solution from POX leaching is combined with recirculated electrolyte in the electrowinning feed tanks. The resulting electrolyte feed solution then passes through the electrowinning cells where it comes into contact with the cathodes and anodes. The anodes have been assumed to be lead for the purposes of this estimate. The cathodes are comprised of stainless-steel starter sheets that accumulate copper as the electrowinning reactions proceed. Electrical current passing through the cells drives two reactions:

1. At the cathode, an accumulation of electrons drives the reduction of Cu<sup>2+</sup> in solution to Cu<sup>0</sup>, causing the copper to plate on the stainless-steel starter sheets.
2. At the anode, a deficit of electrons drives the decomposition of water into H<sup>+</sup> and O<sub>2</sub>, causing the formation of sulfuric acid and the evolution of oxygen gas.

The current density is maintained at 200 A/m<sup>2</sup> to ensure controlled, even plating for a good quality cathode. The spent electrolyte is only depleted in copper by 3 g/L. A significant portion of the spent electrolyte is recirculated to the electrowinning feed tanks while the remainder exits the cellhouse and is sent to leaching for use as a lixiviant.

Table 14.8 provides the key parameters for impurity removal and copper EW.

Table 14.8 Impurity removal and copper electrowinning parameters

Parameter	Value
Impurity removal reagent	Potassium metabisulfite (KMBS)
Current density	200 A/m <sup>2</sup>
Cell voltage	2.35 V
Electrowinning operating temperature	45 °C
Electrowinning copper bite	3 g/L Cu
Spent electrolyte copper concentration	40 g/L Cu
Spent electrolyte acidity	50–60 g/L H <sub>2</sub> SO <sub>4</sub>

#### 14.3.2.2.5. Iron removal

Iron is removed from the nickel rich solution that leaves the atmospheric leach by increasing the pH, using ammonia, in a series of continuous stirred-tank reactors. This causes the iron to precipitate as iron (III) hydroxide, allowing a series of thickeners and filters to separate the iron solids from the solution. The iron solids are sent back to the smelter to recover any entrained pay metals and to avoid generating an iron waste stream. The iron-free solution then proceeds to cobalt solvent extraction (SX).

Table 14.9 provides the key iron removal parameters.

Table 14.9 Iron removal parameters

Parameter	Value
pH control agent	NH <sub>3</sub>
Target pH	5-5.5
Iron filter cake production rate	0.47 t/h
Solids fraction of the iron filter cake	60 wt%

#### 14.3.2.2.6. Cobalt solvent extraction

Cobalt SX consists of a series of mixer-settler units that facilitate the removal of cobalt from the iron-free solution. The circuit consists of three parts: extraction, scrubbing and stripping.

In extraction, the iron-free solution first contacts an organic solution that selectively removes cobalt via mixer tanks. The organic is comprised of bis (2,4,4 trimethylpentyl) phosphinic acid, an extractant with an affinity for cobalt, and a high flash point carrier solvent. After contacting the organic, the aqueous solution is separated using settler tanks. Extraction occurs in four mixer-settler stages. The cobalt free aqueous solution is pumped to nickel SX.

The cobalt-loaded organic from extraction then proceeds to scrubbing, where it is scrubbed with a weakly acidic, cobalt-rich aqueous solution to remove any impurities that may have loaded onto the organic. Scrubbing occurs in three mixer-settler stages. The spent scrubbing solution is recycled to extraction.

The scrubbed organic now proceeds to stripping, where the cobalt is stripped from the organic with sulfuric acid solution. Stripping occurs in three mixer-settler stages. A part of this cobalt strip solution is used to prepare the scrubbing solution and the remainder proceeds to cobalt purification. See a summary of the key parameters in Table 14.10.

Table 14.10 Cobalt SX Parameters

Parameter	Value
Extraction pH Control Agent	NH <sub>3</sub>
Target Extraction pH	5.5
Target Operating Temperature	60 °C
Extractant	Bis (2,4,4 Trimethylpentyl) Phosphinic Acid (Cyanex 272 or equivalent)
Diluent	High flash point aliphatic solvent
Scrubbing Solution	Cobalt strip liquor and dilute H <sub>2</sub> SO <sub>4</sub>
Target Cobalt Concentration Exiting Scrubbing	25 g/L Co
Strip Acid	Dilute H <sub>2</sub> SO <sub>4</sub>
Target Stripping pH	3.4

#### 14.3.2.2.7. Cobalt purification

Cobalt purification serves to remove residual copper, manganese and other trace impurities that load in cobalt SX.

Copper is removed using ion exchange (IX) with an iminodiacetic acid resin. The copper loads onto the resin and is later stripped using sulfuric acid. Nickel present in solution will also load onto the resin. The stripped copper eluate is sent back to POX leaching. The copper-free cobalt solution proceeds downstream for manganese removal.

Manganese is also removed using IX, but with a Di-(2-ethylhexyl) phosphoric acid impregnated resin. Manganese, zinc and other base metals load onto the resin and are later stripped using sulfuric acid. The stripped manganese eluate is sent to effluent treatment. The purified cobalt solution is pumped to cobalt sulfate crystallization.

Cobalt hydroxide precipitated from the cobalt crystallizer bleed is used for pH control throughout cobalt purification to avoid introducing potassium as an impurity.

Table 14.11 summarises the key parameters below.

Table 14.11 Cobalt purification parameters

Parameter	Value
Copper IX resin	Chelating iminodiacetic acid (amberlite 718 or equivalent)
Copper IX design loading temperature	40 °C
Design product concentration	0.1 mg/L Cu
Design resin loading	0.05 mol Cu/L WSR
Copper IX elution reagent	Dilute H <sub>2</sub> SO <sub>4</sub>
Manganese IX resin	D2EHPA Impregnated (Lewatit VP OC 1026 or equivalent)
Manganese IX minimum loading temperature	20°C
Manganese IX maximum loading temperature	40°C
Resin loading capacity	13 g/L Zn
Manganese IX maximum operating pH	4
Manganese IX elution reagent	Dilute H <sub>2</sub> SO <sub>4</sub>

#### 14.3.2.2.8. Nickel solvent extraction

Nickel SX consists of five extraction stages and serves to remove the nickel from the cobalt free raffinate that is pumped from cobalt SX. Organic solution comprised of neodecanoic acid, an extractant with an affinity for nickel, and a high flash point carrier solvent loads the nickel in extraction. The loaded organic is then scrubbed of any impurities that may have loaded before the nickel is stripped from the organic with sulfuric acid. A part of this nickel strip solution is then used for scrubbing and the remainder proceeds to nickel sulphate crystallisation.

To mitigate the risk of nickel-ammonium double salt precipitation, a portion of the nickel free raffinate from extraction is recirculated to the start of nickel SX. This serves to reduce the nickel concentration while increasing the ammonium sulphate concentration in the circuit. The remainder of the raffinate is pumped to crystallisation to produce ammonium sulphate. See a summary of the key parameters in Table 14.12.

Table 14.12 Nickel SX parameters

Parameter	Value
Extraction pH control agent	NH <sub>3</sub>
Target extraction pH	6.85
Target operating temperature	60 °C
Extractant	Neodecanoic acid (commonly referred to as versatic acid 10)
Diluent	High flash point aliphatic solvent
Scrubbing solution	Nickel strip liquor and dilute H <sub>2</sub> SO <sub>4</sub>
Target nickel concentration exiting scrubbing	4 g/L Ni
Strip acid	Dilute H <sub>2</sub> SO <sub>4</sub>
Target stripping pH	5.2

#### 14.3.2.2.9. Cobalt sulphate crystallisation and packaging

The purified cobalt solution from cobalt purification is sent to an evaporator where it is evaporated to saturation. The saturated solution is then fed to a crystalliser that uses steam, electricity and a vacuum to evaporate water at 38 °C and produce a CoSO<sub>4</sub>•7H<sub>2</sub>O slurry. For the purpose of this IA, the crystalliser design assumes the use of multiple effect evaporation, reducing steam consumption by using the evaporated water from the first stage of crystallisation to heat the second stage. The crystal slurry is then centrifuged before being dried to produce battery-grade CoSO<sub>4</sub>•7H<sub>2</sub>O crystals that are bagged in 1-tonne bags before delivery to market. Table 14.13 summarises the key parameters below.

Table 14.13 Cobalt sulphate crystallisation and packaging parameters

Parameter	Value
Target crystalliser operating temperature	38 °C
Crystalliser bleed rate	5.5% of Cobalt in feed
CoSO <sub>4</sub> saturation concentration	31wt% in solution
Solids fraction at crystalliser outlet	45wt%
Target dryer operating temperature	40 °C
Residual moisture in dryer	<0.25wt%
Product packaging type	1-tonne canvas bags

#### 14.3.2.2.10. Cobalt Precipitation

The bleed from cobalt crystallization proceeds to a series of continuous stirred-tank reactors where potassium hydroxide is used to raise the pH of the solution and precipitate the cobalt as cobalt hydroxide.

Potassium hydroxide is used as a base instead of sodium hydroxide because it produces potassium sulfate when reacted with sulfuric acid while sodium hydroxide produces sodium sulfate. Potassium sulfate is a fertilizer and will not pose any problems when it eventually ends up in the ammonium sulfate product.

The precipitated cobalt hydroxide is filtered and washed using a belt filter before use as a pH modifier in cobalt purification. The remaining bleed stream is sent to effluent treatment. Table 14.4 summarizes the key parameters below.

Table 14.14 Cobalt precipitation parameters

Parameter	Value
pH Control Agent	KOH
Target pH	6–8
Solids fraction of the cobalt hydroxide filter cake	20wt%

#### 14.3.2.2.11. Nickel sulphate crystallisation and packaging

The nickel strip solution from nickel SX then proceeds to an evaporator where it is evaporated to saturation. The saturated solution is then fed to a crystalliser that uses steam, electricity and pressure to evaporate water at 65 °C and produce a NiSO<sub>4</sub>•6H<sub>2</sub>O slurry. The crystallizer design assumes the use of multiple effect evaporation, reducing steam consumption by using the evaporated water from the first stage of crystallization to heat the second stage. The crystal slurry is then centrifuged before being dried to produce battery-grade NiSO<sub>4</sub>•6H<sub>2</sub>O crystals that are bagged in 1-tonne bags before delivery to market. Table 14.15 summarises the key parameters below.

Table 14.15 Nickel sulphate crystallisation and packaging parameters

Parameter	Value
Target crystalliser operating temperature	65 °C
Crystalliser bleed rate	10% of Nickel in feed
NiSO <sub>4</sub> saturation concentration	36wt% in solution
Solids fraction at crystalliser outlet	45wt%
Target dryer operating temperature	40 °C
Residual moisture in dryer	<0.25wt%
Product packaging type	1-tonne canvas bags

#### 14.3.2.2.12. Ammonium sulphate crystallisation and packaging

The nickel SX raffinate is sent to an evaporator where it is evaporated to saturation. The saturated solution is then fed to a crystalliser that uses steam, electricity and pressure to evaporate water at 75 °C and produce an ammonium sulphate slurry. Like the nickel sulphate crystalliser, the ammonium sulphate crystalliser design assumes the use of multiple effect evaporation, reducing steam consumption by using the evaporated water from the first stage of crystallization to heat the second stage. The crystal slurry is then centrifuged before being dried to produce ammonium sulphate that is bagged in 1-tonne bags before delivery to market for use as a fertiliser. Table 14.16 summarises the key parameters.

Table 14.16 Ammonium sulphate crystallisation and packaging parameters

Parameter	Value
Target crystalliser operating temperature	75 °C
Crystalliser bleed rate	5% of ammonium sulphate in feed
NiSO <sub>4</sub> Saturation concentration	36wt% in Solution
Solids Fraction at crystalliser outlet	45wt%
Target dryer operating temperature	85 °C
Residual moisture in dryer	<0.25wt%
Product packaging type	1-tonne canvas bags

#### 14.3.2.2.13. Effluent Treatment

A small bleed from the ammonium sulfate crystallizer along with a few other minor streams from the overall process are sent to effluent treatment.

The first step of effluent treatment is mixed-metal hydroxide (MMH) precipitation, which consists of a series of continuous stirred-tank reactors. Potassium hydroxide is added to the reactors in order to raise the pH to between 7–9 and precipitate remaining base metals in solution as hydroxides. The resulting hydroxides are then filtered and washed before being recycled back to atmospheric leaching so that the contained nickel, cobalt and copper are recovered. The MMH-free solution proceeds to the second step of effluent treatment.

The second step of effluent treatment is magnesium and manganese precipitation. Again, the precipitation occurs in continuous stirred-tank reactors. This time, potassium hydroxide is added to raise the pH to between 10–12 to precipitate magnesium and manganese from solution as hydroxides. The resulting hydroxides are then filtered and washed before being sent to the pyrometallurgical plant. The remaining solution, now largely consisting of potassium sulfate and ammonium sulfate, is recycled back to the ammonium sulfate crystallizer for recovery as fertilizer. Table 14.17 summarizes the key effluent treatment operating parameters below.

Table 14.17 Effluent Treatment Parameters

Parameter	Value
<b>MMH Precipitation</b>	
pH Control Agent	KOH
Target pH	7-9
Filter cake production rate	0.03 t/h
Solids fraction of the filter cake	50%
<b>Mg &amp; Mn Precipitation</b>	
pH Control Agent	KOH
Target pH	10-12
Filter cake production rate	0.01 t/h
Solids fraction of the filter cake	50wt%

#### 14.3.3 Recoveries

Recoveries of Ni, Cu and Co through each major process step are shown in Table 14.18. The process models used for the study are not interlinked and, importantly, do not incorporate the recycle of hydrometallurgical residues back to the smelter. For the purposes of the IA, it has been assumed that the pay-metals in residues can be recovered by the recovery factor for the pyrometallurgical steps. This gives the final recoveries shown at the bottom of the table.

Table 14.18 Pay metal recoveries for combined plant

Process Step	Nickel		Cobalt		Copper	
	t/y	Recovery	t/y	Recovery	t/y	Recovery
Nodules in	68,300	-	6,830	-	55,600	-
Final matte	64,600	94.6%	5,290	77.4%	48,100	86.5%
Hydrometallurgical products before recycle	64,000	98.9%	5,190	98.0%	46,400	96.2%
Recycled residue	700	94.6%	100	77.4%	1,800	86.5%
Overall recovery	64,700	94.6%	5,270	77.2%	48,000	86.2%

In addition to the above base metals, approximately 3.7 Mtpa of manganese silicate is to be produced, containing 52.6% MnO (98.9% recovery of manganese).

#### 14.3.4 Plant footprint

No layout of the proposed plant has been developed during this IA.

#### 14.3.5 Infrastructure requirements: utilities, transportation and production

No site visit or specific site selection has been completed for the proposed plant, however potential sites are discussed in Section 18. An important aspect of site selection for the project is the assumption that it has good existing infrastructure in place, including appropriate port facilities, access roads, high voltage power supply, natural gas supply, etc. To assist with site selection, the following tables show utility requirements, major consumables and product quantities.

Table 14.19 shows major utilities required by the combined pyro- and hydro-metallurgical plant.

Table 14.19 Estimated Power, Natural Gas and Water Requirements

Commodity	Annual Requirement	Indicative Peak Demand
Electrical power	2,496,000 MWh	~330 MW
Natural gas	310,183,000 Nm <sup>3</sup>	41,000 Nm <sup>3</sup> /h
Water	5,741,000 m <sup>3</sup>	770 m <sup>3</sup> /h

In addition to the 6.1 Mt/y (wet) of nodules shipped to the plant, various other consumables will also be required. Table 14.20 Summarises consumable quantities in excess of 10,000 t/y.

Table 14.20 Major consumable requirements

Consumable	Approximate Annual Requirement
Coal	473,000 t (wet)
Silica flux	407,000 t
Sulphur	31,000 t
Sulphuric acid (93 wt%)	176,000 t
Anhydrous ammonia	48,400 t

Products and by-products from the process plant will have to be shipped to market. These are summarised in Table 14.21. For the contained pay-metal in each of the main products, refer to Table 14.18.

Unlike most mining processes, the proposed mineral processing flowsheet seeks to make by-products rather than substantial waste streams and is not expected to require tailings ponds or other long-term waste storage on-site.

Table 14.21 Annual product quantities

Product	Annual Production (tpa)
Nickel sulphate	289,300
Cobalt sulphate	25,100
Copper cathode	48,000
Manganese slag	3,690,000
Converter slag	503,000
Ammonium sulphate	192,000

#### 14.3.6 Process plant ramp-up

Based on thorough resource assessment, engineering, test work and pilot-scale demonstration of the process with polymetallic nodules as the feedstock, the ramp-up performance of the integrated commercial facility could be analogous to similar metallurgical facilities that followed a full development program and invested in debottlenecking efforts during commissioning and ramp-up. Provided the project follows that course, it is reasonable to assume a modified Series 2 McNulty ramp-up (Wasmund et al, 2011) with 95% of design capacity after 2 years and 100% after 2.5 years.

## 15 Project infrastructure

### 15.1 On-shore infrastructure

The infrastructure requirements for the Project, apart from the minerals processing facility described in Section 17, are modest compared to terrestrial resources projects of similar production capacities.

The site and host country for the minerals processing facility has not yet been confirmed. The site must be serviced by grid power, reticulated water, and natural gas. A location will be selected that is close to an industrial port, and near an existing municipality from which labour can be sourced.

DeepGreen engaged Global Location Strategies (GLS) to carry out a global benchmarking study of potential sites for the minerals processing facility. The study considered the primary site location drivers for this facility including logistics costs (both inbound and outbound) and energy costs (electricity and natural gas) and port depth. The study also considered:

- Renewable energy availability
- Political stability of country
- Ease of doing business in region/country

The GLS study recommended 13 countries for further consideration.

The Project will require some warehousing capacity to store critical spares (for example, critical spares for the collectors and riser). It is likely that a suitable facility can be purchased or leased and need not be constructed. Reasonable land acquisition costs have been allowed for in the project evaluation model.

### 15.2 Nodule transport

DRT has performed a preliminary assessment of the transportation fleet for transfer of nodules from NORI Area D. The nodules will be landed at an existing deep-water industrial port equipped with bulk offloading facilities and depending on the location of the process plant areas for stockpiling and loading ore on a rail line for transport to the plant. For this study we have assumed the port of Lazaro Cardenas, Michoacan, Mexico, 960 nm from the NORI Area D reference site (11N, 117W). Lazaro Cardenas has an existing, bulk minerals unloading area (Figure 15.1) as well as fuel bunkering facilities. Alternately, the vessels could be equipped for self-unloading in bulk or slurry form. Facilities to receive the ore and dewater it (in the case of slurry offloading) would be required.

This IA assumes transportation of nodules will be by chartered vessels. For Project Zero, transport vessels with 35,000 t deadweight capacities will be sufficient. For the Project One drillship conversions (3.6 Mtpa), two 100,000 t deadweight trans-shipment vessels are required. For Collector Ship 1, the fleet consists of three vessels with deadweight capacities of 100,000 tonnes. The vessels will require DP capability to enable them to be loaded at sea astern of or alongside the PSV. Transshipment vessels will be converted bulk mineral carriers with dynamic positioning (DP) to allow tracking behind the PSV during operations Figure 15.2.

Nodules will be transferred at sea from the PSVs to transshipment vessels. The materials handling method has not yet been confirmed, but multiple options exist (for example, pumping as a slurry or conveying a solid product) and will be evaluated in future studies. This IA assumes the PSVs and the transshipment vessels will be equipped to facilitate the transfer of nodules at sea. This method of offloading, known as tandem offloading, is well established for offloading of oil production vessels in remote areas of the world. DP tankers have been employed in this service for more than 20 years, see (Tannuri, et al., 2009).

The net transfer rate includes simultaneous unloading of the buffer tanks while transferring nodules directly from the lift system. An allowance is included for down time during collector maintenance cycles.

The interstitial moisture content of the nodule slurry during transportation is an important parameter in estimating transportation logistics and costs. Several dewatering methods have been studied previously in the 1970s (Kennecott Copper Corporation - Ledgemont Laboratory, 1977). This included evaluation of several dewatering methods using attrited nodule samples from pump loop tests. The results indicated the interstitial moisture of the cargo (excluding moisture contained in the nodule pores) could be between 5% (for centrifuge dewatering) to 20% (gravity separation). In addition to moisture content, the studies evaluated cut points and mineral recoveries in the dewatered ore. Based on these studies, gravity settling and decanting the wastewater was deemed the most practical and economic method of storage of nodules on the PSV, resulting in about 20% free moisture. The trans-shipment vessels would be equipped with vertical cuttings dryers to reduce the free moisture to 10% for shipping. Optimization of the material handling, dewatering and shipping requires reliable data on the attrition of nodules in the lift system, and on-board pumping. Losses of nodule material in the dewatering and handling process were estimated to be 7 - 10%. These estimates will need to be reassessed after the data collected during the Collector Test is analysed.

Any major on-shore maintenance for the off-shore equipment will be undertaken in third-party maintenance facilities.

Figure 15.1 Unloading bulk minerals at Mexican port of Lazaro Cardenas (Terminales Portuarias de Pacifico)

Figure 15.2 Offloading Operation: (left) with a conventional tanker; (right) with a DP tanker

## 16 Market studies

On 25 May 2012, DeepGreen Engineering Pte. Ltd. (DGE) (a wholly owned subsidiary of DeepGreen Inc) and Glencore International AG (Glencore) entered into a copper off-take agreement and a nickel off-take agreement whereby DGE agreed to deliver to Glencore 50% of the annual quantity of copper material and 50% of the annual quantity of nickel material produced by DGE.

For LME Registered Grade “A” Copper Cathodes, the delivered price is the official LME Copper Grade “A” Cash Settlement quotation as published in the Metal Bulletin averaged over the month of shipping or the following month at Glencore’s choice, plus the official long-term contract premium as announced annually by Codelco, basis CIF Main European Ports. For LME Registered Primary Nickel, the delivered price is the official LME Primary Nickel Cash Settlement averaged over the month of shipping or the following month at Glencore’s choice. For other copper-bearing material and other nickel-bearing material, the parties shall agree a price annually for the forthcoming calendar year on the basis of prevailing market prices for such copper products and such nickel products.

Both the nickel and copper off-take agreements are for the life of the NORI Area, and either party may terminate the agreement upon a material breach or insolvency of the other party. Glencore may also terminate the agreement by giving 12 months’ notice.

CRU International Limited (CRU) was commissioned by NORI to provide market overviews for the four main products from the NORI Area D Project: nickel sulphate ( $\text{NiSO}_4$ ), cobalt sulphate ( $\text{CoSO}_4$ ), copper, and a manganese product (CR, 2020).

CRU expects  $\text{NiSO}_4$  and  $\text{CoSO}_4$  markets to undergo extreme growth from a relatively small current level of 181 kt nickel in sulphate and 35 kt of cobalt in sulphate in 2019, with markets to increase to 138 and 178 times their 2018 sizes respectively to 1.6 Mt nickel in sulphate and 500kt cobalt in sulphate by 2035, with much of this growth occurring post-2025. Electric vehicle production is the driver of this forecast growth.

Copper and manganese ore markets are forecast to grow by 25% and 20% of their 2020 sizes by 2035 respectively. Copper and manganese demand will benefit from electric vehicle penetration, however the primary driver of growth for manganese ore will be steelmaking, and a variety of end use applications generally related to economic health for copper. A significant copper supply gap of around 5 Mtpa is expected by 2030 in the absence of new mine capacity, indicating that inducement pricing of > US\$ 3.10/ lb Cu will be required to bring on new copper supply.

CRU expects copper and  $\text{NiSO}_4$  prices to rise in real terms by 2035, while manganese ore and  $\text{CoSO}_4$  prices are forecast to remain flat, partly due to current prices being at or near a high point in the cycle, recent fall in prices, and expected modest growth in the global steel industry after the COVID 19 epidemic. The long-term cost of production is expected to rise for both copper and  $\text{NiSO}_4$ , helping to support prices.

The  $\text{NiSO}_4$ ,  $\text{CoSO}_4$  and copper to be produced by NORI are to be chemically and physically standard products and no marketability issues are expected. The sulphate forms ( $\text{NiSO}_4$ ,  $\text{CoSO}_4$ ) of these products are premium products and will attract premia over pure nickel and cobalt.

The manganese silicate product differs in both physical and chemical specifications from standard forms of ore found in the market. NORI’s manganese silicate will have a manganese grade of around 40%, which matches neither the high grade (44% Mn) or low-grade (36–38% Mn) ore benchmarks. The product will have  $\text{SiO}_2$  and  $\text{Al}_2\text{O}_3$  contents exceeding the most desirable levels for manganese products but will have a desirable high Mn to Fe ratio. NORI’s processing route also reduces the oxidation state of the manganese oxide from  $\text{MnO}_2$  to  $\text{MnO}$ , which will reduce the energy requirements for customer’s downstream processing. On balance, CRU recommended adopting a small premium of 1- 3% of the 44% Mn ore benchmark price.

17 Environmental studies, permitting and social or community impact

NORI has commenced an Environmental and Social Impact Assessment (ESIA) process in support of an application for an exploitation license for the commercial development of deep-sea polymetallic nodules and has made significant progress with the baseline study program. Off-shore campaigns were completed over the period 2018 - 2020 to conduct oceanographic and sediment sampling activities. These provided the initial information to inform the scoping of baseline environmental studies required for the conduct of the ESIA investigations.

DeepGreen and NORI are seeking broad stakeholder consultation in the design and implementation of the ESIA program. In June 2019, NORI held a scoping study technical workshop with stakeholders in San Diego.

The development and status of the environmental program is described below. The baseline field study work commenced in 2012 and in October 2020 NORI began the first of six dedicated environmental baseline study off-shore campaigns in NORI Area D.

### 17.1 Permitting process

The ISA is mandated through UNCLOS to organize, regulate, and control all mineral related activities in the international seabed Area whilst preserving and protecting the marine environment. As NORI Area D is in the international seabed Area, the ISA is responsible for assessing any Environmental and Social Impact Assessment prepared by NORI and for granting the relevant contracts. NORI is currently one of 16 contractors with a license to explore for polymetallic nodules in the CCZ (refer ISBA/23/C/7, 5 June 2017).

Between 1998 and 2014, the ISA held workshops and developed a number of documents to provide guidance to contractors with respect to its expectations for responsible environmental management during the exploration and exploitation phases of mineral development. The ISA held a workshop “Towards an ISA environmental management strategy for the Area” over 20-24 March 2017 in Berlin Germany. The results of the workshop were published as ISA Technical Study 17 (ISA 2017).

The ISA has issued Regulations on Prospecting and Exploration for Polymetallic Nodules (adopted on 13 July 2000, updated on 25 July 2013). The regulations were complemented by the Legal and Technical Commission (LTC) recommendations for the guidance of contractors on assessing the environmental impacts of exploration (ISBA/25/LTC/6/Rev.1) which was most recently updated on 30 March, 2020. The draft exploitation regulations on deep-seabed mining were discussed at the 25th Session of the ISA (25 February to 1 March 2019 in Kingston Jamaica). The ISA had declared a target of 2020 to have the regulations approved but the COVID-19 pandemic disrupted the ISA program.

Although the environmental impact review process has not yet been finalised, the draft regulations outline the application process and the conditions that Contractors would need to implement during operations. All contractors have been made aware that the ISA requires the completion of the Environmental and Social Impact Assessment (ESIA) studies, culminating in an Environmental Impact Statement (EIS), in support of their applications for an exploitation license. Guidance for contractors in terms of what will be expected in the EIS has been provided in ISA Technical Study No. 10 (ISA 2012a). Further guidance will be provided with the completion of Standards and Guidelines for exploitation activities. The LTC has prioritized the development of six Standards and Guidelines, with three released for public comment in 2020 and the remaining three expected to be released in early 2021. The EIS, along with an Environmental Management System with subordinate Environmental Management and Monitoring Plans (EMMP), will be required as part of the application for an exploitation license within the Contract Area.

The environmental permitting process for the Area has been developed through a consultation program initiated by the ISA in 2013 and includes feedback obtained from multiple stakeholder groups. It is expected to involve a series of checks and balances, with reviews being conducted by the LTC with input from independent experts, as required. The recommendations of the LTC will then go before the ISA Council, which will then review the information provided and decide whether to approve the license application and, if so, what conditions should be applied.

NORI plans to conduct the ESIA studies largely in accordance with the draft ISA guidelines “Recommendations for the guidance of contractors for the assessment of the possible environmental impacts arising from exploration for marine minerals in the Area. Issued by the Legal and Technical Commission” ISBA/25/LTC/6/Rev.1 (ISA, 2020). A plan of work that addresses the requirements detailed in the draft guidelines has been developed.

NORI has progressed with the development of the scoping studies on the assumption that all of the detailed recommendations within this document will carry through to the final recommendations for the guidance of contractors.

The LTC has recommended seven key areas of information for the development of EIAs. These are physical oceanography, chemical oceanography, sediment properties, biological communities, bioturbation, sedimentation, and geological properties. These form the key investigation topics for surveys within the Area, including NORI Area D.

#### 17.1.1 Role of sponsoring state

As sponsoring state, Nauru has a responsibility to ensure that NORI’s activities in the international seabed area are carried out in conformity with Part XI of UNCLOS.

NORI is regulated by Nauru’s International Seabed Minerals Act 2015 (“Nauru Act”), which requires NORI to, amongst other things, “*apply the Precautionary Principle, and employ best environmental practice in accordance with prevailing international standards in order to avoid, mitigate or remedy adverse effects of Seabed Mineral Activities on the Marine Environment*”.

The Nauru Seabed Minerals Authority, established under the Nauru Act, has a number of functions including to, *inter alia*:

- develop policies and institutional arrangements for the purpose of regulating and monitoring the development of seabed minerals in the international seabed area;
- develop standards and guidelines for Seabed Mineral Activities;
- conduct due diligence enquiries into Sponsorship Applicants or Sponsored Parties;
- assist the ISA in its work to establish, monitor, implement and secure compliance with the Rules of the ISA;
- undertake any advisory, supervisory or enforcement activities in relation to Seabed Mineral Activities or the protection of the Marine Environment, insofar as this is required in addition to the ISA’s work in order for Nauru to meet its obligations under the UNCLOS as a Sponsoring State;

### 17.1.2 Compliance status

At the effective date of this report, NORI is in compliance with its exploration contract. NORI is required to submit 5-year work plans which it reports on annually to the ISA. Every 5 years the ISA and NORI review the work completed in the past 5 years. NORI then develops and submits a new 5-year work plan.

NORI has now commenced the exploitation permitting process. In addition to key engineering facets of the project such as designing the nodule collector and the dewatering facility, it is also planning and undertaking the following tasks:

- Characterising nodule mineralisation.
- Characterising the nature of the seabed, water column and biology.
- Conducting environmental baseline studies and impact assessments.
- Characterising the nature of any materials returned to the environment.
- Developing oceanographic and physical information to inform models (e.g., sediment plume models).
- Developing other plans, including the master environmental management plan (EMP) and the various subordinate plans.

### 17.2 Previous environmental studies

Historically, a significant amount of technical work has been undertaken within the CCZ by the Pioneer Investors. Each has developed work programs for their specific part of the Area with some cooperative campaigns undertaken where investigative work has been undertaken on multiple parts of the Area. In the last five to ten years there has been a rapid increase in the technical work undertaken within the CCZ. This work, which has included oceanography, seabed geology and geochemistry, and biological studies, has led to a rapid increase in independent published scientific studies based upon research from the technical studies carried out within the CCZ.

Examples of recent campaigns undertaken by other contractors and institutional research campaigns include:

- RV Sonne cruise SO239 (11 March 2015 to 30 April 2015), which carried out work to examine biological characteristics, genetics and geochemistry across a productivity gradient in the CCZ. The cruise visited six working areas in four ISA contractor areas (BGR, IOM, DEME, Ifremer) and the Area of Particular Environmental Interest (APEI) number 3, located to the north of NORI Area D. The IOM and BGR Areas are immediately adjacent to NORI Area D.
- RV Sonne cruise SO240 (3 May 2015 to 16 June 2015) was undertaken to examine low temperature fluid circulation in sediments. The work included seismic surveys, heat flow studies, pore-water, sediment and nodule sampling.
- UK Seabed Resources Ltd (UKSR) holds two licenses, one of these (UK-1) is located to the east of NORI Area D at the edge of the CCZ. UKSR funded two environmental baseline research cruises as part of the ABYSSLINE program in 2013 (AB01) and 2015 (AB02). AB02 was part-funded by Ocean Minerals Singapore (OMS), the Singapore-sponsored contractor for polymetallic nodules, and also visited OMS licence area as well as APEI-4, to the North.
- The RRS James Cook undertook a cruise (JC120) over 15 April to 19 May 2015 to undertake work at the north east APEI within the CCZ. The cruise was part of the Managing Impacts of Deep-sea resource exploitation (MIDAS) European Union Framework Programme 7 Project, which was jointly funded by the Natural Environment Research Council.

Other EIS documents have also been completed for proposed nodule mining activities and submitted to the ISA. These include:

- Global Sea Mineral Resources (GSR) in 2018 for the development of a pre-prototype collector vehicle equipped with a launch and recovery system planned to be deployed and trialled in the GSR Contract Area in the Clarion-Clipperton Fracture Zone (NE Pacific Ocean)
- The German Federal Institute for Geosciences and Natural Resources (BGR) in 2018 for the testing of a pre-prototype manganese nodule collector vehicle in the Eastern German license area (Clarion-Clipperton Zone); and
- The Government of India's Ministry of Earth Sciences (MoES) in 2020 for a polymetallic-nodule collector pre-prototype deep-sea mining machine in the Indian Contract area of the Central Indian Ocean Basin.

NORI has conducted ten off-shore exploration campaigns in the CCZ between the granting of its exploration license in 2011 and the end of 2020. These have focussed on quantification of the mineral resource, with environmental studies included opportunistically, as follows:

- Campaign 1 in 2012 to NORI Areas C and D in the eastern part of the CCZ. Extensive multibeam geophysical surveying of the seafloor and bulk sampling was conducted. Approximately 4.5 t of nodules were recovered from the seafloor and evidenced by video footage.
- Campaign 2 in 2013 to NORI Areas A and B in the central part of the CCZ. Multibeam geophysical surveying of the seafloor along with recovery of approximately 270 kg of nodules from NORI Areas A and B. (collaboration with TOML). The 2012 and 2013 campaigns had a geological focus and the biological/environmental work carried out by NORI was opportunistic.
- Campaign 3 (26/04/18 to 5/06/18). The field work within NORI Area D included sampling to support environmental studies and to undertake geotechnical studies to inform collector vehicle and riser design, collect high-resolution imagery and environmental baseline studies. A total of 2,286 km of AUV data were collected that include potential reserve areas and camera traverses at 3 km line spacing to investigate nodule abundance and biota. Forty-five (45) box cores collected, with 35 used for environmental work. This included recovery of 239 nodule biota specimens, 62 megafauna (>20 mm) specimens, macrofaunal infauna (>0.25 mm) samples sieved from sediment to depth of 100 mm. Sediments were also collected for geochemistry.
- Campaign 6A (19/08/19 to 1/10/19). Seafloor sediment (box core) sampling for biota and sediment chemistry.
- Campaign 6B (22/11/19 to 21/12/19). Seafloor sediment sampling for biota and sediment chemistry.
- Campaign 4A (2/10/19 to 23/10/19). Deployment of oceanographic moorings and water quality investigations.
- Campaign 4B (6/01/20 to 4/02/20) – Bulk sampling and first stage of habitat disturbance studies.
- Campaign 4C (5/02/20 to 16/03/20) – Bulk sampling and first stage of habitat disturbance studies.
- Campaign 4D (16/06/20 to 15/07/20) – Mooring maintenance and data collection.
- Campaign 5A (16/01/20 to 30/12/2020) - Benthic biology and sediment geochemistry studies.

The availability of the vessel Pacific Constructor, operated by Ocean Infinity in NORI Area D provided NORI the opportunity to commission ROV/AUV surveys, from 23/05/20 to 30/05/20, of the collector site, a directly adjacent (expected) plume impact area, PRZ and intermediate control site. This resulted in the acquisition of approximately 250,000 images of the sea floor. This information will be used to start megafauna survey community characterization and inform survey planning for the forthcoming campaigns.

During Campaigns 6A, 6B, and 4A NORI collected a combined total of 8,673 seafloor biological samples and 267 sediment chemistry samples at 204 locations within NORI Area D to provide initial baseline data for the project. During Campaign 4A, NORI deployed three oceanographic moorings for long term measurement of currents through the water column and other parameters such as turbidity and underwater acoustics. Five sites within NORI Area D were also set up for collection of water quality samples and ocean profiling data.

During Campaign 5A over 8000 sediment sub-samples and biological specimens were collected from boxcore and multicore samples retrieved from 46 seabed sites located in the proposed test mining area, plume deposition footprint and the PRZ. The samples are currently awaiting analysis at various analytical laboratories around the world.

The forward work plan over the next two years will involve several off-shore campaigns as follows<sup>22</sup>:

- Campaign 5B (15/01/21 to 28/02/21). Pelagic Biology. Campaign 5b will be supported by an ROV.
- Campaign 5C (1/04/21 to 14/05/21). Sediment analysis, surface biology, benthic biology will continue during this campaign. Campaign 5c will be supported by an ROV.
- Campaign 5D (15/10/21 to 30/11/21). Pelagic biology will continue during this campaign. Campaign 5d will be supported by an ROV.
- Collector Test (1/09/22 to 1/12/22). Disturbance studies before, during and after the Collector Test will be conducted during this campaign.

The combination of past, present and future studies in the CCZ and NORI Area D provides a significant body of information on the nature of the seabed, sampling procedures and potential environmental impacts of collecting nodules from the seafloor that can now be applied to provide the environmental information required for the ESIA. NORI's studies within the CCZ are being designed to provide data that will be collected using methods that meet international best practices. This will allow comparison with other CCZ technical studies and provide data that can be utilised by other parties. The ISA has hosted workshops for contractors with the aim of standardising methodologies.

NORI has committed to operation in accordance with the following international standards and best practices during the conduct of the ESIA:

- EPA WA (2016). Technical Guidance: Environmental Impact Assessment of Marine Dredging Proposals. Environmental Protection Authority, Perth, Western Australia. <https://www.epa.wa.gov.au/policies-guidance/technical-guidance-environmental>.

All the data collected during the campaigns will be submitted to the ISA DeepData database and will be available to other contractors and researchers with interests in the CCZ.

---

<sup>22</sup> Schedules are subject to revision depending on COVID-19 situation and other factors

### 17.3 Seabed physical environment

Sediment physical characteristics and geochemistry are important as sediments are disturbed during manganese nodule collection. Composition of sediments and sediment pore water has the potential to influence the natural environmental characteristics, principally water quality and potentially the flux of specific elements mobilised during this process. A range of studies associated with various Contract Areas have examined seabed cores and sediments and undertaken geophysical surveys.

As a result of a workshop conducted in May 2003, ISA developed a model of the geological environment within the CCZ (ISA, 2010). The CCZ geological setting has also been described in various ISA reports and Juan et al. (2018). The nature of sediments has been described by ISA (2010) and Halbach and Abrams (2013).

The detailed bathymetric data indicates that the key features are NNW orientated hills and valleys with relief in the order of a few hundred metres, a flat plain in the south-east of the Area and a series of volcanic cones mostly in the southern part of the Area. This relief will influence the distribution of benthic communities within the area.

Kazmin (2009) summarised that the CCZ is characterised by latitudinal distribution of sediment types in relation to climatic and biological zonation at the time of deposition. From the north to south there are red deep-sea clays, then argillaceous radiolarian ooze (siliceous clay), and then carbonaceous ooze (in the south) Figure 17.1.

Figure 17.1 Simplified surface sediment facies in the CCZ

Source: Kazmin 2009 based on Yuzmorgeologiya (2002)

## 17.4 Sediment geochemistry and composition

ISA (2010) summarised the characteristics of the key sediment groups identifying the key lithic and authigenic components. Sediments are considered low in total organic carbon (TOC) reflecting the surface primary productivity. Halbach & Abrams (2013) included a summary of sediment elemental analysis undertaken in areas adjacent to NORI Area D. Studies to date do not systematically include all key environmentally significant elements. Studies reported by Mewes et al (2014), De Smit et al. (2017), Volz et al. (2018) and Simon-Lledo et al. (2019) for adjacent part of the Area, provide information on grain size (site mean mud content up to 92.6%) and TOC content (0.2% (APEI3) to 0.5% (GSR and IOM Area)). TOC is lower below the surface of the sediments.

Studies have been carried out in the CCZ that examined sediment pore waters. Mewes et al. (2014) and Volz et al. (2018) reported on pore water chemistry (oxygen, manganese and nitrate) in sediments from a number of nearby Contract Areas including the BGR and IOM areas near NORI Area D.

During NORI Campaign 3, sediment samples of 100 mm diameter were taken from 31 box cores, in most cases at three depths (0–10 mm, 10–50 mm and 50–100 mm). Subsamples were frozen until analysed. A range of analysis were undertaken including:

- Total inorganic carbon, total organic carbon, and chlorophyll-a.
- Total phosphorus and soluble nitrite and nitrate.
- A range of total element analyses in sediment, including several environmentally significant elements.

Sediments sampled in the 2018 campaign were muds, classified as clay or calcareous clay. Cumulative particle sizes were all: <250 µm; 73–99% <32 µm and 13–88% <2 µm (defined as clay in the assessment).

Several elements (e.g., cadmium, copper, mercury and nickel) had concentrations higher than the ANZECC (2018) sediment quality guidelines. The concentrations of elements such as copper and nickel are similar to those measured in other parts of the Area in the east and middle of the CCZ (refer review by Halbach & Abram (2013)).

NORI (2020b) collected additional sediment samples for chemical analysis during Campaigns 6a and 6b with samples taken from the 0 to 10 cm layer of each pushcore (10 cm in diameter). At the time of writing, sediment samples are being analysed for the physical and chemical characteristics.

## 17.5 Climate

Refer to Section 5.2.

## 17.6 Large-scale oceanography

The proposed nodule collection involves activities that will occur through the full water column, from the production support vessels (PSVs) at the surface to the collector vehicles on the seafloor. The RALS will convey the nodules from the seabed to the PSV, although the enclosed nature of the riser will separate nodules from the environment for most of the water column. Therefore, it is important to understand the physical oceanographic characteristics that will affect both the operational activities and the environmental impacts of those activities to the receiving marine environment.

The ocean is not uniform from surface to seafloor but stratified according to temperature, salinity and density gradients and oxygen levels. In clear oceanic conditions, light penetration is sufficient to support photosynthesis by phytoplankton to a depth between 100 and 200 m but is extinguished altogether below 1000 m. Water movements are also affected by tides, currents, and circulation on local and ocean-wide scales, as well as precipitation and wind. The depths and intensities of these layers are not constant but varies daily and seasonally, so frequent profiling is important to understand the extent of these natural variations.

### 17.6.1 Oceanic currents in NORI Area D

Upper ocean circulation within the CCZ is affected by trade winds and a system of large-scale currents (Gill 1982 in Demidova 1999). The north-easterly Trade Winds generate a westerly moving surface current, with waves having a height of 1 to 2 m. This is a broad current with an average speed of about 10 – 20 cm/s, decreasing with depth (NOAA 1981, ISA 2001, Tilot, 2006, GRS 2018). The surface currents extend down to a maximum depth of 500 m and form part of the North Equatorial Current directed towards the West. At intermediate depths (300-4800 m), the currents are weak (mean 0.08 knots [ $\sim$ 4 cm/s]) and variable in direction (Tilot 2006). Three dynamic seafloor current regimes are evidenced in the region Morgan et al. (1999) and Demidova (1999):

- Calm periods, characterised by minimal current speeds (0 to 3 cm/s), moderate to low variance, and low tidal activity with time intervals lasting about 11 days.
- Intermediate, mostly inertial-tidal periods characterised by the alteration of current speed (0 to 5 or 6 cm/s) and velocity with a corresponding increase in the variance of data.
- Active periods, associated with an initial sharp increase in current speed, which can maintain relatively stable speeds to produce 24-hour means of as much as 8 cm/s (Demidova & Kontar 1989), and 1 hour means of between 13 and 15 cm/s (Hayes 1979). These events can be termed “benthic storms”, which are regular, but not periodic, increases in the current speed lasting from about one or two weeks to five or six weeks.

The general scheme of deep oceanic circulation in the Pacific Ocean is related to the movement of cold and dense waters of Antarctic origin with high salinity and oxygen concentrations (Jaun et al., 2018) and the general direction of near-bottom currents is thought to be dominated by the flow of the Antarctic Bottom Water (ABW) (or Lower Circumpolar Water (LCPW)) from south to the north-east (Demidova 1999).

There are also suggestions from multi-beam bathymetric evidence that benthic currents in the CCZ may control movement and deposition of sediments along the seafloor valleys (Jaun et al. 2018; Morgan et al. 1999), with intermittent benthic storms considered capable of generating depositional and erosional features on the Pacific abyssal plains.

Overall, bottom current measurements at various locations through the CCZ show consistently low average near seabed current velocities (around 40–50 mm/sec). Site specific measurement of currents within NORI Area D in forthcoming campaigns is designed to characterise regional current velocity data through the water column to provide data to assist in sediment transport modelling (from disturbance and or discharge).

### 17.6.2 Oceanographic studies

Physical oceanographical studies in water depths of the CCZ are complex and necessarily long term (e.g., two to three years) to evaluate likely variations over time and location. During 2019, NORI initiated a long term oceanographic, sediment and benthic data collection program from Campaigns 6a and 6b, and deployment of three oceanographic moorings in Campaign 4A (NORI 2020b). The mooring locations and the water quality and Conductivity – Temperature – Density (CTD) profiling locations are shown in Figure 17.2. A diagram of the mooring arrays and sensor configuration is shown in Figure 17.3.

Scientific instrumentation attached to the moorings included:

- CTD, turbidity, transmissivity, and dissolved oxygen sensors.
- Acoustic Doppler Current Profilers (ADCPs) and Doppler Velocity Samplers (DVS).
- Acoustic hydrophone.
- Sediment traps.
- Seafloor camera system.

The data will be continuously recorded and accrue with each annual data recovery, equipment servicing and redeployment cycle, until October 2022.

Figure 17.2 NORI Area D mooring and water quality sampling locations

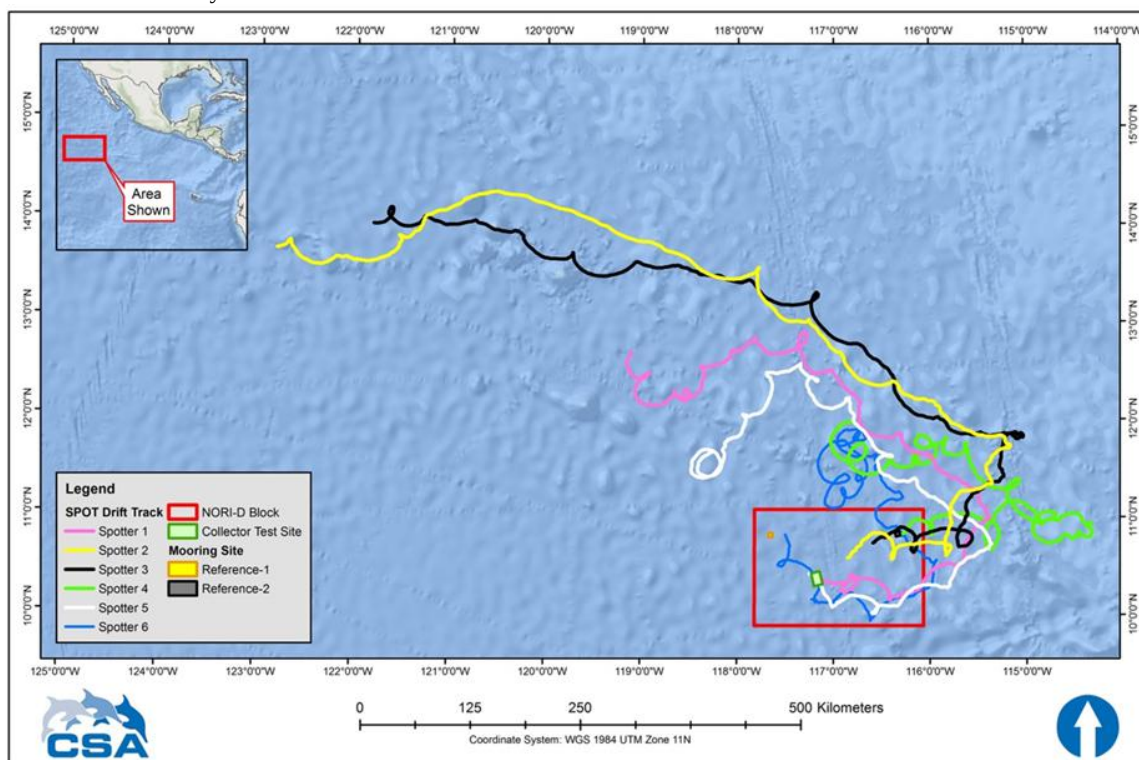

Figure 17.3 Equipment configuration on the mooring array

### 17.6.2.1 Surface currents

During Campaign 4A, six SOFAR surface drifters were deployed from within the NORI Area D Area. Initially, all drifted south-eastward to eastward across NORI Area D, with times of calm periods (circular drifting) until late-October 2019 when they left the block boundary, then drifted north-westward, with a net westerly displacement towards the central Pacific Ocean (Figure 17.4). The SOFAR spotters recorded wind speeds of between 3–19 knots and wave heights of between 1.4–2.8 m during their drift through the NORI Area D.

Figure 17.4 Surface currents recorded by SOFAR drifters

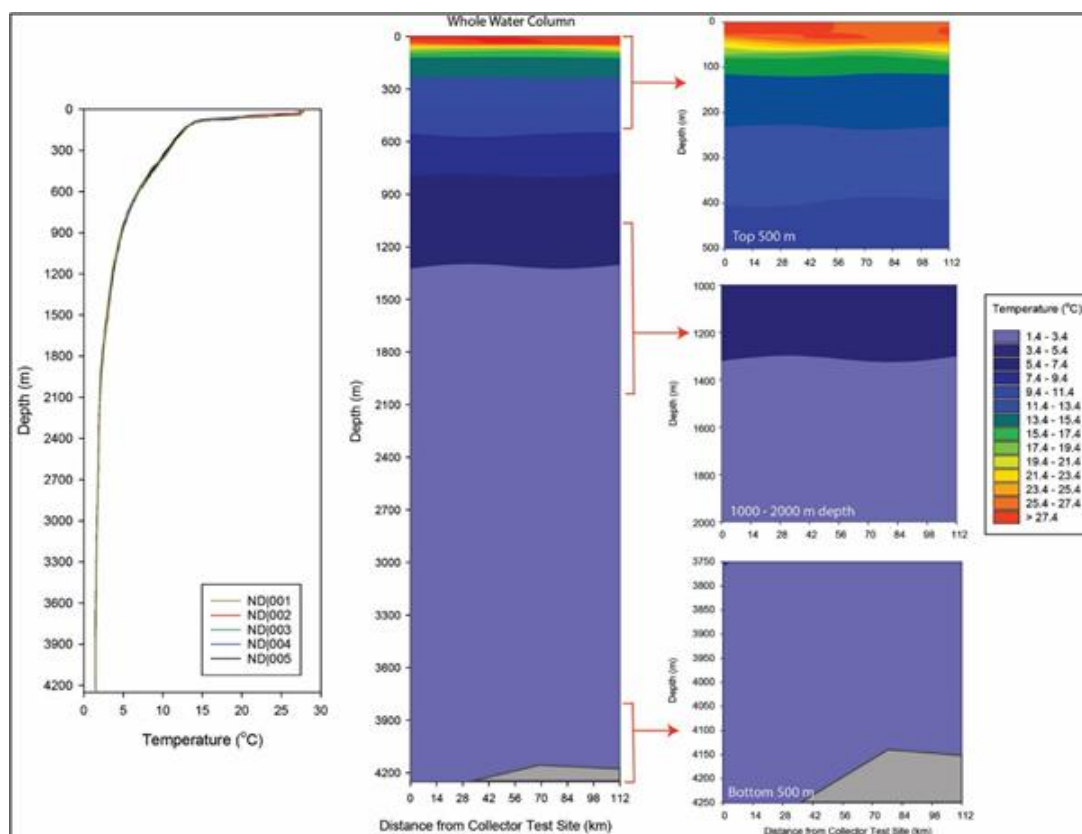

**17.6.2.2 Water column vertical structure**

Profiles of temperature, salinity, dissolved oxygen (DO), pH, turbidity transmissivity, and fluorescence measured in NORI Area D during Campaign 4A at each seawater sampling station are described below. Those for temperature, salinity, DO and pH also show interpolated cross-sections diagonally across the NORI AREA D block from the Collector Test Site (ND|002) to the Reference 2 location (ND|005). Overall, these profiles are consistent with open ocean conditions. NORI’s ongoing profiling of water column characteristics and faunal components will be instrumental for assessment of depths of discharge of riser water and selection of methods of achieving lowest environmental impact.

Figure 17.5 shows the temperature profile, typical of autumn conditions for deep water areas of the tropical north Pacific Ocean. There is a thin surface mixed layer (~50 m from surface) of near homogenous temperature (~27°C) formed by the mixing action of wind and waves, below which is the top of the thermocline, where temperatures drop sharply (~15°C) through the first 100 m of the water column. Seawater temperatures continue to decrease from 15°C to 2°C through the next 2,000 m and remain relatively stable and cold (1.5°C to 2°C) down to the seafloor. This pattern is consistent between the sampling sites.

Figure 17.6 shows the corresponding salinity profile within the water column, which range from approximately 33.5‰ in surface waters to 34.5‰ at the seafloor, with a halocline occurring in the upper 100 m of the water column. The maximum salinity (~34.75‰) was observed at approximately 100 m from which it gradually decreases and stabilizes through the water column to the seafloor. A slight depression in salinity was observed in the upper mesopelagic, coincident with the core of the oxygen minimum zone.

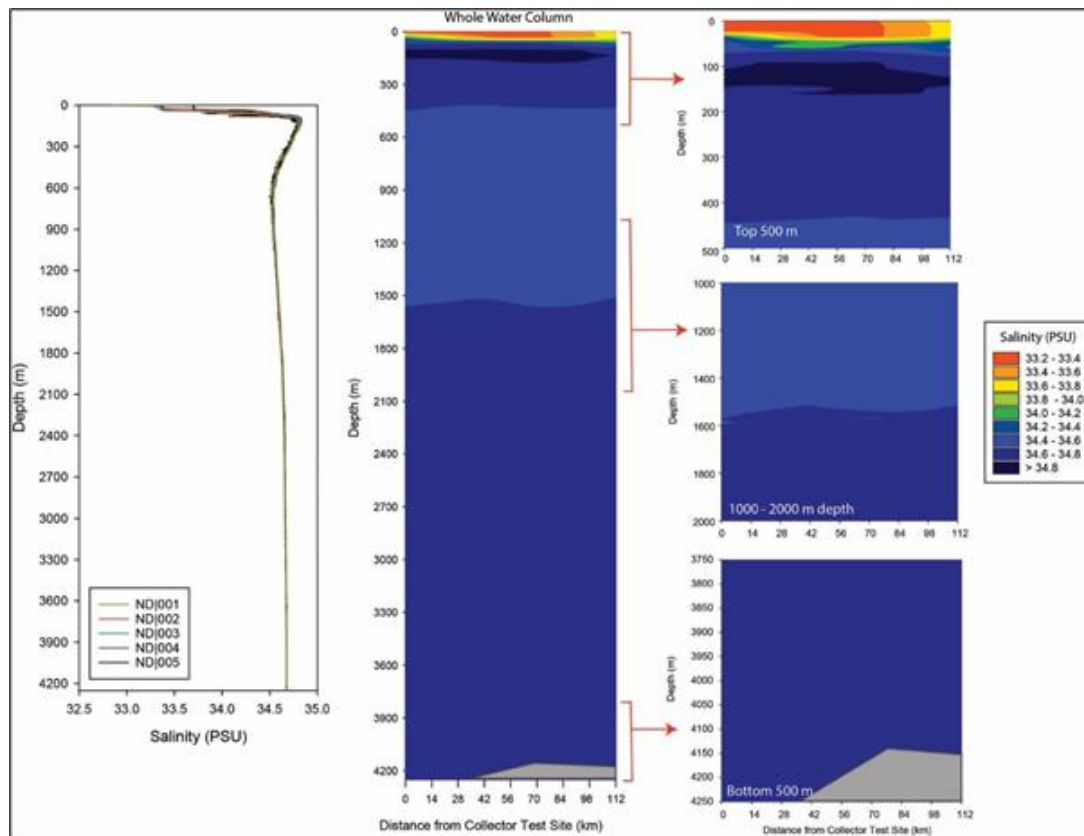

Figure 17.5 Temperature (°C) profile of NORI Area D during Campaign 4A

Note: Temperature (°C) profile of NORI Area D during Campaign 4A at each seawater sampling station (left). Interpolated cross-section of temperature diagonally across NORI Area D from the Collector Test Site (ND|002) to the Reference 2 location (ND|005) (right).

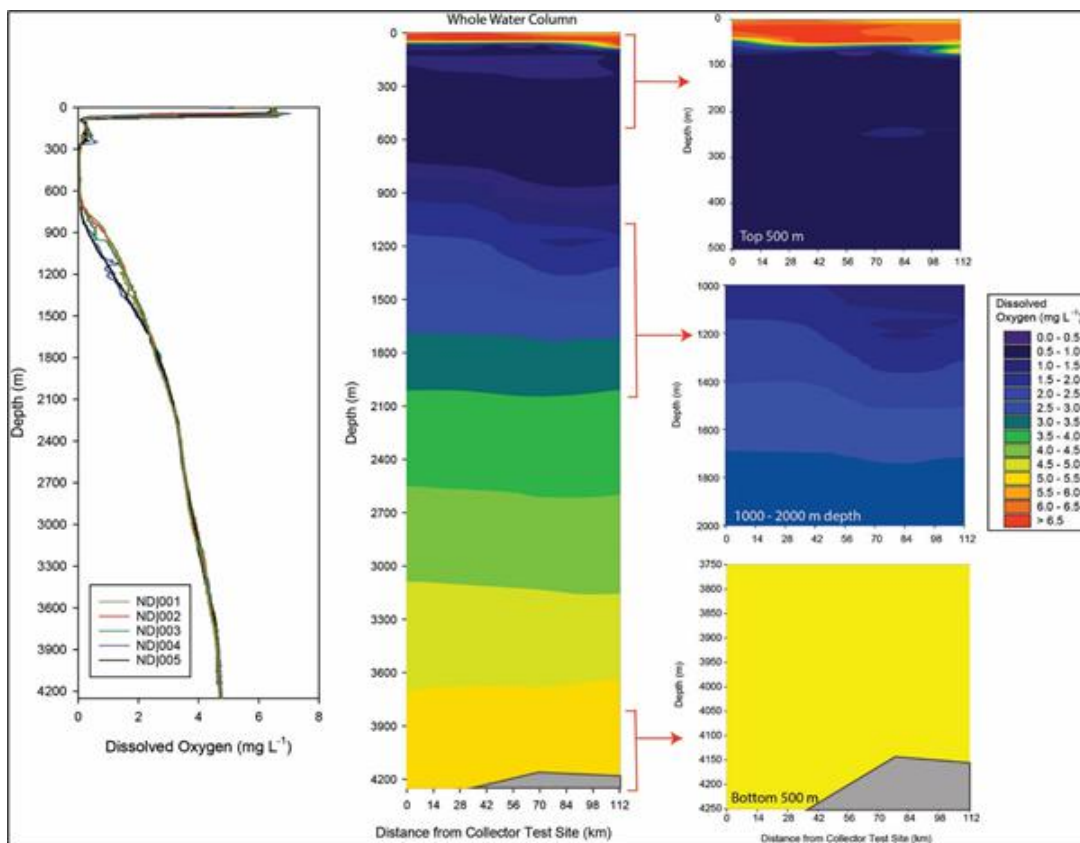

Figure 17.7 shows the profile of dissolved oxygen concentration that is typical for deep oceanic waters. There are high levels (6 to 7 mg/L) in the surface layers, where it is maintained from atmospheric and photosynthetic diffusion. There is an oxygen minimum zone, between 100 and 700 m, where respiration of oxygen by organisms exceeds renewal, resulting in very low oxygen concentrations (i.e., <0.5 mg/L). Below depths of 700 m, the dissolved oxygen concentration gradually increases to approximately 4.5 mg/L at the seafloor, with some slight differences between sites in the depth range of 700 to 1800 m. The source of this oxygen is generally believed to be from influx of oxygen rich waters from polar regions into the deeper parts of the ocean.

Figure 17.6 Salinity (psu) profile of NORI Area D during Campaign 4A

Note: Salinity (psu) profile of NORI Area D during Campaign 4A at each seawater sampling station (Left). Interpolated cross-section of salinity diagonally across NORI Area D from the Collector Test Site (ND|002) to the Reference 2 location (ND|005) (right).

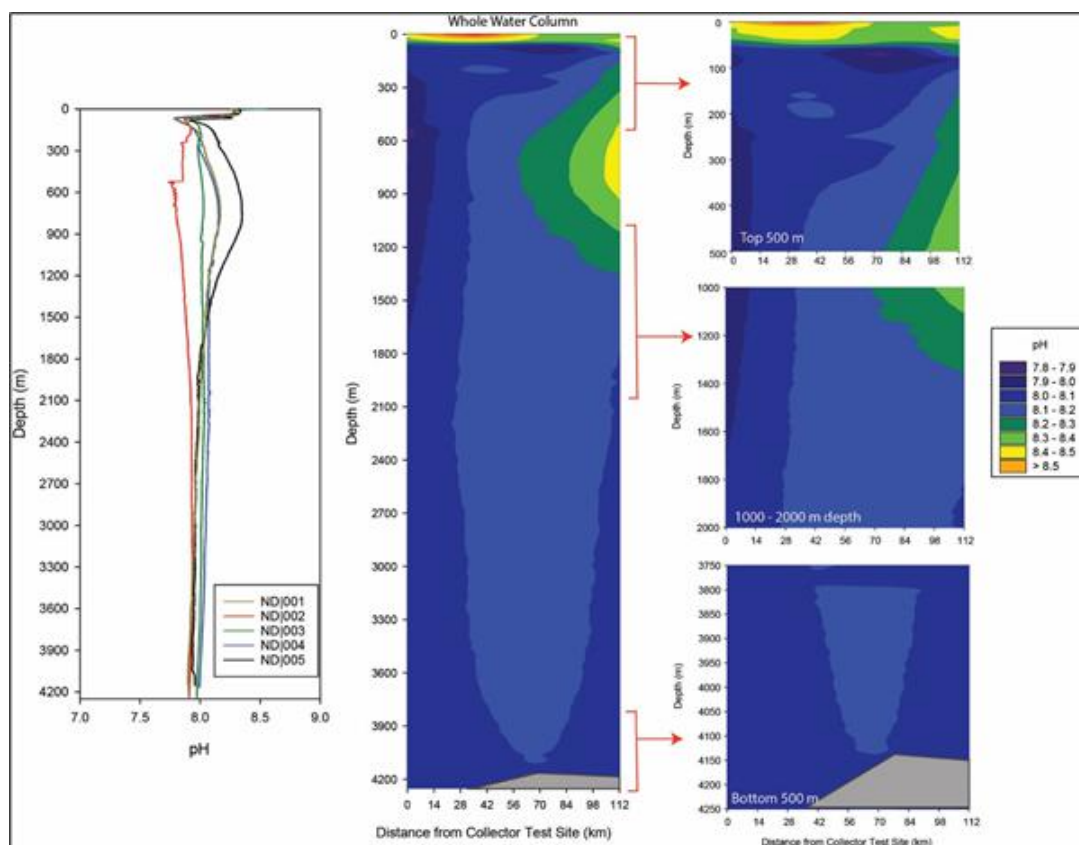

Figure 17.7 Dissolved oxygen (mg L<sup>-1</sup>) profile of NORI Area D during Campaign 4A

Note: Dissolved oxygen (mg L<sup>-1</sup>) profile of NORI Area D during Campaign 4A at each seawater sampling station (Left) and interpolated cross-section of dissolved oxygen diagonally across NORI Area D from the Collector Test Site (ND|002) to the Reference 2 location (ND|005) (right).

Seawater pH values were generally uniform among the stations in the upper 100 m of the water column and between 2,000 m to the seafloor Figure 17.8 but showed some variability within the depth range of the oxygen minimum zone and showed a slight increase from west to northeast.

Figure 17.8 pH profile of NORI Area D during Campaign 4A

Note: pH profile of NORI Area D during Campaign 4A at each seawater sampling station (Left) and interpolated cross-section of pH diagonally across NORI Area D from the Collector Test Site (ND|002) to the Reference 2 location (ND|005) (right).

### 17.6.2.3 Suspended sediments, transmissivity and fluorescence

Turbidity and transmissivity (Figure 17.9) are fairly constant through the water column. Both measurements indicate that there is very little particle suspension at any depth, which is typical for open ocean systems remote from terrigenous inputs or upwelling regions. Fluorescence from chlorophyll showed that the deep chlorophyll maximum is found at a water depth of approximately 50 to 60 m depth, which coincides with the start of the oxygen minimum zone within the region. Fluorescence then rapidly decreased with depth to below detection through the remainder of the water column due to light limitation of growth.

Figure 17.9 Profiles of turbidity (NTU) (Left); percent transmissivity (centre) and fluorescence (mg m-3 Right), in NORI Area D during Campaign 4A

#### 17.6.2.4 Water column chemistry

Sampling and measurements of water column chemistry included nutrients (nitrogen, phosphorus and silica), trace elements (metals and metalloids) and other major constituents was conducted at each of the five water quality sites in NORI Area D during Campaign 4A. The results available to date are tabulated in NORI Annual Report for 2019 (NORI 2020b) and, where possible, compared with Pacific Ocean reference concentrations (World Ocean Atlas WOA2018). Planned further sampling campaigns during the ESIA study will provide progressively improved robustness of baseline characterization of water quality parameters and variations (e.g., with season) or consistent differences, if any, with results from other studies within the CCZ.

Nutrient concentrations throughout the water column in NORI Area D were generally similar to nutrient concentrations, vertical profile trends, variability, and nutrient maxima reported within the BGR License Area and to those reported within the generalized deep water Pacific Ocean (Johnson et al., 2020).

#### 17.6.2.5 Sediment chemistry

During NORI AREA D Campaign 3, opportunistic seafloor sediment sampling for biological and EIA-related geochemical parameters was undertaken at 45 sites using box corers. Samples for sediment geochemical characterisation were obtained at 31 of these sites. In 2019, during NORI Campaigns 6A and 6B, NORI collected a further 267 samples from 204 sediment chemistry sites. The locations of all sampling sites are shown in Figure 7.32. The sediment samples were sent to ALS Environmental Laboratory in Kelso, Washington, USA for analysis, which is accredited by the State of Washington Department of Ecology. At the time of writing, sediments are being analysed for:

- Moisture content (to allow results to be expressed on a dry weight basis).
- Total carbon (TC), total organic carbon (TOC) and total inorganic carbon (TIC).

- Total organic matter.
- Alkalinity (after a 5:1 deionised water extraction).
- Chlorophyll-a and algal biomass.
- Total phosphorus.
- Nitrate-N and nitrite-N (after a 10:1 deionised water extraction).
- Total metals (aluminium, antimony, arsenic, boron, cadmium, calcium, chromium, chromium (VI), cobalt, copper, iron, mercury, lead, magnesium, nickel, selenium, silver, tellurium, thallium, uranium, vanadium, zinc).
- Silicon, silicon dioxide (by calculation).

Results for total metals have been compared against the Screening Quick Reference Tables (SQiRTs) published by NOAA (Buchman, 2008), and the Australian sediment quality guidelines (Simpson and Batley, 2016). The SQiRTs for inorganic variables in marine sediments include screening values ranging from nearly non-toxic to toxic levels, both the 'Effects Range-Low' (ERL) values and the 'Effects Range-Median' (ERM) values. All results for nickel concentrations and most copper concentrations exceeded the ERM range, with a maximum observed value up to ten times the EML for nickel and five times higher for copper. The majority of results for mercury and zinc were similar to, or less than the ERL range, and other metals were lower again or below the method reporting limit. The ESIA will need to assess the potential for remobilization of metals from the sediment during mining to affect the overlying water quality.

## 17.7 Ocean ecosystems

### 17.7.1 Overview of ecosystem compartments

The ISA draft guidelines (2020) recommend that all recognized size classes of biota from microbial (e.g., bacteria) to megafauna (organisms from 2 cm to whales) to be characterised in each zone of potential occurrence, from the atmosphere to the deep ocean seafloor. This section of the IA provides an overview of the expected faunal composition of each of these habitat compartments. Much is drawn from literature sources but supplemented with initial findings from the three campaigns completed in 2019/2020 in NORI Area D. Information to meet all requirements of the ESIA is expected to be available by the completion of campaigns 5a to 5d and the Collector Test at the end of 2022. The key features of the epipelagic, mesopelagic and bathypelagic zones of the water column and faunal components are summarised below.

The epipelagic zone (0–200 m) comprises the near-surface, well-lit environment that includes the surface mixed layer, depth to thermocline and euphotic zone. This is the zone of primary production by phytoplankton, and the dependent food chains from zooplankton and micronekton to larger invertebrates, fish from baitfish to schooling tuna and sharks, marine turtles and mammals. Only within this zone is light sufficient for photosynthesis (by the phytoplankton). Downward transport of dead organisms and particulate organic matter contributes to the food chains in the deeper layers of the water column. However, the surface waters of the open ocean outside of the influence terrestrial run-off are oligotrophic (i.e., nutrient limited, low levels of primary production).

The mesopelagic zone (200–1,000 m) extends down to the lower limit of light penetration, where temperatures decline, and minimum dissolved oxygen levels are encountered. Bioluminescence plays an important ecological role for the many species of fish and invertebrates (e.g., shrimps and squids) and gelatinous organisms (e.g., jellyfishes). These communities also provide a significant proportion of the diets of tuna and other large species that dive into the mesopelagic zone to feed during the day or encounter through vertical migration of the plankton and other micronekton (small fish/invertebrates) into the epipelagic zone during night-time (Bertrand et al 2002).

The bathypelagic zone (>1,000 m) is characterized by the complete absence of light, very low temperature, low nutrients, low productivity, and dissolved oxygen concentrations that are intermediate between the oxygen minimum zone and epipelagic zone. Organisms living in this zone are mostly dependent on food descending from the upper photic zones as sinking marine snow (Polunin et al., 2001) and intermittent falling of large dead animals such as whales. The main characteristics of the abyssal ecosystems (see Smith 1999) are described as follows.

- Low productivity: Generally, biomass declines exponentially with depth (Marshall 1979, Herring 2002). Food availability on the CCZ seafloor is limited by a low flux of particulate organic carbon from the surface and low abundance of life at the abyssal seafloor, and flux from epipelagic zone may be seasonal.
- Low physical energy: Currents at the seabed are slow. Sediment erosion and redeposition from physical processes are uncommon, or intermittent as benthic storms. There is evidence from the eastern CCZ that on geological time scales, and possibly annually, re-suspension and sediment transport events may be occurring (Jaun et al. 2018; Morgan et al. 1999; Smith 1999).
- High species diversity: despite low biomass, diversity at local habitat and regional scales can be high and has been subject of study through CCZ with investigation of specific animal groups at both organism and genetic level. Diversity and genetic preservation are identified as key issues (by the ISA) in managing mineral development within the CCZ. This has led to the establishment of areas of particular interest (APEIs) within the CCZ, each with an area of 400 km by 400 km, which are intended to remain protected from the impacts of nodule collection (ISA 2011a, 2012b). In total, these areas contribute about 30% of the CCZ (Smith et al, 2010).
- Large and continuous habitat but with geographical variations in relation to seabed depth, topography (presence of seamounts and other features), geological variations (e.g., presence of lava) and biological variability.

### 17.7.2 Size classes of organisms

The following sections provide brief descriptions of some of the characteristic organisms found within each of the zones and habitats. The existing information, together with the results of the data currently being examined from the 2018 and 2019 campaigns and the proposed studies over the next four campaigns is expected to provide the required robust baseline data for quantitative assessment and comparison of the faunal populations within and between NORI Area D and other areas of the CCZ.

#### 17.7.2.1 Benthic megafauna

Megafauna (>2 cm) within the CCZ include mobile and sessile organisms, mostly invertebrates that occur on soft and hard substrates. The epifaunal groups include those living at the sediment-water interface such as gastropods, crabs, sea urchins, as opposed to those living within the sediments such as the larger polychaete worms and burrowing crustaceans. Larger and more mobile species living close to the seafloor within the CCZ are likely to include omnivorous fish (primarily rattails), cephalopods (octopus, squid), scavenging amphipods, deep-sea shrimp, and large deposit feeders such as sea cucumber along with suspension feeding sponges and anemones.

Comparative information on abundance and diversity from other megafaunal studies in adjacent research or Contract Areas includes Tilot (2006), Stoyanova (2012), Amon et al. (2016; 2017), Simon-Lledo et al. (2019), and other international benthic research projects in the UK polymetallic nodule mining claim in the CCZ, such as ABYSSLINE <http://abyssline.info/>. The ISA has also created an Atlas of Abyssal Megafauna Morphotypes of the Clarion-Clipperton Fracture Zone (<http://ccfzatlas.com/>).

#### 17.7.2.2 Benthic macrofauna

Macrofauna (>300µm <2 cm) include the organisms that live within and on the sediment and the semi-liquid layer of the sediment-water interface. Polychaete worms comprise 50% to 65% of the macrofauna found in the CCZ, and also crustaceans, echinoderms and bivalve molluscs. Most macrofauna feed on surface deposits. Other studies of sediment macrofauna, for example Yu et al. (2018), examined density and community structure between the areas, including preserve areas, and Janssen et al. (2015) investigated local and regional genetic diversity in isopods and polychaetes across the CCZ to assess connectivity and dispersal.

#### 17.7.2.3 Benthic meiofauna

Meiofauna (>32 to 300 µm) are organisms that occupy the sediment interstitial space or the epibenthic semi-liquid layer at the sediment-water interface. They can also occur on nodule surfaces and other micro-habitat structures. They are ubiquitous and in greater abundance than macrofauna. The main marine taxa include foraminifera, nematode worms, copepods (crustacea), and several other phyla in lesser abundance (Higgins and Thiel, 1988). Due to their abundance, these animals play a key role in carbon cycling in the deep sea and are sufficiently numerous to allow robust statistical monitoring of indices of abundance and diversity over time or between sites in studies of impacts to seabed such as dredging operations (Clarke and Warwick, 1994).

A number of research programmes have sampled the abyssal North Pacific Ocean seafloor and collected data for multiple parameters of interest to biogeochemical modelling efforts. Overall, meiofaunal (63-300 µm) and macrofaunal (300 µm-3 mm) abundances and/or biomass represent the most widely sampled biological parameters in this region, and these data sets also exhibit the greatest consistency in collection methods across field programmes. Preliminary examination of the data indicates that the abundance of these benthic fauna is roughly proportional to the flux of nutrients available in particles settling from the surface (ISA 2010).

#### 17.7.2.4 Benthic microbial communities

Microfauna (biota sized < 32 µm) include bacteria, archaea, protists, fungi and viruses, which are expected to be present in the CCZ. A number of studies have been undertaken to understand the microbial communities present within sediment in the CCZ. Shulse et al. (2016) and Lindh et al. (2017), using rRNA gene sequencing, found that microbial community composition and diversity varied with habitat type, water column depth, and sediment horizon. Microbial communities in the sediments had the highest diversity, followed by nodules, and then by the water column with less than 1/3 the number of operational taxonomic units in the sediments.

#### 17.7.2.5 Benthic nodule fauna

A key topic for study in the CCZ is the composition of the biological communities associated with seabed nodules, which provide the hard seabed substrate on which sessile organisms can attach. In the absence of nodules, there is relatively little other hard surface that provides substrate for organisms to attach themselves.

A research project by Tilot (2006) studied the distribution of benthic megafauna associated with nodules within the CCZ (NIXO-45, NIXO-41 and ECHO-1) sites. It includes an annotated photographic atlas for each phylum, and inventories, based on a collection of about 200,000 photographs of the ocean floor showing a taxonomic diversity of 240 taxa. Of these, 46 were echinoderms, and cnidaria (e.g., jellyfish and sea anemones) was the most diverse phylum with 59 different taxa. The study used a classification of eight nodule facies, based on nodule sizes, surface features and degree of burial to evaluate relative abundance and composition of fauna, by phylum, and trophic and functional groups from analyses of photographic transects covered by towed and autonomous devices. Suspension-feeders were more abundant than detritus feeders regardless of the facies. The study also analysed spatial heterogeneity in distribution of populations across the eight different facies and facies gradients.

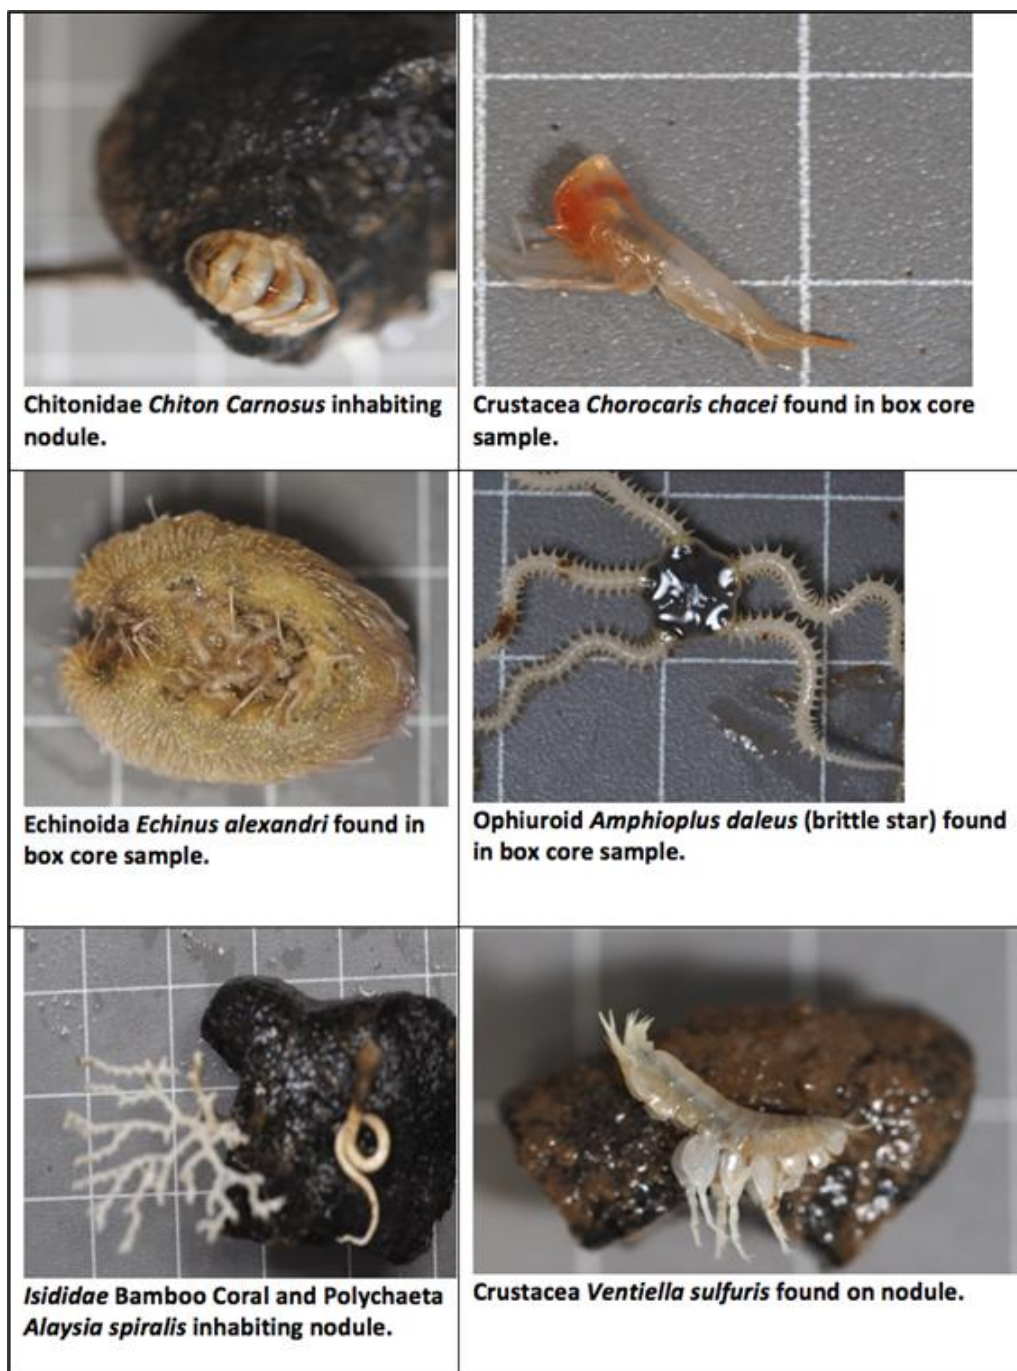

In 2019, NORI completed a habitat mapping project applying a clustering algorithm to NORI Area D data that resulted in an 8-cluster solution classification for geoforms (seamounts, bathymetric highs, bathymetric lows and flat plains), described in NORI (2020b). Within each of these geoforms, key compartments were identified (slopes associated with abyssal hills, depressions within bathymetric lows, seamount sub-features), where biological communities are expected to be distributed according to abiotic type. NORI's existing nodule distribution data is split between three nodule distribution types according to size and sediment gaps between nodules (or percentage cover by nodules). Overlaying the 8-cluster solution geoform classification for each nodule type was then used to determine whether a relationship exists between geoform and nodule distribution type. An example overlay of the eight geoforms for Type 1 nodules is shown in Figure 17.10.

Figure 17.10 Type 1 nodules coloured by their placement within the 8-Cluster geoform map of NORI Area D

Results of the 8-cluster solution geoform classification were available prior to Campaign 6B, which enabled targeting of box core sampling to each of the 8-cluster geoforms. NORI collected 8,673 seafloor biological samples at 204 locations within NORI Area D. Four push-corer subsamples were taken from each box core for analyses of faunal class sizes and sediment chemistry. All samples were preserved using methods appropriate for the taxonomic and eDNA analyses required. Some examples of nodule-attached fauna and sediment megafauna from box core samples are shown in Figure 17.11. Analysis of these samples is yet to take place, however the degree of similarity between the respective eight facies identified in NORI (2020b) and Tilot (2006) will provide valuable comparisons of composition and distribution of nodule fauna over the wider CCZ area.

Figure 17.11 Examples of megafauna from NORI Area D (Note Each scale square is 1x1 cm)

A number of other studies of nodule fauna have also been undertaken in the CCZ that provide background or analogous information and regional context of the types of benthic nodule fauna likely to be observed in NORI Area D, and the role that surface texture and microhabitat heterogeneity of nodules may play in the structure of these communities. These include Amon et al. (2016) Vanreusel et al. (2016), De Smet et al. (2017) Veillette et al. 2007a, 2007b, Thiel et al. (1993) and Mullineaux (1987). Overall, much background information exists on the composition and distribution of nodule-associated fauna of the CCZ to compare and contrast with the findings from NORI Area D.

#### 17.7.2.6 Benthic fish

Benthic fish species and their abundance can be assessed using techniques such as video surveys or video or camera bait stations. Although bait stations attract scavenging species, the method provides valuable information about a section of the fish community present at these depths. Many bathypelagic fish are opportunistic feeders, with large gaping jaws and stomachs adapted to feed on larger prey. Bioluminescence plays a role in feeding, predator evasion, reproduction and communication (Herring 2002). However, there are some more active bathypelagic fish such as families Macrouridae (rattails) and Morridae (cods). The AUV images collected to date, together with those that NORI will collect in the main study program, will provide images of fish present within NORI Area D and for comparison with other literature data for the CCZ.

#### 17.7.2.7 Pelagic micro-organisms

Micro-organisms are found throughout the water column. Due to their size (and the size of their aggregates), they are an easily available substrate for filter feeders and selective feeders such as larval fish. Sorokin et al (1970) estimated that “bacterioplankton” are as important as algae as a primary food substrate. Work on bacterial communities within the UK-1 Area by Shulse et al. (2016) showed that diversity in the water column is lower than diversity in the sediment.

#### 17.7.2.8 Pelagic Phytoplankton

In subtropical sea surface waters, nutrient concentrations are low and phytoplankton populations are sparse (Morgan et al. 1999). Algal productivity is driven by the availability of nutrients in surface waters, which is typically low in areas remote from the influence terrestrial runoff, and levels of light and depth of light penetration. Most publicly available CCZ plankton work appears to have originated from the Deep Ocean Mining Environmental Study (DOMES) sites. DOMES Sites A and B are located to the west of NORI Areas A and B. DOMES Site C is located between NORI Areas A/B and C (see ISA, 2010).

#### 17.7.2.9 Pelagic zooplankton and micronekton

Research on zooplankton and micronekton carried out at the DOMES sites in the 1970s found concentrations to be highest in the upper 150 m, with highest densities of taxa within the upper 100 m of the water column (Morgan et al. 1999). However, many zooplankton only spend part of their time in the surface zone, descending into deeper water of the mesopelagic zone during daytime to escape predators, returning at night to feed on phytoplankton when they are less exposed to visual predators (Castro and Huber 2005). Some patterns of vertical distribution can be more complex with adaptation of species to live within the oxygen minimum zone (Fernandez-Alamo and Farber-Lorda 2006), highlighting the need to understand these processes and potential impacts at different depths within the water column.

#### 17.7.2.10 Pelagic nekton

These include non-commercial species such as squid, lancet fishes, flying fishes, lantern fishes, rat-tail fishes, pelagic shrimp, and euphausiids as well as commercial fish species, such as tuna and billfishes. They are found throughout the Pacific Ocean at tropical and subtropical latitudes. Most of these surface schooling species are highly migratory, and their latitudinal range is seasonal. Many species of sharks are also expected to be found in the CCZ area, inhabiting all zones from surface to the seafloor.

#### 17.7.2.11 Marine mammals, reptiles and birds

Several species of whales are likely to frequent or transit through the CCZ area, including large baleen whales: blue whales, fin whales, sei whales, and the toothed sperm whales. Dolphins such as the Pacific bottlenose and spinner dolphins are also likely to be present. Most sea turtles, particularly the leatherback have worldwide distributions that could transit through the project area.

Given the remote off-shore location of the CCZ, no bird breeding grounds occur at or near the NORI licence areas. However, a range of seabirds may occur in the wider CCZ environment, including those on a migratory pathway, or wandering seabirds, such as albatrosses, shearwaters and petrels.

During the 2019 campaigns, on board observations of marine fauna were made during the time sat NORI Area D and while transiting to and from the site, and this observing and recording program will continue on all NORI's future campaigns. Existing information available from other parts of the CCZ will also be utilised in conjunction with observational seabird research in and adjacent to NORI Area D to build a picture of seabird species present and their occurrence. Seabird observations will also be collated together with the marine mammal observation program.

#### 17.7.3 Ecosystem biodiversity

Biodiversity includes the species and communities within each of the oceanographical zones and topographical habitats described above. It is an important measure of the overall ecosystem health and function, although it has no unifying metric for comparison. NORI's proposed studies are designed to describe the functioning of the CCZ seabed and overlying water column ecosystems, and the role played by different species to make definitive statements about biodiversity impacts in terms of maintenance, or the extent of any reduction or loss.

#### 17.7.4 Ecosystem trophic interaction

Understanding how the components of the ecosystem interact and depend upon each other, through feeding and transfer of carbon is important in being able to understand effects that might occur within an ecosystem when any component of the system is disturbed.

The complexity of deep-water studies requires data on trophic interactions to come from multiple sources (Guenette et al. 2008; Pinkerton et al. 2010; Pinkerton & Bradford-Grieve 2014; Choy et al. 2015, 2017; Drazen & Sutton 2017). The biological dependencies and interactions are complex.

Understanding the ecosystem-scale deep-water trophic interactions within the NORI Area D block will require integration of studies (including trophic model development) undertaken across the CCZ. NORI's proposed sampling methods to be used during the proposed studies will allow for morphological taxonomy, environmental DNA (eDNA), molecular and stable isotope analysis to build up data on overall biodiversity and interactions.

#### 17.7.5 Ecosystem interaction with existing economic activities

The key existing economic activities within the CCZ are the passage of cargo vessels and some fisheries activity.

### 17.7.5.1 Shipping

Although the NORI licence areas have the potential to overlap with some shipping routes, these do not appear to be major routes and the frequency of vessel passage is envisaged to be low, which is consistent with observations made by other ISA contractors operating in the CCZ.

NORI will require each vessel operating under its control to enter data into the ship's log related to ship sightings and activity within the NORI exploration areas. The draft EIS developed by NOAA for the Ocean Mining Associates CCZ manganese nodule exploration licence stated that only 50 vessel sightings were made over a non-continuous 10-year study period, and of these, only one was a fishing vessel (NOAA, 1984). During the NORI 2018 campaign, only one vessel (a fishing vessel) was seen in six weeks. Adherence to standard maritime navigational protocols and radio communications is expected of all vessels in the vicinity to avoid risks of collision.

### 17.7.5.2 Fisheries

The CCZ sits within Major Fishing Area Statistical Area 77 of the Food and Agriculture Organisation (FAO <http://www.fao.org/fishery/area/Area77/en>) of the United Nations, which covers a total surface area of 48.90 million km<sup>2</sup>, including the area from 175°W to the west coasts of USA, Mexico and Central America between latitudes 5° and 40° N. Tuna and other larger pelagic fishes are important components of the marine fisheries and widely distributed in Area. The key countries fishing for tuna in Area 77 are Mexico and USA, followed by Venezuela, Japan, Korea, Spain, and other Asian nations. Over the period 2012 to 2018, total fish capture (including fish, crustaceans and molluscs) for the Eastern Central Pacific (Area 77) has ranged between 1.65 and 2.05 million tonnes (Food and Agriculture Organisation, 2018).

Distribution of catches of different species over smaller scales within Area 77 is provided by the Inter-American Tropical Tuna Commission (IATTC), which was established in 1950 and responsible for the conservation and management of tuna and other marine resources taken by tuna-fishing vessels in the eastern Pacific Ocean. The principal species of tunas caught are the three tropical tuna species (yellowfin, skipjack, and bigeye), followed by the temperate tunas (albacore, and lesser catches of Pacific bluefin). Other scombrids (mackerels), such as bonitos and wahoo, are also caught.

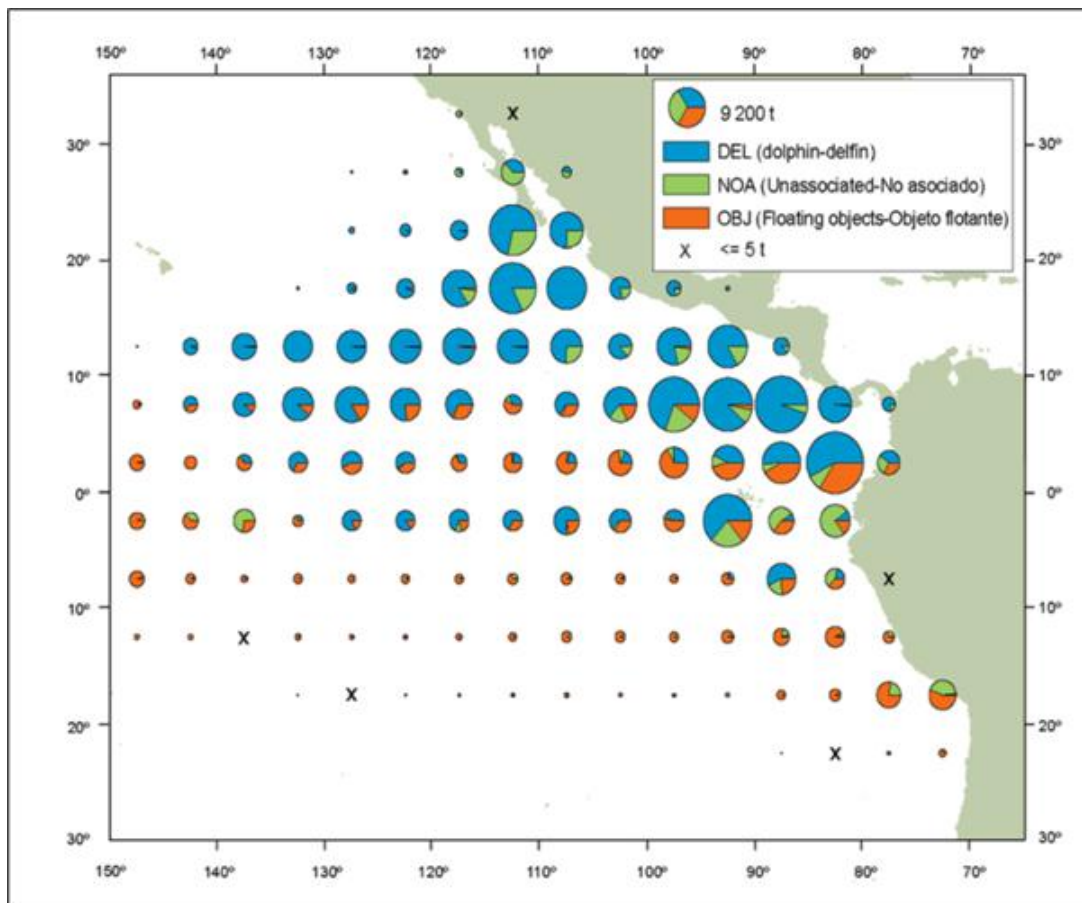

Access to the fishery is regulated by Resolution C-02-03, which requires vessels to be on the IATTC Regional Vessel Register in order to fish for tunas in the eastern Pacific Ocean. Vessels are authorized to fish by their respective flag governments, and only duly authorized vessels are included in the Register. The IATTC also has significant responsibilities for the implementation of the International Dolphin Conservation Program, as tunas are often associated with dolphin schools and such schools provide locational guidance on setting of the tuna purse seine nets.

Almost all the catches in the eastern Pacific Ocean are made by the purse-seine and longline fleets. Detailed catch data are available for the purse-seine fishery, which takes over 90% of the total catches reported. Figure 17.12 shows the average annual distributions of the purse-seine catches of yellowfin, by set type, caught in each 5° by 5° reporting area for the period 2013–2017 (IATTC, 2019). The sizes of the circles are proportional to the amounts of yellowfin caught. DEL denote nets set in location of dolphin schools; OBJ denotes nets set under floating objects and OBJ denotes nets set without associated objects / fish schools. This graph shows some purse seining for yellowfin occurs in the vicinity of NORI Area D (approximately 115° W and slightly north of 10°N). Figure 17.13 shows distributions of the average annual catches (metric tonnes) of bigeye and yellowfin tunas in the Pacific Ocean by Chinese, Japanese, Korean, and Chinese Taipei longline vessels, over the same period. The vast majority of this fishing effort takes place to the south and west of the NORI Area D, with only minor contributions in the project area.

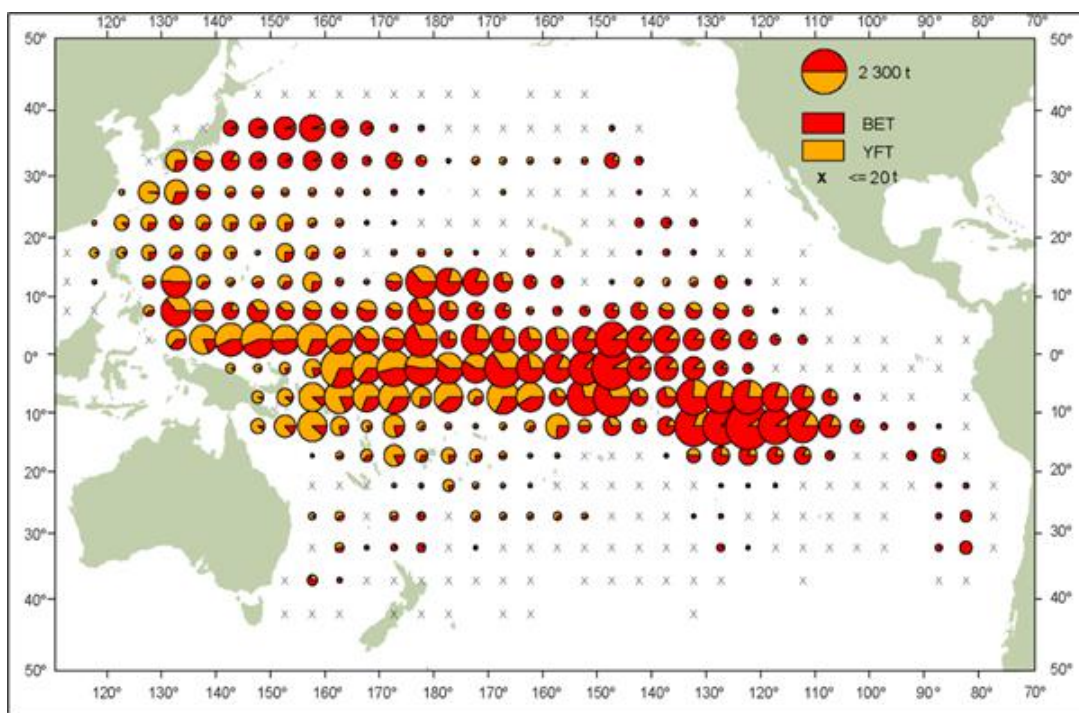

Overall, long term fishing activity within the CCZ near the Nori Area D appears low, based on monitored fishing vessel activity. Additional fisheries information on presence and sightings of fishing vessels will be collected as part of NORI's environmental work program.

## 17.8 Environmental and Social Impact Assessment (ESIA)

NORI has commenced the ESIA process in support of an application for an exploitation license for the commercial development of deep-sea polymetallic nodules. The objective of the ESIA is to describe the project, its potential benefits and the predicted environmental and socioeconomic impacts of project-related activities during the development and operation of polymetallic nodule mining operations. The completed EIS will enable the regulator (ISA) to make an informed decision on the approval of the project and if approved, any further conditions deemed appropriate.

Progression of the ESIA now requires that a comprehensive program of oceanographic, biological and metocean data acquisition be conducted to characterize the baseline conditions at a designated Collector Test Site and control sites in NORI Area D, to enable future validation of the ESIA’s predicted residual impacts (i.e., after all mitigation) during and after mining operations. To date, NORI has completed the initial scoping and has developed detailed study terms of reference to be undertaken by appointed experts. The first of several dedicated environmental campaigns started in October 2020. The stages of ESIA progress are described below.

### 17.8.1 Environmental Impact assessment scoping

Scoping is a critical early step in the preparation of the ESIA and is the point at which issues and impacts that will be important in the decision-making process are identified for investigation by the ESIA (Durden et al 2018).

In June 2019, NORI held a technical stakeholder scoping study workshop in San Diego. Participants included members of the ISA and Government of Nauru, environmental practitioners and academics from the fields of deep-sea mining and academia. The participants followed a structured process of identification of zones of impact through the water column to the seafloor, then linking to each the impacting activities that are associated with polymetallic nodule harvesting. The output from this workshop formed the basis of a detailed scoping document and terms of reference for all the offshore environmental studies needed over the next two to three years to meet the regulatory requirements of the ISA (NORI 2020a).

In February 2020, NORI held a further multi-stakeholder workshop involving diverse stakeholders from academia, the regulator and industry, which focussed on the scoping of the NORI ESIA program. A number of NGO's which have advocated against nodule production were invited but declined to participate in the workshop.

The objectives of the Scoping Phase were to:

- Identify stakeholders and inform them of the proposed Project and the ESIA process.
- Provide stakeholders with the opportunity to identify any issues and concerns associated with the proposed Project.
- Identify areas of likely impact and environmental and social issues that may require further investigation by the ESIA.
- Develop the Terms of Reference (TORs) for specialist baseline and impact assessment studies in response to initial stakeholder input.
- Release the Scoping Report, including draft TOR for specialist studies, for stakeholder review and comment.

In principle, the main issues, in order of perceived priority and relevant to NORI Area D, were identified as:

- Seafloor – direct physical impact of mining/sampling equipment.
- Smothering/burying of fauna by sediment deposition.
- Change in seafloor sediment characteristics post mining (e.g., removal of solid surfaces, such as nodules suitable for attached species colonisation).
- Clogging of suspension feeders.
- Potential release of toxic trace metals and other contaminants.
- Loss of essential habitat (spawning/nursery grounds).
- Likely long time periods for recolonization and recovery of key species groups.
- Water column effects on behaviour of mammals, mesopelagic or migratory fish and plankton through changes in water composition (e.g., chemical contamination) and clarity.
- Surface increased vessel activities and potential pollution (includes risks associated with extreme weather events).
- Reduction in primary production through shading by discharges (if near-surface discharges occur in photic zone).
- Effects on behaviour of surface mammals, fish and birds through changes in water composition and clarity, noise and lights from vessel activity.
- Bioaccumulation of toxic metals through food chain.
- Sediment plume through water column from seafloor operations or midwater discharges.
- Local changes in pH.
- Nutrient and trace mineral enrichment (if near-surface discharges in photic zone).
- Potential oxygen depletion.

Figure 17.14 shows the zones through the water column to the seafloor, where the impacts of nodule harvesting are likely to occur.

Figure 17.14 Potential impact zones through the water column

Source: NORI

After the impact zones were defined a suite of baseline studies was recommended as part of the ESIA to supplement the existing knowledge base and provide site specific data to inform the EIS. A list was developed by participants for each impact zone which described the focus and best available data collection techniques that should be employed. The outputs constitute a seabed-to-surface approach to conducting baseline studies as summarized in Table 17.1 and described in more detail in Section 20.8.2.

Table 17.1 Summary of outputs from June 3-5 workshop, San Diego, USA

Impact Zone	Study Focus	Data Collection Technique
Atmosphere	Meteorology	Desktop studies / At-sea met station
	Air quality	Desktop studies / Emissions incl. Greenhouse Gases
	Seabirds	Desktop studies / At-sea observations
	Light Environment	Desktop studies
	Noise environment (non-human impacts)	Desktop studies
Epipelagic Biology Bathypelagic Biology	Discharge vessels (surface)	Routine discharges / Process for transporting materials / Spills (behavior of material)
	Oil spills	Modelling / Post-impact response planning
	Wave climate	Desktop studies / Opportunistic vessel motion- wave height / Spotter buoys
	Noise environment (non-human impacts)	Moorings / Hydrophones / Engineering design – thrusters - RALS
	Biological environment	Cetaceans and other pelagic megafauna, debris, vessels – observations / Phytoplankton / Zooplankton / Micronekton / Bacterial collection and identification
	Water quality	Sample collection and laboratory analysis
Metecean	Upper, mid and lower water column noise	Hydrophones
	Cetacean presence	Hydrophones
	Sediment flux through water column	Sediment traps
	Sediment flux near seabed	Sediment traps
	POM flux through water column and near seabed	Sediment traps
	Isotope flux through water column and near seabed	Sediment traps
	Upper and midwater column physical oceanography	Moorings - CTD/ADCP
	Lower water column physical oceanography	Moorings - CTD/ADCP
	Vertical water movement	Moorings - CTD/ADCP
Sediment Geochemistry	Contaminant characterization	Screening study / Elutriate test / potential release of toxic metals
Benthic Biology	Habitat mapping	Desktop studies / Geomorphology mapping / Substrate mapping (nodule grades, distribution) / Mine plan development
	Biological communities – Microfauna, Meiofauna, Macrofauna, Megafauna, Demersal scavengers	Targeted taxonomic and distribution studies (AUV / Box cores / Multicores)
	Biotope characterisation	Biotope mapping and analysis
Plume	Upper and midwater column physical oceanography	Moorings - CTD/ADCP/ Hydrodynamic modelling
	Lower water column physical oceanography	Moorings - CTD/ADCP
	Sediment characterisation	Grain size / Physicochemical / Floccs
Ecosystem Function	Temporal water column physicochemical characterisation	CTD profiles / Niskin bottles
	Energy flows	Ecosystem modelling
Social	Stakeholders screening and mapping	Stakeholder screening / Mapping / Engagement Plan
	Training	Capacity building implementation plan
	Sponsoring state coordination	Communications and coordination plan
	Other marine users – Fishing, Subsea Cables, Military operations, Shipping, Cultural heritage	Desktop studies / Focused Studies
	Academic outreach	Communications and coordination plan

## 17.8.2 Project environmental impacts

The main impacts expected to occur during polymetallic nodule collection will involve removal from the seabed of material, with associated alterations to habitat and fauna. The lifting of nodules from the seabed will require the removal of water brought back to the surface with the nodules from the seabed. The separation of the seawater will likely occur immediately above or near to the collection site, either on the CSV or bulk carriers. The seawater that will be separated from the nodules will need to be discharged back to the sea. The discharge water will likely contain some fine material, made up primarily of residual sediment and fragments of nodules.

### 17.8.2.1 Impacts to surface waters

Impacts to surface waters will depend upon the type, number, and size of vessels and platforms deployed at the nodule collecting sites. Impacts associated with surface vessel operations are not exclusive to nodule collecting operations but will need to be considered. These include noise and lights with the main vessel operation, as well as support vessels and bulk carriers moving in and out of the area; vessel emissions to air; and routine discharges associated with vessels (noting that these will be governed by international legislation such as the International Convention for the Prevention of Pollution from Ships (MARPOL) and by specific management plans prepared in relation to particular aspects of operations from which impacts might arise (for example, the effects of lighting on seabirds).

### 17.8.2.2 Impacts to midwater column

Some noise and vibration of the riser are expected from the pumping of nodules to the vessel and may be detectable by organisms inhabiting or diving through those parts of the water column. The intensity and attenuation of generated noise will need to be assessed in the ESIA. The water and contained residual sediments returned to the sea will result in the generation of suspended sediments to which organisms in the vicinity will be exposed and potentially some temperature differences, depending on the extent of counter-current equilibration. NORI's guiding philosophy is to discharge riser water at a depth and in a manner that causes the least and shortest-lived disruption to the ocean's biology, physics, chemistry and ecosystem services. The selection of that depth will be informed by hydrodynamic modelling to determine the extent of sediment dispersion and by identification of the organisms and their sensitivities to exposure to the sediment from the discharged riser water, including the physical and chemical composition of the sediments discharged.

### 17.8.2.3 Impacts to seafloor

Extraction of nodules will result in impacts to the fauna of the seafloor and overlying water column from the physical removal of habitat, the generation of suspended sediment, release of pore water and creation of new sediment surface with a physical structure and chemistry that may differ from that of the seabed prior to nodule extraction. The nodules are generally between 5 and 10 cm in diameter and lie half-buried in the sediment, and so some disturbance of substrate will occur. Mobile swimming or crawling animals may be able to move aside, but all sessile (immobile) benthic fauna in the path of the collecting operation will be affected. In areas of seafloor with soft sediment, much of the biodiversity is to be found in the top 5 to 8 cm of the sediment (Higgins and Thiel, 1988; Giere 1993); noting that, at the time of these references, size definitions of meiofauna extended to 300 or 500µ and into what are now included within the macrofauna.

As for the midwater impacts, NORI's guiding philosophy is for the development plan to include design features to minimise sediment escape to the water column and confine impacts of disturbed material within the collector paths as far as practicable, thereby minimising impacts to undisturbed areas.

### 17.8.2.4 Benthic disturbance and recovery studies

The return of the CCZ to its pre-impact state after removal of nodules from the mined areas is not likely to occur within any foreseeable timeframe, given that nodule formation is believed to be in millions of years. However other species and functions would recover over periods that are measurable. A number of experimental impact-recovery time series research have been carried out under several programs such those identified in Jones et al. (2017), who reviewed changes in faunal densities and diversity of benthic communities measured in response to the 11 simulated or test nodule mining disturbances undertaken in or relevant to the CCZ. Almost all studies showed some recovery in faunal density and diversity for meiofauna and mobile megafauna.

Twenty-six years after the 1989 disturbance and recolonization (DISCOL) experiment carried out in the Peru Basin nodule field, suspension-feeder presence remained significantly reduced in disturbed areas, while deposit-feeders showed no diminished presence (Simon-Lledó et al., 2019). Similarly Vonnahme et al. (2020), and Stratmann et al. (2018) found varying times of recovery for other indices such as: significantly reduced uptake of fresh phytodetritus by bacteria, nematodes and holothurians in plow tracks; microbial community diversity unchanged compared to unplowed reference areas, but microbial cell numbers were 30% lower; and taxonomic composition of meiofauna and macrofauna was not significantly different between plowed and reference sites, but carbon uptake by bacteria, nematodes and holothurians was significantly lower at plowed sites. Overall, these authors estimated that it could take up to 50 years for the more sensitive indicators to return to undisturbed levels.

### 17.8.3 Scopes of work and terms of reference

Based on the outputs from the June 2019 San Diego workshop, and to comply with ISA regulatory requirements, NORI prepared a Scoping Report including Terms of Reference for baseline environmental studies relating to all off-shore components of the project (i.e. nodule collection and transportation) to be conducted within NORI Area D (NORI 2020a). The compilation of this report was designed not only to comply with ISA regulatory requirements but also to address data gaps and reduce uncertainties in project options during progressive phases.

The 2020 Scoping Report provides:

- Identification of the key issues and concerns for consideration in the development of the ESIA study,
- Identification of resource areas that have the potential to be impacted and environmental issues that may require further studies in the ESIA,
- The regulatory body (the International Seabed Authority) with the full scope of the proposed studies and tasks that NORI proposes to undertake in order to comply as far as practicable with the combined regulatory recommendations, set out in ISA documents: i) Recommendations for the guidance of contractors for the assessment of the possible environmental impacts arising from exploration for marine minerals in the Area (ISBA/25/LTC/6; 2020), ii) Recommendations for the guidance of contractors for the assessment of the possible environmental impacts arising from exploration for marine minerals in the Area (ISBA/19/LTC/8 (2013) and iii) Recommendations for the guidance of contractors for the assessment of the possible environmental impacts arising from exploration for polymetallic nodules in the Area (ISBA/16/LTC/7; 2010); and
- Terms of Reference (TORs) for the ESIA studies that provide clear direction for the participating specialists on what needs to be assessed, how it will be assessed, and to what level of detail.

Several of these studies require long term information gathering using moored instruments or multi-year information collection to cover seasonal factors and to build robustness into hydrodynamic / plume modelling. As such baseline data collection in the NORI Area will require a multi-year program of work campaigns, spread over a three-year period. Key to this work is a comprehensive characterization and quantitative comparison of the baseline conditions at a designated Collector Test Site and control sites in the mining lease area.

The proposed campaigns planned for the NORI Area D Area (see Section 20.3) are designed and scheduled for the specialist consultants to complete their work in support of the preparation of the ESIA. Campaigns have been strategically timed to provide maximum time possible between consecutive sampling efforts, to coincide with known periods of seasonal variations in the water column, and to sample the Collector Test Site and a Preservation Reference Zone (PRZ)<sup>23</sup> twice before, and once following, the Collector Test.

#### 17.8.4 Social license / stakeholder engagement

The NORI Area D project differs from a conventional land-based mining project in that there are no landowners or residents who would be directly impacted by the project through displacement or loss of assets. In this case, the key stakeholders include ISA member countries, sponsoring states, businesses in the fossil fuel replacement industries, and community groups with a range of interests in the deep sea and mining.

Engaging with these stakeholders early in the ESIA process is essential to understand their perspectives on the matters of importance to them. To this end, NORI has implemented a Communication and Stakeholder Engagement Plan (CSEP) to ensure that the communications and stakeholder engagement components of the ESIA are conducted in a structured manner, in accordance with international best practices, and that the outcomes of stakeholder engagement are aligned with the objectives of the ESIA and regulatory requirements.

---

<sup>23</sup> An area representative of the area to be mined but outside the mine area of influence

The CSEP demonstrates NORI's commitment to a program of genuine engagement with stakeholders (e.g., regulatory authorities, governments, NGO's, environmental groups and the media, which values their contribution and their involvement in the project. In the first instance the CSEP has been developed specifically for the ESIA study scoping phase of the project (as shown in Figure 17.15) with ongoing engagement guidance as the project transitions from the exploration to exploitation phases of the project. Managing relationships with key stakeholders, including regulatory authorities, governments, NGO's, environmental groups and the media, is critical - not just to the project's reputation and outcomes - but to the reputation of the proponents, investors and partner organizations responsible for bringing the project to fruition.

The objectives of the stakeholder consultation are to:

- demonstrate open and transparent communication.
- create awareness and understanding of the project.
- identify who needs to be aware of what information and when.
- ensure consultative opportunities are provided to ensure effective consideration and management of environmental issues throughout the ESIA.

The CSEP is intended to be a 'live' document and will be updated throughout the project lifecycle post the ESIA phase. A summary of communications and stakeholder engagement objectives as they relate to the Scoping Phase of the EISA is shown in Figure 17.15.

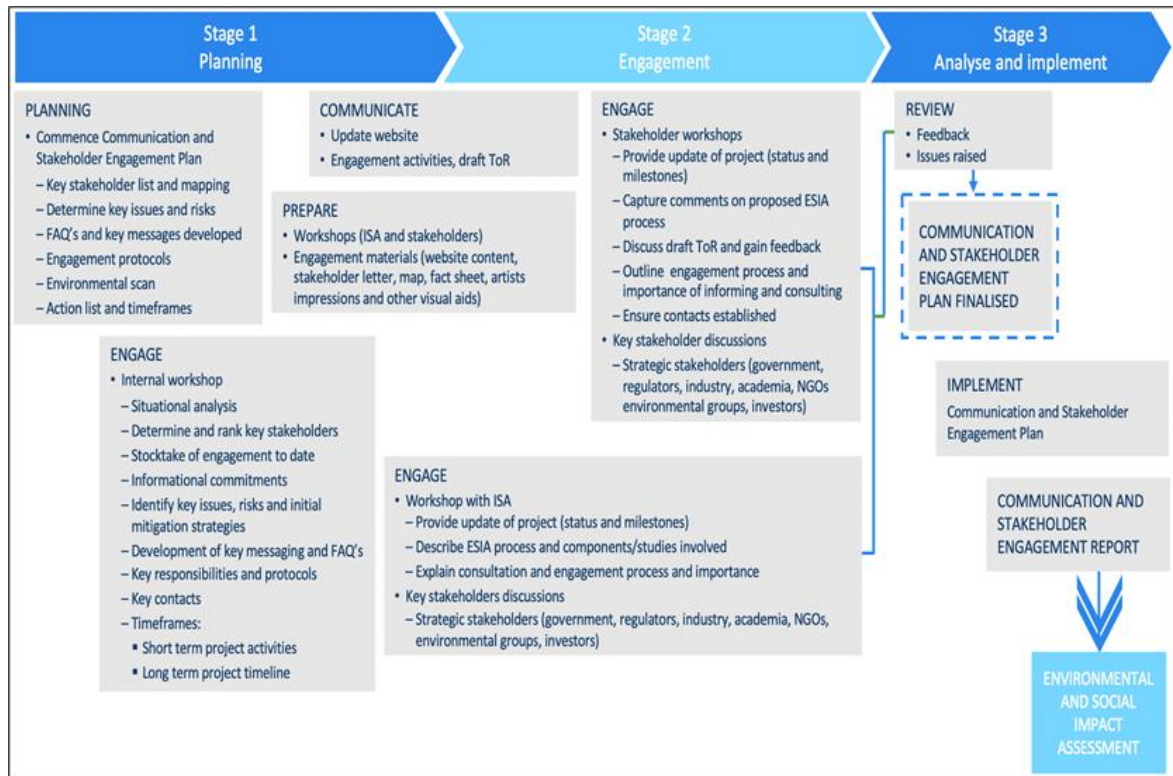

The key activities that have been initiated by NORI to date include:

- The June 2019, technical stakeholder scoping study workshop in San Diego, in which the participation of independent scientific institutions in the ESIA underscores the company's commitment to transparency during the exploration phase.
- Establishment of formalized partnerships with leading scientific research institutions and internationally renowned universities in a significant investment into its ongoing ESIA program of work.
- Organisation of the February 2020 two-day workshop in San Diego attended by more than 70 people from all over the world. Stakeholder meetings (in-person and online) to introduce NORI's environmental baseline thinking and initial planning and to seek feedback.
- February 2020 – Kingston, Jamaica – side event presentation at ISA Council meeting to stakeholders on NORI's environmental baseline thinking and initial plan.
- February 2020 – Kingston Jamaica – meeting with ISA Environment department to present Scoping Report and TOR concept and timelines.
- June/July 2020 – Submission of Scoping Report to LTC.
- October 2020 – response from LTC stating it did not have time to review Scoping Report and will provide feedback in the future.
- Funding of an independent, in-depth lifecycle assessment study that compares the cradle-to-gate impacts of two sources of metals – land ores and deep-sea polymetallic metals. The study produced a white paper, followed by three webinars in May and June 2020 on the white paper, where the lead authors presented the findings and answered questions live.
- Publication of life cycle climate change impacts of producing battery metals from land ores versus deep-sea polymetallic nodules (Paulikas et al, 2020).
- Production of news and media articles available via the DeepGreen website.
- Training opportunities, particularly for pacific island nations, and job advertisements via the website.

Initiatives planned over the next 6–12 months include:

- Release of the Scoping Report to workshop participants for feedback and review.
- Public release of Scoping Report for comments, revision based on public feedback, and submission of revised Scoping Report to LTC, noting public comments and changes incorporated.
- 2021 – submission of EIA to LTC and posting publicly for feedback for Collector Test in 2022 (must be submitted 12 months in advance).

Figure 17.15 Communications and Stakeholder Engagement objectives (scoping phase)

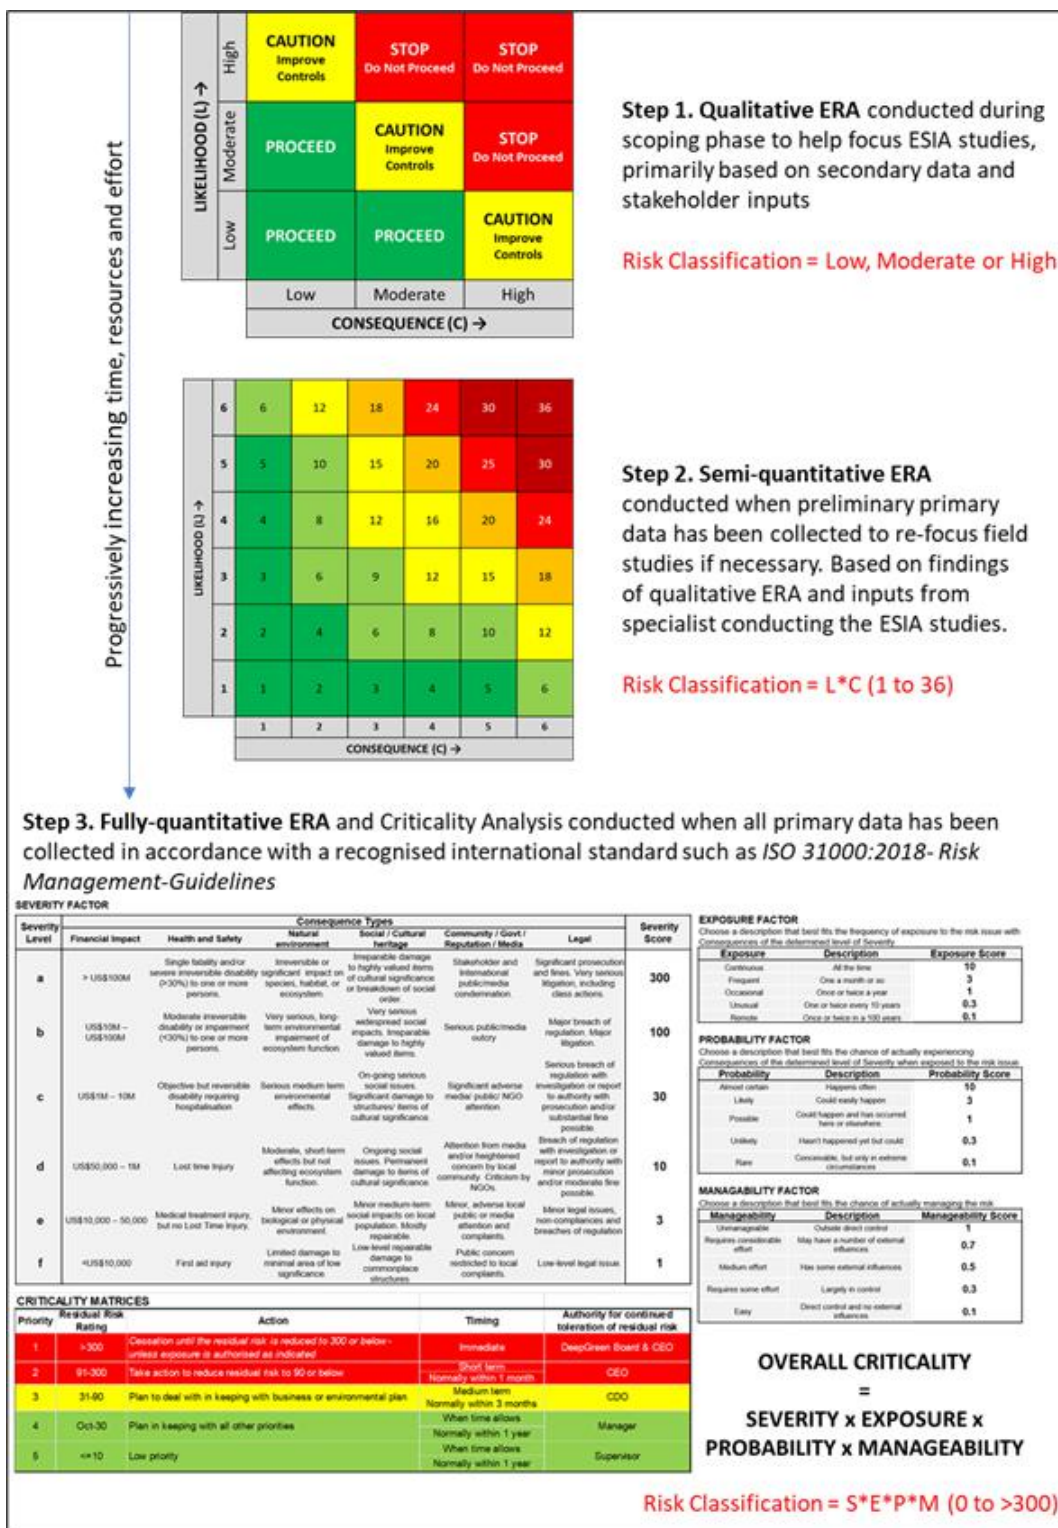

### 17.8.5 Project environmental impact assessment process

The impact assessment process predicts the likely changes to the existing environment that would arise as a result of the project activities and then evaluates the significance of those identified impacts, both in terms of the magnitude of impact (e.g., in duration or extent), and on the key environmental receptors, such as biodiversity, ecosystem services and conservation status of organisms. The initial screening is qualitative, based on secondary knowledge of the receiving environment and expert judgement of sources of impacts and impacts themselves. As the project's collection of primary environmental data progresses and greater definition of engineering details is available, so the assessment enables more quantitative estimates of the scales of impacts, thereby identifying the activities for which mitigation will be required.

The results of an initial qualitative Environmental Risk Assessment (ERA), seen as Step 1 of Figure 17.16, is based on secondary data that were used to inform the scoping process and develop a focused Plan of Work for the ESIA (NORI 2020a). The ERA will transition progressively from low, moderate and high in Step 1 to semi-quantitative and fully quantitative assessments in Steps 2 and 3, respectively, of Figure 17.16, as the information and feedback from the studies becomes available from the forthcoming campaigns.

Figure 17.16 Qualitative, semi-quantitative and fully quantitative risk assessments

### 17.8.6 Ecosystem Based Management

The ISA document ‘Draft regulations on exploitation of mineral resources in the Area’ (ISBA/26/C/CRP.1; 17 December 2019) states that an ‘ecosystem approach’ should be adopted for the effective protection of the marine environment from the harmful effects arising from PMN mining in the CCZ. NORI anticipates that this requirement will be preserved in the final version of the regulations and is preparing terms of reference for the inclusion of an Ecosystem Based Management (EBM) approach to impact mitigation and management.

Internationally, the ecosystem approach to environmental management has emerged as the dominant paradigm for managing marine ecosystems, that aims to protect the health, productivity, and resilience of ecosystems as well as the ecosystem goods and services valued by human beings. According to the Convention on Biological Diversity (CBD), "the ecosystem approach is a strategy for the integrated management of land, water and living resources that promotes conservation and sustainable use in an equitable way".

EBM differs from conventional resource management in that it defines management strategies for entire systems, not simply individual components of the ecosystem. Importantly, EBM considers humans as an integral part of the ecosystem, since humans derive a portfolio of services from the ecosystem and also act as a driver influencing ecosystem processes. Thus, a key aspect of EBM is illuminating trade-offs among ecosystem services and management goals (see Levin et al. 2009).

### 17.8.7 Serious Harm

The ISA draft regulations define “*serious harm to the marine environment*” as “*any effect from activities in the Area on the marine environment which represents a significant adverse change in the marine environment determined according to the rules, regulations and procedures adopted by the International Seabed Authority on the basis of internationally recognized standards and practices informed by the best available scientific evidence.*”

The definition of what constitutes “*significant adverse change*” or when harm becomes “*serious harm*” remains unclear. This is relevant in the context of the ESIA’s needs to establish thresholds and targets against which serious harm can be benchmarked.

There are a number of references to workable definitions, e.g., Levin et al. (2016) narrowed the definition down by applying the FAO definition for “significant adverse impacts” as “those that compromise ecosystem integrity”.

The FAO Guidelines provide that significant adverse impacts are “those that compromise ecosystem integrity” (Food and Agriculture Organisation, 2009, para 17). It lists six factors to consider:

1. intensity and severity of the impact.
2. spatial extent of the impact relative to habitat availability.
3. sensitivity and vulnerability of the ecosystem to the impact.
4. ability for the ecosystem to recover.
5. the extent of ecosystem alteration.
6. the timing and duration of the impact relative to species and habitat needs.

Operationalization of the definition of serious harm will be necessary to provide a practical benchmark against which success criteria can be developed for mitigation and monitoring purposes. This will require the identification of ecological thresholds and management targets for the critical components of the ecosystem that contribute to its integrity. In practice, the impacts must first be identified and quantified, with mitigation measures then applied as necessary to reduce those residual impacts to as low as reasonably practicable (ALARP). Thereafter, only the regulatory authority can judge whether the benefits of the project justify acceptance of the residual impacts.

### 17.8.8 Precautionary Approach

ISA exploration regulations require that “...sponsoring States (as well as the Authority) shall apply a precautionary approach as effected in Principle 15 of the Rio Declaration in order to ensure effective protection for the marine environment from harmful effects which may arise from activities in the Area...” (Reg 31, para 2; Reg 33, para 2).

The Rio Declaration on Environment and Development, Principle 15 states:

*“in order to protect the environment, the precautionary principle shall be widely applied by States according to their capabilities, where there are threats of serious or irreversible damage, lack of full scientific certainty shall not be used as a reason for postponing cost-effective measures to prevent environmental degradation.”*

The precautionary approach indicates that positive action to protect the environment may be required before scientific proof of harm has been provided. The precautionary approach is triggered when, for a given action, there is a) potential for harm and b) uncertainty about causality and magnitude of impacts.

NORI will apply the Precautionary Approach throughout the ESIA process with continued adoption throughout the operational phase of the project. The application of a Precautionary Approach described by in ISA (2012) will be adopted.

### 17.8.9 Mitigation

NORI currently proposes to implement management and mitigation measures to minimise adverse environmental impacts in NORI Area D, in accordance with international best practices such as adherence to the Mitigation Hierarchy (Ekstrom et al., 2015; Holness 2018). The Hierarchy involves a sequence of four key actions - avoid, minimize, rehabilitate and offset— and provides a best practice approach to aid in the sustainable management of living, natural resources by establishing a mechanism to balance conservation needs with development priorities. It is acknowledged that application of the mitigation hierarchy framework in the deep-sea context presents different challenges, particularly when considering practicalities of rehabilitation and offsets in the deep-sea environment, (e.g., UNEP-WCMC, 2016; Niner et al., 2018). These potential limitations will be fully explored when applying the framework to the NORI Area D project. However, while relevant study information is being collected, NORI proposes in-principle mitigation design and activity that will include measures such as:

- Selection of a seabed production plan e.g., collector configuration, speed and sequential collection path to maximise collection efficiency and confine disturbance to the adjacent seabed and biodiversity.
- Engineering design options (e.g., hoods, screens or diffusers) to reduce impacts of sedimentation and deposition in adjacent areas.
- Minimisation of impacts to the water column by the use of a fully enclosed RALS.
- Conducting trial methods (e.g., plume flocculation) to minimise suspension of sediments from the collector, and to retain sediment deposition within the track of the collector, and not in adjacent mine tracks.
- Development of a hydrodynamic plume model to inform selection of the depth of the discharge point dewatering, taking into account environmental considerations, such as the:
  - Design of discharge to dilute to background as soon as possible.

- Minimisation of loss of particles in discharge from dewatering.
- Selection of discharge depth to minimise exposure to fauna and depth range of oxygen minima.
- The use of biodegradable fluids and oils in subsea equipment.
- The adoption of stray light and noise reduction strategies, while meeting essential surface and subsea operational safety requirements.
- The adoption of a waste management strategy that will address the management of sewage, chemical and hazardous materials to minimise the potential for contamination of the water column, including compliance with MARPOL.
- The development of emergency response plans to mitigate the effects of natural disasters and unplanned events.
- In addition to the PRZs and APEIs, it is estimated that approximately 27% of nodules will be left in the production areas after the collector has passed or between collector lines. These nodules may provide habitat for fauna dependent on hard surfaces.

#### 17.8.10 Environmental management and monitoring plans

The ISA draft recommendations (ISBA/25/LTC/6/Rev.1) are that monitoring is conducted to ensure that no serious harm is caused to the marine environment from activities associated with the project. Environmental management of the project throughout the operational phase will require the implementation of the mitigation commitments in the ESIA to ensure that environmental targets are met and thresholds are not exceeded.

NORI will conduct monitoring during and after the operational phase of the project to validate predicted impacts and the effectiveness of mitigation measures applied. Its purpose is to include adaptive management of the project, and auditing of i) the accuracy of predicted impacts, ii) identification of any unexpected deviations from the predicted outcomes, iii) investigating reasons for any deviations, and iv) assessment of whether the mitigation measures have achieved their objectives of reducing or eliminating impacts.

The monitoring metrics and methods will be detailed in the Environmental Management and Monitoring Plan (EMMP). This is an important output of the ESIA process as it documents how NORI will implement, fund, and monitor the suite of mitigation measures described in the ESIA. The EMMP will demonstrate to the ISA that NORI has the technical knowhow, finances and will to minimize the residual impacts of the project to acceptable levels. The EMMP document will be issued as an attachment to the EIS.

A number of specific management plans will be required to support the NORI Area D project. These plans will be prepared as drafts and provided in support of the exploitation permit application. These plans may include but are not limited to:

- Conceptual closure plans.
- Emergency response plans.
- Waste management plans.
- Air quality management.
- Noise and vibration management.
- Lighting management.
- Marine mammal management.
- Biosecurity management (introduced species).

#### 17.8.11 Environmental Management System

The Environmental Management System (EMS) is a set of internal rules which are defined by a collection of policies, processes, procedures and records. This system will define how NORI will identify, assess, monitor and maintain the interactions with the environment during the operational phase in order to prevent negative environmental impacts.

ISO 14001:2015 is the international standard for the development of an effective EMS framework. This will be applied to exploitation operations to help NORI run successfully without any harmful effects and impacts on the environment. The standard is designed to maintain profitability and reduce environmental impacts of an organization's products, services and processes.

The EMS will include provisions for adaptive management, utilising management and monitoring measures described in the EMMP in an iterative decision process to improve understanding and management of the system. Key components of the adaptive management system currently under development include:

- Ongoing monitoring programs to track the status of biological resources over time (through an appropriate indicator) to assess changes in response to management and mitigation actions.
- Decision points at which management responses are selected from a set of alternatives developed as a result of modelling and risk assessment.
- Assessment of information gathered through monitoring to inform decision making, environmental performance evaluation, and iterative learning.
- Feedback loops established so that information and understanding from monitoring and assessment can be used to inform the selection of management actions; as the level of understanding of the system evolves, so too does the quality of decisions.

This adaptive management approach will facilitate an iterative cycle of decision making, monitoring, and assessment leading gradually to improved management as a consequence of improved understanding.

#### **17.8.12 Reporting**

The output of the ESIA process is NORI's EIS, which will set out factual information relating to the project and all the information gathered relating to screening, scoping, baseline study, impact prediction and assessment, mitigation, and monitoring measures. With the formal submission of the EIS, the regulating authority (ISA) will be in possession of the information required about the potential benefits and residual impacts of the project on the environment to make an informed decision on the issuance of an exploitation license.

#### **17.8.13 Permitting risks**

This section outlines the potential risks of delay or refusal by ISA of environmental approval for the NORI Area D project. To date, there is no approved seabed mining operation in the Area, although other contractors are currently at various stages of the ESIA process.

There are some examples of permit applications for deep-sea mining projects in national jurisdictions, briefly summarized as follows. Proposals for three projects in the New Zealand EEZ have so far been refused: for Neptune Resources/NIWA (iron sands and phosphorite nodule extraction), Trans-Tasman Resources Ltd (TTRL) for seabed iron ore extraction, and Chatham Rock Phosphate Ltd (CRP) for phosphate nodules. Some of the critiques common to all have been inadequate assessment of impacts or scale of impacts, inadequate understanding of "whole ecosystems", insufficient safeguards and uncertainty of models.

Environmental approvals were granted in 2009 for Nautilus Minerals Solwara-1 EIS for proposed mining of polymetallic sea floor massive sulphide deposits in the Papua New Guinea EEZ. However, the project has not developed, mostly for technical and financial reasons. The project attracted NGO criticism post EIS for insufficient information on integrated benthic/pelagic ecosystems and lack of specific detail in the drafting of the Environmental Management and Monitoring Plan commitments.

Taking this information into consideration, NORI has followed a three-stage approach in developing the scope of work to ensure i) a rigorous and robust baseline is established to meet all ISA requirements, ii) a dynamic adaptive management system is implemented and iii) a staged approach to project implementation is followed.

At the time of writing, the ISA Regulations are in draft form, giving rise to a risk that the current terms of reference for the ESIA may not meet future (finalized) requirements with resultant information gaps. It is noted that the current (draft) content of the Regulations is comprehensive in coverage of the receiving ecosystem from microfauna to megafauna, and thereby quite onerous in comparison with typical requirements for terrestrial mining projects. In order to limit possible discrepancies developing over the period of the ESIA studies, NORI has developed the scope of work by systematically addressing each of the specific recommendations in the draft Regulations. NORI expects that recommendations for contractors for the assessment of the possible environmental impacts arising from exploration for polymetallic nodules in the Area will carry through from the draft to the final recommendations.

In addition, NORI will maintain frequent dialogue with ISA through the Legal and Technical Commission (LTC) as part of its Communication and Stakeholder Engagement Plan (CSEP) to ensure that any changes in requirements can be accommodated in a timely manner. It will also ensure that stakeholders (e.g., regulatory authorities, governments, NGOs, environmental groups and the media) are informed of project progress and lines of communication are maintained to address concerns arising.

## **17.9 Closure**

The draft regulations on exploitation of mineral resources in the Area (ISBA/26/CRP.1) set out closure responsibilities that include preparation of Closure Plans within a prescribed time prior to planned closure, review of environmental performance guarantees, and post closure monitoring. There will therefore be some ongoing monitoring costs in fulfilment of the Closure Plans.

## **17.10 Onshore environmental and regulatory**

Recovery of the target metals from the nodules will require on-shore processing. As yet, the processing plant has not been designed and its location and host country are not identified. The planned metallurgical process is not expected to produce solid wastes and the content of environmentally active trace metals such as cadmium and arsenic is low. However, NORI recognises that on-shore processing may have potential environmental impacts that should be formally assessed, in due course. NORI is committed to design the processing plant to achieve environmental performance consistent with best global practice and standards regardless of where the plant is built. A comprehensive environmental management plan to be compliant with EMS Standard ISO 14001:2004 will be developed during the Pre-feasibility Study Phase.

18 Capital and operating costs

The capital and operating costs have been split between on-shore and off-shore operations. The off-shore operations consist of all activity at sea, including the recovery of the nodules from the seabed, and transportation of the nodules to shore.

**18.1 Project scale-up**

NORI originally conceived development of NORI Area D with a production rate of 6.4 Mtpa (wet) of nodules, with processing of all the nodules in a new bespoke process plant. Early engineering studies and cost estimates were based on this scenario. For the current IA, NORI proposed a larger scale project, with processing of some of the nodule production under toll treatment arrangements. Toll treatment of nodules in the early years off the project would provide early cash flow without the need to bring forward capital expenditure on NORI's own plant.

In Project Zero, it is proposed that wet nodules will initially be processed in independent pyrometallurgical and hydrometallurgical plants a in toll treatment arrangement. NORI proposes that 4.1 Mtpa of nodules (wet) (3 Mtpa dry) will be processed in tolling arrangements each year (four pyrometallurgical plants by 0.75 Mtpa (dry)/plant). In Project One, once off-shore production increases above 3 Mtpa, the nodules will be processed in pyrometallurgical and hydrometallurgical plants operated and owned by NORI.

In Project One, the cost estimates off-shore property, plant and equipment are based on estimates prepared by DRT for NORI during the 2015 DRT scoping study and updated for this study. The scoping study cost estimates were generally derived from budget estimates supplied by original equipment manufacturers or engineering contractors that specialise in each of the items under consideration. DRT prepared new cost estimates for:

- Project Zero:
  - Upgrading the Hidden Gem drillship for commercial production at up to 1.3 Mtpa (wet) following the Collector Test.
- Project One:
  - Upgrading the Hidden Gem drillship to production at up to 3.6 Mtpa (wet).
  - Conversion of another drillship (Drill Ship 2) for production at up to 3.6 Mtpa (wet).
  - Construction of a bespoke PSV, Collector Ship 1, for production at up to 8.2 Mtpa (wet).

The costs are consistent with Class 4 estimates as defined by ASTM, AACE standards. Contingency is not included.

Estimates for Project Zero and Project One were prepared by DRT based on the assumption that the Hidden Gem sixth generation drillship being converted for the Collector Test would be upgraded to a commercial system following the Collector Test. Upgrading would take place in two stages:

- 1) Project Zero: would utilize the small collector vehicle (6 m width) from the Collector Test and its handling system (LARS).
- 2) Project One: would involve replacement of the small collector with two larger collectors and a new LARS to allow operation of the two larger collectors together.

To account for annual on-shore production that is higher than the 6.4 Mtpa (wet) of nodules baseline throughput values, the capital cost estimates were scaled up, pro-rata, based on capacity, with pyrometallurgical plant capacity 33% higher and hydrometallurgical plant capacity 80% higher. Limitations of the scaling approach include:

- Potential economies of scale are not considered.
- The 6.4 Mtpa (wet) baseline estimate is dated 2019, and the financial model 2020. No inflation adjustment was made.
- The 6.4 Mtpa (wet) baseline estimate was based on a single capital project execution approach, rather than a staged investment in multiple phases. Increased indirect costs for staged implementation of multiple projects were not considered.
- The forecast of construction duration for the 6.4 Mtpa (wet) baseline project is three years. The staged implementation for the larger project reflects shorter investment time periods which may be difficult to achieve for the initial stage.
- With respect to operating costs, no adjustments were made to the 6.4 Mtpa (wet) baseline estimate of unit production costs to reflect higher initial fixed costs (for partial production) and lower later fixed costs (for higher production) due to project staging.

The QPs consider that for the IA, which has an accuracy of the order of +/- 50%, the scaling factors are reasonable.

Based on the required production throughputs, NORI proposes to build and operate four RKEF lines and two hydrometallurgical refineries. The construction schedules of the RKEF lines are as follows:

- RKEF Lines 1 and 2: 2024 to 2026 with production commencing in 2027.
- RKEF Line 3: 2025 to 2027 with production commencing in 2028.
- RKEF Line 4: 2026 to 2028 with production commencing in 2029.

The construction schedules of the hydrometallurgical refineries are as follows:

- Hydrometallurgical refinery 1: 2024 to 2026 with production commencing in 2027.
- Hydrometallurgical refinery 2: 2027 to 2029 with production commencing in 2030.

Costs for NORI's proposed process plant have been considered from the arrival of the nodules at the facility to the production of final product and load out for transport from the facility.

Capital costs are divided into a pre-project period, construction costs during the project period, an operating period when sustaining capital expenditure (off-shore and on-shore) will be required and closure costs at the end of the operating period. All capital and operating costs are in US dollars.

Capital expenditure estimated at US\$10.6 billion is required between 2021 and the completion of the project in 2046. A breakdown of the total is given in Table 18.1.

Table 18.1 Summary of all capital costs

Section	Cost estimate (US\$ million)
Pre-project costs	\$237
Project costs	
Off-shore project costs (including 25% contingency)	
Project Zero	\$204
Project One	\$2,244
Total	\$2,448
On-shore project costs (including 32% contingency)	
Project One	\$4,786
Total	\$4,786
Total project costs	\$7,234
Sustaining capital costs (on-shore and off-shore)	\$2,637
Closure costs	\$500
Total	\$10,607

## 18.2 Pre-project capital cost estimates

NORI has estimated the costs that it expects to incur during study and engineering phases prior to construction. The pre-project period is expected to extend from 2021 until early 2024. The pre-project capital includes the costs of converting the Hidden Gem for the Collector Test, and the Collector Test itself. The pre-project cost estimates are summarised in Table 18.2.

Table 18.2 Pre-project capital costs

Section	Cost Estimate (\$US million)
Equity Account	\$37.5
Off-shore Development	\$70.6
On-shore Operations	\$36.3
Off-shore Operations	\$32.7
Environment	\$12.5
Geoscience & Mine Development	\$0.4
Regulatory Approval	\$2.4
Personnel costs	\$36.8
Corporate costs	\$1.7
Communications	\$3.2
Business Development	\$2.3
Total	\$236.5

## 18.3 Project-period capital cost estimates

### 18.3.1 Off-shore capital costs

#### 18.3.1.1 Project Zero: Hidden Gem Upgrade

The Hidden Gem Drillship will be taken to a shipyard after it has been modified and used for the Collector Test and upgraded to be capable of producing up to 1.3 Mtpa, including one self-propelled collector and RALS. This system will have a design life of five years.

It has been assumed in the development of this cost estimate that the existing accommodation block, drilling and vessel systems on the Hidden Gem were either removed from the vessel, if not required, or refurbished and converted for use as a mining vessel for five years operation. The vessel will also be surveyed and classified by a recognized Class Society for operation as a Mining Vessel.

The capital expenditure (CAPEX) cost estimate for upgrading the Hidden Gem for up to 1.3 Mtpa operation includes engineering, procuring and integrating in a Singapore vessel conversion shipyard. The following changes/additions to the Hidden Gem used for the Collector Test are included:

- New air compressors to replace the leased units on the Collector Test with sufficient capacity to operate the air lift riser for the design production rate.
- Airlift discharge de-aeration and pressure let down system to provide an 8 bar pressurized discharge.
- Dewatering equipment and storage of the nodules in the vessel's existing Crude Oil Tanks.
- Slurrification and nodule offloading pumps and offloading hose reels and hawser to offload the nodules to a tandem moored Dynamically Positioned Transport Vessel.
- Slurry water return system from the Transport Vessel for subsurface disposal.

Note that equipment redundancy has been minimized to reduce CAPEX due the limited production time (five years) for this operation.

The cost includes reusing the collector umbilical system and modifying the collector vehicle used in the Collector Test. A completely new riser system and flexible jumper hose string between the collector and the steel riser will be purchased. It is assumed that the LARS purchased for the Collector Test and existing drillship ROV LARS modifications, will be suitable for Project Zero.

No allowance has been included in the CAPEX estimate for a mark-up by a contractor to execute the Engineering, Procurement and Construction/Commissioning (EPC) of the Hidden Gem upgrade. Therefore, the following are excluded from the CAPEX estimate:

- Taxes
- Duties
- Contractor costs for Letter of Credit, Bank Guarantee, and Performance Bond
- Owners costs for Program Management
- Cost of finance and project financing arrangements, if not neutral cash flow
- CAR Insurance
- Liability insurance
- Warranty / Repairs allowance
- Contractor profit
- Contractor overhead recovery (head office, bid preparation costs, etc.)
- Pre-project Engineering and Development Costs

CAPEX costs are summarized in Table 18.3. Transportation costs, including vessel charter, are included in the operating expenditure estimate (OPEX).

Table 18.3 Project Zero: CAPEX for Hidden Gem upgrade

2020 Costs (US\$ million)	Collectors	Lift (Riser Only)	Production Vessel	TOTAL
Vessel Acquisition & Management	\$0.0	\$0.0	\$0.5	\$0.5
Single Unit Procurement including Vessel Acceptance Testing (excl. O&M Crew)	\$18.5	\$28.7	\$42.7	\$89.8
Initial Spares Inventory	\$6.1	\$4.3	\$3.9	\$14.3
Engineering & Subsystem Test	\$4.5	\$5.7	\$9.5	\$19.8
Project Management	\$1.9	\$2.9	\$4.5	\$9.3
Mobilisation to Site, Integration, Site Commissioning	\$2.1	\$6.2	\$21.0	\$29.3
<b>TOTAL</b>	<b>\$33.1</b>	<b>\$47.8</b>	<b>\$82.1</b>	<b>\$163.0</b>

### 18.3.1.2 Project One: Hidden Gem Upgrade

Following five years of operation, the Hidden Gem will be upgraded for production of up to 3.6 Mtpa with a design life of 20 years.

The CAPEX estimate for upgrading the Hidden Gem includes engineering, procuring and integrating, in a Singapore vessel conversion shipyard, including the following changes/additions to the 1 Mtpa mining vessel:

- Increased air compressor capacity to operate the air lift riser for the design production rate.
- Refurbishment of the hull structure and coatings to achieve the design life of 20 years with minimal steel renewal at special survey dry dockings.
- Providing mining equipment redundancy to provide the reliability and availability to achieve the total annual nodule production tonnage required.
- Provide additional electrical switchgear and MCCs to operate the additional redundant mining equipment.
- Relocate the Collector LARS system forward of the moonpool where space exists to handle, store and maintain larger collectors on deck.
- Provide two additional 7 MW power generation units to provide additional power for larger air compressor capacity.

The cost includes purchasing two new larger collector vehicles for simultaneous operation subsea. The existing flexible jumper hose power reel and collector umbilical system will be used but a second new flexible jumper hose reel and collector umbilical system will be purchased to enable the installation and operation of a second subsea collector.

The flexible jumper and riser from Project Zero will be replaced, due to wear and tear from the 5 years operation, and second flexile jumper hose string purchased for the second collector.

The riser and collector vehicles are considered to have a five-year service life, and their replacement every five years is considered Sustaining Capital. The actual service life may be greater or less than this and can only be determined after further engineering, testing and actual service experience.

The purchase of two new ROVs, complete with control cabin, have been included in the CAPEX for the 20-year design life with two collectors instead of leasing one as was done for Project Zero.

No allowance has been included in the CAPEX for a mark-up by a contractor to execute the EPC of the Hidden Gem upgrade. Therefore, the following are excluded from the CAPEX estimate:

- Taxes
- Duties
- Contractor costs for Letter of Credit, Bank Guarantee, and Performance Bond
- Owners costs for Program Management
- Cost of finance and project financing arrangements, if not neutral cash flow
- CAR Insurance
- Liability insurance
- Warranty / Repairs allowance
- Contractor profit
- Contractor overhead recovery (head office, bid preparation costs, etc.)
- Pre-project Engineering and Development Costs
- Contingency – 25% contingency was added in the economic analysis presented in Section 22 of this report

Table 18.4 provides a summary of the CAPEX for upgrading the Hidden Gem from 1 Mtpa to a 2.6 Mtpa production vessel.

Table 18.4 Project One: CAPEX for upgrade of Hidden GEM

2020 Costs (\$US million)	Collectors	Lift (Riser Only)	Production Vessel	Total
Vessel Acquisition & Management	\$0.0	\$0.0	\$2.3	\$2.3
Single Unit Procurement including Vessel Acceptance Testing (excl. O&M Crew)	\$67.4	\$29.1	\$111.8	\$208.3
Initial Spares Inventory	\$13.2	\$3.6	\$8.1	\$24.9
Engineering & Subsystem Test	\$4.8	\$1.2	\$9.7	\$15.7
Project Management	\$6.8	\$2.4	\$5.4	\$14.6
Mobilisation to Site, Integration, Site Commissioning	\$4.6	\$4.8	\$21.3	\$30.7
<b>TOTAL CAPEX</b>	<b>\$96.7</b>	<b>\$41.2</b>	<b>\$158.6</b>	<b>\$296.5</b>

### 18.3.1.3 Project One: Drill Ship 2 Conversion

A second used drillship (Drill Ship 2) will be purchased and converted for use as second production vessel capable of producing up to 3.6 Mtpa for a 20-year design life. Since the vessel has not been previously used for mining operations, the existing hull structure and coatings, accommodation unit, and drilling and vessel systems will need to be removed if not being used for mining operations or refurbished and converted for an additional 20-year operation as a mining vessel.

An acquisition price of US\$50 million was assumed for a used sixth generation drillship, based on current market information (Tomic, 2020).

The CAPEX estimate for converting Drill Ship 2 includes engineering, procuring, and integrating in a Singapore vessel conversion shipyard. The following changes are included:

- Air compressor module with capacity to operate the air lift riser for the design production rate.
- Refurbishment of the hull structure and coatings to achieve the design life of 20 years with minimal steel renewal at special survey dry dockings.
- Removal of the drilling equipment not to be used during the vessel operation as a mining vessel.
- Mining equipment redundancy to provide the reliability and availability to achieve the total annual nodule production tonnage required.
- Additional electrical switchgear and MCCs to operate the additional redundant mining equipment.
- New Collector LARS system forward of the moonpool where space exists to handle, store, and maintain larger collectors on deck.
- Dewatering equipment and storage of the nodules in the vessel's existing Crude Oil Tanks.
- Slurrification and nodule offloading pumps and offloading hose reels and hawser to offload the nodules to a tandem moored Dynamically Positioned Transport Vessel.
- Slurry water return system from the Transport Vessel for subsurface disposal.
- Two new ROVs and control cabin to support disconnection and retrieval operations of two operating subsea collectors, for maintenance and storm preparation operations.
- Refurbish existing drilling ROV LARS to support two mining ROVs.
- Provide two additional 7 MW power generation units to provide additional power for the larger air compressor capacity.

The cost includes purchasing two large new collector vehicles for simultaneous subsea operation, as well as two new flexible jumper hose powered reels with jumper hose strings and two collector umbilical systems.

A new RALS with steel nodule production riser, air lift injection line, seawater slurry disposal line, and buoyancy will be purchased.

No allowance has been included in the capital cost estimate for a mark-up by a contractor to execute the EPC of the Drill Ship 2 refurbishment and conversion. Therefore, the following are excluded from the CAPEX estimate:

- Taxes
- Duties
- Contractor costs for Letter of Credit, Bank Guarantee, and Performance Bond
- Owner’s costs for Program Management
- Cost of finance and project financing arrangements, if not neutral cash flow
- CAR Insurance
- Liability insurance
- Warranty / Repairs allowance
- Contractor profit
- Contractor overhead recovery (head office, bid preparation costs, etc.)
- Pre-FID Engineering and Development Costs.
- Contingency – 25% contingency was added in the economic analysis presented in Section 22 of this report.

Table 18.5 presents a summary of the CAPEX for converting Drill Ship 2 to a production vessel.

Table 18.5 Project One: CAPEX for conversion of Drill Ship 2

2020 Costs (US\$ million)	Collectors	Lift (Riser Only)	Production Vessel	Total
Vessel Acquisition & Management	\$0.0	\$0.0	\$63.5	\$63.5
Single Unit Procurement including Vessel	\$67.8	\$29.3	\$166.0	\$263.1
Acceptance Testing (excl. O&M Crew)				
Initial Spares Inventory	\$13.3	\$4.4	\$15.7	\$33.3
Engineering & Subsystem Test	\$4.9	\$5.8	\$19.1	\$29.8
Project Management	\$6.8	\$2.9	\$7.7	\$17.4
Mobilisation to Site, Integration, Site Commissioning, & Start-up	\$4.6	\$6.3	\$31.1	\$42.1
<b>TOTAL</b>	<b>\$97.4</b>	<b>\$48.8</b>	<b>\$303.0</b>	<b>\$449.1</b>

#### 18.3.1.4 Project One: Collector Ship 1 construction

The Collector Ship 1 costs are based upon the previous Scoping Study performed in 2015 by DRT (DeepReach Technology Inc., 2015), revised in November 2020 as follows:

- Collector vehicle costs were adjusted to consider the commercial collector design developed by Cellula Robotics, Inc. (Cellula Robotics Ltd., 2015). This involved an addition of buoyancy material to maintain acceptable bearing load.
- Collector vehicle costs were adjusted to include capability to eliminate sediment entrained by the collector head from entering the riser. This includes additional ducting and clean water pumps. The design is based upon ongoing research into this improvement to the collector.
- CAPEX and OPEX costs were scaled to account for an increase in the nominal production rate to 8.2 Mtpa versus 6.4 Mtpa. This is to allow the project to take advantage of higher abundance (20 kg/m<sup>2</sup> versus 15.9 kg/m<sup>2</sup> assumed in the 2015 study).

Inflation of CAPEX was assumed to be zero in view of the current market situation for capital costs in the upstream energy markets (IHS Market, 2021). This data shows a 10% deflation in upstream capital costs since 2015. New build shipbuilding costs have been static since 2015.

Table 18.6 summarises the capital expenditure costs for the construction of Collector Ship 1 for 6.4 Mtpa production. Cargo ships to transfer nodules from the PSV to port are excluded from the estimate. These vessels will be chartered. In this table:

- “Single unit(s) procurement” refers to one production fleet consisting of five collectors, one RALS, one production vessel, and one collector support vessel.
- “Initial spares inventory” includes spare parts for the first year of operation. An allowance of 5% of single unit costs was used, except for 10% allowance for the collector.
- “Detailed engineering and subsystem testing” refer to the engineering and tests devoted to each sub-system. Design of the material handling and airlift system are included under the production vessel cost category. These include both non-recurring costs (for example, engineering) and recurring costs (for example, factory acceptance testing) associated with the design and test of each subsystem.
- “Project management” was estimated at approximately 2% of the single unit procurement cost.
- “Start-up, mobilisation, integration and commissioning” includes the activities of integrating all the equipment and performing trials in shallow and deep water prior to commencing ramp-up of extraction operations. An allowance of nine months of operations is included for this activity.

As was the case for the other vessels, no allowance has been included in the capital cost estimate for a mark-up by a contractor to execute the EPC of the refurbishment and conversion. Therefore, the following are excluded from the CAPEX estimate:

- Taxes
- Duties
- Contractor costs for Letter of Credit, Bank Guarantee, and Performance Bond
- Owners costs for Program Management
- Cost of finance and project financing arrangements, if not neutral cash flow
- CAR Insurance
- Liability insurance
- Warranty / Repairs allowance
- Contractor profit
- Contractor overhead recovery (head office, bid preparation costs, etc.)
- Pre-project Engineering and Development Costs
- Contingency – 25% contingency was added in the economic analysis presented in Section 22 of this report.

Table 18.6 Project One: CAPEX for Collector Ship 1

2020 Costs (US \$million)	Collectors	Lift (Riser Only)	Production Support Vessel incl OFE	Collector Support Platform (PSS)	Total
Single Unit(s) Procurement	\$164.4	\$98.0	\$384.1	\$199.6	\$846.0
Initial Spares Inventory	\$16.4	\$4.6	\$19.2	\$10.0	\$50.2
Detailed Engineering & Subsystem Test	\$14.2	\$10.4	\$17.3	\$5.8	\$47.6
Project management	\$3.3	\$2.0	\$7.7	\$4.0	\$17.1
Startup, Mobilization, Integration & Commissioning	\$0.0	\$0.0	\$65.9	\$22.6	\$88.5
Total	\$198.3	\$114.9	\$494.1	\$242.1	\$1,049.4

### 18.3.1.5 Collector support vessel

A semi-submersible collector support vessel will maintain the collectors deployed by Collector Ship 1. The collector support vessel capital cost estimates were based on the actual costs for the Helix Deepwater Well Intervention platform Q4000, built in the Keppel AmFELS yard in Brownsville, Texas in 2002. The actual costs for this vessel were reportedly US\$180 million. US shipbuilding price escalation is estimated at 150% (FRED, 2020) for an estimated cost of US\$270 million in 2020. For this IA, a discount of 30% was estimated for Chinese versus US construction to estimate the cost for Chinese construction in 2020.

### 18.3.1.6 Project management

Project management costs represent an allowance for an integrated project team to manage and integrate the front-end engineering and design, which would be performed by one or more contractors. The cost estimates were based on engineer's estimates made by DRT, escalated by the US consumer price index (CPI) since 2015.

### 18.3.2 On-shore capital cost for Project One

Capital costs have been estimated for the construction of the processing facility to handle 4.88 Mt (dry) of nodules per year. The estimate has been developed according to Association for the Advancement of Cost Engineering Class 5 level of accuracy (-35% +50%) and is expressed in first quarter 2019 US dollars. A contingency of 32% has been applied to the estimate. Owner's costs and escalation beyond 2019 are excluded.

The on-shore capital cost estimates are summarised in Table 18.7. Further details of the estimate are provided in Table 18.8.

Table 18.7 Summary of project period on-shore capital costs

Section	Cost estimate (US\$ million)
General	\$179
Pyrometallurgical plant	\$1,052
Hydrometallurgical refinery	\$483
Total direct cost	\$1,713
Indirect costs	\$622
Total direct and indirect costs	\$2,335
Contingency	\$746
Total on-shore capital cost	\$3,081

Table 18.8 Summary of project period on-shore capital costs by plant area

Section	Cost estimate (US\$ million)
General	
Site development, roads and buildings	\$46
Power supply and distribution	\$46
Utilities	\$76
Mobile equipment	\$10
Total general	\$179
Pyrometallurgical Plant	
General (building/substation)	\$276
Feed handling	\$106
Rotary kiln calcining	\$216
Electric furnace smelting	\$340
Converter aisle sulphidation	\$113
Total pyrometallurgical plant	\$1,052
Hydrometallurgical refinery	
Matte receiving and handling	\$18
Leaching & Purification	\$87
Copper EW	\$107
Cobalt SX and Purification	\$62
Nickel SX	\$80
Crystallisation & Product Packaging	\$82
Reagents and Utilities	\$48
Total hydrometallurgical refinery	\$483
Total direct on-shore costs	\$1,713

Key assumptions that have been made in developing the estimate include:

- The processing plant will be situated on a flat site.
- Nodules will be delivered to the plant boundary, at the rate required by the process (any buffering to decouple ship unloading rates from conveying rates is assumed to be done at the port).
- Minimal storage of materials and reagents is provided at the plant.
- Utilities will be provided at the plant boundary, including power, water and natural gas.
- Oxygen will be supplied on a cost per tonne basis (sale of gas basis).
- The plant will be built near a major municipality, no camp infrastructure is assumed for construction or operating labour.

The following items are excluded from the capital cost:

- Sunk and legal costs.
- Special incentives and allowances.
- Owner's costs, including permitting and construction insurance.
- Escalation, interest and financing costs.
- Start-up costs beyond those specifically included.
- Additional exploration expenses.
- Delivery of utilities (power, water, natural gas) to the plant boundary. High voltage power lines would be supplied by others up to the plant main substation.

- Port facilities including storage.
- Equipment (permanent or mobile) required to transport feed materials from the port to the plant boundary.
- Equipment (permanent or mobile) required to transport products from the plant to port facilities.

#### 18.4 Sustaining capital cost estimates

The sustaining capital costs (dry dock) for the vessels are:

- Hidden Gem Dry Dock: US\$327 million (US\$109 million per dry dock)
- Drill Ship 2 Dry Dock: US\$349 million (US\$109 million per dry dock)
- Collector Ship 1 Dry Dock: US\$742 million (US\$232 million per dry dock)
- Total: US\$1,418 million

The sustaining capital includes replacement of collectors and risers during each 5-year dry docking cycle, as well as statutory maintenance required to maintain the vessels in class. The sustaining capital allowance was reduced for the last dry dockings for Drill Ship 2 and Collector Ship 1 because their remaining production life at those points is only two and one years, respectively.

For the process plant, sustaining costs of 1.25% of the total on-shore capital costs were applied from the first year of production (2024) to end of the scheduled project life (2046). Total sustaining capital for the on-shore components of the Project is estimated as US\$1,219 million.

#### 18.5 Closure cost estimates

A closure cost of US\$500 million has been allowed in 2046 for remediation of the on-shore minerals processing facility.

Very little infrastructure is expected to be established in the seafloor production areas. Closure costs associated with off-shore activities, which will include post-closure monitoring, are not expected to be material to the IA cost estimates.

#### 18.6 Operating cost estimates

The estimated operating costs, when production reaches steady state in 2030, are summarised in Table 18.9.

Table 18.9 Operating costs at steady state production

Section	Average Operating Cost over Life of Mine (US\$ million/annum)	Average Unit Cost (US\$/t - wet tonne nodules recovered)	Average Unit Cost (US\$/t - dry tonne processed)
Off-shore	\$240.7	\$19.3	\$25.40
Shipping	\$254.4	\$20.4	\$26.84
On-shore	\$1,286.2	\$103.1	\$135.71
Other	\$25.0	\$2.00	\$2.64
Total	\$1,806.3	\$144.85	\$190.59

**18.6.1 Off-shore operating costs**

The operating cost estimates used in this IA are based on estimates prepared by DRT for NORI during the 2015 DRT scoping study. The cost estimates were revised in February 2019. The US Department of Labor, Bureau of Labor Statistics Index CPI-U - Consumer Price Index for All Urban Consumers, increased by 5.848% from May 2015 to January 2019. For this IA, labor-related costs were escalated from 2015 estimates by this CPI value.

Operating expenses are dominated by the cost of fuel, originally based upon a cost of US\$660 per tonne in the Los Angeles/Long Beach market. Since 2015, fuel prices have varied from a low of US\$385 per tonne in early 2016, to a high of US\$785 per tonne in Q4 2018. On 27 February 2020, the price was US\$464 per tonne. This IA is based on a fuel price of US\$500 per tonne, which is the same as the 2015 estimate, and is within the recent range of fuel prices in recent years. The qualified person considers this approach is reasonable.

The PSV crew is assumed to include 52 personnel of which 30 are devoted to mining operations, and the remainder marine crew. The collector support vessel crew includes 30 personnel of which eight would be devoted to collector and maintenance.

Maintenance costs have been factored from the initial capital expenditure at a rate of 5% per annum.

**18.6.1.1 Project Zero operating costs**

Off-shore operating costs estimated for Project Zero are shown in Table 18.10.

Owner's costs include on-shore staff for support of the operations, maintenance, mine planning and logistics of the mining operation, and operation of a separate chartered survey vessel for environmental monitoring and survey.

Table 18.10 Project Zero - Annual Off-shore operating cost

2020 Costs (US\$ million/annum)	Collectors	Lift (Riser Only)	PSV	Total (w/o transport)
Personnel	\$0.0	\$0.0	\$16.5	\$16.5
Fuel (after start of mining operations)	\$0.0	\$0.0	\$23.4	\$23.4
Maintenance, Repair and Support Services	\$1.6	\$1.2	\$9.0	\$11.9
Insurance	\$0.2	\$0.2	\$0.6	\$1.1
<b>TOTAL</b>	<b>\$1.9</b>	<b>\$1.5</b>	<b>\$49.5</b>	<b>\$52.9</b>

### 18.6.1.2 Project One operating costs

Operating costs for the Hidden Gem and Drill Ship 2 during Project One are shown in Table 18.11

Table 18.11 Project One - Summary of annual off-shore operating costs for Hidden Gem and Drill Ship 2

2020 Costs (US\$ million/annum)	Collectors	Lift (Riser Only)	PSV	Total
Personnel	\$0.0	\$0.0	\$19.3	\$19.3
Fuel	\$0.0	\$0.0	\$26.7	\$26.7
Maintenance, Repair and Support Services	\$3.1	\$1.3	\$9.6	\$14.1
Insurance	\$0.7	\$0.2	\$1.6	\$2.5
Total	\$3.8	\$1.6	\$57.1	\$62.5

The annual operating costs for Collector Ship 1 during steady-state production of approximately 7 Mtpa (wet) are summarised in Table 18.12.

Table 18.12 Project One - Summary of annual off-shore operating costs for Collector Ship 1

2020 Costs (US\$ million/annum)	Collectors	Lift (Riser Only)	PSV	Total
Personnel	\$0.0	\$0.0	\$15.7	\$15.7
Fuel	\$0.0	\$0.0	\$47.1	\$47.1
Inspection, Repair and Support Services	\$8.2	\$4.7	\$9.9	\$22.8
Insurance	\$0.0	\$0.0	\$3.4	\$3.4
TOTAL	\$8.2	\$4.7	\$76.0	\$88.9

The annual operating costs for the CSV during steady-state production is summarised in Table 18.12.

Table 18.13 Project One - Summary of annual off-shore operating costs for CSV

2020 Costs (US\$ million/annum)	Total
Personnel	\$8.3
Fuel	\$5.0
Inspection, Repair and Support Services	\$5.5
Insurance	\$0.9
TOTAL	\$19.7

### 18.6.2 Transportation costs

This IA assumes transportation of nodules will be by vessels equipped with dynamic positioning (DP) and dewatering capabilities, utilizing vertical cuttings driers which can remove all but 10% of the free moisture in the vessel holds. DP capability will enable vessels to be loaded at sea, astern of the PSVs.

Transshipment cost estimates are based on estimates by DRT. Trans-shipment model parameters and costs are summarized in Table 18.14. The table indicates buffer storage capacity is adequate to cover the interval between vessel arrivals for Project Zero, however Project One has less buffer storage than this (1.6 days production in buffer storage versus 2.5 days between vessel arrivals, on average). This could be resolved by increasing size and number of vessels in the fleet or by increasing the buffer storage on the PSV, e.g., by converting a larger bulk mineral carrier. These estimates are considered adequate for the purposes of this IA, however further study and optimization of dewatering systems, buffer storage and transport fleet parameters should be performed during the pre-feasibility phase. Tests to determine the amount of attrition during collection and lifting of the nodules will be necessary to inform materials handling and dewatering studies.

In Project Zero, the nodules will be transported to toll-treatment facilities in China. DGM has estimated a cost of \$11/t of nodule (wet) to transport the nodules from the transshipment to Chinese ports.

In-country costs to unload and transport the nodules from the Chinese ports to the toll treatment plants are included in the toll treatment figure estimate of US\$100/tonne of nodule (dry). Estimates were based on initial market intelligence provided by Shanghai Metals Market (SMM, 2020).

In Project One, the IA assumes that nodules will be shipped from NORI Area D to a port on the west coast of Mexico in the state of Michoacán where a process plant would be located. NORI has also used a figure of \$US11/tonne of wet nodules for transportation from the ports to the process plants, based on estimates by Global Location Strategies (Global Location Strategies, 2019) undertaken for NORI. This figure includes off-loading at the port and transportation to the plant.

Table 18.14 Summary of parameters and costs for transport between vessels and transshipment

Vessel	Project Zero	Project One	
	Hidden Gem	Hidden Gem/Drill Ship 2	Collector Ship 1
<b>Annual Production (Mtpa (wet))</b>	1.3	3.6	8.5
Vessel Size (DWT)	35,000	100,000	100,000
No. Vessels in Fleet	2	2	3
Average Cargo Loading Rate (tph)	185	456	1665
Cargo Loading Time (days)	8.3	9.1	2.5
Total Cycle Time (days)	15.5	17.4	10.8
Buffer Storage (days production)	0.8	0.3	1.6
Time between vessel arrivals (days)	-1.2	-0.7	2.5
<b>Annual Costs (US\$ million/annum)</b>			
Personnel	\$4.5	\$4.9	\$8.3
Fuel	\$4.3	\$6.7	\$22.4
Inspection, Repair and Support Services	\$3.8	\$6.8	\$9.8
Insurance	\$0.0	\$0.1	\$0.1
Vessel Charter	\$6.1	\$12.6	\$18.9
<b>TOTAL OPEX</b>	<b>\$18.7</b>	<b>\$31.1</b>	<b>\$59.4</b>

### 18.6.3 Programme management and logistical costs

Estimates of programme management and logistical costs are provided in Table 18.15.

Table 18.15 Programme management and logistical cost

Section	Costs (US\$ million/annum)
Personnel	\$3.2
Travel, G&A	\$0.9
Vessel Charter (Survey & Support)	\$10.0
<b>TOTAL</b>	<b>\$14.1</b>

### 18.6.4 Other operating costs

Estimates of annual corporate and administration costs are presented in Table 18.16.

Table 18.16 Annual corporate and administration costs

Section	Cost (US\$ million/annum)
Nauru administration fee	\$0.1
Kiribati administration fee	\$0.1
Environmental monitoring	\$1.5
Corporate costs	\$10.0
<b>Total</b>	<b>\$11.7</b>

#### 18.6.5 On-shore operating costs – Project Zero

An overall operating cost of US\$100/tonne dry nodules has been assumed for the toll treatment option in Project Zero and Project One. The figure covers the costs for a third party to treat the nodules in its processing facilities to produce the various products. This figure was based on benchmarked operations.

For the production of the nickel alloy, an alloy treatment charge of US\$300/tonne of alloy produced has been assumed. This is based on benchmarked figures and discussions with traders.

#### 18.6.6 On-shore operating costs – Project One

Operating cost estimates were developed assuming a throughput of 4.88 Mtpa dry nodules. Operating cost and production were subsequently scaled by DeepGreen for the projected increase in production, as discussed in Sections 21 and 22.

Project One Operating costs have been estimated for a normal, full operating year, not a ramp-up year or a major outage year (e.g., with the appropriate design features, furnace rebuilds are typically needed after 15–20 years) and are summarised in Table 18.17.

Major consumables (energy, reagents) have been taken from the mass and energy balances calculated in the process models. Other costs have been estimated by reference to other projects at more advanced stages of definition. Unit prices have been assumed based on previous projects, in-house data, or allowances. Plant management and general supplies for the complete facility have been assigned to the pyrometallurgical plant.

Further details for the pyrometallurgical operating costs, including unit prices, are shown in Table 18.18.

Table 18.17 Summary of on-shore annual operating costs for Project One

Section	Cost estimate (US\$ million)
<b>Pyrometallurgical plant (for 4.88 Mtpa of dry nodules)</b>	
Electricity	\$223.0
Coal	\$47.3
Natural gas and diesel	\$26.6
Maintenance materials	\$35.5
Smelting and sulphidation consumables and slag handling	\$28.6
Plant labor, management	\$24.2
Water and water treatment	\$5.5
Total pyrometallurgical operating costs	\$390.8
<b>Hydrometallurgical refinery (for 62 ktpa of produced nickel)</b>

Plant Labor				\$8.9
Supervisors and managers	9	Personnel	\$40,000	\$0.4
Engineers and laboratory	27	Personnel	\$30,000	\$0.8
Site workers and operators	310	Personnel	\$25,000	\$7.8
Maintenance Materials				\$18.4
<b>Total Hydrometallurgy Operating Costs</b>				<b>\$127.2</b>

An allowance for plant management costs (labour and others) has been made for both the pyrometallurgical and hydrometallurgical facilities. This has been assigned to the pyrometallurgical plant. Operating labour cost accounts for plant operations only in both the pyrometallurgical and hydrometallurgical facilities. Expenses associated with corporate and administrative activities such as human resources, finance, accounting, marketing, permitting, insurance among others are excluded from the estimate.

No contingency has been included in the on-shore operating cost estimate. Any cost item not explicitly listed above has been excluded.

### 18.6.7 Sulphidization costs

NORI has assumed that some third party RKEF plants will be modified to produce nickel copper cobalt alloy. Some of the alloy production will be shipped to the NORI hydrometallurgical plants to make use of spare capacity. This will require the alloy from the third party RKEF to be sulphidized. NORI has estimated a figure of US\$3,000/t of nickel produced to account for the capital and operating costs of third party sulphidization treatment.

19 Economic analysis

A financial model based on estimates of future cash flows derived from extraction of nodules from the NORI Project has been developed in-house by DeepGreen. AMC reviewed the logic, input assumptions and integrity of the calculations and forecasts. The financial model is for NORI Area D only, which is at a preliminary level of planning and design.

The mining plan considered in this IA contemplates a 23-year production period. The expected production period is within the expected duration of a NORI Area D Exploitation Contract which would be thirty years (with possible extensions by periods of 10 years) as outlined in the current draft of the regulations for exploitation of Mineral Resources in the Area (ISBA /25/C/WP.1).

After the initial 23-year period, substantial resources will remain in the other NORI Areas that could support future mining (combined Inferred Mineral Resource in NORI Areas A, B and C of 510 Mt (wet) at 1.28% Ni, 0.21% Co, 1.04% Cu, 28.3% Mn, at an average abundance of 11 kg (wet)/m<sup>2</sup>: Golder, 2013).

The project schedule is shown in the Gantt chart in Figure 19.1.

In Project Zero, NORI will toll treat the nodules in third party pyrometallurgical plants and sell the RKEF products into the alloy market. This will generate revenue whilst its pyrometallurgical and hydrometallurgical facilities are being built.

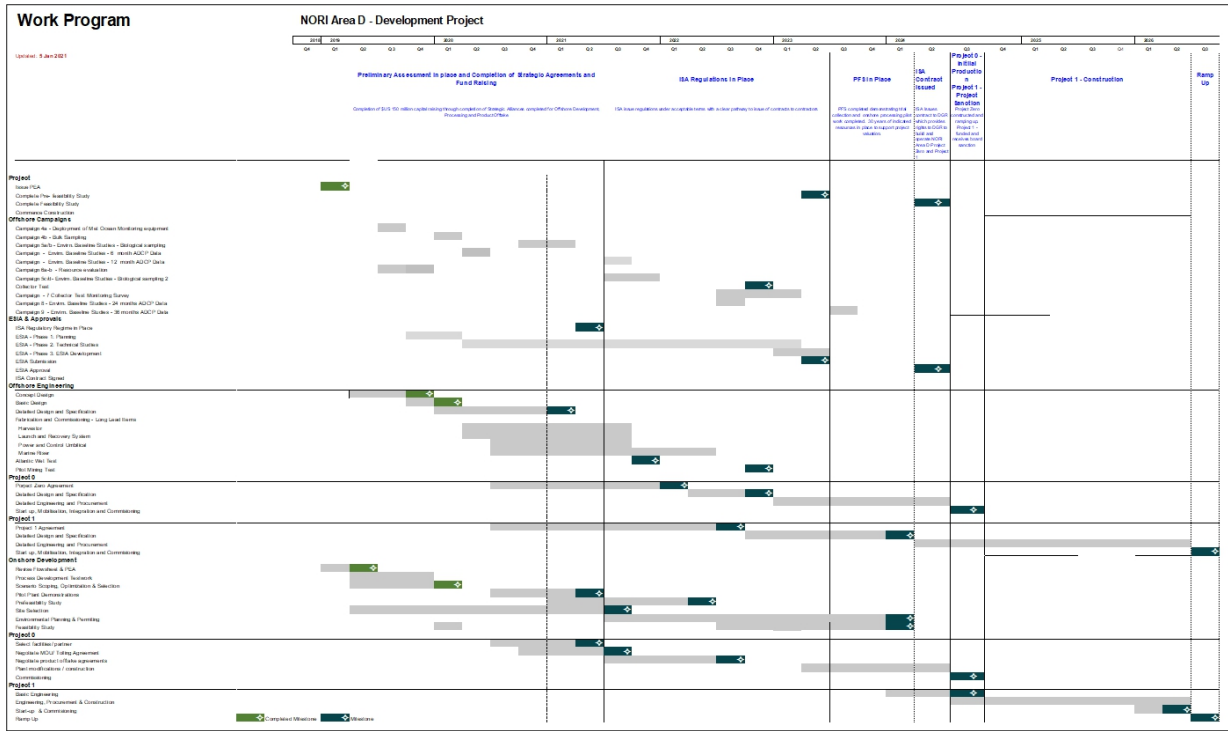

In Project One, NORI will stage the construction of its multiple pyrometallurgical and hydrometallurgical lines to flatten out capital expenditure requirements. Nodule production will be directed preferentially to the NORI pyrometallurgical plants as this is the lowest operating cost option. Whenever these facilities are at maximum capacity (particularly during the ramp-up phase), the surplus nodules will be sent for toll treatment.

NORI will ensure its own hydrometallurgical refineries are filled up to maximum capacity, as this produces the highest value products. Whenever its own hydrometallurgical refineries are at full capacity, NORI will sell the surplus product from its pyrometallurgical plant directly to the matte market. Whilst the matte is not as valuable as the refined products from the hydrometallurgical plant (nickel sulphate, cobalt sulphate, and copper cathode); it still provides a consistent revenue stream and assists for periods when the refineries are at full capacity.

Some of the alloy production from toll treatment of NORI nodules will be shipped to the NORI hydrometallurgical plants to make use of spare capacity. This will require the alloy from the third party RKEF to be sulphidized prior to hydrometallurgical treatment.

Based on discussions with buyers, NORI believes that there is sufficient demand for the alloy and matte over the life of the project.

Figure 19.1 Gantt chart showing proposed schedule of main project phases

## 19.1 Inputs

Post-tax, real (uninflated) cash flows are discussed in this report. The valuation date is 1 January 2021. The analysis was performed on a 100% ownership basis and excludes consideration of financing costs and forward metal sales. The IA assumes the economic parameters listed in Table 19.1.

Table 19.1 Economic inputs

Parameters	Units	Values
Hydrometallurgical plant Ni recovery	%	94.6%
Mn recovery	%	98.9%
Hydrometallurgical plant Cu recovery	%	86.2%
Hydrometallurgical plant Co recovery	%	77.2%
Pyrometallurgical plant Cu recovery	%	96.8%
Pyrometallurgical plant Cu recovery	%	93.3%
Pyrometallurgical plant Co recovery	%	92.7%
Mn silicate grade	%	40.0%
Cu cathode grade	%	99.9%
Payability of Cu content in cathode	%	100%
Nodule moisture content	%	24%
On-shore tax rate	% of taxable income	20%
Average off-shore royalty	% of taxable income	6.7%

### 19.1.1 Commodity prices

Project revenues will come from the following sources:

- A nickel sulphate product
- A copper cathode product
- A cobalt sulphate product
- A manganese silicate product
- An ammonium sulphate product
- A nickel alloy product containing copper and cobalt.
- A matte product from the NORI pyrometallurgical plants containing nickel, copper and cobalt which would be sold to the matte market.

NORI has used the following payable percentages for the alloy:

- Nickel: 80% of in-situ value in the alloy.
- Copper: 40% of in-situ value in the alloy.
- Cobalt: 80% of in-situ value in the alloy.

The following treatment charges and refining charges for the alloy product were used in the NORI financial model:

- A refining charge of US\$1,697/tonne of contained nickel in the alloy.
- A refining charge of US\$800/tonne of contained nickel in the alloy.
- A refining charge of US\$6,700/tonne of contained nickel in the alloy.

- A treatment charge \$300/tonne of alloy.

For the matte product, NORI has used a used a payables figure of 83% of the market metal price of nickel, copper and cobalt.

The metal recoveries for the matte and alloy are those from the pyrometallurgical plant, whilst the refined products (nickel sulphate, copper cathode and cobalt sulphate) are from the hydrometallurgical refinery metal recoveries.

The prices forecast by CRU (CRU, 2020) and adopted for use in this IA are listed in Table 19.2.

Less than 1% of total revenue will be derived from production and sale of ammonium sulphate A price of US\$90/t of ammonium sulphate has been assumed in this IA.

The Qualified Person considers the metal price assumptions underpinning the IA are reasonable.

Table 19.2 Commodity prices

	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	Average from 2034-2046
Ni metal (US\$/t)	\$14,067	\$14,467	\$14,868	\$15,269	\$15,670	\$16,071	\$16,472	\$16,472	\$16,472	\$16,472	\$16,472
Ni contained in Ni Sulphate (US\$/t Ni)	\$15,610	\$16,027	\$16,443	\$16,860	\$17,269	\$17,678	\$18,087	\$18,087	\$18,087	\$18,087	\$18,087
Mn contained in SiMn (US\$/dmu Mn)	\$4.78	\$4.73	\$4.69	\$4.64	\$4.59	\$4.54	\$4.49	\$4.49	\$4.49	\$4.49	\$4.49
Cu metal (US\$/t)	\$6,435	\$6,497	\$6,557	\$6,615	\$6,673	\$6,730	\$6,787	\$6,805	\$6,822	\$6,839	\$6,872

Co contained in Co Sulphate (US\$/t Co)	\$64,250	\$49,035	\$46,933	\$51,014	\$55,450	\$60,272	\$62,784	\$62,162	\$60,351	\$58,594	\$56,920

### 19.1.2 Tax

In undertaking this economic assessment AMC has relied on DeepGreen's analysis of tax treatment of future revenue streams. AMC is not an expert in tax affairs.

The economic assessment is on a post-tax basis. Royalties payable to the ISA, and to the sponsoring state (Nauru) have been accounted for.

The ISA royalty has not been finalized, but discussions are focusing on a royalty that is calculated on an ad valorem basis that references LME pricing but excludes consideration of metallurgical recovery and pricing premia. It is at a rate of 2% for the first five years of production, and 6% thereafter. A further 1% environmental levy was added.

On-shore earnings consider a transfer pricing mark-up of 20% on off-shore operating costs. No off-shore corporate tax was applied.

NORI has not yet committed to locating its on-shore operations in any particular country. The Qualified Person considers it reasonable to expect that potential host nations (and provinces within potential host nations) will compete for the opportunity to host the on-shore operations and will offer favourable taxation arrangements. As a basis to selecting a corporate tax rate for use in this IA, AMC has referred to a publication titled International Comparison of Corporate Income Tax Rates, published by the Congress of the United States Congressional Budget Office (March 2017). The average tax rate (i.e., the total amount of corporate income taxes that companies pay relative to their income after excluding marginal enterprises) for companies operating in Mexico was reported to be 20.3%. Accordingly, AMC selected 20% as the corporate tax rate for this IA.

Straight-line depreciation of onshore and offshore assets was used to calculate the depreciation expense applicable. A depreciation period of 10 years was used for on-shore assets and a depreciation period of five years was used for off-shore assets.

The analysis indicates that the Project will generate approximately US\$7.2 billion in undiscounted royalties payable to the ISA and Nauru, and US\$9.1 billion in on-shore corporate tax payable to the host nation of the processing plant.

### 19.1.3 Production schedule

The production schedule on which the economic analysis is based was developed on an annual basis. The Qualified Person cautions that a prefeasibility study has not been undertaken and that the seafloor production schedule is preliminary in nature and should not be interpreted as a Mineral Reserve. Approximately 96% of the Mineral Resource within NORI Area D is classified as Indicated and a further 1% is classified as Measured Resource. The LOM production sequence includes 6 Mt (wet) of nodules that are classified as Inferred Mineral Resources. This is approximately 2% of the total LOM production.

The production schedule assumes staged operation initially of the Hidden Gem, then Drill Ship 2 and finally Collector Vessel 1, as outlined in Section 16.1.

The nodule metal grades and nodule abundance varying annually according to the life of mine schedule. The grades and nodule abundance for the mine plan were derived from a preliminary production schedule developed by AMC as outlined in Section 16.7. The higher abundance areas were targeted by the production schedule. The metal grades and abundance used in the schedule are compared to the averages (of all Mineral Resource categories) for NORI Area D in Table 19.3.

Table 19.3 Comparison of IA mine plan to Mineral Resource for NORI Area D

	Mineral Resource in NORI Area D (all categories)	Seafloor production plan	Difference (%)
Tonnage (Mt wet)	356	254	71%
Nodule abundance (kg/m <sup>2</sup> )	17.0	16.9	99%
Ni grade (%)	1.40	1.4	100%
Mn grade (%)	31.2	31.0	99%
Cu grade (%)	1.14	1.1	100%
Co grade (%)	0.14	0.14	98%

The production ramp-up discussed in Section 17 was adopted for the production schedule. The Qualified Person considers the assumptions underpinning the IA are reasonable.

## 19.2 Results

All cash flows are denominated in millions of US dollars. The analysis excludes capital sunk prior to 1st January 2021 and excludes the value of the intellectual property that NORI will accrue during the operation. The total cash flows are summarised in Table 19.4.

The analysis indicates a positive economic outcome. Undiscounted post-tax net cash flow of US\$30.6 billion is expected. An internal rate of return of 27% has been modelled. Discounted cash flow analysis of unleveraged real cash flows, discounting at 9% per annum, indicates a project net present value (NPV) of US\$6.8 billion.

The cumulative undiscounted cashflows are shown in Figure 19.2 and the discounted cash flows and progressive NPVs are shown in Figure 19.3. The project reaches its lowest cumulative undiscounted cash flow figure of US\$4.0 billion in 2026. Undiscounted payback period is 6.6 years after commencement of production.

Table 19.4 Summary of cash flows

Cash flow item	Value (US\$ million)
Ni revenue	\$44,106
Mn revenue	\$12,685
Cu revenue	\$11,075
Co revenue	\$26,785
Ammonium sulphate revenue	\$439
<b>Total revenue</b>	<b>\$95,090</b>
Pre-project capital	\$237
Off-shore construction	\$2,448
On-shore construction	\$4,786
Off-shore sustaining capital	\$1,418
On-shore sustaining capital	\$1,219
Closure costs	\$500
<b>Total capital</b>	<b>\$10,607</b>
Off-shore operating costs	\$5,154
Shipping costs	\$5,266
On-shore operating costs	\$26,544
Corporate costs	\$560
<b>Total operating costs</b>	<b>\$37,524</b>
Royalties	\$7,195
Onshore tax	\$9,123
<b>Taxes and royalties</b>	<b>\$16,318</b>
<b>Net undiscounted cash flow</b>	<b>\$30,641</b>

Figure 19.2 Cumulative undiscounted cash flows

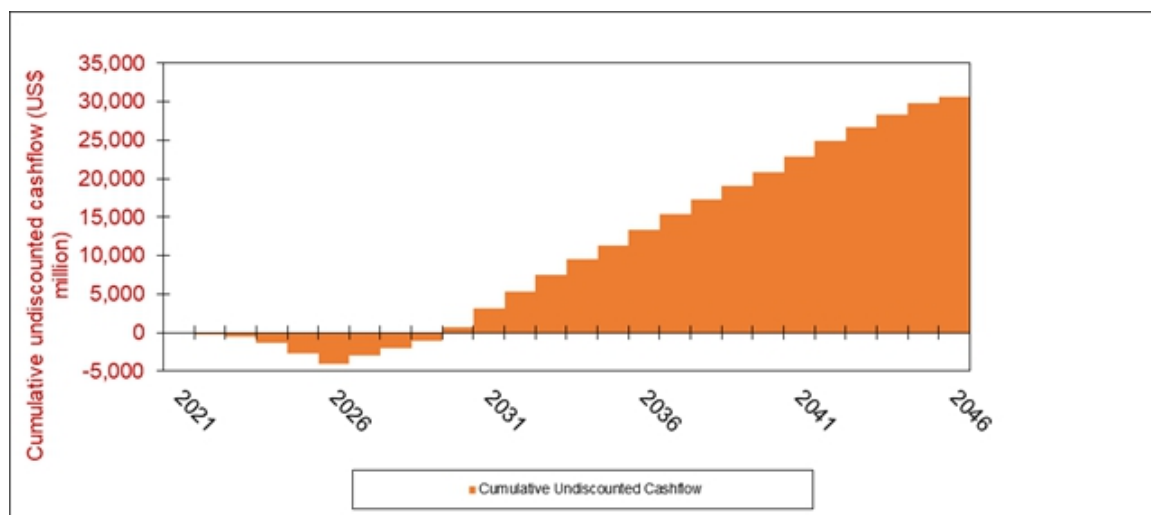

Figure 19.3 Project NPV<sub>2021</sub> and discounted cash flow

The analysis indicates that the Project will generate approximately US\$7.2 billion in undiscounted royalties payable to the ISA and Nauru, and US\$9.1 billion in on-shore corporate tax payable to the host nation of the process plant.

As outlined in Section 21, total project development capital required is \$US7.5 billion, but because of the staged development approach, it is anticipated that revenue will be received prior to the finalization of project capital investment. The maximum negative cumulative undiscounted cash flow is expected to reach -\$US4.0 billion in 2026. This is the level of capital finance that would be required to develop the project under the proposed development scenario and capital payback is expected 6.6 years after the start of production. The maximum negative annual discounted cash flow is -US\$876 million.

The date of the investment decision (decision to mine) is 30<sup>th</sup> June 2023. NORI expects to spend \$237 million on pre-project activities between 2021 and the date of the investment decision. The future value of the project on 30<sup>th</sup> June 2023 (after the pre-project expenditure is sunk and time has elapsed) will be US\$8.6 billion and the IRR from that point will be 29%.

A summary of the revenues for the life of the project is shown in Table 19.5.

Table 19.5 Project revenues by year, over life of project

**19.3 Inferred Mineral Resources**

The IA is preliminary in nature and includes Inferred Mineral Resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. There is no certainty that the IA will be realized.

The LOM production sequence includes 6 Mt (wet) of nodules that are classified as Inferred Mineral Resources. This is approximately 2% of the total LOM production. Excluding the Inferred Mineral Resources from the economic analysis the project NPV is estimated to be \$6.7 billion.

**19.4 Sensitivity analysis**

The sensitivity of project economics to changes in the main variables was tested by selecting high and low values that represent a likely range of potential operating conditions.

In terms of identifying high and low ranges:

- Grade and abundance ranges were based on the distribution throughout the resource.
- Onshore capital cost ranges were based on accuracy levels of +50%, -35%.
- Offshore capital cost ranges were based on Deep Reach Technology’s accuracy levels of +40%, -30%.
- Other capital cost ranges were +/- 25%.
- Note, the collector speed is already at the BOD maximum of 0.5 m/s, so there was no high case value tested.
- Metal recoveries were based on realistic high and low values.
- For other variables ranges were +/- 20%.

The sensitivity analysis inputs are listed in Table 19.10. The impact of each variable on NPV (tested individually) is shown in Figure 19.4. The results are asymmetric for some variables. The variables with the biggest negative impact on NPV are all metal prices, total OPEX, collector speed, nickel sulphate price and development CAPEX. In general, revenue drivers have the biggest impact, followed by OPEX variables and then CAPEX variables.

Figure 19.4 Tornado diagram of NPV sensitivity to variables

20 Adjacent properties

The NORI Area lies within the Clarion Clipperton Zone. Seafloor polymetallic nodules are distributed across the majority of the CCZ. Sections 7 and 20 discuss the relationship of the NORI Area to the other properties in the CCZ.

In 2020, DeepGreen acquired the polymetallic nodule exploration contract awarded by the ISA to TOML. TOML Area F is immediately west of NORI Area D.

21 Other relevant data and information

This section intentionally left blank.

## 22 Interpretation and conclusions

Exploration by several government-funded organisations and commercial consortia (the Pioneer Investors) from the 1960s onwards demonstrated a very large resource of polymetallic nodules, containing nickel, manganese, cobalt, and copper, located on the deep seafloor the CCZ, in the northeast Pacific Ocean between Hawaii and Mexico.

The nodules are located at depths of between 4,000 and 6,000 m and have been explored with considerable success using a variety of deep-sea technologies. Successful trial extraction in the CCZ has also been carried out to demonstrate that the nodules can be collected and pumped to a surface platform and subsequently processed to recover metals.

Exploration of the seafloor in international waters is now administered by the ISA and regulated by the UNCLOS. These institutions operate on the principle that the ocean floor beyond the limits of national jurisdiction, known as the Area, is the common heritage of mankind.

In July 2011, Nauru Ocean Resources Inc. (NORI), a subsidiary of DeepGreen Metals Inc. (DeepGreen), was granted an exploration contract over 74,830 km<sup>2</sup> in the CCZ consisting of four exploration areas (A, B, C and D) (the NORI Area or the Property). NORI's contract for exploration of polymetallic nodules was approved by the Council of the ISA on 19 July 2011, for a term of 15 years and then signed with the ISA on 22 July 2011.

NORI completed off-shore exploration campaigns in 2012, 2013, 2018, and 2019. During these campaigns a variety of data was collected including:

- Bathymetric mapping of the whole of NORI Area D using a hull-mounted MBES.
- Detailed seafloor survey work with an AUV, utilising an MBES, Side Scan Sonar (SSS), Sub-Bottom Profiler (SBP) and camera payload.
- Box core samples.

During this period NORI commissioned a variety of preliminary scientific and engineering studies into the exploitation of polymetallic nodules, with the primary focus on NORI Area D.

### 22.1 Mineral Resources

All the data indicates that both grades and abundance have remarkable continuity. Abundance is more variable than grades and is recognised as the primary control on classification of the Mineral Resource. Sufficient data was collected in NORI Area D to estimate Measured and Indicated Resources and define an area that is expected to be suitable for a trial of a mining system.

Sampling of NORI Area D at a spacing of 10 km by 10 km during the 2019 campaign confirmed that the nodules have low variability and high continuity. The latest Mineral Resource estimate (2020) is 4 Mt Measured and 341 Mt Indicated and 11 Mt Inferred Mineral Resources. Taking into account the conversion of the majority of Inferred to Indicated Mineral Resources, the remaining Inferred Mineral Resource has decreased by 26 Mt as a result of excluding the Volcanic High domain in the south-eastern corner of NORI Area D, due to uncertainty about the occurrence of nodules in this area. The 2020 resource estimate is also slightly higher in abundance (5.4% higher), and nickel (6.1% higher), cobalt (5.4% higher) and manganese (2.2% higher) grades than the 2018 estimate.

Comparison of the area covered by Inferred, Indicated and Measured Mineral Resource for the 2020 estimate and the same area in the 2018 model shows that nickel grade has increased by 6% (1.32% to 1.40% Ni) while abundance has increased by 6% (16.0 to 17.0 kg/m<sup>2</sup>). Mineral Resource tonnage has increased by 10% (from 10 to 11 Mt) in the Inferred area and 7% (from 320 to 341 Mt) in the Indicated area. The positive conversion rates arising from infilling the sampling grid with high-quality box core sample data (rather than extending the area sampled) are exceptionally high compared to the typical outcomes from infill sampling of terrestrial mineral deposits.

Whilst the IA focusses on the development of nodule production in NORI Area D, the other three areas (NORI Area A, B and C), are estimated to contain Inferred Mineral Resources of 510 Mt (wet) at 1.28% Ni, 0.21% Co, 1.04% Cu, 28.3% Mn, at an average abundance of 11 kg (wet)/m<sup>2</sup> at a 4 kg/m<sup>2</sup> abundance cut-off (Golder, 2013). The polymetallic nodule mineralisation in Areas A, B and C has similar characteristics to NORI Area D and it is likely that the technology proposed in the IA would be suitable for these additional areas.

## 22.2 Development plan

NORI proposes to implement the project in multiple phases that will allow the seafloor mining systems to be tested and then nodule production to be gradually ramped up. The phased approach will facilitate derisking of the project for relatively low initial capital investment. The proposed development phases are as follows:

- The Collector Test is designed to perform proof of concept for the methods of collecting and lifting the nodules while acquiring sufficient data to design a commercial system. Nodule collected during the test would be stored on the Hidden Gem and brought to shore for use in large scale process pilot testing. The Collector Test would use a converted sixth generation drillship, the Hidden Gem. The test would not demonstrate the transshipment of nodules to a shore-based facility.
- Project Zero would be an extension of the Collector Test using an upgrade of the converted drillship to produce a sufficient and continuous quantity of nodules to support a relatively small commercial operation of up to 1.3 Mtpa (wet) nodules delivered to a shore-based facility. This operation would demonstrate a more continuous mining operation at a larger scale than the Collector Test and would demonstrate the transshipment of nodules to a processing facility.
- Project One would increase production in a further three steps:
  - a further upgrade of the Hidden Gem for up to 3.6 Mtpa (wet) production, for a 20-year production life.
  - introduction of a second converted drillship (Drill Ship 2) with a capacity of up to 3.6 Mtpa (wet), designed for a 20 year production life.
  - construction of a new purpose-built production support vessel (Collector Ship 1) with capacity of up to 8.2 Mtpa (wet). Project One would benefit from lessons learned on the Collector Test and Project Zero.

NORI proposes that the processing of the polymetallic nodules would also be ramped up in phases. For Project Zero, NORI proposes to toll treat polymetallic nodules at existing RKEF smelters, utilizing excess industry capacity. In Project One, a purpose-built process plant would be constructed, including pyrometallurgical and hydrometallurgical circuits. Much of the nodule production would switch in phases from toll-treatment to treatment in this new plant. A portion of the nodule production would continue to be toll treated.

## 22.3 Off-shore operations

Preliminary design of an off-shore nodule collection system has been completed. The main items of off-shore infrastructure are the nodule collector vehicles, the riser, the production support vessel (PSV), and a collector support vessel.

The seabed system is an extrapolation of existing technologies in deep ocean operations and previous seabed development activities. Much of the technology is a direct derivative of previous experience in nodule developments, such as consortium activities in the 1970s, including significant pilot testing, and also advances in deep water oil and gas development.

The nodules will be collected from the seafloor by self-propelled, tracked, collector vehicles. No rock cutting, digging, drill-and-blast, or other breakage will be required at the point of collection. The collectors will be remotely controlled and supplied with electric power via umbilical cables from the PSV. They nodules will be pumped as a slurry via flexible hoses to a riser, through which they will be transferred to the surface by means of an air lift. Nodules will be discharged to the PSV, where they will be dewatered and temporarily stored or transferred directly to ore transportation vessels. A separate collector support vessel will remain at sea to support the mining operation.

This IA assumes transportation of nodules will be by chartered vessels with deadweight capacities of up to 100,000 tonnes. The vessels will require DP capability to enable them to be loaded at sea alongside the PSV. Hydraulic offloading of the nodules from the PSV to the transport ships is assumed in this IA, but future studies will confirm the offloading mechanism.

There still remain particular component and sub-systems of the off-shore operations that are not “off-the-shelf” and require further development. The technical readiness of some of the described components and assumptions need to be verified by further design and testing. NORI plans to complete a Collector Test in 2022 which will address these issues.

## 22.4 On-shore operations

The overall flowsheet for the on-shore operations, i.e. smelting and sulphuric acid leach, is one of the options that have been considered in the literature. The first part of the pyrometallurgical process is the Rotary Kiln Electric Furnace (RKEF) process that is widely used in the nickel laterite industry. The second pyrometallurgical step (sulphidisation of the alloy produced in the first step to form a matte and then partially conversion in a Peirce-Smith converter to remove iron), while not widely practiced, also has commercial precedent at the Doniambo plant of Societe Le Nickel in New Caledonia.

Sulphuric acid leaching of matte from the pyrometallurgical process has precedent in the platinum group minerals (PGM) industry. Although copper producers typically have a solvent extraction step before electrowinning of their copper, direct copper electrowinning is done in most PGM refineries, where nickel and cobalt are also significant pay-metals. This is to maximise nickel recovery and minimise operating expenses. The nickel and cobalt are purified using solvent extraction, ion exchange and precipitation, which are all commercially proven hydrometallurgical processes. Battery grade nickel and cobalt sulphate are then crystallised from the purified solutions.

The pyrometallurgical process forms two by-products as well as the matte for the hydrometallurgical refinery:

- Electric furnace silicate product containing silica and 53% MnO that is intended to be sold as feed to the Si-Mn industry.
- A converter aisle slag that could be used for aggregate in road construction or other applications.

The hydrometallurgical refinery generates iron residues that would, for a stand-alone plant, require disposal. However, these streams can be recycled back to the pyrometallurgical plant for re-treatment and recovery of entrained pay metals.

Selection of ammonia as a principal reagent in the hydrometallurgical refinery means that an additional by-product—ammonium sulphate—is generated. This could be sold into the fertiliser industry.

The copper cathode quality from direct electrowinning, without a solvent extraction step, is expected to be  $\geq 99.9\%$  Cu. Quality of the matte produced in the pyrometallurgical plant will have an impact on this, including the potential carryover of impurities beyond values assumed for the purpose of the IA.

The production of battery-grade nickel and cobalt sulphates is targeted instead of nickel or cobalt cathodes or other intermediate products.

In summary:

- All parts of the proposed process have commercial precedents in similar or analogous industries, however not as a whole continuous flowsheet.
- Pay-metals are recovered in the following forms:
  - Copper cathodes with an expected quality of  $\geq 99.9\%$  Cu.
  - Battery-grade nickel sulphate.
  - Battery-grade cobalt sulphate.
- Rather than generating large waste streams, the process produces by-products including high manganese content furnace slag and ammonium sulphate.

The process assumptions used in this study will need to be verified as the project proceeds.

## 22.5 Environmental status

Historically, a significant amount of technical work has been undertaken within the CCZ by the Contractors and a significant body of information has been acquired during the past 40 years on the likely environmental impacts of collecting nodules from the sea floor.

NORI's off-shore exploration campaigns have included sampling to support environmental studies, collection of high-resolution imagery and environmental baseline studies. A number of future campaigns are planned to collect data on ocean currents and water quality to assist plume modelling, environmental baseline studies, box core and multicorer sampling focussed on benthic ecology and sediment characteristics.

NORI has commenced the ESIA process in support of an application for an exploitation license for the commercial mining of deep-sea polymetallic nodules. A comprehensive program of metocean and biological data acquisition is in progress to characterize the baseline conditions at a designated Collector Test site and control sites in the mining lease area.

NORI intends to manage the Project under the governance of an EMS, which is to be developed in accordance with the international EMS standard, ISO 14001:2004. The EMS will provide the overall framework for the environmental management and monitoring plans that will be required.

An EMP will be required. The plan will specify the objectives and purpose of all monitoring requirements, the components to be monitored, frequency of monitoring, methods of monitoring, analysis required in each monitoring component, monitoring data management and reporting. The plan will be submitted to the ISA as part of the exploitation contract application.

The social impacts of the off-shore operation are expected to be positive. The CCZ is uninhabited by people, and there are no landowners associated with the NORI Area D nodule project. No significant commercial fishing is carried out in the area. The Project will provide a source of revenue to the sponsor country, Nauru, and to the ISA.

The on-shore environmental and social impacts have not yet been assessed because the process plant has not been designed in detail, and the location and host country (and hence regulatory regime) not confirmed. The Project is not expected to require tailings ponds or other large-scale waste storage on-site. The deleterious elements (for example, cadmium and arsenic) content of the nodules is very low, indicating that with careful management the environmental impacts of the processing operation could be very low.

## 22.6 Economic analysis

The cost estimates used in this IA for off-shore property, plant and equipment are based on estimates prepared by Deep Reach Technology Inc. (DRT) for NORI during the 2015 DRT scoping study. These were generally derived from budget estimates supplied by original equipment manufacturers that specialise in each of the items under consideration.

The estimates assume that the technologies proposed will be technically ready at the time the capital is spent. While much of the proposed technology is derived from previous experience in nodule development and from existing oil and gas technology, the concepts include substantial research and development, customisation, and bespoke engineering. Specific items that require development include field testing of collectors, airlift discharge systems, nodule attrition simulation; a mateable power connector in the megawatt range capable of operating at 5,000 m depth must be qualified. Accordingly, a budget allowance has been made for prefeasibility activities prior to commercial development of the project. A contingency of 25% has been applied to the off-shore capital cost estimates.

On-shore capital costs were estimated according to an Association for the Advancement of Cost Engineering Class 5 level of accuracy (-35% +50%). A contingency of 32% has been applied to the on-shore capital cost estimates. Owner's costs and escalation beyond 2019 are excluded.

Transportation cost estimates to an unspecified Mexican port are based on estimates by Global Location Strategies (Global Location Strategies, 2019) for NORI. The destination port has not yet been determined, nor has the location of the processing plant. Hence, the overland transport requirement cannot yet be estimated. Different vessel sizes will be considered in future studies.

The IA considers a mining plan for a 23-year production period. The draft regulations for exploitation of Mineral Resources in the Area (ISBA/23/LTC/CRP.3\*), promulgated by the ISA, contemplate grant of an initial 30-year exploitation contract, with possible extension by periods of 10-years, subject to license re-applications and renewals. After the initial 23-year period substantial resources will remain in the other NORI Areas (A, B, and C) that could support future mining.

A financial model based on estimates of future cash flows derived from extraction of nodules from NORI Area D has been developed in-house by DeepGreen. AMC reviewed the logic, input assumptions and integrity of the calculations and forecasts and is satisfied that the outcomes of the model are reasonable for a IA.

The analysis indicates a positive economic outcome. Undiscounted post-tax net cash flow of US\$30.6 billion is expected. An internal rate of return of 27% has been modelled. Discounted cash flow analysis of unleveraged real cash flows, discounting at 9% per annum, indicates a project net present value (NPV) of US\$6.8 billion.

The Qualified Persons caution that this IA is preliminary in nature. There is no certainty that the results presented in this IA will be realised. A prefeasibility study has not been undertaken. Mineral Resources are not mineral reserves and do not have demonstrated economic viability.

23 Recommendations

This IA indicates that the NORI Area D resource is potentially economic. The QPs recommend that further data gathering, analysis, design and cost estimation be undertaken to advance the Project.

The priorities should be undertaking the environmental baseline studies and compiling the ESIA required to facilitate timely permitting; obtaining a bulk sample of nodules for metallurgical testing and flowsheet optimisation; and the Collector Test to demonstrate proof of concept and to provide performance data to inform detailed engineering design.

Assuming these activities generate positive results, a prefeasibility study will be warranted.

DeepGreen has identified a program to advance the NORI Area D Project Figure 19.1. The program incorporates the activities recommended by the QPs. It also includes fabrication, commissioning and wet testing of long lead items required for the Collector Test, which is currently scheduled for Q2-3 2022.

Pre-project capital cost estimates, which cover these activities, are summarized in Table 18.2.

NORI estimates \$70.6 million in pre-Project off-shore capital costs including \$40 million for feasibility studies and engineering design. Approximately \$60 million expenditure is expected for successful engineering, fabrication and completion of the Collector Test.

25 Reliance on information provided by the registrant

AMC has relied upon information provided by the registrant in preparing its findings and conclusions regarding the following aspects of modifying factors:

- I. Macroeconomic trends, data, and assumptions, and market studies as, for example, presented in Section 16;
- II. Marketing information and plans within the control of the registrant as, for example, presented in Section 16, 18.1, 18.2, 18.5;
- III. Legal matters outside the expertise of the qualified person, such as statutory and regulatory interpretations affecting the Project as, for example, described in Section 3, 13, and 20;
- IV. Environmental matters outside the expertise of the qualified person as, for example, described in Section 17;
- V. Accommodations the registrant commits or plans to provide to local individuals or groups in connection with its mine plans as, for example, described in Section 20; and
- VI. Governmental factors outside the expertise of the qualified person as, for example, described in Section 3, 19.1.2.

# Technical Report Summary

## **TOML Mineral Resource, Clarion Clipperton Zone, Pacific Ocean DeepGreen Metals Inc.**

In accordance with the requirements of SEC Regulation S-K (subpart 1300)

AMC Project 321012  
26 March 2021

Unearth a smarter way

---

## 1 Executive summary

A large deposit of polymetallic nodules is located in the Clarion Clipperton Zone (CCZ) of the northern central Pacific Ocean. Despite the nodules being located at great depths (4000 to 6000 m), they were explored with considerable success between the mid-1960s to the present day using a variety of increasingly sophisticated deep-sea technologies. In early 2012, Tonga Offshore Mining Limited (TOML), then a 100% owned subsidiary of Nautilus Minerals Inc., acquired an Exploration Area of 74 713 km<sup>2</sup> of the CCZ. In line with the requirements of the relevant oversight body (International Seabed Authority or ISA) TOML is sponsored by the government of the Kingdom of Tonga. The contract for exploration of polymetallic nodules was approved in July 2011, and then formalised on 11 January 2012. The Exploration area consists of six separate areas (termed Areas A to F) scattered across the CCZ (Figure 1.1).

TOML commissioned AMC Consultants Pty Ltd (AMC) to prepare a Technical Report in accordance with the Canadian National Instrument 43-101 reporting standards (NI43-101) and Form 43-101F1. The Report presented the results of exploration and related studies carried out between 2013 and 2016 and an updated Mineral Resource estimate (AMC, 2016). The Mineral Resource statement was prepared in accordance with the SEC Regulation S-K (subpart 1300).

In 2020, DeepGreen Minerals Inc (DeepGreen) acquired the polymetallic nodule exploration contract awarded by the ISA to TOML. DeepGreen commissioned AMC Consultants Pty Ltd (AMC) to recompile the NI43-101 Technical Report (AMC, 2016) as a Technical Report Summary in accordance with SEC Regulation S-K (subpart 1300). AMC understands that DeepGreen may file this Technical Report Summary with the Securities Exchange Commission as part of an S-4 filing to support the merger between Sustainable Opportunities Acquisition Corporation and DeepGreen Metals Inc.

Exploration and development efforts in the CCZ started in the 1960s by state sponsored groups from Russia, France, Japan, Eastern Europe, China, Korea and Germany. Several commercial consortia also explored between the 1960s and the 1980s and in some instances their descendants are still involved to the present day. No commercial mining operations have yet been established in the CCZ. However, a variety of collectors, pick-up systems, and metallurgical processing flow sheets were tested, and several integrated “demonstration scale” systems operated in the CCZ for several months in the late 1970s. Processing test-work has encompassed a variety of hydrometallurgical and pyrometallurgical flow sheets, usually with good results.

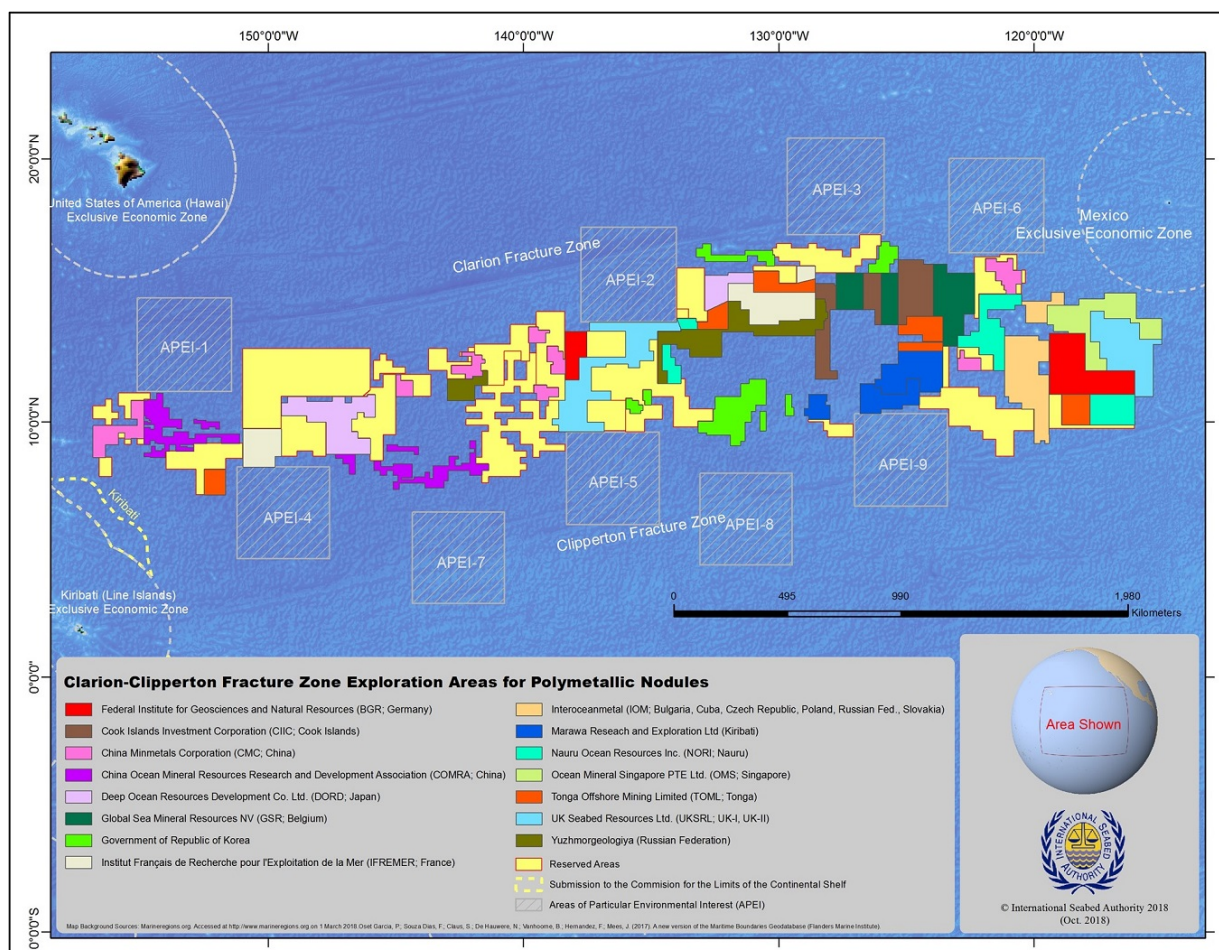

The climate is largely warm, and equatorial surface currents vary by season but are not generally very strong. Wave heights and frequencies are relatively moderate (for the open ocean). Storms are significant for part of the year as a major tropical cyclone belt covers the southern side of the CCZ, approximately one cyclone traverses any given area each year. The deposit is distal from major sea routes used by commercial transport vessels and is marginal to tuna fisheries. No communication cables cross the region.

The worldwide occurrence of polymetallic nodules has been known since the late 1800s. They form by the precipitation of metals either directly from ocean waters or via decomposing microorganisms and/or their waste matter in the benthic sediments. The specific conditions of the CCZ (water depth, latitude and seafloor sediment type) are believed to be the key controls on the formation of the CCZ nodule deposit, which is believed to be the largest and highest Ni-Cu-Co grade deposit of this type in the world. Nodules are typically 4 to 6 cm and up to 10 cm in diameter.

Unlike most land deposits, seafloor nodule deposits are characterized in terms of abundance, measured in units of wet kg/m<sup>2</sup>. This is because both the primary exploration method (surface sampling) and likely recovery method (surface collectors or rakes) are unlikely to work at any significant depth below the seafloor (i.e., 0 to 30 cm). Abundances are typically reported as wet weights due to the practicalities of handling the nodule samples, the wet density of studied nodules is around 2 t/m<sup>3</sup> irrespective of the nodule size. Studies show nodules to contain around 29% free water and 16% water of crystallisation (incorporated into the complex manganese and iron oxy-hydroxide minerals of formation).

In 2012, Golder Associates Pty Ltd estimated an Inferred Mineral Resource for the entire TOML tenement Area. Part of this data was collected by previous explorers including pioneer contractors representing Japan, Russia and France. This data was obtained directly from the ISA and was not supplied with quality assurance or quality control data. However, verification was possible by cross comparison between all of the six pioneer contractors (also Korea, Germany and an eastern European consortium) who have so far supplied the ISA with data across what is effectively a single large deposit.

Figure 1.1 Location of the Clarion Clipperton Zone

Data collected by TOML in 2013 and 2015 supports the historical data but also is of sufficient quantity and quality to allow estimation of an Indicated Mineral Resource for five sub areas within TOML Areas B, C, D and F called B1, C1, D1, D2 and F1. More detailed data collected by TOML has also allowed estimation of a Measured Mineral Resource for a single sub area within TOML Area B. Chain of custody, sample security, Quality Assurance and Quality Control were documented in detail for the TOML data.

The key data sets behind the Inferred Mineral Resource estimate for TOML Areas A through E are surface samples obtained by free fall grab samplers, although a few results from box-corers were also included. Free fall grab samplers are the standard sampling method as they are the most productive tool available. They are believed to underestimate the actual abundance, as smaller nodules may escape some grabs during ascent and larger nodules around the edge of the sampler may be knocked or fall out during the sampling process. This may introduce some conservatism to the Inferred Mineral Resource estimates.

The key data behind the Inferred Mineral Resource estimate for TOML Area F and the Indicated and Measured Mineral Resources are box-corers and measured photographs. Box-corers take longer to collect than free fall grab samplers, but they are believed to have less bias. Photos cover a much greater area than either free fall grabs or box-cores. The weight of individual nodules can be accurately estimated from the length of their long or major axis; a relationship first discovered in the 1970s. Using the box-core samples as calibration devices, TOML was able to measure the size of nodules on several hundred photographs in Areas B and C. Abundance is shown to be related both to nodule coverage in photos and to acoustic response (backscatter) from regional survey. These data thus provide very detailed indications of nodule abundance and continuity.

Many of the records of the sampling procedures used by the pioneer contractors were not available to the Qualified Persons, but it is likely that all of the pioneer contractors followed similar procedures to that used by TOML. Nodule abundance (wet kg/m<sup>2</sup>) was derived by dividing the weight of recovered nodules by the surface area covered by the open jaws of the sampler or corer (typically 0.25 to 0.75 m<sup>2</sup>). A split of the nodules was dried, crushed and ground to enable grade determination via standard analytical methods (typically atomic absorption spectrometry, X-ray fluorescence or inductively coupled plasma methods), either on the vessel or back on shore. Specific nodule chemical standards were used for instrument calibration. TOML also present the results of field, submitted and laboratory duplicates of nodule samples.

Analysis of the data reveals that, as a consequence of their origin, nodule grades vary only slightly across the CCZ, with spatial continuity of the abundance, Mn, Ni, Co, and Cu grades often ranging from the order of several kilometres up to several tens of kilometres. Nodule abundance is sometimes less continuous than grade, as it is also subject to local changes in net sedimentation (a consequence of seafloor slope, slumping, erosion and local currents).

The TOML Exploration Area has been split into two domains: areas with polymetallic nodules; and areas predominately without polymetallic nodules. The multibeam bathymetry and the backscatter data was used to interpret the parts of TOML Area B to F with no polymetallic nodules.

Estimation of tonnage and grade for the TOML Exploration Area within the CCZ was undertaken using only sample data within the TOML Exploration Area. Six block models were constructed using the programs Gstat 1.1-3 and R 3.2.5, one for each TOML Exploration Area (A to F), in three passes. The first pass used a parent block dimension of 1.75 km by 1.75 km and filled the areas defined as Measured Mineral Resource. The second pass for Indicated Mineral Resource used a parent block size of 3.5 km by 3.5 km while the third pass for Inferred used a parent block size of 7.0 km by 7.0 km.

The modelling methodology used for estimating the Mineral Resource was determined through careful consideration of the scale of deposit, mechanism of nodule formation, geological controls and nature of the sampling method. The approach involved estimating nodule abundance and grades into a two-dimensional block model with abundance used for calculating tonnage. Abundance and grades were estimated using Ordinary Kriging (OK) with comparison (not reported) estimates using Inverse Distance Weighting (IDW) and nearest neighbour (NN). The modelling methodology is similar to the method applied by the ISA (2010) for its global estimate which was produced by a multi-disciplinary effort that involved recognised subject matter experts.

The Mineral Resource estimate, with an effective date of 31 December 2020, is presented in Table 1.1. The Mineral Resource estimate at an abundance cut-off of 4 wet kg/m<sup>2</sup> is the selected base case scenario considering a non-selective bulk mining operation.

Table 1.1 Mineral resource Estimate for the TOML exploration area within the CCZ at a 4 kg/m<sup>2</sup> nodule abundance cut-off

Mineral Resource Classification	Tonnes (x10 <sup>6</sup> wet t)*	Abundance (wet kg/m <sup>2</sup> )	Ni (%)	Cu (%)	Co (%)	Mn (%)
Measured	2.6	11.8	1.33	1.05	0.23	27.6
Indicated	69.6	11.8	1.35	1.18	0.21	30.3
Measured + Indicated	72.2	11.8	1.35	1.18	0.21	30.2
Inferred	696	11.3	1.29	1.14	0.20	29.0

\* Variations in totals are due to rounding of individual values. Mn, Ni, Cu and Co assays on samples dried at 105°C

The TOML Mineral Resource estimates are supported by an Initial Assessment carried out on behalf of DeepGreen for the neighbouring NORI Property (AMC, 2021). The polymetallic nodule deposits in NORI Area D are very similar to those in TOML Areas A to F and the QPs consider that the proposed development of NORI Area D is a reasonable analogue for future development in the TOML Areas. The NORI Property IA is directly relevant and applicable to the TOML Property for the reasons set out below:

- This polymetallic nodule mineral field within the CCZ is essentially a single mineral deposit almost 5,000 km in length and up to 600 km wide. The size and level of uniformity of mineralization is unmatched by any mineral deposit of similar value on land.
- The mechanism of formation of the nodules is interpreted to be essentially identical across the entire CCZ, with only minor local variations. Consequently, there is relatively little difference between the size, shape or metal content of the nodules from one area to another.
- The morphological features of the seafloor are similar in the TOML and the NORI Areas
- All Areas are administered under a common legal framework.
- There are no physical or logistical barriers between the Areas. Their location may simply influence shipping costs.

The commonality between the polymetallic nodule deposits in NORI Area D and the TOML Areas indicates that the methods proposed for the development of NORI Area D can reasonably be assumed to be equally relevant for future development in the TOML Areas. The Technical Report Summary for NORI Area D assessed the following mining development scenario:

The IA proposes that nodules will be collected from the seafloor by self-propelled, tracked, collector vehicles. No rock cutting, digging, drill-and-blast, or other breakage will be required at the point of collection. The collectors will be remotely controlled and supplied with electric power via umbilical cables from production support vessel (PSV). Suction dredge heads on each collector will recover a dilute slurry of nodules, sediment, and water from the seafloor. A hopper on each vehicle will separate sediment and excess water, which will pass out of the hopper overflow, from the nodules, which will be pumped as a higher concentration slurry via flexible hoses to a riser. The riser is a steel pipe through which nodules will be transferred to the surface by means of an airlift.

The PSV will support a riser and lift system (RALS) and its handling equipment, and will house the airlift compressors, collector vehicle control stations, and material handling equipment. All power for off-shore equipment, including the nodule collecting vehicles, will be generated on the PSV. The PSVs will be equipped with controllable thrusters and will be capable of dynamic positioning (DP), which will allow the vessels and risers to track the collectors. Nodules will be discharged from the RALS to the PSVs, where they will be dewatered and temporarily stored or transferred directly to a transport vessel.”

---

A combined pyrometallurgical and hydrometallurgical mineral processing scenario is envisaged. The first part of the pyrometallurgical process is the Rotary Kiln Electric Furnace (RKEF) process that is widely used in the nickel laterite industry. The second pyrometallurgical step (sulphidisation of the alloy produced in the first step to form a matte and then partially conversion in a Peirce-Smith converter to remove iron), while not widely practiced, also has commercial precedent at the Doniambo plant of Societe Le Nickel in New Caledonia.

Sulphuric acid leaching of matte from the pyrometallurgical process has precedent in the platinum group minerals (PGM) industry. Although copper producers typically have a solvent extraction step before electrowinning of their copper, direct copper electrowinning is done in most PGM refineries, where nickel and cobalt are also significant pay-metals. This is to maximise nickel recovery and minimise operating expenses. The nickel and cobalt are purified using solvent extraction, ion exchange and precipitation, which are all commercially proven hydrometallurgical processes. Battery grade nickel and cobalt sulphate are then crystallised from the purified solutions.

The pyrometallurgical process forms two by-products as well as the matte for the hydrometallurgical refinery:

- Electric furnace slag containing silica and 53% MnO that is intended to be sold as feed to the Si-Mn industry.
- A converter aisle slag that could be used for aggregate in road construction or other applications.

The hydrometallurgical refinery generates iron residues that would, for a stand-alone plant, require disposal. However, these streams can be recycled back to the pyrometallurgical plant for re-treatment and recovery of entrained pay metals.

Selection of ammonia as a principal reagent in the hydrometallurgical refinery means that an additional by-product—ammonium sulphate—is generated. This could be sold into the fertiliser industry.

The copper cathode quality from direct electrowinning, without a solvent extraction step, is expected to be  $\geq 99.9\%$  Cu. Quality of the matte produced in the pyrometallurgical plant will have an impact on this, including the potential carryover of impurities beyond values assumed for the purpose of the IA.

The production of battery-grade nickel and cobalt sulphates is targeted instead of nickel or cobalt cathodes or other intermediate products.

In summary:

- All parts of the proposed process have commercial precedents in similar or analogous industries, however not as a whole continuous flowsheet.
- Pay-metals are recovered in the following forms:
  - Copper cathodes with an expected quality of  $\geq 99.9\%$  Cu.
  - Battery-grade nickel sulphate.
  - Battery-grade cobalt sulphate.
- Rather than generating large waste streams, the process produces by-products including high manganese content furnace slag and ammonium sulphate.

The process assumptions used in this study will need to be verified as the project proceeds.

The QP considers that this IA supports the view that there are reasonable prospects of economic extraction of polymetallic nodule Mineral Resources in the TOML Areas.

---

The infrastructure requirements for the development of commercial production in the TOML Areas, apart from the minerals processing facility, will be modest compared to terrestrial resources projects of similar production capacities.

The site and host country for the minerals processing facility has not yet been confirmed. The site must be serviced by grid power, reticulated water, and natural gas. A location will be selected that is close to an industrial port, and near an existing municipality from which labour can be sourced.

A preliminary assessment of the transportation fleet for transfer of nodules from the CCZ to an existing deep-water industrial port equipped with bulk offloading facilities was examined (AMC, 2021). The IA assumed that chartered vessels would be used to transport the dewatered nodules to the port of Lazaro Cardenas, Michoacan, Mexico, 960 nm from the NORI Area D reference site. The vessels would be converted bulk mineral carriers with dynamic positioning (DP) to allow tracking behind the production support vessels during operations. The method of offloading, known as tandem offloading, is well established for offloading of oil production vessels in remote areas of the world.

AMC has considered the market for the nickel, copper, cobalt and manganese products that might be recovered from the polymetallic nodules in the TOML Areas.

CRU International Limited (CRU) was commissioned by NORI to provide market overviews for the four main products from the NORI Area D Project: nickel sulphate ( $\text{NiSO}_4$ ), cobalt sulphate ( $\text{CoSO}_4$ ), copper, and a manganese product (CRU, 2020). CRU expects growth in these markets.

CRU expects copper and  $\text{NiSO}_4$  prices to rise in real terms by 2035, while manganese ore and  $\text{CoSO}_4$  prices are forecast to remain flat, due to current prices being at or near a high point in the cycle, recent fall in prices, and expected modest growth in the global steel industry after the COVID 19 epidemic. The long-term cost of production is expected to rise for both copper and  $\text{NiSO}_4$ , helping to support prices.

The QPs consider that the proposed development of NORI Area D is a reasonable analogue for future development in the TOML Areas and the IA completed for the NORI Property is directly relevant and applicable to the TOML Property. The QPs consider that this IA supports the view that there are reasonable prospects of economic extraction of polymetallic nodule Mineral Resources in the TOML Areas.

Recommended future work on the TOML Exploration Area will focus on:

- Further exploration to raise the Inferred Mineral Resources to Indicated and Measured status. The proximity of TOML Area F to NORI Area D suggests that TOML Area F should be a priority.
- Detailed studies to develop key modifying factors to a point where a Mineral Reserve may potentially be estimated;
- Environmental baseline work to support an EIS;
- Concept study work on engineering and commercial aspects leading to trial mining;
- Trial mining.

## 2 Introduction

A large deposit of polymetallic nodules is located in the Clarion Clipperton Zone (CCZ) of the northern central Pacific Ocean. Despite the nodules being located at great depths (4,000 to 6,000 m), they were explored with considerable success between the mid-1960s to the present day using a variety of increasingly sophisticated deep-sea technologies. In early 2012, Tonga Offshore Mining Limited (TOML), a 100% owned subsidiary of Nautilus Minerals Inc. acquired an Exploration Area of 74 713 km<sup>2</sup> of the CCZ. In line with the requirements of the relevant oversight body (International Seabed Authority or ISA) TOML is sponsored by the government of the Kingdom of Tonga. The contract for exploration of polymetallic nodules was approved in July 2011, and then formalised on 11 January 2012.

TOML commissioned AMC Consultants Pty Ltd (AMC) to prepare a Technical Report in accordance with the Canadian National Instrument 43-101 reporting standards (NI43-101) and Form 43-101F1. The Report presented the results of exploration and related studies carried out between 2013 and 2016 and an updated Mineral Resource estimate (AMC, 2016). The Mineral Resource statement was prepared in accordance with the CIM “Estimation of Mineral Resources and Mineral Reserves Best Practice Guidelines”.

In 2020, DeepGreen Metals Inc (DeepGreen) acquired the polymetallic nodule exploration contract awarded by the ISA to TOML. DeepGreen commissioned AMC Consultants Pty Ltd (AMC) to recompile the NI43-101 Technical Report (AMC, 2016) as a Technical Report Summary in accordance with SEC Regulation S-K (subpart 1300).

### 2.1 Purpose of the Technical Report Summary

AMC understands that DeepGreen may file this Technical Report Summary with Securities Exchange Commission as part of an S-4 filing to support the merger between Sustainable Opportunities Acquisition Corporation and DeepGreen Metals Inc.

### 2.2 Sources of information and data

This Technical Report Summary was recompiled from an NI43-101 Technical Report which documented exploration and estimation of Mineral Resources in the TOML Area (AMC, 2016). No new exploration data or modifications to the Mineral Resource estimate have been presented, except that the Mineral Resource has been quoted at a cut-off of 4 kg/m<sup>2</sup> abundance. The new cut-off is based on the estimates of costs and revenues presented in the Initial Assessment (IA) of the Mineral Resource contained in NORI Area D (AMC, 2021). The polymetallic nodule deposits in NORI Area D are similar to those in TOML Areas A through F and the QP considers that the proposed development of NORI Area D is a reasonable analogue for future development in the TOML Areas.

#### 2.2.1 International Seabed Authority data

The historical sample data used as the basis for the Mineral Resource estimate in this report was obtained by Golder Associates directly from the ISA (Golder Associates, 2013). The data was also obtained separately by TOML.

Under the principles of the Law of the Sea, developed nation contractors explore then relinquish or return 50% of their initial Exploration Area to the ISA. As part of this process the ISA requires each pioneer contractor to provide all sample data to a robust centrally managed database within the ISA. The ISA then analyse these data to verify that the two areas are of equal economic value. The analysis and acceptance, or otherwise, of the data by the ISA indicates a degree of verification and validation of these data.

The ISA also supplied TOML with other data in numerous reports (referenced accordingly in the text) and the Mining Code administered by the ISA. These reports as well as structure and authorities of the ISA are publicly available from the ISA website (<http://www.isa.org.jm>).

---

The authors of this report neither supervised nor were involved with the preparation, compilation and management of data supplied by the ISA. The ISA compiled these data from multiple and independent Contractors and other sources. These data can be relied upon for the following reasons:

- The ISA has an imperative to manage these data properly and fairly in order to maintain credibility and minimize disputes amongst its many stakeholders (the nations of the world) and to date AMC is unaware of any such disputes being raised in the context of data quality and management;
- The ISA operates independently of any particular government or commercial stakeholder;
- These data have been used as part of a CCZ wide study and mineral inventory estimation exercise (ISA, 2010), which involved experts not employed by the ISA, or TOML, and these data were deemed to be of suitable reliability by the ISA for this exercise.

### 2.2.2 TOML exploration data

In addition to the above ISA data, TOML collected data including:

- 64,432 km<sup>2</sup> of multibeam sonar bathymetry and backscatter response and interpretation thereof collected during a campaign in 2013 on the RV Mt Mitchell;
- 13 nodule bulk samples and analysis thereof collected on the above 2013 campaign;
- 113 quantitative estimates of nodule abundance from box-core sampling collected during a campaign in 2015 on the RV Yuzhmorgeologiya;
- 161 quantitative estimates of nodule abundance from 587 line km or 20,857 frames of seabed photography collected on the above 2015 campaign, as well as logging of megafauna from the photos and 192 hours of continuous video;
- 4 nodule bulk samples and analysis thereof collected on the above 2015 campaign;
- 280 line km of sidescan and sub-bottom profile sonar survey and interpretation thereof collected on the above 2015 campaign;
- 334 profiles of water chemistry and sea column characterization data and analysis thereof collected on the above 2015 campaign;
- Biological taxonomy (in progress) of 3195 samples collected on the above 2015 campaign.

### 2.3 Field involvement

Mr John Parianos visited the CCZ from 4 September to 7 October 2013 on board the RV Mt Mitchell and from 4 August to 10 October 2015 on board the RV Yuzhmorgeologiya. He spent a total of approximately three months within the CCZ surveying and sampling the TOML Exploration Areas.

### 2.4 Personnel

The Sections that each of the Qualified Persons (QPs) were responsible for are summarised in Table 2.1. In addition, each of the QPs contributed to Sections 22–24, where relevant to the Sections for which they were primarily responsible.

AMC has relied upon information provided by the registrant in preparing its findings and conclusions regarding some aspects of modifying factors, as set out in Section 25.

Table 2.1 List of Qualified Persons responsible for each section

Qualified Person	Responsible for the following report Sections:
AMC Consultants Pty Ltd	Sections 1–3, 8, 9, 11.1 – 11.8, 11.9.1, 11.9.2, 11.9.3, 11.9.4, 11.9.8, 11.9.9, 12, 16–25

### 3 Property Description and Location

The TOML exploration rights are located within the Clarion Clipperton Zone (CCZ) located in the Pacific Ocean (Figure 3.1). The western end of the CCZ is approximately 500 km ENE of Kiribati and approximately 1,000 km south of the Hawaiian island group. The CCZ extends over 4,500 km ENE, in an approximate 750 km broad trend with the eastern limits located approximately 2,000 km west of southern Mexico.

#### 3.1 Tenements and Permits

Tonga Offshore Mining Ltd (TOML), a 100% owned subsidiary of Nautilus Minerals Inc., was sponsored by the Government of the Kingdom of Tonga in its application for approval of a “plan of work for exploration for polymetallic nodules” by the International Seabed Authority (ISA) under the terms of the United Nations Convention on the Law of the Sea 1982 (UNCLOS) and the Mining Code of the ISA (specifically the Regulations for Prospecting and Exploration of Polymetallic Nodules).

The ISA approved the plan of work in July 2011 and this led to signing of a “contract for exploration for polymetallic nodules” by the ISA and TOML on 11 January 2012, that formalised an “Exploration Area” (tenement or licence; Figure 3.1, Table 3.1), a term of 15 years for the contract, and a programme of activities for the first 5-year period. The contract also formalised the rights of TOML around security of tenure leading to a “contract for exploitation”. The contract does not cover minerals other than polymetallic nodules but in this context the ISA is obligated to ensure that no other entity operates in a manner that might unreasonably interfere with TOML.

The TOML contract area comprises six separate blocks (A through F) in the CCZ with a combined area of 74,713 km<sup>2</sup> (Table 3.1 and Table 3.2). These areas were previously explored by Pioneer Investors.

Table 3.1 TOML exploration area in the CCZ

Exploration Area	Reserved Block	Area (km <sup>2</sup> )
Area A	Block 2	10,281
Area B	Block 15	9,966

DD – Decimal degrees, UTM - Universal Transverse Mercator map projection

To date, no exploitation licences for extracting minerals from the seafloor within the Area have been granted.

### 3.1.1 United Nations Convention on the Law of the Sea

The international seabed area (otherwise known as the Area) is defined as the seabed and subsoil beyond the limits of national jurisdiction (UNCLOS Article 1). Figure 3.2 shows a map of the Area (blue zone) as well as 200 nautical mile exclusive economic zones (grey zone) and extended continental shelf zones (orange zone). Figure 3.3 shows the relationships between depth, distance and jurisdiction.

The principal policy documents governing the Area include:

- The United Nations Convention on the Law of the Sea, of 10 December 1982 (The Convention).
- The 1994 Agreement relating to the Implementation of Part XI of the United Nations Convention on the Law of the Sea of 10 December 1982 (the 1994 implementation Agreement).

The Convention deals with, among other things, navigational rights, territorial sea limits, exclusive economic zone jurisdiction, the continental shelf, freedom of the high seas, legal status of resources on the seabed beyond the limits of national jurisdiction, passage of ships through narrow straits, conservation and management of living marine resources in the high seas, protection of the marine environment, marine scientific research, and settlement of disputes.

Part XI of the Convention and the 1994 Implementation Agreement deals with mineral exploration and exploitation in the Area, providing a framework for entities to obtain legal title to areas of the seafloor from the ISA for the purpose of exploration and eventually exploitation of resources.

The Convention entered into force on 16 November 1994. A subsequent agreement relating to the implementation of Part XI of the Convention was adopted on 28 July 1994 and entered into force on 28 July 1996. The 1994 Implementation Agreement and Part XI of the Convention are to be interpreted and applied together as a single instrument.

As of 20 August 2020, the Convention had been signed by 167 States (countries) and the European Union. The United States of America is currently not a party to the Convention.

### 3.1.2 International Seabed Authority

The ISA is an autonomous international organisation established under the Convention and the 1994 Implementation Agreement to organise and control activities in the Area, particularly with a view to administering and regulating the development of the resources of the Area in accordance with the legal regime established in the Convention and the 1994 Implementation Agreement.

All rules, regulations, and procedures issued by the ISA to regulate prospecting, exploration, and exploitation of marine minerals in the Area are issued within a general legal framework established by the Convention and the 1994 Implementation Agreement.

To date, the ISA has issued ([https://www.isa.org.jm/mining-code/ Regulations](https://www.isa.org.jm/mining-code/Regulations)):

- The Regulations on Prospecting and Exploration for Polymetallic Nodules in the Area (adopted 13 July 2000; the Regulations).
- The Regulations on Prospecting and Exploration for Polymetallic Sulphides (adopted 7 May 2010).
- The Regulations on Prospecting and Exploration for Cobalt-Rich Ferromanganese Crusts in the Area (July 2012).

The ISA is currently working on the development of a legal framework to regulate the exploitation of polymetallic nodules in the international seabed area.

In 2014, the ISA completed a study looking at comparative extractive regulatory regimes. This was followed in March 2014 with a stakeholder survey seeking comments on what financial, environmental, and health and safety obligations should be included under the framework (ISA 2014).

In March 2019, the Council of the ISA released the advance and unedited text (English only) of the Draft Regulations on Exploitation of Mineral Resources in the Area (ISBA/25/LTC/WP.1) (ISA, 2018). The revised draft incorporated the consideration of requests addressed to the Legal & Technical Commission by the Council during the first part of the 24th Session in March 2018, comments by the Commission, and also reflected the responses to the first draft from stakeholder submissions. The ISA declared a target of July 2020 to have the regulations approved, however the July session was deferred as a result of COVID-19 pandemic.

Pursuant to paragraph 15(a) and (b) of Section 1 of the annex to the 1994 Implementation Agreement, which relates to article 162 (2)(o)(ii) of the Convention, the ISA Council must also adopt such exploitation regulations within two years of a formal request being made by any State which intends to apply for approval of a plan of work for exploitation.

### **3.2 TOML Obligations**

The contract for exploration for polymetallic nodules contains conditions covering such areas as obligations of the sponsoring state, environmental obligations, marine scientific research, fees, and work programmes.

#### **3.2.1 Work Programme**

Under ISA requirements contractors are required to submit five-year work programs. The first TOML five-year work program was completed in 2016 and reviewed and accepted by the ISA in late 2016.

For the second five-year period ending in 2022 TOML proposed the following program.

- Continue environmental baseline work;
- Complete pilot testing;
- Complete geotechnical studies;
- Complete feasibility studies;
- First draft EIA/EMP;
- Continue training.

TOML noted that the program was:

- Dependent on success at each stage;
- Subject to change based on findings at hand at any particular time; and
- Reliant on funding which in turn is dependent to some extent on macro-economic conditions and development with regards to the Authority and its stakeholders.

As a result of the financial state of the company, TOML did not progress at the rate intended until TOML was purchased by DeepGreen in March 2020. TOML currently plans an aggressive program of offshore campaigns in 2021 – 2023 focussing on resource assessment and environmental base line studies with the objective of upgrading the TOML F resource area to Indicated Mineral Resource status and completing environmental baseline studies and ESIA for the TOML F resource area.

TOML plans to collaborate closely with NORI on offshore technology development as well as progressing in parallel proprietary nodule collection technology developed by TOML. TOML and NORI will collaborate closely on the development of nodule processing solutions.

#### **3.2.2 Royalties and Taxes**

Royalties and taxes payable on any future production from the property will be finalised once the ISA has developed an 'exploitation code'. This was formally proposed as a project by the Secretary General of the ISA and endorsed at the 17<sup>th</sup> Annual Session of the ISA. Any code will need to honour the key principles of UNCLOS.

TOML has agreed to pay a royalty with the Tongan government for each tonne of nodules collected from the TOML area from commercial operations in return for sponsorship.

4 Accessibility, Climate, Local Resources, Infrastructure and Physiography

4.1 Accessibility and infrastructure

The CCZ lies between Hawaii and Mexico and is accessible by ship from various ports in the United States and South America. As the CCZ deposit does not include any habitable land and is not near coastal waters, there is no requirement to negotiate access rights from landowners for seafloor mining operations. All personnel and material will be transported to the project area by ship. The region is well located to ship nodules to the American continent or across the Pacific Ocean to Asian markets. The CCZ is generally outside major shipping lanes as indicated in Figure 4.1 which shows the global cargo shipping network, illustrating the trajectories of all cargo ships bigger than 10,000 gross tonnage during 2007.

Figure 4.1 Global cargo shipping network

Note: Colour scale indicates the number of journeys along each route. Adapted from Kaluza et al. 2010.

4.2 Climate

The CCZ has a tropical oceanic climate, with average temperatures of from 20 °C to 32 °C. Minimum and maximum temperatures generally occur in March and September, respectively (ISA 2001), and the average sea surface temperature is 25 °C. The CCZ is located in open ocean and is subject to tropical weather patterns.

Off-shore operations are planned to run throughout the year, with the exception of hurricane events, which are expected to occur once every three years for any given location. Tropical hurricanes are difficult to predict due to their erratic frequency but have high intensity over short periods and occur mostly during the period from May to October (Tilot, 2006, GSR 2018).

5 History

Manganese precipitation in the deep oceans has probably been a widespread natural process for at least the last 500 million years, which is probably when the deep-oceans first oxidized (Fike et al. 2006). The nodules currently found on the seabed within the Clarion Clipperton Zone (CCZ) are constrained by the age of the Pacific Ocean crust itself and published dating indicates that they are probably no more than several million years old (e.g., Chang et al, 2005).

This history of exploration of the CCZ can be considered in four periods:

- 1 The discovery of the Clarion Clipperton Zone (1875-1969).
- 2 The International Decade of Ocean Exploration (1970-1981).
- 3 The Reciprocating States Regime and the Pioneer Investors (1982-1995).
- 4 The International Seabed Authority (1996 to present day).

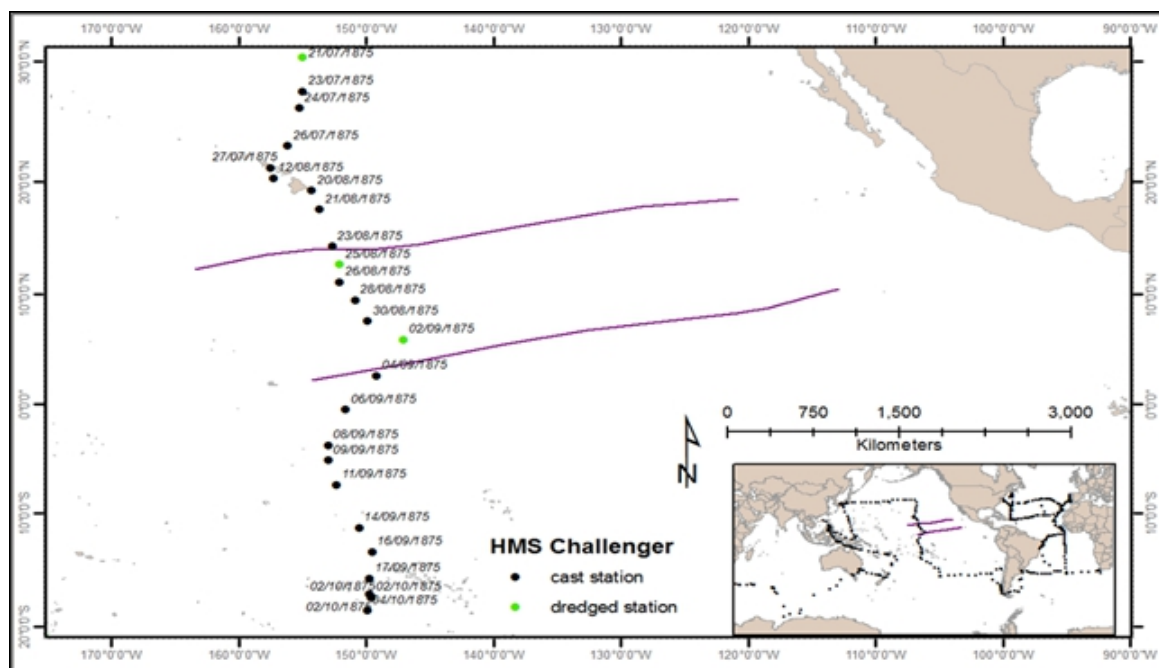

5.1 1875–1969: Discovery of the Clarion Clipperton Zone

5.1.1 First Samples

Polymetallic nodules were first reported in the Arctic Kara Sea (Ingri, 1985) and then by the British HMS Challenger expedition, in February 1873, in the Atlantic Ocean off the Canary Islands (Murray and Renard, 1891). Fossil nodules had already been found in the Alps by C.W. von Giimbel in 1861 (Jenkyns, 1977).

Although the HMS Challenger was primarily sail driven, new technology in the form of a steam engine enabled her crew to winch up nodule samples at 50 of the 343 seabed sample stations surveyed by the ship. Two of these sample stations are in what was later to be called the CCZ (Murray and Renard, 1891; Figure 5.1).

Figure 5.1 Path of the HMS Challenger

Location data from Natural History Museum UK, (2014)

The expedition resulted in numerous oceanographic discoveries including the widespread nature of nodule deposits on the deep-ocean floor. Confirmation of the extent of nodules in the Pacific was made by a contemporary of Murray and Renard, Alexander Agassiz (Mero, 1965) who made several expeditions aboard the US Fish Commission’s USS Albatross around the turn of the century, including one through the central Pacific to the Marquesas Islands. At this time nodules were only seen as items of scientific curiosity.

### 5.1.2 Commercial Recognition

After the Second World War a Swedish expedition reportedly recovered nodules (United Nations, 1979), and interest in exploring seabed nodules started to increase again in the 1950s (as reflected in the publication rate on the subject; Meylan et al, 1976), with people like John Mero (Mero, 1965) promoting their potential with some success. Early exploration efforts and discussion were spread around the planet but based on less than 100 samples collected from the CCZ, Mero predicted the occurrence of many millions of tons of deposits with nickel and copper concentrations each greater than 1% as well as significant manganese and cobalt (Mero 1965).

Two of the early explorers in the 1960s were the USSR and the US companies Kennecott Exploration Inc and Deepsea Ventures. All started exploring in areas other than the CCZ, and it was only in the late 1960s and early 1970s that it became apparent that the CCZ had the best nodule fields in the world in terms of both grade and abundance (McKelvey et al, 1979). By the late 1960s and early 1970s, these explorers had been joined by others. Their efforts are detailed in subsequent sections.

### 5.1.3 USSR

The USSR started an integrated marine research programme in 1949, led by the USSR Academy of Sciences. Regular expeditions commenced with the RV Vitiaz and later the RV Dmitri Mendeleev, starting with at least three campaigns to the Indian Ocean (Bezrukov and Andrushchenko, 1972; Bezrukov, 1962, 1963) then in the southwest Pacific (e.g., Skornyakova et al. 1990), including the Penrhyn Basin near the Cook Islands, and then in the central Pacific (Bezrukov, 1969). Over twenty years, some seventeen Soviet expeditions included at least some research on nodules.

By the late 1960s the focus of Soviet exploration shifted to the Clarion Clipperton Zone. Hundreds of samples and thousands of photos were taken along with seafloor bathymetry mapping during two campaigns. Some mineral inventory estimates were also made (Skornyakova and Andrushchenko, 1964).

### 5.1.4 Kennecott

Source Dave Felix and John Halkyard (pers comm. 2015), unless referenced otherwise.

Kennecott Copper Corporation became interested in manganese nodules in part based on the publications of Dr. John Mero (e.g., Mero, 1965) and work being done at Scripps Institution of Oceanography in the 1960s. Through their subsidiary Bear Creek Mining, Kennecott's first exploration campaign dates back as early as 1962, when 10 tons of nodules were dredged from a site west of Baja California. For the next few years, the group relied on technical associations with oceanographic research campaigns (Killing, 1983) but Kennecott followed up with two more of their own campaigns in 1967. That year, newly designed free fall grabs were used for the first time during the "Clarion" campaign, while the "Confidence" campaign investigated a portion of the CCZ with 143 sample stations, bottom photos and dredge hauls.

In 1969, Kennecott Exploration Inc (KEI) was formed and between 1970 and 1974 KEI conducted another seven campaigns, with progressively more detailed sampling and survey work including dredging for bulk samples (up to 197 tons of nodules and 400 cubic ft of sediment in 1972; Isaacs, 1973). In 1970, on the Crux Campaign, KEI discovered what they called the Frigate Bird deposit in the eastern CCZ (Figure 5.4).

Many exploration techniques and nodule deposit characterization methods were developed and used successfully, but these were never publicly released. Some of the techniques developed at this stage are still used today (e.g., large diameter box-coring and photographic analysis (Felix, 1980).

---

### 5.1.5 Deepsea Ventures Inc

Deepsea Ventures' first campaigns were in the mid-1960s in both the Atlantic (Blake Plateau off Florida) and Pacific (ISA, 2004). They were supported by US academic efforts (e.g., Fuerstenau et al, 1973) which focussed on the geochemistry of nodules and their metallurgical processing.

In the summer of 1970, the company conducted successful collector and air-lift trials at a depth of 762 m on the low metal grade nodule deposits of the Blake Plateau (Kaufman and Latimer, 1971; Lecourt and Williams, 1971; Geminder and Lecourt, 1972; United Nations, 1979). Deep Sea Ventures equipped the Deep-Sea Miner, a 6,750 t freighter, with a 25 m derrick and a 6 m by 9 m central pool (the space from which the subsea devices are deployed). The nodules were raised by airlift, a system previously tested in a 250 m mine shaft (ISA, 2004). The towed collector sled was fitted with a series of tines to exclude material above a certain cut-off size and thereby reduce the chance of pipe string clogging. Material passing the first set of tines was channelled to the suction point by a second set of more closely spaced tines. The first nodules arrived aboard the mining vessel on July 30, 1970. Pumping rates between 10 and 60 tons/hour were successfully achieved during this pre-production mining trial (EC, 1997).

German groups also started working with Deepsea Ventures in 1970 (Backer and Fellerer, 1986) and were more formally involved when Deepsea Ventures went on to form the OMA consortium in the mid-1970s. OMA by then had changed focus to their claim area covering the higher-grade nodules in the central CCZ.

## 5.2 1970–1981: The International Decade of Ocean Exploration

As interest grew through the 1960s, more and more commercial and government funded organizations started exploring the oceans, especially within the CCZ.

The International Decade of Ocean Exploration (IDOE) was an international, collaborative programme to improve the use of the ocean and its resources for the benefit of mankind. It nominally spanned 1970 to 1980 (DOMES, 1981). By 1975 IDOE counted 46 nations as members, including cold world adversaries, the USA and USSR. The US participation was coordinated by their National Science Foundation. Programmes managed by IDOE were mostly scientific in nature including a large environmental research component. IDOE was charged to "Improve worldwide data exchange through modernizing and standardizing national and international marine data collection, processing, and distribution."

The United Nations was keenly aware of the significance of exploiting resources under international jurisdiction and debated how this resource should be managed. On 12 December 1970, the General Assembly of the United Nations adopted 2749 (XXV) "Declaration of Principles Governing the Sea-Bed and the Ocean Floor, and the Subsoil Thereof, beyond the Limits of National Jurisdiction" (United Nations, 1970). This followed negotiations which took place in a specially established Seabed Committee. This document declares the bed and ocean floor, beyond the limits of national jurisdiction, to be the common heritage of mankind (Guntrip, 2003).

The UN's efforts eventually led to development of the Third United Nations Convention on the Law of the Sea, but with a regulatory regime not yet in place, this period of the International Decade of Ocean Exploration is characterized by totally independent and usually overlapping areas of exploration as shown in Figure 5.2.

Figure 5.2 Examples of the overlapping exploration areas of some of the first explorers

Sources: ISA, (2010), Menot et al (2010), Jeong et al (1994)

### 5.2.1 USSR

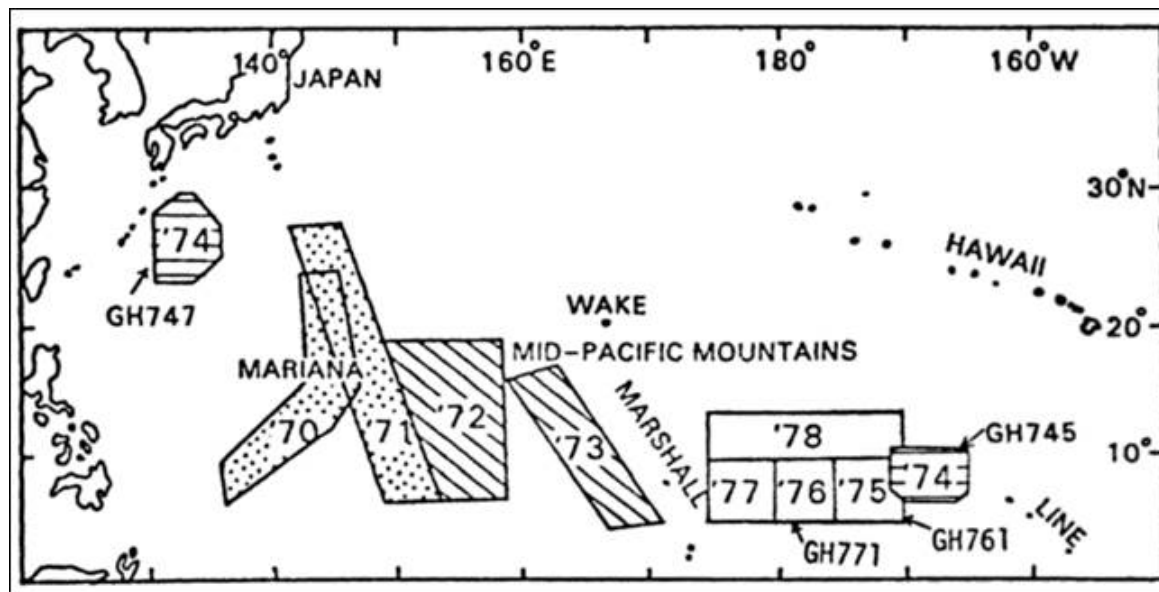

Source Andreev (pers com March 2016), unless referenced otherwise.

During this period Soviet studies of the ocean floor continued from their efforts in the 1960s. From 1976 the USSR Academy of Sciences was joined by State scientific-production enterprises “Sevmorgeologiya” (St.-Petersburg) and “Yuzhmorgeologiya” (Gelendzhik), subordinated to the Ministry of Geology of the USSR. Publications from this period include monographs (Bezrukov, 1976, 1979; Volkov 1979) and numerous magazine articles (e.g., Bazylevskaya, 1973, Skorniyakova et al. 1981).

### 5.2.2 Japan

Japanese companies were easily the most prolific participants in nodule exploration and development in the 1970s, usually through large consortia such as DOMA and DORD (UNOETO, 1979). Japanese government efforts started in 1974 using their newly commissioned research vessel the Hakurei-Maru which was given two main projects: “Marine geological investigations on continental shelves and shores around Japan” and “Investigations on deep-sea manganese nodule deposits” which focused mostly on the Central Pacific Basin (Figure 5.3). These efforts concluded in 1984.

Figure 5.3 Areas researched by the Geological Survey of Japan in the 1970s

Source: UNOETO, 1979

### 5.2.3 Kennecott Consortium (KCON)

Kennecott continued their exploration in the early 1970s attracted by the large informal resource estimates for nickel and other metals. Kennecott also commissioned preliminary feasibility studies of mining by Lockheed Missiles and Space Company and Global Marine Development, Inc., starting in the late 1960s. Kennecott’s corporate processing research centre in Lexington Massachusetts was charged with developing a metallurgical process for nodules with the Kennecott Computing Center in Salt Lake City being made responsible for resource estimates.

As the scale of the needed investment and level of required offshore expertise became apparent, Kennecott reached out and sought partners to share the risk. The KCON consortium was formed in 1974 based on the petroleum industry model of an operator (Kennecott Copper Corp) responsible for execution of work and supporting partners. The partners were Kennecott (50%), Rio Tinto Zinc (20%), Noranda (10%), Consolidated Gold Fields (10%) and Mitsubishi (10%) (Killing, 1983). Subsequently Rio Tinto Zinc sold half their shares to BP Petroleum Development Ltd. The Consortium was led by a Committee of Representatives (COR), which approved plans and budgets, and a Technical Advisory Committee (TAC) of technical experts from each partner which helped prepare the plans and review progress. Several engineers from the partner organizations were seconded to the KCON laboratories, principally the Ocean Mining Laboratory in San Diego, California.

The exploration work described above ended up with two areas of interest for KCON (Figure 5.4):

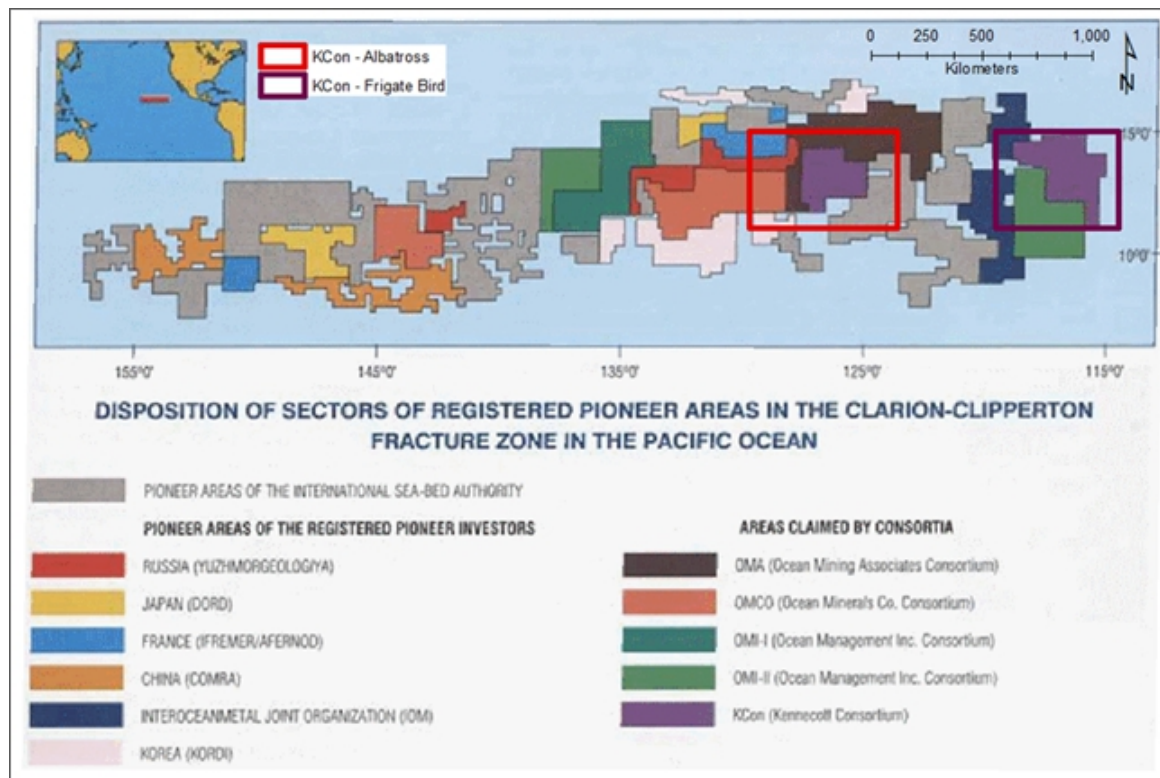

- 1 The Albatross area in the central part of the CCZ, which ultimately became the “USA4” license in 1984 (U.S. Department of Commerce) under the Reciprocating States Agreement (Figure 5.13).
- 2 The Frigate Bird area in the eastern part of the CCZ which ultimately became the “UK” License in the early 1980s.

This consortium developed many of the best exploration techniques used in the CCZ including large capacity box-coring and photographic survey (Felix, 1980). Ultimately KCON reached an unpublished “inferred reserve” for parts of their concessions (David Felix pers comm. 2015). This included definition of “mineable units” on the seafloor.

Once exploration was completed the consortium developed mining system designs, numerical models and tested various components of a commercial mining system (Halkyard 1980, 1982). The development work included a towed nodule pick-up system which was tested at approximately 1/5th scale (Morgan, 2011; Heine and Suh, 1978), a hydraulic and airlift system which was tested on land (Burns and Suhm, 1979; Doyle and Halkyard, 2007), and study of nodule attrition including several pump loop simulations, material handling and transportation (Halkyard, 1979).

Metallurgical development included pilot scale testing of the patented “Cuprion” atmospheric pressure ammoniacal leach process (Skarbo, 1975; Agarwal and Beecher, 1976; Agarwal et al, 1978). A 200-ton bulk sample of nodules collected in 1972 (Isaacs 1973) were intended for a large-scale metallurgical pilot test. These nodules were stored in Safford, Arizona, however the samples were disposed of in the 1990s.

Figure 5.4 Kennecott priority areas of interest in the CCZ

Modified from Yamazaki (2008b)

A comprehensive cost estimate of a commercial mining venture was carried out by KCON between 1978 and 1980. The mining and processing research conducted by KCON in the 1970s was consolidated into a commercial system design and execution plan. This work was performed by Bechtel Corporation with support for the mining system provided by Global Marine Development, Inc. Two sites were selected for the land-based processing plant: Southern California near Los Angeles and the West Coast of Mexico at Lazaro Cardenas, Michoacan, Mexico. Bechtel developed preliminary Cuprion plant designs and cost estimates for both sites. Extensive investigations were conducted into permitting requirements and options for tailings disposal. Lazaro Cardenas was under development as a deepwater port and an industrial hub to support Mexico’s industrialization plans. Meetings were held at a high level with Mexican officials who were encouraging KCON to consider a development at Lazaro Cardenas.

---

The cost estimate was based on a 3 Mtpa manganese nodule project producing about 88,000 lb per year of nickel and associated copper, cobalt and molybdenum. KCON never considered manganese a viable product. The overall conclusion of the KCON/Bechtel study was that at the time nodules could be cost competitive with new sources of nickel, but not with current sources (Dubs, 1983). Also, Kennecott and other industry representatives believed the then terms of the newly negotiated Law of the Sea Treaty would introduce unacceptable risk to the project.

KCON worked with government officials and other interested consortia in establishing a framework which would permit restructuring of Part XI of the Law of the Sea Treaty in a form acceptable to KCON and other active mining consortia. However, as time dragged on KCON progressively wound up their operations, stopping active exploration and closing their Ocean Mining Lab in La Jolla in 1981.

KCON applied for and received an exploration license for a segment of its exploration area under the US Deep Seabed Hard Minerals Resources Act in 1984 (USA-4). Although some ad hoc evaluation continued after this, in May 1993, KCON abandoned their license under the US Act. The consortium was dissolved. In June 1993, Ocean Minerals Company (OMCO) submitted to NOAA an exploration license application from the former KCON license area USA-4. OMCO also acquired the exploration data for the KCON sites.

#### 5.2.4 Ocean Mining Associates (OMA)

The OMA consortium comprised Essex Minerals Company (US), Union Seas Inc (Belgium), Sun Ocean Ventures (US), with Deepsea Ventures Inc the consortium's service contractor (ISA, 2004).

In 1976, six years after the Drake Plateau trials discussed above, OMA started a programme to trial mine nodules in the CCZ. OMA equipped the Wesser Ore, a 20,000 ton iron ore carrier, with a moon pool, a derrick and revolving thrusters. The ship had the two central holds converted for equipment and the moon pool, a forward hold set aside for general use and three holds combined into two for nodule storage. The ship's derrick was covered by a distinctive dome, whose purpose was mostly to keep proprietary technology hidden. The nodules were collected by a suction dredge towed on skis behind a rigid riser and were raised by airlift. The collector was at 1/5th scale except for the collector inlets which were at full design scale.

The ship renamed Deepsea Miner II (Figure 5.5), conducted its first tests in 1977 at 1,900 km southwest of San Diego, California. The tests were suspended because the electric connectors along the pipe string were not completely waterproof. Early in 1978, two further trials encountered new difficulties when the dredge floundered in bottom sediment and a cyclone struck. The latter situation was dangerous as the riser could not be retrieved in time (it took well over 6 hours to recover), so the ship had to ride out the full fury of the storm (later voyages included an emergency explosive detachment system for the riser). Finally, in October 1978, 550 tonnes of nodules were lifted in 18 hours, at a maximum capacity of 50 ton/h. The test was stopped after a blade broke in a suction pump. Ultimately the nodules recovered were taken to Belgium (home of Union Seas Inc) and used for attrition testing in a three-phase loop system (University of Virginia (2015)).

### 5.2.5 AFERNOD

Unless referenced otherwise source is Ifremer (1994) or Menot et al. (2010).

French interest in exploration and mining of Pacific nodules dates back to the mid-1960s but field work commenced in early 1970 when the Company "Société Le Nickel" (SLN) and the National Centre for the Exploitation of Oceans (CNEXO), which later became today's Ifremer (Institut Français de Recherche pour l'Exploitation de la Mer), began studying the nodule deposits, focusing near the Marquesas Island Group (French Polynesia) (IFREMER, 1994, Menot et al, 2010).

In 1974, the Commissariat à l'Energie Atomique (CEA) and the Chantiers de France-Dunkerque, which in the meantime became Chantiers du Nord et de la Méditerranée (NORMED), formed a joint venture called Association Française d'Étude et de Recherche des Nodules Océaniques (AFERNOD). AFERNOD focused more on the CCZ.

In 1984 Ifremer and CEA (via their subsidiary TECHNICATOME) formed GEMONOD (which stands for Groupement pour la mise au point des MOyens nécessaires à l'exploitation des NODules) which led the development programme of the technology of exploitation of nodules funded by the French government until 1988. Thereafter Ifremer resumed management of all aspects of the project.

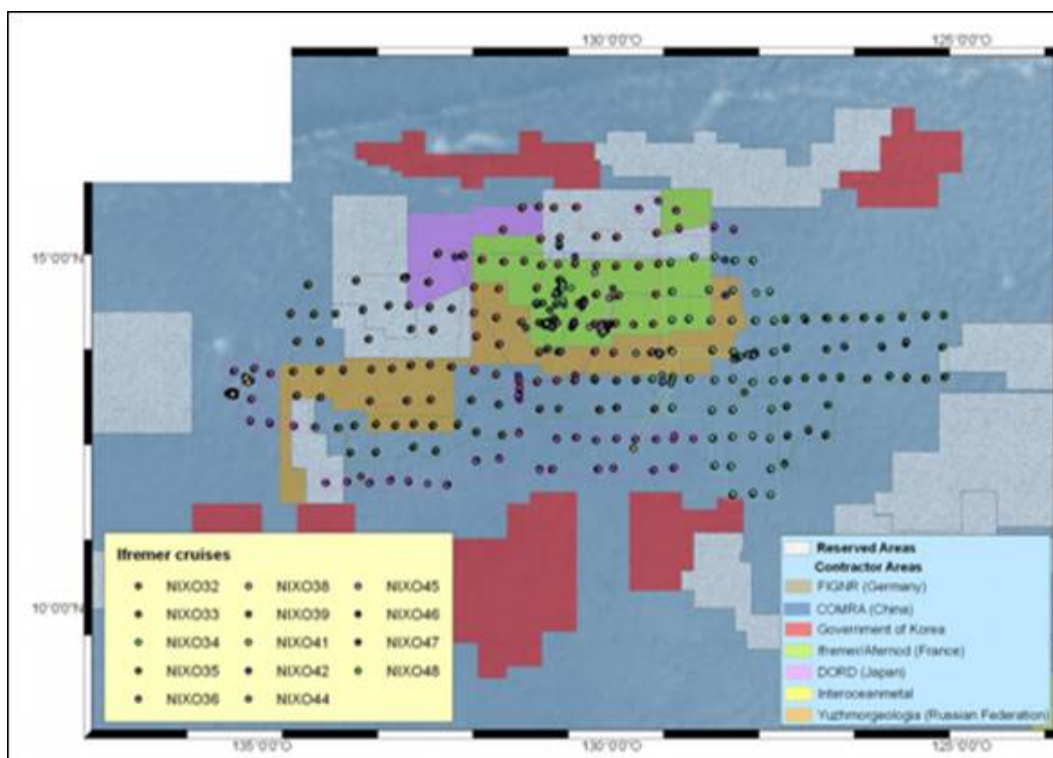

AFERNOD used four research ships for most of their work during the 1970s, the Coriolis, the Noroit, the Suroit, and Jean Charcot. They also used one of the world's first AUVs, the Epaulard, and the manned submersible Nautille.

Between August 1975 and September 1976, the French explored the entire CCZ at a wide but systematic scale with nine campaigns (called NIXO20 to 28). A wide range of technology was used in the exploration effort, but it appears that clusters of free fall grabs were typically used at each sample site.

Analysis of exploration results of the area led to definition of two domains, with one having more continuous grade characteristics. For the next phase the AFERNOD selected an area with consistent grade and typically higher abundance, the 431,500 km<sup>2</sup> “NORIA” area (NOdules RIches et Abondants). The eastern parts of this area coincide with KCON’s Albatross Area (Figure 5.6). Work at NORIA between 1976 and 1977 started with several thousand kilometres each of sonar, magnetic and seismic survey. This was followed by six campaigns of sampling and photographic survey.

Figure 5.6 Samples in the NORIA Area

Source: Menot et al. (2010)

A “mining area” of 150,000 km<sup>2</sup> was then selected from the NORIA area for further work starting in 1979. This work focused on mapping the seafloor topography and nodule abundance. The latest technologies such as multibeam echo sounding (MBES) and AUV survey were brought to the problem as well as more detailed towed surveys.

### 5.2.6 Ocean Mining INC. (OMI)

Unless referenced otherwise the following is sourced from Brockett (pers comm. 2016) or Brockett et al. (2008).

The International Nickel Company (INCO) first became interested in deep-ocean mining for manganese nodules back in 1958, but it was not until late in 1971 that INCO opened its Ocean Mining Development office in Bellevue, WA. During those early years, INCO contracted with outside organizations (John Mero, Dames and Moore, and Deepsea Ventures) to assist with exploration activities including several survey campaigns. INCO then explored in their own right with the MV Growler.

A first generation mechanised self-generating collector concept delivered by contractor Ocean Science Engineering in 1972, proved unworkable in trials in Discovery Bay, Puget Sound.

---

INCO made the decision to develop their collector systems in-house and set about designing what became internally known as the “Electro-Hydraulic” (EH) collector that was subsequently patented in 1976. INCO constructed a version of the EH collector designed to be tested on a cable and scheduled a deep-sea collector test in the CCZ in the early 1970s. Unfortunately, the collector, its instrumentation system, and a 7600 metre electro-mechanical tow cable were lost during a shallow water test off the coast of Oahu, Hawaii. That loss triggered INCO’s decision to search for joint venture partners leading to the formation of OMI.

In 1975 the OMI consortium was created, led by INCO and including AMR of Germany, DOMCO of Japan and SEDCO of the USA.

AMR was given responsibility for the exploration programme within OMI and INCO was assigned responsibility for collector development (Brockett and Kollwentz, 1977). However, both AMR and DOMCO assisted with the design and construction of prototype test collectors. INCO excavated a land based collector test facility in Redmond, WA, and early in 1976 tested eight collectors of various designs.

In 1976 the OMI collector team used the RV *Valdivia* to conduct in-situ collector tests in the CCZ. Two collectors were chosen for a subsequent pilot mining test; the DOMCO hydraulic design and the AMR cutter blade scraper design. Two of the hydraulic collectors were constructed, one with a two metre wide active collection width and one with a three metre wide collection width.

The developmental mining system tested was configured around the SEDCO 445 drill ship which was a 445’ vessel (Figure 5.7). A riser pipe assembled with 9-5/8” diameter oil field casing (Figure 5.9) extended from the gimbaled rig floor on the ship to within 50 metres of the seafloor. This gimbaled rig floor was important for safe and efficient operations and allowed the casing to be safely lowered and the collector deployed without damage. The addition of motion compensation equipment completed the list of requirements for creating the stable platform to carry out successful deep mining operations. The weight of the riser pipe, pumps, instrumentation and collector assembly was over 450 metric tons.

During the pilot mining testing, OMI tested both a hydraulic submersible pump (Figure 5.9) and an air injection lift system to raise the nodules from the seafloor to the surface. The interface between the seafloor collector and riser pipe was a structurally strengthened flexible hose to accommodate variations in seafloor bathymetry. Above the flexible section of hose a deadweight was installed to control riser pipe lift-off during towing operations. Next in line was a dump valve to prevent nodule clogging in the riser pipe during mining shutdowns. There was also a vacuum relief valve in the lower assembly to prevent collapse of the flexible hose in the event the collector became jammed with nodules.

Figure 5.7 OMI Pilot Mining System Configuration and the SEDCO 445 off Honolulu

While the primary function of the collector was to gather the nodules from the seafloor, there were secondary functions; rejecting the oversized and undersized nodules, eliminating unwanted sediment, and introducing the nodules into the riser system. In addition to providing a conduit for lifting the nodules to the surface, the riser pipe was used to tow and navigate the seafloor collector through the mine site. Once on deck, an air, water and nodule separator directed the nodules to conveyors (Figure 5.10) for transporting the nodules to the ship holds and on deck storage containers. Any superfluous water and entrained sediment was returned to the ocean under supervision of NOAA environmental scientists associated with the DOMES project.

Three test campaigns culminated a four-year research and development programme by OMI to determine the technical feasibility and economic viability of deep-ocean mining at the time. The pilot mining test was conducted in more than 5,250 metres of water.

Figure 5.8 INCO electro-hydraulic collector test; DOMCO hydraulic collector launch & recovery test on the RV Valdivia

Figure 5.9 Connection of riser to collector and in-line submersible pump

Figure 5.10 OMI Transport Conveyors Overflowing with Nodules

The OMI team, operating aboard the SEDCO 445 drill ship successfully recovered over 800 metric tonnes of nodules during these tests during the summer of 1978. The submersible pump system recovered approximately 650 tonnes of nodules while the air lift system recovered 150 tonnes. Nodule throughput varied dramatically throughout the tests with the rate exceeding 40 tonnes per hour at times causing the material handling systems and storage containers on the mining ship to overflow with nodules (Figure 5.10).

Most of the 800 tonne sample was shipped to INCO's Port Colbourne research facility for process testing and development. There it was processed into Ni-Cu-Co matte which was distributed to the consortium partners for further evaluation.

Kollwentz (1990) discusses the challenges faced by OMI (and thus by the other commercial consortia) both leading up to, during, and most critically after the successful pilot mining trial. Issues relating to the project specifically revolved around management and related technology development (the nodule consortia were some of the earliest large complex joint ventures; Killing, 1983).

### 5.2.7 Ocean Minerals Company (OMCO)

Ocean Minerals Company comprised US and Dutch interests, namely: Ocean Systems of Lockheed Missiles and Space Company Inc., Amoco Minerals Co, Billiton International Metals BV and Boskalis Westminster (UNOETO, 1979).

In 1978, following the end of the infamous Project Azorian (CIA, 2012), OMCO rented the Glomar Explorer from the United States Government (Spickerman, 2012) to use as the pilot mining vessel. The Glomar Explorer (Figure 5.11) had been built to raise a sunken Russian submarine but had used nodule mining as a cover story. The OMCO partners thus sought to leverage off much of the already completed engineering work.

OMCO conducted an extensive exploration campaign across the CCZ (Golder Associates, 2013) with a minimum of six campaigns utilising the MV Governor Ray between 1978 and 1981. Work included sampling (Spickerman, 2012), photography and video survey. Footage of some of the exploration work and subsequent pilot mining trials can be found at Periscope Film (2013).

The pilot mining vessel had dynamic positioning, a 33,000 ton displacement and a length of 180 m. It utilized a sophisticated system to deploy the pipe string and electric power conduits (ISA, 2004). Its large moon pool (61×22 m) facilitated the handling of a large collector and buffer. OMCO built a motorized collector outfitted with Archimedes screw-drives to crawl over soft sediment (Figure 5.11).

Initial experiments were at a depth of 1,800 m off California, but the first full tests were south of Hawaii at the end of 1978. These first tests were suspended because the doors of the moon pool refused to open. Finally in February 1979, the operation was carried out with more success. In addition, much data was assembled by the ship's advanced computer system. These operations succeeded in demonstrating that OMCO's basic approach to dredging and lifting worked (ISA, 2004).

### 5.2.8 DOMES

In order to meet requirements of national environmental legislation, the United States in 1975 initiated a comprehensive research programme called Deep Ocean Mining Environmental Study (DOMES; Bischoff and Piper 1979; DOMES, 1981; Thiel et al, 1997). The study was described as a Draft Programmatic Environmental Impact Statement and characterised the environment in the CCZ region (which was included in a rectangular area called also the DOMES area) and the impacts of its potential mining.

Figure 5.12 DOMES baseline sites in the CCZ, within the DOMES area

Modified after Piper et al. 1979 with CCZ boundaries and TOML areas.

Phase I of the programme, called DOMES I, was undertaken by the National Oceanic and Atmospheric Administration (NOAA) of the US Department of Commerce to provide environmental baseline information on three representative mining sites (A, B, C) in the Pacific manganese nodule province. Each covered an area of approximately 200 km by 200 km and was chosen in consultation with industry and the scientific community.

The programme was run by NOAA's Pacific Marine Environmental Laboratory with significant input from academia. Twelve campaigns of NOAA's research vessel RV Oceanographer were carried out from August 1975 through November 1976, totalling approximately 240 ship days at the three sites. Scientific disciplines represented were physical oceanography (studies of solar radiation and ocean currents), biological oceanography (studies of phytoplankton and benthic fauna), chemical oceanography (studies of nutrient chemistry and suspended matter), and marine geology (studies of sediment, nodules, acoustic stratigraphy).

DOMES II involved monitoring of the effects of the OMI and OMA pilot trials described above (e.g., Ozturgut et al, 1981). The OMI and OMA systems required discharge of return water from the lift system, and this was monitored and characterised. Estimates of lift and collector impacts for a 5,000 dry metric tonne per day operation were also made.

Data review and reporting included assessment of required resources for mining and on-shore processing marketing and cost-resource-safety trade-off estimates.

DOMES was designed primarily as a data gathering effort and final data reports were submitted to NOAA by early 1978. Data collected concurrently by other workers was included with the DOMES data for completeness, with a book of key findings and data published in 1979 (Bischoff and Piper 1979). The final official Draft Programmatic Environmental Impact Statement was issued in 1981 (DOMES, 1981; Ozturgut et al, 1997). The conclusions of the study at the time were that for a commercial operation most issues were likely not of serious concern, but with key focus on:

- Surface discharge from a typical riser lift system would have no long term impact and would be very small at the scale of the CCZ. A question remained on impact of particulate matter on fish larvae.
- Impact from a typical seabed collector would be clearly adverse to benthic organisms at the site, but that on the scale of the CCZ impact would not be significant. Recolonisation rates were unknown. High rates of biodiversity and ecosystem function were addressed but not examined in depth and the inevitability of islands of undisturbed seafloor within the mine sites was pointed out.
- Extent and impact of sediment plumes generated at the seafloor was still largely unknown and demanding of further investigation. The benthic impact experiments discussed below were then designed to specifically address this point (Ozturgut et al, 1997).

### 5.3 1982–1995: The Reciprocating States Regime and the Pioneer Investors

By 1980, the Third United Nations Conference on the Law of the Sea had been running for eight years and a successful outcome was far from certain (Churchill and Lowe, 1988). The process was drawn out by a need for consensus in the sessions as earlier attempts to use majority votes had proven unsatisfactory.

In the early 1980s legislative efforts to manage deep-sea mining (and specifically development of the CCZ nodules) split with:

- The United Nations establishing a specific Preparatory Commission (PrepCom; at the eleventh session) to look at defining principles and regulations to implement the 1982 Act and to encourage Pioneer Investors into the Area (this was often related to trying to get particular states to sign UNCLOS);
- Establishment of the Reciprocating States Regime (RSR). This directly involved USA, Japan, France, West Germany, United Kingdom and by distant association the USSR, China, and what became the IOM consortium. The RSR was either planned as a bridging system until UNCLOS could be sorted out or was an alternative system altogether (Churchill and Lowe, 1988).

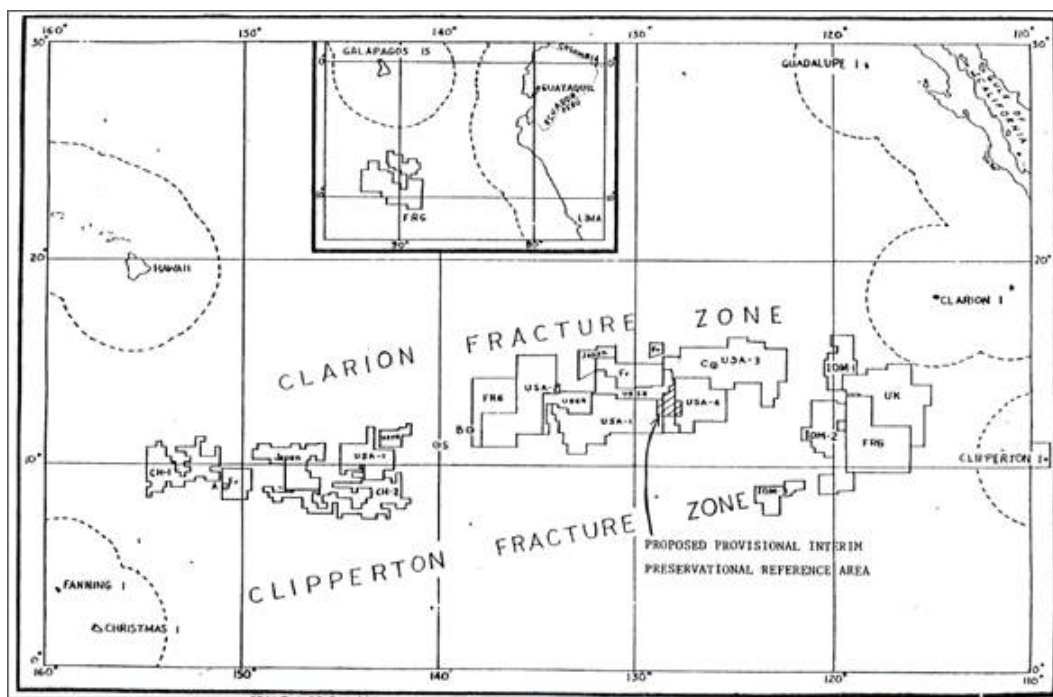

The UN was keen to close out UNCLOS and recognised the need to attract a group of Pioneer Investors on more attractive terms than originally envisaged (Resolution II). Many of the groups that had worked in the Area in the 1970s had the desire to register and protect past work with the hope that UNCLOS was imminent. After several initial attempts to progress discussions, the USSR and India registered first as Pioneer Investors in early 1984. With concerns about losing security of tenure, France and Japan followed suit in late 1984.

Issues with the applications, in part relating to overlapping areas, meant that most of these applications were resubmitted along with others in 1987 and 1988. In the meantime PrepCom worked on regulations, the RSR was progressed further, and the nations concerned discussed the issues at the UN and in other forums.

The RSR worked by mutual co-operation whereby each participating state:

- Established domestic deep mining legislation of a broadly similar basis and
- Met and agreed that mineral rights granted under their respective domestic legislation would not overlap (Figure 5.13).

Figure 5.13 Operating Areas under the Reciprocating States Regime, circa 1993

Source: NOAA (1993)

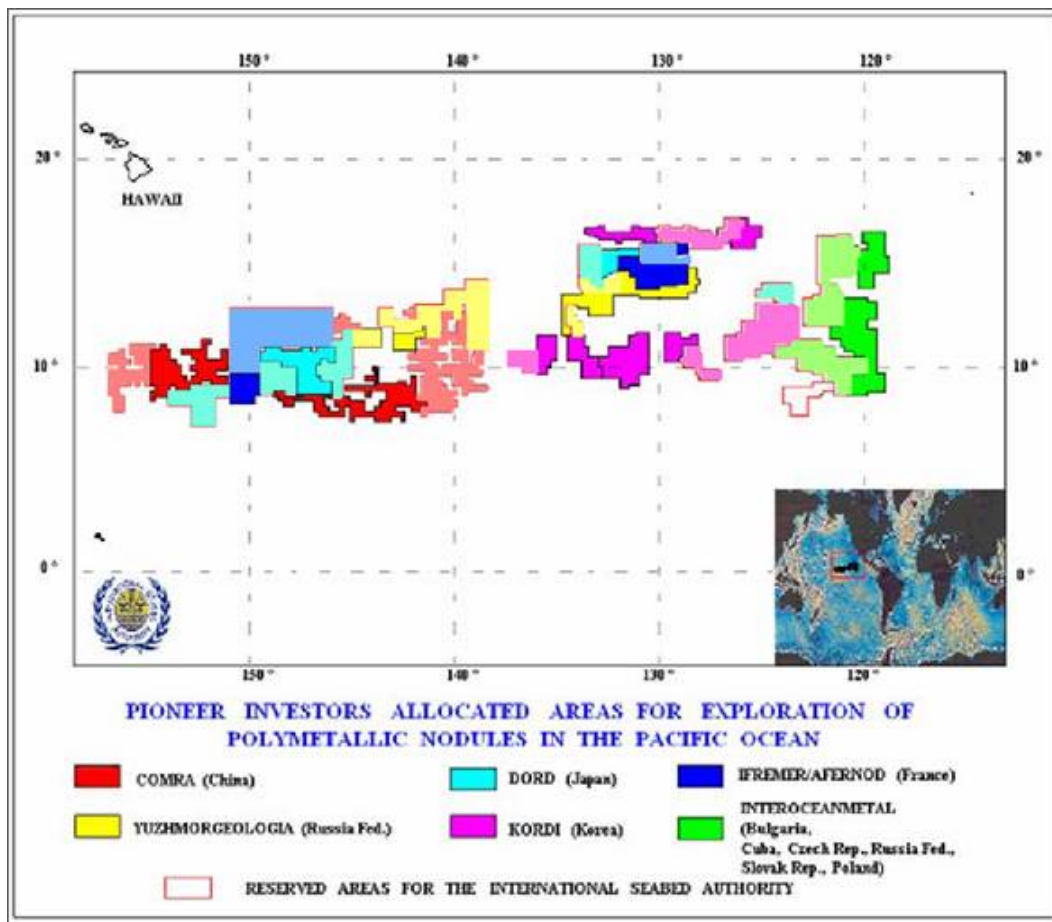

The RSR worked well in terms of removing the issues of the overlapping work programmes (and subsequent claims) that characterised the previous decade. By 1993 there were 18 “operating areas” recognised by the US (Figure 5.13) with all but one in the CCZ. Most of these areas are now encompassed within the ISA contracts and returned areas (Figure 3.1). Today only three of these operating areas are still in force outside of UNCLOS, these being the USA-1 (two blocks) and USA-4 areas, all issued to Lockheed Martin under the US Deep Seabed Hard Minerals Act (NOAA, 2016). The deep-sea mining legislation developed by the other members of the Reciprocating States Regime is however still of value as domestic legislation is required in any event by Sponsoring States under UNCLOS.

Between 1989 and 1994 the commercial consortia started shutting down their nodule programmes and the UN Secretary General seriously tackled the idea of modifying Part XI (Ranganathan, 2014). In 1994, revisions to Part XI (at this stage called “The Boat Paper”) had progressed to point of widespread (if not complete) acceptance. The resulting Agreement on Implementation was included into UNCLOS and adopted as a binding international Convention.

Issuance of the Agreement of Implementation led to a raft of ratifications from UNCLOS signatory states, but despite it being drafted largely in concession to the United States, the United States has not yet ratified UNCLOS, although it did provisionally sign the Agreement of Implementation. By this time the registration of the seven Pioneer Investors was complete. This included the six shown in Figure 5.14 as well as India (with a contract in the Indian Ocean). The Pioneers received special terms including application fees at cost of administration (up to USD 250,000) and the right to apply for 150,000 km<sup>2</sup> in the first instance (returning a 150,000 km<sup>2</sup> area of equal value at that time; Figure 5.14), reducing to their preferred 75,000 km<sup>2</sup> over the next fifteen years.

Figure 5.14 Retained and returned (lighter shade) areas of the pioneer investors in the CCZ

Modified after ISA (2003) and Ifremer (1994)

### 5.3.1 Deep Ocean Resources Development

DORD has its origins in DOMA (Deep Ocean Minerals Association) a consortium of some 39 different Japanese companies that was formed as a public corporation in 1974 but with oversight by the Japanese Ministry of International Trade and Industry (MITI). DORD was then established in 1982, specifically for the development of polymetallic nodules. However, since the mid-1990s, it has been involved in other deep-sea mineral resource types and hydrocarbon research (DORD, 2013). DORD is 75.83% owned by Japan Oil, Gas and Metals National Corporation with the remainder distributed amongst some 43 commercial companies (DORD, 2013).

DORD began manganese nodule exploration activities in 1983 and was formally accepted as a Pioneer Investor in late 1987. DORD reports through the Japanese Agency of Industrial Science and Technology to MITI. Between 1981 and 1989 it spent some JPY20 B (~USD80 M at the time; Kajitani, 1990). Much of the research and development expenditure was on a mining system concept, models and simulations and pilot development by the Technology Research Association involving:

- Towed collector based on the OMI Asakawa design but incorporating a crusher;
- Lift system (either pumping or airlift);
- Flexible hose connection to collector that was key for helping managing heave and seafloor irregularities as well as landing and recovery operations; and
- Pumps and compressors and their efficiency.

In 1997, as part of the pilot programme of component testing, a trial was made using a towed collector without crushing or lifting (Figure 5.15). This was on a seamount southeast of Marcus Island (Minami-Tori-shima) at 2200 m and nodules were successfully collected (Yamazaki 2008, Yamazaki, 2011).

Figure 5.15 1997 Japanese collector, barge and trial schematic

Source: Yamazaki (2006)

In 1996, ahead of the seamount trial, DORD paused work in the CCZ, resuming only in 2008.

### 5.3.2 China and COMRA

Formal Chinese interest in deep-sea marine science and development is believed to date back to the mid-1970s with the leadership of Deng Xiaoping (Takeda Jun'ichi, 2014; Hoagland et al, 1992).

The first known marine surveys took place in 1978 (RV Xiang Yang Hong 05; COMRA, 2013a), 1983 and 1985 (RV Xiang Yang Hong 16 in the central Pacific; Hoagland et al, 1992; Glasby, 1986). Between late 1986 and 1987 a campaign to the CCZ covered 48,000 km<sup>2</sup>.

Between 1991 and 2013, COMRA organized some 16 ocean expeditions to its area in the CCZ (COMRA, 2013b). Ultimately it delineated some 20 Gt of "mineral rich areas" (COMRA, 2013a), using in part an acoustic system called MFES (Multi-Frequency Exploration System; ISA, 2010).

In 2001, COMRA was involved with research institutes in pilot-miner trials in a test pool (2.8 m deep) and later in shallow water (~150 m deep; Li and Jue, 2005; COMRA 2013c). The tests included: trials of track and screw drive vehicles (Figure 5.16); determination of power requirements; ability to navigate obstacles; spud types for tracks; the ability to make turns; and the effect of sideloads. Tendency to accumulate mud is not specifically mentioned. Test work showed that the test tracked vehicle worked better than the test screw drive vehicle (Li and Jue, 2005) so a tracked vehicle was used as basis for the pilot vehicle.

Trials started June 2001 and in September the first successful production test were achieved with collection of 900 kilograms of synthetic nodules. At around the same time lifting tests were done using pumps and pipes in an old mine shaft (to 230 m).

Figure 5.16 Chinese pilot scale tracked and test screw-drive subsea vehicles

Source: Li and Jue (2005)

### 5.3.3 GEMONOD

AFERNOD continued working on the CCZ project for the French government until around 1984 when they were joined by GEMONOD (Groupement pour la mise au point des MOyens nécessaires à l'exploitation des NODules), which focused on the mining and processing sides of the project (Ifremer, 1994).

Work at this time included provision of samples for metallurgical test work, more detailed seabed geotechnical work and accurate characterisation of the types of seabed obstacles. The geotechnical work included using the Nautilie submersible to take shear vane readings on carefully selected sites during the 1988 NIXONAUT campaign (Cochonat et al., 1992).

Much of the photographic and video data collected by Ifremer at this time was studied by biologists and is encapsulated in a detailed study on the megafauna (animals > 2 cm in size) of NIXO45 by Tilot (2006). This includes some of the first detailed photos of animals and landforms on the seafloor of the CCZ and a quantitative analysis of the megafauna present.

A 25 tonne metallurgical sample was collected from 49 dredge deployments. A trial mining site was also selected, called NIXO 45, and this area was surveyed and sampled in detail.

AFERNOD and then GEMONOD also considered a variety of possible mining systems during this period including one of the most exotic ever taken to testing phase. Initially in the 1970's the continuous line bucket system was favoured (ISA, 2001b) but by the mid-late 1970s survey had discovered terrain obstacles on the ocean floor, such as blocks, steps, cliffs and potholes, convincing French engineers that a bottom collector independent of a surface vessel was needed.

In 1980 they worked on the concept of a free-shuttle mining system (Ifremer, 1994) consisting of a series of independent vehicles that would dive on their own to the ocean floor. Reaching the bottom, they would dump ballast to position themselves and would start to collect the nodules. After loading 250 t of nodules, they would drop additional ballast and start their ascent to the surface. It was found during the feasibility study that the system would be too expensive, because the 1,200 t weight of the shuttles far exceeded their 250 t loading capacity. Nonetheless in 1985 a prototype pilot scaled vehicle (PLA-2 6000; Préleveur Libre Autonome) was built and in late 1987 tested in the Mediterranean where it demonstrated flight, landing, seafloor movement, and return to surface (ISA, 2001b).

Figure 5.17 GEMONOD crawler and hydraulic lift system

Source: Herrouin 2009. (Crawler (1) hose (2) buffer (3) pumps (4) rigid pipe (5), semisubmersible platform (6))

By the mid-1980s GEMONOD determined that hydraulic systems seemed to have the greatest potential (Ifremer 1994; Herrouin 2009; ISA 2001b, 2004). GEMONOD's system (Figure 5.17) consisted of: a semi-submersible surface platform; a 4,800 m rigid steel pipe string, and a flexible hose, 600 m long and with a 38 cm internal diameter, connecting the bottom of the pipe string to a dredge on the seabed. This hose would form an arc, allowing the dredge to deviate from the route followed by the surface platform so as to avoid obstacles. The self-propelled dredge would be 18 m long, 15 m wide and 5 m high, weighing 330 t for 78 t buoyancy. Crawling on the bottom, it would collect nodules and condition them for pumping through the flexible hose. Ore carriers would transport the nodules from mining ship to port, where the processing plant would be located.

GEMONOD also looked at mineral processing, both hydrometallurgical and pyrometallurgical options (Ifremer, 1994). This included a pilot processing plant for ammonia/acid leach circuits built in Fontenay-aux-Roses by CEA (ISA, 2001b), and smelting tests by MetalEurop.

#### 5.3.4 USSR and Russia

Studies by the USSR Academy of Sciences increased markedly in number in the 1980s. New advances were in the study of the composition and structure of nodules, as well as local factors (e.g., Kazmin, 1984; Andreev, 1994). However, the most extensive research was carried out by the Ministry of Geology (through institutes such as Yuzhmorgeologiya) of the USSR. These studies included the Indian Ocean, but focused for the most part on the CCZ, and each year between 1982 and 1987 there were four or five marine expeditions (S. Andreev pers comm. 2016). Work included development of high-quality towed sonar and photo platforms (e.g., MAK, MIR and Neptune that are still used today), as well as samplers and navigation systems.

During the 1980s and early 1990s the Soviet explorers examined of the order of 3 million km<sup>2</sup> area in the CCZ, with a network of stations at an average density of ~ 50×50 km. Studies included bathymetric, gravimetric and magnetometric observations, acoustic research, as well as bottom sampling. On the sections of the CCZ regarded as promising for the future development application, the station spacing was reduced to 25×25 km, and towed sonar and video-photography was added.

---

On May 16, 1988 the USSR formally became a Pioneer Investor through Yuzhmoregeologiya, and since then the Ministry of Geology effectively halted all nodule related work outside the CCZ. Up until 1997, YMG performed around 12,000 line km of deep-towed acoustic survey (typically side-scan and sub-bottom profiling) and 8,900 line-km of deep towed photo-television survey and collected about 1100 seafloor samples. The results of this work greatly clarified ideas about the structure of localized accumulations of the nodules.

In parallel with this work the Russians considerably intensified research and development into the extraction and processing of nodules. This included pilot testing of both pyrometallurgical and hydrometallurgical processing in 1989.

During 1988 and 1989 Yuzhmoregeologiya and Sevmoregeologiya also were closely involved in geological studies of the eastern part of the CCZ in order to prepare the applications created before the Interoceanmetal Joint Organization. This included results from some 11 research campaigns.

### 5.3.5 Interoceanmetal Joint Organisation

Interoceanmetal Joint Organization (IOM) was formed on 27 April 1987, based on an Intergovernmental Agreement and started operations in December that year (Kotlinski et al, 2008). In early 1991 IOM registered as a Pioneer Investor with PrepCom with their Certificate of Registration issued in July 1992. Present IOM member states are: Bulgaria, Cuba, Czech Republic, Poland, Russian Federation, and Slovakia. Past members included Vietnam and East Germany.

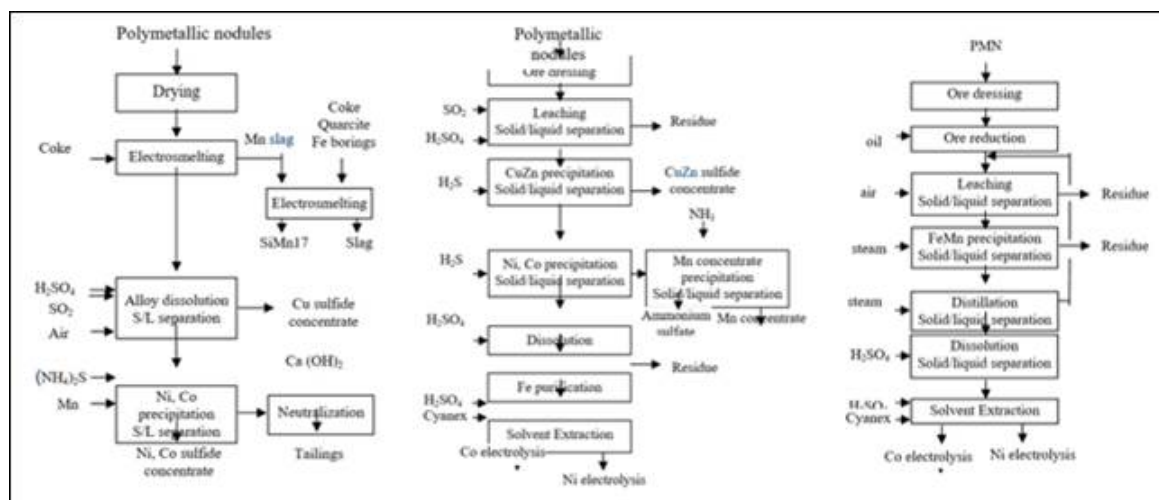

After its establishment, the IOM focused on regional geological and geophysical surveys within the CCZ in 1988 and 1989. After surveying 540,000 km<sup>2</sup> (including TOML Area E), IOM's claim with PrepCom concerned 300,000 km<sup>2</sup>, all in the eastern part of the CCZ. Between 1987 and 2010 they were involved in some 20 research campaigns (Stoyanova, 2010).

In the mid to late 90s IOM started research into mining and minerals processing. Concept design of a possible mining system included computer simulations of the effects of the marine environment on the mining system, movement of the mining vessel and nodule miner and effects of the movement on the transport rise pipe length paid out, and riser pipe deformation. The simulation showed that the riser pipe shape deformation depends mainly on mining vessel movement speed and can be controlled by horizontal forces applied at low speeds.

Experiments were also done for nodules of different shapes and sizes for nodule and water velocity measurements at upward flow in the hydraulic laboratory at in the Department of Water Engineering and Hydrotransport of the Agricultural University of Wroclaw, Poland. The mixture phase velocity measurements were carried out with application of radioisotope-tagged natural and synthetic nodules. A volume concentration as high as 10% was used in a pipeline of 150 mm diameter, that could be considered for a trial or commercial system.

Metallurgical research included desktop development of a pyro-hydrometallurgical processing circuit at the University of Chemical Technology and Metallurgy, Sofia, Bulgaria and Hutny projekt, Bratislava, Slovakia (Figure 5.18).

Figure 5.18 Preliminary metallurgical processes studied by IOM

Pyro-hydrometallurgical (L), acid leach (C) and ammonia leach (R) processes. Source: Kotlinski et al. 2008

Hydrometallurgical acid leach nodule processing was also studied at CNIGRI Moscow, Russia, including benchtop test-work and hydrometallurgical acid and ammonia leach processing options at the Nickel Research Centre in Moa, Cuba. All of the process route options studied gave good metal recoveries but there were clear (unpublished) differences in terms of likely capital and operating costs.

### 5.3.6 Benthic Impact Experiments

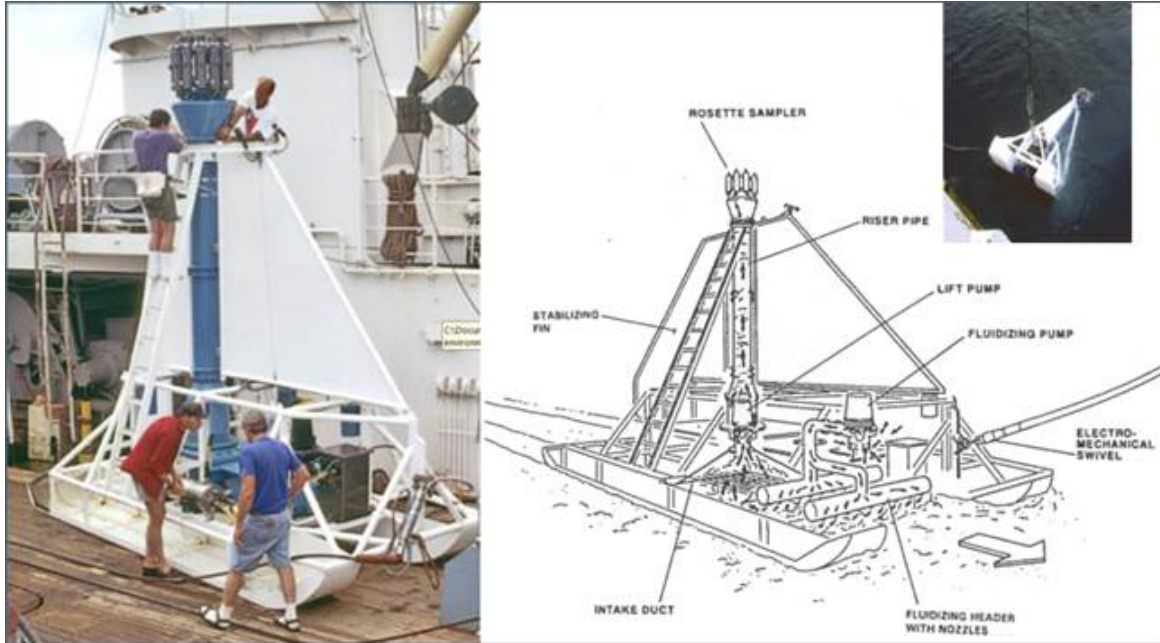

Benthic impact experiments were born out of US environmental studies in the 1970s, including DOMES. The first known disturber system was built in the late 1970s by Sound Ocean Systems Inc (Brockett 2016, pers comm.).

After several attempts by different groups to build an effective disturber and monitoring system, Sound Ocean Systems designed and built a disturber system, the second generation DSSRS-II (Figure 5.19) to lift and then suspend sediments at 5 to 10 m above the seafloor using two 7.6 hp pumps. Testing in early 1993 was followed with a cruise to the CCZ (BIE-II) with YMG, including baseline survey, recovery of the previous year’s sediment traps and a programme of 49 tows. This time the disturber worked “well” and sediment was dispersed. Key conclusions from the trial (Ozturgut et al, 1997) were positive, i.e.:

- Sediment dispersed as a turbidity flow rather than as a low density plume - initial estimates of the far field range of dispersion may have been overestimated;
- Burial of up to 1–2 cm thick appeared not to have the catastrophic effect that was once predicted as both meio- and macrofauna appeared to burrow or recruit to the deep-sea benthos if needed;
- Some questions would remain until a full scale mining test is monitored.

The impact assessment of the site, when revisited after 9 months, indicated that, while some of the meiobenthos showed a decrease in abundance, the macrobenthos showed an increase in their numbers, probably because of increased food availability (Yamazaki, 2011). The site was then revisited again in 2000 by YMG and the key finding was that “Decreasing of macrofauna is observed on physical disturbed areas (on disturber tracks) but not on the areas of re-sedimentation” (Melnik and Lygina, 2010). Note that with a commercial mining system, that sediment from mined areas will be progressively redeposited alongside or immediately behind the collector or concentrator.

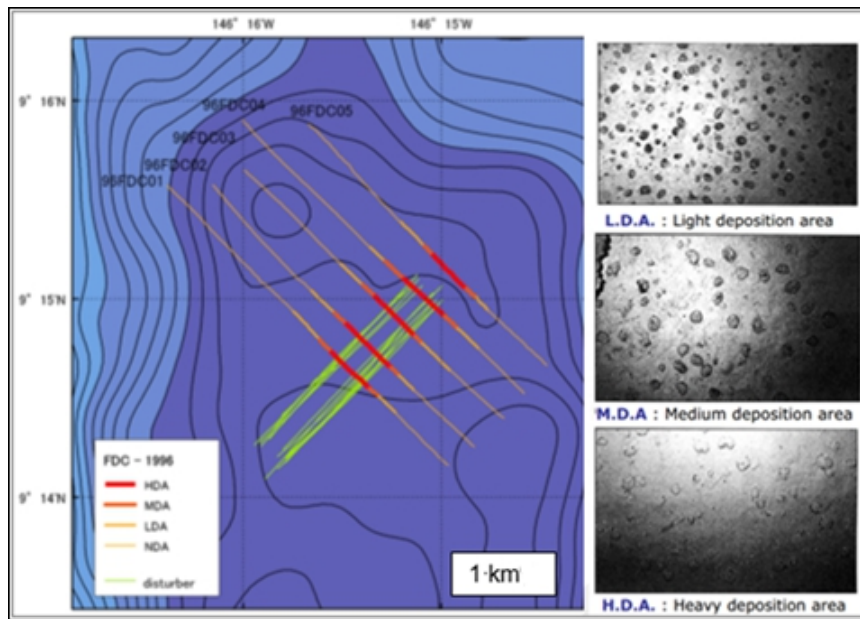

Figure 5.19 DSSRS-II Benthic Disturber

Modified from: Stoyanova (2010), Brockett (1994)

Subsequently the DSSRS-II “benthic disturber” was used by several other groups. One of the best reported experiments was JET (e.g. Yamazaki et al 1997; Yamazaki and Kajitani, 1999; Yamazaki, 2011). This study included baseline data collection, sediment traps, current meters etc, but the Japanese also developed a quantitative photographic analysis method to try and more intensively measure distance of sediment redeposition from the disturbance tracks (Figure 5.20).

Figure 5.20 Review of the DORD 1994 JET Benthic disturber site in 1996 using a FINDER-installed Deep-sea camera

Source: DORD (2010, 2014). Heavy deposition was defined as >0.26 mm (Yamazaki, 2011). NDA is no deposition.

Post-experiment observations took place just after the experiment (J2 survey), about 1 year later (J3), and about 2 years later (J4), by which stage DORD’s main conclusion was that any impact had been significantly reduced. The observations centred around sediment sampling and camera surveys to determine resedimentation impact on the benthos.

Attempts were made to scale up the JET results to full commercial scale, but these were dependent on a number of fundamental assumptions including penetration depth (Yamazaki, 2011).

Radziejewska et al (2001) summarised three surveys at the IOM BIE site, namely those of 1995 (immediately pre and post disturbance), 1997 and in 2000. Research on the IOM site essentially:

- Struggled in 1995 to find significant impact to the meiobenthic communities outside of the tracks left by the DSSRS-II;
- Found in 1997 widespread changes (e.g., in nematode familial make-up) as a result of a phytodetritus sedimentation event (likely a natural plankton bloom event) as well as that the tracks were now substantially “levelled off”, presumably due to action of currents or bioturbation;
- Found in 2000 that response to the phytodetritus sedimentation event was more or less reversed to the condition at the start of the trial.

Radziejewska et al (2001) interpreted that the implications of this are that:

- Certain significant processes take place in the abyssal communities without human intervention;
- This supports the notion of there being no absolute, inherent stability on the abyssal seafloor;
- These natural processes can induce changes of greater magnitude than induced by the benthic impact experiments (and by extension potentially by commercial production)
- That quantitative monitoring of mining impacts will be challenged by the naturally occurring variations.

Figure 5.21 IOM BIE meiobenthos populations for control, resedimentation and impacted area stations

Source: Radziejewska et al (2001) C1, C2, C3 are control stations in 1995, 1997 and 2000; R1, R2 are resedimentation stations in 1997 and 2000, P1, P2, P3 area impacted stations in 1995, 1997 and 2000. Nema is Phylum Nematoda (round worms), harp is Harpacticoida (copepod crustacean)

Kim et al, (2011) looked at sinking particle flux relationships with ENSO and found up to three-fold increase against background during a moderate La Nina event in 2007/08. Significantly with regards to the IOM experiences regarding their BIE site, the winter of 1995 was also a moderate La Nina event (1996 was neutral and 1997 a ‘super’ el Nino; NOAA NWS, 2016).

---

## 5.4 1996 onwards: The International Seabed Authority

With entry into force of UNCLOS in 1994, the ISA technically came into existence. In actuality, the ISA started working as an autonomous international organisation, domiciled in Kingston Jamaica, two years later in June 1996. All signatories of UNCLOS are members of the ISA which operates as mandated by UNCLOS.

### 5.4.1 Korean Research Groups

Korean Ocean Research and Development Institute (KORDI) was established in 1973, with a broad mandate for Korean interests in marine science and engineering.

Work on CCZ nodules began as early as 1983 with three campaigns to the western CCZ in what was called the KODOS Area (Korea Deep Ocean Study; Jeong et al., 1994; Jung et al., 1997). This was followed up with two in 1989/90 in collaboration with the University of Hawaii (Kang, 2008). A combination of samples, bathymetry and seismic data was collected.

Between 1995 and 2002, KORDI focused on exploring their contract area defining mineral inventory of some 510 Mt (Kang, 2008) and environmental baseline data collection (KIOST, 2014). Exploration, environment and mine development programmes were consolidated under one government ministry.

Since 2002 their focus on environmental studies has increased, including research into a Priority Mining Area and preparations for a benthic impact experiment (KIOST, 2014). This has included detailed towed sonar surveys and sampling.

KORDI became KIOST (Korean Institute of Ocean Science and Technology) in mid-2012 and in recent times development of their advanced mining concept has been managed by KRISO (Korea Research Institute of Ships & Ocean Engineering). The concept involves a track driver collector with colander electro-hydraulic heads feeding a sub-sea buffer with inline pumps delivering to a surface vessel. As of 2015, all of the sub-sea components had been built at a pilot scale and tested in relatively shallow waters.

Lab (pool) scale testing was conducted between 2002 and 2010, as well as shallow water tests in 2009 and 2010 with a first generation device (MineRo-I). Collector efficiencies as high as 95% were achieved when the collector head was manually adjusted in terms of height above the seafloor.

Sea trials with the second generation MineRo-II were conducted in 2012 and 2013, with shallow water tracking tests (130 m) followed by a simpler deep water test (1370 m). The shallow water test included collection and subsea crushing of seeded nodules (KIOST, 2014). Sea-trials of the buffer and lift system were completed in late 2015.

### 5.4.2 The new developed nation contractors

In July 2006, Germany (through its geological survey Bundesanstalt für Geowissenschaften und Rohstoffe or Federal Institute for Geosciences and Natural Resources of Germany (BGR)), received an exploration contract in the CCZ. This was the first contract under UNCLOS not to have been granted to a Pioneer Investor.

Sponsored by Germany as a developed nation, the BGR claimed patrimonial links and supplied historical data of the OMI German license area to define approximately 150,000 km<sup>2</sup> of seabed with half entering the ISA reserved areas and half falling under their contract.

Since then, the BGR has been an active explorer and developer with numerous publications, including an informal mineral resource estimate (Ruhlemann et al, 2011; Kuhn et al, 2011 and Kuhn et al, 2012). These include modern and well document reestablishment of many of the basic relationships found in the CCZ and significant contributions to current geological understanding. BGR also commissioned preliminary work on mining and processing technology. The BGR is a partner within the JPI Oceans - Ecological Aspects of Deep-Sea Mining project.

In early 2013, UK Seabed Resources Ltd started an exploration contract in the eastern CCZ. The previous year they submitted an application, sponsored by the United Kingdom, based on the former KCON Frigate Bird area in Figure 5.4). The resultant UK 1 area was 58,000 km<sup>2</sup> and the equivalent returned area was promptly acquired by partner Ocean Minerals Singapore.

Field work to date by UK Seabed seems to have focused on benthic biological baseline studies, specifically two campaigns in 2013 and 2015 (AB01 and AB02) that supported the Abyssline Project (<http://abyssline.info/>). The project is being conducted by a consortium of seven non-profit academic research institutes (University of Hawaii, USA; Hawaii Pacific University, USA; Natural History Museum, UK; Uni Research, Norway; National Oceanography Centre, UK; Senckenberg Institute, Germany; IRIS, Norway).

In March 2016, UK Seabed signed a second exploration contract (UK2), this time for an area in the central CCZ (based on former USA-2 area held for OMI. The retained and returned areas are each about 75,000 km<sup>2</sup>.

Global Sea Mineral Resources (GSR), formerly G-TEC Sea Mineral Resources, also started an exploration contract in early 2013. GSR is owned by dredging company DEME and sponsored by the Belgian government. GSR successfully claimed patrimonial links to Union Miniere, the Belgian member in the OMA consortium, and retained and returned areas are each about 75,000 km<sup>2</sup> that correspond to the former USA-3 license area. The equivalent returned area was promptly acquired by partner Cook Island Investment Corporation.

Since 2013 GSR has mounted at least one campaign of their own (GSR, 2014) with box-coring and MBES. GSR may also have participated in a JPI Oceans campaign to the CCZ in 2014 (see below).

GSR worked on nodule mining technology with IHC Merwede forming for some time a group called OceanFlore. More recently both IHC and DEME have joined the “Blue Nodule” initiative along with a wide range of other European companies and research institutions.

### **5.4.3 The new developing sponsored nation contractors**

Nauru Ocean Resource Inc (NORI) started their exploration contract with the ISA in July 2011. The stakeholders in the company are Nauruan and domiciled in Nauru. These are the Nauru Education and Training Foundation and the Nauru Health and Environment Foundation (ISBA/17/C/9; ISA, 2011). NORI conducted a campaign to the CCZ in 2013 that included seafloor mapping and sampling.

Tonga Offshore Mining Limited (TOML) started its exploration contract with the ISA in January 2012. TOML is domiciled in Tonga. TOML was 100% owned by Nautilus Minerals Inc. which until 2016 had supported TOML in terms of managing two campaigns to the CCZ, environmental baseline data collection, mineral resource estimation (the main subject of this report) and mining and processing concept studies. In 2020, DeepGreen acquired TOML.

Marawa Research and Exploration Ltd started their exploration contract with the ISA in January 2015. Marawa's proposed scientific research and exploration programme will involve seafloor mapping, polymetallic nodule sampling as well as environmental baseline studies and environmental impact assessments in international waters (Marawa, 2012).

---

Ocean Mineral Singapore Pte Ltd (OMS) started their exploration contract with the ISA in January 2015. OMS is a Singapore-incorporated company majority owned by Keppel Corporation, with minority shareholders being UK Seabed Resources Ltd and Singapore-based private investment company Lion City Capital Partners Pte. Ltd., (Keppel, 2015a). Keppel is, amongst other things, a shipbuilding company, and OMS is sponsored by Singapore which was classified by the UN in 2014 as a developing nation (United Nations, 2014).

OMS has collaborated with UK Seabed regarding the second of the Abyssline campaigns (AB02; above).

In late 2013 the Cook Islands Investment Corporation (CIIC), sponsored by the Cook Islands applied for a nodule exploration contract in the reserved areas which was duly approved the following year (ISBA/20/LTC/3, ISBA/20/C/18, ISBA/20/C/29). CIIC have a formal arrangement with GSR regarding the area.

In late 2014 China Minmetals Corporation, sponsored by China, applied for a nodule exploration contract of about 73,000 km<sup>2</sup> in the reserved areas. This was duly approved the following year (ISBA/21/LTC/5, ISBA/21C/L.3).

## 6 Geological Setting and Mineralisation

### 6.1 Global distribution of nodules

Seafloor polymetallic nodules occur in all oceans, and the CCZ hosts a relatively high abundance of nodules. Other relatively dense zones are found in the Peru Basin in the southeast Pacific, the centre of the north Indian Ocean, and the Cook Islands. The CCZ also has the highest overall metal grades (Table 6.1).

Table 6.1 Summary of Global Nodule Grades

Element	All Pacific Ocean	Pacific Ocean outside CCZ	CCZ	Atlantic Ocean	Indian Ocean
Mn wt%	20.1	18.8	26.3	13.3	15.3
Fe wt%	11.4	12.8	6.6	17.0	14.2
Ni wt%	0.76	0.63	1.20	0.32	0.43
Cu wt%	0.54	0.41	0.98	0.13	0.25
Co wt%	0.27	0.29	0.20	0.27	0.21

Source: McKelvey et al., 1983.

Key features of the geological setting are described in this section. Further details are presented in AMC (2016).

### 6.2 Tectonic setting and topographic features

The CCZ is defined by two major west-south-west and east-north-east trending transform fracture zones; the Clipperton Fracture Zone to the south and the Clarion Fracture Zone to the north. These fractures zones can be seen clearly on most bathymetric maps (e.g., Figure 6.1). The eastern and western limits are defined by the Mathematicians Seamounts in the east, and the Line Islands rise in the west. The CCZ seabed deepens progressively from about ~4,200 m at 115°W to ~4,800 m at 128°W, then varies between ~4,800 m and ~5,500 m until 161° W.

The CCZ seabed comprises “Abyssal Plains”, which are the largest physiographic province on Earth, covering some 70% of the area of ocean basins and 30% of the Earth's surface (ISA 2004). Within the abyssal plains province are sub-parallel basaltic lava ridges called abyssal hills, believed to have formed from graben-horst type faulting as a consequence of seafloor spreading. Strike of abyssal hills in the CCZ is north-north-west to south-south-east (locally ±20°; Figure 6.3), and they typically have an amplitude of 50–300 m (maximum 1,000 m; Hoffert 2008) and a wavelength of 1 to 10 km. The abyssal hills are punctuated by typically extinct volcanic knolls and seamounts rising 50 to 4,000 m above the seafloor. Almost all of the abyssal hills, and some of the volcanic knolls are buried beneath sediment (often up to 150 m thick).

The surficial portion of the sediment cover has a relationship with nodule quality, and it varies regionally, i.e. from predominantly carbonate and siliceous oozes in the south-eastern extreme corner, to mixed clay-ooze in the centre, to predominantly siliceous red clay in the north.

Source: ISA 2010.

Figure 6.2 Formation of abyssal hills at mid-oceanic ridges

Figure 6.3 Semi-detailed bathymetry for the part of the TOML tenement area

Also some of the areas of Yuzhmorgeologiya (Melnik and Lygina, 2010), Ifremer (Fouquet et al, 2014), IOM and BGR (Knodt, 2012), (ISA, 2010) background is a Smith & Sandwell Product (ISA, 2010). Inset of TOML Area A, with location to the west

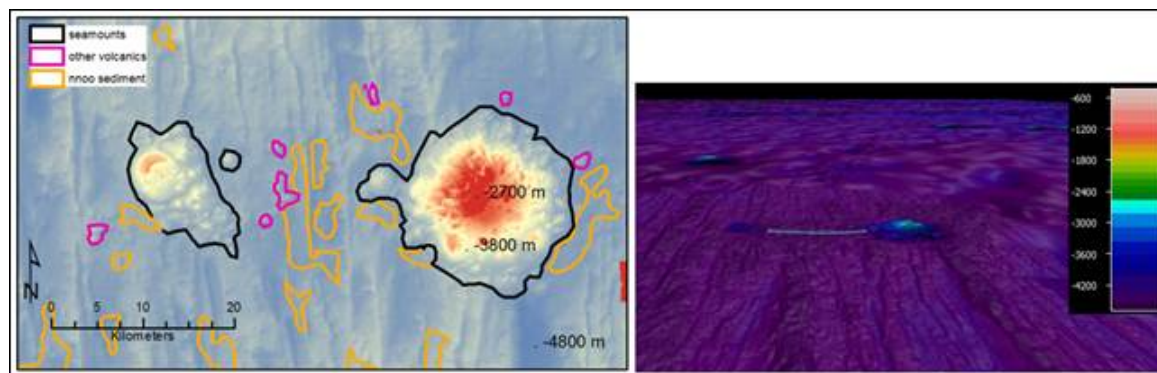

### 6.2.1 Seamounts, knolls, and other volcanic features

Seamounts can occur in chains (related to hotspot traces or tectonic features) or in isolation (more likely due to increased local heat flow associated with tectonic related thinning or fractures).

MBES mapping of TOML areas B-F confirmed that there are no chains of seamounts within the TOML tenement area, that isolated seamounts and cones are approximately 1.5% of the TOML tenement area, and that exposed basalt (typically sheet flows) makes up an additional 1.3%. While no MBES has yet been conducted in Area A, the Smith and Sandwell bathymetry indicates the likelihood only minor amounts of smaller seamounts in the area (Figure 6.3).

The highest single seamount (and the only one visible in the GEBCO dataset) is the ~1,000 m seamount in TOML Area D informally named “Mt Mo” (Figure 6.4).

Figure 6.4 Seamounts in TOML Area D

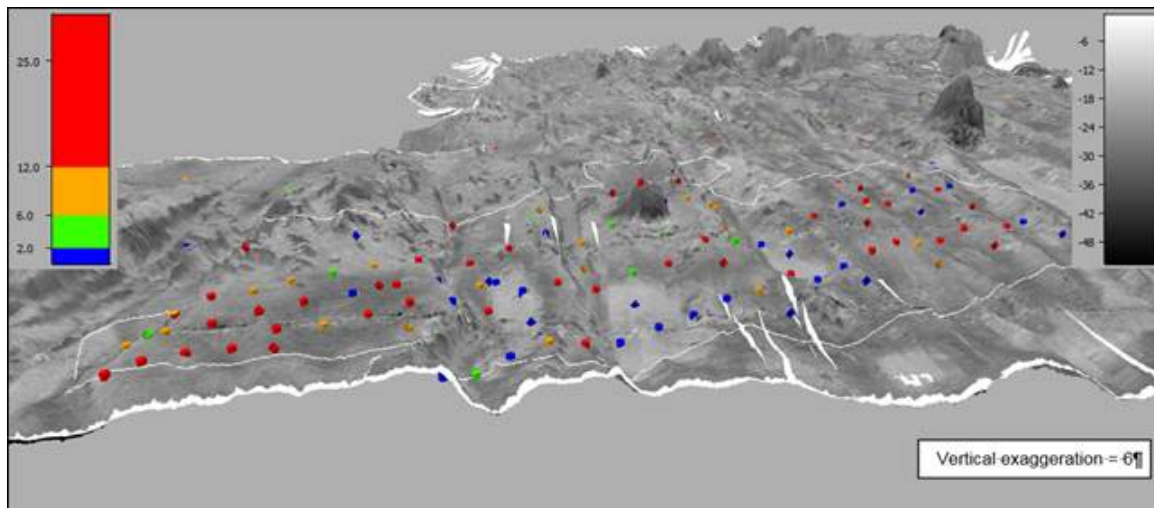

In addition to the seamounts there is evidence for other small amounts of volcanic rocks. These are typically associated with the faults amongst the abyssal hills, which likely reactivate with ongoing movement of the tectonic plate. These are typically flows in the floor of valleys or near the end of valleys.

6.2.2 Sediment drifts

Approximately 7.4 % of TOML Areas B - F are thought to be covered by large sediment drifts (coded as Nnoo below). These can be mapped from MBES, as they are normally softer and ponded in depressions (Figure 6.5). There is also evidence for significant sediment movement elsewhere around seamounts (Figure 6.6) and at the base of steeper slopes. Without detailed MBES there is no clear indication of the amount of sediment drifts in Area A, although all historical sampling returned nodules.

Figure 6.5 Example of “ponded” sediment drifts and corresponding low nodule abundance Area B

Figure 6.6 Example of sediment accumulating around seamounts

From MBES backscatter, TOML Area B

Dynamic changes in current and temperature near the CCZ seafloor have been known since the DOMES study in the late 1970s (Hayes, 1979). This includes current changes related to: tides; likely inertial reaction (e.g., to the Coriolis force); and more significant seasonal or episodic events. The seabed is typically quiet as:

- Seabed currents measured from moorings are typically low (~ 4 cm/s and up to ~12 cm/s); and
- Typically there is no detectable nepheloid layer (stirred up sediment) observed during survey.

Eddies travelling west along the CCZ are commonly observed at the ocean surface. Inall et al. (2015) describe data from a significant eddy, associating eddy surface currents of 40 cm/s at the surface with 10 cm/s currents on the seafloor of the CCZ approximately 4,100m below.

A variety of seabed deposits and patterns are observed and are interpreted to be due to seabed bottom currents (Figure 6.7, Figure 6.8).

Figure 6.7 Types of deep-sea sedimentary processes and deposits related to bottom currents

Figure 6.8 Range of patterns in surficial sediment, TOML Areas D and C

Collected using 30 kHz side scan sonar which penetrates the sediment to some distance (cm to m) and which responds to sediment composition.

### 6.3 Polymetallic mineralisation

#### 6.3.1 Sedimentation and nodule formation

Seafloor polymetallic nodules are composed of nuclei and concentric layers of iron and manganese hydroxides and formed by precipitation of metals from seawater. The metal accumulation rates are slow, and it generally takes millions of years to form a nodule (ISA 2004).

Nodules can be abundant in abyssal areas with oxygenated bottom waters and low sedimentation rates (less than 10 cm per thousand years). Nodules generally range from about 1 to 12 cm in their longest dimension, with the low to middle-range typically the most common (1 to 5 cm).

The specific conditions of the CCZ (water depth, latitude, and seafloor sediment type) are considered to be the key controls for its formation, along with the following factors:

- Supply of metals to the growing surface of the nodule.
- Occurrence of an oxygenated geochemically active layer at the seabed (sediment water interface).
- Effects over time on the geochemically active layer from benthic currents.
- Effects over time on the geochemically active layer from bioturbation.

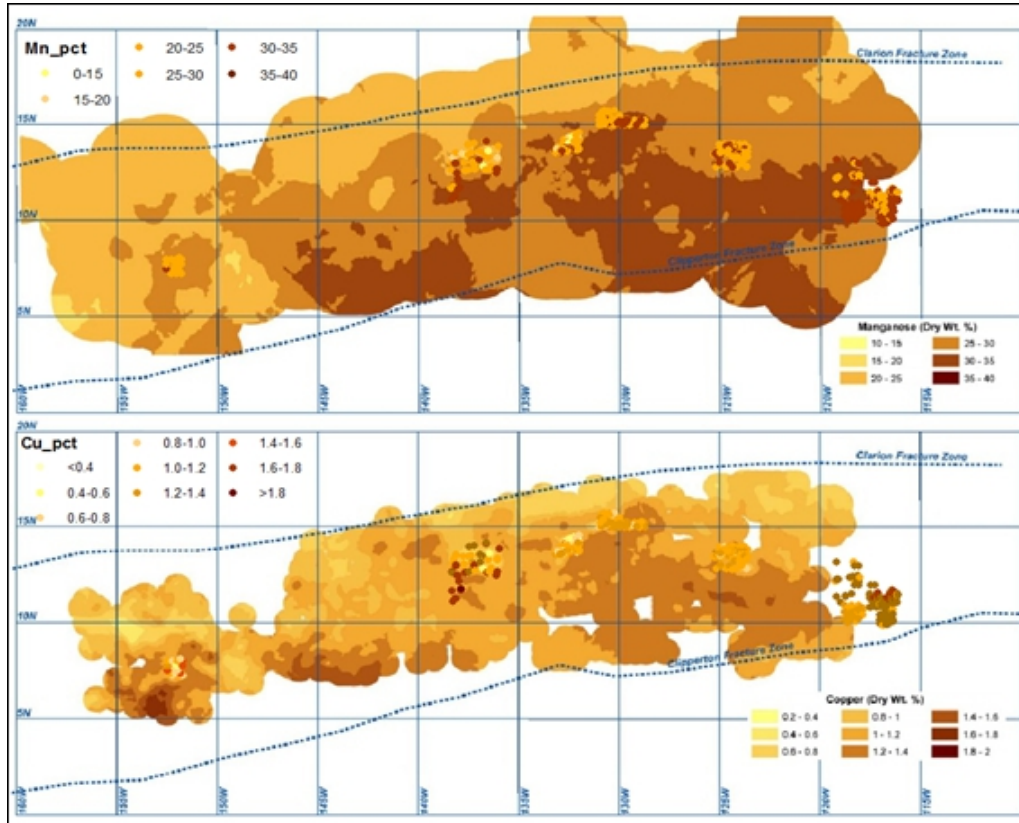

The highest values of metals in nodules are thought to be best developed on the seabed in the equatorial regions. In these regions surface waters have high primary productivity. Microorganisms accumulate metals in their growth relative to seawater and on death, they sink to the seafloor (either directly or through predator wastes), dissolve, and release the metals into the pore water of seafloor sediments. Being located away from terrestrial sources of sediments means that the metals are not preferentially accumulated by clay minerals. Commonly, the upper portion of the nodules accumulate metals directly from seawater, while the lower portion of the nodules, partially buried in sediment, accumulate metals from pore-water in the host sediments.

Sediments from the CCZ consist mostly of clays and some siliceous biological remains (e.g. frustules). Sands and larger sediments are not generally found so far from land, and any carbonate biological remains (e.g. skeletons) dissolve on the seabed in these deep-water regions faster than they accumulate. Some siliceous biological remains also dissolve at the seabed.

6.3.2 Nodule grades

Grade variation through the CCZ is well summarised by ISA (2010) and Morgan (2009) who combined datasets provided by several of the ISA contractors. Within the CCZ nodule field, nodule chemistry varies only slightly compared to the differences in mean nodule grades from other basins elsewhere in the world. The strongest trend is observed for Mn and Cu, which both increase towards the southeast (Kazmin in ISA, 2003; ISA, 2010; Morgan, 2009; see Figure 6.9). This may relate to proximity to metal sources from the East Pacific Rise or the American continents.

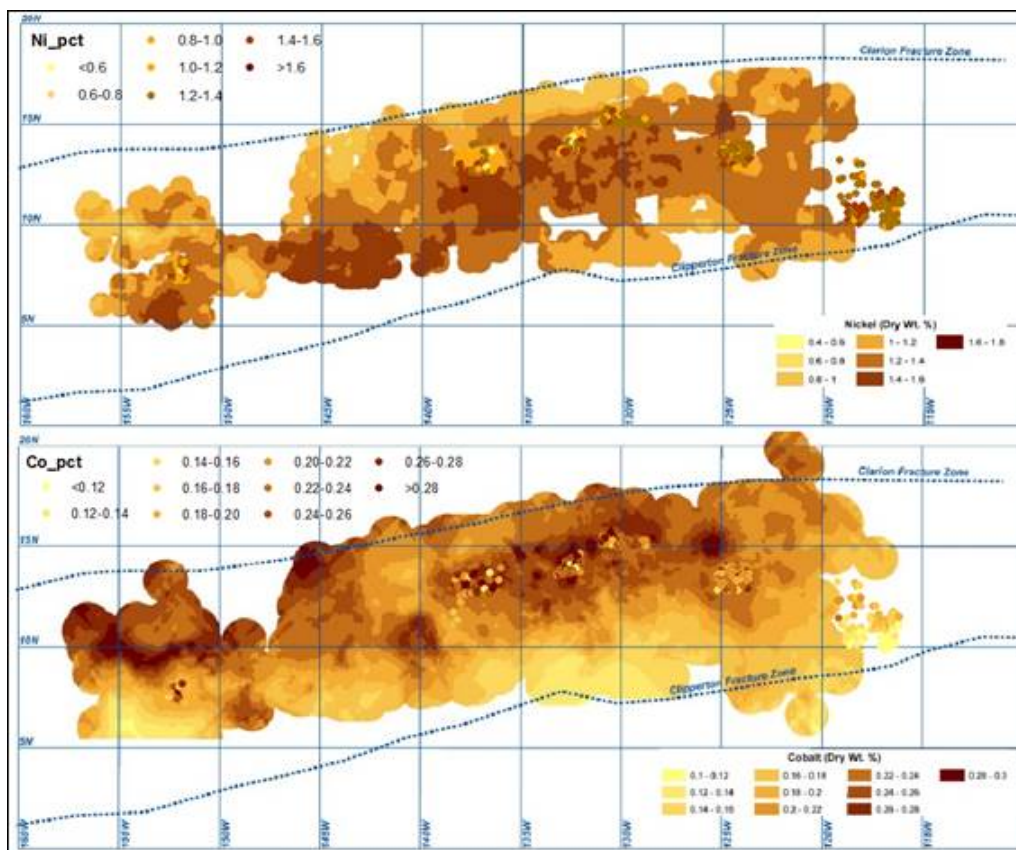

Figure 6.9 Modelled Mn and Cu grades in nodules across the CCZ

Source: Morgan (2009), point data attributed to OMI

In contrast, Ni and Co partly correlate along the central axis of the CCZ (Figure 6.10), with the Co appearing to be offset to the north from the Ni. The reason for the distribution of these metals is unknown but may relate to a lack of competition for the metals in the sediments, which have both lower chlorite and lower smectite in this region (Futterer, 2006).

Figure 6.10 Modelled Ni and Co grades in nodules across the CCZ

Source: Morgan (2009), point data attributed to OMI.

### 6.3.3 Grades of other metals

Grades for elements other than Mn, Ni, Cu and Co are not reported in the mineral resource for the TOML tenement area. Boxcores from CCZ15 campaign were analysed for a range of metals and these broadly agree with grades for a wider range of metals reported on Pacific nodules by McKelvey et al (1983), except for Rare Earth Element (REE) which are lower in the TOML dataset (see below). McKelvey et al (1983) do not separate out the grades of nodules from the CCZ but document average grades for nodules with Ni+Cu >1.8%, the bulk of which come from the CCZ. These are summarised below per the classification of McKelvey et al (1983) with their average grade followed by the average grade determined by TOML:

- Other base or alloy metals such as Zn (0.14%; 0.147%), Mo (0.039%; 0.064%), Ti (0.58%; 0.301%) and Pb (0.071%; 0.019%)
- Rare earth elements and other transition metals such as Sr (0.077%;0.057%), Y (0.012%; 0.009%), Zr (0.027%), Te (0.021%), La (0.019%; 0.012%), Ce (0.066%; 0.029%) and Nd (0.023%; 0.013%)
- Possible deleterious elements or reagent consumers and enhancers such as F (3%), Mg (1.57%; 1.94%), Al (2.96%; 2.47%), Si (8.26%;6.82%), S (0.319%; 0.13%), Cl (0.860%), Ca (1.73%; 1.76%), As (0.012%; ≤0.005% in some analysed dredge samples), and Ba (0.224%; 0.284%)

These levels of metals are supported in some cases (Zn, Mo) by data presented by Haynes et al. (1985), who also reported very limited data on Au and platinum group metals (all at the ppb level except Pt which averaged 0.1 ppm from 5 samples).

The REE values in the TOML tenement areas more closely agree with those published from the historical Lockheed Martin Exploration Area by Spickermann, (2012). This area is adjacent to TOML Exploration Areas B, D, and E. Total REE reported by Spickermann is about 0.08% (0.079% from TOML Areas A, C, B, D and F) with a median of 617 (619, TOML) ppm light REE (La-Eu) and 171 (180, TOML) ppm heavy REE (Gd-Y).

Also of interest is a clear trend of increasing Ba and S from TOML Area A, B and C to D and then to F. This trend suggests increased barite ( $\text{BaSO}_4$ ) whose presence in turn is thought to represent increased primary productivity (or rather activity) within the diagenetic environment (Ba preferentially captures S released from decaying organic material in the sediment below the calcite compensation depth (e.g., Schulz and Zabel, 2006). This trend corresponds well with modern sea surface primary productivity.

#### 6.3.4 Nodule abundance and estimation of tonnages

#### 6.3.5 Nodule abundance

Polymetallic nodules lie on the seafloor sediment, often partly buried. Some nodules are completely buried, although the frequencies of such subsurface occurrences are very poorly defined. Kotlinski and Stoyanova (2006) document up to five discrete layers of buried nodules, although all were within 45 cm of the surface despite using sediment cores of 250 to 380 cm depth (i.e., all of these nodules are near surface). Other images of box corers also suggest that all or most of the nodules are at the surface. Consequently, drilling is not required for definition of the Mineral Resources.

The nodules vary in abundance, in some cases touching one another and covering more than 70% of the seafloor. They can occur at any depth, but the highest concentrations have been found on abyssal plains between 4,000 and 6,000 mbsl.

Nodule abundance is estimated either by:

- Taking a sample from the seafloor and dividing the weight of nodules by the area of the primary sampler;
- Using a photograph of nodules on the seabed to estimate their individual weight (e.g., as used by Kennecott; Felix 1980) which has been used with considerable success in some areas by TOML and dividing the weight of nodules by the area of the image.

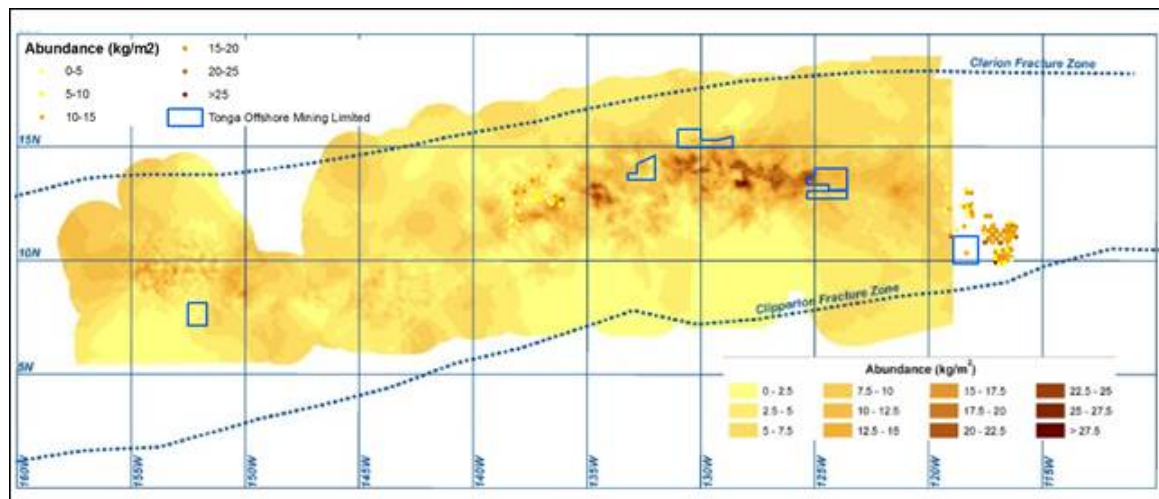

Nodule abundance is typically reported in wet  $\text{kg/m}^2$ :

- Wet weights are the most relevant in any collecting and transport operation;
- Often the nodule samples have multiple uses once collected at sea, some are for assay, others for environmental or metallurgical test work and some for reference (retaining the sample to dry and then weigh is less convenient);
- With complexity related to drying conditions and determining wet/dry density, weighing of the samples at surface is the simplest and most effective way to measure and compare nodule abundances between different campaigns and between the different contractors.

Sample aliquots were dried, crushed and pulverised before assaying. Using dry weight percent assays on wet weight mineral resource and inventory is a commonly accepted practice for similar bulk commodities that can contain significant amounts of free water (e.g., iron ore or Ni-Co laterite).

Nodule abundance variability is significantly higher than metal grades in most areas, suggesting that abundance estimation will be the key variable of uncertainty in mineral resource estimation. Figure 6.11 shows evidence of this compared to Figure 6.9 and Figure 6.10.

Figure 6.11 Modelled nodule abundance across the CCZ

Source: Morgan (2009), point data attributed to OMI.

## 6.4 Nodule Density and Moisture Content

### 6.4.1 Nodule density

Polymetallic nodules have an average wet density of about 2 t/m<sup>3</sup> (Table 6.2; Figure 6.12). TOML confirmed historical results from the north Pacific (Hessler and Jumars, 1974) through ~60 water displacement density measurements. The density measurements were done for both single nodules and for nodules in bulk, including fragments and sand resulting from attrition during transport and handling.

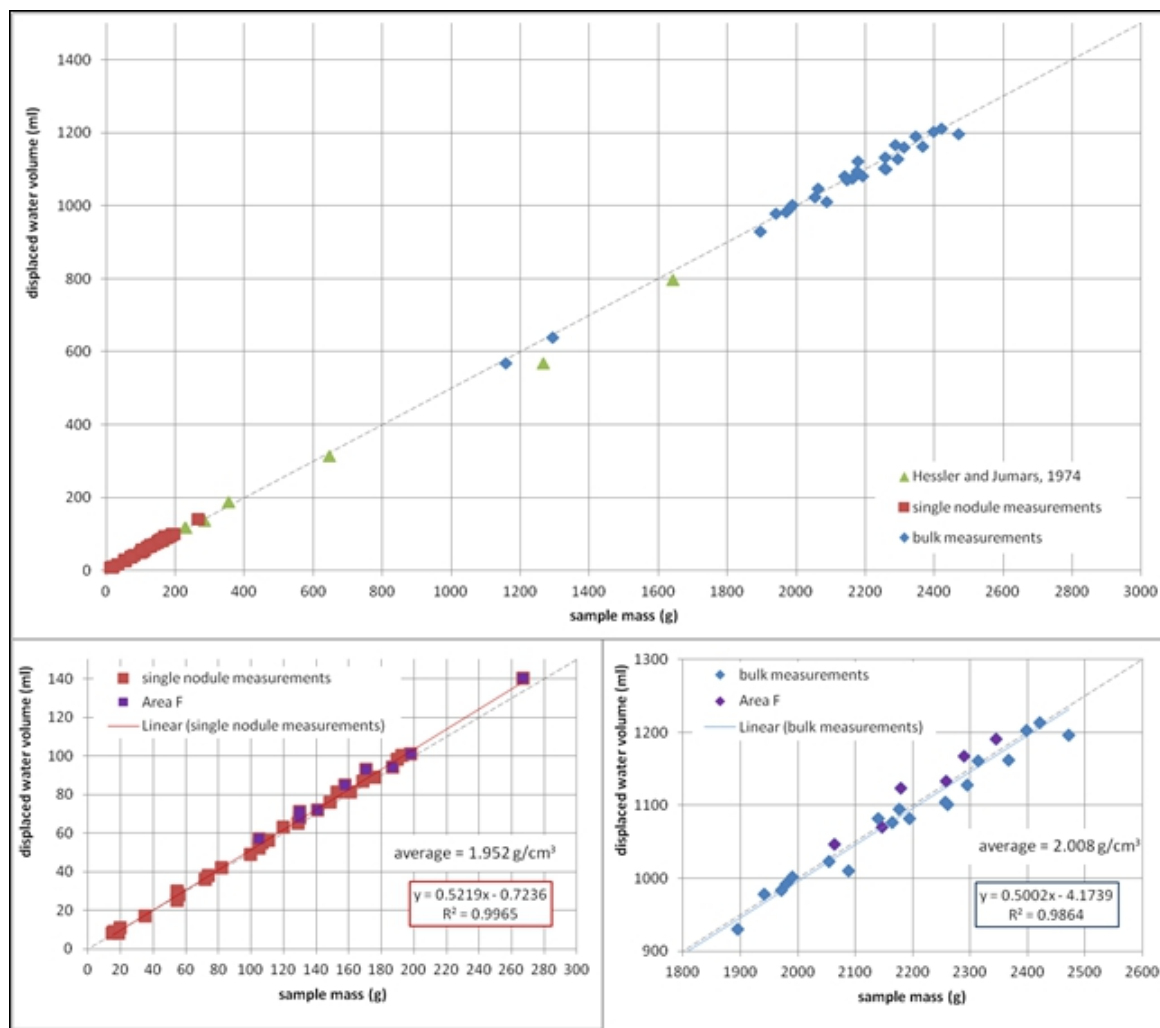

The results are similar except that the mean of the single nodules is ~2.8% lower than that of the bulk measurements. This might be due to air or water filled expansion cracks in the single nodules (that were collected ~7 months before the density measurements were made) the bulk nodule samples contained many more fragments that presumably relate to fractures along these cracks. The bulk nodule measurements are preferred over the single nodule measurements as they are likely more accurate due to larger sample size. The bulk nodule measurements also have a lower standard deviation.

Also noted is that Area F nodules might be slightly less dense than the other TOML tenement areas (Table 6.2; Figure 6.12). By averages this is of the order of 2–4%, being slightly more pronounced in the single nodule estimates. Nodule densities have not yet been measured for Area A.

Table 6.2 Nodule Density measurements TOML Area B, C, D and F

	Count	g/cm <sup>3</sup>					Standard deviation
		Min	Median	Mean	Max	Range	
Single nodules	34	1.78	1.95	1.95	2.38	0.60	0.11
Bulk nodules	27	1.94	2.01	2.01	2.07	0.13	0.03
Single nodules area F	9	1.83	1.91	1.90	1.99	0.16	0.06
Bulk nodules area F	6	1.94	1.97	1.97	2.01	0.07	0.02

Figure 6.12 Nodule densities of samples from TOML areas B-D, F, and central north Pacific

Single and bulk measurements from nodules collected during the CCZ15 campaign; historical values from Hessler and Jumars (1974)

### 6.4.2 Nodule water content

Exploitation of polymetallic nodules is likely to be done on a wet tonnage basis in that nodules will be transported, stored and sold without oven drying. In exploration, the abundance of nodules collected by free fall grabs or box-corers is also typically measured on the exploration vessel immediately after collection before the sample has time to air dry. Reporting a polymetallic nodule mineral resource on a wet basis is thus simpler and more appropriate than reporting on a dry basis, as is done for grade.

Total water content in wet nodules is estimated at 44% (Table 6.3), but the situation is further complicated as two main types of water are present:

- Water of crystallization included within manganese and iron oxide minerals. This was determined in TOML test work to consistently be about 16% by wet weight (including other likely trace levels of other volatiles). A very small amount of water of crystallization likely starts being removed at temperatures as low as 50–70 °C through a transformation of the manganese mineral busserite into birnessite, but most is stable until much higher temperatures (115 °C and greater; Novikov and Bogdanova (2007)).

- Free water included within pores and other cavities within the nodules including water adsorbed onto minerals – this is estimated to be around 28% by wet weight depending on the micro and macro void space in the nodules. Air-drying may remove approximately 16% (absolute) of this, with the rest by oven drying (up to 105 °C).

Estimating the water content is then complicated further again due to two properties specific to the nodules:

- The nodules have very high porosity (~50%; Ifremer, 2010) and are hygroscopic (Figure 6.13). Within a day of drying to 105°C pulped nodules will absorb at least 7% of moisture by mass if exposed to ambient air.
- Depressurization of the nodules after collection leads to mineral transformation (e.g., breakdown of ferrosulphate) and micro-fractures and fractures. Free water might be added into the cracks and micro-cracks. TOML tests suggest that four months after collection about 3% free water on a wet basis can be added into samples that are soaked in water (this 3% is not included in the totals indicated above).

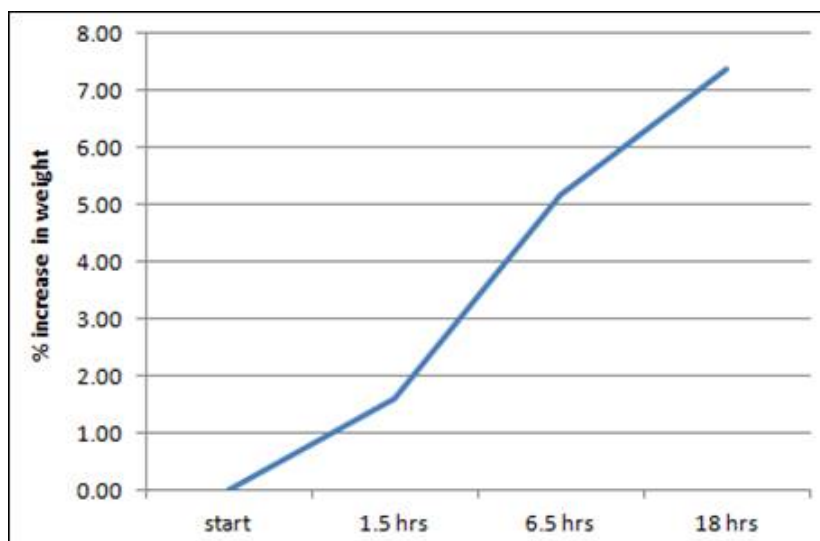

Published moisture values from the very comprehensive metallurgical reports by Haynes et al. (1985) and Fuerstenau et al. (1973) are summarised below along with TOML results.

Table 6.3 Comparison with published moisture contents

Source	Total Moisture	Free Moisture	Water of Crystallisation
Mero (1965) p233	–	30-36*	–
Fuerstenau et al. (1973)**	>22.66%	13.1%	>8.74%
Haynes et al. (1985)	45-50%	35–45% with about half able to be dried in air	5-10%
Wiedicke-Hombach et al (2012)	44%	Not specified	Not specified
TOML measurements	44%	28% with about 60% of this able to be dried in air	16%***

\* drying temp not specified may include some water of crystallization; \*\*used in the 2012 Nautilus CCZ NI43-101 report (Golder, 2013) to characterise moisture; \*\*\* includes ±2% water of crystallisation lost up to 105°C

Figure 6.13 Nodule sample (pulp) absorption after drying to 105°C for 6 hours

Test work done by TOML on select nodules involved three stages of drying. Stage one was air drying at up to 260 hours at ambient temperatures of 22 °C to 25 °C and humidity of 50% to 60% (Figure 6.14). Moisture content lost by the time of stabilisation (around 200 hours at these ambient temperature and humidity) varied between 13% and 19%.

Figure 6.14 Air drying results for a short term sample batch (L) and a long term sample batch (R)

Stage two was oven drying at up to 978 hours in seven temperature steps. From Figure 6.15 the moisture content lost was a very consistent 15% to 16.5% at 105°C and 18% to 19.5% at 160 °C.

Figure 6.15 Oven drying results for nodules

Between each oven drying temperature the samples were left exposed to ambient air for one hour to measure hygroscopic weight increase. Whole nodules absorbed water more slowly than pulverised nodules (e.g., Figure 6.13).

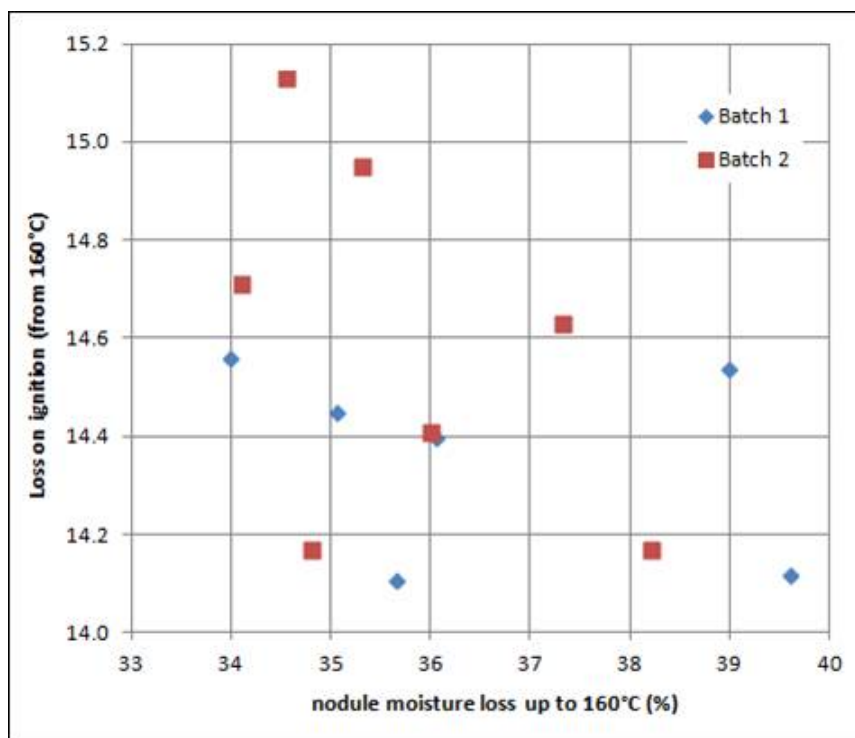

Stage three was loss on ignition (LOI) where samples were pulverised and effectively sintered at 1,000°C, driving off all moisture that might include other types of "combined water" (hydrates and labile hydroxy-compounds) and carbon dioxide although the latter is thought to be minimal in nodules.

From Figure 6.16 the LOI from 160°C was remarkably constant for the test samples between 14% and 15.2% which equates to:

- 10.6% to 11.8% from 160 °C on a starting wet basis.
- 16.8% to 18% from 105 °C. The results are comparable with other TOML analyses and figures from some sources:
  - Mero (1965) reports LOI (1100°C) of 15% to 39% averaging 25.8% but from nodules at an "air dried" level.
  - Reference material CGL131 (a nodule standard from the eastern German area in the CCZ) averaged an LOI of 16.98% from 16 laboratories, although the figure is not certified.

Other workers report higher LOIs (20% to 25%) but do not specify the drying method in enough detail for valid comparison. The chance of hygroscopic absorption of moisture cannot be discounted.

Figure 6.16 Loss on ignition (at 1,000°C) for two batches of TOML samples

A combined drying curve is summarised in Figure 6.17. Average total moisture content is 47% with most of the variance in total moisture apparent from the earliest stages of air-drying (48 hours at ambient temperature). With consideration of ~3% storage water absorbed into post sampling expansion cracks (see above) a standard total moisture content of 44% is derived.

Figure 6.17 Three stage drying curve for polymetallic nodules

Average total moisture content is 47% with most of the variance in total moisture apparent from the earliest stages of air-drying (48 hours at ambient temperature). After adjustment for absorbed water (determined in a separate test involving samples sealed from collection and sampled soaked before drying) an effective moisture content of 44% is arrived at.

In the estimation of moisture content (or other component) wet basis is taken before any air drying or soaking, dry basis is taken at 105 °C and a volatile free basis is taken after LOI at 1,000 °C with all volatiles removed. Other bases are mentioned in the text with the temperature specified.

### 6.5 Diagenetic Crusts

The minor amounts of ferro-manganese crust found in the CCZ are not the same as hydrogenetic cobalt-rich crusts typically found on the top of seamounts e.g., in the Pacific Prime Zone in the north-west Pacific Ocean (e.g., Hein and Koschinsky, 2013). Two types have been logged, both by TOML and other workers (e.g., Ifremer; Menot et al., 2010):

- Massive crust is five to ten centimetres thick and is typically found in blocks several decimetres a side but occasionally as pavement; and
- Crustal-nodules are small to medium sized (<20 cm) discrete fragments of ferro-manganese that can grade into nodules.

In total, crusts were logged in ~0.6% of the photo-profiles, with crustal nodules more common (~0.5%) and massive crusts being present only ~0.1% of the time. Neither type was collected in box-cores during the TOML CCZ15 campaign, and their extent is deemed insignificant in terms of the mineral resource estimation in Section 11.

### 6.6 Deposit Types

Surface and near surface polymetallic seafloor nodules are the only mineralisation type classed as a deposit in this report.

### 6.7 TOML Nodule Types

TOML’s classification system was developed near the end of the CCZ15 campaign, once a wide range of characteristic nodules had been studied (Table 6.4). The classification aims to be simple and modular with two required codes (size then type, as per the ISA system) and three optional suffix codes (aspect of the nodules form, degree of fragmentation typically seen, and degree of development of botryoidal texture); as summarised in Table 6.4. Examples of type are also shown in Figure 6.18 and Figure 6.19.

Table 6.4 TOML CCZ15 Nodule classification and proportions seen in logging during CCZ15

		1: size Long Axis					
		=<2 cm		2-5 cm		>5 cm	
		s	sm	m	ml	l	mx (mixed)
		(small)		(medium)		(large)	18%
		8%	11%	20%	24%	18%	
2: type	S	s-S 1%	sm-S 2%	m-S 1%	ml-S 1%	l-S 0%	mx-1%
	(smooth)						
	10%	s-SR 7%	sm-SR 8%	m-SR 13%	ml-SR 22%	l-SR 18%	mx-SR 17%
	RS						
	(rough-smooth)						
	84%	s-R 1%	sm-R 2%	m-R 2%	ml-R 1%	l-R 0%	mx-R 1%
	R						
(rough)							
6%							
3: aspect/oblate							
high	regular	low	irregular	prolate			
-hi	-rg	-lw	-ir	-pr			
4: fragmentation							
rare		mod		common			
-ra		-md		-cm			
5: botryoidal							
well dev.		poorly dev		absent			
-bo		-po		-no			

From Table 6.4 it is apparent that in the TOML area at least, rough-smooth nodules are the most common, especially in the medium to large size range.

Figure 6.18 Sections through a S-type Nodule (left) and a R-type Nodule with a S-type core (right)

Source: von Stackelberg and Beiersdorf, (1991).

Figure 6.19 Example nodules found in the TOML area

Smooth (top left), rough-smooth (top right), rough (bottom left) and overturned rough-smooth (bottom right) types

Between TOML tenement areas B - F there are notable differences in the sizes and types of nodules present (Figure 6.20). Area F is distinctive for having generally more medium S type nodules than the other areas (although it also contains large SR type nodules of generally high aspect). Area C1 has very few truly large nodules with medium to large SRs dominating. Areas B1, and D1-D2 have a wider range of sizes again mostly (70–90%) of SR type although B1 has some discrete areas of smaller nodules. Two dredge samples from Area A contained mostly small smooth nodules, and as mentioned below one of these looks to be mostly of hydrogenetic character.

Figure 6.20 Nodule size and type within the areas sampled during TOML CCZ15

Codes are per Table 6.4

### 6.8 Variation in TOML Nodule Grades

Grade variation in CCZ nodules is remarkably low. Basic statistics pertaining to grade are included with the Mineral Resource data review in Section 11.

During the CCZ13 and CCZ15 TOML campaigns, dredge samples were taken for metallurgical test work and the opportunity was taken to analyse numerous (~30 per dredge) sub-samples of nodules to better establish grade variation within a small area.

These dredge sub-sample results are compared below with box-core and historical results for Ni, Cu, Co and Mn (Figure 6.21 and Figure 6.22). Bear in mind that the three datasets all cover different areas with:

- historical samples covering all of TOML A-E;
- TOML box-cores (BC) all of selected sub-areas in Areas B, C, D and F; and
- dredge samples in select locations.

Key conclusions from this comparison are that:

- There is generally good to excellent agreement between dredge samples and the more widely sampled but internally consolidated samples from box-cores;
- There is generally excellent agreement between the historical data (section 9.1) and the TOML dredge and box-core samples with the exception of Mn (higher in the TOML samples from some areas as discussed in Section 11);
- Some of the regional grade trends are seen between the TOML Areas (e.g., Area B has generally higher Ni and lower Cu than Area C, while Area F has distinctly lower Co);
- The lower grade nodules from box-cores from Area B1 seen in Figure 6.21 and Figure 6.22) tend to be found in a single area in the central-eastern part of the area (B3645 and surrounds), that is characterised by typically R-type nodules and frequently low to very low abundances;
- Area A and B nodules have a greater range in grade consistent with more variable ratios of diagenetic to hydrogenetic formation (higher Co and Fe).

Figure 6.21 Nodule variance in Ni and Cu for dredge and box-core samples in the TOML Areas

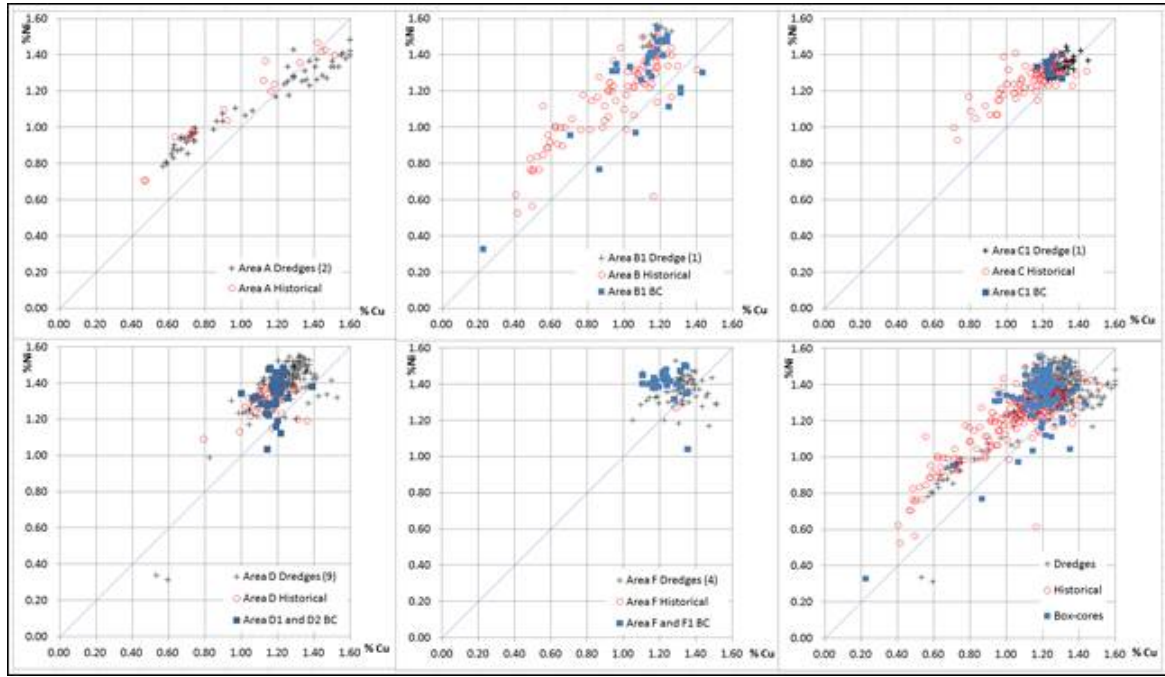

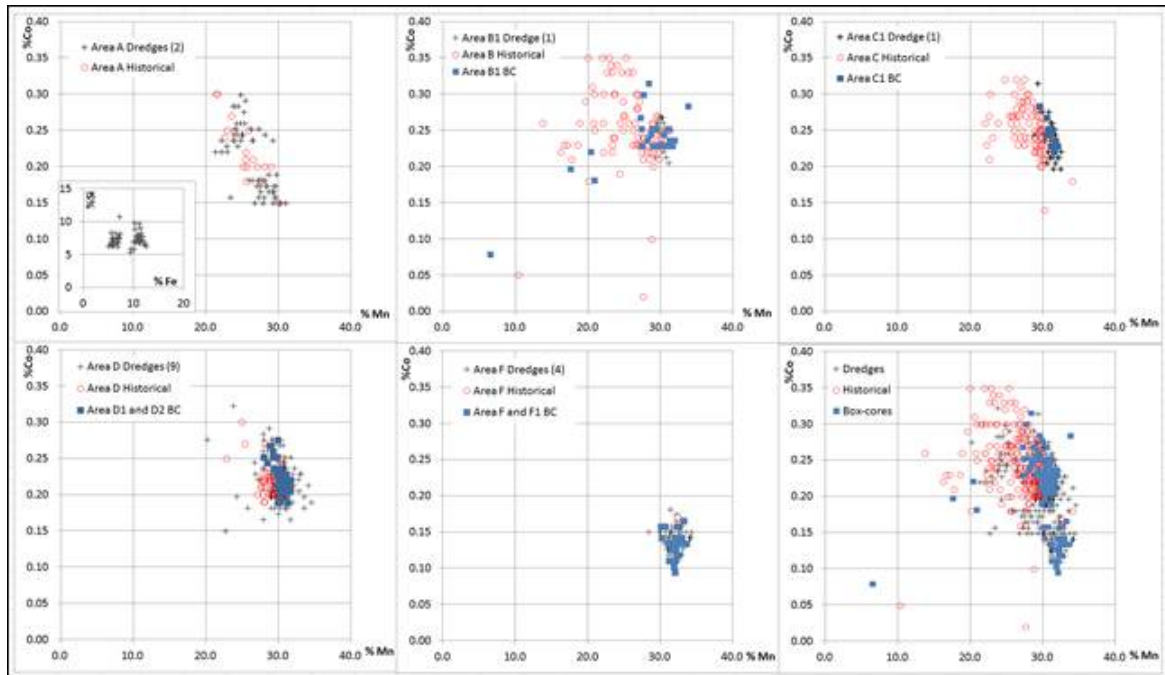

Figure 6.22 Nodule variance in Mn and Co for dredge and box-core samples in the TOML Areas

**6.9 Nodule Distribution**

The distribution of nodules though the CCZ is not constant, and likewise their abundance varies within the TOML contract areas. Areas with few or no nodules that can be discriminated in mapping are:

- Volcanic areas (seamounts and more recent flows)

- Slopes or escarpments (from ongoing normal faulting and both of basement basalt and overlying sediment)
- Areas of “no nodules on ooze” (Nnoo) that are thought to be areas of drifting sediments that preclude nodule formation.

As noted in Table 6.5, only the volcanic areas and Nnoo sediment drifts were domained separate to the sediment bearing nodules in the mineral resource estimate.

Table 6.5 MBES mapped seabed classification and proportions

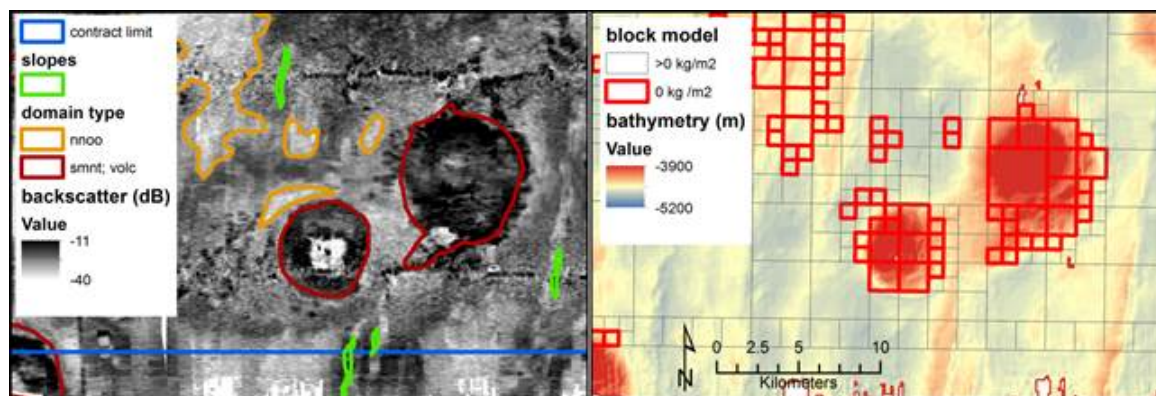

Area	Volcanic exposure	Nnoo sediment	Slopes	Nodule bearing
B	5.9	6.0	3.9	84.2
C	1.8	5.6	3.2	89.4
D + E	3.0	12.9	4.2	79.9
F	1.5	2.1	4.9	91.6

Note that without MBES survey, it is not possible to estimate the proportions of the above mapped units in Area A.

Strictly speaking, most of the above discriminated areas still contain some nodules. Small nodules are found on seamounts and in amongst the escarpments. Sediment drifts also usually contain the occasional nodule as seen in seafloor photos. There may also be nodules buried near the edge of sediment drifts.

Dealing with these areas in the mineral resource estimate is described in Section 11. Mapping based on MBES (e.g., Figure 6.23) estimates the area with no or insignificant nodules to comprises 10 to 20% of the total area (Table 6.5).

Figure 6.23 Mapped areas of volcanic rocks, slopes and Nnoo sediment in part of TOML Area B

Note that over-estimation of area of slopes is likely due to smoothing from the relatively coarse (60–120 m) resolution of the shipborne 12 kHz MBES and the nature of interpretation. Slopes were not significant enough to be domained out in the mineral resource estimate. There is also the possibility that many of the mapped volcanics of lower relief are partly covered with sediment and nodules. Box-core sampling of Nnoo type areas was done if that unit was covered by the planned sample grid in the CCZ15 campaign. Direct correlation of nodule abundance with MBES backscatter was relatively poor.

### 6.9.1 Importance of buried nodules

Sediment is thought to cover even surficially located nodules from time to time, due to ongoing sedimentation and the effect of seafloor currents. In many cases, grazing holothurians clear any accumulated sediment off the nodules.

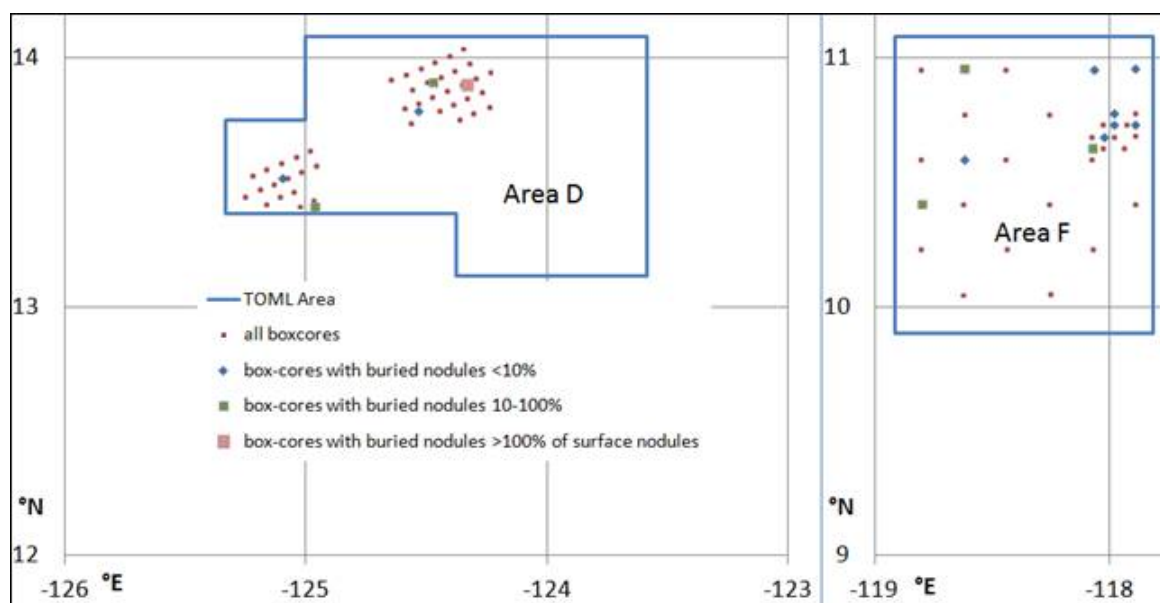

In logging during TOML’s CCZ15 campaign, a clear distinction was made between:

1. **Powder** a thin coating of sediment, usually so little (~ 5 mm) that the outline of the nodule can be seen in a photograph;
2. **Cover** is up to several centimetres of sediment, obscuring the nodule completely from vision, maintaining the nodule within the geochemically active layer and with the amount of cover irrelevant to sampling and collecting methods;
3. **Buried** was defined as when there is greater than 10 cm of sediment on the nodule. Buried nodules often are below the geochemically active layer. As they are likely located too deep for a nodule collector, they were collected from the box-cores in CCZ15 purely for reference purposes and their weights and chemical analyses were **not included** in the dataset supporting the mineral resource statement.

Buried nodules often have a very soft brown powdery surface, which is thought to reflect surface ‘corrosion’ due to reduction and breakdown of the nodule. However, this was always seen on the surface of nodules and no extensively degraded remnants were seen. Many buried nodules have the size and textures of large to medium SR type (see TOML classification in Table 6.4 above) indicating that they were at the surface for a long period of time before burial. When present in the box-cores, the buried nodules were often found in groups at the same depth, and it is suspected that they became buried by falling into burrows due to undermining. Buried nodules tend to be larger than the average nodules found at the surface.

Buried nodules are uncommon. A total of 16 out of the 113 box cores taken during CCZ15 had buried nodules and all of these were located in Area D and F (Figure 6.24). If just Areas D and F are considered, then buried nodules were found in about 23.8% of samples which is a similar ratio to that described by Kotlinski and Stoyanova (2006) who found 22.6% within the part of the IOM contract area (59 of 261 sample sites).

Figure 6.24 Location and percentage of buried nodules found during CCZ15

---

## 7 Exploration

Exploration in the TOML tenement area comprises two main phases:

- Historical work and data collected by the pioneer contractors who returned Reserved Areas to the ISA. This work underpins much of the inferred mineral resource estimated in Section 11 and reported previously (Golder Associates, 2013).
- TOML work and data acquired by TOML during two exploration campaigns in 2013 and 2015 (called CCZ13 and CCZ15 respectively in this report). This work underpins part of the inferred mineral resource estimate as well as all of the indicated and measured mineral resource estimates.

### 7.1 Historical Data

Six exploration groups are known to have surveyed areas within the TOML tenement area and collected samples of polymetallic nodules. Much of this work overlapped as it predated the signing of the Law of the Sea. These include the Japanese group (DORD), the South Korean group (KORDI), the Russian Federation group (Yuzhmorgeologiya), the French group (Ifremer), the German group (FIGNR or BGR), and the consortium, Ocean Minerals Company (OMCO). The timing and location (ISA, 2003) of the OMCO sampling is known but the results are not available outside of ISA published contour maps.

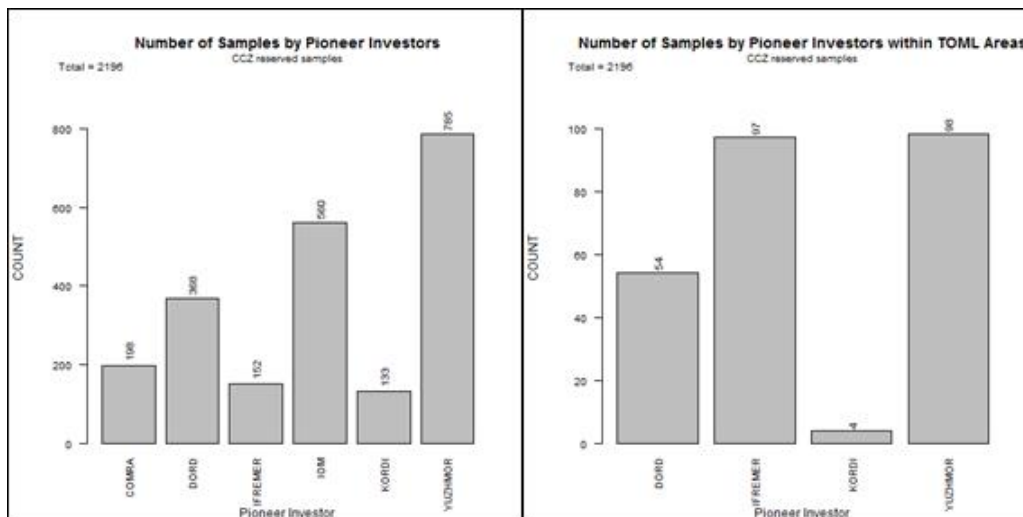

Virtually all the samples in the TOML tenement area were obtained by free fall grab (FFG) samplers, although a few results from box corers (BC) were also included. As detailed in section 7.5.6, nodule abundance (wet kg/m<sup>2</sup>) is derived by dividing the weight of recovered nodules by the surface area covered by the open jaws of the sampler or corer (typically 0.25 to 0.5 m<sup>2</sup> but in some cases as much as 1 m<sup>2</sup>). Assays were done on dried sample splits by commonly used spectrometric methods (AAS and XRF).

#### 7.1.1 Nodule Sample Data Supplied to TOML

The TOML tenement area was a Reserved Area and as such was sampled by Pioneer Investor or developed nation sponsored contractors. These samples provided the basis of a database held and maintained by the ISA. These data were used initially to define the areas of the TOML application, and subsequently to estimate an inferred mineral resource for the part of the TOML tenement area they covered (Golder Associates, 2013).

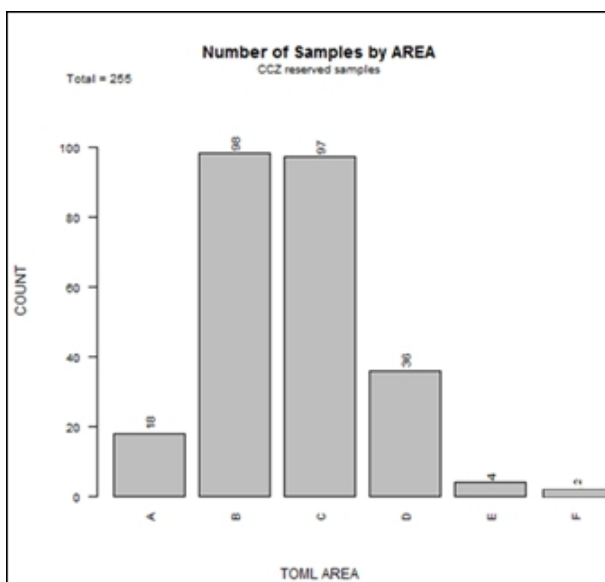

Bar plots showing the total number of samples within the TOML tenement area collected by each Pioneer Investor or developed nation contractor are presented in Figure 7.1 and Figure 7.2. The statistics for the samples that contain both abundance and grade data inside the TOML tenement area are tabulated in Table 7.1 to Table 7.6. Samples in the CCZ but outside the TOML tenement area are presented in Table 7.6.

Figure 7.1 Total Number of Samples by Pioneer Contractor.

Pioneer Contractors are sometimes referred to as Pioneer Investors

Figure 7.2 Total Number of Samples by TOML tenement areas.

Note that 8 additional samples were received for Area E from IOM (see Table 7.5).

Coefficient of Variation	0.15	0.40	0.16	0.24	0.74

The above tables and Figure 7.3 indicate that all of the TOML tenement areas have similar ranges of grade and abundance to the rest of the CCZ deposit. The coefficients of variation of grades are low compared to most terrestrial mineral resources. Abundance values vary more widely, making abundance estimates the key variable of uncertainty in mineral resource estimation. For the historical data, sample spacing is predominantly wide (10 km to 30 km). However, there are a number of closely spaced samples (500 m to <10 km) but these are insufficient to constrain the short range controls on grade and abundance within the TOML tenement areas. TOML's own sampling (see below) serves to constrain the short range.

Figure 7.3 Box Plots of historical sample grades within the TOML tenement areas.

Box size represents 1st and 3rd quartiles centred on the median and box width reflects number of samples

Figure 7.4 Box Plots comparing the 6 Pioneer Investor Reserved Area Data Sets across the entire CCZ.

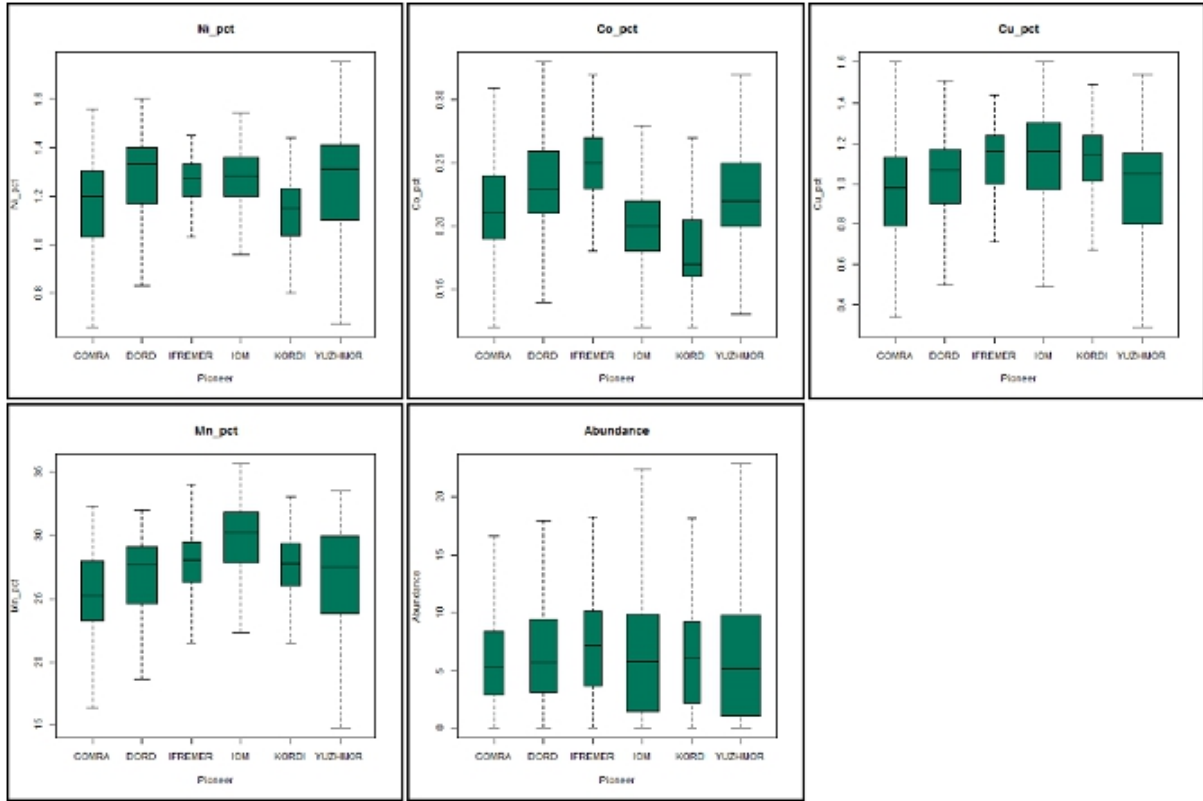

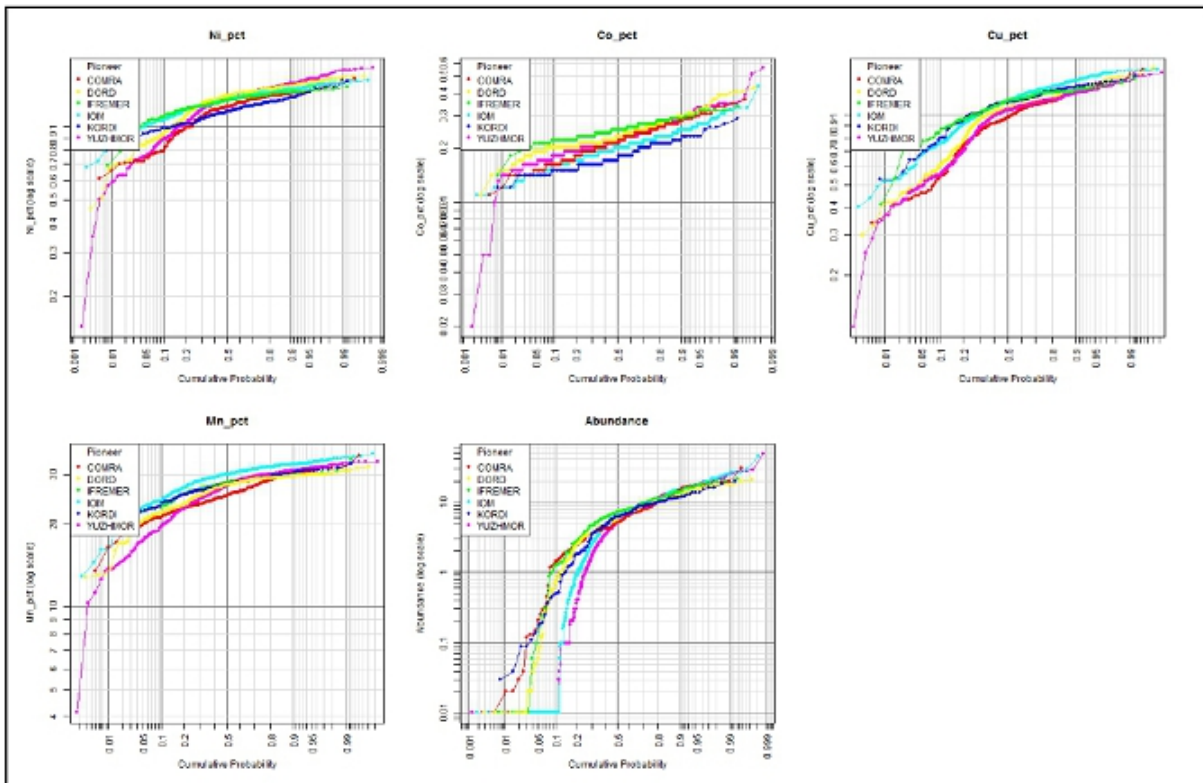

Figure 7.5 Log Probability plots comparing the 6 Pioneer Investor Data Sets.

### 7.1.2 Historical Sampling Method

Virtually all the historical samples used in the TOML Mineral Resource estimates were obtained by FFG samplers plus a few by BC samplers. Research has shown that free fall grab samplers consistently underestimate the actual abundance (Hennigar, Dick and Foell, 1986), but even today they are the most productive tool available for the assessment of nodule abundance. This is because a number of them can be deployed at any one time from the survey vessel allowing an order of magnitude increase in collection efficiency, i.e., approximately 10 to 20 samples per day for a FFG, versus about three samples per day for a BC that is winched to and from the seafloor.

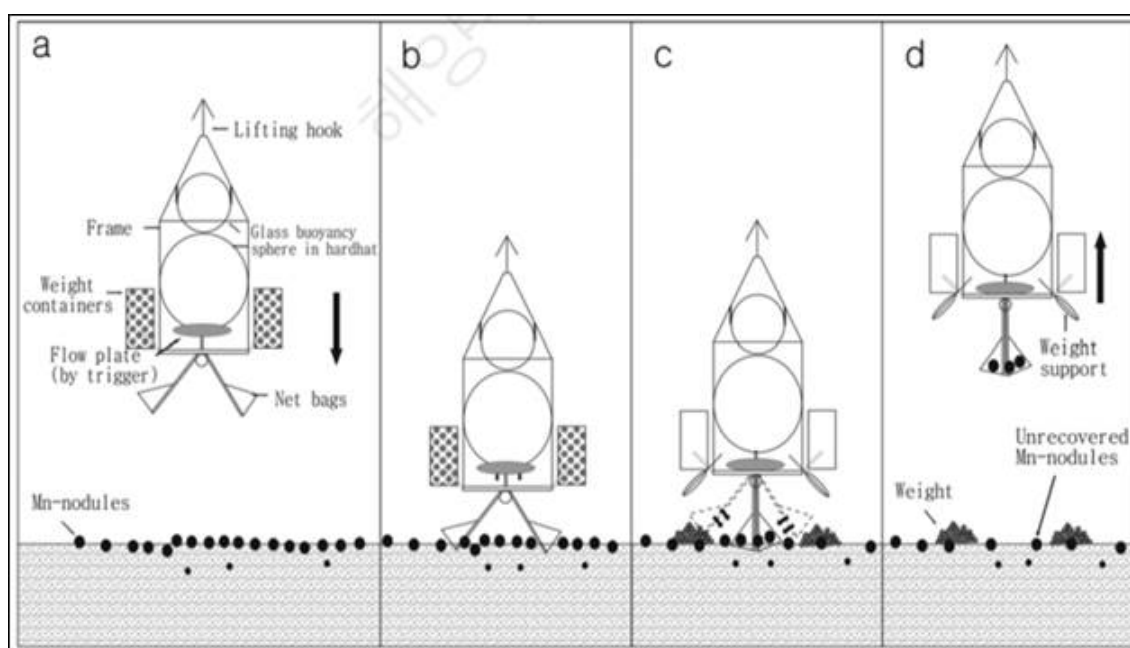

Lee et al. (2008) compared FFG and BC data in some detail. They found a wide range but consistent differences with FFG under-reporting compared to BC (Figure 7.8). They also illustrate why BC results should be much more accurate than FFG results based on mechanical effectiveness (Figure 7.6, Figure 7.7). They then recommend an overall correction factor of 1.4 to convert a FFG abundance to a BC abundance. However, they acknowledge that any simple factor lacks precision. One key issue is the size of the FFG or BC (area covered) versus the nodule diameter. Free fall grab samplers have been demonstrated to underestimate the actual abundance as smaller nodules may escape some grabs during ascent and larger nodules around the edge of the sampler may be knocked out or fall out during the sampling process.

No conversion has been applied to the TOML nodule abundance because:

- Sample collection type is not specified in the historical data (i.e. proportion and identity of BC versus FFG samples is unknown (although most are likely to be FFG).
- The size of collector and nodule sizes is not specified in the historical data.

Therefore estimates of nodule abundance based on historical samples are likely to be conservative.

Figure 7.7 Cartoon showing the recovery process of nodules using Box Corer

Modified after: Lee et al., (2008).

Figure 7.8 Comparison of returned abundances from BC and FFG at test stations within the KORDI exploration area

Source: Lee et al., (2008).

Metal content in the historical samples was determined by a variety of standard analytical methods, including atomic absorption and X-ray fluorescence. Limited information is available on historical sample preparation and analytical methods. The various groups reportedly used polymetallic nodule Certified Reference Materials (e.g., NOD-P-1; Flanagan and Gottfried, 1980) for QAQC, however details of the Certified Reference Materials and analytical results were not included in the dataset supplied by the ISA to TOML and Golder.

## 7.2 TOML Work Programmes

In 2012, TOML realised the need for two campaigns to effectively define a mineral resource of sufficient confidence and size to likely support the building, commissioning and payback of a mining operation.

The first campaign in 2013 utilised the MBES system of the chartered RV Mt Mitchell (Figure 7.9) to map the seafloor in Areas B through F, as well as to test equipment and collect sufficient sample to confirm grades and support metallurgical test work.

The second campaign in 2015 used the experienced team and equipment spread on the RV Yuzhmorgeologiya (Figure 7.9) to sample and image mapped priority areas so that a higher confidence and expanded mineral resource could be estimated, and to collect environmental baseline and geotechnical data.

Figure 7.9 RV Mt Mitchell (CCZ13) and RV Yuzhmorgeologiya (CCZ15)

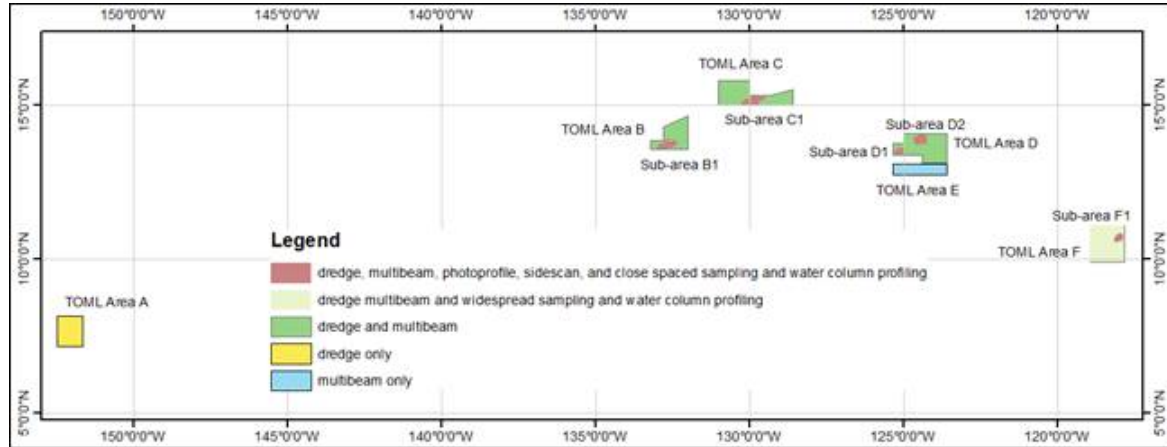

Table 7.7 and Figure 7.10 summarise collected data from each TOML area and sub-area. MBES (12 kHz MBES echosounding) includes bathymetric and backscatter products and geological geomorphological interpretation. Photo-profile includes still and video products and logging. Dredge sample data includes grade characterisation and some size distribution data. Water column includes temperature, pressure, turbidity and in some cases physical samples and current. Box-core data includes nodule grade and abundance; fauna, and in some cases vane shear and/or sediment characterisation. Deep-tow sonar includes sidescan sonar, sub-bottom profiler and micro survey and altimetry.

Table 7.7 TOML datasets by area and by campaign

	MBES km <sup>2</sup>	Photo-profile line km	Dredge #	Water column #	Box-core #	Deep Tow Sonar line km

### 7.3 TOML Sampling Methods

Details of key resource data collection processes and methods are presented here.

#### 7.3.1 Multibeam Bathymetry

MBES is used to determine the depth of water (bathymetry) and the acoustic reflectance (backscatter) of the seabed. It operates by transmitting a focused acoustic pulse (Figure 7.11) from a specially designed transducer across a swath across the vessel track. These pulses return as a set of receive beams that are weaker and narrower and whose arrive time varies depending on speed and distance. Thus position and depth can be measured and seafloor hardness can be qualitatively assessed.

Figure 7.11 MBES operations schematic

During the CCZ13 campaign the RV Mt Mitchell operated a hull mounted Kongsberg EM120 MBES over areas B through F. This equipment operates at 12 kHz and is capable of operation up to 11,000 m water depth. It has better than 5 m vertical resolution and ~60 m horizontal resolution for bathymetry and ~30 m for backscatter at water depths between 4,500–6,000 m. It has a maximum swath width of 6 times the water depth but the effective swath width varies from 2 to 6 times the water depth depending on the depth, sea state and heading.

The only pre-existing bathymetric data over the TOML tenement areas (excluding occasional widely spaced transit lines collected by research vessels) was the Sandwell and Smith based, satellite bathymetry (BODC, 2014). This bathymetry is calculated using mean sea levels to estimate depth to seafloor and is good for a resolution of 30 arc seconds (within the TOML areas this roughly equates to 900 m). In a general sense, this data is usually accurate to within a hundred metres vertically, but it lacks the definition necessary to define the smaller seamounts, ridges and smaller bathymetric features. No publicly available backscatter or seafloor reflectance data exists for these survey areas. As a result, conducting these MBES surveys provides TOML with a significant improvement in the vertical and horizontal resolution of the bathymetry, and with unprecedented intensity definition of the backscatter, resulting in visibly crisper, and much more interpretable imagery.

CTD (conductivity-temperature-depth) soundings were performed at each of the survey areas in 2013. The primary reason for this is that the MBES system requires an accurate full water column sound velocity profile with which to perform real time beam steering and location calculations.

### 7.3.2 Box-coring

Box-coring was undertaken in 2015 to collect samples for mineral resource estimation, to collect biological samples for environmental base-line measurement and to collect geotechnical data. Box-core operations adhered to the following:

- Deployment and recovery off the stern of the vessel using three strand wire and the vessel's starboard hydrographic sample winch (Figure 7.12)
- The vessel maintained minimum forward speed, typically 0.3 to 0.7 knots into result (combination of surface wind and waves)
- The box-core's progress and status (fired or not) was tracked using a signal from a 12 kHz pinger
- Landing points were within 500 m of the planned grid co-ordinates (as per Dive Plans) with the following pre-conditions:
  - Landing points avoid steeper areas (>10° slope) based on pre-existing multi-beam bathymetry
  - The hydrographic surveyors guiding the landing never sight the backscatter product of the existing multi-beam coverage (to eliminate chance of sighting bias)
  - USBL navigation provides location to within ±15 m.

Figure 7.12 Box-corer Deployment Schematic

### 7.3.3 Box-coring Overview

Box-corers have been used in the CCZ since the 1970s. As they collect a seabed sample effectively intact (Figure 7.7), they are seen by most workers as the best possible sampling device to estimate the nodule abundance in any given area. As such, the box-core samples were the most important contributor to the CCZ15 campaign results and by extension, to an independently validated, mineral resource estimate.

Box-corers come in different sizes: typically 0.1 m<sup>2</sup> or 0.25 m<sup>2</sup> (plan area of sample box or tube), but box-corers of 0.75 m<sup>2</sup> and 1 m<sup>2</sup> have also been used.

Smaller box-corers are good for micro-biological sampling of the epibenthic zone and are adequate for the estimation of abundant nodule resources, especially those involving smaller nodules. For accurate estimation of the abundance of larger nodules, especially in lower quantities, larger box-corers are more accurate.

The largest box-corers used in the CCZ were 1 m<sup>2</sup> (Afermod's Sympas system and one built by the OMCO consortium), but by all accounts, these were very large and difficult to handle. Kennecott built a 0.75 m<sup>2</sup> corer and used it extensively, deeming it to be an effective compromise (Felix, 1980).

### 7.3.4 Box-corer Equipment

Two types of box-corers were used during the TOML CCZ15 campaign:

- 0.75 m<sup>2</sup> box-corer manufactured by KC Denmark (80.740 code) and supplied by Nautilus Minerals (Figure 7.14). For part of the campaign, the KC box-corer included a carousel of 12 small volume (300 ml) Niskin bottles for water sampling. Each side of the box has an internal width of just below 87 cm (there are minor variances of 1–2 mm with the corner welds), so the true area of 7569 cm<sup>2</sup> is used for the abundance estimation.
- 0.25 m<sup>2</sup> box-corer manufactured by YMG (Figure 7.15) based on a USNEL/Scripps design from the 1970s.

Figure 7.13 Details and operations with the KC box-corer

Figure 7.14 Details and recovery of the YMG box-corer

### 7.3.5 Nodule sampling

Logging was completed manually by the Lead Scientist on shift. The manual logs were scanned and then transposed into MS Excel.

All weights were taken using a Wedderburn Marine motion compensated scale (WM42; Serial number #3380724) that was checked and calibrated in Brisbane, Australia, before shipping to the vessel. The scale has a 40 cm x 40 cm plate with vessel motion recorded and corrected electronically. Scales are claimed to be accurate to 60 kg ± 50 g, which was as observed during the campaign. The scales were checked using 12×1.5 litre or 12×2 litre water bottles and recorded weights were consistent with the mass of water plus packaging.

Upon arrival on deck, the nodules were photographed in situ, removed from the box and weighed three times:

- 1st time with mud still attached (preliminary weight) to enable biological analysis
- 2nd time after washing in filtered salt water (washed weight)
- 3rd time several days later and after exposure to 30–90 minutes in air conditioning and removal of ponded or sweated free water (aired weight).

Note that at each stage of handling, despite due care, some attrition of the nodules occurred with loss of a small (generally <1%) of fine material (dust to sand sized). The bulk of this loss occurred at the washing stage, but it was noticeable at the aired stage as well. The rate of attrition varied by nodule type (rough nodules broke up more) and by area (the rough and smooth rough nodules in the southern part of Area F were especially soft).

The difference between the washed and other weights is illustrated below in Figure 7.16. There is almost no difference between the washed and aired weights (average for all samples over 1 kg is –0.87%; in Area F it is –1.86%), with the cause of the minor differences debatable (moisture or attrition).

Figure 7.15 Preliminary vs. washed vs. aired box-core nodule sample weights (kg)

Figure 7.16 Differences in washed vs. aired box-core nodule sample weights by area

Handling of nodules was at all times supervised by the Chief or Lead Scientists, who were also the only people permitted to weigh the nodules, record the weights and seal bags and pails for transport. Nodule sampling was managed as follows (refer Figure 7.17, Plates 1 to 24):

- From the box, nodules were removed to the weighing station (in the geology laboratory or adjacent to the box-core landing spot on the back deck; (Plates 8 & 13))
- Here, preliminary weight was taken and recorded, the nodules were washed, firstly the selection with observed fauna, then the rest of the nodules.
- Then the washed weight was taken and recorded (Plate 14).
- Then the nodules were carried to the geology laboratory where they were arranged and photographed by a designated scientist before temporary storage in sealed plastic bags in a designated area.
- Then at the conclusion of sampling of an area (1-7 days after collection), the samples were laid out about 6-20 at a time for airing (Plates 21 & 22).
- After 30 to 90 minutes of airing, reference and duplicate samples were selected, re-packed weighed again, sealed in plastic bags security tagged with tamper-proof tags or tape and then photographed (Plates 19 & 20).
- Then the nodules were packed into specially marked paint pails with tamper-proof tape (Plate 23).
- Duplicates were collected from roughly one in ten samples. Subsamples were taken using cone and quartering.
- Pails were then transported (escorted by Chief or Lead Scientist) to a refrigerated container (reefer) on deck for transport to Brisbane, Australia, where the main assay laboratory is located (Plate 24).
- Reference samples were placed in specially marked and labelled pails for airfreight to Brisbane, Australia (in case of loss of the reefer in transit). These samples are for general reference purposes, but also serve as backup for chemical analysis. These samples were not sealed with security tags or tamper-proof tape.
- Duplicate samples were placed in specially marked containers and labelled for air-freight to Jacobs University, Bremen, Germany, where the check laboratory is located. These samples and all container pails were sealed with tamper-proof tape.

Figure 7.17 Details and operations regarding sample processing

### 7.3.6 Buried Nodules

In most samples, there were no buried (i.e. >10cm) nodules although some were occasionally entrained by the sides of the box or the shovel. If present, buried nodules were separated at the point of collection from the box and were washed, weighed, and packed separately. Entrained nodules were sampled for reference purposes only and were not weighed.

### 7.3.7 Vane Shear Readings

Vane shear was measured in all box-cores that returned with undisturbed sediment. A 33 mm vane on a calibrated hand held shear vane device was used. Measurement location and readings were recorded on the Box-core Sample Log Sheet then transferred to a spreadsheet.

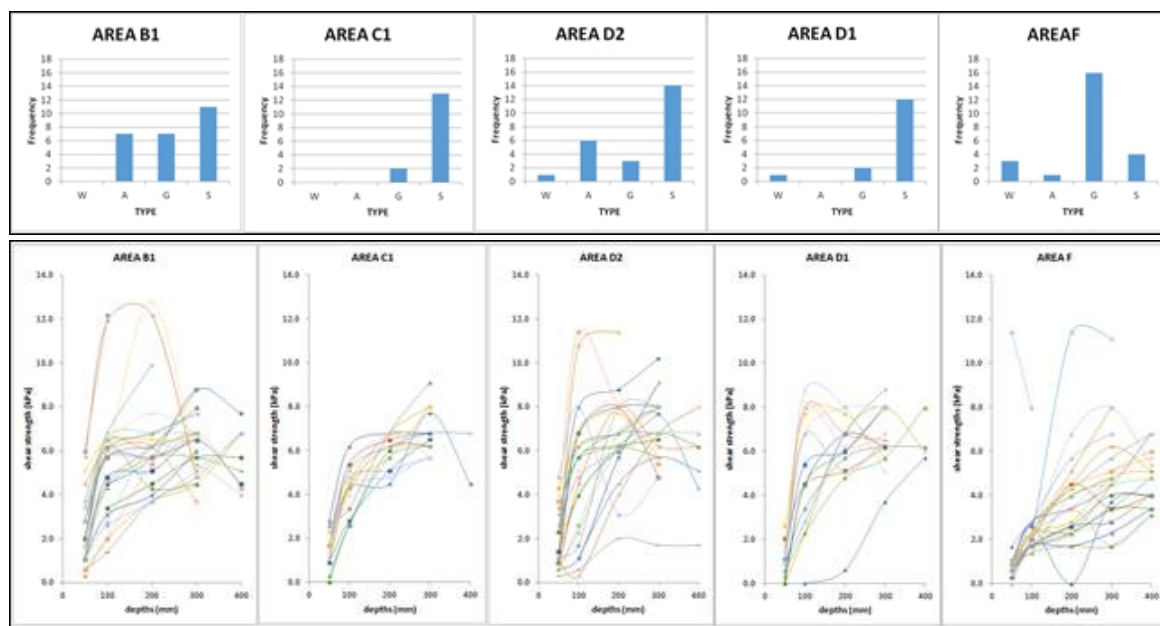

Vane shear was classified into one of four classes:

- W is mostly weak from top to base
- A is all stiff from top to base
- G is soft at the top with gradual stiffening with depth
- S is soft at the top with more sudden stiffening with depth.

Data were also reviewed by box and the most coherent reading selected. Averaging of readings was not undertaken as some measurements were taken in disturbed sediment, especially near the base. The most coherent readings were generally taken in the centre of the box.

Summary results are included in the maps further below, but the classes vary by area as shown in Figure 7.18.

Figure 7.18 Summary vane shear results from TOML CCZ15 study areas

These data shows clear differences in the uppermost part of the sediment between areas, with:

- Area C1 showing consistently suddenly stiffening ground conditions (mostly class S);
- Area D1 showing a slightly wider range to C1 including some more rapidly stiffening situations (mostly class S);
- Areas B1 and D2 have a wider range of conditions and both areas have occurrences of sediment drift (Nnoo);
- Area F (and F1) has a universally weak upper layer then generally and gradually stiffens (mostly class G).

### 7.3.8 Biological-Sediment sampling

Biological-sediment base-line samples were collected from the majority of box-core samples. These samples were collected in accordance with ISA Technical Study: No.10 “Environmental Management Needs for Exploration and Exploitation of Deep Sea Minerals”. If TOML is to proceed to trial mining/full scale mining, these samples will play a key role in the environmental impact assessment of the proposed mine site(s).

Samples were collected to obtain an understanding of the in-fauna and epi-benthic community composition and sediment characterisation within the TOML tenement areas. A variety of sample types were collected from each box-core, which were fixed and preserved separately for morphological and molecular taxonomy.

Sample types collected and planned analysis:

- Overlying water fauna
- Megafauna (animals greater than 2 cm)
- Nodule fauna
- Micro-fauna (animals smaller than 32 µm)
- Meio-fauna (animals greater than 32 µm and less than 250 µm)
- Macro-fauna (animals greater than 250 µm and less than 2 cm)
- Sediment chemistry
- Particle size distribution
- Special core samples. Sample type collected occasionally to capture unusual sediment characteristics of interest in their original sediment layers.

Collection method, fixing and preservation are illustrated in Figure 7.19 to Figure 7.23. Biological-sediment samples were only collected if the box-core sample was in relatively good condition. If the box-core sample was damaged during collection, or recovery resulting in the mixing of sediment layers, most sample types were not collected. Biological-sediment samples were collected in conjunction with nodule samples. However, care was taken to minimise the mixing of sediment layers during the extraction of nodules.

Between sampling events, all sampling equipment was washed thoroughly using 25 µm filtered seawater to prevent contamination of samples. Sterilised Nalgene sample containers and Whirl-Pak sample bags were used to collect samples. During the collection of sediment chemistry samples, no equipment containing metal was used in order to prevent cross-contamination due abrasion and to trace level analyses.

The following are the essential operations undertaken to collect all samples types listed above. Figure 7.17 displays the order of sample collection and processing:

- Upon retrieval of the box-core to deck and delivery of the box-core samples to science team, overlying water was siphoned off into clean pails using plastic tubing and large pipettes. The water was then poured through a 32 µm sieve and the contents collected and fixed/preserved in 99% ethanol. (Figure 7.17 – Plates 5 & 6)
- Visible mega-fauna were collected from the surface of the sample using forceps, placed in a sample container and preserved. After preliminary weighing of the nodules, selected nodules were washed over a sieve (32 µm) and the contents of the sieve collected and fixed/preserved in 6% formalin or 99% ethanol. Large mega-fauna attached to the nodules were photographed before being removed from the nodule
- The required amount of 5 cm and 10 cm PVC cores were pushed into a box-core sample to a depth of over 20 cm. Rubber bungs were then inserted into the cores (Figure 7.17 – Plates 10 & 11)
- Residue samples were collected using heavy-duty geological sample bags (Figure 7.17, Plate 12),

- 
- PVC cores were extracted from the box-core and placed upright in pails to prevent mixing of layers. Cores were washed to prevent contamination during processing
  - PVC cores were analysed either for fauna type or for sediment characterisation, using horizon measurers and core cutter (Figure 7.17 – Plates 15, 16, 17 & 18):
  - Micro-fauna (2 x 5 cm diameter cores) — 0–2 cm, 2–5 cm and 5–10 cm horizons were extracted, placed in the appropriate Nalgene sample container and fixed/preserved in 99% ethanol
  - Meio-fauna (4 x 10 cm diameter cores) – 0–2 cm, 2–5 cm and 5–10 cm horizons were extracted, placed in the appropriate Nalgene sample container and fixed/preserved in 4% formalin or 99% ethanol
  - Macro-fauna (4 x 10 cm diameter cores) – 0–2 cm, 2–5 cm, 5–10 cm and 10–20 cm horizons were extracted and sieved (250 µm). The contents of the sieve placed in the appropriate Nalgene sample container and fixed/preserved in 6% formalin or 99% ethanol
  - Sediment chemistry – 0–2 cm, 2–5 cm, 5–10 cm and 10–20 cm horizons were extracted and placed in sterilised Whirl-Pak sample bags
  - Particle size distribution 0–2 cm, 2–5 cm, 5–10 cm and 10–20 horizons were extracted and placed in sterilised Whirl-Pak sample bags
  - Duplicate samples – were collected
  - All samples collected were labelled using the q-Core database, following a pre-determined sample numbering system
  - After fixing/preservation, all samples were packed into pails and stored in a refrigerated container kept at 2–4 °C (Figure 7.17– Plate 24)
  - Samples fixed in 4% and 6% formalin were transferred to buffered 99% ethanol after approximately two weeks for long-term storage and preservation.

The bulk of the samples collected were shipped to Nautilus Minerals in Brisbane, Australia. A selection of overlying fauna, nodule fauna, meio-fauna, macro-fauna and mega-fauna have been shipped to YMG, Gelendzhik, Russia for expert morphological taxonomic identification. Sediment chemistry and particle size distribution samples were sent to SGS, Cairns for analysis. The bulk of the fauna samples will be stored until they can be analysed in accordance with a yet to be scoped environmental impact statement project.

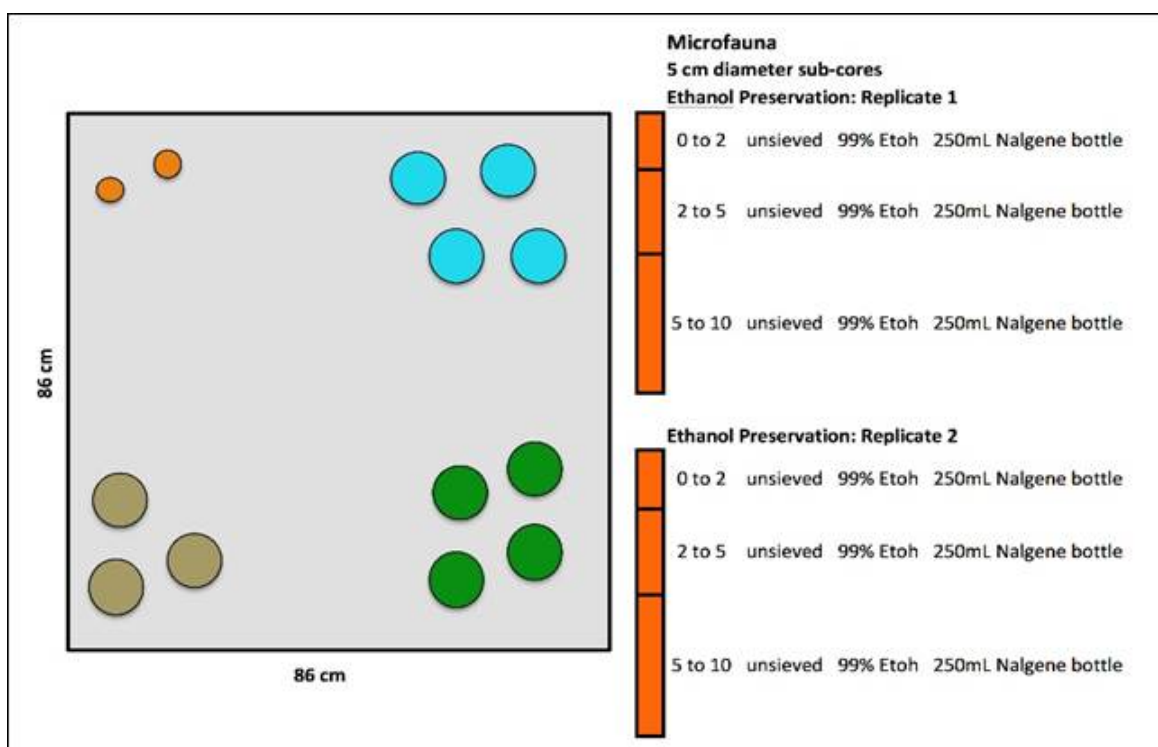

Figure 7.21 Sample Plan – Meio-fauna

Figure 7.22 Sample Plan – Macro-fauna

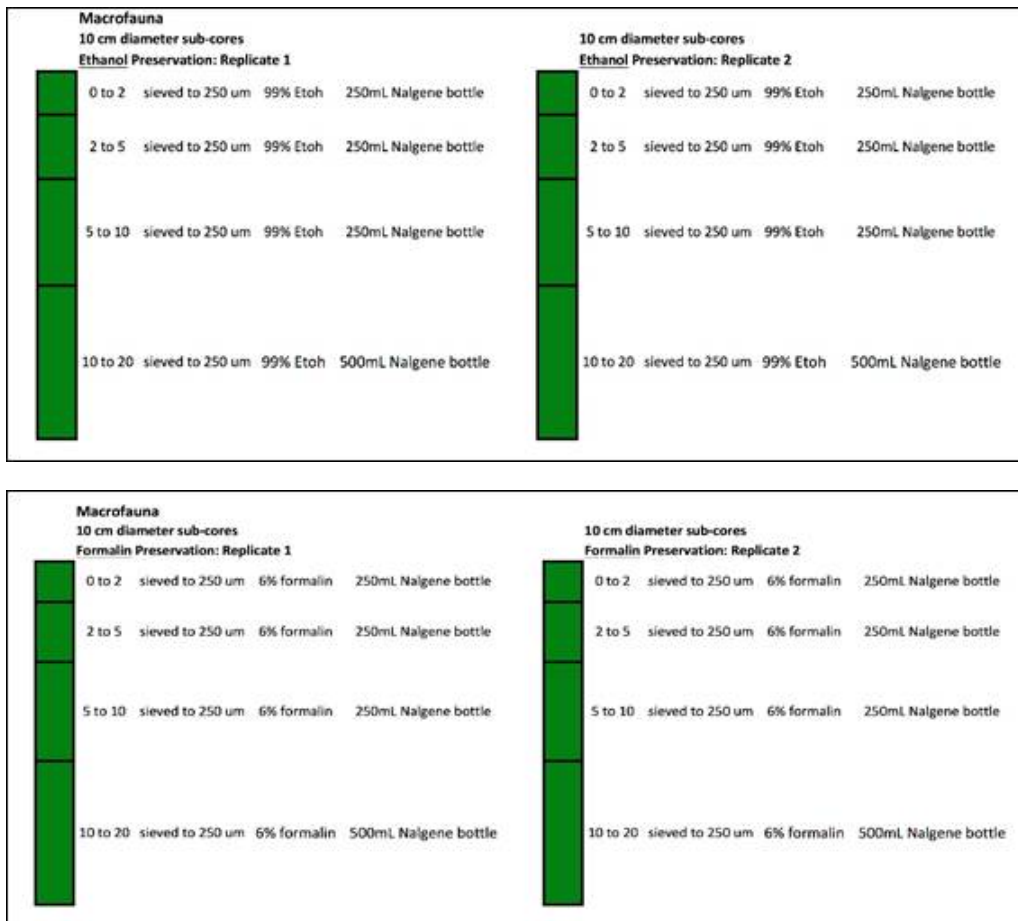

Figure 7.23 Sample Plan – Sediment characterisation

### 7.3.9 Sediment residue sampling

Most box-cores with good returned sediment had three samples taken after all other sampling was complete:

- Top sample was typically 0–5 cm and comprised any remaining semi-liquid layer and geochemically active layer. Typically very soft and selected by this characteristic.
- Second sample was of more solid sediment typically taken at 5–20 cm.
- Third sample was remaining to base of box, usually a further 10–20 cm down, depending on depth of penetration.
- Each sample weighed between 5 kg and 25 kg and in total about 330 samples were taken, making this the highest volume-weight sample collected and shipped.
- The sediment was taken for use in future geotechnical/engineering studies (e.g., reconstruction for traction and nodule collection bench top trials) and for reference.

### 7.3.10 Water sampling

Water column samples were collected during CCZ15 as part of the environmental base-line characterisation of the TOML tenement areas in order to meet the recommendations per the ISA document; Environmental Management Needs for Exploration and Exploitation of Deep Sea Minerals. Samples were collected via the Niskin bottle rosette attached to the box-corer (Figure 7.13, Figure 7.24). The Niskin bottle rosette contained 12×300 ml Niskin bottles, which were triggered using a pressure sensor. Samples were collected for both infield and on-shore laboratory analysis.

Water sample types collected were:

- Total Metals (TM) - 125 ml sterilised Nalgene container – 1 ml of nitric acid added for preservation (on-shore analysis);
- Total Suspended Solids (TSS) - 1 L sterilised container (on-shore analysis);
- pH and Oxidation-Reduction Potential (ORP) - In-field measurements – approximately 150 ml required to obtain measurements.

The water sampler (Niskin rosette) was programmed with the selected depth strata for full water sampling programme conducted in Area C, D and F and the Niskin bottles set to the open position, each time before deploying the box-core. The water-sampling programme was designed to collect samples from varying depth strata across all areas where box coring was conducted.

Depth strata sampled for the majority of samples collected were:

- 50 m
- 200 m
- 500 m
- 1,000 m
- 1,500 m
- 500 m from the seafloor
- 100 m from the seafloor
- 50 m from the seafloor

Upon recovery of box-core and Niskin rosette to deck, the Niskin bottles were processed depending on the sample type being collected. TM and TSS were collected using the appropriate sterilised sample containers and refrigerated at 4°C. The pH and ORP samples were collected and taken to the water chemistry laboratory for analysis. Samples were analysed using YSI Pro10 handheld multi-probe with pH and ORP sensors. A three-point calibration was conducted on the pH sensor prior to every sampling event.

Niskin bottles were fired during the decent due to the limitations of the device, as there was no way of programming the device to delay firing at the set depth strata on ascent. To minimise the risk of contamination from residue left from previous sample, the box-core was washed out between deployments. Due to commissioning issues the water sampler was not operational until Area C. Therefore, water samples were only collected in Area C, D and F.

All water samples collected for laboratory analysis were priority hand-carried back to Brisbane and shipped to SGS Cairns for analysis.

Figure 7.24 Water Sample Collection and Water Chemistry Laboratory

### 7.3.11 Water column profiling

During CCZ15, water column profiles were collected as part of the environmental base-line characterisation of the TOML Areas in order to meet the recommendations per the ISA document: Environmental Management Needs for Exploration and Exploitation of Deep Sea Minerals. The majority of water column data were collected via a Mini Autonomous Plume Recorder (MAPR) with the following sensors:

- Temperature (°C);
- Turbidity (NTU);
- Depth (m).

The MAPR was deployed during most operations by attaching it to either the box-core cable (50 m above the box-corer) or the umbilical of the MAK (side-scan) or Neptune (photo-profiler) at 50 m above either instrument, see Figure 7.13-Plates 7 & 9. Upon recovery of the MAPR to deck, these data were downloaded and processed and Excel template.

Along with the MAPR, an Aanderaa Seaguard single-point current sensor was deployed on a select number of box-core deployments in Area F.

### 7.3.12 Photo-Profiling Programme

Photo-profiling was undertaken to provide data on short range continuity of nodules and visual based estimates of nodule abundance for mineral resource estimation. It also provided a census of mega-fauna and macro-fauna for environmental base line measurement and habitat mapping. Finally, it helped calibrate MBES and deep towed sonar results in terms of understanding seafloor rugosity.

Deployment and recovery of the camera was off the stern of the vessel using an umbilical and the vessels aft tow winch (Figure 7.25). The system was deployed just above the seafloor with the winch operator taking line in and line out to compensate partially for vessel heave. Video was streamed constantly to the vessel where it was logged by TOML team into the Nautilus Minerals' proprietary Nautical logging system.

Figure 7.25 Neptune Deployment Schematic

Photographs were taken automatically at a prescribed altitude of 3.5 m above the seafloor, a minimum.

30 seconds apart and continually uploaded to the vessel where scientists collected them from the central server and logged them for geology and biology. These were also subsequently logged by the TOML biologist in more detail.

Neptune lines were pre-planned to place the vessel into “prevailing result” where it maintained a forward speed of about 1.2 knots. As the line got longer, more line tended to be fed out and vessel speed tended to increase. Average velocities also tended to increase as the campaign progressed and the team optimised survey settings.

The system’s position was monitored using a 12 kHz USBL beacon except on line CCZ15-F08, where an estimate of position had to be made from line out and vessel position.

Hydrographic surveyor and bridge shared the same navigation display and the vessel was steered so that the profiles never moved more than 1 km off line and typically was well within 500 m of the planned line.

Survey data from the vessel, USBL location of the camera and attitude sensor was collected and subjected to preliminary analysis to learn more about towing dynamics.

Figure 7.26 Neptune Deployment Photographs

### 7.3.13 Deep Towed Sonar Programme

YMG's MAK-1M deep towed system was brought on the CCZ15 campaign primarily to map and characterise the seafloor bathymetry in detail via its 30 kHz side scan system. The system also provided useful data on seafloor composition from its 5 kHz sub-bottom profiler and on seafloor surface survey from its altimeter-USBL survey data.

Essential operation was as follows:

- Deployment and recovery of the sled and depressor was off the stern of the vessel (Figure 7.27, Figure 7.28).
- MAK lines were pre-planned to place the vessel into prevailing result where it maintained a forward speed of about 1.5 knots.
- The system's position was monitored using an integrated 12 kHz USBL beacon and altimeter.
- The system was towed behind a depressor weight about 100 m above the seafloor with slight elevation changes to follow the seabed. Speed of towing was limited by ping rate and data quality.
- Hydrographic surveyor and bridge shared the same navigation display and the vessel was steered so that the sled never moved more than several hundred metres off line.
- All processing through to delivered products was done on-board by the YMG MAK team.

As with the Neptune photo-profile systems, analysis of the sled versus ship position as well as some attitude/MAPR sensor data provided information on deep tow dynamics that might be of help in the design of future towed systems (e.g., for the Nautilus mining concept).

Figure 7.27 MAK Deployment Schematic

Figure 7.28 MAK Components and Deployment

### 7.3.14 Dredging Programmes

Dredging was carried out during both the CCZ13 and CCZ15 campaigns, albeit with different methodologies. The intent was to collect sample for metallurgical test work, including chemical whole rock analysis.

#### 7.3.14.1 CCZ13 Epibenthic sled

An epibenthic sled was designed and built for the CCZ13 dredging (Figure 7.29, Figure 7.30). An epibenthic collector was chosen so as to:

- Be able to be set up to skim the seafloor collecting epibenthic and inbenthic located nodules with minimum mud;
- Be more able to clean itself of mud;
- Consequently, impact the environment less.

Figure 7.29 Epibenthic sled Deployment Schematic

Sample handling procedures essentially comprised weighing on recovery, followed by screening ( $\pm$ and 3/8" or approximately 6 cm) and photography of all, or if an excess of material for the photo sheet, a typical sub-sample. Many of the nodules were broken from their time in the dredge.

After some trial and error, the approach generally taken to dredge was:

- About 1.5 km before the edge of the target zone, steam into the wind at 1.5–2.5 knots paying out line to 6–7 km.
- On reaching the bottom or the target line out slow to slowest effective forward speed (i.e., having available steerage). this was typically 0.3–0.8 kt speed over ground.
- Use line out to regulate load as transmitted to the load cell.
- Run the load between minimum (line slack) and maximum loads (lift off), decreasing the range around what was judged to be the effective towing load (this was typically a range of only about 40–80 kg).

- Once or twice during the deployment (later increased to 3–4 times) lift and lower the sled using the vessel speed to wash out excess mud that might be filling the sled (termed a “tea-bag” manoeuvre). Minimise use of the winch to avoid tipping the nose of the sled and losing sample.
- End the dredge by starting line in and speed up the boat to 2 knots.

Figure 7.30 Photos of epibenthic sled

### 7.3.14.2 CCZ15 Galatea dredge

The dredging approach was changed in CCZ15 for reasons of practicality.

Figure 7.31 Galatea Dredge Deployment Schematic

The sample locations were picked to ensure that between the sampling of this campaign and the CCZ13 campaign, at least one dredge sample was taken in each contract area. Dredges were also the quickest and most effective way to sample Area A, albeit in a non-quantitative manner.

The process of dredging involved:

- Dredge lowered at 0.5 m/s for first 200 m then 1 m/s to the bottom, then slowed to 0.5 m/s till touching the seabed.
- Recovery to surface all the way at 1 m/s (full speed).
- The vessel maintained forward speed into the weather at all times (~0.8–1.3 knot SOG was OK no change in speed needed).
- Winch speed slowed but not stopped and the pinger trace height (~10 m) used to estimate when the dredge touches.
- “Teabag” manoeuvres used to clean the dredge between landings (each landing is about 1 minute and after lifting at about 0.7 m/s to 100 m the cleaning takes about 2–3 minutes before return to the seafloor at 0.5 m/s).
- 3–7 “teabags” were carried out depending on weight of sample required.

Figure 7.32 Operations and details of the YMG Galatea-trawl dredge

### 7.3.15 Marine Survey

During CCZ13 a TOML contract surveyor operated Caris HIPS (Hydrographic Data Processing System) software through the MBES system’s dual head GPS array and maintained a digital survey log. Deployments and co-ordinates were written into a logbook. Communications were verbally to the bridge on the same level and via handheld radio to the back deck.

During CCZ15 RV Yuzhmorgeologiya’s survey department coordinated operations and logged events (TOML personnel also kept a logbook). Various sensors (e.g., GPS, weather station, USBL) all fed to a central computer with most data read into Hydropro software. The main navigation screen from Hydropro was replicated on the bridge so that the officers there received real-time updates on current and planned movements. Communication between Hydrographer, Bridge, Pinger Operator, Winch Operator and Back Deck Supervisor was via a dedicated open intercom system. A USBL antenna was deployed through a small opening in the base of the ship and an IXSEA Posidonia 6000 gen1 system used this and an umbilical to transmit to the MAK deep tow system, and to communicate with a variety of 12 KHz beacons.

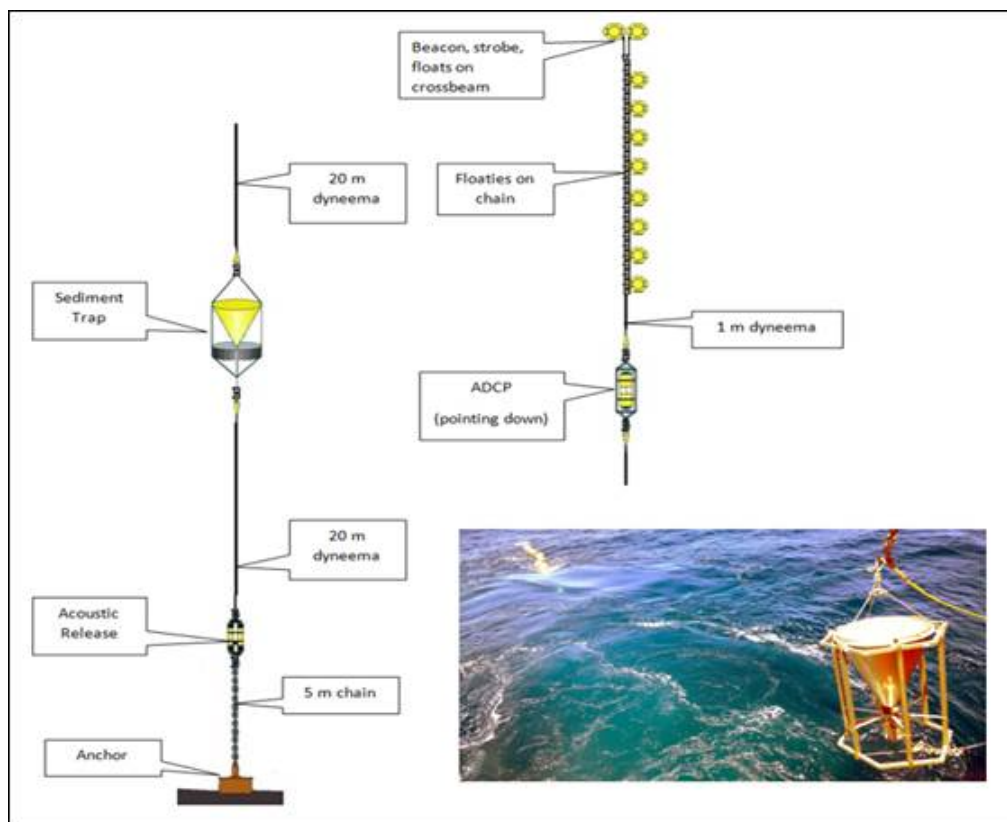

### 7.3.16 Other Programmes

#### 7.3.16.1 Long Term Moorings

During and shortly after CCZ15, two moorings were deployed, one in Area C (S01) and one in Area B (S03).

The moorings were designed to be simple and inexpensive and to have a minimum two-year life (Figure 7.33). Engineering was by Sound Ocean Systems Inc based on environmental parameters provided by the Nautilus environmental team and an Erias Group (Melbourne, Australia) consultant.

Figure 7.33 CCZ15 Mooring Design and deployment of Mooring S01 in Area C

7.3.16.2 Other Environmental Data

A complete summary of environmental data collected during the CCZ15 campaign is presented in Table 7.8 below. Other specific data collected was:

- CSMF, or marine mammal observations, were recorded on a log by the bridge. During CCZ13 marine mammals were only seen outside the CCZ and during CCZ15 two mammal sightings were made with a solitary dolphin to the east of Area A and two whales (likely Sperm Whales) within Area D. Birds were seen on both campaigns but were only logged during CCZ15 (Figure 7.34)
- Weather Information, including logs, weather reports as well as interpretation of these data.

Figure 7.34 CCZ15 CSMF Events

7.4 TOML Exploration Results

The exploration results discussed here include all data relevant to the mineral resource estimate. Much of the supporting data collected during the TOML CCZ13 and CCZ15 campaigns is still being processed. This includes much of the environmental and geotechnical data collected, but also includes mineralogy from samples and detailed geological interpretation from acoustic survey. This information will be reported, as relevant, at a later time.

7.4.1 TOML MBES results

The MBES results are shown at a small scale in Figure 7.35 and Figure 7.36. The bathymetry shows that almost the entire area is composed abyssal hills and the bathymetry and backscatter together show that most of the area is covered by nodule bearing sediment.

Figure 7.35 CCZ13 MBES bathymetry coverage

Relief range blue to yellow is about 400 m scaled by each area. Background is the GEBCO bathymetric product (BODC, 2014)

Figure 7.36 CCZ13 MBES backscatter coverage

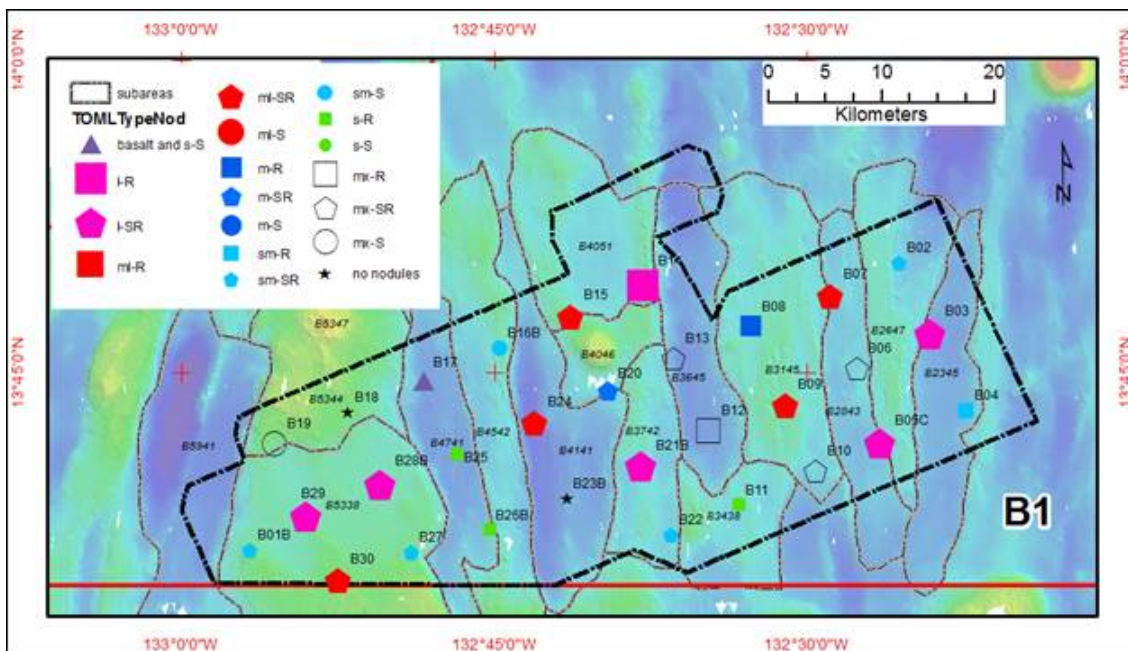

Background is the GEBCO bathymetric product (BODC, 2014)

The MBES bathymetry is used repeatedly in the following figures as the backdrop to the box-core results.

7.4.2 TOML Box-core results

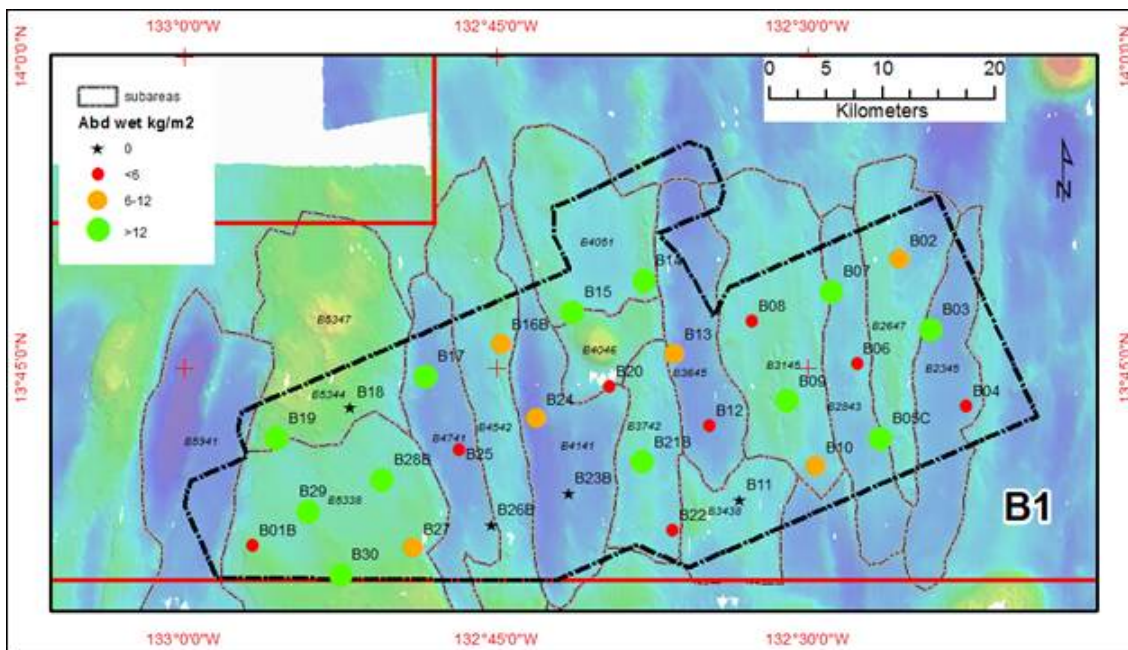

Figure 7.37 to Figure 7.51 summarises nodule and sediment characteristics of the box-core sites. Note that data exists at many of the same sites for water column characteristics and chemistry and fauna numbers and taxonomy data.

Figure 7.37 Nodule Types, Area B1

Nodule abundances are reported in wet kg/m<sup>2</sup>, estimated using the process and principles discussed in section 7.5.6.

Figure 7.38 Nodule Abundance, Area B1

Shear strength is classified per the process and classification detailed in Section 9.3.7.

### 7.4.3 TOML Photo-profile results

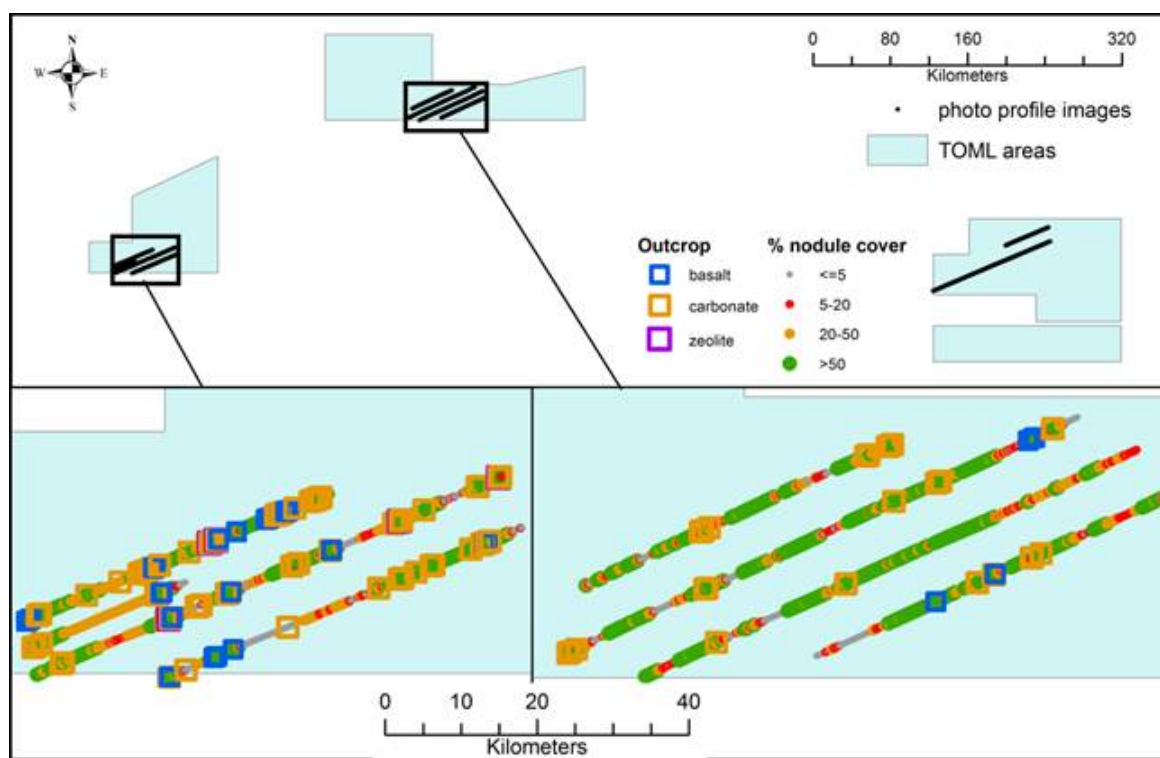

Photo-profiling provided key data on nodule type and abundance as well as for baseline logging of mega-fauna. Ten lines were completed, with one in two parts after equipment repair (Figure 7.52).

Use of photographs in nodule abundance estimations is not new and is discussed by Felix (1980) and by UNOETO (1979). These results are included with the box-core based abundance data used for mineral resource estimation.

An estimation of nodule cover (% visible cover by nodules on the seafloor) was also possible. This is much simpler to measure than nodule long axis as it is a simple colour contrast. Percentage cover does relate to abundance, but the relationship is much weaker than nodule long axis, so nodule cover was not used in the mineral resource estimate except to support interpreted and measured continuity.

When combined with observations of outcrop, the nodule coverage plots in Figure 7.52 give a good indication of the high levels of continuity for the nodules amongst the fault bounded abyssal hills. The process clearly does not work in Area D where sediment cover is high.

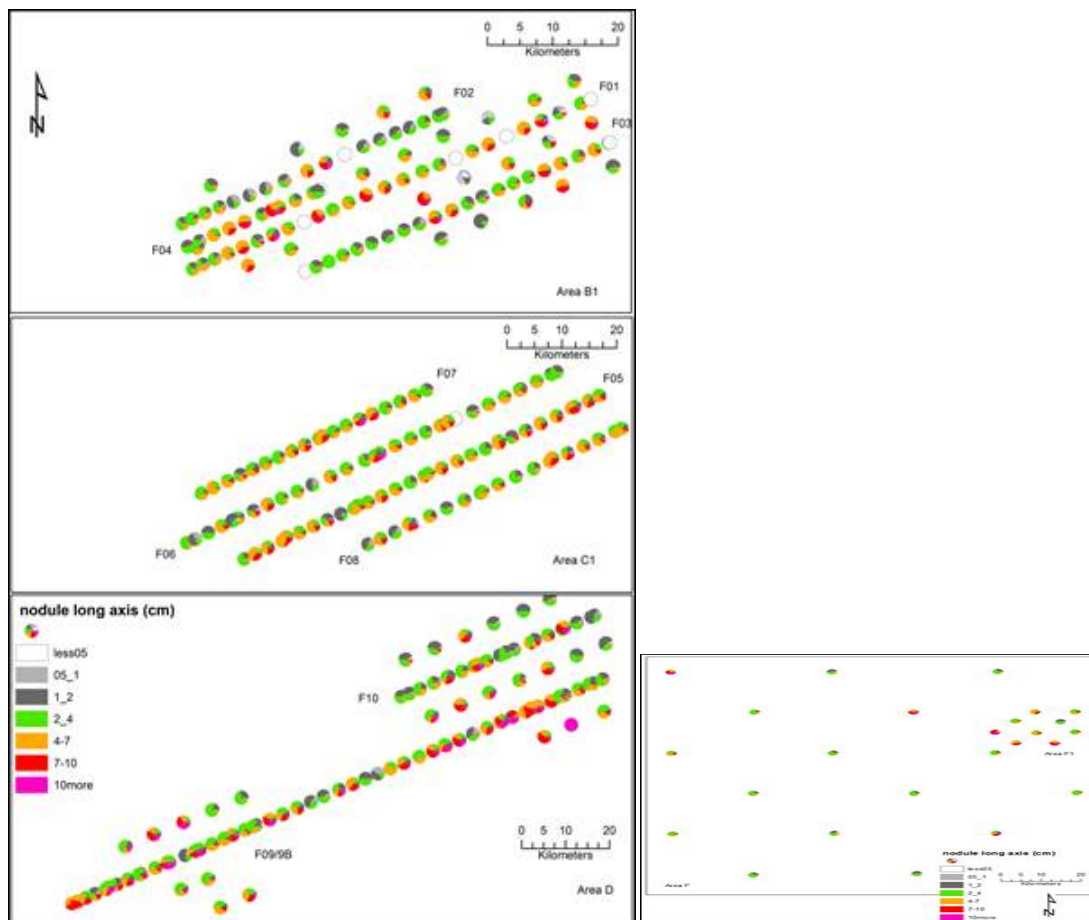

Figure 7.52 Neptune Photo-profile logging of % cover and outcrop types

Insets only shown for Area B (L) and C (R)

Nodule size analysis (combined with box core observations) is shown in Figure 7.53. An understanding of nodule sizes and other characteristics such as rugosity and strength will be useful in designing the mining system. Considerable information was collected in respect of long axis measurements taken from photo-profile images (roughly every 100th image for abundance estimation purposes).

Figure 7.53 Nodule sizes and types from photo-profiles and box-cores

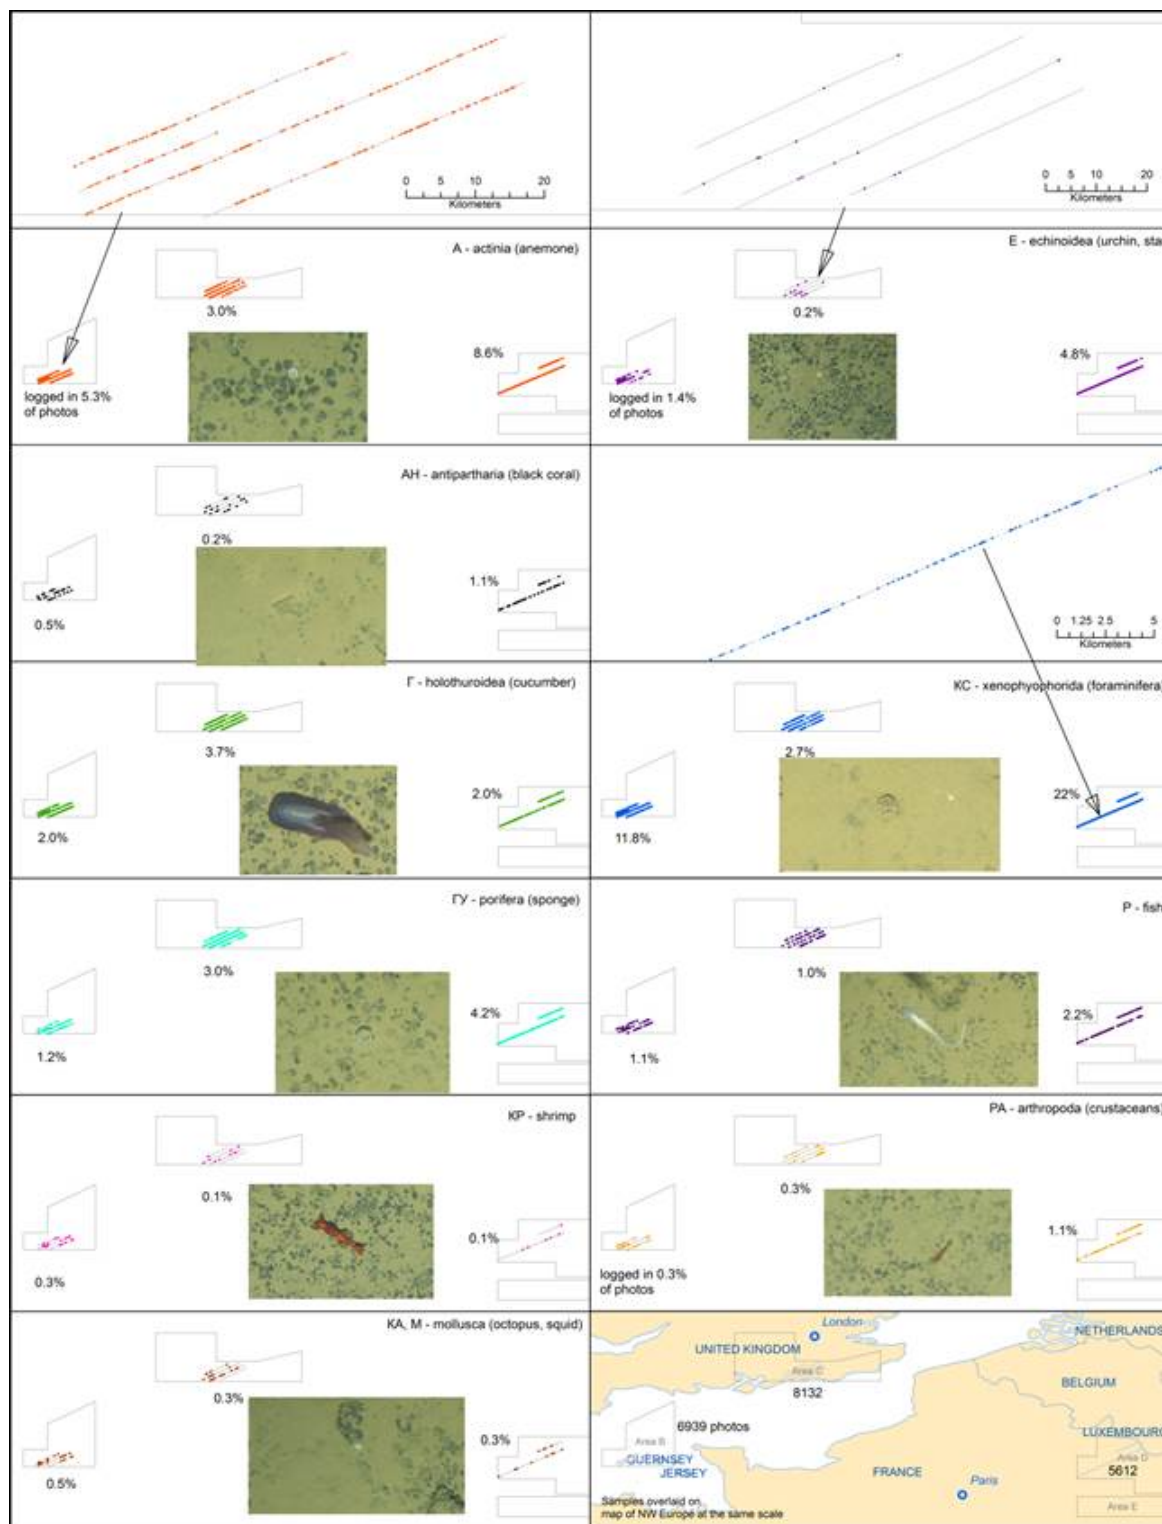

Top: B1, Middle-left: C1, Bottom-left: D1-D2, Bottom right: F and F1

All the surveyed areas host nodules of different sizes but Area B has mixed sized nodules and includes many of the smaller nodules. In Area C, nodule size increases to an average of small to medium and they are well distributed throughout. Within Area D, there is a mixture of sizes with some very large nodules found in the box-core samples. Bigger nodules were recovered from the box-corer than measured on the photo-profiling lines due to a frequent underestimation related to the sediment cover in this area. Area F has typically medium sized nodules but very large size nodules are seen in places.

Photos were also logged as they were collected for visible megafauna with preliminary logging results in Figure 7.54.

Figure 7.54 Neptune Photo-profile preliminary logging summary distribution of megafauna

Some examples of the main types of megafauna seen in the photo-profiling conducted by TOML during the CCZ15 campaign are shown below. The photos were selected effectively at random from logging codes of the ~20,000 photos captured during that campaign.

**7.4.4 TOML Photo-profile based habitat mapping trial**

A habitat classification scheme was developed during the CCZ15 campaign that was based on previous work in the CCZ and that adopted elements of existing classifications schemes, namely the US Coastal and Marine Ecological Classification Standard (CMECS, FGDC, 2012), the European Nature Information System (EUNIS, Davies et al. 2004) and the Collaborative and Automated Tools for Analysis of Marine Imagery (CATAMI, Althaus et al. 2015). The TOML scheme contained three components (Geomorphology, Substrate and Biological). The scheme was trialled on TOML area B1 (Figure 7.66, Figure 7.67) with the intent to apply to other areas after review.

Figure 7.66 Areas where biota was not observed

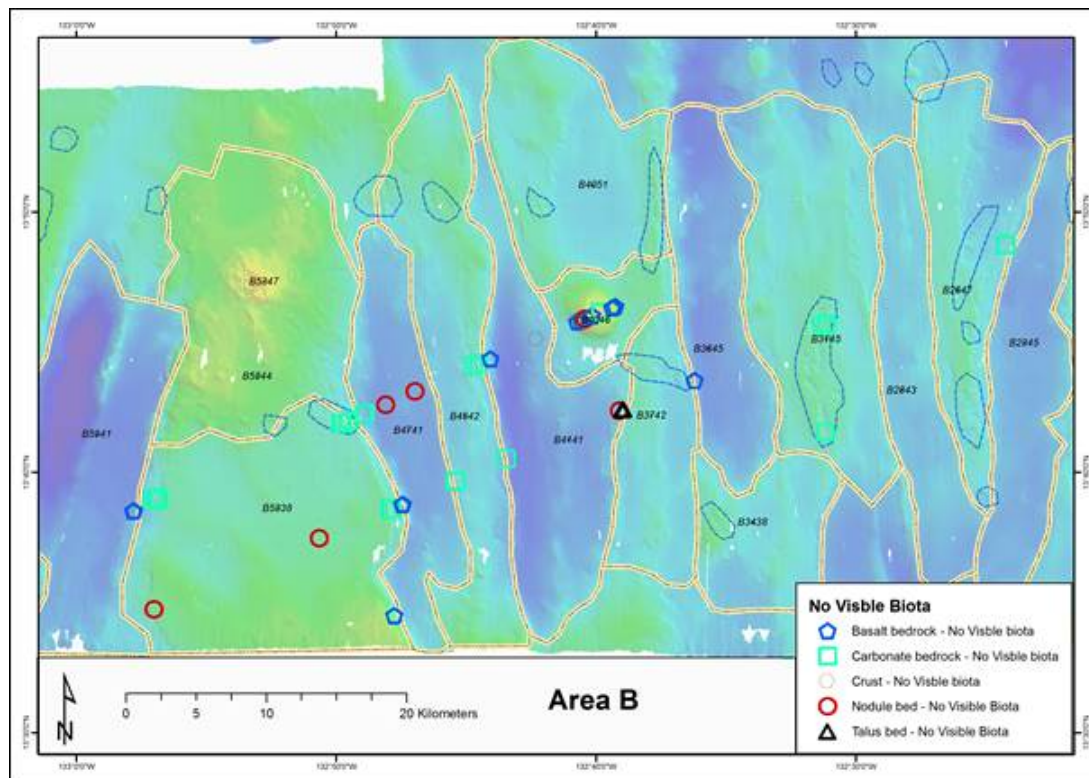

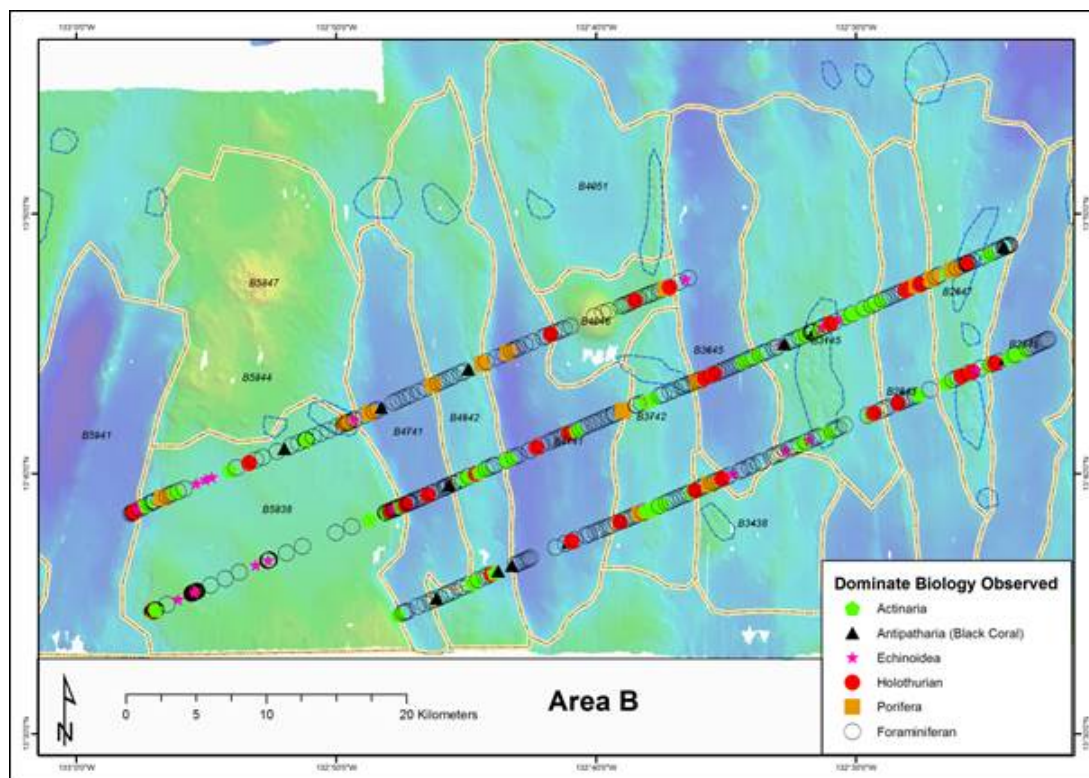

Figure 7.67 Dominant biota observed

The trial involved detailed classification of every tenth photo taken along three Neptune photo sled lines (CCZ15-F01, F02 and F03). In some areas, the number of photos logged was increased to capture seafloor features that were smaller in area.

Data were analysed to determine if there were any significant relationships between the distribution of benthic biota and the geofoms and substrate types on which they occurred. The analysis made use of boosted regression trees (BRT) via the R statistical software package (R Core Team, 2016) and multivariate cluster analysis via Primer-e software (Clarke and Gorley, 2006). The trial dataset used in the analysis was relatively small and analysis was restricted to fauna that were most abundant in photo logging. Therefore, some caution is needed when interpreting the results. BRT analysis was not extended to investigate variable interactions or predictions of habitat suitability.

#### 7.4.4.1 BRT Results

Actinarians (sea anemones) were predominantly observed in nodule bearing sediment. The BRT results indicated that actinarians were most frequently associated with nodule cover class of 21–40%, 41–60% and >60%. They were most commonly associated with large Type C nodules.

Megafauna-sized foraminifera were observed in the majority of photographs logged. Volcanic and carbonate bedrock were the only substrates that did not support foraminifera.

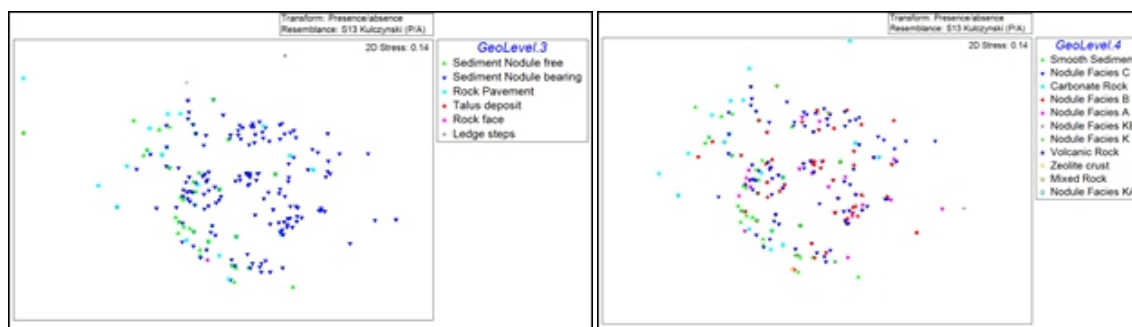

BRT analysis using a logging class “no visible biota” indicated that the seamount in Area B and step/ledge geofoms were devoid of megafauna. The substrate observed in these areas was volcanic and carbonate bedrock and crust.

### 7.4.4.2 Cluster Analysis Results

Morphospecies abundance was compiled for each photo frame, along with the four-level Geomorphology and Substrate components logged from each frame. Data from two photo sled lines in Area B were used in this preliminary analysis. The abundance data were transformed to presence-absence. This is the most aggressive form of transformation and so patterns detected using presence-absence data are considered to represent the strongest ecological patterns of interest to the preliminary analysis.

There was no clustering of samples according to Geoform levels 1 and 2. Samples did cluster according to Geoform Level 3 (Figure 7.68), with nodule-bearing sediment forming a somewhat dispersed cluster that overlaps with, but is distinct from, nodule-free sediments. A stress of 0.14 in the multidimensional scaling plot indicates that patterns are fairly well represented in two dimensions. A 3D plot of the same data decreased the stress to 0.1, indicating that there is an important third dimension to the data. Analysis of Similarity (ANOSIM routine) indicated that the difference between nodule-free and nodule-bearing sediments was statistically significant (Global R = 0.326, R significance < 0.05 for pairwise comparison). Rock pavement appeared to form a third intermediate and dispersed group and ANOSIM indicated that the rock pavement samples were significantly distinct from nodule-free sediments and nodule-bearing sediments.

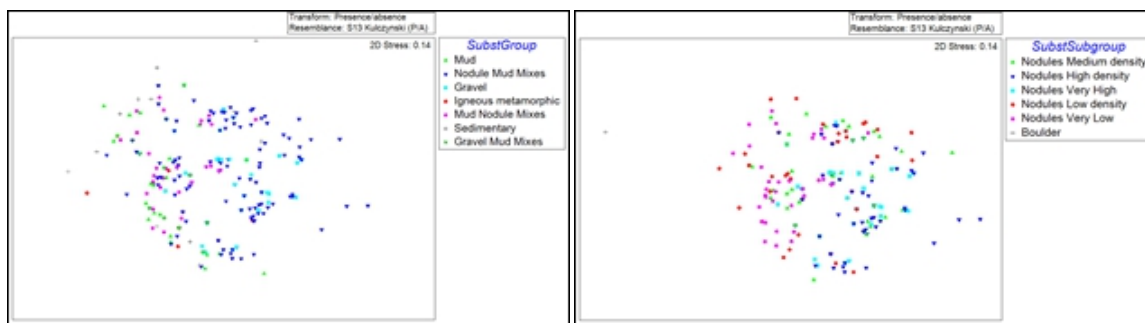

Figure 7.68 Samples (image frames) coded by Geoform Level 3 (L) and 4 (R)

At Geoform Level 4, samples from smooth sediment formed a dispersed but separate cluster from those on nodule-associated geoforms (Figure 7.68) but there was no significant clustering according to nodule facies type, a result confirmed by ANOSIM.

At the Substrate Group level (level 3 of the substrate classification hierarchy) there was dispersion among samples, but samples from nodule-mud mixes and gravels formed a group that was differentiated from mud and mud-nodule mixes (Figure 7.69). These groups represented varying dominance of nodules and ANOSIM indicated that the pairwise difference between nodule-mud mixes and mud-nodule mixes was significant. At level 4 of the substrate classification, nodule density was estimated. Again there was dispersion among samples, but those from high density (41–60%) and very high density (60+%) nodule density substrates clustered separately from the low (6-20%) and very low (1–5%) nodule density substrates (Figure 7.69). ANOSIM indicated that these groups were significantly different. Differences in community composition among substrate types may be expected because nodules represent attachment surfaces for sessile invertebrates that favour hard substrates.

Figure 7.69 Samples (image frames) coded by Substrate Group

Samples (image frames) coded by Substrate Group (level 3 of the substrate classification at L and level 4 at R)

#### 7.4.4.3 Conclusions of Preliminary Habitat Mapping

The hierarchical physical and biological classification scheme used to log images appears to be suitably sensitive to detect gradients in megafauna community composition and relate these to physical habitat structure. Importantly, preliminary analysis indicated that high-level taxonomic identifications made using the formal scientific classification (e.g., phylum-level, which are often the only identifications possible from imagery) did not provide suitable resolution to detect differences. The concept of morphospecies identification has been adopted for megafauna in several contemporary marine studies and has been used in the CCZ for nodule-attached foraminifera, where formal taxonomic descriptions are not available (Kamenskaya et al, 2012; Veillette et al, 2007; Gooday et al, 2015).

Specific conclusions of the preliminary analysis are:

- Megafauna communities associated with nodule-free sediments differ from those associated with nodule-bearing sediments.
- Among the nodule-associated group, nodule facies (level 3 Geoform) as they were logged, was not a significant factor in structuring community composition. However, nodule density was significant.
- Based on the preliminary cluster analysis of Area B, a working hypothesis is supported for the existence of four benthic habitat types with respect to megafauna:
  - Sediment: nodule-free: smooth mud.
  - Sediment: nodule-bearing: high to very high density nodule-mud mixes.
  - Sediment: nodule-bearing: low to very low density nodule-mud mixes.
  - Rock pavement: sedimentary carbonate.

Populating Boosted Regression Tree models with additional data is expected to provide additional resolution on fauna distributions and provide a method for predictive habitat suitability modelling and thus support future impact assessment and spatial management of mining.

It is noted that the habitat mapping trial was done across a fairly restricted range of abyssal hill types (Physiographic Setting Subcomponent to Geoform Level 1 in Table 7-3) without any clear discrimination in biology between these types. This needs still to be reconciled with biological differences noted by Melnik and Lygina (2010) at Geoform Level 1 (their Striped, Undulated and Cloak type abyssal hills).

#### 7.4.5 Other results

##### 7.4.5.1 Dredging

Seventeen sites have been sampled either by epibenthic sled (CCZ13 campaign; Figure 7.30) or Galatea dredge (CCZ15 campaign; Figure 7.31).

Figure 7.70 Dredge sample locations CCZ13 and CCZ15

The samples were logged and:

- Sub-sampled extensively (up to 30 fragments per dredge sample) to confirm historical grades and to study variability in grade;
- Used in drying testwork;
- Used for metallurgical test work.

#### 7.4.5.2 Towed Sonar - Side Scan

Sidescan sonar was used to map/characterise parts of several of the sub-areas for which an Indicated Mineral Resource is estimated. In effect these sub-areas are future options for TOML to conduct pilot, trial, and early commercial mining operations and are called Priority Mining Areas (PMA) in ISA terminology. An example of survey over the B5338 field within the B1 sub-area, is presented here.

In B5338 and the other areas, features of note on the side-scan and sub-bottom profiler can be classified into five categories:

- Texture relating to nodule coverage/size (and thus nodule abundance)
- Mapping of obstacles of concern in any future mining operation
- Detailed bathymetry (slopes and orientations of slopes)
- Textures and profiles relating to sediment types
- Features that imply a particular geological history.

Nodule coverage in B5338 is consistent on the top of the ridge with a clear correlation with photo-profile coverage (Figure 7.52).

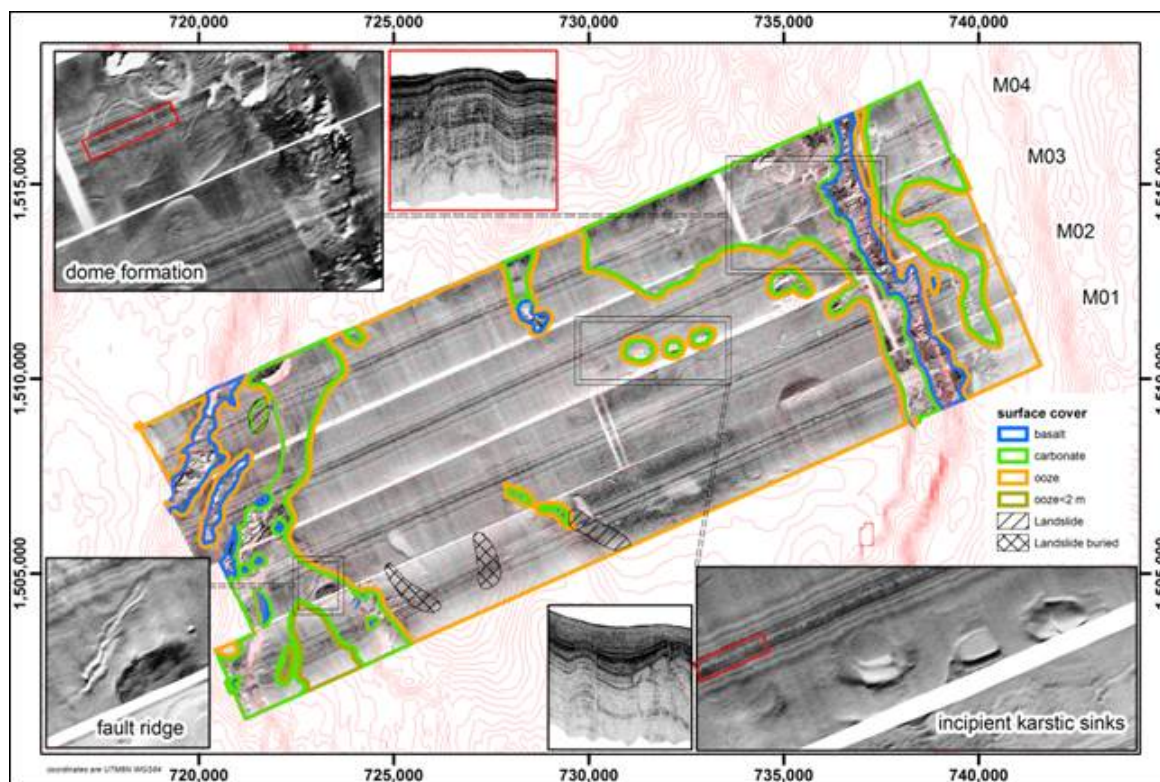

The most significant obstacles are the slopes defining the eastern and western boundaries of B5338, but there are also areas within the sub-area that could likely hinder a mining system. These include incipient karstic features and a basalt outcrop. There is also one steep small ridge as well as a small basalt floored karstic feature in the SW. Apart from these, however, the surface looks very smooth even with local ridge systems of several tens of metres altitude.

The sub-bottom profile data (not shown) show good development of a typical CCZ stratigraphy with thinning of siliceous ooze to the north.

In the northern area peculiar dome-shaped features (~1 km diameter) are visible on the side-scan (Figure 7.71). These appear to be the result of block faulting. Sub-surface carbonate dissolution is indicated in the sub-bottom profiler at depth both in B5338 and in adjacent valley B4741 but these do not express at surface.

Figure 7.71 Side scan coverage and geological interpretation of the B5338 field, Area B1

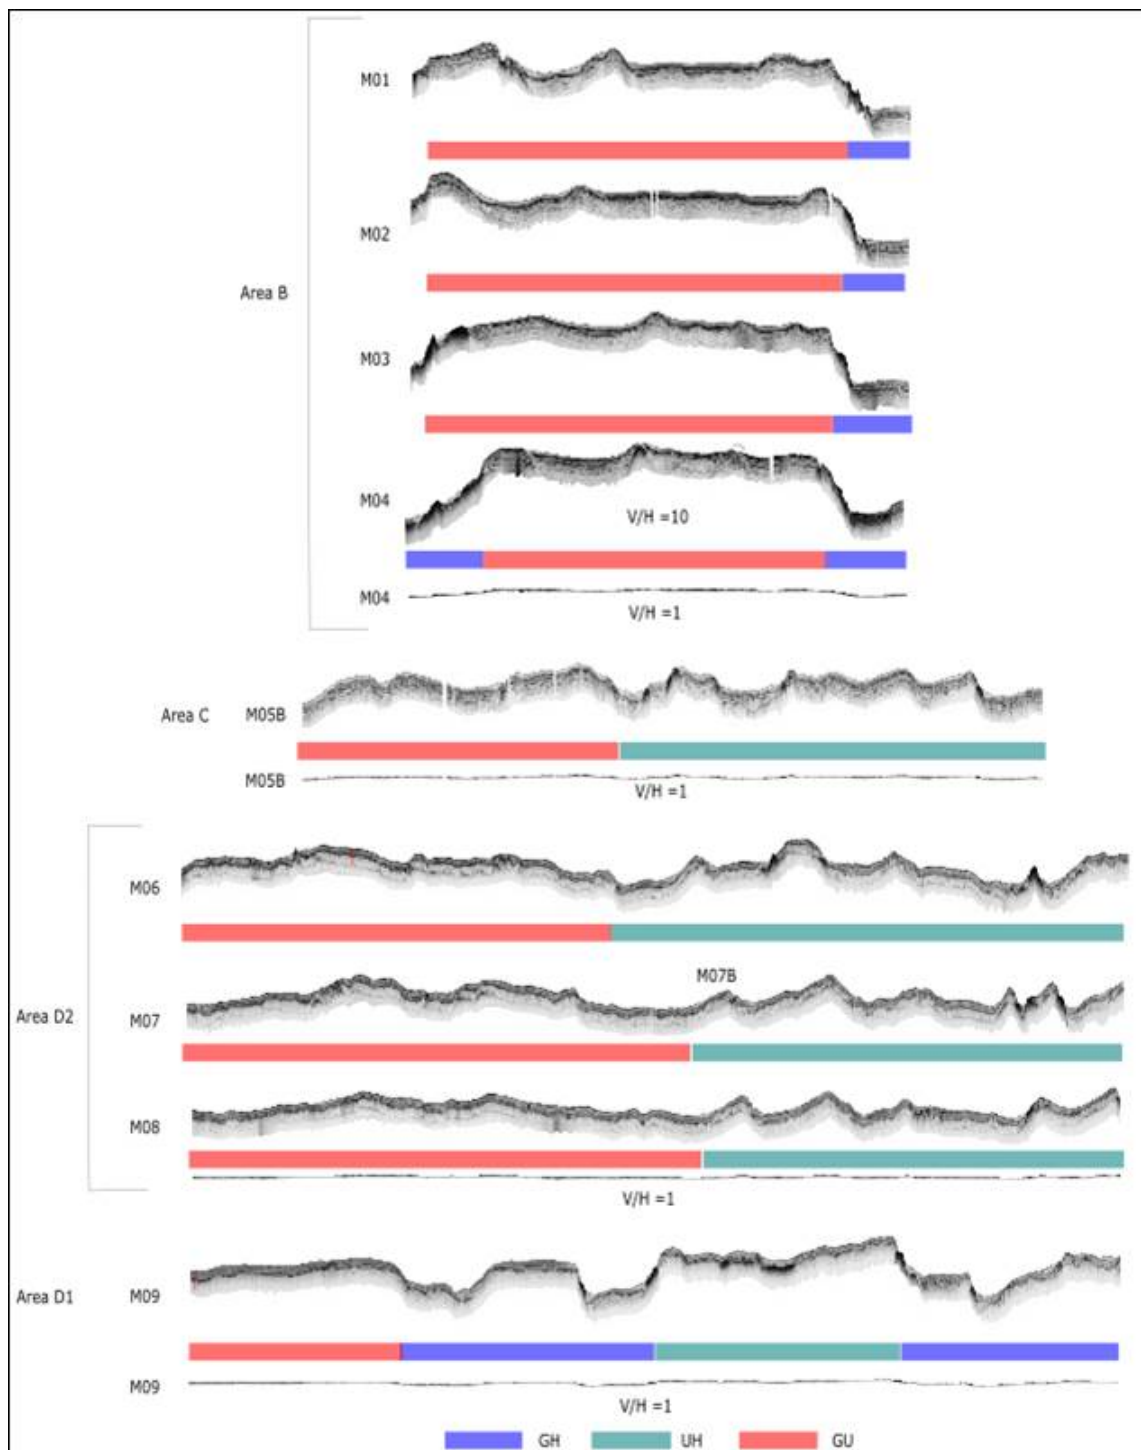

Swath is ~2km wide and sub-bottom profile thickness is ~ 100 m at V/H=10:1

### 7.4.5.3 Towed Sonar – Sub-bottom Profiler

The sub-bottom profiler was used to classify types of abyssal hills. Figure 7.72 shows profiles with three types of abyssal hill:

- GH stands for graben-horst and is the most rugged topography with fully developed grabens (valleys) and intermediate horsts (hills)
- UH stands for undulating hills and is less rugged than GH and typically includes half-grabens and warped rather than fault-blocked topography
- GU stands for gently undulating and is the most, gentle land form with warped gently undulating topography.

Figure 7.72 Abyssal hill classification from sub-bottom profiles

A range of other geological features can be seen on the sub-bottom profile sections, including faults, collapse features (probably related to a combination of faulting and carbonate dissolution; (Figure 7.73) and recent igneous activity including dykes (Figure 7.74) and sills (Figure 7.75). Of note are the “basin type” dissolution horizons that are found almost exclusively in grabens or down-warped areas. They have distinctly different sonar signature to the karstic features that typically form on hill crests.

Figure 7.73 Fault bound collapse-dissolution in carbonate

Profile is about 100 m thick: CCZ15-M04\_(T), CCZ15-M03\_(B) each section pair is V/H=10, and V/H=1

Figure 7.74 Possible dyke swarm in western subarea D 3454

Profile is about 100 m thick: (CCZ15-M06) section pair is V/H=10, and V/H=1

Figure 7.75 Possible late stage sill or peperite layer and feeders in DW0332, Area D1

Profile is about 100 m thick: section pair is V/H=10, and V/H=1

7.4.5.4 Relationship with backscatter

An indirect relationship between nodule abundance and acoustic response has been known for many years (e.g., ISA, 2010; Ruhlemann et al, 2011), and this was confirmed by the results of the two TOML campaigns. Essentially the backscatter response (or reflection) can be used in many cases to discriminate:

- Rock from sediment
- Sediment types (e.g., Calcareous versus siliceous)
- Sediment with or without nodules
- Sediment with larger or smaller nodules (and larger nodules often result in higher abundance).

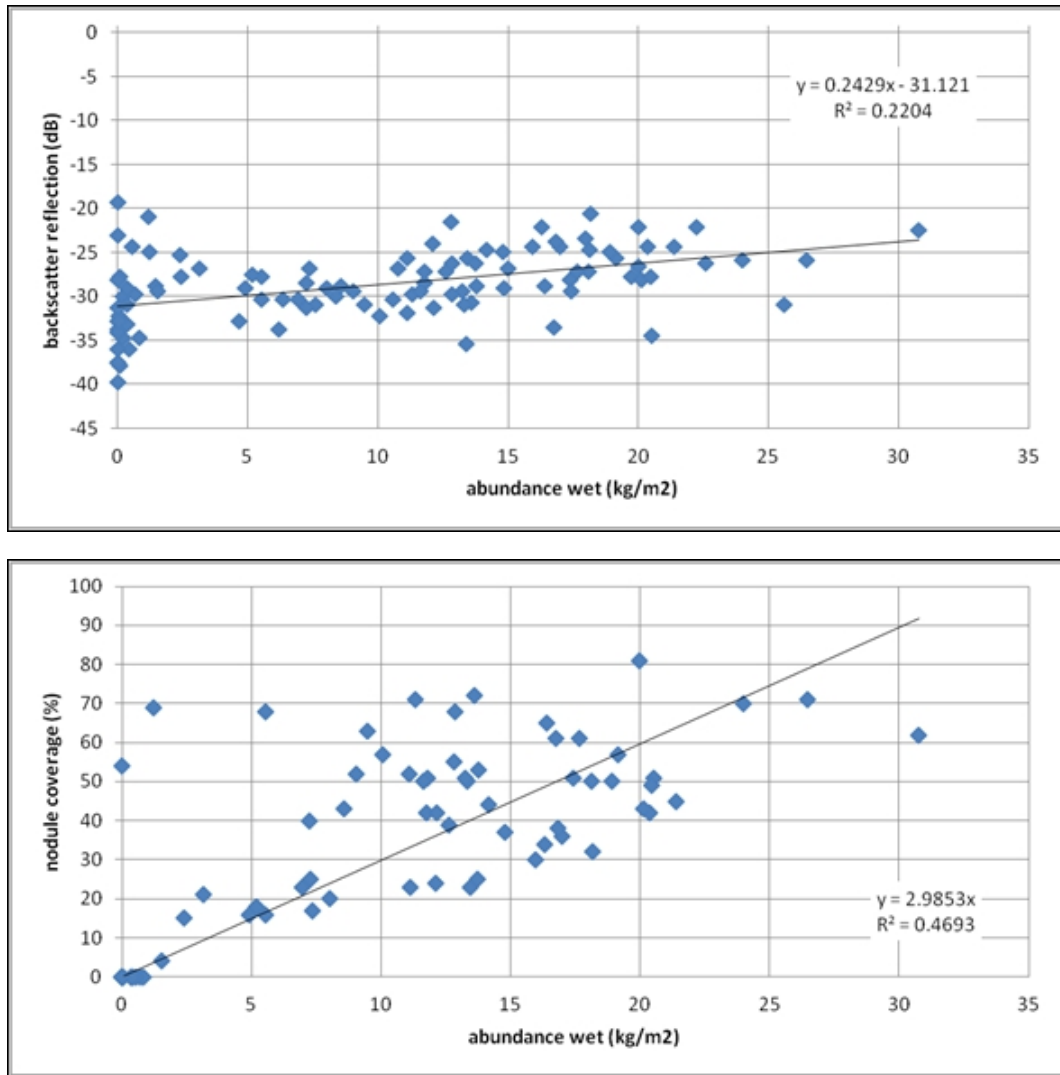

An example of characterisation is illustrated in Figure 7.76 and this response played a role in the map shown in Figure 7.71. The continuous nature of the nodules is evident from both acoustics and photo logging. Figure 7.77 quantifies the fair correspondence between abundance and acoustic reflectance and abundance and nodule coverage for TOML area B1.

Figure 7.76 Characterised MBES backscatter response in B5338

Nodule cover from photo-profile lines ~3.5 km apart.

Area B1, include long-axis based estimates of nodule abundance

8 Sample preparation, analyses and security

### 8.1 Historical preparation, analysis and security

#### 8.1.1 Historical sample preparation

The sampling programmes undertaken by previous explorers in the TOML tenement area, which comprise an important data set used here for resource estimation, include Japanese, French, and Russian data sets. In 2012, independent consultants Golder Associates (Golder, 2013) sent requests to the agencies responsible for each of these data sets but only received partial responses from Yuzhmorgeologiya (Russia; TOML Exploration Area B) and DORD (Japan; TOML Exploration Areas A and D) which are included below.

A Golder Associates subcontractor, (Dr Charles Morgan) had been previously directly involved with one of the US exploration programmes (OMCO) that was carried out during the same period as these other programmes, working as a Senior Scientist for Lockheed. This work included direct participation in resource assessment survey expeditions to the CCZ and development and implementation of sample preparation and analysis procedures. The description of sample preparation and analysis methods provided below is based on this experience.

Prior to establishment of the ISA, explorers working under different jurisdictions settled claim boundary overlaps through a process of negotiation and data exchange (e.g., NOAA, 1987). Though data were generally not exchanged until after negotiations related to exploration claim boundaries were completed, Morgan conferred with representatives of these consortia at several formal professional meetings and informal settings, comparing methods and procedures used for sample collection, analysis, and quality control. Many aspects of the OMCO procedures were used by the other explorers.

As described below, documentation of sample treatment methods has been provided by Professor Valeriy Yubko, Deputy Director of the Russian oceanographic institution Yuzhmorgeologiya, based in Gelendzhik, Russia and operating under the jurisdiction of the Russian Federal Agency of Natural Resources. Professor Yubko was a senior member of the Russian team that explored for polymetallic nodule deposits in the CCZ and delineated the Yuzhmorgeologiya exploration claim under the ISA. As shown in the following sections, the Russian methodology was very similar to the methodology practiced by the Lockheed group. Some details have also been provided by Dr Okazaki on the DORD sampling and analytical procedures. Dr Okazaki is current exploration manager for the CCZ nodule field for DORD. Ongoing use of wet weights for abundance by the BGR is also explained below.

##### 8.1.1.1 OMCO procedures

Polymetallic nodule samples collected with FFG samplers were transferred directly from the sampler into individual plastic bins and carried below deck to the geochemical laboratory. In the laboratory they were laid out separately on a white surface marked with a scaled grid and photographed to permit determination of nodule size distribution. They were then sealed in labelled fibreglass-reinforced collection bags and stored in the ship's hold for the balance of the exploration campaign.

The bins and lay-out surface were cleaned between samples using filtered seawater and dry paper towels. No cleaning of the nodules was usually necessary, since any mud adhering to them would be swept off the nodule surface through the open mesh of the sampler collection net during the ~4,500 m ascent from the seafloor. Samples collected with box corers were processed in a similar manner, except that the adhering mud had to be rinsed off each nodule as it was removed from the box corer.

The collected sample bags were transported from the ship that almost always docked at a pier in San Diego Bay, to the Lockheed Ocean Laboratory, which was also located on the Bay at Harbor Island. Transfer of the samples from the ship to the secured laboratory storage facility

---

was the first priority when the ship came to port and was always handled personally by the expedition crew and other Lockheed employees.

Prior to weighing, the samples were removed from the sample bags and placed in a single layer in labelled, open trays on tables in the air-conditioned laboratory for at least 12 hours to ensure a uniform degree of air drying. The samples were then weighed using a high-capacity laboratory scale and divided into two subsamples of approximately equal weight. As a portion of the nodules was to be kept uncrushed, the technicians were instructed to ensure as much as possible that both subsamples contained similar nodule size distributions to the original samples. One subsample was placed in a labelled jar and kept as a permanent archive. The second subsample was prepared for Atomic Absorption Spectrographic (AAS) analysis, as described below. This is a potential source of sample bias but OMCO minimised this risk by randomly selecting which sample was used for archive.

The second subsample was crushed using a jaw crusher (similar to the Retsch™ BB51 currently available; see Retsch, 2012) to produce a product with a maximum size of less than about 1 mm. The crushed sample was then mixed using a 3-axis shaker to achieve uniform mixing and to preclude any separation of the less dense detrital (siliceous) component from the more dense metal oxide component of the sample. The mixed sample was passed through a laboratory sample splitter as required to produce a 5 to 10 g subsample for AAS analysis. The remainder of the sample was then stored as a second, crushed archive sample. The subsample was further ground to a fine powder using a laboratory ball mill prior to assaying.

The powdered subsample was placed in a 110 °C drying oven for at least 6 hours to remove adsorbed water. It was then immediately transferred to a sealed desiccator to cool to ambient temperature. Cooled samples were weighed using a Mettler™ analytical balance and then transferred to Parr™ Teflon-lined high pressure digestion vessel. Reagent grade hydrofluoric, boric, and hydrochloric acids were introduced to the vessel, which was then sealed and heated for several hours to complete the digestion. The digested samples were then diluted as necessary with filtered, distilled water for AAS analysis using a Hewlett-Packard instrument. Standard analysis included determination of Mn, Fe, Co, Ni, Cu, Zn, Si, Ca and Mg.

Analytical accuracy was confirmed by periodic introduction of standards made from crushed, mixed, and powdered bulk nodule samples that had also been sent to three independent commercial laboratories for determination of these metal contents. Additional confirmation was achieved using standards formulated by the U.S. Geological Survey (A-1 and P-1; see Flanagan and Gottfried, 1980). These standards were subjected to the entire preparation procedure to ensure that no significant contamination was occurring and that no systematic analytical errors were being included in the process.

#### **8.1.1.2 Yuzhmorgeologiya procedures**

The measurement of abundance of nodules at the sample site was carried out using an 'enclosed' Ocean-0.25 grab sampler (Figure 8.1) with a 0.25 m<sup>2</sup> gripped surface and a depth of sampling of approximately 30 cm. The grab sampler was combined with GFU-6-8 photography unit. This device takes ocean bottom photos at the sampling point.

Figure 8.1 Ocean-0.25 Grab Sampler (Yubko, 2012)

The procedure for sub-sampling was:

1. Extraction of all nodules from the grab sampler (Figure 8.2).
2. Crushing of all nodules to a maximum particle size of up to 10 mm.
3. Drying (approximately 24 hours) of all samples at 105 °C until constant weight was achieved.
4. Crushing of all samples to 1 to 2 mm particle size and splitting of 400 to 500 g using a splitting device.
5. Pulverizing of the split sample (not less than 400 g) was carried out in the vibrating grinder up 100 mesh particle size (0.074 mm).
6. Formation of analytical sample (200 g) and its duplicate (200 g).

Chemical analyses were carried out on sub-samples with an approximate weight of 0.5 g, selected from the analytical sample. Determination of Ni, Cu, Co and Fe content was carried out by AAS and the content of Mn by a method of photometric (electrometric) titration.

Figure 8.2 Mn-nodules Inside Grab Sampler (left) and Outside Grab Sample (right) (Yubko, 2012)

### 8.1.1.3 DORD procedures

DORD's procedure for sampling (Okazaki, 2012) is understood to include:

- Each sample station is a combination of three sub-sampling points which effectively form an isosceles triangle with lengths of sides 1.4 nm, 1.4 nm and 2.0 nm.
- Collection was mostly by free fall grab, but at occasional stations a box corer was used at one of the three sub-sample points.
- In later campaigns at least (which may not include the TOML Exploration Area) a ship-borne X-ray fluorescence analyzer was used for the chemical analysis with some representative samples being assayed at an on-land laboratory to assess precision and accuracy.

### 8.1.1.4 BGR procedures

Ruhlemann et al. (2011) describe the sediment and nodule sampling process used by the BGR in recent times (2006) which is largely not relevant to the Pioneer Contractor data from the TOML Exploration Area. One exception however is their citing the ongoing use of a BGR procedure in the 1980s of washing sediment from collected nodules with specially cleaned seawater before determining their wet weight and converting this to a dry weight by means of a simple 30% reduction factor.

### 8.1.2 Historical Quality Assurance and Quality Control procedures

No systematic QAQC information is available as this information was not provided to the ISA. QAQC was known to be undertaken at the time of sampling as part of the scientific process used by each consortia (country). Data quality was assured using comparative measures between the different datasets (section 7.1.1) to prove that the samples within the TOML Exploration Area were not statistical outliers. This level of quality assurance was deemed suitable for a Mineral Resource at an Inferred level of confidence.

As part of the requirements by ISA, the Pioneer Contractors were required to relinquish half of their claim to the ISA as reserved blocks. During this process the ISA reviewed the sampling data to ensure that the splitting of the claim was even with equal abundance and grade occurring

in the retained portion of the claim and the parts being relinquished. As such, the ISA has accepted the data (and quality) supplied by the Pioneer Contractors.

### **8.1.3 Historical adequacy of sample preparation, security and analytical procedures**

Free fall grab samplers consistently underestimate the actual abundance but provide samples that can be used to determine adequate estimates of the grade of the surface nodules (Hennigar, Dick and Foell, 1986). Even today they are the most efficient tool available for sampling the nodules at the seafloor. This is because a number of them can be deployed at any one time from the survey vessel allowing an order of magnitude greater speed in collection i.e. approximately 10 to 20 samples per day for a FFG versus 2 to 3 samples per day for a BC that is winched to and from the seafloor.

In many cases, it is unknown exactly when the nodule weights have been taken by the Pioneer Contractors. Thus it has been assumed that the samples were weighed shortly after recovery on board the exploration vessels (or back at base) and usually before any splitting or crushing. This partial assumption is more conservative in any tonnage estimate than the alternative that the abundance weights are for dried nodules. It also fits well with Dr Charles Morgan's experience with sampling in the CCZ and the process description provided by Yuzhmorgeologiya.

Overall, the comparison of the sampling and assaying between the Pioneer Contractors show that the data are adequate for geological modelling and are reliable for Mineral Resource estimation at an Inferred level of confidence. This is supported by the very similar grades obtained in the TOML sampling.

## **8.2 TOML preparation, analysis and security**

### **8.2.1 Sample Chain of Custody**

Refer also to Section 7 regarding TOML's exploration programme, including sampling methodology.

For box-core samples the Primary Sample handling from sample tube handover to lab was managed only by the TOML ship-based science team under the supervision of one Chief Scientist and two Lead Scientists.

Primary Samples were weighed on deck or in the lab (preliminary weight), washed, weighed again (washed weight) and then moved to the main lab and stored in an exclusive designated area.

At periodic intervals Primary Samples were laid out by Chief Scientist and the Lead Scientist Responsible in the main lab (which was closed to all other people during the process). After air-drying to remove surface water, the Primary Samples were weighed again (air-dried weight; used for abundance estimation for the Mineral Resource estimate) and then some samples were split for Field Duplicates by cone and quarter and for all samples by picking for Reference Samples (~1–6 nodules proportional to the sample size). The sample remaining after these splits were removed is the Main Sample, and the chemical analysis of this was used to support the grade estimation for the Mineral Resource estimate. Weight estimates were recorded on a dedicated written log by the Lead Scientists and Chief Scientist, with scanned backups, and then typed into a master Excel spreadsheet by the Chief Scientist. Recorded washed weights were included in the Daily Progress Reports sent to the head office.

Main samples were then sealed using tamperproof tape or tags into specially marked drums that were sealed with tamperproof tape. The drums were escorted by the Chief Scientist or Lead Scientist Responsible to a storage reefer on the deck of the vessel. The reefer was repacked twice during the voyage due to processing of biological samples and to aid quarantine clearance, with only partial supervision at this stage by the Chief Scientist or Lead Scientist Responsible.

---

On arrival into port (Panama), the container was sealed by the Chief Scientist using a padlock. Spare keys were held by the agent in case inspection was needed, but in the end, this was not required. The Field Duplicates were couriered to the specialist laboratory at Jacobs University Bremen and the Reference Samples were couriered to the Brisbane office of TOML parent company Nautilus Minerals.

The Field Duplicates were received by Laboratory Staff at Jacobs University, prepared at the BGR laboratory in Hannover and analysed using ICP at Jacobs. Results were emailed in an excel spreadsheet to the Chief Scientist.

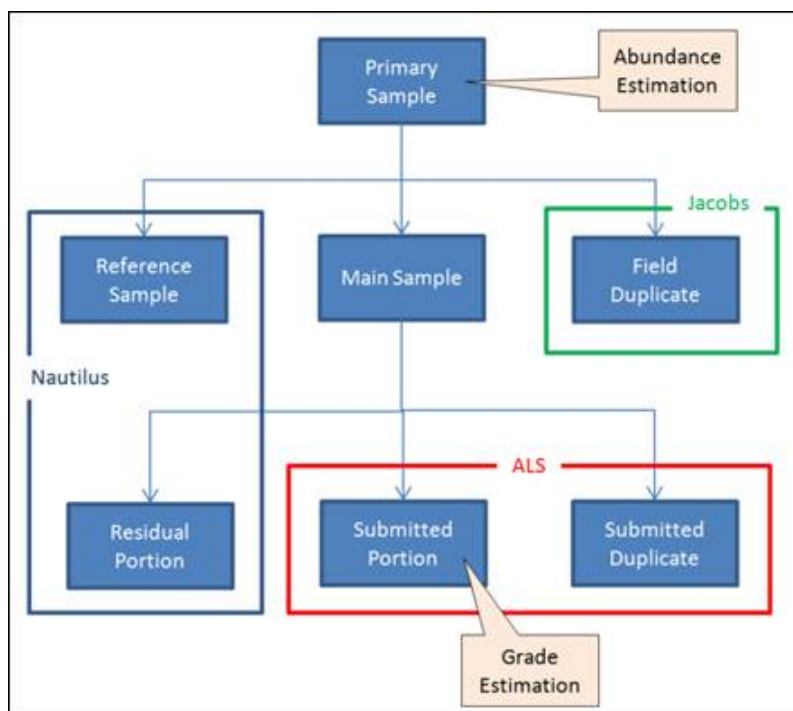

On arrival of the container into Brisbane (where the analytical laboratory is located), the opening of the container was supervised by the Mineral Resource Qualified Person. The drums were inspected and all tamperproof tape was intact. The drums were collected by an employee of Australian Laboratory Services and transported to their lab in Brisbane.

At the laboratory, the Mineral Resource Qualified Person and an assistant cone and quarter split the Main Sample again; for all samples a Submitted Portion was taken for crushing, grinding and chemical analysis, and for samples of sufficient size a Residual Portion was retained for storage. For some samples a Submitted Duplicate was also collected. The Submitted Portion and Submitted Duplicate were prepared then analysed by ALS in Brisbane using XRF (details below) and the results emailed as datasheets in excel format and by certificate in pdf format to the Chief Scientist. ALS maintain certified sample handling systems (see below) with step by step monitoring, which can be produced/interrogated on request. This includes the use of Blanks, Laboratory Duplicates and Certified Standards. Processed pulps of the submitted portion and submitted duplicate are stored at ALS for the moment. The Residual Portion was collected from ALS by TOML staff and stored in Nautilus Sample Repository in Virginia, Queensland, where it has been used for characterisation test work.

Chemical data received by the Chief Scientist is stored in raw format on a server and captured with relevant sample information within a Nautilus Acquire database system.

Sample COC is summarised in Figure 8.3. Chain of Custody for the abundance estimation has been overseen by Chief Scientist and the two Lead Scientists. Chain of Custody for the grade estimation extends from them to the Mineral Resource Qualified Person and ALS Staff. The Chief Scientist is also serving as Qualified Person for Geology and Mineralisation and for Deposit Types.

Figure 8.3 COC sample flow (box-core samples)

Process for the dredge samples was simpler as their results do not inform the Mineral Resource estimate. In both the CCZ13 and CCZ15 campaign dredge-variance sub-samples Submitted Portions were sent to ALS and Field Duplicates were sent to Jacobs. The dredge samples are bulk samples (between 40 and 800 kg) so the Reference Sample is the bulk of the material. There is no Residual Portion or Submitted Duplicate involved in the dredge samples.

Jacobs was selected as the check laboratory as it has a long history of working with nodules, including considerable work on REE. Jacobs does the analyses for the German Contractor (BGR). Samples were analysed by a combination of ICP-MS and ICP-OES.

ALS was selected as the main laboratory as it has full commercial QAQC procedures in place and is expert in analysing manganese ores. Samples were analysed by both fused disk XRF (for reported Ni, Cu, Co, Mn) and ICP-AES for trace and minor elements.

## 8.2.2 Laboratory analysis methods

### 8.2.2.1 ALS

ALS Laboratory Group in Brisbane, Australia has extensive experience in the analysis of high manganese materials by the XRF method. ALS operates quality systems based on international standards ISO/IEC17025:1999 “General requirements for competence of calibration and testing laboratories” and ISO9001:2000 “Quality Management Systems - Requirements”.

ALS-Brisbane described their preparation processes as:

Samples are sorted into sequential order. Samples are then transferred to barcode labelled aluminium trays and loaded onto trolleys which are placed in a large natural gas fired oven for drying. Oven temperature is a maximum of 105 degrees but more typically, temperature is ~90 degrees. After drying, samples are jaw crushed in a Jacques jaw crusher to bring particle size to less than 10mm. Assuming samples weigh less than 3 kg, the crushed samples is then pulverised in an LM5 mill to a powder with typical particle size >85% passing 75µm. Very small samples are pulverised in a smaller bowl using an LM2 mill.

Firstly for our fusion / XRF method, it is standard practice for us to:

- Place an approximate 0.33 g aliquot into a glass vial, which is then placed in an oven at 105 degrees for a minimum of 1 hour (usually more);
- The sample is then removed from the oven and immediately weighed in the vial (still warm);
- The dried sample is then transferred to the tared platinum crucible for fusion.

Note that our XRF26s procedure is specifically designed for difficult to fuse chromite and manganese ores, hence the small aliquot.

Our normal procedure for our ICP method is not to re-dry samples after the initial drying prior to crushing and pulverising. Nautilus originally specified a drying temperature of only 90 degree Celsius. However when we initially compared the nodule elements that had been reported both by XRF and ICPAES, in general, the XRF results were higher. We realised from some drying testwork we were doing and our experience with bauxites and nickel laterites that was likely due to reabsorption of moisture. We then went back and:

- Placed the boxes of pulverised samples in paper bags in an oven for 6 hours at 105 degrees;
- The box was removed from the oven prior to weighing the sample aliquots and one by one each sample was weighed.
- There was no dessication and the last few samples in the box may have been out of the oven for almost an hour prior to being weighed.

This in general resulted in ICPAES results much closer to those reported by XRF.

ALS supplied analytical data by chromite/manganese ore fused disk XRF method (ME-XRF26s) for all samples:

- LOI, Al<sub>2</sub>O<sub>3</sub>, BaO, CaO, Cr<sub>2</sub>O<sub>3</sub>, CoO, Fe<sub>2</sub>O<sub>3</sub>, K<sub>2</sub>O, CuO, MgO, MnO, Na<sub>2</sub>O, P<sub>2</sub>O<sub>5</sub>, SO<sub>3</sub>, SiO<sub>2</sub>, NiO, TiO<sub>2</sub>, PbO, ZnO

They also supplied data by high grade four acid ICP-AES method (ME-ICP61a) for select samples (including all box-cores):

- Ag, Al, As, Ba, Be, Bi, Ca, Cd, Co, Cr, Cu, Fe, Ga, K, La, Mg, Mn, Mo, Na, Ni, P, Pb, S, Sb, Sc, Sr, Th, Ti, Tl, U, V, W, Zn

Many of the above elements were at levels below the detection limit of ME-ICP61a.

#### 8.2.2.2 Jacobs

Jacobs is the Laboratory operated by the Integrated Environmental Studies Program Group, Earth and Space Sciences Program, at Jacobs University in Bremen, Germany. This group has been involved in nodule analysis and study for over 10 years and have been integral to much of the development of nodule standards used in the industry. They describe their preparation as follows:

The Fe-Mn nodules provided were powdered. In case of small sample bags the whole material was first crushed and then homogenized and powdered in an achate ball mill. Material provided in large (several kilograms) sample bags was first crushed and then splitted using a riffle splitter. One representative sample split (100-200 g) was then homogenized and powdered using the achate ball mill.

For sample decomposition, the nodule powders were dried for approximately 12 hours at 105 °C prior to digestion. Precisely weighed 50 mg aliquots of each dried sample were digested in 30 ml PTFE (polytetrafluoroethylene) pressure vessels using a PicoTrace DAS acid digestion system (Bovenden, Germany). The dried powders were dissolved with ultrapure concentrated acids, initially with 5 ml of a mixture of hydrochloric (HCl), nitric (HNO<sub>3</sub>), and hydrofluoric (HF) acids (ratio of 3:1:1, respectively), at 180 °C for 12 hours. After cooling, samples were evaporated at 120°C for approximately 2 hours to near dryness, re-dissolved with 3 ml 20% HCl and heated again at 120 °C to near dryness. The residues were taken up again in 3 ml 20% HCl and heated at 120 °C to near dryness. Finally, the residues were diluted to 50.0 g in 0.5 M HNO<sub>3</sub> / 0.05 M HCl and immediately analyzed.

Major and minor element analysis was carried out using Inductively Coupled Plasma Mass Spectrometry (ICP-MS, Perkin Elmer NEXION 350X quadrupole instrument) for the determination of REE, Y, Sc, Ti, Rb, Zr, Nb, Mo, Cs, Ba, Hf, Ta, W, Pb, Th, U, while Fe, Mn, Mg, Ca, Na, Al, P, Sr, Cu, Co, Ni, Zn, V were determined with Inductively Coupled Plasma Optical Spectrometry (ICP-OES, SpectroCiros SOP instrument).

Accuracy and reproducibility of chemical analyses were checked with the certified reference materials Nod-P-1 (USGS). The measured concentrations are in very good agreement with published data (Table 2), proving the accuracy of the analytical methods. We also report the method precision of the ICP-MS and ICP-OES measurements, which is defined as the precision of multiple sample decomposition and measurement of a reference standard as % relative standard deviation (%RSD). The method precision of the ICP-MS measurements is generally very good and better than 2 % for all elements of the reference standard NOD-P1 (n=4), except for Rb (3%) and Ta (9%). Method precision of ICP-OES is better than 2% for most elements, except for Ca, Co, Li, Ni, and V (<3%) and for P and V (<5%).

Jacobs thus supplied data by single acid (0.5M HNO<sub>3</sub>) ICP-OES for all samples:

- Al, Ca, Co, Cu, Fe, K, Mg, Mn, Na, Ni, Sr, V, Zn

They also supplied data by 0.5M HNO<sub>3</sub> ICP-MS for selected samples:

- Li, Be, Sc, Ti, Rb, Y, Zr, Nb, Mo, Te, Cs, Ba, La, Ce, Pr, Nd, Sm, Eu, Gd, Tb, Dy, Ho, Er, Tm, Yb, Lu, Hf, Ta, W, Pb, Th, U

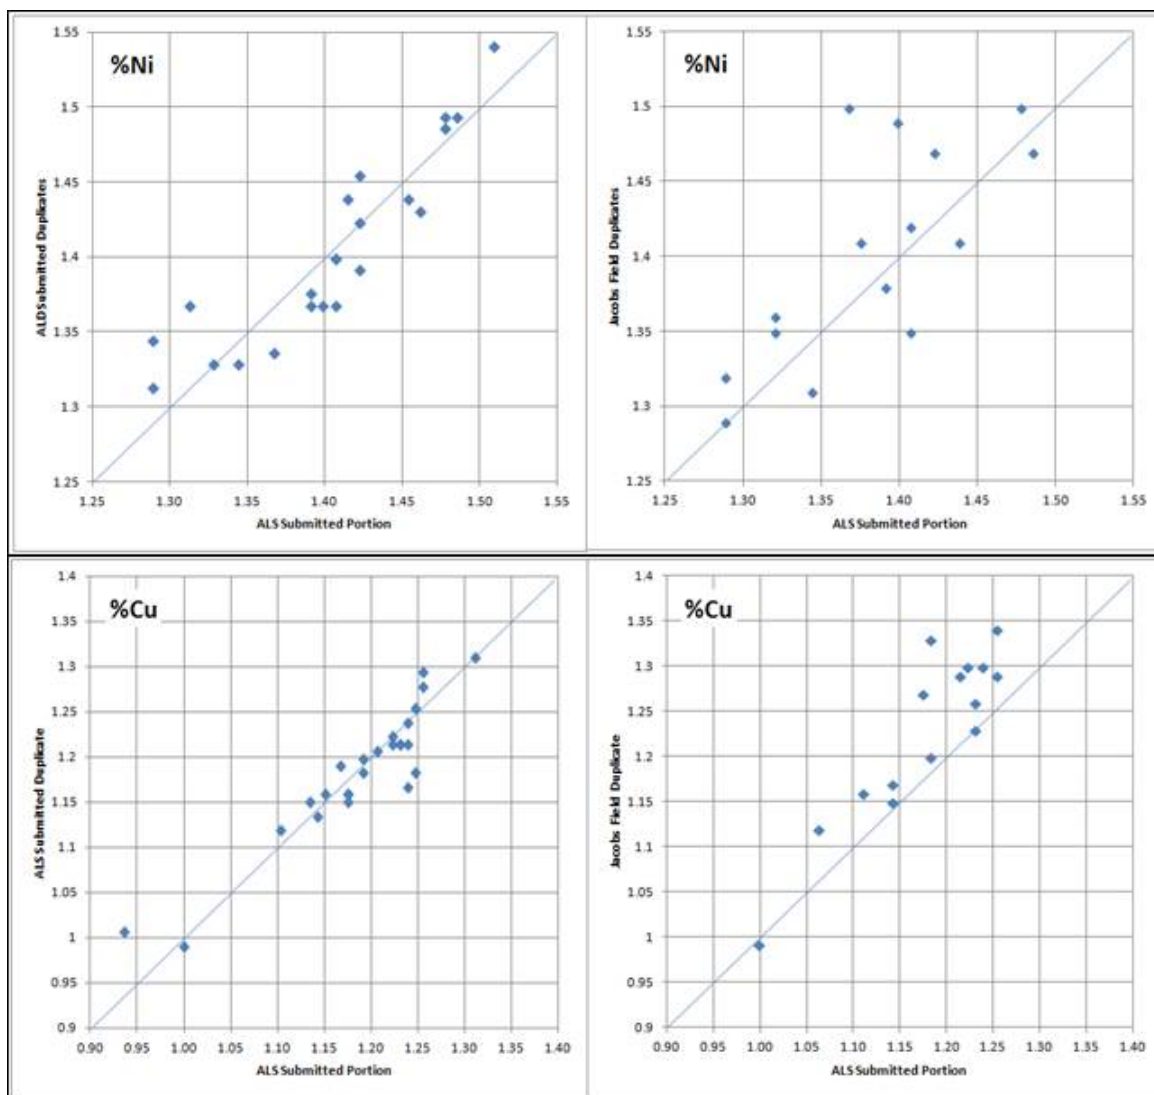

### 8.2.3 TOML Quality Assurance and Quality Control procedures

For the 104 box-core Submitted Portion samples submitted to ALS, 34 were duplicated (32.6%) with:

- 25 Submitted Duplicates to ALS (24.0%); and
- 15 Field Duplicates to Jacobs (14.4%).

Six Submitted Portion samples were duplicated both as Submitted Duplicates and Field Duplicates (5.7%).

Figure 8.4 Comparison of Nickel and Copper grades in duplicates

Field Duplicates from the box-core Primary Samples were produced using the cone and quarter technique once the final air-dried weighing step was completed.

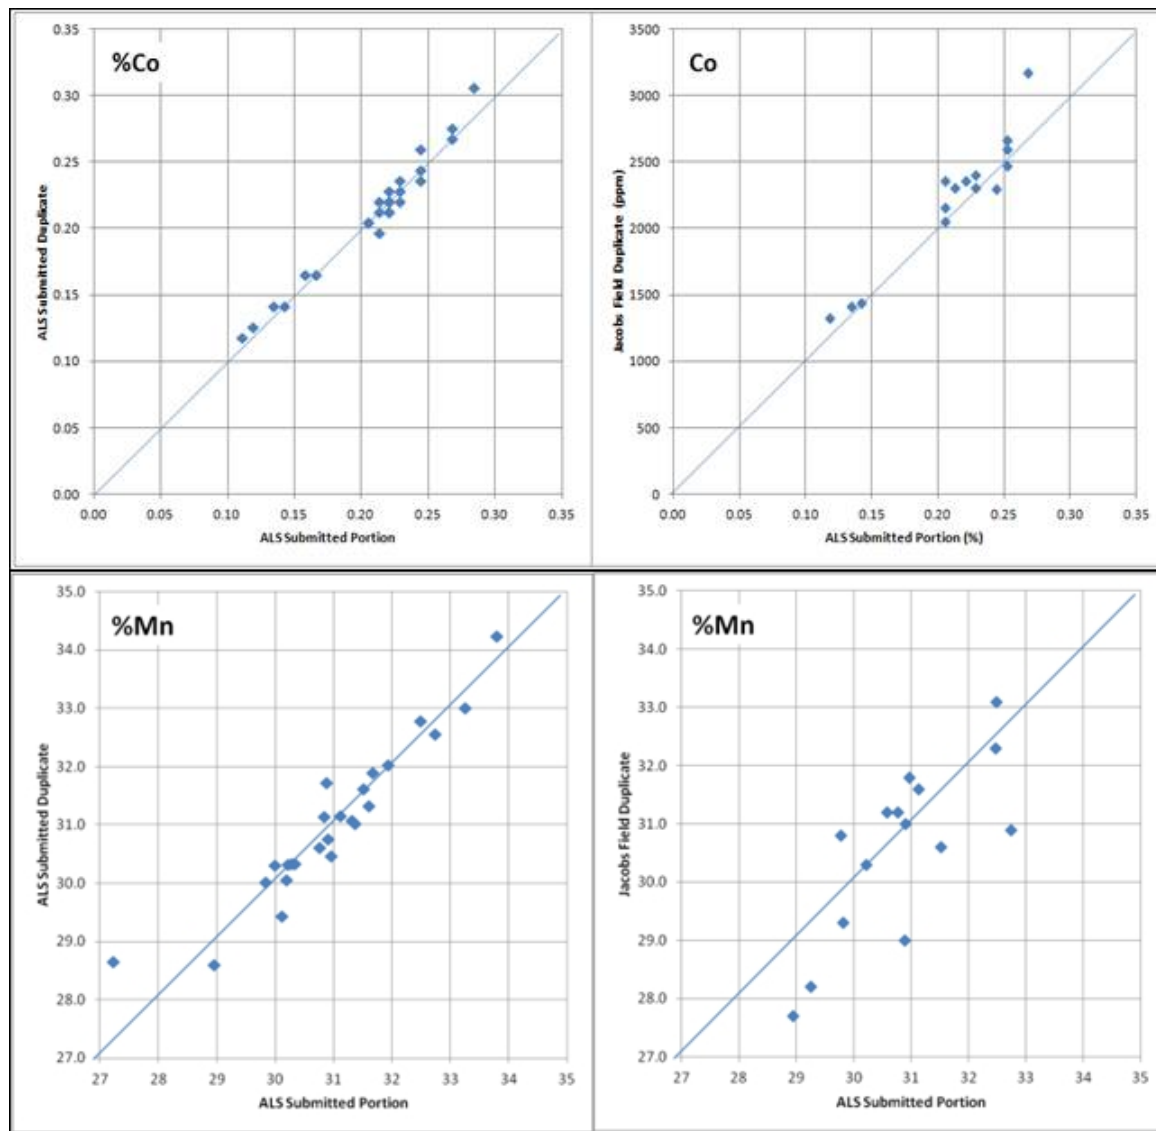

Reference samples from the box-core Primary Samples were taken at the same time but were selected on the basis of preference for entire nodules over a range of sizes and textures (if such a range was present) with an intent to include the most common forms of nodules.

Submitted Duplicates from the box-core Main Samples were produced using the cone and quarter technique.

Dredge “variance” samples were picked from all sides of the dredge pile with an attempt not to bias based on size or form. Dredge “variance” sample Field Duplicates were taken by snapping picked samples in half. These results give a good indication of the degree of inter-sample variance that might be expected.

Comparisons of duplicate results for Ni, Cu, Co and Mn are illustrated in Figure 8.4 and Figure 8.5. With Half Relative Difference analysis in Table 8.1 and Table 8.2.

Figure 8.5 Comparison of Cobalt and Manganese grades in duplicates

All Submitted Duplicates correlate very well with their Submitted Portion pairs). Field Duplicates correlate well with their Submitted Portion pairs except for high copper samples (bias high to Jacobs) and maybe low grade manganese (but the number of samples is too few to be sure and the relative difference is low; Table 8.2).

Table 8.1 Half Relative Difference Submitted Portions and Submitted Duplicates

	Co	Cu	Mn	Ni
Min	-3.44	-3.70	-2.55	-2.09
Max	3.84	2.99	1.13	1.42
Mean	-0.455	0.0995	-0.0506	0.0131

Half Relative Difference = difference between samples divided by their mean and times 0.5 and times 100

Table 8.2 Half Relative Difference Submitted Portions and Field Duplicates

	Co	Cu	Mn	Ni
Min	-8.62	-5.88	-1.70	-1.09
Max	2.93	0.330	3.15	50.0
Mean	-2.70	-2.07	0.399	30.0

Field Duplicates sent to Jacobs (analysis by ICP) generally compare very well with Submitted Portion analysed by ALS (XRF) with the exception of high copper samples (Figure 8.6), where there appears to be a bias of the order of 0.05 to 0.1 % Cu with Jacobs reading higher than ALS. On a relative basis this difference is not severe (Table 8.2).

Figure 8.6 Comparison of high grade copper duplicates

Selected high copper samples were reanalysed with additional standards by ALS without appreciable difference, then an aliquot of the Submitted Portion pulp was sent to Jacobs. Jacobs analysis of these aliquots is in broad agreement with the ALS results, indicating either contamination of the Field Duplicates during preparation or most likely a change in instrument calibration at Jacobs. The analysis supports that the ALS analysis of the Submitted Portion is valid for Cu at all grades.

### 8.2.4 Blanks, Laboratory Duplicates and Standards

Numbers of blanks, laboratory duplicates and standards are presented below. Note that Jacobs refers to duplicates as replicates.

Table 8.3 Blanks Laboratory Duplicates and Standards

	ALS			Jacobs
	XRF	LOI	ICP	ICP
Box-core samples analysed <sup>i</sup>		131		–
Laboratory duplicates	6	9	8	4 <sup>iii</sup>
Blanks	4		8	–
Non-nodule standards	12	9	8	–
Dredge samples analysed <sup>ii</sup>		–		–
Laboratory duplicates	11	9	–	2
Blanks	6		–	–
Non-nodule standards	17	9	–	–
Nodule standards	5	–	–	7 <sup>iv</sup>

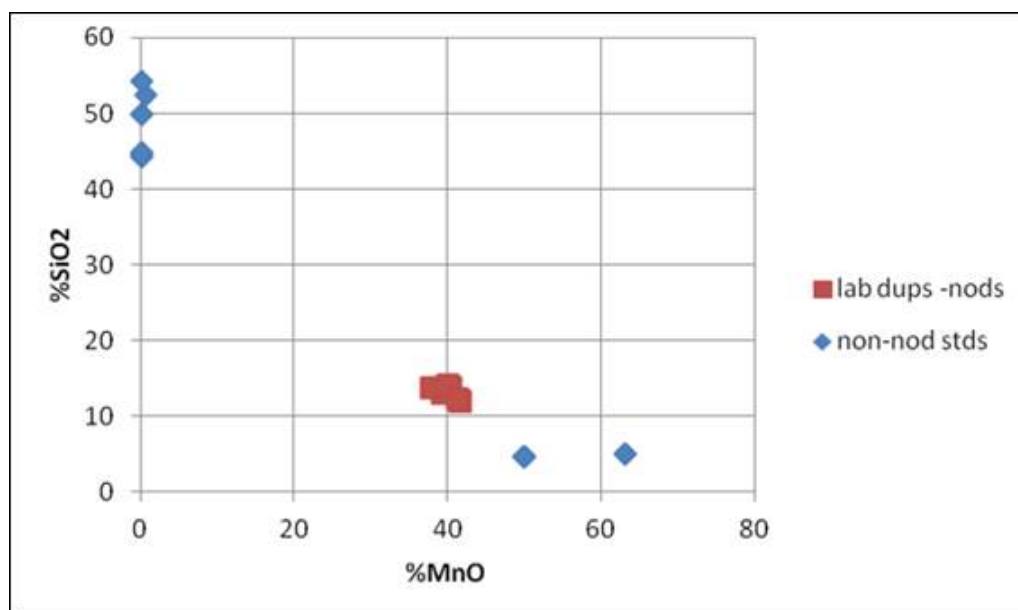

<sup>i</sup> Includes 25 submitted duplicates as well as a crust and a buried nodule analysed for research purposes

<sup>ii</sup> For the purposes of this note only samples collected during CCZ15 included here

<sup>iii</sup> Two duplicates being replicate digestion from the same pulp split and two being replicates from a separate pulp split

<sup>iv</sup> Jacobs analysed dredge and box-core samples as a single batch; ALS analysed the dredge samples approximately 7 days after the box-core samples

Figure 8.7 ALS Laboratory duplicates and non-nodule standards

All ALS blanks were below detection limit for the key elements of interest (reported in the mineral resource), i.e. Ni, Mn, Cu, Co. One batch of four blanks returned Ga values of up to 28% of the mean for nodules but other elements were below or near detection limits.

Within the ALS box-core QAQC set, the range of non-nodule standards are compared with the laboratory duplicates in Figure 8.7 for the two most relevant elements Mn and Si. For these elements all of the analysed standards were within acceptable bounds.

Figure 8.8 ALS Laboratory duplicates compared to submitted portions

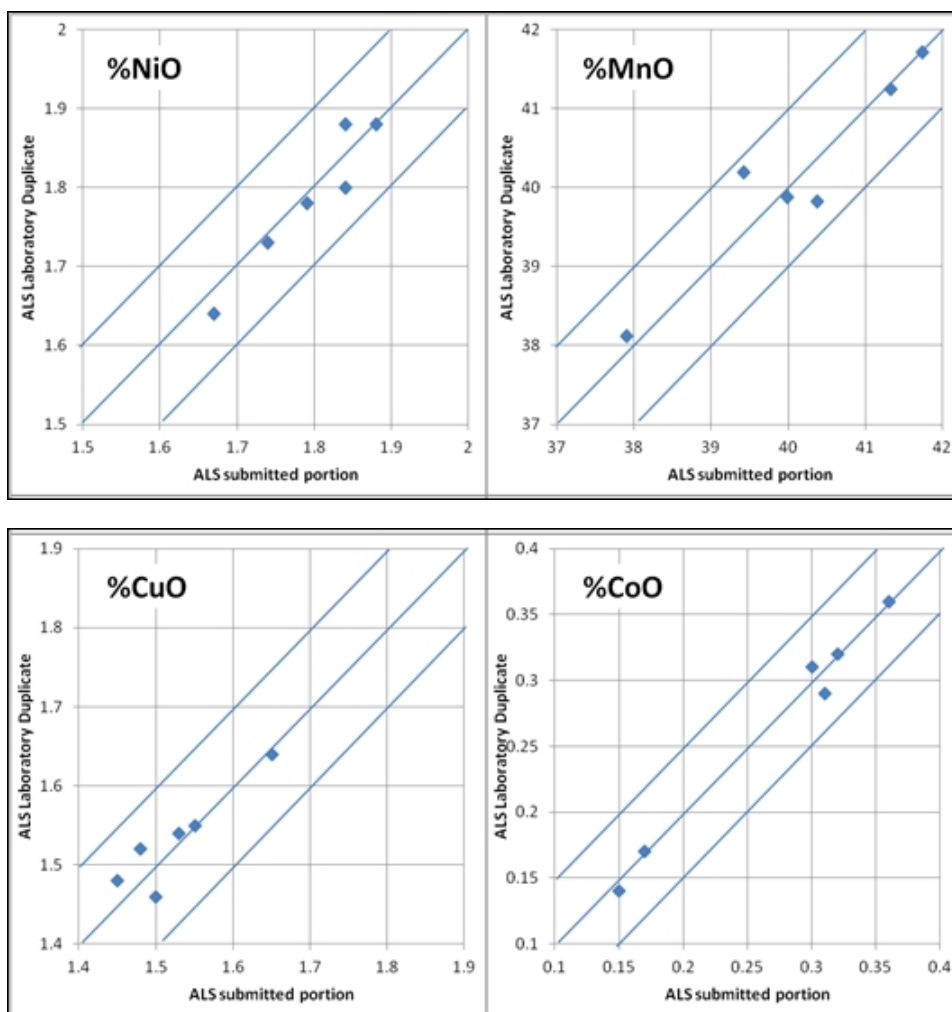

Figure 8.8 shows the close agreement between ALS laboratory duplicates (separate aliquot from pulverised material) and the original analyses of the Submitted Portions. Laboratory duplicates by Jacobs for Ni, Cu, Co and Mn are all within 3% relative agreement.

Figure 8.9 ALS performance against the CGL-131 nodule standard

Grey boxes are ±5% relative for key elements of interest

Figure 8.10 ALS performance against the NOD-P1 standard

Grey boxes are ±5% relative for key elements of interest

Figure 8.11 Jacobs performance against the CGL-131 and NOD-P1 standards for Cu re-analysis work

Grey boxes are ±5% relative for key elements of interest – the special run of these standards are not included in Table 8.1

### 8.2.5 TOML photo abundance estimates Chain of Custody

Nodule abundance was estimated by TOML using two methods:

1. Physical samples using a box-corer (see COC above).
2. Long axis based estimates from photographs.

Photographs were taken during the CCZ15 campaign by contractor Yuzhmoregeologiya. The photos were transmitted from the towed camera sled in real time to a camera operator and were automatically named with the date and time (in UTC) of the survey. File posting location was on a secure server (airwalled) with access by camera operator, surveyor and geoscientists.

---

Location of the camera sled at the time of photography was recorded separately by the Yuzhmorgeologiya hydrographic surveyor on watch using a combination of vessel GPS and either USBL signal or estimate of position from length of line out. Survey periods are recorded in the bridge log, vessel log and daily progress reports.

Photos were logged in near real time for geology and biology, with periodic updates of photo files to the filing on the TOML master computer.

Abundance estimates were made only for select photos due to the intense nature of the work and issues with sediment cover in some areas. Normally in TOML Areas B1 and C1 every 100<sup>th</sup> photo was selected. The selected photos were georeferenced to a template in a GIS program by a geoscientist and the long axis of each nodule within selected swaths was digitised. Each photo was checked by the Lead Geoscientist on watch and by the Lead Geoscientist designated accountable for data quality. The Chief Scientist ran a routine to measure the digitised lengths and also compiled the data into a MS Access database.

Copies of the processed data were passed, via email, to the Mineral Resource Qualified Person midway through the photo-profiling programme and after the campaign.

#### **8.2.6 TOML adequacy of sample preparation security and analytical procedures**

TOML had clear and secure chain of custody for the nodule samples collected during their exploration campaigns. Sufficient Field and Submitted Duplicates have been taken to demonstrate lack of significant error in the chemical analyses. TOML also followed rigorous procedures for abundance estimation using both physical samples and photographs, with good correlation and validation.

Data storage is secure and there is no evidence of any tampering of grade and abundance measurements.

Overall, the data are reliable for Mineral Resource estimation. This is supported by the very similar grades and abundances obtained in the historical sampling.

---

## 9 Data Verification

### 9.1 Historical data

Sampling data were collected by six Pioneer Contractors during the 1970s to 2000s. As part of the ISA requirements to relinquish half of the registered Pioneer Contractor's claims, the data for the relinquished portions were made available to the ISA where they were archived. This entire data set was first provided to TOML in a comma delimited format, and then independently to Golder Associates in 2012 who were then compiling a technical report on this same project (Golder Associates, 2013). Mineral Resources QP in this report was the lead QP for the Golder Associates technical report.

The database provided by the ISA contains multiple independent datasets that were independently collected and sampled using similar methods (FFG or BC sampling) but with slightly different equipment and were assayed by different laboratories. Because the database contains multiple datasets the datasets can be compared with each other for the purpose of validating the internal consistency of the data. Additionally, there are a number of published summaries of data that have not been provided to the ISA but show similar mean grades to the data within the TOML Exploration Area (Table 9.1).

Golder Associates contractor Charles Morgan was familiar with the procedures and processes that were used in collecting and assaying the samples. He was also involved with collection, inspection and analysis of samples, photographs and video coverage of the polymetallic nodule deposits for Lockheed Martin while on board the exploration ship MV Governor Ray. Dr Morgan was also involved with reviewing the Pioneer Contractors work and results, through his role on the ISA Legal and Technical Commission (ISA LTC), and in the compilation of ISA Technical Bulletin No. 6.

The sample data are supported by independent third party data, have been reviewed by the ISA LTC during the process of granting licences to the Pioneer Contractors, and are maintained by the independent ISA. Golder concluded that these data are suitable for Inferred Mineral Resource estimation purposes.

#### 9.1.1 Data independence

QP Matthew Nimmo received the available data collected from within the CCZ and the TOML Exploration Area from the ISA via Charles Morgan. The data set was received on June 22 2012 from Dr Vijay Kodagali, Senior Scientific Officer of the International Seabed Authority (Email: vkodagali@isa.org.jm) who sent the data by email in Microsoft Excel format.

This data set is identical to the one used for the resource assessment provided by TOML, verifying the source of the sample data.

The database includes all data submitted to the ISA that were collected in the Reserved Areas of the CCZ. The data were collected by parties completely independent of TOML or Nautilus Minerals and retained exclusively in the custody of the ISA prior to their transfer. The data sets were also subject to third party review by the ISA's LTC, as part of the process of granting Pioneer Contractors Exploration Areas.

#### 9.1.2 Historical data integrity

The original assay sheets from the laboratories for the individual nodule samples within the TOML Exploration Area are not available. Neither are the quality control procedures used by the laboratories and the ISA. It is reasonable to infer that the historical data is of sufficient quality for an Inferred Mineral Resource estimate because:

- The ISA is an independent agency with significant accountability under the Law of the Sea. Part of its mandate is the receipt and storage of sea floor sampling data suitable for the estimation of nodule resources and the legally binding award of licenses. It is reasonable to assume that a reasonable level of care was applied by the ISA.

- Comparison of the six independent data sets from the CCZ shows a high level of consistency in abundance and grade and, conversely, provides no evidence of bias or systematic error in the TOML data.
- Recent TOML nodule sampling confirms the existence, and abundance and grade continuity of the polymetallic nodules within the TOML Exploration Areas.

### 9.1.3 Data comparisons for the entire reserved areas

The Quality Assurance/Quality Control (QAQC) data for the historical samples are not available. Some QAQC is known to have been completed at the time, but there was no requirement to submit the results to the ISA. All the Pioneer Contractors collected samples by slightly different methods and assayed using different laboratories from what is effectively a single deposit. Due to the vast size and relative consistency of grade of the deposit the comparison between the data sets can be used as a proxy for QAQC.

Data covering the reserved blocks of ISA contained only a small number of anomalous values that may be suspected to be erroneous (four out of 2212 data points). These included:

- A Co value of 3.23% (next largest is 0.56% Co).
- Two Cu values of 157.0% and 66.0% (probably 1.57% and 0.66% respectively) (next largest is 1.62% Cu).
- A Mn value of 288.0% (probably 28.8%) (next largest is 35.62% Mn).

All these anomalous values are likely data entry errors and are contained within one contractor dataset (Yuzhmorgeologiya) and do not occur within the TOML Exploration Area, these data points were not used in any way for the resource estimate.

The box plots and log-probability plots (Section 11) comparing the data sets show that the distributions for Ni, Co, Cu, Mn and abundance are very similar between the different data sets, and across the CCZ. Variations between the data sets are attributed to both spatial variability and minor differences in sampling and assaying methods.

Figures comparing the assay distributions of the samples within the TOML Exploration Area with all other available data from the reserved blocks are presented in Section 7. These plots show that Ni, Cu and Mn compare well but with divergence at the tails of the distributions, while Co and nodule abundance tend to be biased slightly lower for the TOML data.

The samples within the TOML Exploration Area used for the Mineral Resource estimate were collected by Yuzhmorgeologiya, DORD and Ifremer. These three data sets show no significant differences.

Overall the results confirm the consistency of the mineralisation across the entire CCZ and the TOML Exploration Area which form a small part of the CCZ.

### 9.1.4 Comparison with non-ISA sourced data

Table 9.1 lists the mean grades of the nodules from different parts of the CCZ that were based on data that is not included in the data obtained from the ISA. These mean grades are very consistent with each other and with the mean grades of the data that falls within the TOML Exploration Area.

One example is from the Scripps Institution of Oceanography (SIO) which compiled a database of polymetallic nodules information from numerous sources (referenced in the database), last updated in 1981 (NOAA, 2013 a). As a comparison exercise, this dataset was clipped to the CCZ and analysed for comparison with the available ISA database. Note that as the vast majority of these samples were collected by dredging and coring, abundances were not estimated or recorded, and therefore only grade analysis is possible. The dataset was downloaded and imported into Microsoft Access, with some minor format alteration in the process. This database was then saved and accessed directly from ArcGIS.

A polygon representing the boundaries of the CCZ was used to query the database, and create a subset containing only samples within this zone. The mean values are included in Table 9.1.

Table 9.1 Mean Grades of the CCZ Nodules from Various Sources

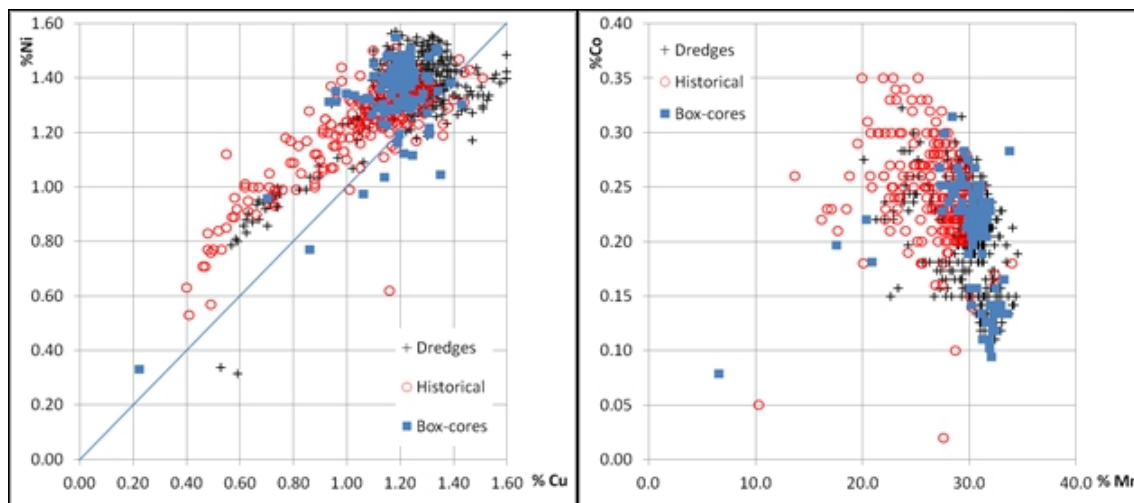

Ni (%)	Cu (%)	Co (%)	Mn (%)	Abundance (wet kg/m <sup>2</sup> )	Number of Samples	Source
1.24	1.03	0.22	27.2	6.5	2196	Data supplied by ISA (All CCZ)
1.22	1.06	0.24	26.9	8.5	255	Data supplied by ISA (TOML Exploration Area)
1.20	0.98	0.20	26.3	–	–	McKelvey et al, 1983
1.22	0.97	0.16	24.5	–	160	SIO (NOAA, 2013a)
1.29	1.19	0.23	29.1	–	–	Friedrich et al, 1983
1.28	1.16	0.23	24.6	–	–	Mielke (1975)
1.3	1.0	0.23	24.6	17	141	Ruhlemann et al (2011) west area
1.3	1.1	0.17	24.6	10	237	Ruhlemann et al (2011) east area

## 9.2 TOML data

### 9.2.1 Comparison of historical and TOML data

The CCZ13 and CCZ15 sample results of TOML were compared with historical samples. There is good correspondence given that the areas sampled are different. High Cu and Mn grades are less common in the historical samples but the ranges are the same and QA/QC for these elements show no issue with the TOML analyses of these elements.

Figure 9.1 Comparison between TOML analyses and historical analyses

The TOML analyses are from the submitted portion; the same plots by area are included in Section 6

### 9.2.2 Nodule variation test work

Grade variation between nodule box-core samples is very low, with coefficients of variation typically around of 0.05 to 0.2 compared to nodule abundance which is typically around 0.5 to 0.7 (Table 9.2). Even extensive sub-sampling (dredge “variance” samples) did not expose any significant variance in grades (CV <=0.06).

Table 9.2 Coefficients of variation for historical and TOML nodule samples

Number of samples		Area/sample type	Coefficient of variation				
Primary	Sub		Nodules	Mn	Ni	Cu	Co
2	60	Area A TOML Dredge “variance”	0.09	0.18	<b>0.34</b>	0.22	n/a
18	0	Area A Historical	0.10	0.21	<b>0.35</b>	0.18	0.50
27	0	Area B1 TOML BC	0.20	0.21	<b>0.21</b>	0.18	0.90
1	20	Area B1 TOML Dredge “variance”	0.02	0.03	<b>0.04</b>	0.09	n/a
89	0	Area B Historical	0.17	0.20	<b>0.27</b>	0.22	0.67
14	0	Area C1 TOML BC	0.02	0.03	<b>0.03</b>	0.07	0.73
1	30	Area C1 TOML Dredge “variance”	0.03	0.03	<b>0.04</b>	0.11	n/a
87	0	Area C Historical	0.08	0.08	<b>0.13</b>	0.13	0.44
38	0	Area D1 and D2 TOML BC	0.03	0.07	<b>0.05</b>	0.09	0.61
10	187	Area D TOML Dredge “variance”	0.06	0.10	<b>0.10</b>	0.12	n/a
42	0	Area D Historical	0.05	0.06	<b>0.08</b>	0.10	0.53
12	0	Area E Historical	0.10	0.15	<b>0.17</b>	0.18	0.56
25	0	Area F and F1 TOML BC	0.03	0.06	<b>0.06</b>	0.13	0.23
4	82	Area F TOML Dredge “variance”	0.03	0.05	<b>0.08</b>	0.10	n/a
2	0	Area F Historical	0.00	0.03	<b>0.01</b>	0.04	0.27

The dredge “variance” samples were groups of up to 30 sub-samples collected from each dredge in order to study the grade variance or nugget of a sample point. As the dredges were often landed several times in a deployment a much larger range was covered than would be expected in a single box-core.

Figure 9.2 compares the CVs of the historical data and TOML dredge and box-core samples. The size of the circle is proportional to the CV (or spread) of the grades of the samples.

### 9.2.3 Nodule long-axis estimate validation

Photographs were used by commercial explorers in the 1970s to estimate polymetallic nodule abundance (Felix, 1980; Kaufman and Siapno, 1972).

The benefits of photos over physical sampling were immediately recognised, i.e.:

- Quicker and cheaper
- Larger primary sample (area)

This relationship works through measurement of each nodule’s long (or major) axis and the outcome is much better than estimates from photo-based nodule coverage or acoustic response. The process of estimating the weight of nodules was called Long-Axis Estimation (LAE).

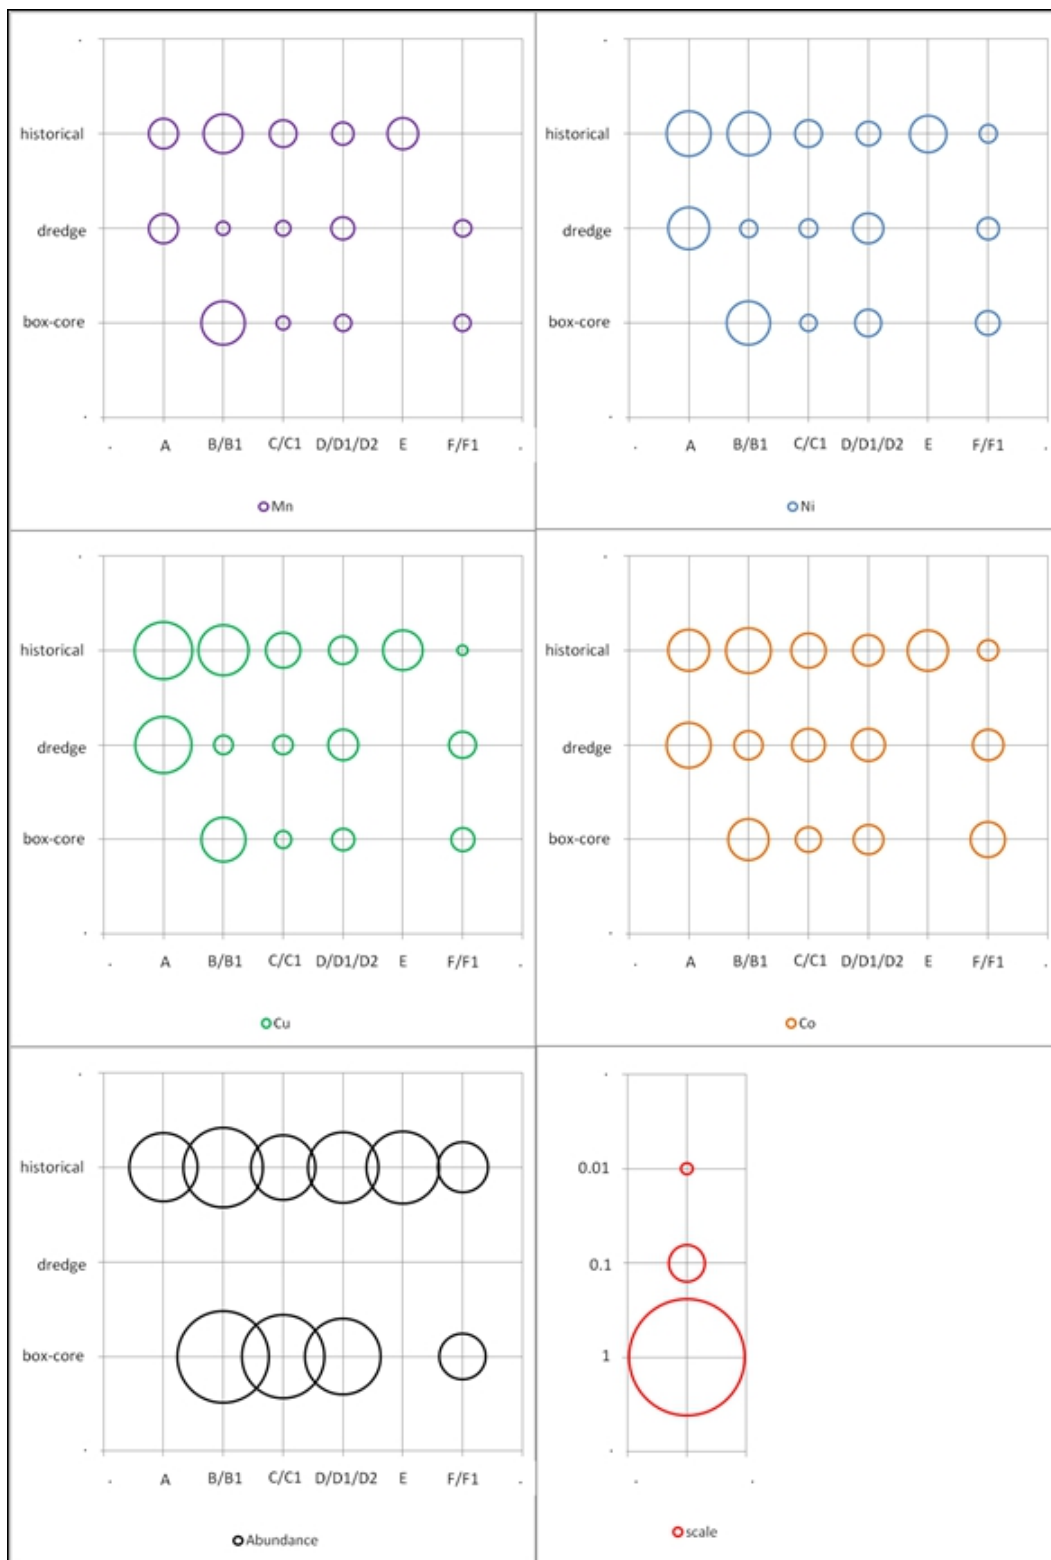

As discussed below, a key limitation of photo-based abundance estimation was that in some areas sediment ‘powder’ or ‘cover’ was sufficient to mask too many of the nodules to allow an accurate estimate. A correction factor might be possible in some of these cases, but this has not been applied to date on the TOML areas as it is likely crude and development requires more work.

Felix (1980) proposed a formula for nodules within part of the Kennecott area as follows:

$$\text{Log}_{10}\text{wt.} = (2.71)(\text{log}_{10}\text{LA\_cm}) - 0.18$$

Where wt. is the wet mass of the nodule in grams and LA\_cm is the long or major axis of that nodule in centimetres. This formula was modified slightly in both TOML Areas B1 and C1 based on calibration results.

Figure 9.2 Comparison of coefficients of variation for historical and TOML nodule samples

Values from Table 9.2

### 9.2.3.1 Photo-based estimates in the TOML Area

During 2015 TOML collected seabed photos using a box core mounted camera system to collect seabed photos from areas B, C, D and F (bottom shots) and a towed camera system (called the Neptune) to collect seabed photos from areas B, C and D.

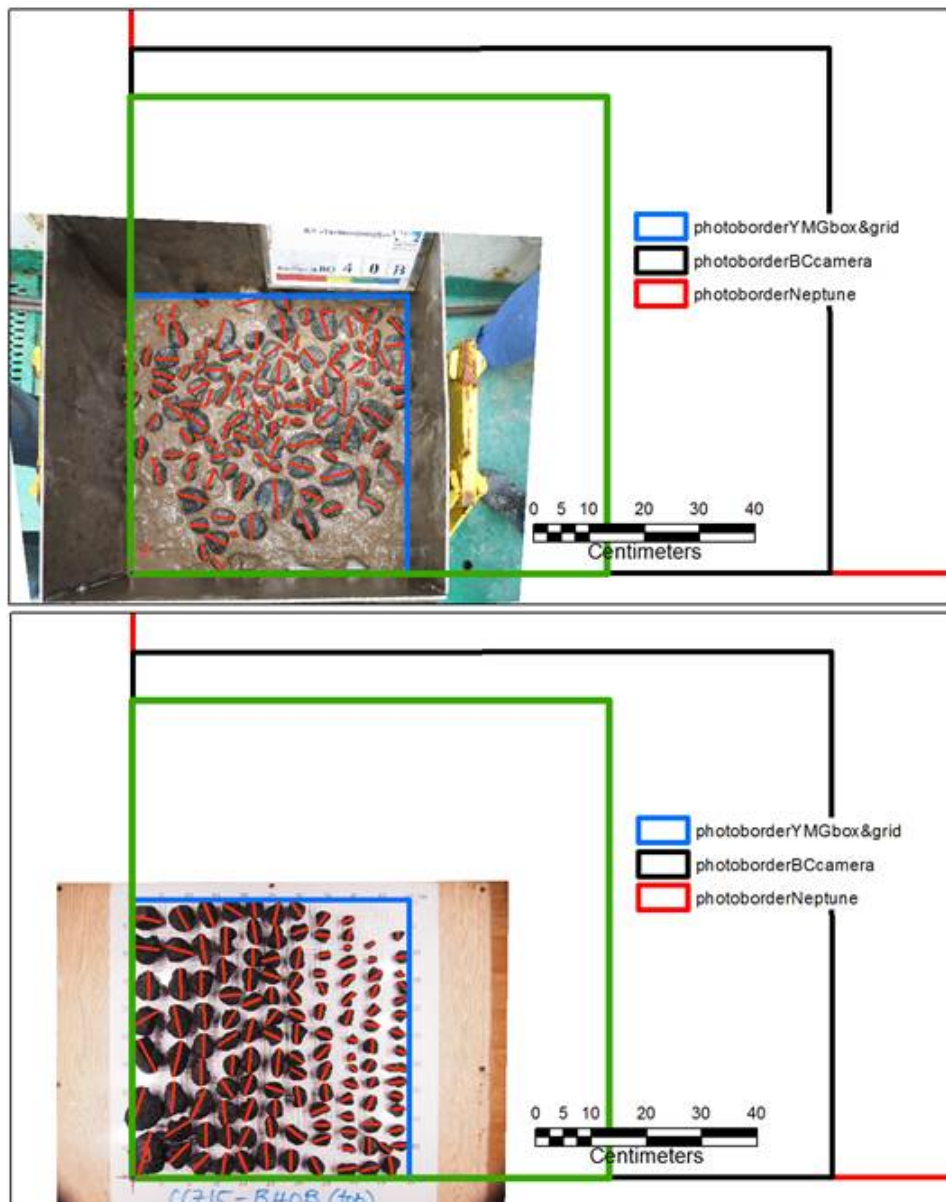

In areas B and C, it proved possible to use the bottom shots (e.g., Figure 9.3) as well as photos of the box-core samples taken on the vessel to calibrate and modify the Felix (1980) formula (above) to accurately estimate the weighed abundance of each box-core. The photos taken on the vessel included topshots of the sample in the box-core as it landed on deck and grid photos of the nodules from the box-core after washing off mud (e.g., Figure 9.4).

Figure 9.3 Example LAE measurement – bottom photo

Green frame is the area sampled by the KC box-corer

Figure 9.4 Example LAE measurement – top shot (YMG box) and grid photo

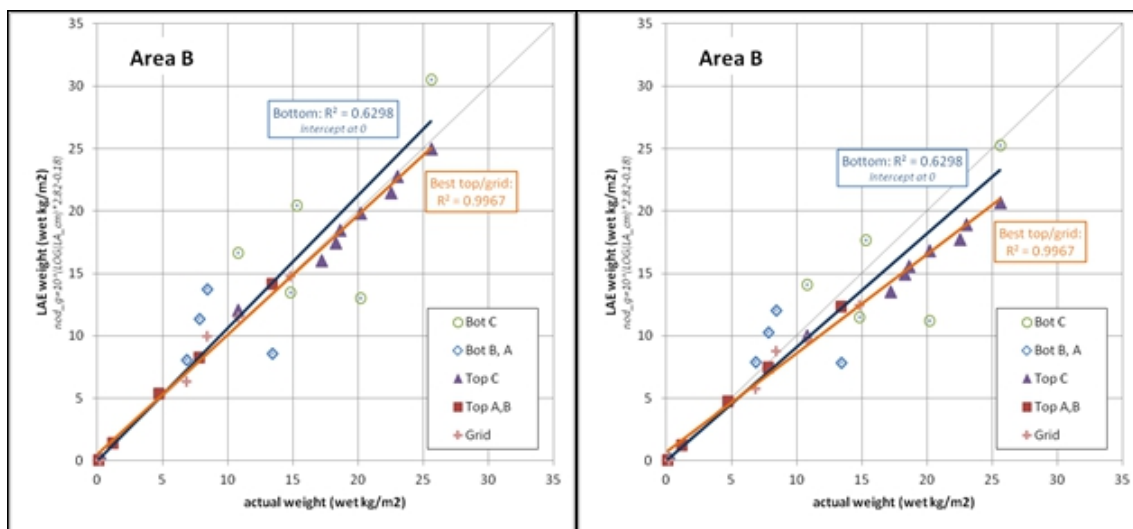

Green frame is the area sampled by the KC box-corer

The process involved referencing the photos to scale in a GIS package, using an average field of view based on a variety of images of the trigger weight-scale. Then a line was digitised along the long axis of each nodule before recording the length of each line into a database. The line measurements were then analysed in MS Excel, comparing the total calculated weight with the total actual sample weight. Accurate weighing of individual nodules was not possible due to the heave of the vessel, but a motion compensated scale could accurately weigh entire box-core samples ( $\pm 50$  g).

Initially the formula of Felix (1980) was used but a much better fit was achieved if the factors were modified (Figure 9.5). The need to modify the factors probably relates to difference in nodule's thickness:area aspect ratios between areas, that in turn could relate to differences in the thickness of the geochemically active layer.

Figure 9.5 Area B correlations with best fit factors (L) and Felix 1980 factors (R)

In Area B, long-axis estimates made use of box-core seafloor photos, topshots and, where needed, sample grid photos, as in some cases the camera on the box-corer didn't work, and in other cases the sample arrived on deck scrambled into the sediment. Area B was compared by type of nodule (Contractor Yuzhmorgeologiya facies A, B, C) as well as combined types with no noticeable difference in relationship.

The calibrated relationship stood up very well (Figure 9.5); better than some nodule by nodule point counting that was also tried and so the formula was applied to the Neptune photos (approximately every 100th) with results broadly agreeing with the box coring (Figure 9.6) but providing much more detail.

The processing involving the Neptune towed camera sled photos was broadly similar to the calibration work done with the box-core bottom photos except that the Neptune images were referenced to an average field of view from images that clearly showed two centrally located laser pointers (30 cm spacing) carried on the towed camera sled. Although an electronic altimeter triggered the camera at near identical heights above the seafloor, each image varied slightly in terms of field of view due to flare and rocking of the sled in response to vessel motion.

Due to the very large volume of readings (>90,000) the digitised nodule lengths were compiled into and reported from a MS Access database. They were also studied using the statistical program R.

The process was then extended to Area C, and with agreement of the mineral resource Qualified Person only half the box-cores were taken (for calibration and grade estimation) as the Neptune photos were seen to be the better dataset due to area covered in each shot and frequency of photos available for measurement-interpretation. Again, the factors in the Felix (1980) formula were adjusted to improve accuracy (Figure 9.7).

In Area C the correlations between bottom photos based estimates and actual weights show less scatter – this might be due to a slightly different camera with a wider field of view being used.

Figure 9.6 Comparison of physical samples and LAE in Areas B and C

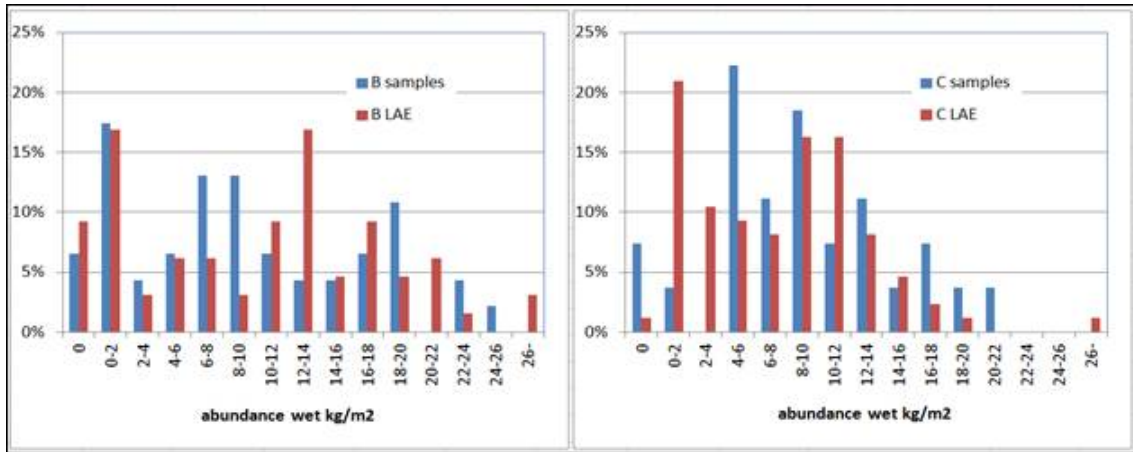

Figure 9.7 Area C correlations with best fit factors (L) and Felix 1980 factors (R)

In Area D however, the degree of cover (Figure 9.8, Figure 9.9, Figure 9.10) confounded the process. This possibility of this had been warned by Felix (1980), so after the orientation Neptune lines were complete, the survey focused on box-cores and there is no Neptune LAE data from this area for mineral resource estimation purposes.

Figure 9.8 Degree of powder on visible nodules in Area D vs Area B

Note that level 3 cover is the highest possible per the logging schema used during the CCZ15 campaign.

Figure 9.9 High degree of sediment “powder” and cover in Area D

Figure 9.10 Covered nodules B75, Area D2

In Area F, no towed camera survey was done but a visual comparison between bottom photos, topshots and grid photos reveals good exposure of nodules.

Abundance variance for both box-core samples and LAE estimates are summarised and compared in Table 9.3. Area B1 and Area C1 have higher box-core based global coefficients of variation than Area D1 and Area D2, while Area F and Area F2 are especially continuous. Thus, the Neptune LAE results are helping in the two more variable areas and would probably have been less critical in the others.

Table 9.3 Summary statistics of abundance between box-cores and LAE

Area	Type	Count	Stdev	Average	CV
B1	BC	30	8.25	9.35	0.88
B1	NeptLAE	75	7.74	10.16	0.76
C1	BC	16	5.54	7.80	0.71
C1	NeptLAE	86	5.40	7.34	0.74
D2	BC	26	6.86	11.59	0.59
D1	BC	16	8.20	13.84	0.59
F	BC	15	6.81	15.80	0.43
F1	BC	10	4.63	21.65	0.21
Historical data used in 2012 NI43-101 Inferred estimate (count = 255)					0.62

9.2.3.2 Confirmation Study

In April 2016 individual nodules were weighed on shore to check the relationships obtained and applied at sea. More accurate weighing of individual nodules was possible, now that the work could be done on land without the influence of vessel heave, but the samples used were necessarily residues of the collected samples that had already been split and sub-sampled for grade, reference and mineragraphy. Also, the samples had been transported several times and were then more 6 months old and so were often comprised mostly of broken nodules which could not be measured. Nevertheless, some 390 nodules were each weighed and measured with results as follows:

In TOML Area B1 there was a good fit between the formula used at sea and individual nodules weighed (Figure 9.11) confirming a valid relationship. While a slightly better visual fit might have been possible regarding the larger nodules it is likely that the unbiased correlation in Figure 9.7 would be adversely impacted (e.g., using Felix’s factors in Figure 9.5). Large nodules are uncommon and it is not clear how representative the individuals weighed actually are (irregular nodules might be more prone to breakage).

Figure 9.11 Confirmation nodules weights Area B and histogram of nodules by long-axis length

For Area C there was a shortage of whole nodules especially larger ones (which are naturally rare in Area C; Figure 9.12) but the relationship and formula was confirmed. There is a chance that the formula is a little conservative (i.e., factors a little closer to Felix’s or Area B’s could have been used), but again care needs to be taken considering the strong correlation obtained using the best fit factors versus the imparted bias using Felix’s factors in Figure 9.7.

Figure 9.12 Confirmation nodules weights Area C

For TOML Area F, if LAE is used in the future, then the factors published by Felix look to be potentially suitable (Figure 9.13). It is worth noting that TOML Area F is near the southern side of the Kennecott “Frigate Bird” exploration area, and that the larger nodules there are known to be distinctly thinner in aspect (Section 6).

Figure 9.13 Confirmation nodules weights Area F

---

### 9.3 Adequacy of data

The historical nodule sample data is considered suitable for the purpose of estimating Mineral Resources to an Inferred level of confidence. The QP also considers that the combination of the TOML and historical nodule sample data (physical samples and photo based long axis estimates) combined with detailed backscatter, photo profiling and geological interpretation is sufficient to estimate polymetallic nodule Indicated Mineral Resources and, in one small especially data rich area, Measured Mineral Resources.

The primary characteristic of the polymetallic nodule deposit that separates this deposit from typical terrestrial manganese, nickel and copper deposits is that the nodules themselves can be accurately mapped through photo-profiles and backscatter acoustic response. The bulk of the polymetallic nodules sit on top of the seabed allowing them to be photographed. However, in some areas such as TOML Area D some nodules are partially covered by sediment making it more difficult to detect the presence and abundance of the nodules. The most accurate method for determining nodule abundance is through physical sampling by box-core or free fall-grab sampling. However, these methods are costly and result in wide sample spacing. Due to the fact that nodules are visible, photography can be used in many areas to estimate nodule abundance directly. The two methods for doing this are estimating the nodule percent coverage (percent of exposed nodule surface area within the photo) and measuring each individual nodule long-axis and then using these measurements to calculate abundance using variants of the formula defined by Felix (1980). The long-axis estimation (LAE) method is the most accurate and preferred method but comes at a cost in the time to manually process each photo - limiting the number of photos that can be used for estimating abundance. The benefit of using photographs is being able to demonstrate continuity between physical sample location and accurately quantify nodule abundance. TOML is developing an automated method of doing these measurements for future application.

The QP considers the abundance estimates derived from photographs to date from TOML Areas B and C, to be suitable for estimating nodule abundance for the Mineral Resource.

---

## 10 Mineral Processing and Metallurgical Testing

Considerable mineral evaluation and metallurgical testwork on nodules from the CCZ has been reported. This was predominantly at a laboratory scale, with some test work at a pilot plant scale (Sen, 2010). All published historical work indicates that processing of nodules is technically feasible. To maximise recoveries of valuable metals the manganese lattice has to be broken down, either through pyrometallurgical or hydrometallurgical/biohydrometallurgical action.

Haynes et al (1985), in a NOAA funded US Bureau of Mines managed study, examined in detail the chemistry, morphology, and mineralogy of the nodules as well as five discrete processing routes. The processing routes are either hydrometallurgical or combinations of pyrometallurgical and hydrometallurgical processes, and were investigated at the bench scale with nodule feed, with a specific focus on tailing and slag composition (Haynes et al, 1985). The potential process routes (Figure 10.1) include:

- Gas reduction and ammoniacal leach process (Caron process).
- Cuprion ammoniacal leach process (as developed by Kennecott in their nodule studies in 1970s and 80s).
- High temperature and high pressure sulfuric acid leach process (HPAL).
- Reduction and hydrochloric acid leach process.
- Smelting and sulfuric acid leach process.

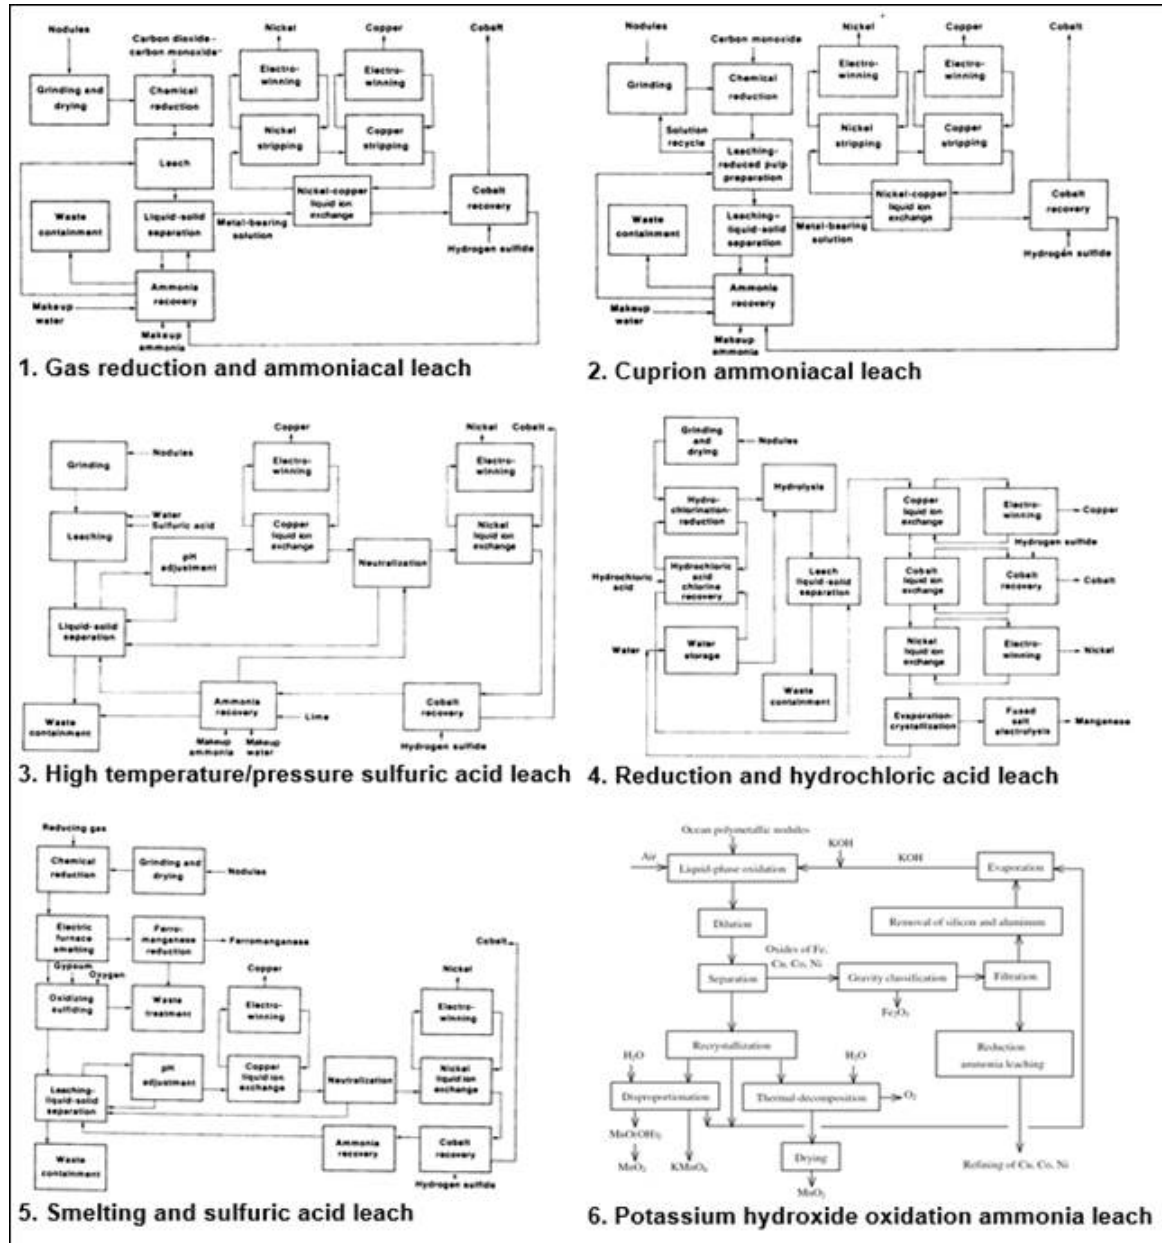

The first three processes are three-metal recovery systems with manganese reporting to a waste stream, with the last two also recovering manganese. The cuprion process operates at atmospheric pressure and temperature and flotation of the tailings can produce commercial grade manganese concentrates (NIOT, 2008).

Additional process routes, including biohydrometallurgy and alternative reducing agents, have been studied, e.g., Wang and Li (2005, Figure 10.1) and general reviews by Mukherjee et al. (2004) and Sen (2010).

Haynes et al (1985) and Wang and Li (2005) both conclude that the studied flow sheets for nodules are technically feasible. At the laboratory (bench top) scale Ni, Cu and Co recoveries vary but for the processes not using ammonia leach generally exceeded 90%. For the ammonia leach type processes recoveries vary with Haynes et al (1985) achieving greater than 90% for Ni and less for Co and Cu and Wang et al. (2005) achieving 95% for Cu, 65% for Co and 84% for Ni.

Neither Haynes et al (1985) nor Wang and Li (2005) reported Mn recovery, although the smelting process produced Mn rich tailings and a ferro-manganese product, and the hydrochloric acid leach process could also produce manganese. Sen (2010) reports process options with manganese recoveries of 85%. In NIOT (2008) COMRA reports that pilot tests on 'smelting—oxidative leaching-SX' returned metal recoveries of Ni, Cu and Fe of greater than 90%, Co of 89%, and Mn of 82%, while IOM, who studied both hydrometallurgical and pyrometallurgical process routes, report extraction efficiencies via sulphur-dioxide leaching of greater than 98% for Ni and Mn and greater than 90% for Co.

Figure 10.1 Potential process flow-sheets for seafloor nodules. 1-5 studied by Haynes et al. (1985) and 6 by Wang and Li (2005)

Recovery methods that could be employed for commercial development of polymetallic nodule deposits in the CCZ were studied in an IA for NORI Area D (AMC, 2021). The commonality between the polymetallic nodule deposits in NORI Area D and TOML Areas indicates that the methods proposed for the development of NORI Area D can reasonably be assumed to be equally relevant for future development in the TOML Areas. This is discussed further in Section 11.9.

## 11 Mineral Resources

Estimation of tonnage and grade for TOML Exploration Areas A, B, C, D, E, and F within the CCZ was undertaken in the second quarter of 2016. The estimates are based on the historical box-core and free fall-grab nodule sampling (262 samples) supplemented with recently acquired TOML nodule box core (113 samples) and photo-profile data (20,857 frames over 587 line km). Only sample data within the TOML tenement Area was used to inform the estimates.

The Mineral Resource estimate reported here follows and supersedes a maiden NI 43-101 Inferred Mineral Resource estimates reported by Golder Associates (2013). Differences between the two estimates are consistent and explicable.

The modelling methodology used for estimating the Mineral Resource was determined through careful consideration of the scale of deposit, geological mechanism and controls behind nodule formation and nature of the sampling method. The approach involved estimating nodule abundance and grades into a two-dimensional block model. Abundance, in wet kg/m<sup>2</sup>, was used for calculating tonnage. Abundance and grades were estimated using ordinary kriging (OK). Inverse distance weighting (IDW) and nearest neighbour (NN) estimates were used to validate the OK estimates.

The QP has assessed the available geological, mining and processing information regarding the manganese nodules and concluded that there are reasonable prospects of economic extraction (see additional explanation in Sections 10, 13, and 16).

### 11.1 Mineral Resource domains

The occurrence of polymetallic nodules within the CCZ is influenced on a regional scale by two large scale geological features: the boundary of the CCZ deposit and the presence of seamounts.

The boundary limits of the CCZ defining the region where nodules have been found to occur is bracketed by the Clarion and Clipperton Fracture Zones to the north and south respectively. The deposit extends to the west and east between the two fracture zones. The limits to the CCZ occur well outside the boundaries of the TOML Exploration Areas. Accordingly, 100% of the TOML Exploration Area fall within the CCZ polymetallic nodule deposit.

Bathymetric features only play a role in distribution of polymetallic nodules at a regional scale. There are principally two regional scale bathymetric domains: sea mount ranges and abyssal hill province. Based on interpretation of the GEBCO bathymetry data from the ISA, and TOML's own bathymetry, less than 2% of the TOML Exploration Area is covered by isolated sea mounts. Effectively, the entire TOML Exploration Area falls within the abyssal hill domain.

Within the TOML Area there are small, disconnected zones where there are no polymetallic nodules present or the polymetallic nodule abundance is very low. These zones are controlled by local geology (presence of basalt or carbonate ooze) and bathymetry.

The TOML Area has been split into two domains. Areas with polymetallic nodules and areas predominately without polymetallic nodules. The MBES bathymetry and the backscatter data was used to interpret the parts of TOML Area B through F with no polymetallic nodules. For the Mineral Resource estimate two broad domains have been interpreted from the data. These are:

1. NOD – polymetallic nodule domain. This domain exists almost everywhere and extends beyond the boundaries of the TOML Exploration Areas.
2. NON – areas with no or low nodule abundance of polymetallic nodules. This domain includes the No Nodules on Ooze (Nnoo), seamounts and areas with basalt. Nodule abundance in the NON areas was set to zero in the block model. It is not defined in Area A as that area has not been surveyed by MBES.

Figure 11.1 through to Figure 11.5 show the TOML Exploration geological domains used for the Mineral Resource estimate. Sample locations are indicated by white circles.

## 11.2 Manganese Nodule Data used for the Mineral Resource Estimate

### 11.2.1 Description of data

Historical box-core and free fall grab sampling data was initially provided by Dr Vijay Kodagali, Senior Scientific Officer of the International Seabed Authority (Email: vkodagali@isa.org.jm) who sent the data by email in Microsoft Excel format on June 22 2012. This data included samples for TOML Exploration Areas A, B, C, D, E and F (Figure 11.6). An additional eight samples within Area E were provided by Tomasz Abramowski from Interoceanmetal Joint Organization (IOM) on 21 November 2014. The data were provided in comma delimited format.

The historical polymetallic nodule sample data consists of 2211 records of which only 268 of the nodule samples fall within the TOML Exploration Area.

Polymetallic nodule samples collected during the TOML 2015 campaign within the TOML Exploration Areas B, C, D, and F were analysed by ALS Laboratories and provided to the QP on 17 March 2016 in a single text file. A total of 104 box-core samples were collected and sampled.

A separate data set containing the manganese nodule abundance for the 113 TOML box-core samples and calculated abundance for 536 sea floor photos was provided by TOML. The calculated abundance was derived from every 100<sup>th</sup> photo of the TOML 2015 sea floor photo-profiling, providing an average spacing of 2.7 km between photo observation points. The photos were processed manually by measuring the long axis of every nodule within the photo or within a subset of the photo. This enabled an accurate estimate of the nodule abundance in each photo.

The spatial coordinates of the data were in digital latitude and longitude. For spatial modelling and Mineral Resource estimation the coordinates were transformed into Universal Transverse Mercator (UTM) using the World Geodetic System (WGS 84) spatial reference system. Table 11.1 lists the minimum and maximum UTM coordinates for each TOML Exploration Area.

Figure 11.6 Location of the historical sample data provided by the ISA and IOM and the TOML data

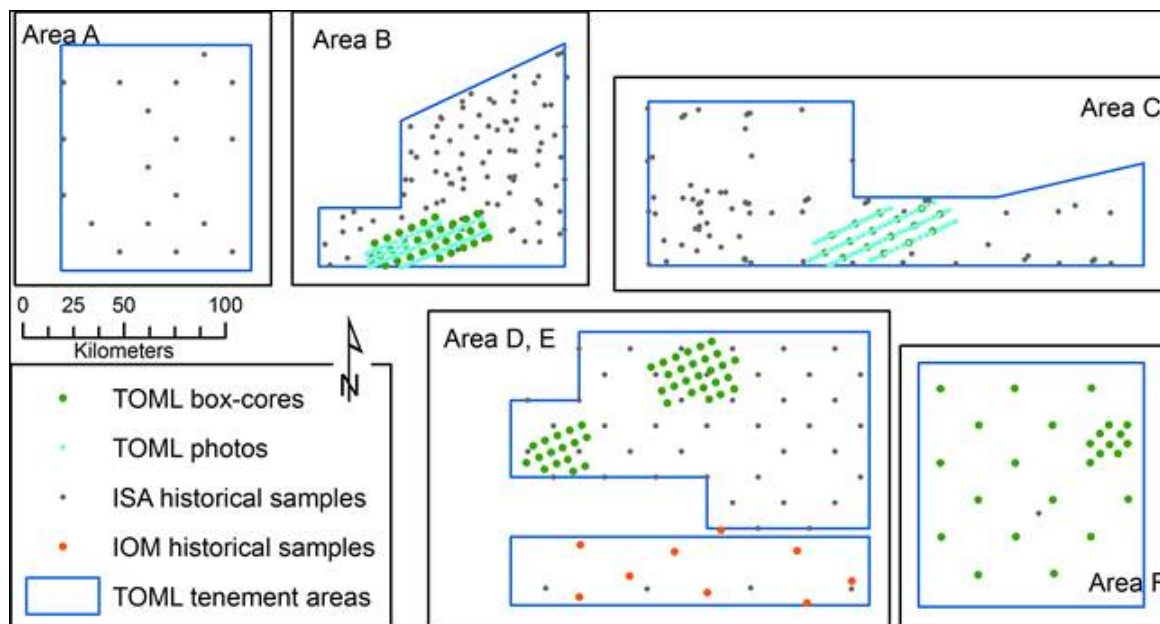

Table 11.1 Minimum and maximum UTM coordinates for each TOML Exploration Area

TOML Exploration Area	Easting		Northing		UTM Zone
	Min (m)	Max (m)	Min (m)	Max (m)	
A	553 976.1	647 191.3	792 205.9	902 969.6	5
B	694 523.4	824 684.8	1 502 007	1 623 606	8
C	284 947.0	544 795.5	1 658 368	1 747 831	9
D	247 296.3	437 027.2	1 451 032	1 557 860	10
E	246 691.9	436 798.9	1 409 560	1 447 514	10
F	289 837.4	410 806.1	1 093 913	1 225 830	11

The historical and recent TOML data were combined into a single data set and checked for anomalous or erroneous values. The 0 assay values in the historical data represent absent data and were reset to absent value where abundance is recorded as 0, and to 0.01 where abundance is greater than 0.

### 11.2.2 Sample statistics

The descriptive statistics of the nodule sample data are listed in Table 11.2 to Table 11.6. Comparison of the historical nodule samples within the TOML Exploration Area (Table 11.4) and the recently acquired TOML nodule samples (Table 11.5) indicate slightly higher mean grades for Abundance, Mn, Ni and Cu, and slightly lower Co for the TOML samples.

Table 11.2 Statistics of all samples within the TOML Exploration Areas

Variable	Samples	Missing	Min (%)	Max (%)	Mean (%)	Var	CV	Median
Abundance	527	9	0	30.77	9.50	43.088	0.69	8.79
Mn	338	198	6.54	33.79	27.91	13.426	0.13	28.9
Ni	338	198	0.33	1.55	1.26	0.034	0.15	1.31
Cu	338	198	0.22	1.51	1.09	0.046	0.2	1.16
Co	338	198	0.02	0.35	0.23	0.002	0.21	0.23

Var = variance; CV = coefficient of variation

Declustering weights were calculated and applied to the nodule sample data to assess the potential bias in the descriptive statistics that can arise from clustering of sample data. Table 11.3 lists the declustered nodule descriptive statistics for all samples within the TOML Exploration Area. Declustering the data resulted in a slight increase in the mean of Abundance, but no significant change for Mn, Cu and Co indicating that the statistics are not significantly affected by clustering.

Table 11.3 Declustered statistics of all polymetallic nodule samples within TOML Exploration Area

Variable	Samples	Missing	Min (%)	Max (%)	Mean (%)	Var	CV	Median
Abundance	527	9	0	30.77	10.20	39.35	0.61	9.16
Mn	338	198	6.54	33.79	28.09	10.414	0.11	28.71
Ni	338	198	0.33	1.55	1.26	0.03	0.14	1.31
Cu	338	198	0.22	1.51	1.11	0.045	0.19	1.16
Co	338	198	0.02	0.35	0.22	0.003	0.24	0.22

Var = variance; CV = coefficient of variation

Table 11.4 Statistics of historical samples within the TOML Exploration Areas

Variable	Samples	Missing	Min (%)	Max (%)	Mean (%)	Var	CV	Median
Abundance	253	9	0.03	26.0	8.82	27.134	0.59	8.09

Table 11.6 Statistics of TOML photo samples within the TOML Exploration Areas

Variable	Samples	Missing	Min (%)	Max (%)	Mean (%)	Var	CV	Median
Abundance	161	0	0	30.77	8.65	45.745	0.78	8.78

Var = variance; CV = coefficient of variation

Figure 11.7 Histogram and log-probability plot of Abundance for all samples within TOML Exploration Areas

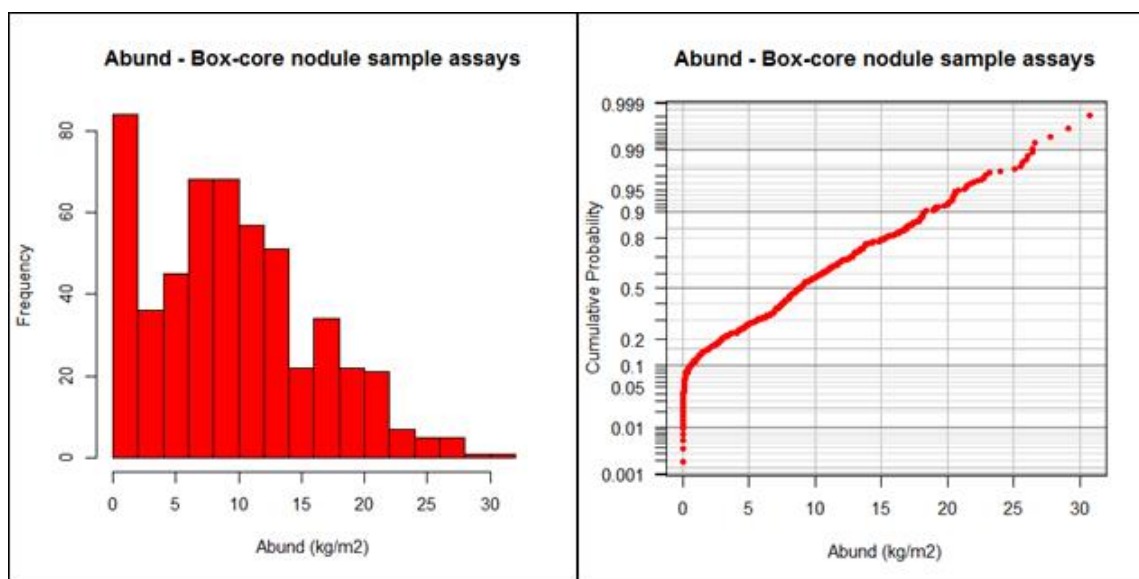

Figure 11.8 Histogram and log-probability plot of Mn for all samples within TOML Exploration Areas

Figure 11.9 Histogram and log-probability plot of Ni for all samples within TOML Exploration Areas

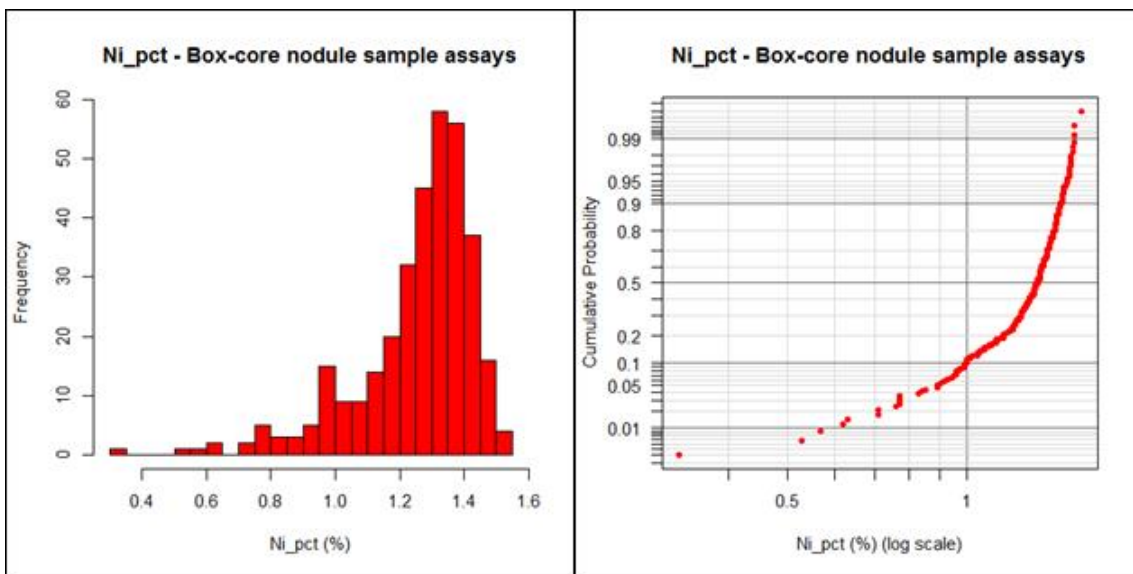

Figure 11.10 Histogram and log-probability plot of Cu for all samples within TOML Exploration Areas

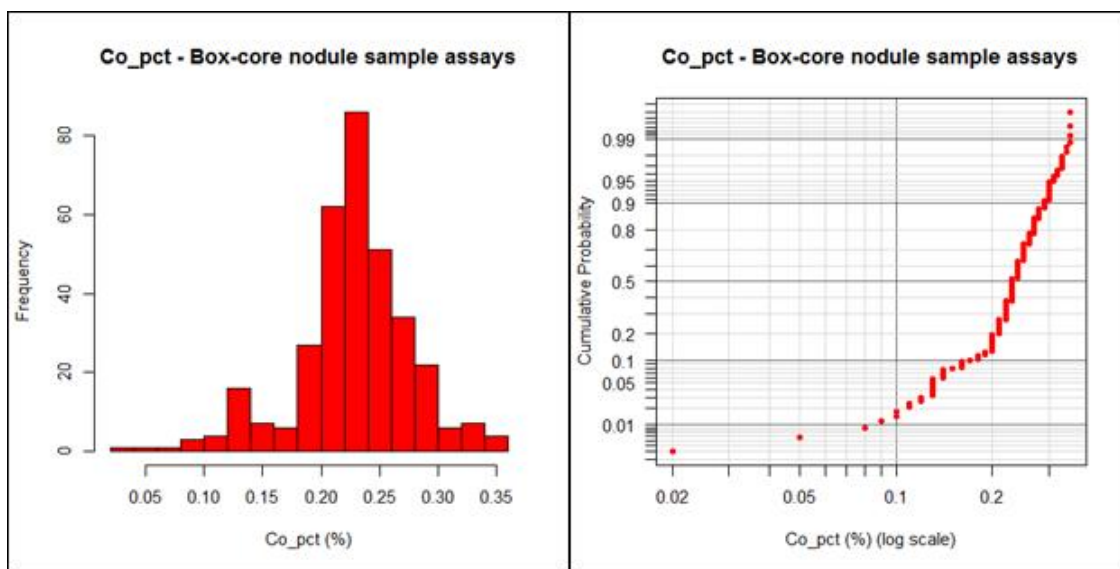

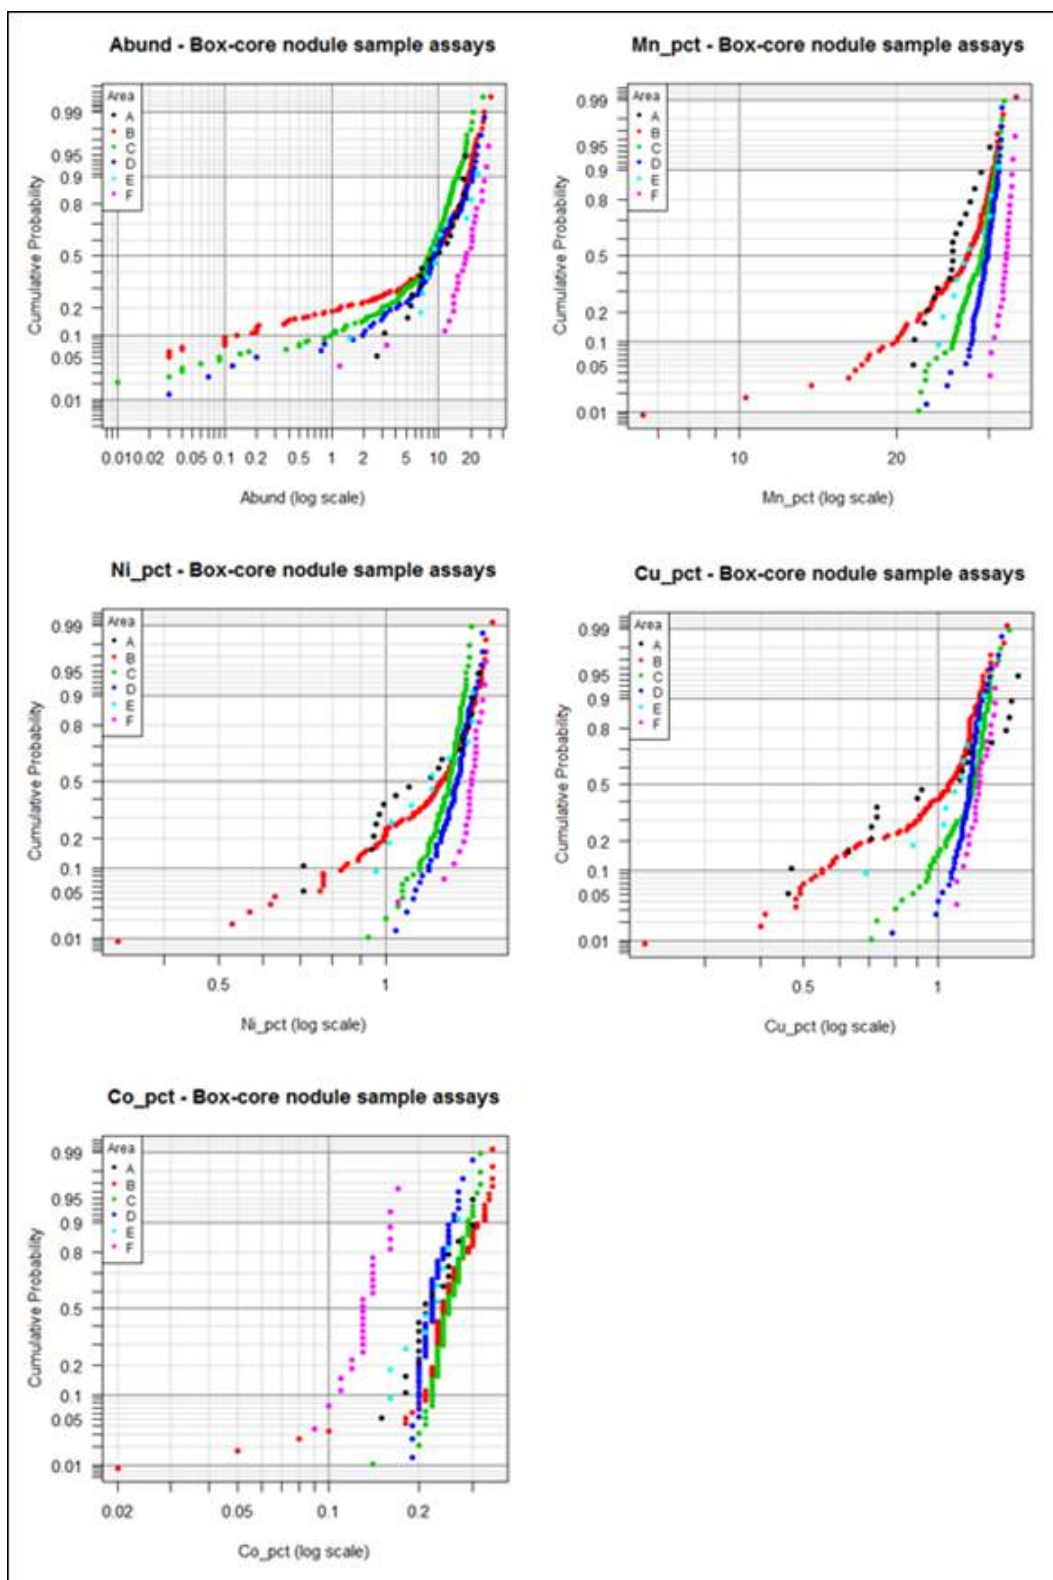

Figure 11.11 Histogram and log-probability plot of Co for all samples within TOML Exploration Areas

The log-probability plots (Figure 11.12) for Abundance, Mn, Ni, Cu and Co by TOML Exploration Area indicate variations in the grade distributions between the areas (note regional grade variations illustrated in Section 6). The distributions for Ni and Cu for samples in TOML Exploration Areas A, B and E are different than the samples in Areas C, D and F. This feature is also present in the full CCZ data set and is interpreted to be due to regional-scale geological differences. Nodule samples from Area F show significantly lower Co than samples from all the other areas while Mn shows a gradual increase from Areas A and B through to Area F.

Figure 11.12 Log-probability plots for Abundance, Mn, Ni, Cu and Co by TOML Exploration Areas

Box plots provided in Figure 11.12 clarify the differences in assays between TOML Exploration Areas. These plots also reveal that the variance in Ni and Cu is higher for TOML Exploration Areas A and B then the other areas. Also, Area E shows higher Ni variance similar to Area A and B. Area F appears to have anomalously high Mn with a much lower variance then all other areas. Area F appears to also have higher median Ni and Cu and significantly lower Co values.

Box-plots summarising molybdenum and the light and heavy rare earth elements are provided in Figure 11.14 to Figure 11.16. At this stage reasonable prospects of economic extraction have not been demonstrated for these elements and so they have not been estimated as part of the Mineral Resource.

Figure 11.13 Box-plots for Abundance, Mn, Ni, Cu and Co by TOML Exploration Areas

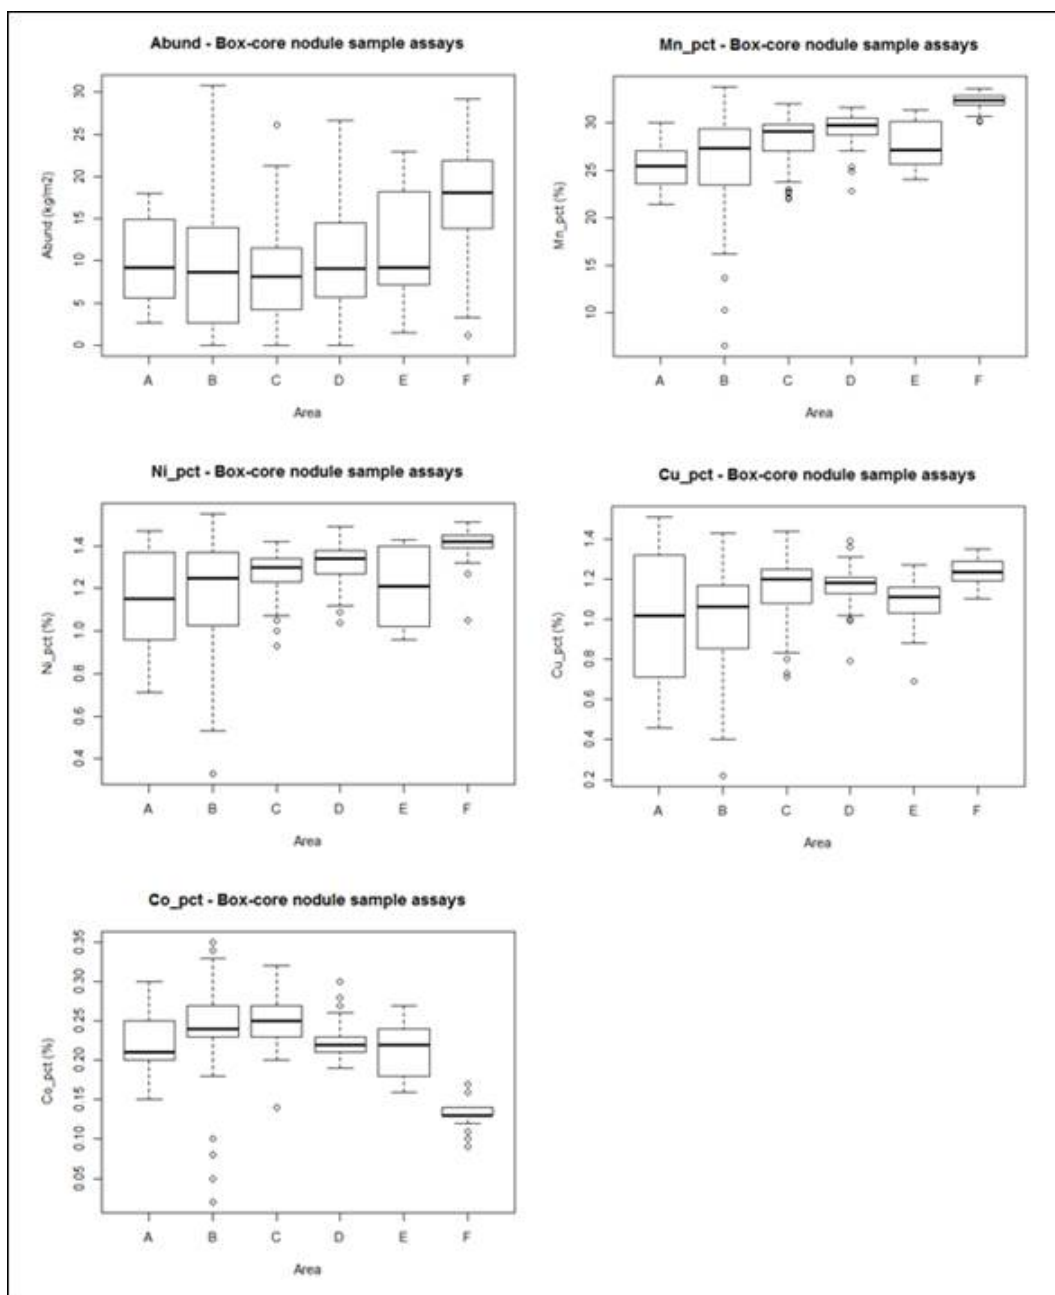

Figure 11.14 Box-plot of Mo for sample data within the TOML Exploration Areas

Figure 11.15 Box-plot of light rare earth elements for sample data within the TOML Exploration Areas

Figure 11.16 Box-plot of heavy rare earth elements for sample data within the TOML Exploration Areas

The coefficients of variation are very small for nodule Abundance, Mn, Ni, Cu and Co suggesting that the application of top-cuts is not necessary. Also, the approximate natural limits for absorption of the Ni (~6.02%), Cu (~8.03) and Co (~6.60%) metals, suggested in the study by Novikov and Bogdanova (2007), are significantly higher than the maximum values (Ni=1.55%, Cu=1.51%, Co=0.35%) in the data. This suggests that all the Ni, Cu and Co values are within natural limits.

The presence of outliers (or 'extreme' values) was assessed by examining the summary statistics and probability plots. No outliers were detected.

Top cuts were not applied to the data prior to grade estimation.

### 11.2.3 Representativeness of sampling

In-fill box core sampling by TOML in 2015 confirmed the presence of nodules at similar grade and abundance to the wider spaced historical sampling. A comparison between the mineral resource estimates is further below.

TOML also collected continuous sea floor photo profiles along three (3) lines in Area B and four (4) lines in Area C.

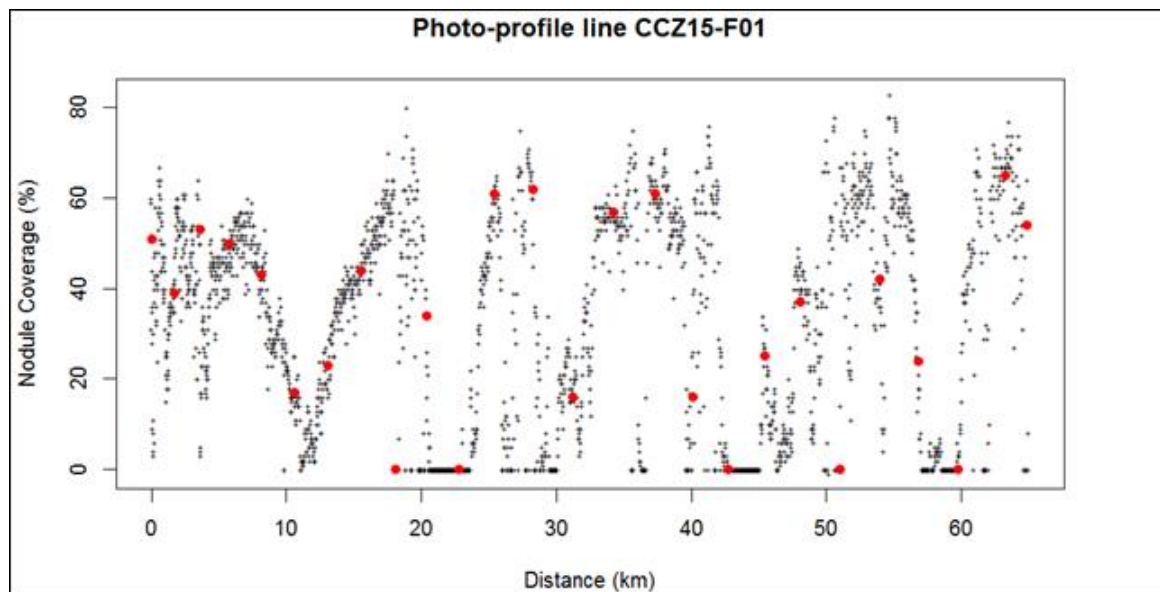

From these photos it is possible to derive the percent of nodule coverage using automated image processing techniques. The percent nodule coverage is the amount of image pixels identified as nodules divided by the total number of pixels in the photo. It is also possible to use the long-axis estimation method for determining nodule abundance. However, this method is time consuming to process a single image as the long axis of every nodule is picked manually. An accurate, repeatable and robust automated computer implementation of LAE is being developed by a Nautilus contractor and is currently in the prototype stage.

The nodule percent coverage estimated from the sea floor photos shows a positive correlation with nodule abundance (Figure 11.20). Nodule percent coverage can be used as a proxy for nodule abundance although it is at best a moderate estimator (Figure 11.20).

Plots of the nodule percent coverage for the three lines that cross the TOML Exploration sub-area B1 are shown in Figure 11.17 to Figure 11.19.

These plots show the presence of nodules between box-core locations. Note that the average distance between each photo is approximately 25 m and ranges from 5 m to 79 m.

Figure 11.17 Photo-profile line CCZ15-F01 that crosses Area B1 Mineral Resource

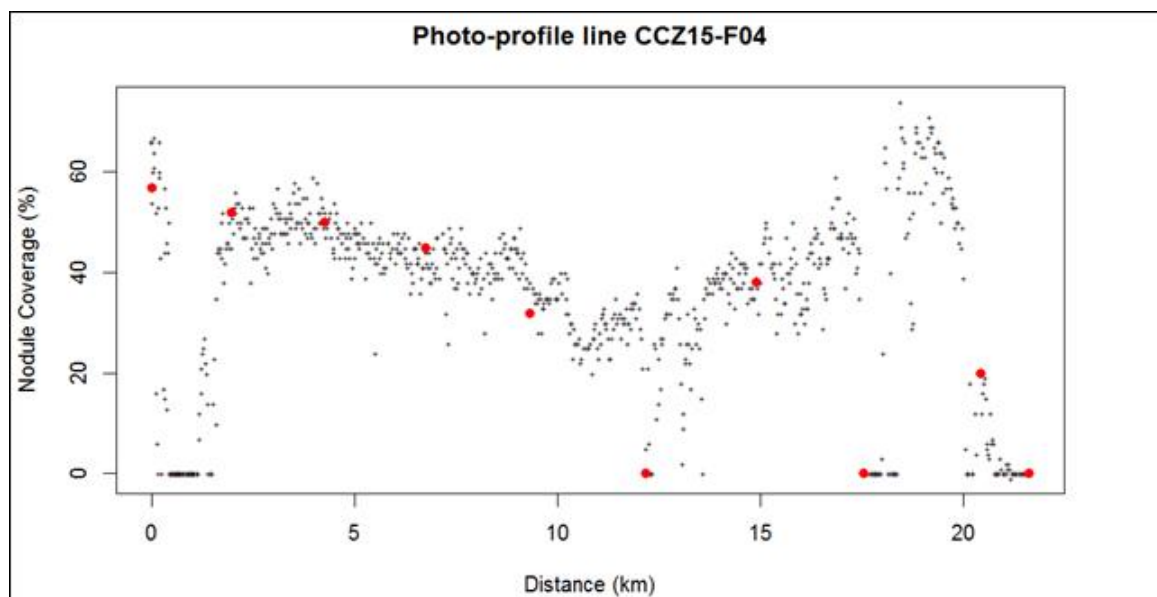

Red dots – nodule coverage for seafloor photos which were used in the manual estimate of abundance using the long-axis estimation method and used in the Mineral Resource estimate. Black dots – nodule abundance for all other seafloor photos.

Figure 11.20 Comparison of nodule percent coverage against nodule abundance

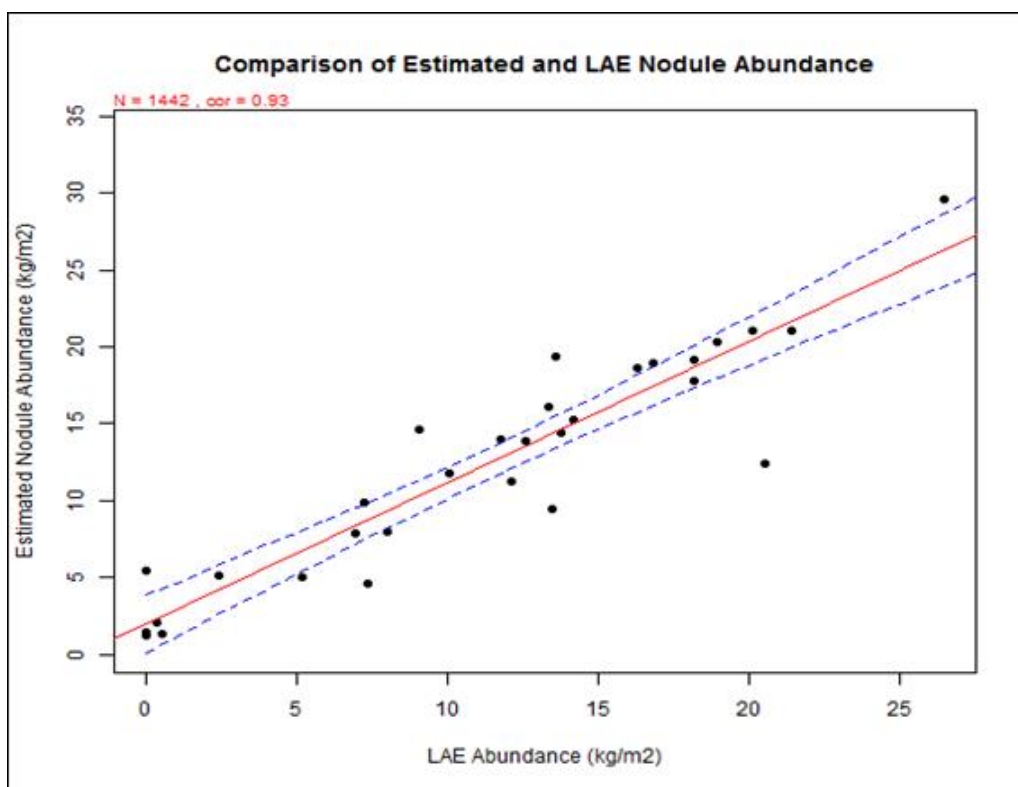

A total of 2754 seafloor photos from the photo profile lines CCZ15-F01, CCZ15-F02 and CCZ15-F04, using an image analysis program to estimate the long axis dimensions of nodules in the photos. These photo-profile lines cover the Measured Mineral Resource area within TOML sub-area B1. The long axis estimates were then used to estimate the nodule abundance for each photo. This data was not required or used in estimation of the Mineral Resource, but they do support it.

There is very good agreement between the nodule abundance estimated from automated analysis of the seafloor photos and the nodule abundance estimated from manual measurement of the nodule long-axis (Figure 11.21). Refinement of the automated method is likely to result in even better correlation with the manual method. The benefit of the automated method is reduced time in processing each image which enables more images to be processed. This will enable almost complete mapping of nodule abundance within selected areas prior to nodule harvesting and can be used in a grade control system.

Figure 11.22 to Figure 11.24 show plots of the nodule abundance estimated from the seafloor photos. Note that the distance between each photo is approximately 30 m.

Figure 11.21 Comparison of nodule abundance estimated from photos against nodule abundance estimated manually using the long-axis estimation method

The red line is the fitted linear regression. The blue dashed lines are the 95% confidence intervals for the linear regression model.

 Black dots – nodule abundance for all other seafloor photos.

Polymetallic nodule grades (Table 11.2) within the CCZ have very low coefficients of variation which indicate a low risk in estimating grades and that ordinary kriging is an appropriate technique to use for estimation. The dredge sampling programme conducted by TOML on polymetallic nodules during their 2013 campaign, included analysis of multiple individual nodules taken from each dredge sample. It confirmed the very low variance in the nodule grades at the local scale.

Variograms of the polymetallic nodule grades of Mn, Ni, Cu and Co within the TOML Exploration Area show reasonable spatial continuity with ranges greater than the average sample spacing. The long variogram ranges for the nodule grades reflect the very large-scale diffuse distribution of metals within the ocean water column and that the manganese acts like a sponge absorbing the metals. The variogram for abundance, on the other hand, has significantly shorter ranges. This reflects the mechanism of nodule formation and the less continuous distribution of nodules.

The Qualified Person considers that the box-core and free fall grab sample spacing within the TOML Exploration Areas A to F are sufficient to demonstrate continuity of Mn, Ni, Cu and Co. The addition of photo profiling enables confidence in the continuity of nodule abundance and can be reasonably assumed on the basis of the scale of the deposit and the mechanisms of nodule formation.

### 11.3 Geostatistics

#### 11.3.1 Nodule sample variography

All manganese nodule samples (historical box-core and free fall-grabs, TOML box-core and photos) within the TOML Exploration Area were combined and used for analysis of spatial continuity (autocorrelation). The experimental semi-variograms were scaled to the population variance. Variogram maps (Figure 11.30) were calculated for the purpose of determining the direction of greatest continuity.

Spherical semi-variogram models were fitted to the experimental variograms using two structures (Table 11.7). Where possible, consistent parameters were used between the fitted variogram models for each direction and each of the variables. This was done to ensure element relationships or correlations evident between samples are respected implicitly during estimation and reflected in the resource estimate. Also, the same type of variogram model was fitted to the experimental semi-variograms.

The directions of greatest continuity deduced from the variogram maps appears to be approximately 150° and 060°. Abundance and Cu show no anisotropy in the variogram ranges while Mn and Ni appear to show greater continuity in the 150° and Co shows greater continuity in the 060° direction. The 060° direction is roughly parallel to the broad regional trend of the CCZ and the 150° direction is parallel to the abyssal hills. Smaller scale local trends oriented parallel with bathymetry ridges are not visible in the wide spaced data.

The variogram models listed in Table 11.7 were used in estimating the values for nodule abundance, Mn, Ni, Cu and Co.

Table 11.7 Variogram models

Variable	Nugget		Spherical Structure 1		Spherical Structure 2			Anisotropy Ratio
	C0	C1	Range H1		C1	Range H2		
			060° (km)	150° (km)		060° (km)	150° (km)	
Abundance	0.40	0.60	5	5	–	–	–	1.0
Mn	0.21	0.37	5	10	0.42	15	30	0.5
Ni	0.21	0.37	5	10	0.42	15	30	0.5
Cu	0.21	0.37	22	22	0.42	70	70	1.0
Co	0.21	0.37	22	16	0.42	70	50	0.714

### 11.3.2 Variography of nodule coverage estimated from photo profiles

The continuity of nodule abundance as measured by the abundance variograms was checked by using the photo profile data.

The omni-directional and 060° directional variograms (Figure 11.31) for the percent nodule coverage estimated from the sea floor photos are similar to the box-core variograms. The range of percent nodule coverage is slightly shorter than the box-core samples. The large number of close spaced photos allows for a better estimate of the very short-range spatial variability and nugget. The percent nodule coverage semivariance starts at 0 (nugget) and quickly rises to the same semivariance value (between 0.5 and 0.6) as the first point on the box-core nodule abundance variogram. This suggests that the nugget for nodule abundance is close to 0 and that the first variogram structure has a sill of approximately 0.38 at a range of 1,000 m.

Also interesting is the periodic effect (hole effect) evident in the sill at ranges of approximately 7.5 km and 15 km which may be related to the spacing between the abyssal hills.

Figure 11.31 Omni-directional and 060° directional variograms for percent nodule coverage estimated from sea floor photos

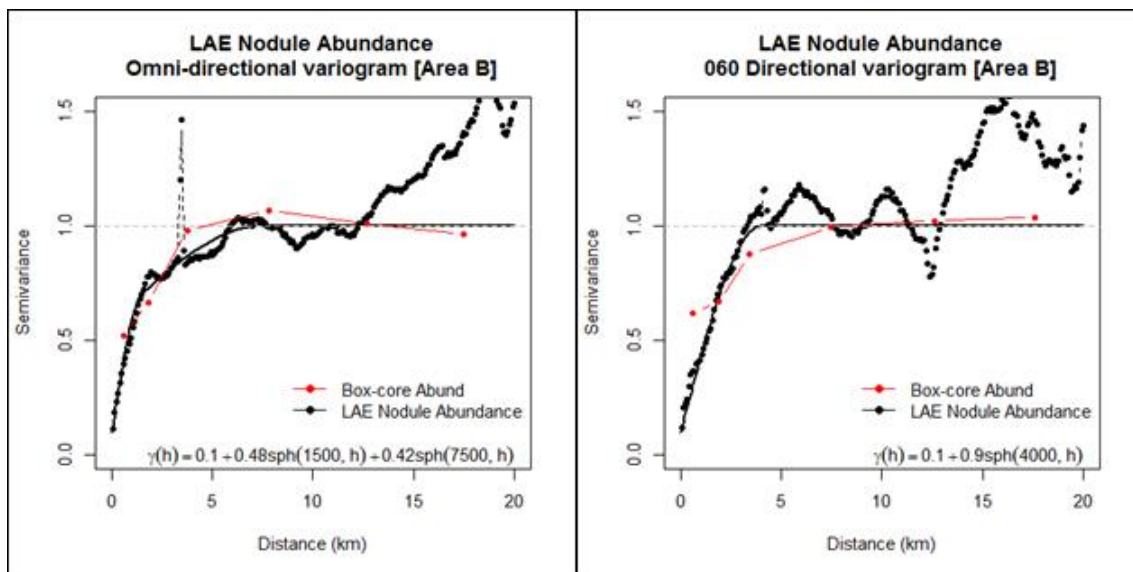

### 11.3.3 Variography of the estimated nodule abundance from the photo profile lines

The nodule abundance data automatically estimated from the seafloor photos using the LAE method were used to check the continuity of nodule abundance and compared with the variograms from the exploration sample data.

Compared with the nodule percent coverage variograms (Figure 11.31), the LAE nodule abundance omni-directional variograms show a slightly longer range of 7500 m. The same periodic effect (hole effect) evident in the percent nodule coverage variograms is also present in the 060° directional variogram while the omni-directional variogram hints at the presence of a long-range trend in the data. The omni-directional variogram is very similar to the nodule sample variogram but again shows a very low nugget variance.

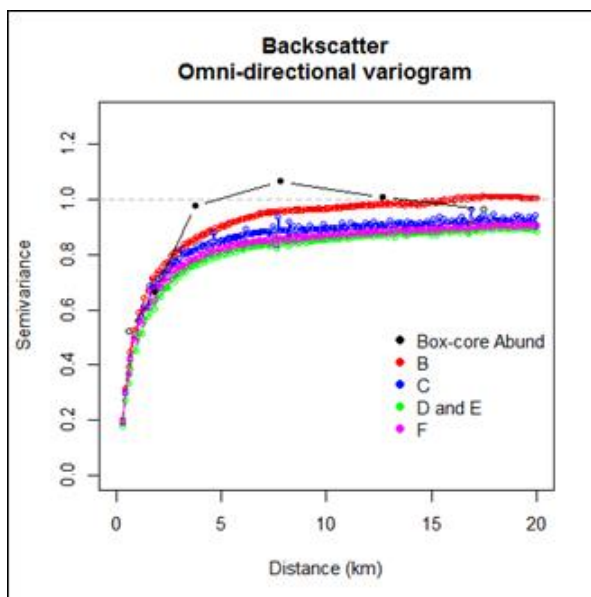

Figure 11.32 Omni-directional and 060° directional variograms for nodule abundance estimated using the LAE method from sea floor photos

#### 11.3.4 Variography of the backscatter data

The backscatter data shows limited correlation with abundance but, in a broad sense, can be used to delineate zones of nodules from zones with very low to no nodules (the no nodule (NON) domain). Omni-directional variography (Figure 11.33) of the backscatter values indicate spatial variability that is consistent with the nodule sample data. The omni-directional variogram of the nodule sample data has a shorter range than the backscatter variograms but with similar very short range spatial variability. Interestingly Area B has the shortest range of the backscatter variograms and Area D and E have the longest.

Figure 11.33 Omni-directional variograms for backscatter values

#### 11.4 Geological block model

Six block models were constructed, one for each TOML Exploration Area (A through to F). Each model was blocked according to the data spacing. Blocks of 1.75 km by 1.75 km were used to fill the areas tested by box core and photo profiles on a 3.5 km by 3.0 km grid (Measured Mineral Resource). Blocks of 3.5 km by 3.5 km were used to fill areas tested by box core sampling on a nominal spacing of approximately 7 km by 7 km (Indicated Mineral Resources), while the remainder were filled with blocks of 7.0 km by 7.0 km (Inferred Mineral Resources). Sub-cells with dimensions of 0.875 km by 0.875 km were used to accurately represent the boundaries of the TOML Exploration Areas, the areas interpreted to contain no nodules and the boundaries between Measured and Indicated.

The total area of the block model is 74 683 km<sup>2</sup> which is 99.96% of the actual total area of the TOML Licence Areas of 74 713 km<sup>2</sup> (Table 11.8). This indicates that the sub-blocks were adequate for approximating the licence boundaries.

Table 11.8 Comparison of model areas and actual licence areas

Area	Actual Area (m <sup>2</sup> )	Model Area (m <sup>2</sup> )	Percent Difference
A	10 280.560	10 309.141	0.278
B	9 966.266	9 950.062	-0.163
C	15 763.385	15 785.656	0.141
D and E	22 882.804	22 843.953	-0.170
F	15 819.900	15 794.078	-0.163
All	74 712.915	74 682.891	-0.04

#### 11.5 Mineral Resource estimation

Ordinary Kriging (OK) was used to estimate Abundance, Mn, Ni, Cu and Co into the block model. Grades were estimated on a parent block basis using block discretisation of 5 by 5 by 1. Grades were also estimated using Nearest Neighbour (NN) and Inverse Distance (IDW) to the power of 2 for validation of the OK estimates. Blocks and sub-blocks within the NON domain were set to zero.

Three separate estimation passes were run, one for each parent cell size (Mineral Resource classification). The estimates for Measured and Indicated Mineral Resource used a search range of 30 km while for Indicated and Inferred a search range of 70km was used. A minimum of 1 and a maximum of 3 samples were allowed per octant search with a maximum of 8 samples per estimate.

The global Mineral Resource estimate is listed in Table 11.9 and the grade tonnage curves are shown in Figure 11.34. At abundance cut-offs of 7 kg/m<sup>2</sup> or less the tonnage and grade are relatively insensitive. Above 7 kg/m<sup>2</sup>, global tonnage declines rapidly.

Figure 11.35 through to Figure 11.39 show sample locations on estimated block grades for Ni, Cu, Co, Mn and Abundance within the TOML Exploration Areas A to F. The figures indicate that for Ni, Cu, Co, Mn and Abundance there is continuity at ranges (40 to 80 km) several times greater than the average sample spacing. The patterns in distribution appear consistent between Ni, Cu, Co, and Mn reflecting the homogenous nature of the nodule chemistry across the TOML Exploration Area.

### 11.6 Cut-off grade

Due to the extremely low variance in the grades and the high metal content of the nodules, a conventional cut-off based on grades is not relevant to definition of the Mineral Resources. A cut-off based on abundance is a more effective basis for determining the limits of economic exploitation. A cut-off of 4 kg/m<sup>2</sup> abundance was chosen for the TOML Area, based on the estimates of costs and revenues presented in the Initial Assessment (IA) of the Mineral Resource contained in NORI Area D (AMC, 2021). The polymetallic nodule deposits in NORI Area D are similar to those in TOML Areas A through F and the QP considers that the proposed development of NORI Area D is a reasonable analogue for future development in the TOML Areas. Further details are presented in Section 11.9 of this report.

The metal prices assumed in the calculation of the cut-off were: nickel metal US\$16,472/t; nickel in nickel sulphate US\$18,807/t Ni; copper metal US\$6,872/t; cobalt metal US\$46,333/t; cobalt in cobalt sulphate US\$56,920/t Co; manganese in manganese silicate US\$4.50/dmtu. The price estimates are long term (2034–2046) forecasts provided in a report by CRU International Limited (CRU, 2020). The QP considers that this timeframe is reasonable in view of the likely time required to bring the majority of the TOML Mineral Resources into production.

### 11.7 Mineral Resource classification

Classification of the Mineral Resource into Measured, Indicated and Inferred categories, in accordance with SEC Regulation S-K (subpart 1300), considered: the nodule sample quality, uncertainty in the nodule sample abundance and grades, continuity of nodule abundance and grade and scale of the deposit.

- Inferred Mineral Resource classification was based on sampling by Pioneer Contractors on a nominal spacing of 20 km, the variation and uncertainty in the sample quality, and the likely presence of short-range variation to nodule abundance.
- Indicated Mineral Resource classification was based on box core sampling by TOML on a nominal spacing of approximately 7 km by 7 km (including photo profiling in some cases at 7 km by 3 km), supplemented by sampling by Pioneer Contractors.
- Measured Mineral Resource was based on box core sampling by TOML on a nominal spacing of approximately 7 km by 7 km plus photo-profiling on a nominal spacing of 3.5 km by 3.0 km, supplemented by sampling by Pioneer Contractors.

Table 11.9 Mineral Resource Estimate for the TOML Exploration Area within the CCZ at a 4 kg/m<sup>2</sup> nodule abundance cut-off

Mineral Resource Classification	Tonnes (x10 <sup>6</sup> wet t)*	Abundance (wet kg/m <sup>2</sup> )	Ni (%)	Cu (%)	Co (%)	Mn (%)
Measured	2.6	11.8	1.33	1.05	0.23	27.6
Indicated	69.6	11.8	1.35	1.18	0.21	30.3
Measured + Indicated	72.2	11.8	1.35	1.18	0.21	30.2
Inferred	696	11.3	1.29	1.14	0.20	29.0

\*Variations in totals are due to rounding of individual values

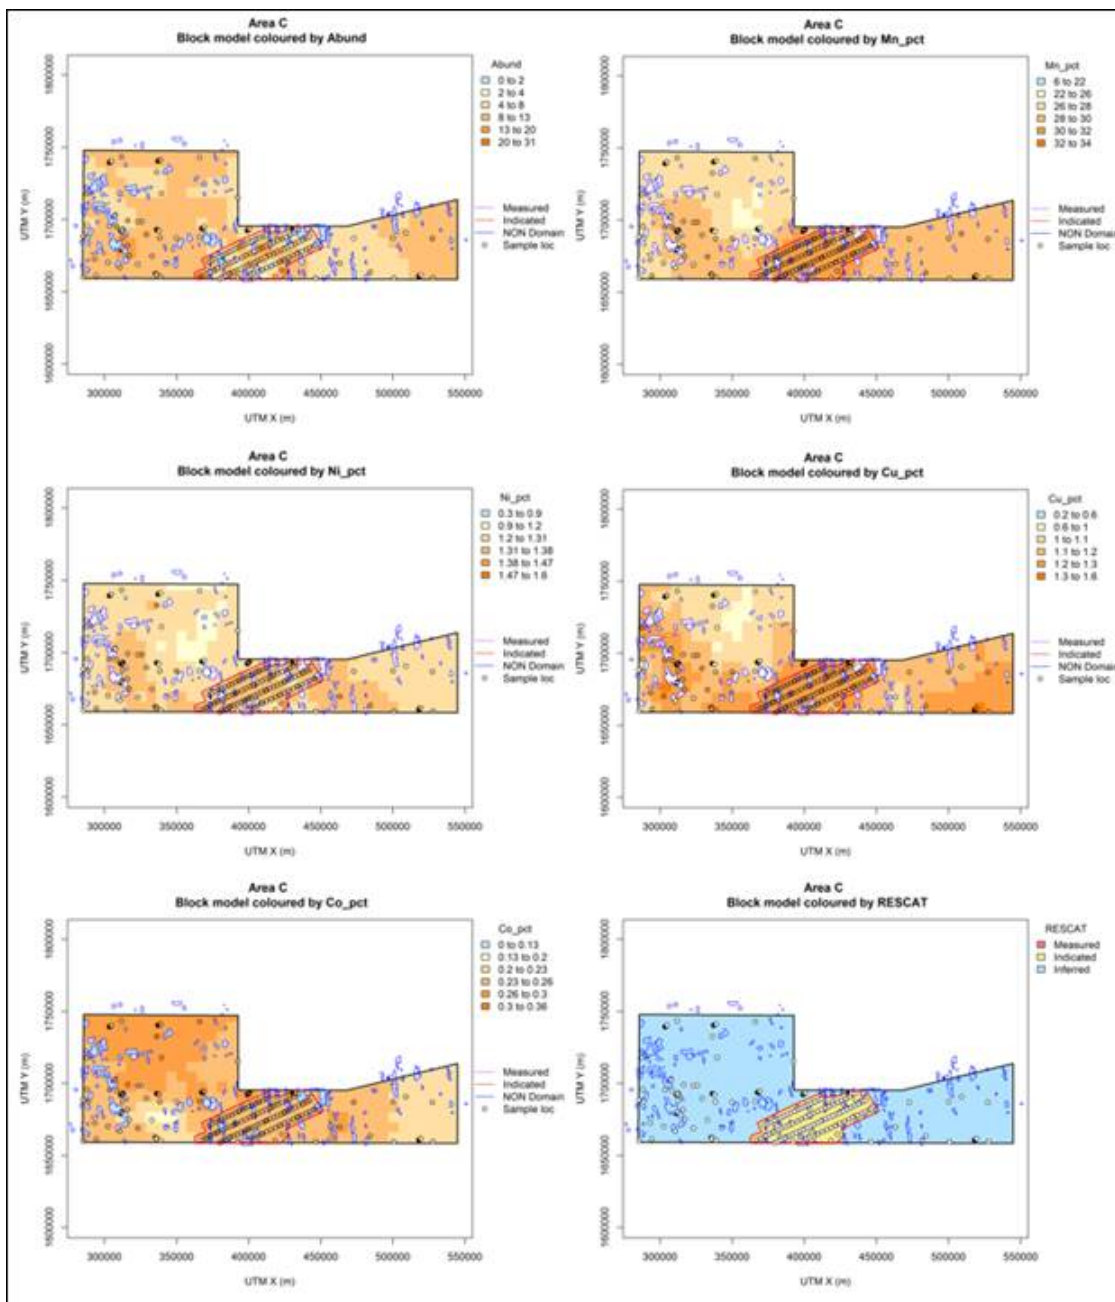

Figure 11.38 Map showing block model and sample distribution for Abundance Mn, Ni, Cu and Co in TOML Area D and Area E

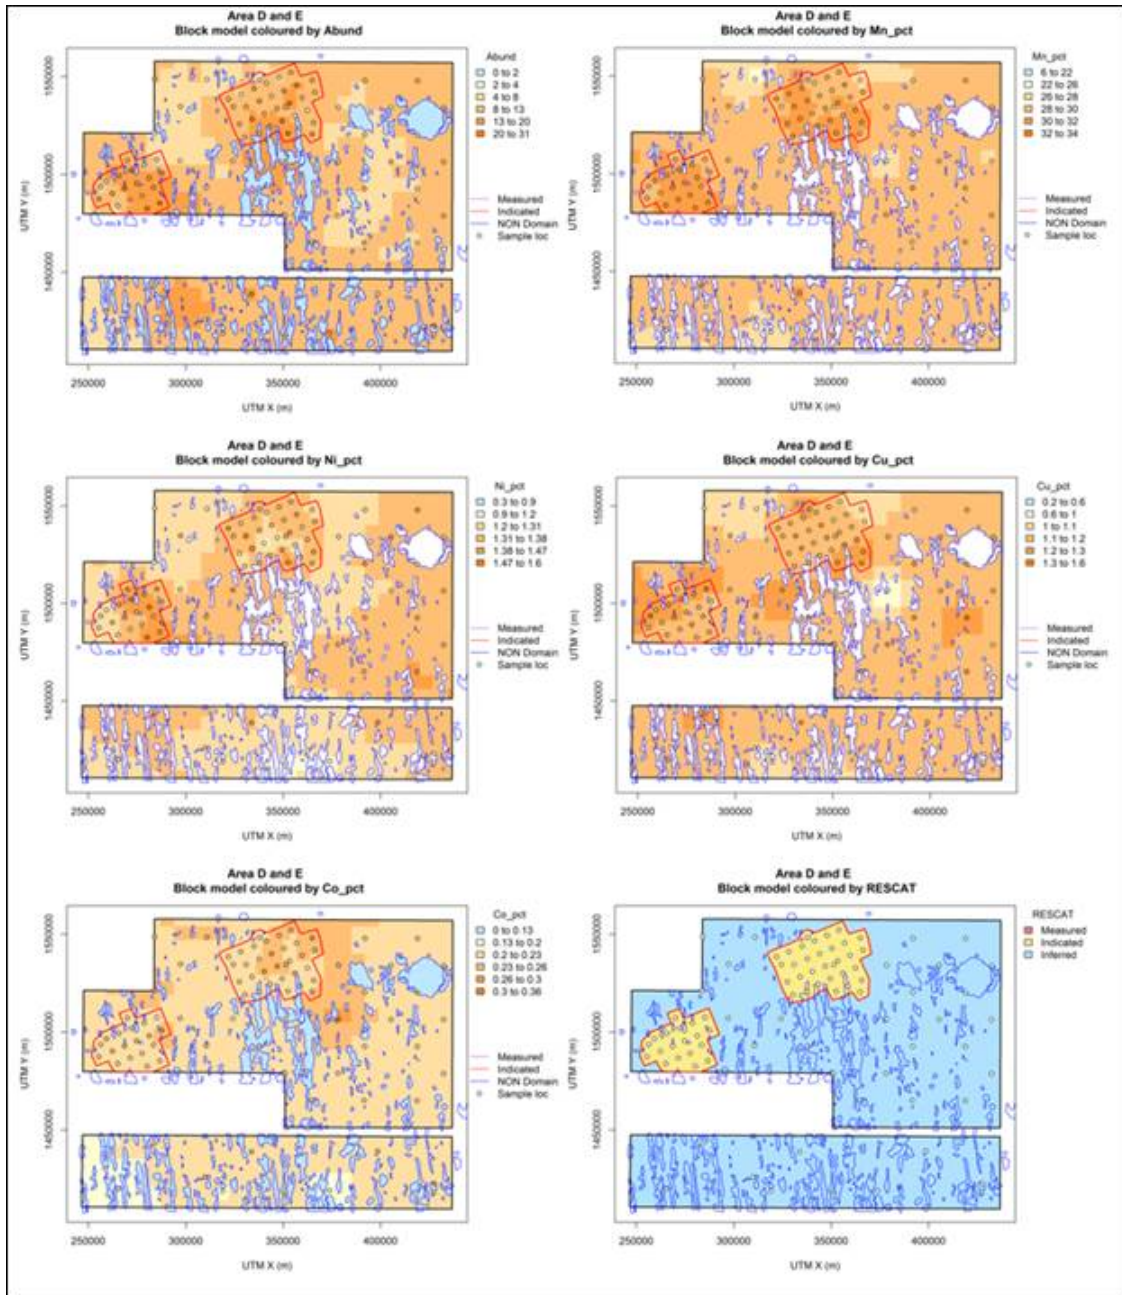

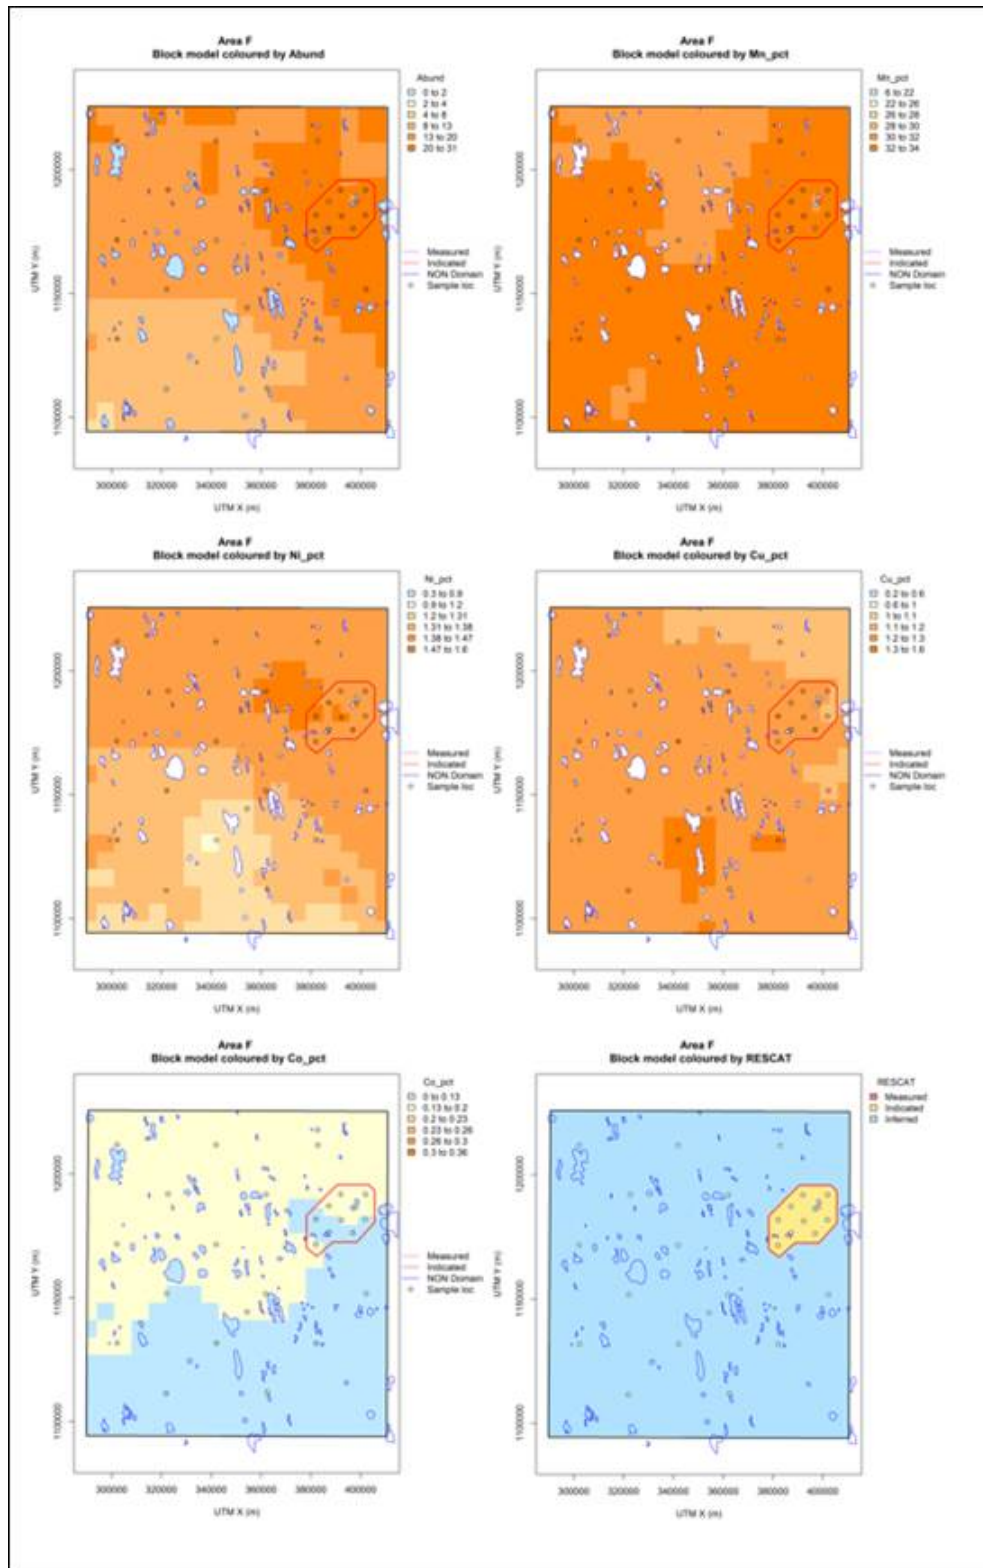

Figure 11.39 Map showing block model and sample distribution for Abundance Mn, Ni, Cu and Co in TOML Area F

The Mineral Resource model was validated by comparing the global mean and variance of the model against alternative nearest neighbour and inverse distance weighting estimates and the declustered samples. The comparative data for abundance, Mn, Ni, Cu and Co are presented in Table 11.10. The mean grades compare favourably and the expected variance reduction is observed, indicating that the estimate is satisfactory.

Table 11.10 Global mean and variance comparison (excluding NON domain, model cells weighted by volume)

		Declustered Samples (N=476 Abund) (N=315 Metals)	Model (N=14939)		
			NN	IDW	OK
Abundance (wet kg/m <sup>2</sup> )	Mean	10.39	10.78	10.98	11.33
	Variance	38.19	36.29	26.86	16.56

	Variance	0.003	0.003	0.003	0.002

### 11.8 Comparison with previous Mineral Resource estimate

The initial global Inferred Mineral Resource for the TOML Exploration Areas was reported on 20 March 2013 by Golder Associates (Golder Associates, 2013). Table 11.11 shows the 2013 Mineral Resource estimate at a 4 kg/m<sup>2</sup> abundance cut-off.

The changes in the 2020 Mineral Resource estimate for the TOML CCZ Exploration Areas are due to:

- Inclusion of Areas E and F for the first time. High abundances and grades in Area F.
- Additional nodule abundance sample information (from box core and photo profile) collected during the 2015 Campaign.
- Setting the abundance estimates within the NON (no nodule) domain to zero in areas covered by MBES (TOML Areas B, C, D, E, F).
- Use of ordinary kriging (rather than inverse distance weighting) supported by short-range variogram to estimate abundance.
- Changes in block model parent cell size related to improved sample spacing.

The biggest change to the estimate is the inclusion of Areas E and F. In order to understand the impact of the other changes, the 2020 Mineral Resource estimate only for TOML Areas A to D, is shown in Table 11.12. The change from inverse distance weighting to ordinary kriging and the changes to block model parent cell size are unlikely to have any significant impact on the overall estimates. The differences between the 2013 and 2020 estimates for Area A to D are therefore likely to be mainly due to the additional sampling in 2015 and excising the NON domain from the estimates.

Comparison of Table 11.11 and Table 11.12 shows that the additional data has increased the total Mineral Resource tonnage by 3%. In the areas with the most new data (the Indicated and Measured areas), abundance and grades are all higher in the new model than the 2013 model. These changes show that it is reasonable to expect that the majority of Inferred Mineral Resources could be upgraded to Indicated or Measured Resources with further exploration.

Table 11.11 2013 Mineral Resource Estimate for the TOML Areas A to D at a 4 kg/m<sup>2</sup> abundance cut-off

Mineral Resource Classification	Tonnes (x10 <sup>6</sup> wet t)	Abundance (wet kg/m <sup>2</sup> )	Ni (%)	Cu (%)	Co (%)	Mn (%)
Inferred	440	8.9	1.2	1.1	0.24	26.9

Table 11.12 Current (2020) Mineral Resource Estimate for the TOML Areas A-D at a 4 kg/m<sup>2</sup> abundance cut-off

Mineral Resource Classification	Tonnes (x10 <sup>6</sup> wet t)	Abundance (wet kg/m <sup>2</sup> )	Ni (%)	Cu (%)	Co (%)	Mn (%)
Measured	2.6	11.8	1.33	1.05	0.23	27.6
Indicated	57.5	11.0	1.33	1.17	0.23	29.8
Measured + Indicated	60.1	11.1	1.33	1.16	0.23	29.7
Inferred	393.6	9.6	1.22	1.07	0.24	27.1

Additional more-detailed comparisons of the data available in 2013 and the data gathered by TOML in 2015 are provided in Table 11.13 to Table 11.18.

## **11.9 Initial Assessment**

The TOML Mineral Resource estimates are supported by an Initial Assessment carried out on behalf of DeepGreen for the NORI Property (AMC, 2021). The polymetallic nodule deposits in NORI Area D are similar to those in TOML Areas A through F and the QP considers that the proposed development of NORI Area D is a reasonable analogue for future development in the TOML Areas. The NORI Property IA is directly relevant and applicable to the TOML Property for the reasons set out below.

### **11.9.1 Geological setting and mineralisation**

The TOML area and the NORI Property occur within the vast polymetallic nodule field in the Clarion Clipperton Zone of the Pacific Ocean. This mineral field is essentially a single mineral deposit almost 5,000 km in length and up to 600 km wide. The size and level of uniformity of mineralization is unmatched by any mineral deposit of similar value on land. The mechanism of formation of the nodules is interpreted to be essentially identical across the entire CCZ, with only minor local variations. Consequently, there is relatively little difference between the size, shape or metal content of the nodules from one area to another. Figure 6.9 to Figure 6.11 illustrate the remarkable continuity of grades and abundances across the whole of the CCZ.

The morphological features of the seafloor are similar in the TOML and the NORI Areas, which all lie within the Abyssal Plains and are characterized by sub-parallel basaltic lava ridges called abyssal hills. The Areas are punctuated by typically extinct volcanic knolls and seamounts and scattered sediment drifts in which few nodules are preserved at the seafloor.

Figure 11.40 compares nodule shapes, nodule abundance on the seafloor and backscatter imagery from TOML and NORI Areas.

### **11.9.2 Exploration methods**

The exploration methods used to explore and delineate the Mineral Resources in the TOML and NORI areas were essentially the same. MBES was used to determine the depth of water (bathymetry) and the acoustic reflectance (backscatter) of the seabed. Nodule coverage was interpreted using the backscatter data. Physical sampling of the nodules was carried out initially using FFG samplers and in more recent years by BC samplers which provide a better-quality sample. Measurements of nodule abundance obtained from physical samples were supplemented with estimates of abundance made using the LAE method and high-resolution photographs of the seafloor.

### **11.9.3 Sample preparation analysis and security**

The sample preparation and assaying procedures used in the TOML and NORI areas were essentially the same. The Pioneer Investor data lacks some supporting information but all studies to date indicate that the Pioneer Investor data is reliable. In both Areas, high standards of QAQC were applied to the exploration programmes that were carried out by TOML and NORI. The assay data are supported by the results of certified reference materials, duplicate samples, blank samples, and duplicate analyses at a second laboratory. Sample security was of a high standard and the QPs consider that there was negligible risk of interference with the samples.

### **11.9.4 Mineral Resources**

The Mineral Resources in the TOML and NORI areas were estimated using similar methods. Although the average abundances in the TOML Areas are lower than in NORI Area D, they are still well above the 4 kg/m<sup>2</sup> abundance cut-off derived in the IA. Furthermore, as discussed in Sections 7.1.2 and 11.8, the FFG samples tend to underestimate abundance and it is likely that, as the FFG data is progressively replaced with BC data, the estimated abundances in the Mineral Resource will increase.

Figure 11.40 Comparison of nodule shapes, nodule abundance and backscatter imagery from TOML Areas (left) and NORI Areas (right)

### 11.9.5 Mining methods

The commonality between the polymetallic nodule deposits in NORI Area D and the TOML Areas indicates that the methods proposed for the development of NORI Area D can reasonably be assumed to be equally relevant for future development in the TOML Areas. The Technical Report Summary for NORI Area D assessed the following mining development scenario:

*“The main items of off-shore infrastructure are the nodule collector vehicles, the riser, and... production support vessels (PSV).*

*The nodules will be collected from the seafloor by self-propelled, tracked, collector vehicles. No rock cutting, digging, drill-and-blast, or other breakage will be required at the point of collection. The collectors will be remotely controlled and supplied with electric power via umbilical cables from the PSV. Suction dredge heads on each collector will recover a dilute slurry of nodules, sediment, and water from the seafloor. A hopper on each vehicle will separate sediment and excess water, which will pass out of the hopper overflow, from the nodules, which will be pumped as a higher concentration slurry via flexible hoses to a riser.*

*The riser is a steel pipe through which nodules will be transferred to the surface by means of an airlift. The riser will consist of three main sections. The lower section will carry the two-phase slurry of nodules and water from the collectors to the airlift injection point. The mid-section will carry a three-phase mixture of slurry and air. This section will also include two auxiliary pipes: one to carry the compressed air for the airlift system, and one to return water from dewatering of the slurry to its subsea discharge point. The upper section of riser will have a larger diameter to account for the expansion of air in the airlift.*

*The airlift works by lowering the average density of the slurry inside the riser to a level lower than seawater. The difference between the hydrostatic pressure of the seawater at depth and the pressure caused by the weight of the low-density three-phase slurry column inside the riser forces the slurry column to rise. The energy to achieve the lift will be supplied by compressors housed on the PSV, which will be capable of generating very high air pressures.*

*The PSVs will each support a riser and lift system (RALS) and its handling equipment, and will house the airlift compressors, collector vehicle control stations, and material handling equipment. All power for off-shore equipment, including the nodule collecting vehicles, will be generated on the PSVs. The PSVs will be equipped with controllable thrusters and will be capable of dynamic positioning (DP), which will allow the vessels and risers to track the collectors. Nodules will be discharged from the RALS to the PSVs, where they will be dewatered and temporarily stored or transferred directly to a transport vessel.”*

The QP considers that this IA supports the view that there are reasonable prospects of economic extraction of polymetallic nodule Mineral Resources in the TOML Areas.

### 11.9.6 Mineral Processing and metallurgical testing

The polymetallic nodules in the TOML and NORI Areas have similar morphological, mineralogical, and grade characteristics. As noted in Section 10, all published historical work indicates that processing of nodules is technically feasible.

The commonality between the polymetallic nodule deposits in NORI Area D and TOML Areas indicates that the methods proposed for the development of NORI Area D can reasonably be assumed to be equally relevant for future development in the TOML Areas. The Technical Report Summary for NORI Area D (AMC, 2021) assessed the following mineral processing scenario:

*“The first part of the pyrometallurgical process is the Rotary Kiln Electric Furnace (RKEF) process that is widely used in the nickel laterite industry. The second pyrometallurgical step (sulphidisation of the alloy produced in the first step to form a matte and then partially conversion in a Peirce-Smith converter to remove iron), while not widely practiced, also has commercial precedent at the Doniambo plant of Societe Le Nickel in New Caledonia.*

*Sulphuric acid leaching of matte from the pyrometallurgical process has precedent in the platinum group minerals (PGM) industry. Although copper producers typically have a solvent extraction step before electrowinning of their copper, direct copper electrowinning is done in most PGM refineries, where nickel and cobalt are also significant pay-metals. This is to maximise nickel recovery and minimise operating expenses. The nickel and cobalt are purified using solvent extraction, ion exchange and precipitation, which are all commercially proven hydrometallurgical processes. Battery grade nickel and cobalt sulphate are then crystallised from the purified solutions.*

---

*The pyrometallurgical process forms two by-products as well as the matte for the hydrometallurgical refinery:*

- *Electric furnace slag containing silica and 53% MnO that is intended to be sold as feed to the Si-Mn industry.*
- *A converter aisle slag that could be used for aggregate in road construction or other applications.*

*The hydrometallurgical refinery generates iron residues that would, for a stand-alone plant, require disposal. However, these streams can be recycled back to the pyrometallurgical plant for re-treatment and recovery of entrained pay metals.*

*Selection of ammonia as a principal reagent in the hydrometallurgical refinery means that an additional by-product—ammonium sulphate—is generated. This could be sold into the fertiliser industry.*

*The copper cathode quality from direct electrowinning, without a solvent extraction step, is expected to be  $\geq 99.9\%$  Cu. Quality of the matte produced in the pyrometallurgical plant will have an impact on this, including the potential carryover of impurities beyond values assumed for the purpose of the IA.*

*The production of battery-grade nickel and cobalt sulphates is targeted instead of nickel or cobalt cathodes or other intermediate products.*

*In summary:*

- *All parts of the proposed process have commercial precedents in similar or analogous industries, however not as a whole continuous flowsheet.*
- *Pay-metals are recovered in the following forms:*
  - *Copper cathodes with an expected quality of  $\geq 99.9\%$  Cu.*
  - *Battery-grade nickel sulphate.*
  - *Battery-grade cobalt sulphate.*
- *Rather than generating large waste streams, the process produces by-products including high manganese content furnace slag and ammonium sulphate.*

*The process assumptions used in this study will need to be verified as the project proceeds.”*

The QP considers that this IA supports the view that there are reasonable prospects of economic extraction of polymetallic nodule Mineral Resources in the TOML Areas.

#### **11.9.7 Infrastructure**

The infrastructure requirements for the development of commercial production in the TOML Areas, apart from the minerals processing facility, will be modest compared to terrestrial resources projects of similar production capacities.

The site and host country for the minerals processing facility has not yet been confirmed. The site must be serviced by grid power, reticulated water, and natural gas. A location will be selected that is close to an industrial port, and near an existing municipality from which labour can be sourced.

As part of the IA for the NORI Area D Project, a preliminary assessment of the transportation fleet for transfer of nodules from the CCZ to an existing deep-water industrial port equipped with bulk offloading facilities was examined (AMC, 2021). The IA assumed that chartered vessels would be used to transport the dewatered nodules to the port of Lazaro Cardenas, Michoacan, Mexico, 960 nm from the NORI Area D reference site. The vessels would be converted bulk mineral carriers with dynamic positioning (DP) to allow tracking behind the production support vessels during operations. The method of offloading, known as tandem offloading, is well established for offloading of oil production vessels in remote areas of the world.

There are no physical or logistical barriers between the TOML and NORI Areas. Their location may simply influence shipping costs.

The QP considers that establishing on-shore infrastructure and transportation of nodules from the TOML Areas to suitable ports are unlikely to be impediments to commercial production from the TOML Areas.

#### **11.9.8 Market studies**

AMC has considered the market for the nickel, copper, cobalt and manganese products that might be recovered from the polymetallic nodules in the TOML Areas.

CRU International Limited (CRU) was commissioned by NORI to provide market overviews for the four main products from the NORI Area D Project: nickel sulphate (NiSO<sub>4</sub>), cobalt sulphate (CoSO<sub>4</sub>), copper, and a manganese product (CRU, 2020).

CRU expects NiSO<sub>4</sub> and CoSO<sub>4</sub> markets to undergo extreme growth from a relatively small current level of 181 kt nickel in sulphate and 35 kt of cobalt in sulphate in 2019, with markets to increase to 138 and 178 times their 2018 sizes respectively to 1.6 Mt nickel in sulphate and 500kt cobalt in sulphate by 2035, with much of this growth occurring post-2025. Electric vehicle production is the driver of this forecast growth.

Copper and manganese markets are forecast to grow by 25% and 20% of their 2020 sizes by 2035 respectively. Copper and manganese demand will benefit from electric vehicle penetration, however the primary driver of growth for manganese ore will be steelmaking, and a variety of end use applications generally related to economic health for copper.

CRU expects copper and NiSO<sub>4</sub> prices to rise in real terms by 2035, while manganese ore and CoSO<sub>4</sub> prices are forecast to remain flat, due to current prices being at or near a high point in the cycle, recent fall in prices, and expected modest growth in the global steel industry after the COVID 19 epidemic. The long-term cost of production is expected to rise for both copper and NiSO<sub>4</sub>, helping to support prices.

#### **11.9.9 Environmental compliance and permitting**

The ISA is mandated through UNCLOS to organize, regulate, and control all mineral related activities in the international seabed Area whilst preserving and protecting the marine environment. As the TOML Areas are in the international seabed Area, the ISA is responsible for assessing any Environmental and Social Impact Assessment prepared by TOML and for granting the relevant contracts. Further details are provided in Section 17.

Between 1998 and 2014, the ISA held workshops and developed a number of documents to provide guidance to contractors with respect to its expectations for responsible environmental management during the exploration and exploitation phases of mineral development. The ISA held a workshop "Towards an ISA environmental management strategy for the Area" over 20-24 March 2017 in Berlin Germany. The results of the workshop were published as ISA Technical Study 17 (ISA 2017).

---

The ISA has issued Regulations on Prospecting and Exploration for Polymetallic Nodules (adopted on 13 July 2000, updated on 25 July 2013). The regulations were complemented by the Legal and Technical Commission (LTC) recommendations for the guidance of contractors on assessing the environmental impacts of exploration (ISBA/25/LTC/6/Rev.1) which was most recently updated on 30 March, 2020. The draft exploitation regulations on deep-seabed mining were discussed at the 25th Session of the ISA (25 February to 1 March 2019 in Kingston Jamaica). The ISA had declared a target of 2020 to have the regulations approved but the COVID-19 pandemic disrupted the ISA program.

Although the environmental impact review process has not yet been finalised, the draft regulations outline the application process and the conditions that Contractors would need to implement during operations. All contractors have been made aware that the ISA requires the completion of the Environmental and Social Impact Assessment (ESIA) studies, culminating in an Environmental Impact Statement (EIS), in support of their applications for an exploitation license. Guidance for contractors in terms of what will be expected in the EIS has been provided in ISA Technical Study No. 10 (ISA 2012a). Further guidance will be provided with the completion of Standards and Guidelines for exploitation activities. The LTC has prioritized the development of six Standards and Guidelines, with three released for public comment in 2020 and the remaining three expected to be released in early 2021. The EIS, along with an Environmental Management System with subordinate Environmental Management and Monitoring Plans (EMMP), will be required as part of the application for an exploitation license within the Contract Area.

The environmental permitting process for the Area has been developed through a consultation program initiated by the ISA in 2013 and includes feedback obtained from multiple stakeholder groups. It is expected to involve a series of checks and balances, with reviews being conducted by the LTC with input from independent experts, as required. The recommendations of the LTC will then go before the ISA Council, which will then review the information provided and decide whether to approve the license application and, if so, what conditions should be applied.

The LTC has recommended seven key areas of information for the development of EIAs. These are physical oceanography, chemical oceanography, sediment properties, biological communities, bioturbation, sedimentation, and geological properties. These will form the key investigation topics for surveys within the Area, including the TOML Areas.

The social impacts of the off-shore operation are expected to be positive. The CCZ is uninhabited by people, and there are no landowners associated with the TOML Areas. No significant commercial fishing is carried out in the area. The Project will provide a source of revenue to the sponsor country, Tonga, and to the ISA.

The on-shore environmental and social impacts have not yet been assessed because the process plant has not been designed in detail, and the location and host country (and hence regulatory regime) not confirmed.

As sponsoring state, Tonga has a responsibility to ensure that TOML's activities in the international seabed area are carried out in conformity with Part XI of UNCLOS.

Under ISA requirements contractors are required to submit five-year work programs. The first TOML five-year work program was completed in 2016 and reviewed and accepted by the ISA in late 2016.

For the second five-year period ending in 2022 TOML proposed the following program.

- Continue environmental baseline work;
- Complete pilot testing;
- Complete geotechnical studies;
- Complete feasibility studies;

- 
- First draft EIA/EMP;
  - Continue training.

TOML noted that the program was:

- Dependent on success at each stage;
- Subject to change based on findings at hand at any particular time; and
- Reliant on funding which in turn is dependent to some extent on macro-economic conditions and development with regards to the Authority and its stakeholders.

As a result of the financial state of the company, TOML did not progress at the rate intended until TOML was purchased by DeepGreen in March 2020. TOML currently plans an aggressive program of offshore campaigns in 2021–2023 focussing on resource assessment and environmental base line studies with the objective of upgrading the TOML F resource area to Indicated Mineral Resource status and completing environmental baseline studies and ESIA for the TOML F resource area.

12 Mineral Reserve Estimates

There are no Mineral Reserve estimates for the TOML Exploration Area of the CCZ and the potential viability of the Mineral Resources has not yet been supported by a pre-feasibility study or a feasibility study.

### 13 Mining Methods

Mining methods that could be employed for commercial development of polymetallic nodule deposits in the CCZ were studied in an IA for NORI Area D (AMC, 2021). The commonality between the polymetallic nodule deposits in NORI Area D and TOML Areas indicates that the methods proposed for the development of NORI Area D can reasonably be assumed to be equally relevant for future development in the TOML Areas. This is discussed further in Section 11.9.

There are no Mineral Reserve estimates for the TOML Exploration Area of the CCZ and the potential viability of the Mineral Resources has not yet been supported by a pre-feasibility study or a feasibility study.

#### 14 Recovery Methods

Recovery methods that could be employed for commercial development of polymetallic nodule deposits in the CCZ were studied in an IA for NORI Area D (AMC, 2021). The commonality between the polymetallic nodule deposits in NORI Area D and TOML Areas indicates that the methods proposed for the development of NORI Area D can reasonably be assumed to be equally relevant for future development in the TOML Areas. This is discussed further in Section 11.9.

There are no Mineral Reserve estimates for the TOML Exploration Area of the CCZ and the potential viability of the Mineral Resources has not yet been supported by a pre-feasibility study or a feasibility study.

15 Project Infrastructure

The project infrastructure that would be required for commercial development of polymetallic nodule deposits in the CCZ was studied in an IA for NORI Area D (AMC, 2021). The commonality between the polymetallic nodule deposits in NORI Area D and TOML Areas indicates that the requirements for the development of NORI Area D can reasonably be assumed to be equally relevant for future development in the TOML Areas. This is discussed further in Section 11.9.

There are no Mineral Reserve estimates for the TOML Exploration Area of the CCZ and the potential viability of the Mineral Resources has not yet been supported by a pre-feasibility study or a feasibility study.

---

16 Market Studies and Contracts

For initial assessment of the prospects for economic extraction of the Mineral Resource, AMC has considered the market for the nickel, copper, cobalt and manganese products that might be recovered from the polymetallic nodules in the TOML Areas.

CRU International Limited (CRU) was commissioned by NORI to provide market overviews for the four main products from the NORI Area D Project: nickel sulphate (NiSO<sub>4</sub>), cobalt sulphate (CoSO<sub>4</sub>), copper, and a manganese product (CRU, 2020).

CRU expects NiSO<sub>4</sub> and CoSO<sub>4</sub> markets to undergo extreme growth from a relatively small current level of 181 kt nickel in sulphate and 35 kt of cobalt in sulphate in 2019, with markets to increase to 138 and 178 times their 2018 sizes respectively to 1.6 Mt nickel in sulphate and 500kt cobalt in sulphate by 2035, with much of this growth occurring post-2025. Electric vehicle production is the driver of this forecast growth.

Copper and manganese markets are forecast to grow by 25% and 20% of their 2020 sizes by 2035 respectively. Copper and manganese demand will benefit from electric vehicle penetration, however the primary driver of growth for manganese ore will be steelmaking, and a variety of end use applications generally related to economic health for copper.

CRU expects copper and NiSO<sub>4</sub> prices to rise in real terms by 2035, while manganese ore and CoSO<sub>4</sub> prices are forecast to remain flat, due to current prices being at or near a high point in the cycle, recent fall in prices, and expected modest growth in the global steel industry after the COVID 19 epidemic. The long-term cost of production is expected to rise for both copper and NiSO<sub>4</sub>, helping to support prices.

The metal prices assumed in the calculation of the cut-off for the Mineral Resource were: nickel metal US\$16,472/t; nickel in nickel sulphate US\$18,807/t Ni; copper metal US\$6,872/t; cobalt metal US\$46,333/t; cobalt in cobalt sulphate US\$56,920/t Co; manganese in manganese silicate US\$4.50/dmtu. The price estimates are long term (2034–2046) forecasts provided in a report by CRU International Limited (CRU, 2020). The QP considers that this timeframe is reasonable in view of the likely time required to bring the majority of the TOML Mineral Resources into production.

---

17 Environmental Studies, Permitting, and Social or Community Impact

The ISA is mandated through UNCLOS to organize, regulate, and control all mineral related activities in the international seabed Area whilst preserving and protecting the marine environment. As the TOML Areas are in the international seabed Area, the ISA is responsible for assessing any Environmental and Social Impact Assessment prepared by TOML and for granting the relevant contracts.

Between 1998 and 2014, the ISA held workshops and developed a number of documents to provide guidance to contractors with respect to its expectations for responsible environmental management during the exploration and exploitation phases of mineral development. The ISA held a workshop “Towards an ISA environmental management strategy for the Area” over 20-24 March 2017 in Berlin Germany. The results of the workshop were published as ISA Technical Study 17 (ISA 2017).

The ISA has issued Regulations on Prospecting and Exploration for Polymetallic Nodules (adopted on 13 July 2000, updated on 25 July 2013). The regulations were complemented by the Legal and Technical Commission (LTC) recommendations for the guidance of contractors on assessing the environmental impacts of exploration (ISBA/25/LTC/6/Rev.1) which was most recently updated on 30 March, 2020. The draft exploitation regulations on deep-seabed mining were discussed at the 25th Session of the ISA (25 February to 1 March 2019 in Kingston Jamaica). The ISA had declared a target of 2020 to have the regulations approved but the COVID-19 pandemic disrupted the ISA program.

Although the environmental impact review process has not yet been finalised, the draft regulations outline the application process and the conditions that Contractors would need to implement during operations. All contractors have been made aware that the ISA requires the completion of the Environmental and Social Impact Assessment (ESIA) studies, culminating in an Environmental Impact Statement (EIS), in support of their applications for an exploitation license. Guidance for contractors in terms of what will be expected in the EIS has been provided in ISA Technical Study No. 10 (ISA 2012a). Further guidance will be provided with the completion of Standards and Guidelines for exploitation activities. The LTC has prioritized the development of six Standards and Guidelines, with three released for public comment in 2020 and the remaining three expected to be released in early 2021. The EIS, along with an Environmental Management System with subordinate Environmental Management and Monitoring Plans (EMMP), will be required as part of the application for an exploitation license within the Contract Area.

The environmental permitting process for the Area has been developed through a consultation program initiated by the ISA in 2013 and includes feedback obtained from multiple stakeholder groups. It is expected to involve a series of checks and balances, with reviews being conducted by the LTC with input from independent experts, as required. The recommendations of the LTC will then go before the ISA Council, which will then review the information provided and decide whether to approve the license application and, if so, what conditions should be applied.

The LTC has recommended seven key areas of information for the development of EIAs. These are physical oceanography, chemical oceanography, sediment properties, biological communities, bioturbation, sedimentation, and geological properties. These will form the key investigation topics for surveys within the Area, including the TOML Areas.

As sponsoring state, Tonga has a responsibility to ensure that TOML’s activities in the international seabed area are carried out in conformity with Part XI of UNCLOS.

Under ISA requirements contractors are required to submit five-year work programs. The first TOML five-year work program was completed in 2016 and reviewed and accepted by the ISA in late 2016.

For the second five-year period ending in 2022 TOML proposed the following program.

- Continue environmental baseline work;
- Complete pilot testing;
- Complete geotechnical studies;
- Complete feasibility studies;
- First draft EIA/EMP;
- Continue training.

TOML noted that the program was:

- Dependent on success at each stage;
- Subject to change based on findings at hand at any particular time; and
- Reliant on funding which in turn is dependent to some extent on macro-economic conditions and development with regards to the Authority and its stakeholders.

As a result of the financial state of the company, TOML did not progress at the rate intended until TOML was purchased by DeepGreen in March 2020. TOML currently plans an aggressive program of offshore campaigns in 2021–2023 focussing on resource assessment and environmental base line studies with the objective of upgrading the TOML F resource area to Indicated Mineral Resource status and completing environmental baseline studies and ESIA for the TOML F resource area.

18 Capital and Operating Cost

Capital and operating costs have not been estimated for the TOML Areas.

There are no Mineral Reserve estimates for the TOML Exploration Area of the CCZ and the potential viability of the Mineral Resources has not yet been supported by a pre-feasibility study or a feasibility study.

19 Economic Analysis

A cash flow analysis has not been developed for the TOML Areas.

There are no Mineral Reserve estimates for the TOML Exploration Area of the CCZ and the potential viability of the Mineral Resources has not yet been supported by a pre-feasibility study or a feasibility study.

## 20 Adjacent Properties

Nauru Ocean Resources Inc (NORI), a wholly-owned subsidiary of DeepGreen, holds exploration rights to four areas (NORI Area A, B, C, and D, the Property) in the CCZ that were granted by the International Seabed Authority (ISA) in 2011. NORI is sponsored to carry out its mineral exploration activities in the Property by the Republic of Nauru, pursuant to a certificate of sponsorship signed by the Government of Nauru on 11 April 2011.

Several other contractors have rights in the CCZ under the ISA, as described in Section 5 and summarized in Figure 3.1.

Lockheed Martin Systems Co (LMS) or Ocean Minerals Company (OMCO; GPO, 2011, Spickermann, 2012) is recognised to have two US licenses granted by NOAA (Section 5).

To date, no commercial production of polymetallic nodules has taken place in the CCZ.

---

21 Other Relevant Data and Information

As part of the eighteenth session of the ISA in July 2012, (ISA 2012b). Nine APEIs within the CCZ were designated by the Council of the ISA as part of an environmental management plan. None of the nine areas impact the TOML Exploration Area.

The APEIs are an important part of the ISA's EMP for the CCZ (ISA, 2012b; Smith et al, 2010) they aim to:

- Protect large enough areas to maximise both conservation benefits and exploitation benefits (at present they are more extensive than areas granted by the ISA to contractors for development);
- Be arranged to provide representative cover of different subregions as defined by productivity gradients and faunal turnover and as many seamounts as possible;
- Each APEI is large enough to ensure a core area is remote from even pessimistic estimates of impact from deep-sea mining;
- Complement ecosystem based management strategies for the area.

The APEIs were reviewed as required by policy in 2014 for the purposes of forthcoming review of the ISA's EMP and the decision (or not) to extend their location and validity. Independent consultants Seascope (Seascope Consultants, 2014) found no reason to change the APEI.

---

22 Interpretation and Conclusions

TOML holds tenement over a significant part (74 713 km<sup>2</sup>) of the CCZ polymetallic nodule deposit in six areas (Areas A to F). These licences are under a contract for exploration of polymetallic nodules signed with the International Seabed Authority which has its remit from the United Nations Convention on the Law of the Sea.

Historical work over the last four decades has shown the deposit to be widespread and of very consistent grades. Exploration and development have progressed over this period, including scientific discovery and characterisation, successful efforts at trial mining, and bench scale metallurgical processing.

Work by TOML confirmed the historical data available for Mineral Resource estimation and furthermore provides significant additional detail and evidence for continuity such that Mineral Resource estimates of higher confidence can be determined. TOML also completed sampling of environmental and geotechnical data that is still being analysed. To date results complement, but have not revealed anything fundamentally different from, available historical work.

TOML Exploration Areas A to F have sufficient samples of adequate quality to define a Mineral Resource for Mn, Ni, Cu and Co. The estimate of abundance and hence tonnage for the Inferred Mineral Resource for the TOML Exploration Areas A to F may be biased low due to reliance on free fall grab samples in places.

The 2020 Mineral Resource estimate (Measured, Indicated and Inferred Mineral Resources), which was informed by data collected by TOML in 2013 and 2015, is presented in Table 11.9.

Due to the extremely low variance in the grades and the high metal content of the nodules, a cut-off based on abundance is appropriate for determining the limits of economic exploitation. A cut-off of 4 kg/m<sup>2</sup> abundance was chosen for the TOML Area, based on the estimates of costs and revenues presented in the Initial Assessment (IA) of the Mineral Resource contained in NORI Area D (AMC, 2021). The metal prices assumed in the calculation of the cut-off were: nickel metal US\$16,472/t; nickel in nickel sulphate US\$18,807/t Ni; copper metal US\$6,872/t; cobalt metal US\$46,333/t; cobalt in cobalt sulphate US\$56,920/t Co; manganese in manganese silicate US\$4.50/dmtu. The price estimates are long term (2034–2046) forecasts provided in a report by CRU International Limited (CRU, 2020). The QP considers that this timeframe is reasonable in view of the likely time required to bring the majority of the TOML Mineral Resources into production.

Comparison of the 2013 Inferred Mineral Resource estimate and the 2020 estimate shows that the additional data has increased the total Mineral Resource tonnage by 3%. In the areas with the most new data (the Indicated and Measured areas), abundance and grades are all higher in the new model than the 2013 model. These changes show that it is reasonable to expect that the majority of Inferred Mineral Resources could be upgraded to Indicated or Measured Resources with further exploration.

The ISA is mandated through UNCLOS to organize, regulate, and control all mineral related activities in the international seabed Area whilst preserving and protecting the marine environment. As the TOML Areas are in the international seabed Area, the ISA is responsible for assessing any Environmental and Social Impact Assessment prepared by TOML and for granting the relevant contracts.

The ISA has issued Regulations on Prospecting and Exploration for Polymetallic Nodules. Draft exploitation regulations on deep-seabed mining were discussed at the 25th Session of the ISA (25 February to 1 March 2019 in Kingston Jamaica). The ISA had declared a target of 2020 to have the regulations approved but the COVID-19 pandemic disrupted the ISA program.

---

Although the environmental impact review process has not yet been finalised, the draft regulations outline the application process and the conditions that Contractors would need to implement during operations. All contractors have been made aware that the ISA requires the completion of the Environmental and Social Impact Assessment (ESIA) studies, culminating in an Environmental Impact Statement (EIS), in support of their applications for an exploitation license. Guidance for contractors in terms of what will be expected in the EIS has been provided in ISA Technical Study No. 10 (ISA 2012a). Further guidance will be provided with the completion of Standards and Guidelines for exploitation activities.

The TOML area and the NORI Property occur within the vast polymetallic nodule field in the Clarion Clipperton Zone of the Pacific Ocean. This mineral field is essentially a single mineral deposit almost 5,000 km in length and up to 600 km wide. The size and level of uniformity of mineralization is unmatched by any mineral deposit of similar value on land. The mechanism of formation of the nodules is interpreted to be essentially identical across the entire CCZ, with only minor local variations. Consequently, there is relatively little difference between the size, shape or metal content of the nodules from one area to another.

The morphological features of the seafloor are similar in the TOML and the NORI Areas, which all lie within the Abyssal Plains and are characterized by sub-parallel basaltic lava ridges called abyssal hills. The Areas are punctuated by typically extinct volcanic knolls and seamounts and scattered sediment drifts in which few nodules are preserved at the seafloor.

The polymetallic nodules in the TOML and NORI Areas have similar morphological, mineralogical, and grade characteristics. All published historical work indicates that processing of nodules is technically feasible.

The TOML Mineral Resource estimates are supported by an Initial Assessment carried out on behalf of DeepGreen for the NORI Property (AMC, 2021).

The IA proposes that nodules will be collected from the seafloor by self-propelled, tracked, collector vehicles. No rock cutting, digging, drill-and-blast, or other breakage will be required at the point of collection. The collectors will be remotely controlled and supplied with electric power via umbilical cables from production support vessel (PSV). Suction dredge heads on each collector will recover a dilute slurry of nodules, sediment, and water from the seafloor. A hopper on each vehicle will separate sediment and excess water, which will pass out of the hopper overflow, from the nodules, which will be pumped as a higher concentration slurry via flexible hoses to a riser. The riser is a steel pipe through which nodules will be transferred to the surface by means of an airlift.

The PSV will support a riser and lift system (RALS) and its handling equipment, and will house the airlift compressors, collector vehicle control stations, and material handling equipment. All power for off-shore equipment, including the nodule collecting vehicles, will be generated on the PSV. The PSVs will be equipped with controllable thrusters and will be capable of dynamic positioning (DP), which will allow the vessels and risers to track the collectors. Nodules will be discharged from the RALS to the PSVs, where they will be dewatered and temporarily stored or transferred directly to a transport vessel.”

The polymetallic nodules in the TOML and NORI Areas have similar morphological, mineralogical, and grade characteristics. The IA for NORI Area D assessed a combine pyrometallurgical and hydrometallurgical mineral processing scenario. The first part of the pyrometallurgical process is the Rotary Kiln Electric Furnace (RKEF) process that is widely used in the nickel laterite industry. The second pyrometallurgical step (sulphidisation of the alloy produced in the first step to form a matte and then partially conversion in a Peirce-Smith converter to remove iron), while not widely practiced, also has commercial precedent at the Doniambo plant of Societe Le Nickel in New Caledonia.

Sulphuric acid leaching of matte from the pyrometallurgical process has precedent in the platinum group minerals (PGM) industry. Although copper producers typically have a solvent extraction step before electrowinning of their copper, direct copper electrowinning is done in most PGM refineries, where nickel and cobalt are also significant pay-metals. This is to maximise nickel recovery and minimise operating expenses. The nickel and cobalt are purified using solvent extraction, ion exchange and precipitation, which are all commercially proven hydrometallurgical processes. Battery grade nickel and cobalt sulphate are then crystallised from the purified solutions.

The pyrometallurgical process forms two by-products as well as the matte for the hydrometallurgical refinery:

- Electric furnace slag containing silica and 53% MnO that is intended to be sold as feed to the Si-Mn industry.
- A converter aisle slag that could be used for aggregate in road construction or other applications.

The hydrometallurgical refinery generates iron residues that would, for a stand-alone plant, require disposal. However, these streams can be recycled back to the pyrometallurgical plant for re-treatment and recovery of entrained pay metals.

Selection of ammonia as a principal reagent in the hydrometallurgical refinery means that an additional by-product—ammonium sulphate—is generated. This could be sold into the fertiliser industry.

The copper cathode quality from direct electrowinning, without a solvent extraction step, is expected to be  $\geq 99.9\%$  Cu. Quality of the matte produced in the pyrometallurgical plant will have an impact on this, including the potential carryover of impurities beyond values assumed for the purpose of the IA.

The production of battery-grade nickel and cobalt sulphates is targeted instead of nickel or cobalt cathodes or other intermediate products.

In summary:

- All parts of the proposed process have commercial precedents in similar or analogous industries, however not as a whole continuous flowsheet.
- Pay-metals are recovered in the following forms:
  - Copper cathodes with an expected quality of  $\geq 99.9\%$  Cu.
  - Battery-grade nickel sulphate.
  - Battery-grade cobalt sulphate.
- Rather than generating large waste streams, the process produces by-products including high manganese content furnace slag and ammonium sulphate.

The process assumptions used in this study will need to be verified as the project proceeds.

The QP considers that this IA supports the view that there are reasonable prospects of economic extraction of polymetallic nodule Mineral Resources in the TOML Areas.

The infrastructure requirements for the development of commercial production in the TOML Areas, apart from the minerals processing facility, will be modest compared to terrestrial resources projects of similar production capacities.

The site and host country for the minerals processing facility has not yet been confirmed. The site must be serviced by grid power, reticulated water, and natural gas. A location will be selected that is close to an industrial port, and near an existing municipality from which labour can be sourced.

---

A preliminary assessment of the transportation fleet for transfer of nodules from the CCZ to an existing deep-water industrial port equipped with bulk offloading facilities was examined (AMC, 2021). The IA assumed that chartered vessels would be used to transport the dewatered nodules to the port of Lazaro Cardenas, Michoacan, Mexico, 960 nm from the NORI Area D reference site. The vessels would be converted bulk mineral carriers with dynamic positioning (DP) to allow tracking behind the production support vessels during operations. The method of offloading, known as tandem offloading, is well established for offloading of oil production vessels in remote areas of the world.

AMC has considered the market for the nickel, copper, cobalt and manganese products that might be recovered from the polymetallic nodules in the TOML Areas.

CRU International Limited (CRU) was commissioned by NORI to provide market overviews for the four main products from the NORI Area D Project: nickel sulphate ( $\text{NiSO}_4$ ), cobalt sulphate ( $\text{CoSO}_4$ ), copper, and a manganese product (CRU, 2020). CRU expects growth in these markets.

CRU expects copper and  $\text{NiSO}_4$  prices to rise in real terms by 2035, while manganese ore and  $\text{CoSO}_4$  prices are forecast to remain flat, due to current prices being at or near a high point in the cycle, recent fall in prices, and expected modest growth in the global steel industry after the COVID 19 epidemic. The long-term cost of production is expected to rise for both copper and  $\text{NiSO}_4$ , helping to support prices.

The QPs consider that the proposed development of NORI Area D is a reasonable analogue for future development in the TOML Areas and the IA completed for the NORI Property is directly relevant and applicable to the TOML Property. The QPs consider that this IA supports the view that there are reasonable prospects of economic extraction of polymetallic nodule Mineral Resources in the TOML Areas.

---

23 Recommendations

It is recommended that future work on the TOML Area focus on determining the viability of mining systems through trial nodule mining and appropriate methods for predicting, monitoring and controlling production rates during mining. Additionally, key modifying factors need to be constrained to a point where a Mineral Reserve could potentially be estimated for the TOML Exploration Areas.

### Exploration

- Undertake additional box core sampling campaigns to raise the Inferred Mineral Resources to Indicated and Measured status. The proximity of TOML Area F to NORI Area D suggests that TOML Area F should be a priority.
- Undertake additional photo profiling in areas categorized as Indicated Mineral Resource to increase the Measured Mineral Resource.
- Investigate automated processing of nodule photographs to estimate nodule abundance using the long-axis method. This will allow very detailed short-range determination of abundance along photo-profile lines informing a simulation study regarding variability during mining.
- Undertake a conditional simulation study to quantify the uncertainty and risk in nodule abundance. This will likely help provide production bounds for the operating system(s).
- Undertake additional photo profiling in areas categorized as Indicated Mineral Resource to increase the Measured Mineral Resource well ahead of commercial extraction of the existing Measured Mineral Resource.

### Environment

- Complete analysis of data collected during the TOML CCZ13 and CCZ15 campaigns, including analysis of oceanographic information, taxonomy of collected samples, habitat mapping from photo profiles, collection of moorings to enable:
  - Integration with CCZ-wide published data.
  - Environmental baseline conditions to be documented.
- Complete new environmental baseline studies and ESIA for TOML Area F.
- Develop a monitoring programme to accompany future work, including trial mining.

### Engineering and Commercial Concept

- Complete analysis of geotechnical data collected during the TOML CCZ15 campaign.
- Complete system concept design and options and risking exercises.
- Prepare economic and commercial studies to provide scoping estimates for CAPEX and OPEX for mining, transportation and processing options.
- Complete metallurgical research and pilot testing of nodules.
- Advance engineering design.

### Trial Mining

- Conduct a trial mining operation within the TOML Area, which will inform a commercial mining feasibility study. This should include:
  - Fabrication of pilot scale equipment;
  - Appropriate permitting;
  - Selection of a candidate site(s).
- Include an environmental monitoring programme, which will inform a commercial mining EIS.

Possible budgets required for this work over the next two to three years may total \$US30–50 million.

25 Reliance on information provided by the registrant

AMC has relied upon information provided by the registrant in preparing its findings and conclusions regarding the following aspects of modifying factors:

- (i) Macroeconomic trends, data, and assumptions, and market studies as, for example, presented in Section 16;
- (ii) Legal matters outside the expertise of the qualified person, such as statutory and regulatory interpretations affecting the Project as, for example, described in Section 3 and 17;
- (iii) Environmental matters outside the expertise of the qualified person as, for example, described in Section 17;
- (iv) Governmental factors outside the expertise of the qualified person as, for example, described in Section 3, 17.

## Date

The effective date of this Technical Report Summary is 31 December 2020.

## Signature
